v.6

CONTENTS.

- André, John, and Honora Sneyd, 715.
Burns, Some of the Haunts of, 385.
Carnival of the Romantic, The, 129.
Choate, Rufus, 79.
Clarian's Picture, 66.
Confessions of a Medium, The, 699.
Culture, 343.
Darwin on the Origin of Species, 109, 229.
——— and his Reviewers, 406.
Day with the Dead, A, 326.
Election in November, The, 492.
Eleusinia, 157.
Expression, 572.
Fayal and the Portuguese, 526.
Galleries of Art, On the Formation of, 106.
Great Arm-Chair, The, 294.
Hallam, Arthur, 694.
History, Something about, 298.
Hood, Thomas, 513.
Hunting a Pass, 44.
Iceberg of Torbay, The, 443.
Irving, Recollections of, 601.
Italian Experiences in collecting "Old Masters," 578.
July Reviewed by September, 378.
Maryland, A Legend of, 29, 141.
Meteorology, 1.
Midsummer and May, 544, 674.
Modern Cinderella, A, 425.
My Neighbor, the Prophet, 309.
National Intelligencer and its Editors, The, 470.
Parker, Theodore, 449.
Pasquin and Pasquinades, 395.
Plea for Freedom from Speech and Figures of Speech-Makers, A, 740.
Professor's Story, The, 95, 215, 362, 482, 613, 729.
Regicide Colonels in New England, The, 89.
Shakspeare done into French, 202.
———, Some Notes on, 288.
Shelley, More Words about, 59.
Sicily, A Journey in, 209.
Sunshine, 657.
'Tenty Scran', 587.
Three-Mile Cross, 355.
Tobacco, 187.
Trees, Among the, 257.
Two Tongues, The, 667.
United States and the Barbary States, The, 641.
Victor and Jacqueline, 168, 271.
Walker, 460.
- POETRY.
- Anno Domini, 1860, 228.
Cat-Bird, To the, 94.
"Cattle" to the "Poet," The, 58.
Children's Hour, The, 354.
Epithalamia, 693.
Fatima, The Song of, 297.
Gone, 571.
Icarus, 457.
Irene Anadyomene, 612.
Magnolia-Flower, On a, 287.
Midsummer, 185.
Old Days and the New, The, 441.
Pilot's Story, The, 323.
Poet's Singing, The, 207.
Prince Adeb, 153.
Sonnet, written after a Violent Thunder-Storm in the Country, 481.
Spring, 77.
Summons, The, 405.
Treasure-Trove, 15.
Vanity, 116.
We shall rise again, 725.
- ART.
- Mr. Jarves's Collection, 509.

REVIEWS AND LITERARY NOTICES.

Bacon, Lord, Works of, 762.

———, Rogeri, Opera, 746.

Balzac's César Birotteau, 637.

Bryant's Forest Hymn, 761.

Chappell's Popular Music of the Olden Time,
759.

Claiborne's Life and Times of General Sam.
Dale, 120.

Delepierre's History of Flemish Literature,
503.

Essays and Reviews, 633.

Fureidis, El, 119.

Goodwin's Syntax of the Moods and Tenses
of the Greek Verb, 242.

How could he help it? 123.

Leslie's Autobiographical Recollections, 373.

Mitchell's Popular Astronomy, 117.

Old Battle-Ground, The, 376.
Olmsted's Journey in the Back-Country,
635.

Palmer's Folk-Songs, 761.

Ruskin's Modern Painters, 239.

Saxe's Money-King and other Poems, 120.

Say and Seal, 121.

Smith, Thomas Assheton, Reminiscences of,
632.

Stoddard's Loves and Heroines of the Poets,
761.

Tariff-Bill, The New, 124.

Territories, The Law of the, 243.

Tyndall's Glaciers of the Alps, 508

Wedgwood's Dictionary of English Etymol-
ogy, 248.

Whittier's Home Ballads and Poems, 637.

RECENT AMERICAN PUBLICATIONS, 126, 255,

VOL. VI.—JULY, 1860.—NO. XXXIII.

METEOROLOGY.

A GLANCE AT THE SCIENCE.

THE purpose of this article is to present, in a brief and simple manner, the leading principles on which the science of Meteorology is founded,—rather, however, in the spirit of an inquirer than of a teacher. For, notwithstanding the rapid progress it has made within the last thirty years, it is far from having the authority of an exact science; many of its phenomena are as yet inexplicable, and many differences of opinion among the learned remain unreconciled on points at first sight apparently easy to be settled.

Meteorology has advanced very far beyond its original limits. Spherical vapor and atmospheric space give but a faint idea of its range. We find it a leading science in Physics, and having intimate relations with heat, light, electricity, magnetism, winds, water, vegetation, geological changes, optical effects, pneumatics, geography,—and with climate, controlling the pursuits and affecting the character of the human race. It is so intimately blended, indeed, with the other matters here named, as scarcely to have any positive boundary of its own; and its vista seems ever lengthening, as we proceed.

Without dwelling upon the numerous consequences which flow from meteorological influences, let us see what is properly included under the subject of Meteorology. And first, of the Atmosphere.

This is a gaseous, vapor-bearing, elastic fluid, surrounding the earth. Its volume is estimated at $\frac{1}{25}$ th, and its weight at about $\frac{43}{1000}$ ths, that of the globe. It is composed of 21 parts in weight of Oxygen and 77 of Nitrogen, with a little Carbonic Acid, Aqueous Vapor, and a trace of Carburetted Hydrogen. There are numerous well-known calculations of the proportions of the various constituents of the atmosphere, which we owe to Priestley, Dalton, Black, Cavendish, Liebig, and others; but that given by Professor Ansted is sufficiently simple and intelligible. In 10 volumes or parts of it, he gives to

Oxygen, the great supporter of life,	2.100
Nitrogen, (not condensible under 50 atmospheres, and not respirable or combustible,)	7.750
Aqueous Vapor	.142
Carbonic Acid	.004
Carburetted Hydrogen	.004
	<hr/>
	10.000

and he adds a trace of Ammoniacal Vapor. It is usual to state the proportions

of air as being 1 Oxygen to 4 Nitrogen.

It is a curious fact, that, while there are six varieties of compounds of nitrogen and oxygen, but one of these is fitted to sustain life, and that is our atmosphere.

It is well enough to note, that, when we use the word volume or measure, in speaking of the atmosphere or any gaseous body, we adopt the theory of Gay-Lussac, who discovered that gases unite with each other in definite proportions whenever they enter into combination. This theory led to important results; for by knowing the elements of a compound gas, we easily determine its specific gravity. It has been attempted to apply the principle to organic bodies; but it has not yet been carried to a full and satisfactory conclusion. It may be noticed, too, that Dalton affirmed that simple substances unite with each other in definite weights to form compound substances, thus supporting the idea of Lussac. These discoveries were made about the same time, Dalton having the credit of originating them. Various modifications of the principle have been from time to time presented to public attention.

Whether the constituents of the atmosphere are chemically or mechanically combined,—one of the things about which the learned are not fully agreed,—it is found to be chemically the same in its constituents, all over the world, whether collected on mountains or on plains, on the sea or on the land, whether obtained by aëronauts miles above the earth or by miners in their deepest excavations. On the theory of its mechanical combination, however, as by volume, and that each constituent acts freely for itself and according to its own laws, important speculations (conclusions, indeed) have arisen, both as regards temperature and climatic differences. It should be observed, that volume, as we have used the word, is the apparent space occupied, and differs from mass, which is the *effective* space occupied, or the real bulk of matter, while density is the relation of mass to volume, or

the quotient resulting from the division of the one by the other. Those empty spaces which render the volume larger than the mass are technically called its pores.

Has the composition of the atmosphere changed in the lapse of years? On this point both French and German philosophers have largely speculated. It is computed that it contains about two millions of cubic geographical miles of oxygen, and that 12,500 cubic geographical miles of carbonic acid have been breathed out into the air or otherwise given out in the course of five thousand years. The inference, then, should be, that the latter exists in the air in the proportion of 1 to 160, whereas we find but 4 parts in 10,000. Dumas and Bossingault decided that no change had taken place, verifying their conclusion by experiments founded on observations for more than thirty-five years. No *chemical* combination of oxygen and nitrogen has ever been detected in the atmosphere, and it is presumed none will be.

The atmosphere possesses, as may be readily imagined, many important characteristics. One of these is Weight.

This is demonstrated by simple, yet decisive experiments. The discovery of the *fact* is attributed to the illustrious Galileo, but to modern science we owe all the certainty, variety, and elegance of the demonstration. A vessel containing a quantity of air is weighed; the air is exhausted from it and it is weighed again. An accurate scale will then detect the difference of weight. A cubic foot of air weighs 1.2 oz. Hence a column of air of one inch in diameter and a mile in height weighs 44 oz.

The atmosphere is supposed to have an elevation of from 45 to 50 miles, but its weight diminishes in proportion to its height. The whole pressure at the surface of the earth is estimated to be 15 lbs. to the square inch; a person of ordinary size is consequently pressed upon by a weight of from 13 to 14 tons. Happily for us, the pressure from with-

out is counteracted by the pressure from within.

The weight of the air is of great importance in the economy of Nature, since it prevents the excessive evaporation of the waters upon the earth's surface, and limits its extent by unalterable laws. Water boils at a certain temperature when at the earth's surface, where the weight of the atmosphere is greatest, but at different temperatures at different elevations from the surface. At the level of the sea it boils at 212° . On the high plains of Quito, 8,724 feet above the sea, it boils at 194° , and an egg cannot be cooked there in an open vessel. At Potosí the boiling-point is still lower, being 188° , and the barometrical column stands at 18° . Indeed, the experiment is often exhibited at our chemical lectures, of a flask containing a small quantity of water, which, exhausted of air, is made to boil by the ordinary heat of the hand.

Fahrenheit proposed to ascertain the height of mountains by this principle, and a simple apparatus was contrived for the purpose, which is now in successful use. The late Professor Forbes of Edinburgh, whose untimely death the friends of science have had so much reason to deplore, ascertained that the temperature of boiling water varied arithmetically with the height, and at the rate of one degree of the thermometric scale for every 549.05 feet. Multiplying the difference of the boiling-point by this number of feet, we have the elevation. The weight of the atmosphere, as indicated by the barometer, is also a means for ascertaining the height of mountains or of plains; but correction must be made for the effects of expansion or contraction, and for capillarity, or the attraction between the mercury and the glass tube, at least whenever great exactness is required. Tables for the convenience of calculation are given in several scientific works, and particularly in a paper of Professor Forbes, Ed. Trans. Vol. 15. Briefly, however, we may state, that between 0° and 32° , 34 thousandths of an inch must be allowed for depression or

contraction, and between 32° and 52° 33 thousandths. The weight of the atmosphere is not only affected by rarefaction, but by currents of air, which give it a sudden density or rarity. Those who have ascended mountains have experienced both these changes.

A common experiment to prove the weight of air is that of the Magdeburg Hemispheres, a simple contrivance of Otto Guericke, a merchant of that city. It is a part of every complete philosophical apparatus. It consists of brass caps, which, when joined together, fit tightly and become a globe. The air within being exhausted, it will be found difficult to separate them. If the superficies be 100 square inches and the height of the mercury be 30 inches, the atmosphere will press on these hemispheres with a weight of 1,475 lbs, requiring the efforts of seven or eight powerful men to tear them asunder. One of these instruments, of the diameter of a German ell, required the strength of 24 horses to separate it. The experiment was publicly made in 1650 at the Imperial Diet at Rendsborg, in the presence of the Emperor Ferdinand III. and a large number of princes and nobles, much to their astonishment.

As compared with water, the air (the barometer indicating 30° , and the thermometer 55°) is 833 times lighter.

It is this weight of the atmosphere which counterbalances that of a column of mercury 29 inches in height, and a column of water 32 to 34 feet in height. The old quaint notion of Nature's abhorring a vacuum was found to be practically only an assertion that the air had weight. The ordinary pump, commonly called the suction-pump, is constructed on this principle. The weight of the atmosphere at the level of the sea is found to be the same all over the world.

We find the atmosphere with another characteristic,—Elasticity.

However it may be compressed, air returns, on liberation, to its original volume, and while thus perfectly elastic it

is also the most compressible of bodies. This elasticity arises from the repulsive force of its particles, and is always equal to the compressive force which it balances. A glass vessel full of air, placed under a receiver and then exhausted by the air-pump, will burst into atoms. Water, on the other hand, is almost the reverse. Twenty cubic inches, introduced into a cannon whose sides are three inches thick, cannot be compressed into nineteen inches without bursting it. This non-elastic property of water, with another, that of communicating, when under the action of any force, an equal pressure in all directions, led to the invention of the hydraulic press.

The elasticity of the air enables fishes to rise and sink in water, through the action of the air-bladder.

The sudden compression of air liberates its latent heat, and produces fire. On this principle the pneumatic tinder-box is constructed.

Brockhaus says that air has as yet been compressed only into one-eighth of its original bulk.

For every degree of heat between the freezing-point and the boiling-point, 32° and 212° , the expansion of air is about $\frac{1}{495}$ th part, so that any invention which seeks to use rarefied air as a motive power must employ a very intense degree of heat, enough to fuse many kinds of metals.

To the celebrated Mr. Boyle and to Henry Cavendish, both of Great Britain, we are indebted for most of what we know of this particular property of the air.

Density, or closeness, is another quality of the atmosphere. It has been found to be 770 times less than that of water, and 770 cubic inches of air weigh as much as a cubic inch of water. It is in direct ratio with its elasticity, and there are tables by which it may be determined at different altitudes. At the surface of the earth, this density is indicated as 1; at $2\frac{1}{2}$ miles, as $\frac{1}{2}$; at 5 miles, as $\frac{1}{4}$; and so on, the difference being in a geometrical progression.

As we proceed in the consideration of our general subject, we shall find, under the appropriate heads, that density is not without material influence on reflection and refraction, on transparency and the transmission of light, the presence or absence of moisture, and the amount of heat at the earth's surface,—and we might add, on health, and the increase or diminution of the vital energies.

Temperature is another branch of our subject, and one involving a series of subordinate topics on which volumes have been written, and to which are still devoted the labors of the most learned men of our day. In this place, merely an outline can be attempted.

Temperature is the degree of heat or cold in the particles of all bodies, which is perceptible by sensation, and is measurable by their expansion or contraction. It is the key to the theory of the winds, of rain, of aërial and oceanic currents, of vegetation and climate with all their multifarious and important differences. While the inclined position of the earth on its axis and its movement in its elliptical orbit influence the general amount of heat, it is rather to the consequences of these in detail that we are called when we speak of temperature. If the sun shone on a uniformly level surface, everywhere of the same conducting and radiating power, there would be but little difficulty in tracing the monotonous effects of temperature.

The reformer Luther, as eccentric as he was learned and sincere, is reported to have said, that, if he had been consulted at the Creation, he would have placed the sun directly over the centre of the world and kept it there, to give unchanging and uniform light and heat! It is certainly much better that he was not consulted. In that case, every parallel of latitude would have been isothermal, or of equal mean annual temperature. The seasons would have been invariable in character. Some portions of the earth would have been scorched to crispness, others locked up in never-changing ice.

Vegetation, instead of being universal, would have been confined to a narrow zone; and the whole human race would have been driven together into one limited habitable space, to interfere with, incommode, and destroy each other. The arrangement is best as it is.

We find very important modifications of temperature, occasioned not only by astronomical influences, but by local causes and geographical characteristics. For while, as a general rule, the nearer we approach the equator, the warmer we shall be, yet temperature is greatly affected by mountains, seas, currents of air or water, by radiation, by forests, and by vegetation. It is found, in fact, that the lines of temperature, (the happy conception of Humboldt,) when they are traced upon the map, are anything but true zones or circles.

The line of the greatest mean warmth is not coincident with the equator, but falls to the north of it. This line at 160° W. Long. from Greenwich is 4° below the geographical equator; at 80° it is about 6° north, sweeping along the coast of New Granada; at 20° it comes down and touches the equator; at 40° E. Long., it crosses the Red Sea about 16° north of the equator, and at 120° it falls at Borneo, several degrees below it;—and the points of the greatest heat, in this line, are in Abyssinia, nearer the tropic of Cancer than to the equator. On the other hand, the greatest mean cold points, according to the opinions of Humboldt, Sir David Brewster, and others, do not coincide, as would seem natural, with the geographical poles, but they are both to be found in the northern hemisphere, in Latitude 80° , 95° E. Long. and 100° W. Long. from Greenwich. The western is ascertained to be $4\frac{1}{2}^{\circ}$ colder than the eastern or Siberian. If this be the fact,—but it is not positively admitted,—an open sea at the pole may be considered as probable, on the ground of its having a higher mean temperature than is found at 80° . Kaemtz places one of these cold points at the north of Barrow's Straits,—the other near Cape Taimur, in Sibe-

ria. Burghaus, in his Atlas, transfers the American cold pole to 78° N. Lat. It is perhaps too early to determine rigorously the true temperature of these points.

A noticeable fact also is this,—that places in the same latitude rarely receive the same amount of heat. Quebec, in British America, and Drontheim, in Norway, enjoy about the same quantity, while the former is in 47° and the latter in 63° N. Lat. The mean winter temperature of Pekin, $39^{\circ} 45'$ N. Lat., is 5° below the freezing-point; while at Naples, which is north of Pekin, it seldom, if ever, goes below it, and Paris, 500 miles farther north, has a mean winter temperature of 6° above the freezing-point. The city of New York, about 11° south of London, has a winter temperature of much greater severity. The mean temperature of the State of New York, as determined by a long series of observations, is $44^{\circ} 31'$.

The mean temperature of countries is found to be very stable, and but very small variations have been detected in modern times. But that there have been important climatic changes, since the Christian era, cannot be doubted, unless we doubt history. Not many centuries ago, it was a common thing for all the British rivers to freeze up during the winter, and to remain so for several months. If space permitted, an interesting statement could be made of the changes which have taken place in vegetation in Greenland, and throughout certain northern parts of Europe,—also in Palestine, Greece, and other southern countries,—while we know that the earth's inclination upon its axis has been unchanged.

Mrs. Somerville remarks, that, though the temperature of any one place may be subject to very great variations, yet it never differs from the mean state more than a few degrees.

Without this atmospheric covering of ours, it is considered that the temperature of the earth at its surface would be the same as that of the celestial spaces, supposed to be at least 76° below zero, or

possibly, says Humboldt, 1400° below! Human life, without our atmosphere, could not exist for a single moment.

It is computed, that, if the annual heat received by the earth on its surface could be equally distributed over it, it would melt, in the course of a year, a stratum of ice 46 feet thick, though it covered the whole globe, and as a consequence the amount of unradiated heat would render it uninhabitable.

The relative position of the sun affects temperature, rather than its distance. In winter the earth is three millions of miles nearer the sun than in summer, but the oblique rays of the former season reach us in less quantity than the more direct ones in summer.

The distribution of land and water, the nature of the soil, the indentation of bays, the elevation of land above the sea-level, insularity, etc., all, as we have already suggested, have a modifying influence on temperature.

The atmosphere possesses also a reflecting and refracting power, arising from its varying density, and, perhaps, in the latter case, somewhat from its lenticular outline.

But for this property we should have no twilight. The sun, instead of sending up his beams while 18° below the visible horizon, would come upon us out of an intense darkness, pass over our sky a brazen inglorious orb, and set in an instant amid unwelcome night.

Reflection is the rebound of the rays of light or heat from an opposing surface at the same angle as that at which they fall upon it. These are called angles of incidence and reflection, and are equal.

Refraction is the bending of a ray passing obliquely from a rarer into a denser medium. This may be observed when a rod is placed slantingly in a vessel of clear water; the part immersed will appear bent or broken. This is ordinary refraction. Terrestrial refraction is the same thing, occurring whenever there is a difference of density in the aerial strata.

The atmosphere absorbs some portion of the light which it receives. It is not all reflected or refracted or even penetrative.

Objects seen under various degrees of light, either convected or retarded by different media, appear near or distant, distinct or confused. Thus, we are often surprised at the apparent nearness and brightness of an opposite shore or neighboring island, in some conditions of the air, while at other times they seem distant and lie in shadowy obscurity.

The looming up of a vessel on the water is another common instance of the principle of refraction.

It has been noticed by almost every one, that, during the warm and moist nights of summer, the moon, as she rises above the horizon, appears much larger than when at the zenith. So the setting sun is seen of apparently increased size. Sir John Herschel asserts that the appearance is an illusion, and so do some others. Professor Carey says, that, if we look through a paper tube at the moon when on the horizon, the paper being folded so as to make the aperture of its exact size, and then look again at it when it reaches the zenith, we shall find there is no difference.

On the other hand, an experiment is offered by a German Professor, of the name of Milo, of this kind: If we look through a tube so constructed as to have one side filled with spirits of wine and the other with common air, the half of the object seen through the former will be found to appear much larger to the eye than the other half seen through the latter.

It is laid down, that, where extraordinary refraction takes place laterally or vertically, the visual angle of the spectator is singularly enlarged, and objects are magnified, as if seen through a telescope. Dr. Scoresby, a celebrated meteorologist and navigator, mentions some curious instances of the effects of refraction seen by him in the Arctic Ocean.

Many remarkable phenomena attend this state of the atmosphere, known as

the Fata Morgana of Sicily, the Mirage of the Desert, the Spectre of the Brocken, and the more common exhibitions of halos, coronæ, and mock suns. The Mountain House at Catskill has repeatedly been seen brightly pictured on the clouds below. Rainbows are also due to this condition of the atmosphere.

We might occupy the remainder of the space allowed us by enlarging on various topics which belong to this part of our subject. The twilight gray, the hues of the evening and morning sky, the peculiarity of the red rays of light, the scintillation of stars, their flashing changes of colors, are all meteorological in their character, as well as strikingly beautiful and interesting.

Polarity of light is another of the wonders of which Meteorology takes cognizance. The celebrated Malus, in 1808, while looking at the light of the setting sun shining upon the windows of the Luxembourg, was led to the discovery that a beam of light which was reflected at a certain angle from transparent and opaque bodies, or by transmission through several plates of uncrystallized bodies, or of bodies crystallized and possessing the property of double refraction, changed its character, so as to have sides, to revolve around poles peculiar to itself, and to be incapable of a second reflection. The angle of polarity was found to be 54° .

The beam of polarized light was also found to have the peculiar property of penetrating into the molecules of bodies, illuminating them and enabling the eye to determine as to their structure. The production of beautiful spectres, prismatic colors of gorgeous hues, and the most remarkable system of rings, has followed the discovery, and important results are expected from the continuation of the researches. It has already enabled the astronomer to determine what heavenly bodies do or do not shine with their own light. The subject is still under investigation.

Color from light comes also under the

notice of the meteorologist. The received opinion is, that there is no inherent color in any object we look at, but that it is in the light itself which falls upon and is reflected from the object. Each object, having a particular reflecting surface of its own, throws back light at its own angle, absorbing some rays and dispersing others, while it preserves its own. In this sense it may be said that the rose has no color,—its hues are only borrowed. If the idea should be carried out, it would certainly destroy much of the poetry of color. Thus, in praising the modest blush which crimson the cheek of beauty, we should destroy all its charm, if we attributed it to a sudden change in the reflecting surface of the epidermis,—a mere mechanical rushing of blood to the skin, and a corresponding change in its angle of reflection!

Without light, however, there is no color. Agriculturists and chemists understand this. Plants without light retain their oxygen, which bleaches them.

The theory of color has never been fully agreed upon. Some writers maintain that the character of its hues depends on the number of undulations of a ray. Goethe's theory is substantially, that colors are produced by the thinning or thickening and obstructing of light. Brewster contends that there are but three primary colors,—red, yellow, and blue. Wollaston finds four,—red, yellowish green, blue, and violet. But this, as well as the consideration of the solar spectrum of Newton, is more the specialty of Optics. The atmospheric relations of color are more apposite to our purpose.

The color of the clouds, which may be occasionally affected by electricity, is owing to the state of the atmosphere and its reflecting and refracting properties.

The color of snow is white because it is composed of an infinite variety of crystals, which reflect all the colors of light, absorbing none, and these, uniting before they reach the eye, appear white, which is the combination of all the colors.

Wind, the atmosphere in action, though not picturesque, is always wonderful, often terrible and sublime. The origin of wind, its direction and its force, its influence on the health of man, his business, his dwelling-place, and the climate where he perpetuates his race, have attracted the profound attention of the greatest philosophers.

To the rarefaction of the air at the equator, and the daily revolution of the earth, is attributed the origin of the Trade-Winds, which blow from the east or a little to the north of east, north of the equator, and east or south of east after we are south of the equator. The hot current of ascending air is replaced by cold winds from the poles.

But why are we not constantly subject to the action of north winds, which we rarely are? Because of the diurnal motion of the earth, which at the equator equals one thousand miles an hour. The polar winds in coming down to the equator do not have any such velocity, because there is a less comparative diurnal speed in the higher latitudes. The air at the poles revolves upon itself without moving forward;—at the equator, the velocity, as we have mentioned, is enormous. If, then, says Professor Schleiden, we imagine the air from the pole to be carried to the equator, some time must elapse before it will acquire the same velocity of motion from west to east which is always found there. Therefore it would remain behind, the earth gliding, as it were, from beneath it; or, in other words, it would have the appearance of an east wind. Lieutenant Maury adopts the same explanation. It is, indeed, that of Halley, slightly modified.

The warm air, ascending from the equatorial regions, rushes to the poles to be cooled in turn, sliding over the heavy strata of cold air below.

The northern trade-wind prevails in the Pacific between 2° and 25° of N. Latitude; the southern trade, between 10° and 21° of S. Latitude. In the Atlantic the trades are generally limited by the 8th and 28th degrees of N. Lat-

itude. The region of calms lies between these trades, and beyond them are what are styled the Variables. In the former the seaman finds baffling winds, rain, and storms. Occasionally, from causes not yet fully explained, north and south periodical winds break in upon them, such as the Northers which rage in the Gulf of Mexico.

There are many curious facts connected with the Trades, and with the Monsoons, or trade-winds turned back by continental heat in the East Indies, the Typhoons, the Siroccos, the Harmattans, land and sea breezes and hurricanes, the Samiel or Poison Wind, and the Etesian. The Cyclones, or rotary hurricanes, offer a most inviting field for observation and study, and are an important branch of our subject. But we are obliged to omit the consideration of these topics, to be taken up, possibly, at some other opportunity. The theory of the Cyclones may be justly considered as original with our countryman, Mr. Redfield. Colonel Reid, Mr. Piddington, and other learned Englishmen have adopted it; and so much has been settled through the labors of these eminent men, that intelligent seamen need fear these storms no longer. By the aid of maps and sailing-directions they may either escape them altogether, or boldly take advantage of their outward sweep, and shorten their passages.

We have yet to ascertain the causes of the many local winds prevailing both on the ocean and the land, and which do not appear to be influenced by any such general principle as the Trades or the Monsoons.

The force of air in motion gives us the gentle breeze, the gale, or the whirlwind. At one hundred miles an hour it prostrates forests. In the West Indies, thirty-two pound cannon have been torn by it from their beds, and carried some distance through the air. Tables of the velocity of winds are familiar to our readers.

Let us next advert to the connection

of the atmosphere with Vapor and Evaporation. The vapor rising from the earth and the sea by evaporation, promoted by dry air, by wind, by diminished pressure, or by heat, is borne along in vesicles so rare as to float on the bosom of the winds, sometimes a grateful shade of clouds, at other times condensed and gravitating in showers of rain. Thus it enriches the soil, or cools the air, or reflects back to the earth its radiated heat. At times the clouds, freighted with moisture, present the most gorgeous hues, and we have over us a pavilion more magnificent than any ever constructed by the hand of man. These clouds are not merely the distilleries of rain, but the reservoirs of snow and hail, and they are the agents of electric and magnetic storms.

Notwithstanding their variety, clouds are easily classified, and are now by universal consent distinguished as follows.

In the higher regions of the air we look for the Cirri, the Curl Clouds. They are light, lie in long ranges, apparently in the direction of the magnetic pole, and are generally curled up at one extremity. They are sometimes called Mackerel Clouds. They are composed of thin white filaments, disposed like woolly hair, feather crests, or slender net-work. They generally indicate a change of weather, and a disturbance of the electric condition of the atmosphere. When they descend into the lower regions of the air, they arrange themselves in horizontal sheets and lose much of their original type. The Germans call them *Windsbäume*, or wind-trees.

The Cumulus is another form of cloud, which floats along in fleecy masses, in the days of summer, but dissolves at night. Sometimes it resembles a great stack or pile of snow, sometimes it has a silvery or a golden edge, as if we saw a little of the lining. Sometimes they lie motionless in the distance, and are mistaken by mariners for land. They rest upon a large base, and are borne along by surface-winds. Their greatest height

is not more than two miles. They carry large quantities of moisture with them, and, when preceding rain, fall rapidly into other shapes.

The Stratus, or Fall Cloud, is horizontal in its figure, lies near the earth, and its length is usually greater than its breadth. It floats in long bands with rounded or sharpened points, and is seen rising from rivers or lakes, at first as a fog. In the morning it indicates fine weather. The Fall Cloud never discharges rain.

This comes only from the Nimbus, which is quite unlike the others. It puts on a dark gray color, has irregular transparent edges, and increases rapidly so as to obscure the sky. It appears to absorb the other clouds, to be a union of their differently electrified particles, which are attracted to each other, form drops of water, and descend as rain.

Of the first three forms we have three modifications or varieties. The Cirro-Cumulus is a congeries of roundish little clouds in close horizontal position, varying in size and roundness, and often, to use the words of the poet Bloomfield, appearing as

“The beauteous semblance of a flock at rest.”

The Cirro-Stratus is more compact than the Cirrus, — the strata being inclined or horizontal. It is sometimes seen cutting the moon's disc with a sharp line. The Cumulo-Stratus, or Twain Cloud, is denser than the Cumulus, and more ragged in its outlines. It overhangs its base in folds, and often bears perched on its summit some other form of cloud, which inosculates itself with it. Sometimes a Cirro-Stratus cloud comes along and fastens itself to it parasitically. It is one of our most picturesque forms of clouds.

Within the last two years we have twice observed in the city of New York, during the summer afternoons, large masses of clouds coming over from the southwest, and hanging rather low, which could not be well placed in any of the classes already described, or recognized as such by meteorologists. They consist-

ed of a great number of hemispherical forms of large diameter, hanging vertically from a Stratus cloud or plane above them, and to which they appeared attached. They were regular in shape, and very distinct; they barely touched each other, and were of a gray color. They might be compared to a hay-field turned upside down, with innumerable hay-cocks hanging below it. Unfortunately, the circumstances under which the spectacle was observed did not admit of any resort to the barometer, thermometer, or anemometer. Should further observations verify these remarks, it might perhaps be proper to style this variety the Hemispherical.

Dew is another atmospheric product. It is the condensation of the warmer vapor of the atmosphere, in calm and serene nights, and in the absence of clouds, by the cold surface of bodies on which it rests. In some countries it is copious enough to supply the want of rain. The earth radiates its own acquired heat, grows colder than the atmosphere, and so condenses it.

What is thermometrically called the dew-point is that degree at which the moisture present in the atmosphere, on being subjected to a decrease of temperature, begins to be precipitated or condensed. It is the same as the point of saturation. Daniell calls it "the constituent temperature of atmospheric vapor." It is our criterion for ascertaining how much moisture there is in the air, and at what degree of heat or cold it would be precipitated. When the air is saturated, a dry bulb and a wet bulb will read alike.

The dew-point has been a puzzle to most persons. Very few treatises explain it satisfactorily. The definition just given, though explicit, is not quite enough. For it will be perceived that an ordinary subtraction of the degrees of temperature on a wet thermometer, which had cooled down by evaporation, from the actual temperature indicated by a dry thermometer, will not give us the dew-point.

For example,—if a free or dry thermometer indicates 63° , and the one with the wet bulb has by evaporation cooled down to 54° , the difference would be 9° . The dew-point would not be 54° , but that degree to which the mercury would fall in the free thermometer, for the atmosphere to become saturated with the quantity of moisture then actually existing in it. It would be 46.8° .

This dew-point, which figures so largely in all well-kept meteorological reports, is the key to many important conditions of the atmosphere, affecting health, vegetation, and climate.

It is found that the air at different degrees of heat has different degrees of elasticity, different degrees of tension, and different degrees of capacity to hold vapor. Dalton, by a series of experiments with barometer-tubes, into which he introduced air and vapor at certain temperatures, found what its force was upon the mercurial column from degree to degree. He also experimentally determined the ratio of the weight of moisture and of air, the former being five-eighths of the latter,—in other words, how many grains of moisture additional could be held by the air, advancing from degree to degree of temperature. This being ascertained, a table of factors was constructed, in other words, a set of figures contrived, which should, by a multiplication of the subtracted difference between the range of the dry bulb and the wet bulb of the thermometers, furnish the amount of deduction from the former which would indicate the dew-point, or the point to which the mercury in the dry thermometer must fall to show how much more moisture the air could hold without its condensation. These tables of factors have been constructed at the Greenwich Observatory, and are generally used.

The Hygrometer, invented by Mr. Daniell, gives the dew-point by inspection.

It is an error to suppose that dew falls like rain from the air; it forms on the body which is cooled down below the

temperature of the air. It differs in quantity with the radiating or cooling surface; that which has absorbed and retained the most heat during the day radiates the most at night and furnishes the most cold in return.

Hoar-frost, such as we find on our window-panes, or on the grass, is the moisture of the warm air cooled down and frozen, and is produced when the cold at the surface is below the freezing-point. What we in common parlance call the action of frost, and which in this climate is well known to be very powerful, is not particularly injurious to organized bodies.

Mists are the vapor near the ground rendered visible by the temperature of the air falling below that of the vapor. When we see our breath in a cold morning, we see a mist. Where the surface is comparatively warm and damp, and the air is cooler, we have mists, which, if dense, are called fogs. These are found plentifully on the banks of Newfoundland; and with icebergs on the one hand and the Gulf Stream on the other, we must always expect to have them.

The distribution of rain, which is one of the offices of the clouds, is another of the more important features of Meteorology. The amount of water taken up by evaporation into the atmosphere is almost incredible. It is calculated by Lieutenant Maury that there is annually taken up in the torrid zone a belt of water three thousand miles in breadth and sixteen feet deep. Rain occurs regularly and irregularly in different parts of the earth. In some places it may be calculated upon to a day; in others it is quite unknown. Latitude and longitude may indicate the points of distribution, but the causes are dependent on temperature, winds, locality, and, what may seem a strange assertion, upon the conduct of man himself. The greatest quantity falls near the equator, diminishing towards the poles. Much more falls on islands and coasts than in the interior of continents, —more in the region of the variables and

less in that of the trades. There are, however, tropical countries of great extent where rain is scarcely ever seen.

The influence of man upon rain is seen in the progress of civilization, the destruction of forests, and the drying-up of meres, swamps, and water-courses.

Forests undoubtedly affect the distribution of rain, and the supplies of streams and springs. Their cooling influence precipitates the vapor passing over them, and the ground beneath them not getting heated does not readily evaporate moisture. Lands, on the contrary, which are cleared of forests become sooner heated, give off larger quantities of rarefied air, and the passing clouds are borne away to localities of greater atmospheric density.

The Canary Islands, when first discovered, were thickly clothed with forests. Since these have been destroyed, the climate has been dry. In Fuerteventura the inhabitants are sometimes obliged to flee to other islands to avoid perishing from thirst. Similar instances occur in the Cape Verdes. Parts of Egypt, Syria, and Persia, that once were wooded, are now arid and sterile deserts.

In the temperate zones these results are not so immediately apparent. It is now much in doubt whether the climate of our country has changed its character within the last two hundred years. Jefferson and Dr. Rush both contended that it had. Our oldest inhabitants assert that in their day our winters began nearly two months earlier than they do now.

The general laws laid down in relation to rain are these: —

1. It decreases in quantity as we approach the poles.
2. It decreases as we pass from maritime to inland countries.
3. It decreases in the temperate zones on eastern coasts as compared with western coasts, but within the tropics it is the reverse.
4. More rain falls in mountainous than in level countries.
5. Most rain falls within the tropics.

The rainless regions, not deserts, are parts of Guatemala, the table-land of Mexico, the Peruvian coast, parts of Morocco, Egypt, Arabia, Persia, etc.

The electric character of the air is another subject of interest, and a leading one in Meteorology. What can be more magnificent, what more awful, than those storms of lightning and thunder which are witnessed sometimes even in our own latitudes?

Faraday, who as a chemist and philosophical writer is of the highest authority, professes to have demonstrated that one single grain of water contains as much electricity as can be accumulated in eight hundred thousand Leyden jars, each requiring to charge it thirty turns of the large machine at the Royal Institution.

It is not intended that this astounding statement should be received without some grains of allowance; but a very elegant and scientific writer, who adopts it without hesitation, adds, "We can from this crystal sphere [of water] evoke heat, light, electricity in enormous quantities, and beyond these we can see powers or forces for which, in the poverty of our ideas and our words, we have not names."

Flashes of electricity have been detected, during warm, close weather, issuing from some species of plants. The Tuberose and African Marigold have been seen to emit these mimic lightnings. (Goethe is the authority for this.) To atmospheric electricity we doubtless owe the coruscations of the Aurora, one of the most beautiful of our meteors.

The usual forms of lightning are the zigzag or forked sharply defined,—the sheet-lightning, illuminating a whole cloud, which it seems to open,—heat-lightning, not emanating from any cloud, but apparently diffused through the air and without report. There are also fireballs which shoot across the sky, leaving a train often visible for seconds and minutes. These last, when they project any masses to the earth, are termed *aërolites*.

Atmospheric electricity has much to do with the distribution of rain, the precipita-

tion of vapor, the condition of our nervous system, and, according to Humboldt, with the circulation of the organic juices. Atmospheric electricity has heretofore been a great obstacle to the success of the Magnetic Telegraph, and curiously disturbs its operation; but there has recently been invented an instrument called a Mutator, which is connected with the wires, and carries off all the disturbing influences of the atmosphere without interfering with the working current. On the other hand, artificially created electricity has led to important advances in many of the arts and sciences.

Ice is water frozen under a very curious and peculiar law. Hail is the congelation of drops of rain in irregular forms, always sudden,—by some attributed to electricity and currents of air violently rarefied by it, and by others to rain-drops falling through a cold stratum of air and suddenly congealed. Snow, the ermine of the earth, is the crystallized moisture of the air, and is in subjection to unchanging laws.

Water contracts as it grows colder, until it falls in temperature to 42°. It then expands till it reaches 32°, when it becomes solid, though its density is actually diminished, and its specific gravity is reduced to .929, while that of unfrozen water is 1.000. Of course it is much lighter, and it floats. This admirable arrangement prevents our rivers being frozen up and our lakes becoming solid. Ice thickens because it is porous, and allows the heat of the water to pass up and the cold to descend; but this is happily a slow process, as ice is a bad conductor. Salt water freezes at the temperature of 7°, 25° below freezing-point. There are many things to be said about ice, whether as glaciers, or Arctic bergs, or, as it is found sometimes, contrary to its general law, at the bottom of rivers and ponds, its geological movements in the transportation of boulders, and as an article of luxury;—but we are compelled to leave them for the present.

Snow, which, in its crystallization, sur-

passes the most perfect gems, is invariably found arranged in determinate angles, to wit, 60° , and its double, 120° , and formed of six-sided prisms. More than one hundred kinds have been described by Dr. Scoresby and others, and all these are combinations of the six-sided prism. The uses of snow, from its non-conducting qualities, whether as appreciated by the Esquimaux as a material for huts, or by the agriculturists of our own climate as sheltering the seed, are too well known to require any particular remarks. Strange as it may appear, the proximate cause of the formation of snow is not yet fully agreed upon by the learned.

The connection between Sound and the atmosphere is an important one. The air is a conductor of sound, and in some conditions one of the best. A bell rung in an exhausted receiver gives no sound. In the Arctic regions ordinary conversations have been distinctly heard for the distance of a mile and a half.

All that we have thus far said in this article bears directly, in some form or other, on another of the great features of Meteorology, one of its great objects, and an unceasing topic,—namely, Climate.

The term Climate, in its general sense, indicates the changes and condition of the atmosphere, such as we have been considering. It has something to do with all of them; it is not entirely controlled by any. Thus, places having the same mean annual temperature often differ materially in climate. In some (we quote Mrs. Somerville) the winters are mild and the summers cool, whereas in others the extremes of heat and cold prevail.

Climates are not found coincident with lines of latitude; they are quite as often found parallel to lines of longitude. If you connect the extreme points of the mean annual temperatures by a line passing round the earth, you have a zone, but never a true circle. The curves are longitudinal.

Climate is dependent on temperature, winds, the elevation of land, soil, ranges of mountains, and proximity of bodies of water; and it is also the expression, if we may so term it, of the changes in the atmosphere sensibly affecting our organs. Humboldt refers it to humidity, temperature, changes in barometric pressure, calmness or agitation of the air, amount of electric force, and transparency of the sky.

When mountains range themselves in lines of latitude across a continent, they are barriers to civilization, to the mingling of races, and the union of states. Thus, the Pyrenees have always kept France and Spain apart, the Alps and the Apennines have secluded Switzerland from its neighbors. In our own country, Providence has placed our great mountains on a northern and southern axis; the slopes, the direction, the prevailing winds, the facilities for transportation and travel favor no one of our northern, southern, and western States more than another.

Climate affects vegetation and the distribution of animal life, and thus greatly modifies commerce.

Whatever of importance is accomplished in those countries where climate has overpowered a race is best and principally done by the men of the temperate zones, who carry with them perseverance, courage, and ability, and maintain their ascendancy, true to their type, while they have their life to live.

But with our own eyes we may perceive how much climate affects agriculture. The humidity or dryness of soils, their natural or acquired heat or cold, the prevailing winds, the quantity of rain, the snows, the dews, all affect the planter of the seed and the tiller of the ground; they increase or diminish the aggregate of the products of countries, the value of their imports and exports,—in short, their material power, their resources, their influence, their very existence.

The climate of our own country is exceedingly variable. The transitions from heat to cold are very sudden, the range

of the mercury is very great. In the North, we have almost the Arctic winters; in the South, almost the peculiarities of the tropics. Of the State of Pennsylvania it has been said, that in this respect it is a compound of all the countries in the world. Mr. Jefferson and Dr. Rush, as before observed, insisted that our climate has changed; and Williams, the historian of Vermont, contends that New England has deteriorated in its seasons, temperature, harvests, and health, since its early settlement. Our winds blow from every point of the compass, but a due north wind is very rare. Our great western lakes have a large influence on our climate. Some learned men have asserted, that, if they were land, their area being about ninety-four thousand square miles, the region would be so cold as to be scarcely inhabitable.

Such is an outline of our subject. The science itself is by no means systematized. Many things are taken for granted which may yet be disproved. If, says Humboldt, we perceive a want of connection in the phenomena of certain sciences, we may anticipate the revelation of new facts, whose importance will probably be commensurate with the attention directed to other branches of study. What we want is a larger class of observers, and not only those who are professional persons, but those who would commune with Nature, and seek to invigorate their minds by the acquisition of new ideas, and a recourse to rich and pure sources of enjoyment.

But more than this. It is a requirement of the present age, says the same authority, that there should be an equal appreciation of all branches of mathematical and physical science; for the material wealth and the growing prosperity of nations are principally based upon a more enlightened employment of the products and forces of Nature.

Much attention has of late years been paid to this subject. Many distinguished men in Europe have connected their great reputations indissolubly with it, and

it is absolutely true that more persons are engaged in a common effort to promote this science than any other of our time. In Paris there is a large and flourishing society where the most brilliant of its savans combine their efforts. In London, that which was established in 1850 has met with remarkable success, and a most unexpected crowd of supporters. The finest instruments, the most accurate observations, and entire uniformity of purpose have been the result. In Germany, equal zeal prevails among its naturalists. There are more than eight hundred stations throughout the world where regular observations are made, and upwards of three hundred and sixty of them are in the United States. The Smithsonian Institution has been also a wise patron of this science, by its numerous publications, its lucid directions for observing meteorological changes, and the bestowal of standard instruments in large numbers to efficient and well-placed observers. By a recent arrangement, a portion of this work is to be performed by the Patent Office.

Observation, and accuracy in observation, are the foundation of this science. The results are compared to the leaves of a book, which will some day be arranged and bound together in one volume. The instruments in use are delicate, ingenious, and indispensable. Their history, uses, and importance would be topic enough for a separate article.

While at the first view Meteorology may appear to occupy but a limited sphere, upon a closer examination it will be found to embrace almost all the sciences, and to be commensurate with Nature itself. It is continually influencing us, by its agencies appealing to our senses, ministering to our wants, and governing our conduct.

Its influence upon its votaries is equally remarkable; for, as a rule, they are distinguished among the learned, their characters are in harmony with their pursuits, and they are recognized everywhere for disinterestedness, philanthropy, and public and private virtue. While Mental Phi-

losophy has made but little progress since the times of Plato, and the world is but little better for scholastic disputations, Natural Science has civilized man, elevated his condition, increased the circle of

his exertions, and, by the development of some of its simplest principles, united the intelligent, the learned, the enterprising, and the virtuous of all nations into a recognized and a noble brotherhood.

TREASURE-TROVE.

ONCE, the Castle of Chalus, crowned
 With sullen battlements, stood and frowned
 On the sullen plain around it;
 But Richard of England came one day,
 And the Castle of Chalus passed away
 In such a rapid and sure decay
 No modern yet has found it.

Who has not heard of the Lion King
 Who made the harps of the minstrels ring?
 Oh, well they might imagine it
 Hard for chivalry's ranks to show
 A knight more gallant to face a foe,
 With a firmer lance or a heavier blow,
 Than Richard I. Plantagenet;

Or gayer withal: for he loved his joke,
 As well as he loved, with slashing stroke,
 The haughtiest helm to hack at:
 Wine or blood he laughingly poured;
 'Twas a lightsome word or a heavy sword,
 As he found a foe or a festive board,
 With a skull or a joke to crack at.

Yet some their candid belief avow,
 That, if Richard lived in England now,
 And his lot were only a common one,
 He ne'er had meddled with kings or states,
 But might have been a bruiser of pates
 And champion now of the "heavy weights,"—
 A first-rate "Fighting Phenomenon."

A vassal bound in peace and war
 To Richard I. was Vidomar,—
 A noble as proud and needy
 As ever before that monarch bowed,
 But not so needy and not so proud
 As the monarch himself was greedy.

Vicomte was he of the Limousin,
 Where stones were thick and crops were thin,
 And profits small and slow to come in.
 But slow and sure, the father's plan, did
 Not suit the son. Sire lived close-handed ;
 Became, not rich, but very landed.
 The only debt that ever he made
 Was Nature's debt, and that he paid
 About the time of the Third Crusade, —
 A time when the fashion was fully set
 By Richard of running in tilts and debt,
 When plumes were high and prudence low,
 And every knight felt bound to "go
 The pace," and just like Richard do,
 By running his purse and a Paynim through.
 Yet do not suppose that Vidomar
 Was ever a knight in the Holy War:
 For Richard many a Saracen's head
 Had lopped before the old Count was dead ;
 And Richard was home from Palestine,
 Home from the dungeon of Tiernstein,
 And many a Christian corpse had made,
 Ere the time in which the story is laid.
 But the fashion he set became so strong,
 That Vidomar was hurried along,
 And did as many a peer has done
 On reaching a title and twenty-one,
 And met the fate that will meet a peer
 Who lives in state on nothing a year.
 Deserted by all, except some Jews,
 Holding old post-obits and IOUs,
 Who hunted him up and hunted him down,
 He left Limoges, the capital town,
 For his country castle Chalus,
 (As spendthrift lords to Boulogne repair,
 To give their estates a chance to air,
 And went to turning fallows ;
 At least, he ordered it, (much the same,)
 And went himself in pursuit of game
 Or any rural pleasure,
 Till one fine day, as he rode away,
 A serf came running behind to say
 They'd found a crock of treasure.
 No more he thought of hawk or hound,
 But spurred to the spot, and there he found,
 Beyond his boldest thoughts,
 A sum to set him afloat again, —
 The leading figure, 'twas very plain,
 Was followed by several 0s.

Oh, who can tell of the schemes that flew
 Through his head, as the treasure met his view,

And he knew that again his note was good ?
 He may have felt as a debtor would
 Who has dodged a dogging dun,
 Or a bank-cashier in his hour of dread
 With brokers behind and breakers ahead,
 Or a blood with his last "upon the red,"—
 And each expecting a run.
 What should he do ? 'Twas very true
 That all of his debts were overdue ;
 But the "real-whole-souled" must use their gold
 To run new scores,— not to pay off old.
 That night he lay till the break of day,
 The doubtful question solving :
 Himself in his bed, and that in his head,
 He kept by turns revolving.

THAT selfsame day, not very far
 From the country castle of Vidomar,
 The king had been progressing :
 A courtly phrase, when the king was out
 On a chivalrous bender ; any route
 As good as another : what about
 Were little good in guessing.

That night, as he sat and drank, he frowned,
 While courtiers moodily stood around,
 All wondering what the journey meant,
 Till a scout reported, "Treasure found!"—
 With a rap that made the glasses bound,
 He swore, "By Arthur's table round,
 I'll have another tournament!"

No more, as he sat and drank, he frowned,
 Or courtiers moodily stood around,
 But all were singing, drinking ;
 And louder than all the songs he led,
 And louder he said, "Ho ! pass the red !"
 Till he went to bed with a ring in his head
 That seemed like gold a-chinking.

'Twere wrong to infer from what you've read
 That Richard awoke with an aching head ;
 For nerves like his resisted
 With wonderful ease what we might deem
 Enough to stagger a Polypheme,
 And his spirits would never more than seem
 A trifle too much "assisted."

And yet in the morn no fumes were there,
 And his eyes were bright,— almost as a pair

Of eyes that you and I know ;
 For his head, the best authorities write,
 (See the Story of Tuck,) was always right
 And sound as ever after a night
 Of "*Pellite curas vino !*"

As soon as the light broke into his tent,
 Without delay for a herald he sent,
 And bade him don his tabard,
 And away to the Count to say, "By law
 That gold was the king's : unless he saw
 The same ere noon, his sword he would draw
 And throw away the scabbard."

An hour, for his morning exercise,
 He swayed that sword of wondrous size, —
 'Twas called his great "persuader" ;
 Then a mace of steel he smote in two, —
 A feat which the king would often do,
 Since Saladin wondered at that *coup*
 When he met our stout crusader.

A trifle for him : he "trained to light," —
 Grown lazy now : but his appetite,
 On the whole, was satisfactory, —
 As the vanishing viands, warm and cold,
 Most amply proved, ere, minus the gold,
 The herald returned and trembling told
 How the Count had proved refractory :

Had owned it true that his serfs had found
 A treasure buried somewhere in the ground, —
 Perhaps not strictly a nugget :
 Though none but Norman lawyers chose
 To count it tort, if the finders "froze"
 To treasure-trove, — especially those
 Who held the land where they dug it, —

For quits he'd give up half, — down, — cash ;
 And that, for one who had gone to smash,
 Was a liberal restitution :
 His neighbor Shent-per-Shent did sue
 On a better claim, and put it through, —
 Recovered his suit, but not a *sou*
 At the tail of an execution.

Cœur gazed around with the ominous glare
 Of the lion deprived of the lion's share, —
 A look there was no mistaking, —
 A look which the courtiers never saw
 Without a sudden desire to draw
 Away from the sweep of the lion's paw
 Before their bones were aching.

He caught the herald,—'twas by the slack
 Of garments below and behind his back,—
 Then twirled him round for a minute ;
 And when at last he let him free,
 He shied him at a neighboring tree,
 A distance of thirty yards and three,
 And lodged him handsomely in it :

Then seized his ponderous battle-axe,
 And bade his followers mount their hacks,
 With a look on his countenance *so stern*,
 So little of fun, so full of fight,
 That, when he came in the Count's full sight,
 In something of haste and more of fright,
 The Count rode out of the postern ;

And crowding leagues from his angry liege,
 He left his castle to storm or siege,—
 His poor beef-eaters to hold out,
 Or save themselves as well as they could,
 Or be food for crows : what noble should
 Waste thought on such ? As a noble would,
 He prudently smuggled the gold out.

In the feudal days, in the good old times
 Of feudal virtues and feudal crimes,
 A point of honor they'd make in it,
 Though sure in the end their flag must fall,
 To show stout fight and never to call
 A truce till they saw a hole in the wall
 Or a larder without any steak in it.

The fight began. Shouts filled the air,—
 "St. George !" "St. Denis !" — as here and there
 The shock of the battle shifted ;
 There were catapult-shots and shots by hand,
 Ladders with desperate climbers manned,
 Rams and rocks, hot lead, and sand
 On the heads of the climbers sifted.

But the sturdy churls would not give way,
 Though Richard in person rushed to the fray
 With all of his rash proclivity
 For knocks ; till, despairing of knightly fame
 In doughty deeds for a doubtful claim,
 The hero of Jaffa changed his game
 To a masterly inactivity.

He stretched his lines in a circle round,
 And pitched his tent on a rising ground
 For general supervision

Of both the hostile camps, while he
 Could join with Blondel in minstrel glee,
 Or drink, or dice with Marcadee,
 And *they*—consume provision.

To starve a garrison day by day
 You may not think a chivalrous way
 To take a fortification.

The story is dull: by way of relief,
 I make a digression, very brief,
 And leave the "ins" to swallow their beef,
 The "outs" their mortification.

Many there were in Richard's train
 More known to fame and of higher degree,
 But none that suited his fickle vein
 So well as Blondel and Marcadee.
 Blondel had grown from a minstrel-boy
 To a very romantic troubadour
 Whose soul was music, whose song was joy,
 Whose only motto was *Vive l'amour!*
 In lady's bower, in lordly hall,
 From the king himself to the poorest clown,
 A joyous welcome he had from all,
 And Care in his presence forgot to frown.
 Sadly romantic, fantastic and vain,
 His heart for his head still made amends;
 For he never sang a malicious strain,
 And never was known to fail his friends.
 Who but he, when the captive king,
 By a brother betrayed, was left to rot,
 Would have gone disguised to seek and sing,
 Till he heard his tale and the tidings brought?
 Little the listening sentries dreamed,
 As they watched the king and a minstrel play,
 That what but an idle rhyming seemed
 Would rouse all England another day!
 'Twas the timely aid of a friend in need,
 And, seldom as Richard felt the power
 Of a service past, he remembered the deed
 And cherished him ever from that hour:
 He made him his bard, with nought to do
 But court the ladies and court the Nine,
 And every day bring something new
 To sing for the revellers over their wine;
 With once a year a pipe of Sherry,
 A suit of clothes, and a haunch of venison,
 To make himself and his fellows merry,—
 The salary now of Alfred Tennyson.

Marcadee was a stout Brabançon,
 With conscience weak and muscles strong,

Who roamed about from clime to clime,
 The side of virtue or yet of crime
 Ready to take in a regular way
 For any leader and regular pay ;
 Who trusted steel, and thought it odd
 To fear the Devil or honor God.
 His *forte* was not in the field alone,
 He was no common fighter,
 For in all accomplishments he shone,—
 At least, in all the lighter.
 To lance or lute alike *au fait*,
 With grasp now firm, now light,
 He flourished this to knightly lay,
 And that to lay a knight.
 Ready in fashion to lead the *ton*,
 In the battle-field his men,
 He danced like a Zephyr, and, harness on,
 Could walk his mile in ten.
 And Nature gave him such a frame,
 His tailor such a fit,
 That, whether a head or a heart his aim,
 He always made a hit.
 Wherever he went, the ladies dear
 Would very soon adore him,
 And, quite of course, the lords would sneer,—
 But never sneer before him !
 Perhaps it fared with the ladies worse
 Than it fared with their gallants ;
 For he broke a vow with as slight remorse
 As he ever broke a lance.
 Thus, tilting here and jilting there,
 He fought a foe or he fooled a fair,
 But little recking how ;
 So deadly smooth, so cruel and vain,
 He might have made a capital Cain,
 Or a splendid dandy now.
 In short, if you looked o'er land and sea,
 From London to the Niger,
 You certainly must have said with me,—
 If Richard was lion, Marcadee
 Might well have been the tiger.

A MONTH went by. They lay there still,
 And chafed with nothing but time to kill,—
 A tough old foe. Observe the way
 They laid him out, as thus :— One day,—
 'Twas after dinner and afternoon,
 When the noise was over of knife and fork,
 And only was heard an occasional cork
 And Blondel idly thrumming a tune,—

King Richard pushed the wine along,
 And rapped the table, and cried, "A song!
 Dulness I hold a shame, a sin
 Against good wine. Come, Blondel, begin!"
 Blondel coughed,— was "half afraid,"—
 Was "out last night on a serenade,
 And caught a cold,"— his "voice was gone,—
 And really, just now, his head" ——"Go on!"
 He bowed, and swept the chords — "Brrrrang"—
 With a handful of notes, and thus he sang:—

BLONDEL.

LIFE is fleeting,— make it pleasant;
 Care for nothing but the present;
 For the past we leave behind us,
 And the future may not find us.
 Though we cannot shun its troubles,
 Care and sorrow we may banish;
 Though its pleasures are but bubbles,
 Catch the bubbles ere they vanish.

There is joy we cannot measure,—
 Joy we may not win with treasure.
 When the glance of Beauty thrills us,
 When her love with rapture fills us,
 Let us seize it ere it passes;
 Be our motto, "Love is mighty."
 Fill, then, fill your brimming glasses!
 Fill, and drink to Aphrodite!

Of course they drank with a right good will,
 For they never missed a chance "to fill."
 And yet a few, I'm sorry to own,
 Made side-remarks in an undertone,
 Like those we hear, when, nowadays,
 Good-natured friends, with seeming praise,
 Contrive to damn. In the midst of the hum
 They heard a loud and slashing thrum:
 'Twas the king: and each his breath drew in
 Till you might have heard a falling pin.
 Some little excuse, at first, he made,
 While over the lute his fingers strayed:—
 "You know my way,—as the fancies come,
 I improvise."—There was ink on his thumb.
 That morning, alone, good hours he spent
 In writing despatches never sent.

RICHARD.

THERE is pleasure when bright eyes are glancing
 And Beauty is willing; but more

When the war-horse is gallantly prancing
 And snuffing the battle afar, —
 When the foe, with his banner advancing,
 Is sounding the clarion of war.

Where the battle is deadly and gory,
 Where foeman 'gainst foeman is pressed,
 Where the path is before me to glory,
 Is pleasure for me, and the best.
 Let me live in proud chivalry's story,
 Or die with my lance in its rest!

The plaudits followed him loud and free
 As he tossed the lute to Marcadee,
 Who caught it featly, bowing low,
 And said, "My liege, I may not know
 To improvise; but I'll give a song,
 The song of our camp, — we've known it long.
 It suits not well this tinkle and thrum,
 But needs to be heard with a rattling drum.
 Ho, there! Tambour! — He knows it well, —
 'The Brabançon!' — Now make it tell;
 Let your elbows now with a spirit wag
 In the outside roll and the double drag."

MARCADEE.

I'M but a soldier of fortune, you see:
 Huzza!
 Glory and love, — they are nothing to me:
 Ha, ha!
 Glory's soon faded, and love is soon cold:
 Give me the solid, reliable gold:
 Hurrah for the gold!

Country or king I have none, I am free:
 Huzza!
 Patriot's quarrel, — 'tis harvest for me:
 Ha, ha!
 A soldier of fortune, my creed is soon told, —
 I'd fight for the Devil, to pocket his gold:
 Hurrah for the gold!

He turned to the king, as he finished the verse,
 And threw on the table a heavy purse
 With a pair of dice; another, I trow,
 Still lurked *incog.* for a lucky throw: —
 "'Tis mine; 'twas thine. If the king would play,
 Perchance he'd find his revenge to-day.
 Gambling, I own, is a fault, a sin;
 I always repent — unless I win."
Le jeu est fait. — "Well thrown! eleven!
 My purse is gone. — Double-six, by heaven!"

At this unlucky point in the game
 A herald was ushered in. He came
 With a flag of truce, commissioned to say
 The garrison now were willing to lay
 The keys of the castle at his feet,
 If he'd let them go and let them eat:
 They'd done their best; could do no more
 Than humbly wait the fortune of war
 And Richard's word. It came in tones
 That grated harshly:—"D—n the bones
 And double-six! Marcadee, you've won.—
 Take back my word to each mother's son,
 And tell them Richard swore it:
 Be the smoke of their den their funeral pall!
 By the Holy Tomb, I'll hang them all!
 They've hung out so well behind their wall,
 They'll hang out well before it."
 Then Richard laughed in his hearty way,
 Enjoying his joke, as a monarch may;
 He laughed till he ached for want of breath:
 If it lacked in life, it was full of death:
 Like many, believing the next best thing
 To a joke with a point is a joke with a sting.
 Loud he laughed; but he laughed not long
 Ere he leaped to the back of his charger strong,
 And bounded forward, axe on high,
 Circling the tents with his battle-cry,—
 "Away! away! we shall win the day:
 In the front of the fight you'll find me:
 The first to get in my spurs shall win,—
 My boots to the wight behind me!"

* * * They have reached the moat;
 The draw is up, but a wooden float
 Is thrust across, and onward they run;
 The bank is gained and the barbican won;
 The outer gate goes down with a crash;
 Through the portcullis they madly dash,
 And with shouts of triumph they now assail
 The innermost gate. The crushing hail
 Of rocks and beams goes through the mass,
 Like the summer-hail on the summer-grass;—
 They falter, they waver. A stalwart form
 Breaks through the ranks, like a bolt in the storm:
 'Tis the Lion King!—"How, now, ye knaves!
 Do ye look for safety? Find your graves!"—
 One blow to the left, one blow to the right,—
 Two recreants fall;—no more of flight.
 One stride to the front, and, stroke on stroke,
 His curtle-axe rends the double oak.
 Down shower the missiles;—they fall in vain;
 They scatter like drops from the lion's mane.

He is down, — he is up ; — that right arm ! how
 'Tis nerved with the strength of twenty, now !
 The barrier yields, — it shivers, — it falls.
 “ Huzza ! Saint George ! to the walls ! to the walls !
 Throw the rats to the moat ! cut down ! spare not !
 No quarter ! remember — *Je—su !* I'm shot !

On a silken pallet lying, under hangings stiff with gold,
 Now is Cœur-de-Lion sighing, weakly sighing, he the bold !
 For with riches, power, and glory now forever he must part.
 They have told him he is dying. Keen remorse is at his heart.
 Life is grateful, life is glorious, with the pulses bounding high
 In a warrior frame victorious : it were easy so to die.
 Yet to die is fearful ever ; oh, how fearful, when the sum
 Of the past is lengthened murder, — and a fearful world to come !
 Where are now the wretched victims of his wrath ? The deed is done.
 He has conquered. They have suffered. Yonder, blackening in the sun,
 From the battlements they're hanging. Little joy it gives to him
 Now to see the work of vengeance, when his eye is growing dim !
 One was saved, — the daring Bowman who the fatal arrow sped ;
 He was saved, but not for mercy ; better numbered with the dead !
 Now, relenting, late repenting, Richard turns to Marcadee,
 Saying, “ Haste, before I waver, bring the captive youth to me.”
 He is brought, his feet in fetters, heavy shackles on his hands,
 And, with eye unflinching, gazing on the king, erect he stands.
 He is gazing not in anger, not for insult, not for show ;
 But his soul, before its leaving, Richard's very soul would know.
 Death is certain, — death by torture : death for him can have no sting,
 If that arrow did its duty, — if he share it with the king.
 Were he trembling or defiant, were he less or more than bold,
 Once again to vengeful fury would he rouse the fiend of old
 That in Richard's breast is lurking, ready once again to spring.
 Dreading now that vengeful spirit, with a wavering voice, the king
 Questions impotently, wildly : “ Prisoner, tell me, what of ill
 Ever I have done to thee or thine, that me thou wouldest kill ? ”
 Higher, prouder still he bears him ; o'er his countenance appear,
 Flitting quickly, looks of wonder and of scorn : what does he hear ?

“ And dost thou ask me, man of blood, what evil thou hast done ?
 Hast thou so soon forgot thy vow to hang each mother's son ?
 No ! oft as thou hast broken vows, I know them to be strong,
 Whene'er thy pride or lust or hate has sworn to do a wrong.
 But churls should bow to right divine of kings, for good or ill,
 And bare their necks to axe or rope, if 'twere thy royal will ?
 Ah, hadst thou, Richard, yet to learn the very meanest thing
 That crawls the earth in self-defence would turn upon a king ?
 Yet deem not 'twas the hope of life which led me to the deed :
 I'd freely lose a thousand lives to make thee, tyrant, bleed ! —
 Ay ! mark me well, canst thou not see somewhat of old Bertrand ?
 My father good ! my brothers dear ! — all murdered by thy hand !
 Yes, one escaped ; he saw thee strike, he saw his kindred die,
 And breathed a vow, a burning vow of vengeance ; — it was I !

I've lived ; but all my life has been a memory of the slain ;
 I've lived but to revenge them, — and I have not lived in vain !
 I read it in thy haggard face, the hour is drawing nigh
 When power and wealth can aid thee not, — when, Richard, thou must DIE !
 What mean those pale, convulsive lips ? What means that shrinking brow ?
 Ha ! Richard of the lion-heart, thou art a coward now !
 Now call thy hireling ruffians ; bid them bring the cord and rack,
 And bid them strain these limbs of mine until the sinews crack ;
 And bid them tear the quivering flesh, break one by one each bone ;—
 Thou canst not break my spirit, though thou mayst compel a groan.
 I die, as I would live and die, the ever bold and free ;
 And I shall die with joy, to think I've rid the world of thee."

Swords are starting from their scabbards, grim and hardened warriors wait
 Richard's slightest word or gesture that may seal the Bowman's fate.
 But his memory has been busy with the deeds of other times.
 In the eyes of wakened conscience all his glories turn to crimes,
 And his crimes to something monstrous ; worlds were little now to give
 In atonement for the least. He cries, in anguish, " Let him live.
 He has reason ; never treason more became a traitor bold.
 Youth, forgive as I forgive thee ! Give him freedom, — give him gold.
 Marcadee, be sure, obey me ; 'tis the last, the dying hest
 Of a monarch who is sinking, sinking fast, — oh, not to rest !
 Haply, He above, remembering, may relieve my dark despair
 With a ray of hope to light the gloom when I am suffering — there !"

The captain neared the royal bed
 And humbly bowed his helmèd head,
 And laid his hand upon the plate
 That sheathed his breast, and said, " Though late
 Thy mercy comes, I hold it still
 My duty to do thy royal will.
 If I should fail to serve thee fair,
 May I be doomed to suffer — there !"

I've often met with a fast young friend
 More ready to borrow than I to lend ;
 I've heard smooth men in election-time
 Prove every creed, but their own, a crime :
 Perhaps, if the fast one wished to borrow,
 I've taken his word to pay " to-morrow " ;
 Perhaps, while Smooth explained his creed,
 I've thought him the man for the country's need ;
 Perhaps I'm more of a trusting mood
 Than you suppose ; but I think I would
 Have trusted that man of mail,
 If I had been the dying king,
 About as far as you could sling
 An elephant by the tail !

GOOD subjects then, as now, no doubt,
 When a king was dead, were eager to shout

In time, "God save" the new one!
 One trouble was always whom to choose
 Amongst the heirs; for it raised the deuse
 And ran the subject's neck in a noose,
 Unless he chose the true one.

Another difficult task, — to judge
 If the coming king would bear a grudge
 For some old breach of concord,
 And take the earliest chance to send
 A trusty line by a trusty friend
 To give his compliments at the end
 Of a disagreeable strong cord.

And whoever would have must seize his own.
 Thus a dying king was left alone,
 With a sad neglect of manners;
 Ere his breath was out, the courtiers ran,
 With fear or zeal for "the coming man,"
 In time to escape from under his ban,
 Or hurry under his banners.

So Richard was left in a shabby way
 To Marcadee, with an abbot to pray
 And pother with "consolation,"
 Reminding 'twas never too late to search
 For mercy, and hinting that Mother Church
 Was never known to leave in the lurch
 A king with a fat donation.

But the abbot was known to Richard well,
 As one who would smoothen the road to hell,
 And quite as willing to revel
 As preach; and he always preached to "soothe,"
 With a mild regard for "the follies of youth," —
 Himself, in epitome, proving the truth
 Of the world, the flesh, and the Devil.

This was the will that Richard made:—
 "My body at father's feet be laid;
 And to Rouen (it loved me most)
 My heart I give; and I give my ins-
 Ides to the rascally Poitevins;
 To the abbot I give my darling — sins;
 And I give" — He gave up the ghost.

The abbot looked grave, but never spoke.
 The captain laughed, gave the abbot a poke,
 And, without ado or lingering,
 "Conveyed" the personals, jewels, and gold,
 Omitting the formal *To Wade and to Hold*.
 From the royal finger, before it was cold,
 He slipped the royal finger-ring.

There might have been in the eye of the law
 A something which lawyers would call a flaw
 Of title in such a conversion :
 But if weak in the law, he was strong in the hand,
 And had the "nine points." — He summoned his band,
 And ordered before him the archer Bertrand,
 Intending a little diversion.

He called the cutter, — no cutter of clothes,
 But such as royalty kept for those
 Who happened to need correcting, —
 And told him that Richard, before he died,
 Desired to have a scalpel applied
 To the traitor there. With professional pride,
 The cutter began dissecting.

Now Bones was born with a genius to flay :
 He might have ranked, had he lived to-day,
 As a capital taxidermist :
 And yet, as he tugged, they heard him say,
 Of all the backs that ever lay
 Before him in a professional way,
 That was of all backs the firmest.

Kind reader, allow me to drop a veil
 In pity ; I cannot pursue the tale
 In the heartless tone of the last strophe.
 'Tis done, and again I'll be the same.
 They triumphed not, if they felt no shame :
 No muscle quivered, no murmur came,
 Until the final catastrophe.

The captain jested a moment, then
 He waved his hand and bowed to his men
 With a single word, "Disbanded,"
 And galloped away with three or four
 Stout men-at-arms to the nearest shore,
 Where a gallant array not long before
 With the king in pride had landed.

He coasted around, went up the Rhine,
 So famous then for robbers and wine,
 So famous now as a ramble.
 The wine and the robbers still are there ;
 But they rob you now with a bill of fare,
 And gentlemen bankers "on the square"
 Will clean you out, if you gamble.

He built him a Schloss on — something-Stein,
 And became the first of as proud a line
 As e'er took toll on the river,
 When barons, perched in their castles high,

On the valley would keep a watchful eye,
 And pounce on travellers with their cry,
 "The Rhine-dues! down! deliver!"

And crack their crowns for any delay
 In paying down. And that, by the way,
 About as correctly as I know,
 Is the origin true of an ancient phrase
 So frequently heard in modern days,
 When a gentleman quite reluctantly pays, —
 I mean, "To come down with the rhino."

A LEGEND OF MARYLAND.

"AN OWRE TRUE TALE."

THE framework of modern history is, for the most part, constructed out of the material supplied by national transactions described in official documents and contemporaneous records. Forms of government and their organic changes, the succession of those who have administered them, their legislation, wars, treaties, and the statistics demonstrating their growth or decline, — these are the elements that furnish the outlines of history. They are the dry timbers of a vast old edifice; they impose a dry study upon the antiquary, and are still more dry to his reader.

But that which makes history the richest of philosophies and the most genial pursuit of humanity is the spirit that is breathed into it by the thoughts and feelings of former generations, interpreted in actions and incidents that disclose the passions, motives, and ambition of men, and open to us a view of the actual life of our forefathers. When we can contemplate the people of a past age employed in their own occupations, observe their habits and manners, comprehend their policy and their methods of pursuing it, our imagination is quick to clothe them with the flesh and blood of human brotherhood and to bring them into full sympathy with our individual nature.

History then becomes a world of living figures, — a theatre that presents to us a majestic drama, varied by alternate scenes of the grandest achievements and the most touching episodes of human existence.

In the composing of this drama the author has need to seek his material in many a tangled thicket as well as in many an open field. Facts accidentally encountered, which singly have but little perceptible significance, are sometimes strangely discovered to illustrate incidents long obscured and incapable of explanation. They are like the lost links of a chain, which, being found, supply the means of giving cohesion and completeness to the heretofore useless fragments. The scholar's experience is full of these reunions of illustrative incidents gathered from regions far apart in space, and often in time. The historian's skill is challenged to its highest task in the effort to draw together those tissues of personal and local adventure which, at first without seeming or suspected dependence, prove, when brought into their proper relationship with each other, to be unerring exponents of events of highest concern.

It is pleasant to fall upon the course of one of these currents of adventure, —

to follow a solitary rivulet of tradition, such as by chance we now and then find modestly flowing along through the obscure coverts of time, and to be able to trace its progress to the confluence of other streams,—and finally to see it grow, by the aid of these tributaries, to the proportions of an ample river, which waters the domain of authentic history and bears upon its bosom a clear testimony to the life and character of a people.

The following legend furnishes a striking and attractive exemplification of such a growth, in the unfolding of a romantic passage of Maryland history, of which no annalist has ever given more than an ambiguous and meagre hint. It refers to a deed of bloodshed, of which the only trace that was not obliterated from living rumor so long as a century ago was to be found in a vague and misty relic of an old memory of the provincial period of the State. The facts by which I have been enabled to bring it to the full light of an historical incident, it will be seen in the perusal of this narrative, have successively, and by most curious process of development, risen into view through a series of accidental discoveries, which have all combined, with singular coincidence and adaptation, to furnish an unquestionable chapter of Maryland history, altogether worthy of recital for its intrinsic interest, and still more worthy of preservation for the elements it supplies towards a correct estimate of the troubles which beset the career and formed the character and manners of the forefathers of the State.

CHAPTER I.

TALBOT'S CAVE.

It is now many years ago,—long before I had reached manhood,—that, through my intimacy with a friend, then venerable for his years and most attractive to me by his store of historical knowledge, I became acquainted with a tradition touching a strange incident that had reference to a mysterious person connected with a locality on the Susquehanna River

near Havre de Grace. In that day the tradition was repeated by a few of the oldest inhabitants who dwelt in the region. I dare say it has now entirely run out of all remembrance amongst their descendants, and that I am, perhaps, the only individual in the State who has preserved any traces of the facts to which I allude.

There was, until not long ago, a notable cavern at the foot of a rocky cliff about a mile below the town of Port Deposit. It was of small compass, yet sufficiently spacious to furnish some rude shelter against the weather to one who might seek refuge within its solitary chamber. It opened upon the river just where a small brook comes brattling down the bank, along the base of a hill of some magnitude that yet retains the stately name of Mount Ararat. The visitor of this cavern might approach it by a boat from the river, or by a rugged path along the margin of the brook and across the ledges of the rock. This rough shelter went by the name of Talbot's Cave down to a very recent period, and would still go by that name, if it were yet in existence. But it happened, not many years since, that Port Deposit was awakened to a sudden notion of the value of the granite of the cliff, and, as commerce is a most ruthless contemner of all romance, and never hesitates between a speculation of profit and a speculation of history, Talbot's Cave soon began to figure conspicuously in the Price Current, and in a very little while disappeared, like a witch from the stage, in blasts of sulphur fire and rumbling thunder, under the management of those effective scene-shifters, the quarrymen. A government contract, more potent than the necromancy of the famed wizard Michael Scott, lifted this massive rock from its base, and, flying with it full two hundred miles, buried it fathoms below the surface of the Atlantic, at the Rip Raps, near Hampton Roads; and thus it happens that I cannot vouch the ocular proof of the Cave to certify the legend I am about to relate.

The tradition attached to this spot had

nothing but a misty and spectral outline. It was indefinite in the date, uncertain as to persons, mysterious as to the event,—just such a tradition as to whet the edge of one's curiosity and to leave it hopeless of gratification. I may relate it in a few words.

Once upon a time, somewhere between one and two hundred years ago, there was a man by the name of Talbot, a kinsman of Lord Baltimore, who had committed some crime, for which he fled and became an outlaw and was pursued by the authorities of the Province. To escape these, he took refuge in the wilderness on the Susquehanna, where he found this cave, and used it for concealment and defence for some time,—how long, the tradition does not say. This region was then inhabited by a fierce tribe of Indians, who are described on Captain John Smith's map as the "Sasqueshannocks," and who were friendly to the outlaw and supplied him with provisions. To these details was added another, which threw an additional interest over the story,—that Talbot had a pair of beautiful English hawks, such as were most prized in the sport of falconry, and that these were the companions of his exile, and were trained by him to pursue and strike the wild duck that abounded, then as now, on this part of the river; and he thus found amusement to beguile his solitude, as well as sustenance in a luxurious article of food, which is yet the pride of gastronomic science, and the envy of *bons vivants* throughout this continent.

These hawks my aged friend had often himself seen, in his own boyish days, sweeping round the cliffs and over the broad expanse of the Susquehanna. They were easily distinguished, he said, by the residents of that district, by their peculiar size and plumage, being of a breed not known to our native ornithology, and both being males. For many years, it was affirmed,—long after the outlaw had vanished from the scene,—these gallant old rovers of the river still pursued their accustomed game, a solitary pair, without kindred or acquaintance

in our woods. They had survived their master,—no one could tell how long,—but had not abandoned the haunts of his exile. They still for many a year saw the wilderness beneath their daily flight giving place to arable fields, and learned to exchange their wary guard against the Indian's arrow for a sharper watch of the Anglo-Saxon rifle. Up to the last of their appearance the country-people spoke of them as Talbot's hawks.

This is a summary of the story, as it was told to me. No inquiry brought me any addition to these morsels of narrative. Who this Talbot was,—what was his crime,—how long he lived in this cave, and at what era,—were questions upon which the oracle of my tradition was dumb.

Such a story would naturally take hold of the fancy of a lover of romance, and kindle his zeal for an enterprise to learn something more about it; and I may reasonably suppose that this short sketch has already stirred the bosoms of the novel-reading portion, at least, of my readers with a desire that I should tell them what, in my later researches, I have found to explain this legend of the Cave. Even the outline I have given is suggestive of inferences to furnish quite a plausible chapter of history.

First, it is clear, from the narrative, that Talbot was a gentleman of rank in the old Province,—for he was kinsman to the Lord Proprietary; and there is one of the oldest counties of Maryland that bears the name of his family,—perhaps called so in honor of himself. Then he kept his hawks, which showed him to be a man of condition, and fond of the noble sport which figures so gracefully in the annals of Chivalry.

Secondly, this hawking carries the period of the story back to the time of one of the early Lords Baltimore; for falconry was not common in the eighteenth century: and yet the date could not have been much earlier than that century, because the hawks had been seen by old persons of the last generation somewhere about the period of our Revo-

lution; and this bird does not live much over a hundred years. So we fix a date not far from sixteen hundred and eighty for Talbot's sojourn on the river.

Thirdly, the crime for which he was outlawed could scarcely have been a mean felony, perpetrated for gain, but more likely some act of passion, -- a homicide, probably, provoked by a quarrel, and enacted in hot blood. This Talbot was too well conditioned for a sordid crime; and his flight to the wilderness and his abode there would seem to infer a man of strong purpose and self-reliance.

And, lastly, as he must have had friends and confederates on the frontier, to aid him in his concealment, and to screen him from the pursuit of the government officers, and, moreover, had made himself acceptable to the Indians, to whose power he had committed himself, we may conclude that he possessed some winning points of character; and I therefore assume him to have been of a brave, frank, and generous nature, capable of attracting partisans and enlisting the sympathies and service of bold men for his personal defence.

So, with the help of a little obvious speculation, founded upon the circumstantial evidence, we weave the network of quite a natural story of Talbot; and our meagre tradition takes on the form, and something of the substance, of an intelligible incident.

CHAPTER II.

STRANGE REVELATIONS.

AT this point I leave the hero of my narrative for a while, in order that I may open another chapter.

Many years elapsed, during which the tradition remained in this unsatisfactory state, and I had given up all hope of further elucidation of it, when an accidental discovery brought me once more upon the track of inquiry.

There was published in the city of Baltimore, in the year 1808, a book

whose title was certainly as little adapted to awaken the attention of one in quest of a picturesque legend as a treatise on Algebra. It was called "The Landholder's Assistant," and was intended, as its name imported, to assist that lucky portion of mankind who possessed the soil of Maryland in their pursuit of knowledge touching the mysteries of patents, warrants, surveys, and such like learning, necessary to getting land or keeping what they had. The character and style of this book, in its exterior aspect, were as unpromising as its title. It was printed by Messrs. Dobbin & Murphy, on rather dark paper, in a muddy type, -- such as no Mr. Dobbin nor Mr. Murphy of this day would allow to bear his imprimatur, -- though in 1808, I doubt not, it was considered a very creditable piece of Baltimore typography. This unpretending volume was compiled by Chancellor Kilty. It is a very instructive book, containing much curious matter, is worthy of better adornment in the form of its presentation to the world, and ought to have a title more suggestive of its antiquarian lore. I should call it "Fossil Remains of Old Maryland Law, with Notes by an Antiquary."

It fell into my hands by a purchase at auction, some twenty years after I had abandoned the Legend of the Cave and the Hawks as a hopeless quest. In running over its contents, I found that a Colonel George Talbot was once the Surveyor-General of Maryland; and in two short marginal notes (the substance of which I afterwards found in Chalmers's "Annals") it was said that "he was noted in the Province for the murder committed by him on Christopher Rousby, Collector of the Customs," -- the second note adding that this was done on board a vessel in Patuxent River, and that Talbot "was conveyed for trial to Virginia, from whence he made his escape; and after being retaken, and" (as the author expresses his belief) "tried and convicted, was finally pardoned by King James the Second."

These marginal notes, though bringing

no clear support to the story of the Cave, were embers, however, of some old fire not entirely extinct, which emitted a feeble gleam upon the path of inquiry. The name of the chief actor coincided with that of the tradition; the time, that of James the Second, conformed pretty nearly to my conjecture derived from the age of the hawks; and the nature of the crime was what I had imagined. There was just enough in this brief revelation to revive the desire for further investigation. But where was the search to be made? No history that I was aware of, no sketch of our early time that I had ever seen, nothing in print was known to be in existence that could furnish a clue to the story of the Outlaw's Cave.

And here the matter rested again for some years. But after this lapse, chance brought me upon the highway of further development, which led me in due time to a strange realization of the old proverb that "Murder will out,"—though, in this case, its discovery could bring no other retribution than the settlement of an historical doubt, and give some posthumous fame to the subject of the disclosure.

In the month of May, 1836, I had a motive and an opportunity to make a visit to the County of St. Mary's. I had been looking into the histories of our early Maryland settlement, as they are recounted in the pages of Bozman, Chalmers, and Grahame, and found there some inducements to persuade me to make an exploration of the whereabouts of the old city which was planted near the Potomac by our first pilgrims. Through the kindness of a much valued friend, whose acquirements and taste—both highly cultivated—rendered him a most effective auxiliary in my enterprise, I was supplied with an opportunity to spend a week under the hospitable roof of Mr. Carberry, the worthy Superior of the Jesuit House of St. Inigoes on the St. Mary's River, within a short distance of the plain of the ancient city.

Mr. Campbell and myself were invited by our host to meet him, on an appointed

day, at the Church of St. Nicholas on the Patuxent, near the landing at Town Creek, and we were to travel from there across to St. Inigoes in his carriage,—a distance of about fifteen miles.

Upon our arrival at St. Nicholas, we found a full day at our disposal to look around the neighborhood, which, being the scene of much historical interest in our older annals, presented a pleasant temptation to our excursion. Our friendly guide, Mr. Carberry, took us to Drum Point, the southern headland of the Patuxent at its entrance into Chesapeake Bay. Here was, at that time, and perhaps still is, the residence of the Carroll family, whose ancestors occupied the estate for many generations. The dwelling-house was a comfortable wooden building of the style and character of the present day, with all the appurtenances proper to a convenient and pleasant country homestead. Immediately in its neighborhood—so near that it might be said to be almost within the curtilage of the dwelling—stood an old brick ruin of what had apparently been a substantial mansion-house. Such a monument of the past as this, of course, could not escape our special attention, and, upon inquiry, we were told that it was once, a long time ago, the family home of the Rousbys, the ancestors of the present occupants of the estate; that several generations of this family, dating back to the early days of the Province, had resided in it; and that when it had fallen into decay, the modern building was erected, and the old one suffered to crumble into the condition in which we saw it. I could easily understand and appreciate the sentiment that preserved it untouched as part and parcel in the family associations of the place, and as a relic of the olden time which no one was willing to disturb.

The mention of the name of the Rousbys, here on the Patuxent River, was a sudden and vivid remembrancer to me of the old story of Talbot, and gave new encouragement to an almost abandoned hope of solving this mystery.

CHAPTER III.

A GRAVEYARD AND AN EPITAPH.

WITHIN a short distance of this spot, perhaps not a mile from Drum Point, there is a small creek which opens into the river and bears the name of Mattapony. In early times there was a notable fort here, and connected with it a stately mansion, built by Charles Calvert, Lord Baltimore, for his own occasional residence. The fort and mansion are often mentioned in the Provincial records as the place where the Council sometimes met to transact business; and accordingly many public acts are dated from Mattapony.

Calvert was doubtless attracted to this spot by the pleasant scenery of the headland which here looks out upon the noble water-view of the Chesapeake, and by its breezy position as an agreeable refuge from the heats of summer.

Our party, therefore, determined to set out upon a search for some relics of the mansion and fort; and as a guide in this enterprise, we engaged an old negro who seemed to have a fair claim in his own conceit to be regarded both as the Solomon and the Methuselah of the plantation. He was a wrinkled, wise-looking old fellow, with a watery eye and a grizzled head, and might, perhaps, have been about eighty; but, from his own account, he left us to infer that he was not much behind that great patriarch of Scripture whose years are described as one hundred and threescore and fifteen.

Finding that he was native to the estate, and had lived here all his life, we interrogated him with some confidence in his ability to contribute something useful to the issue of our pursuit. Amongst all the Solomons of this world, there is not one so consciously impressed with the unquestionable verity of his wisdom and the intensity of his knowledge as one of these veterans of an old family-estate upon which he has spent his life. He is always an aristocrat of the most uncompromising stamp, and has a contemptuous disdain and intolerance for every form of democracy. Poor white people

have not the slightest chance of his good opinion. The pedigree and history of his master's family possess an epic dignity in his imagination; and the liberty he takes with facts concerning them amounts to a grand poetical hyperbole. He represents their wealth in past times to have amounted to something of a fabulous superfluity, and their magnificence so unbounded, that he stares at you in describing it, as if its excess astonished himself.

When we now questioned our venerable conductor, to learn what he could tell us of the old Proprietary Mansion, he said, in his way, he "membered it, as if it was built only yesterday: he was fotch up so near it, that he could see it now as if it was standing before him: if *he* couldn't pint out where it stood, it was time for him to give up: it was a mighty grand brick house,"—laying an emphasis on *brick*, as a special point in his notion of its grandeur; and then he added, with all the gravity of which his very solemn visage was a copious index, that "Old Master Baltimore, who built it, was a real fine gentleman. He knowed him so well! He never gave anything but gold to the servants for tending on him. Bless you! he wouldn't even think of silver! Many a time has he given me a guinea for waiting on him."

This account of Old Master Baltimore, and his magnificent contempt of silver, and the intimacy of our patriarch with him, rather startled us, and I began to fear that the story of the house might turn out to be as big a lie as the acquaintance with the Lord Proprietary,—for Master Baltimore had then been dead just one hundred and twenty-one years. But we went on with him, and were pleasantly disappointed when he brought us upon a hill that sloped down to the Mattapony, and there traced out for us, by the depression of the earth, the visible lines of an old foundation of a large building, the former existence of which was further demonstrated by some scattered remains of the old imported brick of the edifice which were imbedded in the soil.

This spot had a fine outlook upon the Bay, and every advantage of locality to recommend its choice for a domestic establishment. We could find nothing to indicate the old fort except the commanding character of the hill with reference to the river, which might warrant a conjecture as to its position. I believe that the house was included within the ramparts of the fortification, as I perceive in some of the old records that the fortification itself was called the Mattapony House, which was once beleaguered and taken by Captain John Coode and Colonel Jowles.

After we had examined all that was to be seen here, our next point of interest was a graveyard, which, we had been informed by some of the household at Mrs. Carroll's, had been preserved upon the estate from a very early period. Our old gossip professed to know all about this, from its very first establishment. It was in another direction from the mansion-house, about a mile distant, on the margin of an inlet from the Bay, called Harper's Creek; and thither we accordingly went. Before we reached the spot, the old negro stopped at a cabin that lay in our route and provided himself with a hoe, which, borne upon his shoulder, gave a somewhat mysterious significance to the office he had assumed. He did not explain the purpose of this equipment to us, and we forbore to question him. After descending to the level of the tide and passing through some thickets of wild shrubbery, we arrived upon a grassy plain immediately upon the border of the creek; and there, in a quiet, sequestered nook of rural landscape, the smooth and sluggish little inlet, begirt with water-lilies and reflecting wood and sky and the green hill-side upon its surface, was the chosen resting-place of the departed generations of the family. A few simple tombstones—some of them darkened by the touch of Time—lay clustered within an old inclosure. The brief memorials engraved upon them told us how inveterately Death had pursued his ancient vocation and gathered in his relentless

tribute from young and old in times past as he does to-day.

Here was a theme for a sermon from the patriarch, who now leaned upon his hoe and shook his head with a slow ruminative motion, as if he hoped by this action to disengage from it some profound moral reflections, and then began to enumerate how many of these good people he had helped to bury; but before he had well begun this discourse we had turned away and were about leaving the place, when he recalled us by saying, "I have got one tombstone yet to show you, as soon as I can clear it off with the hoe: it belongs to old Master Rousby, who was stobbed aboard ship, and is, besides that, the grandest tombstone here."

Here was another of those flashes of light by which my story seemed to be preordained to a prosperous end. We eagerly encouraged the old man to this task, and he went to work in removing the green sod from a large slab which had been entirely hidden under the soil, and in a brief space revealed to us a tombstone fully six feet long, upon which we were able to read, in plainly chiselled letters, an inscription surmounted by a carved heraldic shield with its proper quarterings and devices.

Our group at this moment would have made a fine artistic study. There was this quiet landscape around us garnished with the beauty of May; there were the rustic tombs,—the old negro, with a countenance surcharged with the expression of solemn satisfaction at his employment, bending his aged figure over the broad, carved stone, and scraping from it the grass which had not been disturbed perhaps for a quarter of a century; and there was our own party looking on with eager interest, as the inscription every moment became more legible. That interest may be imagined, on reading the inscription, which, when brought to the full light of day, revealed these words:—

"Here lyeth the body of Xph^r Rousbie Esquire, who was taken out of this world by a violent death received on board his

Majesty's ship *The Quaker Ketch*, Capt. Tho^s. Allen Commander, the last day of October 1684. And also of Mr. John Rousbie, his brother, who departed this naturall life on board the Ship *Baltimore*, being arrived in Patuxen the first day of February 1685."

This was a picturesque incident in its scenic character, but a still more engaging one as an occurrence in the path of discovery. Here was most unexpectedly brought to view a new link in the chain of our story. It was a pleasant surprise to have such a fact as this breaking upon us from an ambuscade, to help out a half-formed narrative which I had feared was hopeless of completion. The inscription is a necessary supplement to the marginal notes. As an insulated monument, it is meagre in its detail, and stands in need of explanation. It does not describe Christopher Rousby as the Collector of the Customs; it does not affirm that he was murdered; it makes no allusion to Talbot: but it gives the name of the ship and its commander, along with the date of the death. "The Landholder's Assistant" supplies all the facts that are wanting in this brief statement. These two memorials help each other and enlarge the common current of testimony, like two confluent streams coming from opposite sources. From the two together we learn that Colonel Talbot, the Surveyor-General in 1684, killed Mr. Christopher Rousby on board of a ship of war; and we are apprised that Rousby was a gentleman of rank and authority in the Province, holding an important commission from the King. The place at which the tomb is found shows also that he was the owner of a considerable landed estate and a near neighbor of the Lord Proprietary.

The story, however, requires much more circumstance to give it the interest which we hope yet to find in it.

CHAPTER IV.

DRYASDUST.

I HAVE now to change my scene, and to pursue in another quarter more im-

portant investigations. I break off with some regret from my visit to St. Mary's, because it had many attractions of its own, which would form a pleasant theme for description. Some of the results of that visit I embodied, several years ago, in a fiction which I fear the world will hardly credit me in saying has as much history in it as invention.* But my journey had no further connection with the particular subject before us, after the discovery of the tomb. I therefore take my leave, at this juncture, of good Father Carberry and St. Inigoes, and also of my companion in this adventure,—pausing but a moment to say, that the Superior of St. Inigoes has, some time since, gone to his account, and that I am not willing to part with him in my narrative without a grateful recognition of the esteem I have for his memory, in which I share with all who were acquainted with him,—an esteem won by the simple, unostentatious merit of his character, his liberal religious sentiment, and his frank and cordial hospitality, which had the best flavor of the good old housekeeping of St. Mary's,—a commendation which every one conversant with that section of Maryland will understand to imply what the Irish schoolmaster, in one of Carleton's tales, calls "the hoighth of good living."

After my return from this excursion, I resolved to make a search amongst the records at Annapolis, to ascertain whether any memorials existed which might furnish further information in regard to the events to which I had now got a clue. And here comes in a morsel of official history which will excuse a short digression.

The Legislature had, about this time, directed the Executive to cause a search through the government buildings, with a view to the discovery of old state papers and manuscripts, which, having been consigned, time out of mind, to neglect and oblivion, were known only as heaps of promiscuous lumber, strewed over the floors of damp cellars and unfrequented

* *Rob of the Bowl.*

garrets. The careless and unappreciative spirit of the proper guardians of our archives in past years had suffered many precious folios and separate papers to be disposed of as mere rubbish; and the not less culpable and incurious indolence of their successors, in our own times, had treated them with equal indifference. The attention of the Legislature was awakened to the importance of this investigation by Mr. David Ridgely, the State Librarian, and he was appointed by the Executive to undertake the labor. Never did beagle pursue the chase with more steady foot than did this eager and laudable champion of the ancient fame of the State his chosen duty. He rummaged old cuddies, closets, vaults, and cocklofts, and pried into every recess of the Chancery, the Land Office, the Committee-Rooms, and the Council-Chamber, searching up-stairs and down-stairs, wherever a truant paper was supposed to lurk. Groping with lantern in hand and body bent, he made his way through narrow passages, startling the rats from their fastnesses, where they had been intrenched for half a century, and breaking down the thick drapery—the Gobelin tapestry I might call it—woven by successive families of spiders from the days of the last Lord Proprietary. The very dust which was kicked up in Annapolis, as the old newspapers tell us, at the passage of the Stamp Act, was once more set in motion by the foot of this resolute and unwearied invader, and everywhere something was found to reward the toil of the search. But the most valuable discoveries were made in the old Treasury,—made, alas! too late for the full fruition of the Librarian's labor. The Treasury, one of the most venerable structures in the State, is that lowly and quaint little edifice of brick which the visitor never fails to notice within the inclosure of the State-House grounds. It was originally designed for the accommodation of the Governor and his Council, and for the sessions of the Upper House of the Provincial Legislature; the Burgesses, at that time, holding their meetings in the

old State House, which occupied the site of the present more imposing and capacious building: this latter having been erected about the year 1772.

In some dark recess of the Treasury Office Mr. Ridgely struck upon a mine of wealth, in a mouldy wooden box, which was found to contain many missing Journals of the Provincial Council, some of which bore date as far back as 1666. It was a sad disappointment to him, when his eye was greeted with the sight of these folios, to see them crumble, like the famed Dead-Sea Apples, into powder, upon every attempt to handle them. The form of the books was preserved and the character of the writing distinctly legible, but, from the effect of moisture, the paper had lost its cohesion, and fell to pieces at every effort to turn a leaf. I was myself a witness to this tantalizing deception, and, with the Librarian, read enough to show the date and character of the perishing record.

Through this accident, the Council Journals of a most interesting period, embracing several years between 1666 and 1692, were irretrievably lost. Others sustained less damage, and were partially preserved. Some few survived in good condition.

Our Maryland historians have had frequent occasion to complain of the deficiency of material for the illustration of several epochs in the Provincial existence, owing to the loss of official records. No research has supplied the means of describing the public events of these intervals, beyond some few inferences, which are only sufficient to show that these silent periods were marked by incidents of important interest. The most striking of these privations occurs towards the end of the seventeenth century,—precisely that period to which the crumbling folios had reference.

This loss of the records has been ascribed to their frequent removals during periods of trouble, and to the havoc made in the rage of parties. The Province, like the great world from which it

was so far remote, was distracted with what are sometimes called religious quarrels, but what I prefer to describe as exceedingly irreligious quarrels, carried on by men professing to be Christians, and generated in the heat of disputes concerning the word of the great Teacher of "peace on earth." Out of these grew any quantity of rebellion and war, tintured with their usual flavor of persecution. For at this era the wars of Christendom were chiefly waged in support of dogmas and creeds, and took a savage hue from the fury of religious bigotry. The wars of Europe since that period have arisen upon commercial and political questions, and religion has been freed from the dishonor of promoting these bloody strifes so incompatible with its high office. In these quarrels of the fathers of Maryland, the archives of government were seized more than once, and, perhaps, destroyed. On one occasion they were burnt. And so, amongst all these disorders, it has fallen out that the full development of the State history has been rendered impossible.

Mr. Ridgely's foray, however, into this domain of dust and darkness has happily rescued much useful matter to aid the future chronicler in supplying the deficiency of past attempts to trace the path of our modest annals through these silent intervals. Incidentally the Librarian's work has assisted my story; for, although the recovered folios did not touch the exact year of my search, the pursuit of them led me to what I may claim as a discovery of my own. I found what I could not say was wholly lost, but what, until Mr. Ridgely's exploration drew attention to the records, might have been said to have shrunk from all notice of the present generation, and to be fast falling a prey to the tooth of time and the visit of the worm. A few years more of neglect and the ill usage of careless custodians, and it would have passed to that depository of things lost upon the earth, which fable has placed in the moon. It was my good fortune, in this upturning of relics of the past, to lay my hand upon

a sadly tattered and decayed MS. volume, — unbound, without beginning and without end, coated with the dust which had been gathering upon it ever since Chalmers and Bozman had done their work of deciphering its quaint old text. It lay in the state of rubbish, in an old case, where many documents of the same kind had been consigned to the same oblivion, and with it had been sleeping for as many years, perhaps, as the Beauty in the fairy tale, — happily destined, at last, to be awakened, as she was, by one who by his perseverance had won a title to herself.

This manuscript was now, in this day of revival, brought out from its hiding-place, and, upon inspection, proved to be a Journal of the Council for some few years including the very date of the death of the Collector on the Patuxent.

The record was complete, neatly written in the peculiar manuscript character of that age, so difficult for a modern reader to decipher. Its queer old-fashioned spelling suggested the idea that our ancestors considered both consonants and vowels too weak to stand alone, and that therefore they doubled them as often as they could; and there was such an actual identification of its antiquity in its exterior aspect as well as in its forms of speech, that, when I have sat poring over it alone at midnight in my study, as I have often done, I have turned my eye over my shoulder, expecting to see the apparition of Master John Llewellyn — who subscribes his name with a very energetic flourish as Clerk of the Council — standing behind me in grave-colored doublet and trunk-hose, with a starched ruff, a wide-awake hat drawn over his brow, and a short black feather falling amongst the locks of his dark hair towards his back.

This Journal lets in a blaze of light upon the old tradition of Talbot's Cave. The narrative of what it discloses it is now my purpose to make as brief as is compatible with common justice to my subject.

CHAPTER V.

A FRAGMENT OF HISTORY.

CHARLES CALVERT, Lord Baltimore, the son of Cecilius, was, according to the testimony of all our annalists, a worthy gentleman and an upright ruler. He was governor of Maryland, by the appointment of his father, from 1662 to 1675, and after that became the Lord Proprietary by inheritance, and administered the public affairs in person. His prudence and judgment won him the esteem of the best portion of his people, and the Province prospered in his hands.

All our histories tell of the troubles that beset the closing years of his residence in Maryland. They arose partly out of his religion, and in part out of the jealousy of the crown concerning the privileges of his charter.

He was a Roman Catholic; but, like his father, liberal and tolerant in opinion, and free from sectarian bias in the administration of his government. Apart from the influence of his father's example, the training of his education, his real attachment to the interests of the Province, and his own natural inclination,—all of which pointed out to him the duty as well as the advantage of affording the utmost security to the freedom of religious opinion,—the conditions under which he held his proprietary rights rendered a departure from this policy the most improbable accusation that could be made against him. The public mind of England at that period was fevered to a state of madness by the domestic quarrel that raged within the kingdom against the Catholics. The people were distracted with constant alarms of Popish plots for the overthrow of the government. The King, a heartless profligate, absorbed in frivolous pleasures, scarcely entertained any grave question of state affairs that had not some connection with his hatreds and his fears of Catholics and Dissenters. Then, also, the Province itself was composed, in far the greater part, of a Protestant population,—computed by some contemporary

writers at the proportion of thirty to one,—a population who were guaranteed freedom of conscience by the Charter, and who possessed all necessary power both legal and physical to enforce it.

Under such circumstances as these, how is it possible to impute designs against the old established toleration, which had marked the history of Maryland from its first settlement to that day, to so prudent and careful a ruler as Charles Calvert, without imputing to him, at the same time, a folly so absurd as to belie every opinion that has ever been uttered to his advantage?

Yet, notwithstanding these improbabilities, the accusation was made and affected to be believed by the King and his Council; the result of which was that a royal order was sent to the Proprietary, commanding him to dismiss every Catholic from employment in the Province, and to supply their places by the appointment of Protestants.

The most plausible theory upon which I can account for this harsh proceeding is suggested by the fact that parties in the Province took the same complexion with those in the mother country and ran parallel with them,—that the same excitements which agitated the minds of the people in England were industriously fomented here, where no similar reason for them existed, as the volunteer work of demagogues who saw in them the means of promoting their own interest,—that, in fact, this opposition to the Proprietary grew out of a failing in our ancestors which has not yet been cured in their descendants, a weakness in favor of the loaves and fishes. The party in the majority carried the elections, and felt, of course, as all parties do who perform such an exploit, that they had made a very gigantic sacrifice for the good of the country and deserved to be remunerated for such an act of heroism, and thereupon set up and asserted that venerable doctrine which has been erroneously and somewhat vaingloriously claimed as the conception of a modern statesman, namely,—“that to the victors

belong the spoils." I rejoice in the discovery that a dogma so profound and so convenient has the sanction of antiquity to commend it to the platform of the patriots of our own time.

I must in a few words notice another charge against Lord Baltimore, which was even more serious than the first, and to which the cupidity of the King lent a willing ear. Parliament had passed an act for levying certain duties on the trade of the Southern Colonies, which were very oppressive to the commerce of Maryland. These duties were gathered by Collectors specially appointed for the occasion, who held their commissions from the Crown, and who were stationed at the several ports of entry of the Province. The frequent evasion of these duties gave rise to much ill-will between the Collectors and the people. Lord Baltimore was charged with having connived at these evasions, and with obstructing the collection of the royal revenue. His chief accusers were the Collectors, who, being Crown officers, seemed naturally to array themselves against him. Although there was really no foundation for this complaint, yet the King, who never threw away a chance to replenish his purse, compelled the Proprietary to pay by way of retribution a large sum into the Exchequer.

I have no need to dwell upon this subject, and have referred to it only because it explains the relation between Lord Baltimore and Christopher Rousby, and has therefore some connection with my story. Rousby was an enemy to the Proprietary; and from a letter preserved by Chalmers it appears there was no love lost between them. Lord Baltimore writes to the Earl of Anglesey, the President of the King's Council, in 1681,—"I have already written twice to your Lordship about Christopher Rousby, who I desired might be removed from his place of Collector of his Majesty's Customs,—he having been a great knave, and a disturber of the trade and peace of the Province"; which letter, it seems, had no effect,—as Christopher Rousby was continued in his

post. He was doubtless emboldened by the failure of this remonstrance against him to exhibit his ill-will towards the Proprietary in more open and more vexatious modes of annoyance.

All these embarrassments threw a heavy shadow over the latter years of Lord Baltimore's life, and now drove him to the necessity of making a visit to England for the purpose of personal explanation and defence before the King. He accordingly took his departure in the month of June, 1684, intending to return in a few months; but a tide of misfortune that now set in upon him prevented that wish, and he never saw Maryland again.

In about half a year after Calvert's arrival in England, King Charles the Second was gathered to his fathers, and his brother, the Duke of York, a worse man, a greater hypocrite, and a more crafty despot, reigned in his stead.

James the Second was a Roman Catholic, and Calvert, on that score alone, might have expected some sympathy and favor: he might, at least, have expected justice. But James was heartless and selfish. The Proprietary found nothing but cold neglect, and a contemptible jealousy of the prerogatives and power conferred by his charter. James himself claimed to be a proprietary on this continent by virtue of extensive royal grants, and was directly interested with William Penn in defeating the claims of the Baltimore family to the country upon the Delaware; he was, therefore, in fact, the secret and prepossessed enemy of Calvert. Instead of protection from the Crown, Calvert found proceedings instituted in the King's Bench to annul his charter, which, but for the abrupt termination of this short, disgraceful reign in abdication and flight, would have been consummated under James's own direction. The Revolution of 1688 brought up other influences more hostile still to the Proprietary; and the Province, which was always sedulous to follow the fashions of London, was not behindhand on this occasion, but made, also, its revolution, in imitation of the great one. The end of all was the ut-

ter subversion of the Charter, and a new government of Maryland under a royal commission. How this was accomplished our historians are not able to tell. From 1688 to 1692 is one of our dark intervals of which I have spoken. It begins with a domestic revolution and ends with the appointment of a Royal Governor, and that is pretty nearly all we know about it. After this, there was no Proprietary dominion in Maryland, until it was restored upon the accession of George the First in 1715, when it reappears in the second Charles Calvert, a minor, the grandson of the late Proprietary. This gentleman was the son of Benedict Leonard Calvert, and was educated in the Protestant faith, which his father had adopted as more consonant with the prosperity of the family and the hopes of the Province.

Before Lord Baltimore took his departure, he made all necessary arrangements for the administration of the government during his absence. The chief authority he invested in his son Benedict Leonard, to whom I referred just now, — at that time a youth of twelve or fourteen years of age. My old record contains the commission issued on this occasion, which is of the most stately and royal breadth of phrase, and occupies paper enough to make a deed for the route of the Pacific Railroad. In this document “our dearly beloved son Benedict Leonard Calvert” is ordained and appointed to be “Lieutenant General, Chief Captain, Chief Governor and Commander, Chief Admiral both by sea and land, of our Province of Maryland, and of all our Islands, Territories, and Dominions whatsoever, and of all and singular our Castles, Forts, Fortresses, Fortifications, Munitions, Ships, and Navies in our said Province, Islands, Territories, and Dominions aforesaid.”

I hope to be excused for the particularity of my quotation of this young gentleman's titles, which I have given at full length only by way of demonstration of the magnificence of our old Palatine Province of Maryland, and to excite in the present generation a becoming pride

at having fallen heirs to such a principality; albeit Benedict Leonard's more recent successors to these princely prerogatives may have reason to complain of that relentless spirit of democracy which has shorn them of so many worshipful honors. But we republicans are philosophical, and can make sacrifices with a good grace.

As it was quite impossible for this young Lieutenant General to go alone under such a staggering weight of dignities, the same commission puts him in leading-strings by the appointment of nine Deputy or Lieutenant Governors who are charged with the execution of all his duties. The first-named of these deputies is “our dearly beloved Cousin,” Colonel George Talbot, who is associated with “our well-beloved Counsellor,” Thomas Tailler, Colonel Vincent Low, Colonel Henry Darnall, Colonel William Digges, Colonel William Stevens, Colonel William Burgess, Major Nicholas Sewall, and John Darnall, Esquire. These same gentlemen, with Edward Pye and Thomas Truman, are also commissioned to be of the Privy Council, “for and in relation to all matters of State.”

These appointments being made and other matters disposed of, Charles Calvert took leave of his beautiful and favorite Maryland, never to see this fair land again.

CHAPTER VI.

A BORDER CHIEFTAIN.

I HAVE now to pursue the narrative of my story as I find the necessary material in the old Council Journal. I shall not incumber this narrative with literal extracts from these proceedings, but give the substance of what I find there, with such illustration as I have been able to glean from other sources.

Colonel George Talbot, whom we recognize as the first-named in the commission of the nine Deputy Governors and of the Privy Council, seems to have been a special favorite of the Proprietary. He was the grandson of the first Baron of

Baltimore, the Secretary of State of James the First. His father was an Irish baronet, Sir George Talbot, of Cartown in Kildare, who had married Grace, one of the younger sisters of Cecilius, the second Proprietary and father of Charles Calvert. He was, therefore, as the commission describes him, the cousin of Lord Baltimore, who had now invested him with a leading authority in the administration of the government.

He was born in Ireland, and from some facts connected with his history I infer that he did not emigrate to Maryland until after his marriage, his wife being an Irish lady.

That he was a man of consideration in the Province, with large experience in its affairs, is shown by the character of the employments that were intrusted to him. He had been, for some years before the departure of Lord Baltimore on his visit to England, a conspicuous member of his Council. He had, for an equal length of time, held the post of Surveyor-General, an office of high responsibility and trust. But his chief employment was of a military nature, in which his discretion, courage, and conduct were in constant requisition. He had the chief command, with the title and commission of Deputy Governor, over the northern border of the Province, a region continually exposed to the inroads of the fierce and warlike tribe of the "Sasqueshannocks."

The country lying between the Susquehanna and the Delaware, that which now coincides with parts of Harford and Cecil Counties in Maryland and the upper portion of the State of Delaware, was known in those days as New Ireland, and was chiefly settled by emigrants from the old kingdom whose name it bore. This region was included within the range of Talbot's command, and was gradually increasing in population and in farms and houses scattered over a line of some seventy or eighty miles from east to west, and slowly encroaching upon the thick wilderness to the north, where surly savages lurked and watched the advance of the white man with jealous anger.

The tenants of this tract held their lands under the Proprietary grants, coupled with a condition, imposed as much by their own necessities as by the law, to render active service in the defence of the frontier as a local militia. They were accordingly organized on a military establishment, and kept in a state of continual preparation to repel the unwelcome visits of their hostile neighbors.

A dispute between Lord Baltimore and William Penn, founded upon the claim of the former to a portion of the territory bounding on the Delaware, had given occasion to border feuds, which had imposed upon our Proprietary the necessity of building and maintaining a fort on Christiana Creek, near the present city of Wilmington; and there were also some few block-houses or smaller fortified strongholds along the line of settlement towards the Susquehanna. These forts were garrisoned by a small force of musketeers maintained by the government. The Province was also at the charge of a regiment of cavalry, of which Talbot was the Colonel, and parts of which were assigned to the defence of this frontier.

If we add to these a corps of rangers, who were specially employed in watching and arresting all trespassers upon the territory of the Province, it will complete our sketch of the military organization of the frontier over which Talbot had the chief command. The whole or any portion of this force could be assembled in a few hours to meet the emergencies of the time. Signals were established for the muster of the border. Beacon fires on the hills, the blowing of horns, and the despatch of runners were familiar to the tenants, and often called the ploughman away from the furrow to the appointed gathering-place. Three musket-shots fired in succession from a lonely cabin, at dead of night, awakened the sleeper in the next homestead; the three shots, repeated from house to house, across this silent waste of forest and field, carried the alarm onward; and before break of day a

hundred stout yeomen, armed with cutlass and carbine, were on foot to check and punish the stealthy foray of the Sasquesahannock against the barred and bolted dwellings where mothers rocked their children to sleep, confident in the protection of this organized and effective system of defence.

In this region Talbot himself held a manor which was called New Connaught, and here he had his family mansion, and kept hospitality in rude woodland state, as a man of rank and command, with his retainers and friends gathered around him. This establishment was seated on Elk River, and was, doubtless, a fortified position. I picture to my mind a capacious dwelling-house built of logs from the surrounding forest; its ample hall furnished with implements of war, pikes, carbines, and basket-hilted swords, mingled with antlers of the buck, skins of wild animals, plumage of birds, and other trophies of the hunter's craft; the large fireplace surrounded with hardy woodsmen, and the tables furnished with venison, wild fowl, and fish, the common luxuries of the region, in that prodigal profusion to which our forefathers were accustomed, and which their descendants still regard as the essential condition of hearty and honest housekeeping. This mansion I fancy surrounded by a spacious picketed rampart, presenting its bristling points to the four quarters of the compass; and accessible only through a gateway of ponderous timber studded thick with nails: the whole offering defiance to the grim savage who might chance to prowl within the frown of its midnight shadow.

Here Talbot spent the greater portion of the year with his wife and children. Here he had his yacht or shallop on the river, and often skimmed this beautiful expanse of water in pursuit of its abundant game,—those hawks of which tradition preserves the memory his companions and auxiliaries in this pastime. Here, too, he had his hounds and other hunting-dogs to beat up the game for which the banks of Elk River are yet famous.

This sylvan lodge was cheered and refined by the presence of his wife and children, whose daily household occupations were assisted by numerous servants chosen from the warm-hearted people who had left their own Green Isle to find a home in this wilderness.

Amidst such scenes and the duties of her station we may suppose that Mrs. Talbot, a lady who could not but have relinquished many comforts in her native land for this rude life of the forest, found sufficient resource to quell the regrets of many fond memories of the home and friends she had left behind, and to reconcile her to the fortunes of her husband, to whom, as we shall see, she was devoted with an ardor that no hardship or danger could abate.

Being the dispenser of her husband's hospitality,—the bread-giver, in the old Saxon phrase,—the frequent companion of his pastime, and the bountiful friend, not only of the families whose cottages threw up their smoke within view of her dwelling, but of all who came and went on the occasions of business or pleasure in the common intercourse of the frontier, we may conceive the sentiment of respect and attachment she inspired in this insulated district, and the service she was thus enabled to command.

This is but a fancy picture, it is true, of the home of Talbot, which, for want of authentic elements of description, I am forced to draw. It is suggested by the few scattered glimpses we get in the records of his position and circumstances, and may, I think, be received at least as near the truth in its general aspect and characteristic features.

He was undoubtedly a bold, enterprising man,—impetuous, passionate, and harsh, as the incidents of his story show. He was, most probably, a soldier trained to the profession, and may have served abroad, as nearly all gentlemen of that period were accustomed to do. That he was an ardent and uncompromising partisan of the Proprietary in the dissensions of the Province seems to be evident. I suppose him, also, to have been

warm-hearted, proud in spirit, and hasty in temper,—a man to be loved or hated by friend or foe with equal intensity. It is material to add to this sketch of him, that he was a Roman Catholic,—as we have record proof that all the Deputy Governors named in the recent commission were, I believe, without excep-

tion,—and that he was doubtless imbued with the dislike and indignation which naturally fired the gentlemen of his faith against those who were then supposed to be plotting the overthrow of the Proprietary government, by exciting religious prejudice against the Baltimore family.

[To be continued.]

HUNTING A PASS.

A SKETCH OF TROPICAL ADVENTURE.

[Continued.]

CHAPTER II.

ON the 18th of April, having collected such information bearing on our purposes as it was possible to obtain, we left La Union, and fairly commenced the business of "Hunting a Pass." To reach the valley of the Goascoran, on the extent and character of which so much depended, it was necessary to go round the head of the Bay of La Union. For several miles our route coincided with that of the *camino real* to San Miguel, and we rode along it gayly, in high and hopeful spirits. The morning was clear and bright, the air cool and exhilarating, and the very sense of existence was itself a luxury. At the end of four miles we struck off from the high road, at right angles, into a narrow path, which conducted us over low grounds, three miles farther, to the Rio Sirama, a small stream, scarcely twenty feet across, the name of which is often erroneously changed in the maps for that of Goascoran or Rio San Miguel. Beyond this stream the path runs over low hills, which, however, subside into plains near the bay, where the low grounds are covered with water at high tide. The natives avail themselves of this circumstance, as did the In-

dians before them, for the manufacture of salt. They inclose considerable areas with little dikes of mud, leaving openings for the entrance of the water, which are closed as the tide falls. The water thus retained is rapidly evaporated under a tropical sun, leaving the mud crusted over with salt. This is then scraped up, dissolved in water, and strained to separate the impurities, and the saturated brine reduced in earthen pots, set in long ranges of stone and clay. The pots are constantly replenished, until they are filled with a solid mass of salt; they are then removed bodily, packed in dry plantain-leaves, and sent to market on the backs of mules. Sometimes the pots are broken off, to lighten the load, and great piles of their fragments—miniature *Monti testacci*—are seen around the *Salinas*, as these works are called, where they will remain long after this rude system of salt-manufacture shall be supplanted by a better, as a puzzle for fledgling antiquaries.

Six miles beyond the Rio Sirama we came to another stream, called the Siramita or Little Sirama, for the reason, probably, as H. suggested, that it is four times as large as the Sirama. It flows through a bed twenty feet deep and up-

wards of two hundred feet wide, paved with water-worn stones, ragged with frayed fragments of trees, and affording abundant evidence that during the season of rains it is a rough and powerful torrent. Between this stream and the Goascoran there is a maze of barren hills, relieved by occasional level reaches, covered with acacias and deciduous trees. Through these the road winds in easy gradients, and there are numerous passes perfectly feasible for a railway, in case it should ever be deemed advisable to carry one around the head of the bay to La Union.

The traveller emerges suddenly from among these hills into the valley of the Goascoran, and finds the river a broad and gentle stream flowing at his feet. At the time of our passage, the water at the ford was nowhere more than two feet deep, with gravelly bottom and high and firm banks, without traces of overflow. We had now passed the threshold of the unknown region on which we were venturing, and although we had a moral conviction that the valley before us afforded the requisite facilities for the enterprise which we had in hand, yet it was not without a deep feeling of satisfaction, almost of exultation, that, on riding to the summit of a bare knoll close by, we traced the course of the river, in a graceful curve, along the foot of the green hills on our left, and saw that it soon resumed its general direction north and south, on the precise line most favorable for our purposes. In the distance, rising alone in the very centre of the valley, we discerned the castellated Rock of Goascoran, behind which, we were told, nestled the village of Goascoran, where we intended passing the night. We had taken its bearings from the top of Conchagua, and were glad to find that the intervening country was level and open, chiefly savanna, or covered with scattered trees. There was no need of instrumentation here, and so, ordering Dolores to bring up the baggage as rapidly as possible, we struck across the plain in a right line, in total disregard of roads or pathways, for the Rock of Goascoran.

A smart gallop of two hours brought us to its foot, and in a few minutes after we entered the village, and rode straight to the *Cabildo*, or House of the Municipality, tied our mules to the columns of the corridor, pushed open the door, and made ourselves at home.

And here I may mention that the *cabildo*, throughout Honduras, is the stranger's refuge. Its door is never locked, and every traveller, high or low, rich or poor, has a right to enter it unquestioned, and "make it his hotel" for the time being. Its accommodations, it is true, are seldom extensive and never sumptuous. They rarely consist of more than one or two hide-covered chairs, a rickety table, and two or three long benches placed against the wall, with a *tinaja* or jar for water in the corner, and possibly a clay oven or rude contrivance for cooking under the back corridor. In all the more important villages, which enjoy the luxury of a local court, the end of the *cabildo* is usually fenced off with wooden bars, as a prison. Occasionally the traveller finds it occupied by some poor devil of a prisoner, with his feet confined in stocks, to prevent his digging a hole through the mud walls or kicking down his prison-bars, who exhibits his ribs to prove that he is "*muy flaco*," (very thin,) and solicits, in the name of the Virgin and all the *Santos*, "*algo para comer*" (something to eat).

In most of the *cabildos* there is suspended a rude drum, made by drawing a raw hide over the end of a section of a hollow tree, which is primarily used to call together the municipal wisdom of the place, whenever occasion requires, and secondarily by the traveller, who beats on it as a signal to the *alguazils*, whose duty it is to repair at once to the *cabildo* and supply the stranger with what he requires, if obtainable in the town, at the rates there current. Not an unwise, nor yet an unnecessary regulation this, in a country where nobody thinks of producing more than is just necessary for his wants, and, having no need of money, one does not care to sell, lest his scanty store should

run short, and he be compelled to go to work or purchase from his neighbors.

The people of Goascoran stared at us as we rode through their streets, but none came near us until after we had vigorously pounded the magical drum, when the *alguazils* made their appearance, followed by all the urchins of the place, and by a crowd of lean and hungry curs,—the latter evidently in watery-mouthed anticipation of obtaining from the strangers, what they seldom got at home, a stray crust or a marrow-bone. We informed our *alguazils* that we had mules coming, and wanted *sacate* for them. To which they responded,—

“*No hay.*” (There is none.)

“Then let us have some maize.”

“*Tampoco.*”

“What! no maize? What do you make your *tortillas* of?”

“We have no *tortillas.*”

“How, then, do you live?”

“We don’t live.”

“But we must have something for our animals; they can’t be allowed to starve.”

To which our *alguazil* made no reply, but looked at us vacantly.

“Do you hear? we *must* have some *sacate* or some maize for the animals.”

Still no reply,—only the same vacuous look,—now more stolid, if possible, than before.

I had observed that the *Teniente’s* wrath was rising, and that an explosion was imminent. But I must confess that I was not a little startled, when, drawing his bowie-knife from his belt, he strode slowly up to our impassible friend, and, firmly grasping his right ear, applied the cold edge of the steel close to his head. The supplementary *alguazil* and the rabble of children took to their heels in affright, followed by the dogs, who seemed to sympathize in their alarm. But, beyond a slight wincing downwards, and a partial contraction of his eyes and lips, the object of the *Teniente’s* wrath made no movement, nor uttered a word of expostulation. He evidently expected to lose his ears, and probably was surprised at nothing except the pause in the opera-

tion. My own apprehensions were only for an instant; but, had they been more serious than they were, they must have given way before the extreme ludicrousness of the group. I burst into a roar of laughter, in which the *Teniente* could not resist joining, but which seemed to be incomprehensible to the *alguazil*, whose face assumed an expression which I can only describe as that of astonished inanity. I don’t think he is quite certain, to this day, that the incident was not altogether an ugly dream. At any rate, he lost no time in obeying my order to go straight to the first *alcalde* of the village, and tell him that he was wanted at the *cabildo*.

Reassured by seeing the *alguazil* come out alive, the *muchachos* returned, greatly reinforced, edging up to the open door timidly, ready to retreat on our slightest movement. We had not long to wait for the first *alcalde*, of whose approach we were warned by a sudden scramble of curs and children, who made a broad lane for his passage. Evidently, our *alcalde* was a man of might in Goascoran, and he established an immediate hold on our hearts by stopping on the corridor and clearing it of its promiscuous occupants by liberal applications of his official cane. He was a man of fifty, burly in person, and wore his shirt outside of his trousers, but, altogether, carried himself with an air of authority. He was prompt in speech, and, although evidently much surprised to find a party of foreigners in the *cabildo*, rapidly followed up his salutation by putting himself and the town and all the people in it “at the disposition of our Worships.”

I explained to him how it was that he had been sent for, placing due emphasis on the stupidity of the *alguazil*. He heard me without interruption, keeping, however, one eye on the *alguazil*, and handling his cane nervously. By the time I had finished, the cane fairly quivered; and the delinquent himself, who had scarcely flinched under the *Teniente’s* knife, was now uneasily stealing away towards the door. Our *alcalde* saw the movement, and, with a hurried bow,

and "*Con permiso, Caballeros,*" (With your permission, gentlemen,) started after the fugitive, who was saluted with "*Que bestia!*" (What a beast!) and a staggering blow over his shoulders. He hurried his pace, but the *alcalde's* cane followed close, and with vigorous application, half-way across the *plaza*. And when the *alcalde* returned, out of breath, but full of apologies, he received a welcome such as could be inspired only by a profound faith in his ability and willingness to secure for us not merely *sacate* and maize, but everything else that we might desire. We told him that he was a model officer and a man after our own hearts, all of which he listened to with dignified modesty, wiping the perspiration from his face, meanwhile, with — well, with the tail of his shirt!

The *alcalde* was very hard on his constituency, and, from all that we could gather, he seemed to regard them collectively as "*bestias,*" and "*hombres sin vergüenza*" (men without shame). We concurred with him, and regretted that he had not a wider and more elevated official sphere, and gave him, withal, a *trago* of brandy, which he seemed greatly to relish, and then again approached the subject of *sacate* for our mules. To our astonishment, the *alcalde* suddenly grew grave, and interrupted me with —

"*Pero, no hay, Señor.*" (But there is none, Sir.)

"Well, maize will answer."

"*Tampoco.*"

"What! no maize? What do you make your *tortillas* of?"

"We have no *tortillas.*"

"How, then, do you live?"

"We don't live."

A general shout of laughter greeted this last reply, in which, after a moment of puzzled hesitation, the *alcalde* himself joined.

"So, you don't live?"

"Absolutely, no!"

"But you eat?"

"Very little. We are very poor."

"Well, what do you eat?"

"Cheese, *frijoles*, and an egg now and then."

"But no *tortillas*?"

"No. We planted the last kernel of maize two days ago."

And so it was. The little stock of dried grass and maize-stalks stored up from the present rainy season had long ago been consumed, and the maize itself, which is here the real staff of life, had run short, — and that, too, in a country where three crops a year might easily be produced by a very moderate expenditure of labor in the way of tillage and irrigation.

Fortunately for our poor animals, Dolores had provided against contingencies like this, and taken in a supply of maize at La Union. As for ourselves, what with a few eggs and *frijoles*, furnished by the *alcalde*, in addition to the stock of edibles, pickled oysters and other luxuries, prepared for us by Doña Maria, we contrived to fare right sumptuously in Goascoran. We afterwards found out, experimentally, what it was not to live, in the sense intended to be conveyed by the unfortunate *alguazil* and the impetuous *alcalde*, and which H. declared logically meant to be without *tortillas*. But we could never make out why the *alcalde* should call the *alguazil* "a beast," and beat him over his shoulders with a cane, withal.

Goascoran is a small town, of about four hundred inhabitants, and boasts a tolerably genteel church and a comfortable *cabildo*. It is situated on the left bank of the river to which it gives its name, and which here still maintains its character of a broad and beautiful stream. On the opposite side from the town rises a high, picturesque bluff, at the foot of which the river gathers its waters in deep, dark pools with mirror-like surfaces, disturbed only by the splash of fishes springing at their prey, or by the sudden dash of water-fowls settling from their arrowy flight in a little cloud of spray.

I have alluded to the castellated Rock of Goascoran, which, however, is only a type of the general features of the surrounding country. The prevailing rock is sandstone, and it is broken up in fantastic peaks, or great cubical blocks with

flat tops and vertical walls, resembling the *mesas* of New Mexico. At night, their dark masses, rising on every hand, might be mistaken for frowning fortresses or massive strongholds of the Middle Ages. They seem to mark the line where the volcanic forces which raised the high islands in the Bay of Fonseca had their first conflict with the sedimentary and primitive rocks of the interior. The river is full of boulders of quartz and granite reddened by fire, resembling jasper, and alternating with worn blocks of lava,—further evidences of volcanic action. Altogether, the country, in its natural aspects, reminds the traveller of the district lying between Pompeii and Sorrento, in Italy, and probably owes its essential features to the same causes.

From Goascoran to Aramacina, a distance of twelve miles, the road traverses a slightly broken country, while the river pursues its course, as before, through a picturesque valley, narrowed in places by outlying *mesas*, but still regular, and throughout perfectly feasible for a railway. Aramacina itself is prettily situated, in a bend of one of the tributaries of the Goascoran, the Rio Aramacina, and numbers perhaps three hundred inhabitants. Immediately in front rises a broad sandstone table or *mesa*, at the foot of which there are some trickling springs of salt water, much frequented by cattle, and corresponding to the *salt-licks* of our Western States.

Behind the town is a high spur of the mountain range of Lepaterique, covered with pines, and veined with silver-bearing quartz. We visited the abandoned mines of Marqueliso and Potosí, but the shafts were filled with water, and only faint traces remained of the ancient establishments. Extravagant traditions are current of the wealth of these mines, and of the amounts of treasure which were taken from them in the days of the Viceroy. A few specimens of the refuse ore, which we picked up at the mouth of the principal shaft, proved, on analysis, to be exceedingly rich, and gave some color to the local traditions.

The *cabildo* of Aramacina was very much dilapidated, and promised us but poor protection against the rain, which now began to fall every night with the greatest regularity. We nevertheless selected the corner where the roof appeared soundest, and managed to pass the night without a serious wetting. The evening was enlivened by visits from all the leading inhabitants, whom we found to be far more communicative than their neighbors of Goascoran. Our most entertaining visitor, however, was a "countryman," as he styled himself, a negro by the name of John Robinson, born in New York, and now a magnate in Aramacina, where he had resided for upwards of sixteen years. Although he had fallen into the habits of the native population, and wore neither shirt nor shoes, he entertained for them a superlative contempt, which he expressed in a strange jumble of bad English and worse Spanish. He had been with Perry on Lake Erie, and afterwards on board various vessels of war, in some capacity which he did not explain with great clearness, but which he evidently intended should be understood as but little lower than that of commander. A glass of brandy made him eloquent, and he took a position in the middle of the *cabildo*, and gave us an oration on the people of Honduras, in a style singularly grotesque and demonstrative. In broken and scarcely intelligible English,—for he had nearly forgotten the language of his youth,—he denounced them as "thieves and liars," and then asked them, "Is it not true?" Imagining, doubtless, that he was declaiming their praises, the enthusiastic assemblage responded, "*¡Sí! sí!*" (Yes! yes!) Not a crime so gross, nor a trait of character so degraded, but he laid it to their charge, receiving always the same vehement response, "*¡Sí! sí!*"

We got rid of our *paisano* with difficulty, and only under a promise to visit his *chacra*, somewhere in the vicinity, next morning. But we saw no more of him,—not much to our regret; for John Robinson, I fear, was sadly addicted to

brandy, of which our supply was far too small to admit of honoring many such drafts as he had made the preceding evening.

One and a half miles to the southeast of Aramacina is a ledge of sandstone rock, with a smooth vertical face, which is covered over with figures, deeply cut in outline. This ledge forms one side of a rural amphitheatre overlooking the adjacent valley, and is by nature a spot likely to be selected as a "sacred place" by the Indians. It faces towards the west, and from all parts of the amphitheatre, which may have answered the purposes of a temple, the morning sun would appear to rise directly over the rock. The engravings in some places are much defaced or worn by time, so that they cannot be made out; but generally they are deep and distinct,—so deep, indeed, that I used those which run horizontally as steps whereby to climb up the face of the ledge. I should say that they were two and a half inches deep. A portion had been effaced by a rude quarry which the people of Aramacina had opened here to obtain stone for their church.

Some of the figures are easily recognizable as those of men and animals, while others appear entirely arbitrary, or designed simply for ornament. Enough can be clearly made out to show the affiliation of the engravers with the ancient Mexican families of Nicaragua and San Salvador. The space covered by these inscriptions is about one hundred feet long, by twelve or fifteen in height. A quarter of a mile to the southward are other smaller rocks with figures, too much defaced, however, to be traced satisfactorily. Vases of curious workmanship, human bones in considerable quantities, and other relics and remains, it is said, may be discovered by digging in the earth anywhere within the natural amphitheatre to which I have referred. This is another circumstance going to favor the belief that this was anciently a place of great sanctity; for it is a universal custom among all nations to bury their

dead in the neighborhood of shrines and temples.

Although the immediate district in which these aboriginal traces are found does not seem to have fallen within the region occupied by the Nahuatt or Mexican tribes of Central America at the time of the Conquest, but in what was called the country of the Chontals, yet it is not difficult to suppose, that, in the various hostile encounters which we know took place between the two nations, the Nahuatts may have penetrated as far as Aramacina, and left here some record of their visit,—if, indeed, they did not succeed in effecting a temporary lodgment. At any rate, there can be but little doubt that a portion of the engravings on the rocks above described, but particularly those which seem to record dates, were made by them.

From Aramacina to Caridad, the next town on our course, and four leagues distant, the road is laid out on Spanish principles, which are the very reverse of scientific. Instead of keeping along the river-valley, it passes directly over a high, rocky spur of the lateral mountains, through a pass called *El Portillo*, (The Portal,) elevated fifteen hundred feet above the sea. The view from its summit, whence we were enabled to trace our course up to this point, as if on a map, in some degree compensated us for the labor of the ascent. From here we could also look ahead, beyond the town of Caridad; and we saw, with some misgivings, that there the lateral ranges of mountains seemed to send down their spurs boldly to the river, leaving only what the Spaniards call a *cañon* or narrow gorge, walled in with precipitous rocks, for its passage. A shadow came over every face, in view of the possible obstacles in our path; and although we tried to reassure ourselves by the reflection, that, where so large a stream could pass, there must certainly be room enough for a road, yet, it must be confessed, we wound down the hill of *El Portillo* to Caridad with spirits much depressed. Moreover, a drizzling rain set in before we reached the village,

and clouds and vapor settled down gloomily on the surrounding hills and mountains, rendering us altogether more dismal than we had been since leaving New York. We rode up to the *cabildo* of Caridad in silence, and fortunately found it new, neat, and comfortable, with cover for our mules, ample facilities for cooking, and an abundance of dry wood for a fire, now rendered necessary to comfort by the damp, and the proximity of high mountains. Fortunately, also, we experienced no difficulty in getting fodder for our animals and food for ourselves,—a bright-eyed Señora, wife of the principal *alcalde*, volunteering to send us freshly baked and crisp *tortillas*, which were brought to us hot, in the folds of the whitest of napkins. After dinner and coffee, and under the genial influences of a fire of the pitch-pine, which gave us both light and heat, our spirits returned, and we did not refuse a hearty laugh, when H. read from a dingy paper, which he found sticking on the wall of the *cabildo*, the report of the day's transactions on the Caridad Exchange, "marked by a great and sudden decline in railway shares, caused by the timidity of holders, and by an equally sudden reaction, occasioned by two dozen of soft-boiled eggs and a peck of *tortillas*."

Caridad is a neat little town, of about three hundred inhabitants, situated on a level *plateau* nearly surrounded by high mountains,—the valley of the river, both above and below, being reduced to its narrowest limits. To the northeastward of the town, and on a shelf of the Lepaterique Mountains, which rise abruptly in that direction, and are covered with pine forests to their summits, is distinctly visible the Indian town of Lauterique,—its position indicating clearly that it had been selected with reference to defensive purposes. We had seen its white church from El Portillo, looking like a point of silver on the dark green slope of the mountain.

Rain fell heavily during the night; but the morning broke bright and clear. The increased roar of the river, however, made

known to us that it was greatly swollen, and when we walked down to its brink we found it a rapid and angry torrent, with its volume of water more than double that of the previous day. This was not an encouraging circumstance; for we had learned, that, if we intended following up the stream, instead of making a grand *détour* over the mountains, it would be necessary to ford the river, about a mile above the town. All advised us against attempting the passage. "*Mañana*," (Tomorrow,) they said, would do as well, and we had better wait. Meanwhile the waters would subside. Nobody had ever attempted the passage after such a storm; and the river was "*muy bravo*" (very angry). I have said that all advised us against moving; but I should except the second *alcalde*, who had taken a great fancy to us, and wanted to enter our service. His dignity did not rebel at the position of *arriero* or muleteer; any place would suit him, so that we would agree to take him finally to "El Norte,"—for such is the universal designation of the United States among the people of Central America. He shared in none of the fears of his townsmen, and told them, that, fortunately, all the world was not as timid as themselves, and wound up by volunteering to accompany us and get us across.

We gladly accepted his offer, and started out with the least possible delay. I need not say that we made rather an anxious party. The unpromising observations of the preceding day, and the possibilities of the mountains' closing down on the river so as to forbid a passage, were uppermost in every mind; but all sought to hide their real feelings under an affectation of cheerfulness, not to say of absolute gayety. As we advanced, and rounded the hills which shut in the little *plateau* of Caridad on the north, we saw that the high lateral mountains sent down their rocky spurs towards each other like huge buttresses, lapping by, and, so far as the eye could discern, forming a complete and insurmountable barrier. Over the brow of one of these, a zigzag streak of white

marked the line of the mule-path. Our guide traced it out to us with his finger, and assured us that it traversed a bad *portillo*, over which the wind sometimes sweeps with such force as to take a loaded mule off his feet, and dash him down the steep sides of the mountain. Half a mile of level ground still intervened between us and the apparent limit of our advance, and we trotted over it in silence, pulling up on the abrupt bank of the deep trough of the river, which foamed and chafed among the great boulders in its bed, and against its rocky shores, nearly a hundred feet below us. A break-neck path wound down to a little sand-pit; and on the opposite side of the stream another path wound up, in like manner, to a narrow *plateau*, on which stood a single hut, with its surroundings of plantain-trees and maize-fields. I looked anxiously up the stream, but a sudden bend, a few hundred yards above, shut off the view; and there the flinty buttresses of the mountain rose sheer and frowning, perpendicularly from the water's edge.

The eyes of the Lieutenant had followed mine, and we exchanged a glance which expressed as plainly as words, that, unless the mountain-spur which projected into the bend of the river should prove sufficiently narrow to be tunnelled, or should fall off so as to admit of a side-cutting in the rock, our project might be regarded as at an end. To determine that point was our next and most important step. Down the steep descent, scrambling amongst rocks and bushes, where it seemed a goat would hardly dare to venture,—down we plunged to the water's edge. Here the stream was not less than a hundred yards broad, flowing over a rocky bed full of rolling stones and boulders, with a velocity which it seemed impossible for man or beast to stem. But our *alcalde* was equal to the emergency.

Stripping himself naked, he took a long pole shod with iron, which seemed to be kept here for the purpose, and started out boldly into the stream, for the purpose of making a preliminary survey of the line of passage. Planting his pole firmly

down the stream, so as to support himself against the current, he cautiously advanced, step by step, "prospecting" the bottom with his feet, so as to ascertain the shallowest ford, and that freest from rocks and stones. Sometimes he slipped into deep holes and disappeared beneath the surface, but he always recovered himself, and went on with his work with the greatest deliberation and composure. After crossing and recrossing the river in this manner three or four times, he succeeded in fixing on a serpentine line, where the water, except for a few yards near the opposite bank, was only up to his shoulders, and which he pronounced "*muy factible*" (very feasible).

"But, *amigo*," exclaimed H., in an excited tone, "you forget that you are six feet high, and that I am but five feet five!"

"*No hay cuidado!*" (Have no care!) was the reassuring reply of the *alcalde*, as he slapped his broad chest with his open palm; "*soy responsable!*" (I am responsible!)

The mules were now unsaddled, and the trunks taken over, one by one, on the *alcalde's* head. Next, the animals were forced into the water, and, after vehement flounderings, now swimming, now stumbling over rolling stones, they were finally, bruised and bleeding and the forlornest of animals, got across in safety. Next came our turn, and I led the way, with a thong fastened around my body below the armpits, and attached, in like manner, to our stalwart *alcalde*. Long before we reached the middle of the stream, notwithstanding I carried a large stone under each arm by way of ballast, I was swept from my feet out to the length of my tether, and thus towed over by our guide. When all were snugly across, the laughter was loud and long over the ridiculous figure which everybody had cut in everybody's eyes, except his own. H. immortalized the transit in what the French call *un croquis*, but it would hardly bear reproduction in the pages of a narrative so staid as this.

Intent on determining, with the least

possible delay, the important question, whether the mountains really opposed an insurmountable obstacle to our project, I left my companions and Dolores to re-saddle and get under way at their leisure, and pushed ahead with the *alcalde*. Striking off from the mule-path, we climbed up, among loose rocks and dwarf-trees and bushes, to the top of the mountain. My excitement gave me unwonted vigor, and my sturdy guide, streaming with perspiration long before we reached the summit, prayed me, "in the name of all the saints," to moderate my rate of speed, and give him a *trago* of Cognac. My suspense was not of long duration; for, on reaching the crest of the eminence, I found that we were indeed on a narrow spur, easily tunnelled, or readily turned by galleries in the rock, and that, beyond, the country opened out again in a broad table-land sloping gently from the north, and traversed nearly in its centre by the gorge of the river. The break in the Cordilleras was now distinct, and I could look quite through it, and see the blue peaks of the mountains on the Atlantic slope of the continent. A single glance sufficed to disclose all this to my eager vision, and the next instant six rapid shots from my revolver conveyed the intelligence to my companions, who were toiling up the narrow mule-path, half a mile to my right. The *Teniente* dismounted, evidently with the intention of joining us, but soon got back again into his saddle,—having experienced, as H. explained, "a sudden recurrence of palpitation."

Rejoining my companions, I dismissed our guide with a reward which surprised him, and we pursued our way to the *Portillo*. This name is given to the point where the path, after winding up the side of the mountain half-way to its summit, suddenly turns round its brow, and commences its descent. It is a narrow shelf, in some places scarcely more than a foot wide, rudely worked in the living rock, which falls off below in a steep and almost precipitous descent to the river; and although it did not quite realize the

idea we had formed of it from the description of our guide, it was sufficiently picturesque to inspire the most daring mountaineer with caution. At any rate, most of our party dismounted, preferring to lead their mules around the point to having their heads turned in riding past it. Exposed to the full force of the winds, which are drawn through this river-valley as through a funnel, and with a foothold so narrow, it was easy to believe that neither man nor beast could pass here during the season of the northers, except at great risk of being dashed down the declivity.

A little beyond the *Portillo*, the road diverges from the valley proper of the river, and is carried over an undulating country to the village of San Antonio del Norte, finely situated on a grassy plain of considerable extent, a dependency of the valley of the Goascoran. We had intended stopping here for the night; but the *cabildo* was already filled with a motley crowd of *arrieros* and others on their way to San Miguel. A tall *mestizo*, covered with ulcers, sat in the doorway, and two or three culprits extended their claw-like hands towards us through the bars of their cage and invoked alms in the name of the Virgin and all things sacred. We therefore contented ourselves with a lunch under the corridor of a neighboring house, and, notwithstanding it was late in the afternoon, pressed forward towards the little Indian town of San Juan, three leagues distant.

It was a long and rough and weary way, and as night fell without any sign of a village in front, we began to have a painful suspicion that we had lost our road,—if a narrow mule-path, often scarcely traceable, can be dignified by that name. So we stopped short, to allow a man on foot, whom we had observed following on our track for half an hour, to come up. He proved to be a bright-eyed, good-natured Indian, who addressed us as "*Vuestras Mercedes*," and who informed us not only that we were on the right road to San Juan, but also that he himself belonged there and was now on his way home.

“ Good, *amigo!* — but how far is it ? ”

“ *Hay no mas,* ” (There is no more,) was the consoling response.

“ But where is the town ? ”

“ *Allá!* ” (There !)

And he threw his hand forward, and projected his lips in the direction he sought to indicate,—a mode of indication, I may add, almost universal in Central America, and explicable only on the assumption that it costs less effort than to raise the hand.

Our new friend was communicative, and told us that he had been all the way to Caridad to bring a priest to San Juan, “ *para hacer cosas de familia,* ” (to attend to family affairs,) which he explained as meaning “to marry, baptize, and catechize.” The people of San Juan, he added, were too poor to keep a priest of their own; they couldn’t pay enough; and, moreover, their women were all old and ugly. And he indulged in a knowing wink and chuckle.

Meantime we had kept on our course, and it had become quite dark; still there was no sign of the village,—not even the flicker of lights or the barking of dogs.

“ What did the fellow say about the distance ? ” inquired H., angrily.

“ That there was no more distance. ”

“ Ask him again; he couldn’t have understood you. ”

“ *Amigo,* where is your village ? You said just now that it was close by. ”

“ *Hay no masITA, Señor!* ”

“ What’s that ? ”

“ He says that the distance was nothing before, and is still less now ! ”

“ Bah ! he’s a fool ! ”

Half an hour later, which to H.’s indignant imagination seemed an age, we reached the top of a high ridge, and saw the first glimmer of the lights of the village, on the farther edge of a broad plain, a mile and a half distant.

“ *Estamos aquí!* ” (Here we are !) exclaimed our guide, triumphantly.

Our mules pricked forward their ears at the welcome sight, and we trotted briskly over the plain, and, as usual, straight to the *cabildo*,—a newly constructed edifice

of canes plastered with mud, but, for a tropical country, suffering under the slight defect of having no windows or aperture for ventilation besides the door. The drum brought us the most attentive of *alguazils*, and we fared by no means badly in San Juan; that is to say, we had plenty of milk and eggs.

When supper was over, H. lighted a pine splinter, and put on record his “ Observations on the Standard of Measurement in Honduras,” which I am allowed to copy for the information of travellers.

“ Distances here are computed by what may be called Long Measure. League is a vague term, and, like x in an algebraic equation, stands for an unknown quantity. It may mean ten miles, more or less,—any distance, in fact, over five miles. The unit of measure, as fixed by law, is *estamos aquí*, (here we are,) which is a mile and a half; *hay no masITA* (a little less than nothing) is five miles; *hay no mas* (there is no more) is ten miles; and *muy cerca* (very near) is a hard day’s journey. As regards spirituous liquors, a *trago* of brandy, or ‘a drink,’ is whatever may be in the bottle, be the same large or small, and the quantity more or less. ”

San Juan is insignificant in point of size, but its population seems to be well to do in the world, in the relative sense in which that term is to be interpreted in Central America. Here we found that the river forks,—the principal branch, however, which retains the name of Gascoran, still preserving its general course north and south. The smaller branch, called Rio de San Juan, descends from high mountains to the westward, having its rise, we were told, near the secluded Indian *pueblos* of Similton and Opotoro. We found the elevation of San Juan to be nine hundred feet above the sea,—an altitude sufficiently great, combined with the proximity of the Cordilleras, to give it a generally cool and delightful climate. The change in temperature from that of the sea-coast, however, is less marked than the change in scenery and vegetation. It is true, we find the ever-

graceful palm, the orange, plantain, and other tropical fruit-trees; but the country is no longer loaded down with forests. It spreads out before the traveller in a succession of swelling hills and level savannas, clothed with grass, and clumped over with pines, and miniature parks of deciduous trees, sufficiently open to permit cattle and horsemen to roam freely in every direction. During the dry season, however, this open region becomes dry and parched, and the traveller passing over it then would be apt to pronounce the whole country sterile and without cultivation. But in little lateral valleys and *coves* among the mountains, sheltered from the sun, and watered by springs or running streams, there are many plantations of sugar-cane, maize, rice, and other standard products of the tropics, of unsurpassed luxuriance. We sometimes came on these green places unexpectedly, far away from any habitation, and all the more gem-like and beautiful from their rough setting of sere savanna and rugged mountain.

We left San Juan early in the morning, crossing to the left bank of the river, still a noble stream, a hundred and fifty feet broad, and pure as crystal. A government *tambo*, or *ranchito*, opposite the town, on the bank, indicated that even here the river was sometimes unfordable. Hence the construction of this public shelter for travellers obliged to wait for the subsidence of the waters. These government *ranchos* are common on all the roads, in the less populous parts of the country, or where the towns are widely separated, and are the refuge of the wayfarer benighted or overtaken by a storm in his journey. They seldom consist of more than four forked posts planted in the ground, supporting a roof of *paja* or thatch. Occasionally one or two sides are wattled up with canes, or closed with poles placed closely together. They are usually built where some spring or stream furnishes a supply of water, and where there is an open patch of pasturage; and although they afford nothing beyond shelter, they are always welcome retreats to

the weary or belated traveller. For one, I generally preferred stopping in them to passing the night in the little villages, where the *cabildos* are often dirty and infested with fleas, and where a horrible concert is kept up by the lean and mangy curs which throughout Central America disgrace the respectable name of dog. In fact, a large part of the romance and many of the pleasantest recollections of our adventures in Honduras are connected with these rude shelters, and with the long nights which we passed in them, far away in dark valleys, or on mountain-crests, but always amongst Nature's deepest solitudes.

After crossing the river, our path, with the perversity of all Spanish roads, instead of following up the valley of the stream, diverged widely to the right through a cluster or knot of hills, in which we were involved until we reached a rapid stream called Rio Guanupalapa, flowing through a narrow gorge, over a wild mass of stones and boulders. Here we breakfasted, picturesquely enough, and, resuming our course, soon emerged from the hilly labyrinth on a series of terraces, falling off like steps to the river on our left. They had been burned over, and the young grass was sprouting up, under the freshening influence of the early rain, in a carpet of translucent green. At a distance of four leagues from San Juan, after descending from terrace to terrace, we again reached the river, now flowing through a valley three hundred yards broad, and about fifty feet below the general level of the adjacent *plateau*. Here we found another fork in the stream: the principal body of water descending, as before, from the right, and called Rio Rancho Grande; the smaller stream, on the left, bearing the name of Rio Chaguiton; and the two forming the Rio Goascoran. Half a mile beyond the ford is a collection of three or four huts, called Rancho Grande. Here we stopped to determine our position. We were now at the foot of the "divide," and close to the pass, if such existed, of which we were in search. Immediately in front

rose a high peak, destitute of trees, which the people called *El Volcan*. It had deep breaks or valleys on either side, evidently those of the streams to which I have alluded. Outside of these, the mountains, six or eight thousand feet in height, swept round in a majestic curve. Were there, then, two passes through the Cordilleras, separated by the conical peak of *El Volcan*? or did the great valley of the Goascoran divide here, only to waste itself away in narrow gorges, leaving a summit too high to be traversed except by mountain mules?

Strange to say, the occupants of the huts at Rancho Grande could give us no information on these points, but to all our inquiries only answered, "*Quien sabe?*" (Who knows?)—and pointed out to us the line of the mule-path, winding over the intervening hills and along the flank of *El Volcan*. Up to this time we had had comparatively small experience, and did not quite understand, what we afterwards came to know too well, that a Spanish road is perfect only when it runs over the highest and roughest ground that by any possibility may be selected between two given points.

We did not waste much time with the people of Rancho Grande, but urged on our mules as rapidly as possible. Turning abruptly to the right and leaving the plateau behind us, we advanced straight up the high ridge intervening between the two valleys, and thence in a zigzag course to the foot of *El Volcan*, a mass of igneous rock, protruded through the horizontal sandstone strata,—the gradual recession of which gives to the country the terraced character to which I have so often alluded. Leaving our mules here, H. and myself clambered up amongst rough and angular rocks, strewn in wildest disorder, to the bare and rugged summit of *El Volcan*. From this commanding position the view was unobstructed all the way back to the Pacific. The whole valley of the river, and line of our reconnaissance, the *Portillo* of Caridad, the Rock of Goascoran, the Volcano of Conchagua, and the high islands of the

Bay of Fonseca, were all included in the view. Rancho Grande and the fork of the river appeared at our feet; and on the right hand and the left, extending upwards in nearly parallel directions, were the deep valleys of the rivers Rancho Grande and Chaguiton,—that of the former clothed with pines, while that of the latter presented only a succession of savannas, with here and there a group of forest-trees. Our view to the northward, however, was obstructed by hills and forests, and our ascent of *El Volcan* failed to give us a view of the Pass, which we knew must now be near at hand. We descended, therefore, and resumed our course,—anxiously, it is true, but with few of the serious misgivings which had beset us at Caridad.

The path wound around the base of *El Volcan*, on the level terrace or shelf from which it springs. As we advanced, we could distinctly perceive that the valley to our right rose gradually, with a gentle, but constant grade. At a distance of three miles it had nearly reached the level of the terrace along which we rode, and at the end of our fourth mile the terrace and the valley merged into each other, and the mule-path dipping into the waters of the stream, now reduced to a sparkling brook, resumed its direction on the opposite bank. We stopped here, in a natural park of tall pines, and lunched beneath their shade, drinking only the cool, clear water which murmured among the mossy stones at our feet. We needed no artificial stimulus; our spirits were high and buoyant; we had almost traced the Goascoran to its source; half an hour more must bring us to its fountain-head,—and then? We knew not exactly what then; but one thing was certain, that nothing in the form of a hill or mountain obstructed our advance, for the light, reflected from a clear sky, streamed horizontally between the tree-trunks in front, while on either hand the vistas were dark, and the outlines of gigantic mountains could be discerned towering to mid-heaven.

Half a mile farther on, crossing in

the interval a number of little tributary streams, we came where the pines were more scattered; they soon disappeared, and we emerged upon an open glade or natural meadow. A high mountain, dark with forests, rose on our right; on the left was a long range of grassy hills; but in front all was clear! A government *rancho*, built under the shade of a couple of tall fruit-trees, stood in the middle of the savanna, and on its farther edge were the cane buildings of a cattle-*hacienda*, just visible through the wealth of plantain-trees by which they were surrounded, while the cattle themselves were dotted over the intervening space, cropping the young grass, which here looked brighter and fresher than in the valley below. Impulsively my mule pricked her ears forward, and broke into a rapid trot. Soon she stepped across the stream, which we had followed to its birthplace, now reduced to a trickling rivulet stealing out from a spring, "an eye of water," (*ojo de agua*,) coyly hidden away under a clump of trees draped with evergreen vines at the foot of the neighboring hills. I knew that we were at the "summit"; the faint swell of the savanna, scarcely perceptible to the eye, which supported the government *rancho*, it was clear, was the highest point between the two great oceans, and the cool breeze which fanned our foreheads was the expiring breath of the trade-winds coming all the way from the Bay of Honduras! My mule halted at the *rancho*; I threw the bridle over her neck, and went forward on foot; but I had not proceeded a hundred paces before my attention was arrested by the cheerful murmur of another little stream, also descending from the foot of the mountain at our right,—but this time, after traversing half the width of the savanna, it turned away suddenly to the north, and with a merry dash and sparkling leap started off on its journey to the Atlantic! In that direction, however, a forest of tall pines still shut off the view, and it was not until I reached the summit of one of the lateral hills that I could look over and beyond them.

Then, for the first time, I saw the great plain of Comayagua, at a level some hundreds of feet below us, spreading away for a distance of forty miles, in a rich succession of savannas and cultivated grounds, dotted with villages, and intersected by dark waving lines of forest, marking the courses of the various streams that traverse it like the veins on an outspread hand. At its northeastern extremity, its white walls now gleaming like silver in the sunlight, and anon subdued and distant under the shadow of a passing cloud, was the city of Comayagua, unmistakable, from its size, but especially from the imposing mass of its cathedral, as the principal town of the plain, and the capital of the Republic. Circling around this great plain, and, with the exception of only a narrow opening at its northern extremity, literally shutting it in like an amphitheatre, is a cincture of mountains, rising to the height of from three to six thousand feet,—a fitting frame-work for so grand a picture.

I returned slowly to the *rancho*, where my companions were preparing our encampment, and communicated to them the result of my observations. Singularly enough, there was no excitement; even H. forgot to inquire "what was the price of stock." But we took our dinner in calm satisfaction,—if four *torillas*, three eggs, six onions, and a water-melon, the total results of Dolores's foraging expedition to the cattle-*hacienda*, equally divided between eight hungry men, can be called a dinner.

We spent the evening, a good part of the night, and the next day until afternoon, in determining our position and altitude, and in various explorations in both directions from the summit. We found that we were distant seventy-eight miles in a right line from La Union, and (barometrically) 2958 feet above mean-tide in the Pacific. We afterwards ascertained that the hut in which we passed the night is called Rancho Chiquito, and that name was accordingly given to this summit, and to the Pass, as distinguished from another break through the mountains, to

the westward, which we subsequently discovered and designated as the Pass of Guajoca.

After Rancho Chiquito, the first town which is reached in the plain of Comayagua, entering it from this direction, is Lamani,—a small village, it is true, but delightfully situated in an open meadow, relieved only by fruit-trees and the stems of the *nopal* or palmated cactus, which here grows to a gigantic size, frequently reaching the height of twenty or thirty feet. The *cabildo* was in a state of extreme dilapidation, and we called on the first *alcalde* for better accommodations. He took us to the house of the *padre*, who was away from home, and installed us there. It was the best house in the place, whitewashed, and painted with figures of trees, men, animals, and birds, all in red ochre, and in a style of art truly archaic. The *padre's* two servants, an old woman and her boy, were the sole occupants of the establishment, and did not appear at all delighted to see us. According to their account, there was nothing in the house to eat; they had no *tortillas*, no eggs, no chickens, “*absolutamente nada*” (absolutely nothing). All this was affirmed with the greatest gravity, while a dozen fat fowls were distinctly visible through the open doorway, perched, for the night, among the bare limbs of the *jocote* trees in the court-yard. I pointed them out to the old woman, and, producing a handful of silver, told her that we were willing to pay for such as we required.

“*Pero no puedo venderles.*” (But I can't sell them.)

“Why?”

“*No puedo.*”

Dolores meantime took a stick, knocked three of the finest from their perches, and quietly wrung their necks. I expected to see the old dame swoon away, or at least go off in a paroxysm of tears; but, instead of committing any such civilized folly, she silently took up her slaughtered innocents, dressed and cooked them, and thanked me profoundly for the *medio* each, which I handed her next morning.

The lesson was not lost on us, in our subsequent travels; for we found it almost universal, that the lower classes are utterly indisposed to sell their domestic commodities. Their services may be purchased; but their chickens are above price. When, however, you have helped yourself, you are astonished to find how ridiculously small a sum will heal the wound you have made and atone for the loss you have inflicted.

From Lamani to Comayagua the road is direct, over a slightly undulating plain, subsiding gently to the north, and traversed nearly in its centre by the Rio Hanuya, fed by numerous tributaries falling from the mountains on either hand. We forded it at a distance of ten miles from Lamani, and were surprised to find it already a large and deep stream, frequently impassable for days and weeks together, during the season of rains. Half a mile beyond the ford we came to the Villa de San Antonio, a considerable place, and, next to the capital itself and the town of Las Piedras, the largest in the plain. Here we stopped at the house of the first *alcalde*, who gave us a cordial reception, and an ample dinner, in a civilized fashion,—that is to say, we had veritable plates, and knives and forks withal.

In Central America, curiosity is unchecked by our conventional laws, and the traveller soon ceases to be surprised at any of its manifestations, however extraordinary. When, therefore, a couple of dozen spectators, of all ages and both sexes, invaded the house of our host, and huddled around us while eating, we were in no degree astonished, but continued our meal as if unconscious of their presence. One yellow dame, however, was determined not to be ignored, and insisted on speaking English, of which she had a vocabulary of four or five words, picked up in her intercourse with American sailors at the port of Truxillo. We were hungry, and did not much heed her; whereupon she disappeared, as if piqued, but soon returned with what she evidently regarded as an irresistible appeal to our interest, in the shape of a

blue-eyed, flaxen-haired child, perhaps three years old, perfectly naked, but which she placed triumphantly on the table before us.

"*Mira estos caballeros! son paisanos tuyos, niño!*" (See these gentlemen, child! they are your countrymen!)

"Yes!" ejaculated the brat, to the infinite entertainment of the spectators, none of whom appeared to discover the slightest impropriety in the proceeding.

Of course, we had not come all the way to the Villa de San Antonio to set up our standard of what is moral or amusing; so we laughed also, and asked the mother to give us the history of the phenomenon. It was given without circumlocution; and we learned, in most direct phrase, that Captain — of —, who traded to Truxillo, was responsible for this early effort towards what H. called "the enlightenment of the country." So far from feeling ashamed of her *escapade* with the Captain, the mother gloried in it, and rather affected a social superiority over her less fortunate neighbors, in consequence. It is, however, but right to say, that the freedom with which matters of this sort are talked about in Central

America does not necessarily imply that the people at large are less virtuous than in other countries. *Honi soit qui mal y pense* is a motto universally acted on; legs are called legs; and even the most delicate relations and complaints are spoken of and discussed without the slightest attempt at concealment or periphrasis. It is no doubt true, that marriage is far from general among the middle and lower classes; and a woman may live with a man in open concubinage without serious detriment to her character or position, so long as she remains faithful to him.* It is only when she becomes "light o' love" and indiscriminate in her conduct, that she is avoided and despised. And although the remark may sound strangely to American ears, I have no question that this left-hand compact, on the whole, is here quite as well kept as the vows which have secured the formal sanction of the law and the Church.

* But few statistics relating to this subject are in existence; but those few quite bear out these observations. According to the official returns of the District of Amatitlan in Guatemala, the whole number of births in that Department for the year 1858 was 1394, of which 581 were illegitimate!

[To be continued.]

THE "CATTLE" TO THE "POET."*

How do *you* know what the cow may know,
As under the tasselled bough she lies,
When earth is a-beat with the life below,
When the orient mornings redden and glow,
When the silent butterflies come and go,—
The dreamy cow with the Juno eyes?

How do *you* know that she may not know
That the meadow all over is lettered, "Love,"
Or hear the mystic syllable low
In the grasses' growth and the waters' flow?
How do *you* know that she may not know
What the robin sings on the twig above?

* See "The Poet's Friends," *Atlantic Monthly*, vol. v., p. 185.

MORE WORDS ABOUT SHELLEY.

THERE is a moral or a lesson to be found in the life of almost every man, the chief duty of a biographer being to set forth and illustrate this; and a history of the commonest individual, if written truly, could not fail to be interesting to his fellows; for the feelings and aspirations of men are pretty much alike all the world over, and the elements of genius not very unequally distributed through the mass of mankind,—the thing itself being a development due to circumstances, very probably, as much as to anything singular in the man. But there are few good biographies extant; the writers, for the most part, contenting themselves with superficial facts, refusing or unable to follow the mind and motive powers of the subject,—or following these imperfectly. For this reason, they who would read the truest kind of biographies must turn to those written by men of themselves,—that is, the autobiographies; and these are, in fact, found to be among the most attractive specimens of literature in our language, or any other.

The life of any man is more or less of a mystery to other men, and one who would write it effectively must have been intimate with him from his youth onward. When the biography is that of a man of genius, the difficulty is greatly increased, even to the writer who has been his life-long familiar; for genius, by the necessity of its being, implies a departure in a variety of ways from the thoughts and rules of that regulated existence which is most favorable to the progress and welfare of men in the mass,—at least, as these are generally understood. But if the life-long intimacy be wanting in this instance, the task of the writer is the most difficult of all, and almost always a failure,—save in some rare case, where the writer and his subject have been men of a similar stamp.

Few biographies are written by the life-intimates of the dead. In most in-

stances they are composed as tasks or duties by comparative strangers; or if now and then by the friends or associates of the subject, these are very likely the observers of only a part of his life, the *seri studiosorum* of his latter or middle career, and unacquainted with that period when the strong lines of character are formed and the mental tendencies fixed. Boswell's "Life of Johnson" is considered one of the best performances of its kind in our language; but it is, after all, only half a biography, as it were. We have the pensioned and petted life of the rough and contemptuous man of genius,—whose great renown in English literature, by-the-by, is owing far more to that garrulous admirer of his than to his own works,—but we have little or nothing about those days of study or struggle when he taught and flogged little boys, or felt all the contumely excited by his shabby habiliments, or knocked down his publisher, or slept at night with a hungry stomach on a bulkhead in the company of the poor poet Savage. All the racier and stronger part of the man's history is slurred over. No doubt he would not encourage any prying into it, and neither cared to remember it himself nor wished others to do so. He had a sensitive horror of having his life written by an ignorant or unfriendly biographer, and even spoke of the justice of taking such a person's life by anticipation, as they tell us. Others, feeling a similar horror, and some of them conscious of the enmities they should leave behind them, have themselves written the obscurer portions of their own lives, like Hume, Gibbon, Gifford, Scott, Moore, Southey. These men must have felt, that, even at best, and with the fairest intentions, the task of the biographer is full of difficulties, and open to mistakes, uncertainties, and false conclusions without number.

The autobiographies are the best biographies. No doubt, self-love and some

cowardly sensitiveness will operate on a man in speaking of his own doings; but all such drawbacks will still leave his narrative far more trustworthy, as regards the truth of character, than that of any other man: and this is more emphatically the case in proportion to the genius of the writer; for genius is naturally bold and true, the antipodes of anything like hypocrisy, and prone to speak out,—if it were but in defiance of hatred or misrepresentation, even though the better and more philosophic spirit were wanting. We should have better and more instructive autobiographies, if distinguished men were not deterred by the self-denyng ordinance so generally accepted, that it is not becoming in any one to speak frankly of himself or his own convictions. We have no longer any of the strong, wayward egotists,—the St. Augustines, the Montaignes, the Rousseaus, the Mirabeaus, the Byrons; even the Cobbetts have died out. But the Carlyles and the Emersons preserve amongst us still the evidences of a stronger time.

There are two sorts of biographies, which may be described, in a rough way, as biographies of thought and biographies of action. It may not be a very difficult thing, perhaps, to write the life of a politician or a general, or even of a statesman or a great soldier. At any rate, the history of such a one is an easy matter, compared with that of a mere man of thought, of a man of genius. In the former case, we have the marked events, which are, as it were, the stepping-stones of biography,—events belonging to the narrative of the time,—and the individual receives a reflected light from many men and things. Dates and facts make the task of statement or commentary more easy to the writer, and his work more interesting to the general reader. But the case of the mere thinker, the man of inaction, whose sphere of achievement is for the most part a little room, and who produces his effects in a great measure in silence or solitude, is a very different one. The names of his publications, the

dates of them, the number of them, the publisher's price for them, the critic's opinion of them, are meagre facts for the biographer; and if the man of genius be a man of quiet, sequestered life, the record of it will be only the more uninteresting to the reader. It is only when something painful has been suffered, something eccentric done and misunderstood and denounced or derided, that the biography rouses the languid interest of the public. Indeed, so imperfect and false are the plan and style of the literary biographies, that such opprobria are, as it were, necessary to them,—necessary stimulants of attention, and necessary shades of what would otherwise be a monotonous and ineffective picture; and thus the unlucky men of letters suffer posthumously for the stupidity of others as well as their own faults or divergencies. When biographers have not facts, they are not unwilling to make use of fallacies; they set down "elephants for want of towns." Dean Swift is a case in point. Society has avenged itself by calumniating the man who spat upon its hypocrisies and rascalities; and to appease the wounded feelings of the world, he is attractively set down as a savage and a tyrant. Mr. Thackeray and others find such a verdict artistically suitable to their criticisms or their narratives, (a French author has written a romantic book about the Dean and Stella,) and so the man is still depicted and explained as the slayer of two poor innocent women, a sort of clerical Bluebeard, and the horrid ogre who proposed to kill and eat the fat Irish babies. Thackeray's plan of dissertation, indeed, was inconsistent with any displacing or disturbing of the preconceived notions; the success of it was, on the contrary, to be built upon the customary old impressions of the subject. Everybody is pleased to find his own idea in Thackeray, liking it all the better for the graphic way in which it is set forth and illustrated; and the result shows the shrewd artistic judgment of the critic, who apparently (especially in the Dean's case) understands his readers rather better than

his theme. As for Swift,—though a fair knowledge of the man may be gleaned from the several biographies of him that we have, his life has not yet been fairly written and interpreted; and we believe the same may be said of most literary men of genius.

It must certainly be said of Shelley,—and this brings us to the beginning of our remarks. Not one man in ten thousand would be capable of writing the life of that poet as it should be written,—even supposing the biographer were one of his intimate friends. Shelley went entirely away from the ranks of society,—farther away than Byron, and was a man harder to be understood by the generality of men. An autobiography of such a man was more needed than that of any other; but we could not expect an autobiography from Shelley. He felt nothing but pain and sorrow in the retrospect of his life, and, like Byron, shrank from the task of explaining the mixture of self-will, injustice, falsehood, and impetuous defiance that made up the greater part of his history; and when he died, he left everything at sixes and sevens, as regarded his place and acts in the world. Accordingly, until lately, no one ventured forward with a biography of the departed poet, who has been for more than a generation looked on, as it were, through the medium of two lights: one, that of his poetry, which represents him as the loftiest and gentlest of minds; and the other, the imperfect notices of his life, which show him forth a cruel, headstrong, and reckless outlaw,—hooted at, anathematized, (and by his own father first,) driven out, like a leper in the Middle Ages, and deprived of the care of his children. In his case, however, the tendency to dwell upon and bring out the darker traits of biography does not exhibit itself in any remarkable way; and, on the whole, Shelley's character wears a mild and retiring rather than a defiant or fiendish aspect. The world is inclined to make allowances for him; on account of his beautiful poetry; and this is something of the justice which, on oth-

er grounds also, is probably due to him. Still, nobody has come forward to write his biography as it should be written; and we are yet to seek for the illustrated moral of a sensitive, unaccommodating, and impulsive being, rebelling against the rules of life and the general philosophy of his fellow-creatures, and shrinking with a shy, uncomprehended pride from the companionship of society. Shelley's disposition was a marked and rare one, but there is nothing of the riddle in it; for thousands, of his temperament, may always be found going strangely through the world, here and there, and the interpretation of such a character could be made extremely interesting, and even instructive, by any one capable of comprehending it.

After a considerable interval, some notices of Shelley have appeared, without, however, throwing much additional light on the wayward heart and pilgrimage of the poet. Mr. C. S. Middleton has published a book upon Shelley and his writings; Mr. T. J. Hogg has given a sketch of his life; and E. J. Trelawny some recollections of him, as well as of Byron. None of these pretends to explain that eccentric nature, or harmonize in any way his acts and his feelings; though a few things may be gathered that tend to make the biography somewhat more distinct than before, in some particulars. On the subject of his first unfortunate marriage, we are made aware that his wife was a self-willed, ill-taught young woman, who set her own father at defiance, and threw herself on the protection of such a wandering oddity as Percy Shelley. She was strong-minded, and brought with her into her husband's house her elder sister, also strong-minded, a ridiculous and insufferable duenna, whom Shelley hated with all his heart and soul, and wished dead and buried out of his sight,—finding, no doubt, his unsteady disposition controlled and thwarted by the voice and authority of his sister-in-law, who, knowing that her father furnished the young couple with their chief means of livelihood, would be all the more resolute in advising them or

domineering over the migratory household. At last, these women grew tired of the moping and ineffectual youth who still remained poor and unsettled, with a father desperately healthy and inexorable, and all hope of the baronetcy very far off indeed; they grew tired of him and went away,—the wife, like Lady Byron, refusing to go back to such an aimless, rhapsodizing vagabond. With her natural decision of mind, aided and encouraged, very likely, by her astute relatives, she thought she saw good reasons for breaking and setting aside the contract which had united them; and no doubt the poor woman must have felt the hardship of living with such a melancholy outlaw. Having nothing in common with the devoted Emma, drawn in the ballad of “The Nut-brown Maid,” she must have hated that wandering about from place to place, living in lonely country-houses, under perpetual terror of robbers in the night, and subsisting for the most part on potatoes and Platonism; and she must have especially hated the Latin Grammar. She naturally thought, that, when she was married, she should have nothing more to say to exercises and lessons; but she found a pedagogue in Shelley, and the honeymoon saw her “attacking Latin” for the purpose of construing the poet Horace. How she must have hated all poets! She had other ideas,—ideas of ease, respectability, baronetcy; and her disappointment was greater than she could bear. Mr. Hogg says, she had a propensity to strong courses, and would talk of suicide in a speculative way. It is not difficult to discover the truth of that unfortunate union and disunion. Shelley, betrayed by the impulses of his enthusiast nature and the ignorant and deplorable credulity of a bookworm, allowed himself to be imposed upon by a designing boarding-school girl and her relatives, and everything followed as a matter of course. The unhappy wife recklessly broke the bond which she had as recklessly formed, and which the poet would have honorably and truly respected all his life; and then her passionate regret reacted fatally on herself,—and

on him also, by a Nemesis not so very strange or unnatural, as the world goes.*

The subject of Shelley’s character is a delicate and a difficult one, and Mr. Hogg and Mr. Trelawny, especially, show their inability to understand it, by the way in which they put forward and dwell upon the poet’s peculiarities. Trelawny, a hard-minded, thorough-paced man of the world, publishing garrulously in his old age what he was silent about in his better period, talks of the poet’s oddity, awkwardness, and want of punctuality,—as if Percy were some clerkly man on ‘Change; and Hogg, hilariously clever, says Shelley was so erratic, fragmentary, and unequal, that his character cannot be shown in any way but as the figures of a magic-lantern are shown on a wall,—Mr. Hogg’s own style of description being the wall,—“O wall, O wall, O sweet and lovely wall!” He also tells us, to instance the poet’s familiarity with the sex, a story of Shelley sitting with one of his lady friends and being plied with cups of tea by that fair sympathizer,—the poet talking and letting his saucer fall, and the lady wiping his perspiring face with a pocket-handkerchief. Such scraps of silly gossip are not biography; they may do for tea-table chit-chat, but show very feebly in the place where one looks for something like a philosophical criticism on the mind of so extraordinary a man as Shelley.

Genius alone can do justice to genius; and kindred genius alone will do it. There have been, no doubt, a great many writers of biography who had no objection to compensate their feelings for bygone slights or discourtesies, suffered from some wayward or inattentive superiority, some stroke of ridicule or malice. Literary antipathies do not die with the dead. The posthumous impression of Margaret Fuller Ossoli has been colored by some who sneer at her ways and pretensions, be-

* Since this article was written, Mr. Peacock, an early friend of Shelley, has published a very different estimate of the character of Harriet Shelley. See *Fraser’s Magazine* for March, 1860.

cause there was probably something in her manner which displeased them in a personal way. She had certainly a very awkward fashion of blinking her eyes, and also "a mountainous *me*." It is very probable poor Edgar Poe has had his faults exaggerated by those who suffered from the critical superiority of his intellect; since some of those notices of him which tend most to fix his character as a reprobate, and appear in a laggard way in the English periodicals, were probably written by some of his own countrymen. It was a painful consciousness of this literary revenge that made H. W. Herbert, in his last agony, call on his brother-penmen for mercy on his remains, and that induces many of our public men to bring out their own memoirs or encourage others to do so. It looks like vainglory, but it is not such. The memoirs show a mortal dread of calumny or misrepresentation. Mr. Barnum, for instance, was more just to himself than anybody else would be. He showed that his doings were only of a piece with those of thousands around him in society; and this not unreasonable extenuation is one that few of his critics are apt to make use of in commenting on him and his dexterities of living. As for Shelley, he might have shunned or slighted or overlooked Mr. Trelawny in some painful or preoccupied moment, or offended the robust man of the world by the mere delicate shyness of his look; he might also have puzzled and bewildered Mr. Hogg, being, perhaps, puzzled and bewildered himself, by some subtle mental speculation, — unconscious that for these things he was yet to be brought to judgment and turned into ridicule, for the coming generation, by these familiar men, — these drilled and pipe-clayed familiar men. He might have tossed up a paradox or two to keep the muscles of his mind in exercise on a cold day, and his rapid intellect may have run away from his hearer, trampling on the conventions and platitudes in its course; but Mr. Hogg does not think he had fixed notions concerning anything. The poet did not nail his

colors with a cheer to the mast of any of the great questions of the day, ethical or social, and therefore suffered the disparagements of those intelligent friends of his who have been taught to consider a well-defined rigidity of conviction and maintenance, in the midst of all these phenomena of our universe, telluric and uranological, as the test of everything valuable in human character and morals. And thus it has come about, that genius, with its native instincts of reason, truth, and common sense, is doomed to pay the penalty of its preëminence and its divergencies, and suffer at the hands of friends and enemies alike, from the show of those false appearances, insincerities, equivocations, which are its natural and proper antipathies.

Since the foregoing observations were written, the writer has seen a certain corroboration of them in the interesting "Memorials of Shelley," recently edited by Lady Shelley, and published by Ticknor and Fields. For, in the preface of this book, she takes occasion to speak of the misstatements of all those who have hitherto written on the subject of the poet, instancing the fallacies of Captain Medwin's book, and also, in an especial manner, though vaguely enough, the incorrectness, amounting to caricature, put forth by a later biographer, one of Shelley's oldest friends, — by which she evidently means to indicate Mr. Hogg. At the same time, the nature of her Ladyship's book is, involuntarily, an additional evidence of the difficulty that seems fated to attend all attempts to set forth or set right the character of Shelley. Indeed, she appears to be in some degree conscious of this; for she says, apologetically, that she has published the "Memorials" for the special purpose of neutralizing the misstatements and spirit of Mr. Hogg's work, and also lets us know that the time is not yet come for the publication of other and more important matter calculated to do justice to the character of Percy Bysshe Shelley.

It is only natural to think that Lady Shelley is not the person to write the biography of the poet, whose relationship

to her is such a close one. She would far more willingly leave the events of his troubled life forever unremembered. Indeed, when we find, that, in her long widowhood of thirty years, Mrs. Shelley shrank from the task of writing the life of her husband, we can the more easily understand why any member of his family, especially a lady, should be the most unfit to undertake the task. Nobody could expect Lady Shelley to enter into those painful explanations necessary to it. Accordingly, in the work before us, we do not find any light thrown on those places where a person would be most anxious to see it. Lady Shelley slurs over the undutiful boyhood of the poet and the terrible sternness of his Mirabeau-father. She merely glances across the first foolish marriage and the catastrophe that closed it, as a bird flies over an abyss. On such subjects she cannot set about contradicting anybody.

But it is an ungrateful task to go on speaking of short-comings in a case like this, where the hardest critic in the world must sympathize with the feelings of the author, whatever becomes of the book. And yet the book will be very welcome to every one who regards it as a feminine offering of tender admiration and grief laid upon the grave of departed genius. Though not exactly the sort of personal history one would wish for from another hand, it is still valuable, as furnishing very interesting matter for a future biography. We have in it several new letters of Shelley's, some letters of Godwin's, and others of Mrs. Shelley's, together with a number of touching extracts from the diary of the latter. There are also two papers from the poet's pen: one an "Address to Lord Ellenborough" in defence of a man punished for having published Paine's "Age of Reason," and another an "Essay on Christianity." In the first, with all a boy's enthusiasm, he opposes the high abstract logic of truth and toleration to the hard government policy which tries to keep a reckless kind of semi-civilization in order, and cannot bring itself to believe, that, as yet, the broad principle of license is the

one that can serve the cosmogony best. In the next he rather surprises the reader by exhibiting himself as the eulogist and expounder of Jesus Christ,—but not after the manner of Saint Paul. No doubt, the secular and semi-pagan tone of this dissertation will jar against the orthodoxy of a great many readers,—to whom, however, it will be interesting as a literary curiosity. But it is meant to show the character of Shelley in a more amiable light than that in which it is contemplated by the generality of people.

To explain Percy Bysshe Shelley, by telling us he was inconsequent, absurd, and odd in his manners, is as futile as to explain him by saying he was a strange, wonderful genius, of the Platonic or Pythagorean order, always soaring above the atmosphere of common men. To call a man of genius an inspired idiot or an inspired oddity is an easy, but false way of interpreting him. The truth of Shelley's character may be found by a more matter-of-fact investigation. He was naturally of a feeble constitution from childhood, and not addicted to the amusements of stronger boys; hence he became shy, and, when bullied or flouted by the others, sensitive and irritable, and given to secret reading and study, instead of play with those "little fiends that scoffed incessantly." These habits gave him the name of an oddity, and what is called a "Miss Molly," and the persecution that followed only made him more recluse and speculative, and disgusted with the ways and feelings of others. He began to have thoughts beyond his years, and was happy to think he had, in these, a compensation for what he suffered from his schoolfellows. With his hermit habits grew naturally a strong egotistical vanity, which he could as little repress as the other youths could repress their muscular propensities to exercise; and hence his eagerness to set forth the threadbare heretical theories he had found among his books. For supporting these with an insolent show of importunity, he was turned away from college, and soon left his father's home, with his father's curse to bear him company. Had the

baronet been in the way of a *lettre de cachet*, like Mirabeau's father, he would certainly have had Percy put into Newgate and kept there.

The malediction of the old man seems to have clung to Shelley's mind to the end, and made him rebellious against everything bearing the paternal name. He assailed the Father of the Hebrew theocracy with amazing bitterness, and joined Prometheus in cursing and dethroning Zeus, the Olympian usurper. With him, tyrant and father were synonymous, and he has drawn the old Cenci, in the play of that name, with the same fierce, unfilial pencil, dipped in blood and wormwood. Shelley was by nature, self-instruction, and inexperience of life, impatient and full of impulse; and the sharp and violent measures by which they attempted to reclaim him only exasperated him the more against everything respected by his opponents and persecutors. Genius is by nature aggressive or retaliatory; and the young poet, writhing and laughing hysterically, like Demogorgon, returned the scorn of society with a scorn, the deeper and loftier in the end, that it grew calm and became the abiding principle of a philosophic life. It was the act of his father which drove Shelley into such open rebellion against gods and men. Very probably, though he might have lived an infidel in religious matters, like tens of thousands of his fellows, he would not have written, or, at least, published, such shocking things, if his father had been more patient with a youth so organized. But parents have a right to show a terrible anger when thwarted by their children, and in this case the father too much resembled the son in wilful impetuosity of temper. Turned out of his first home, Shelley went wandering forth by land and sea,—a reed shaken by the wind, a restless outcast yearning for repose and human sympathy, and in this way encountering the questionable accidents of his troubled, unguarded life, and gathering all the feverish inspiration of his melancholy and unfamiliar poetry.

With a sense of physical infirmity or

defect which shaped the sequestered philosophy of the Cowpers, the Bérangers, and others, the manlier minds of literature, including Byron himself, in some measure, Shelley felt he was not fit for the shock and hum of men and the greater or lesser legerdemain of life, and so turned shyly away to live and follow his plans and reveries apart, after the law of his being, violating in this way what may be called the common law of society, and meeting the fate of all nonconformists. He was slighted and ridiculed, and even suspected; for people in general, when they see a man go aside from the highway, maundering and talking to himself, think there must be a reason for it; they suppose him insane, or scornful, or meditating a murder,—in any case, one to be visited with hard thoughts; and thus baffled curiosity will grow uneasily into disgust, and into calumny, if not into some species of outrage,—and very naturally, after all; for man is, on the whole, made for society, and society has a sovereign right to take cognizance of him, his ways and his movements, as a matter of necessary *surveillance*.

The world will class men "in its coarse blacks and whites." Some mark Shelley with charcoal, others with chalk,—the former considering him a reprobate, the latter admiring him as a high-souled lover of human happiness and human liberty. But he was something of both together,—and would have been nothing without that worst part of him. He ran perversely counter to the lessons of his teachers, and acted in defiance of the regular opinions and habits of the world. He was too outspoken, like all genius; whereas the world inculcates the high practical wisdom of a shut mouth and a secretive mind. Fontenelle, speaking according to the philosophy of the crowd, says, "A wise man, with his fist full of truths, would open only his little finger." Shelley opened his whole hand, in a fearless, unhappy manner; and was accordingly punished for ideas which multitudes entertain in a quiet way, saying nothing, and living in the odor of respectable opinion. With a mind that re-

coiled from anything like falsehood and injustice, he wanted prudence. And as, in the belief of the matter-of-fact Romans, no divinity is absent, if *Prudentia* be present, so it still seems that everything is wanting to a man, if he wants that. Shelley denied the commonly received Divinity, as all the world knows, — an Atheist of the most unpardonable stamp, — and has suffered in consequence; his life being considered a life of folly and vagary, and his punishment still enduring, as we may perceive from the tone and philosophy of his biographers, or rather his critics, who, not being able to comprehend such a simple savage, present his character as an oddity and a wonder, — an *extravaganza* that cannot be understood without some wall of the world's pattern and plastering to show it up against.

It is, to be sure, much easier and safer to regard Shelley's career in this way than to justify it, since the customs and opinions of the great majority must, after all, be the law and rule of the world. Shelley's apologist would be a bold man. Whether he shall ever have one is a question. At all events, he has not had a biographer as yet. His widow shrank from the task. Of those familiar friends of his, we can say that "no man's thought keeps the roadway better than theirs," and all to show how futile is the attempt to measure such a man with the foot-rule of the conventions. Shelley was a mutineer on board ship, and a deserter from the ranks; and he must, therefore, wait for a biographer, as other denounced and daring geniuses have waited for their audience or their epitaph.

CLARIAN'S PICTURE.

A LEGEND OF NASSAU HALL.

"Turbine raptus ingenii." — SCALIGER.

[Concluded.]

THE next morning there was queer talk about Clarian. Mac and I stared at each other when we heard it at breakfast, but still kept our own counsel in silence. Some late walkers had met him in the moonlight, crossing the campus at full speed, hatless, dripping wet, and flying like a ghost.

"I tell you," said our informant, a good enough fellow, and one not prone to be violently startled, "he scared me, as he flitted past. His eyes were like saucers, his hair wet and streaming behind him, his face white as a chalk-mark on Professor Cosine's blackboard. Depend on it, that boy's either going mad or has got into some desperate scrape."

"Pshaw!" growled Mac, "you were drunk, — couldn't see straight."

"Mr. Innocence was returning from

some assignation, I suspect," remarked Zoile.

"If he had been, *you'd* have encountered him, Mr. Zoile," said Mac, curtly.

But I noticed my chum did not like this new feature in the case.

After this, until the time of my receiving the lad's invitation, I neither saw nor had communication with Clarian, nor did any others of us. If he left his room, it was solely at night; he had his meals sent to him, under pretence of illness, and admitted no one, except his own servant. This fellow, Dennis, spoke of him as looking exceedingly feeble and ill; and also remarked that he had apparently not been to bed for some days, but was mixing colors, or painting, the whole time. I went to his door several times, but was

invariably refused admittance, and told, kindly, but firmly, that he would not be interrupted. Mac also tried to see him, but in vain.

"I caught a glimpse of that boy's face at his window just now," said he, one day, coming in after recitation. "You may depend upon it, there's something terribly wrong. My God, I was horrified, Ned! Did you ever see any one drown? No? Well, I did once, — a woman. She fell overboard from a Chesapeake steamboat in which I was coming up the Bay, and sank just before they reached her. I shall never forget her looks as she came up the last time, turned her white, despairing, death-stricken face towards us, screamed a wild nightmare scream, and went down. Clarian's face was just like hers. Depend upon it, there's something wrong. What can we do?"

Nothing, indeed, save what we did, — wait, until that pleasant morning came round and brought me Clarian's note. I could scarcely brook the slow laziness with which the day dragged by, as if it knew its own beauty, and lingered to enjoy it. At last, however, the night came, the hour also, and punctually with it came Dr. Thorne, a kindly young physician, and a man of much promise, well-read, prompt, clear-headed, resourceful, and enthusiastically attached to his profession. Mac tucked a volume of Shakspeare under his arm, and we made our way to Clarian's room forthwith. Here we found about a dozen students, all known to us intimately. They were seated close to one another, conversing in low tones, and betraying upon their faces quite an anxiety of expectation. The door of the bedroom was closed, the curtain was lowered, and the only light in the room came from a shaded lamp, which was placed upon a small table in the recess to the right of the picture.

"What is this for?" inquired Dr. Thorne, pointing to a sort of salver resting upon a low tripod directly in front of the picture.

"Where is Clarian?" asked I.

"He looks awful," some one began in a whisper, when the lad's feeble voice called out from the bedroom, —

"Is it Ned and Mac?"

The door was pulled open, and Clarian came towards us.

"I am glad to see you, my friends. Dr. Thorne, you are truly welcome. Pray, be seated. Mac, here is your place, you and your Shakspeare," said he, indicating the chair and table in the recess.

I had held out my hand to the lad, but he turned away without taking it, and began to adjust the cords that moved the curtain.

"The tripod, Dr. Thorne," said he, with a sickly smile, "is a — a mere fancy of mine, — childish, — but in the salver I shall burn some pyrotechnic preparations, while the picture is being exhibited, by way of substitute for daylight. Excuse me a moment," added he, as he went into the bedroom again.

"Blount," said Dr. Thorne, in my ear, "why have you permitted this? What ails that boy? If he is not cared for soon, he will go crazy. Hush! — here he comes, — keep your eye on him."

Then, as Clarian came out, and stood in the bedroom doorway, quite near me, I remarked the terrible change since I had last seen him. He leaned against the door-frame, as if too weak to support himself erect; and I saw that his knees shook, his hands jerked, and his mouth twitched in a continual nervous unrest. He had on a handsome *robe de chambre* of maroon velvet, which he seldom wore about college, though it was very becoming to him, its long skirts falling nearly to his feet, while its ample folds were gathered about his waist, and secured with cord and tassel. His feet were thrust into neat slippers, and his collar rolled over a flowing black cravat à la *Corsaire*. His long hair, which was just now longer than usual, was evenly parted in the middle, like a girl's, and, combed out straight, fell down to his shoulders on either side. All this care and neatness of dress made the contrast of his face stand out the more strikingly. Its

pallor was ghastly: no other word conveys the idea of it. His lips kept asunder, as we see them sometimes in persons prostrated by long illness, and the nether one quivered incessantly, as did the smaller facial muscles near the mouth. His eyes were sunken and surrounded by livid circles, but they themselves seemed consuming with the dry and thirsty fire of fever: hot, red, staring, they glided ever to and fro with a snake-like motion, as uncertain, wild, and painful, in their unresting search, as those of a wounded and captive hawk. The same restlessness, approaching in violence the ceaseless spasmodic habit of a confirmed Chorea, betrayed itself in all his movements, particularly in a way he had of glancing over his shoulder with a stealthy look of apprehension, and the frequent starts and shivers that interrupted him when talking. His voice also was changed, and in every way he gave evidence not only of disease of mind and body, but of a nervous system shattered almost beyond hope of reaction and recovery. Trembling for him, I rose and attempted to speak with him aside, but he waived me off, saying, with that sickly smile which I had never before seen him wear, —

“No, Ned,—you must not interrupt me to-night, neither you nor the rest,—for I am very weak and nervous and ill, and just now need all my strength for my picture, which, as it has cost me labor and pain,—much pain,—I wish to show in its best light. Macbeth's terror—it means more than it did the other night, Ned—but”——

Here he murmured an inarticulate word or two, recovering himself almost instantly, however, and resuming in a stronger voice,—

“Macbeth's doom is my picture. You will wonder I preferred the solid wall to canvas, perhaps,—but so did the genuine old artists. Lippo Lippi, and Giotto, and——why, Orcagna painted on graveyard walls; and I can almost fancy, sometimes, that this room is a vault, a tomb, a dungeon, where they torture people. Turn to the place, good Mac, Shak-

speare's tragedy of ‘Macbeth,’ Act Third, Scene Fourth, and read the scene to us, as you know how to read; I will manage the accompaniments.”

As he spoke, he touched the salver with a lighted match, so that a blue alcoholic flame flickered up before the curtain, making the poor lad's face seem more ghastly than ever.

“You must sit down, Clarian,” cried Dr. Thorne, resolutely.

Clarian smiled again, that dim, uncertain smile, and answered,—

“Nay, Doctor, let me have my own way for an hour, and after that you shall govern me as your learned skill suggests. And do not be uneasy about my ‘cream-faced’ aspect, as I see Ned is: there is plentiful cause for it, beyond the feebleness of this very present, and to-night is not the first time I have worn these ‘linen cheeks.’ Read on, Mac.”

We sat there in the dim light, breathless, awed,—for all of us saw the boy's agony, and were the more shocked that we were unable to understand it,—until, at last, in a voice made more impressive by its tremor, Mac began to read the terrible text,—to read as I had never heard him read before, until a fair chill entered our veins and ran back to our shuddering hearts from sympathy. Then, as he read on and painted the king and murderer together, while his voice waxed stronger and fuller, we saw Clarian step forward to the salver and busy with its lambent flame, till it blazed up with a broad, red light, that, shedding a weird splendor upon all around, and lending a supernatural effect to the room's deep shadows, the picture's funereal aspect, and the unearthly pallor of the boy's countenance, startled our eyes like the painful glare of midnight lightning.

“Thou canst not say, I did it! Never shake Thy gory locks at me!”

As the reader thrust the terror of these words upon us, all started back, for the curtain was plucked suddenly away, and there before us, not in Clarian's picture, it seemed, but in very truth, stood Mac-

beth, conscious of the murdered presence. Even the reader, absorbed as he was in his text, paused short, amazed; and I forgot that I had seen this picture, only knew that it was a living scene of terror. Doubtless much of this startling effect was the result of association, the agitation of anxiety, the influence of the impressive text, the suddenness of the apparition, the unusual light; but in the figure of Macbeth, at which alone we gazed, there was a life, a terrible significance, that outran all these causes. It was not in the posture, grand as that was,—not in the sin-stamped brow, rough with wrinkles like a storm-chafed sea,—not in the wiry hair, gray and half rising in haggard locks, like adders that in vain try to escape the foot that treads them down,—nor in the mouth, for that was hid behind the impotent guard of the upraised arm and clenched fist,—but in those painted eyes, into which, all-fascinated, we ever gazed, reading in them all that crouching terror, all the punishment of that spectral presence, all the poignant consciousness of his fate to whom such things could happen, to whom already his victims rise again,

“With twenty mortal murders on their crowns,
And push us from our stools!”

While I yet gazed, a sickening terror pervading me in the presence of these ghastly eyes, there came a voice, as if from afar,—“Read on!”—so consonant with the tone of my emotions, that I looked to see the figure itself take speech, until Mac, with a gasp, resumed. Still, as he read, the nightmare-spell possessed me, till a convulsive clutch upon my arm roused me, and instinctively, with the returning sense, I turned to Clarian.

Not too soon,—for then, in his own person, and in that strange glare, he was interpreting the picture to us. He stood, not thrown back like Macbeth, but drawn forward, on tiptoe, with neck reached out, form erect, but lax, one arm extended, and one long diaphonous finger pointing over our heads at something he saw be-

hind us, but towards which, in the extremity of our terror, we dared not turn our eyes. *He saw it*,—more than saw it,—we knew, as we noted the scream swelling in his throat, yet dying away into an inarticulate breath ere it passed the blue and shaken lips,—he saw it, and those eyes of his, large enough in their wont, waxed larger still, wilder, madder with desperate affright, till every one of us, save the absorbed reader, recognized in them the nightmare horror of the picture,—knew that in Macbeth Clarian had drawn his own portrait! There he stood, drawn on, staring, pointing——

“Stop!” shouted Dr. Thorne, his voice hoarse and strident with emotion; but Mac, absorbed in his text, still read, flinging a fine and subtle emotion of scorn into the words,—

“O proper stuff!
This is the very painting of your fear:
This ”——

“Triple fool! be silent!” cried Dr. Thorne again, springing to his feet,—while we, spell-bound, sat still and waited for the end. “Cease! do you not see?” cried he, seizing Mac.

But there stood Clarian yet, that red light upon his check and brow, that fixed stare of a real, unpainted horror in his speechless face, that long finger still pointing and trembling not,—there he stood, fixed, while one might count ten. Then over his blue lips, like a ghost from its tomb, stole a low and hissing whisper, that curdled our blood, and peopled all the room with dreadful things,—a low whisper that said,—

“Prithee, see there! behold! it comes! it comes!” Now he beckoned in the air, and called with a shuddering, smothered shriek,—“Come! I did it! come! Ha!” yelled he, plucking the spell from his limbs like a garment, and springing madly forward towards the door,—“Ha! touch me not! Off, I say, off!” He paused, gazed wildly round, flung his hand to his brow, and, while his eyes rolled till nothing but their whites were seen, while the purple veins swelled like mole-tracks in

his forehead, and a bubbling froth began to gather about his lips, he tossed his arms in the air, gave shrieking utterance to the cry,—“O Christ! it is gone! it is gone!” and fell to the floor with a bound.

We sprang to him,—Thorne first of any.

“This is my place, gentlemen,” said he, in quick, nervous tones. Then, taking the prostrate child into his arms, he carried him to his bed, laid him down, felt his pulse, and placed his head in Mac's arms. Returning then, he veiled the picture, flung the salver out of the window, and dismissed the huddled throng of frightened students, warning them to be silent as to the night's events. “Very likely Clarian will never see to-morrow; so be careful, lest you soil his memory.”

“What does it mean, Thorne?” asked Mac, as the Doctor and I came again to the bedside. “It is nothing more than an overdose of *cannabis* or opium upon an excited nervous system, is it?”

Thorne looked at the delicate-limbed child who lay there in Mac's strong arms, wiped away the gathering froth from the lips, replaced the feebly quivering limbs, and, as he lingered over the pulse, replied,—

“He has been taking *hashish*?”

“He *has* taken it,—I do not say he is under its influence now.”

“No,—he has not touched any stimulant. This is much worse than that,—this means epilepsy, Mac, and we may have to choose between death and idiocy.”

He was still examining the boy, and showing Mac how to hold him most comfortably.

“If I could only get at the *causes* of this attack,—those, I mean, which lie deeper than the mere physical disorder,—if I could only find out what it is he has been doing,—and I could, easily, were I not afraid of directing suspicion towards him, or bringing about some unfortunate embarrassment”——

“What is it you suspect?” thundered Mac.

“Either some cruel trick has been play-

ed upon the boy, or he has been guilty of some act of madness”——

“Impossible!” cried we in a breath; “Clarian is as pure as Heaven.”

“Look at him, Thorne!” said my good chum,—“look at the child's baby-face, so frank and earnest!—look at him! You dare not say an impure thought ever awoke in that brain, an impure word ever crossed those lips.”

Dr. Thorne smiled sadly.

“There is no standard of reason to the enthusiast, my dear Mac; and here is one, of a surety. However, time will reveal; I wish I knew. Come, Ned, help me to mix some medicines here. Be careful to keep his head right, Mac, so as to have the circulation as free as possible.”

While we were occupied in the front room, there came a stout double knock at the door, and when I opened it, Hullfish, the weather-beaten old constable of the borough, made his hesitating appearance. The Doctor gave me a quick glance, as if to say, “I told you so,” and then returned the old man's bluff salutation. As soon as Hullfish saw him, he came forward with something like a sigh of relief, and said,—

“Ah, Doc, you here? 'Tar'n't a hoax, then, though I was mightily 'feared it was. Them students is the Devil for chivying of a feller,—beggin' your pardon, Mr. Blount. Have you got him yonder, Doctor?” said he, his keen eye noticing Mac and Clarian in the back room.

“What do you mean, Hullfish? Got whom?” asked Thorne, making me a sign to be quiet.

“The party, Sir, that was to be copied. I've got a blank warrant here, all right, and a pair of bracelets, in case of trouble.”

“What fool's errand is this, old man?” asked the Doctor, sternly.

“What! you don't know about it? Lord! p'raps it's a sell, after all,” said he, quite chopfallen. “But I've got my pay, anyhow, and there's no mistake in a V on the Princeton Bank. And here's the papers,” said he, handing a note to

the Doctor. "If that's slum, I'm done, that's all."

The Doctor glanced at the scrap of paper, then handed it to me, asking, "Is that his handwriting?"

It was a note, requiring Mr. Hullfish to privately arrest a person guilty of a capital offence, until now concealed. If he was not brought to Hullfish's house between nine and ten that night, then Hullfish was to proceed to No. — North College, where he would be certain to find the party. The arrest must be made quietly. The handwriting was undoubtedly Clarian's, and I told Thorne as much.

"You see, gentlemen," said Hullfish, "I wouldn't 'a' taken no notice of it, ef it hadn't been for the money; but, thinks I, them students a'n't in the habit of sech costly jokes, and maybe there'll be some pinching to do, after all. So you mean to say it's a gam, do you, Doctor? May I be so bold as to inquire what yonder chap's holding on to 'tother about?"

"'Tother' is dangerously ill,—has a fit, Hullfish. He is the author of that note,—very probably was out of his mind when he wrote it."

"So? Pity! Very sick? Mayn't I see him?"

But, as he stepped forward, Thorne stood in the way and effectually intercepted his view. The constable smiled cunningly, as he drew back, and said,—

"You're sure 'ta'n't nothing else, then? Nobody's been getting rapped on the head? Didn't see no blood, though,—that's true. Well, I don't like to be sold, that's a fact,—but there's no help for it. Here's the young man's change, Doctor,—warrant sixty-six, my fees one dollar."

Thorne carelessly asked if there had been any rows lately,—if he had heard of any one being hurt,—if they had been quiet recently along the canal; and being assured that there had been no disturbance of moment,—“only a little brush between Arch and Long Tobe, down to Gibe's,”—he handed the money back to Hullfish.

“Keep that yourself,—it is yours by rights. And, look you, mum's the word in this case, for two reasons: there's danger that the poor little fellow there is going to croak before long, and you'd be sorry to think you'd given trouble to a dead man; and what's more, if the boys get hold of this, there'll be no end of their chaffing. There's not a few of them would like to cook your goose for you,—I needn't tell you why; so, if you don't want them to get the flashest kind of a pull over you, why, you'll take my advice and keep dark.”

“Nothing like slang, Ned, with the police or the priggish gentry. It gives them a wonderful respect for your opinion,” said the Doctor, when Hullfish was gone. But his serious, almost stern look returned immediately, as he continued,—“Now to solve this mystery, and find out what this wretched boy has been doing. Come, you and Mac, help me to understand him.”

When we had told the Doctor all we knew of the lad, he pondered long over our recital.

“One thing is certain,” said he: “the boy is innocent in intention, whatever he has done, and we must stand by him,—you two particularly; for you are to blame, if he has got himself into any predicament.”

“The boy has done nothing wrong, Thorne,” said Mac, sturdily; “he may have been trapped, or got himself involved somehow, but he never could have committed any crime capable of superinducing such an attack as this.”

The Doctor shook his head.

“You may be right, my friend,—and I hope you are, for the child's sake, for it will certainly kill him, if he has. But I never trust an intense imagination when morbidly excited, and I have read of some strange freaks done by persons under the influence of that infernal *hashish*. However, trust me, I shall find out what is the matter before long, and bring the boy round nicely. He is improving fast now, and all we have to do is to avert another attack.”

Thank Heaven, in a day or two Clarian was pronounced to be out of danger, and promising rapid recovery. We had removed him to our rooms, as soon as the violence of the convulsion left him, in order to spare him the associations connected with his own abode. Still, the lad continued very weak, and Thorne said he had never seen so slight an attack followed by such extreme prostration. Then it did my heart good to see how my chum transformed himself into the tenderest, the most efficient of nurses. He laid aside entirely his brusque manner, talked in the softest tones, stole noiselessly about our rooms, and showed all the tender solicitude, all the quiet "handiness" of a gentle woman. I could see that Clarian loved to have him at his bedside, and to feel his caressing hand.

"You see, Ned," Mac would say, in a deprecatory tone that amused me vastly, "I really pity the poor little devil, and can't help doing all in my power for him. He's such a soft little ass,—confound Thorne! he makes me mad with his cursed suspicions!—and then the boy is out of place here in this rough-and-tumble tilt-yard. Reminds me of a delicate wine-glass crowded in among a ruck of ale-flagons and battered quart-cups."

But, though we rejoiced to see that Clarian's health promised to be better than it had been for months, we did not fail to notice with regret and apprehension, that, as he grew physically better and mentally clearer, a darkening cloud settled over his whole being, until he seemed on the point of drowning in the depths of an irremediable dejection and despair. Besides this, he was ever on the point of telling us something, which he yet failed of courage to put into words; and Thorne, noticing this, when, one day, we were all seated round the bed, while the lad fixed his shaded, large, mournful eyes upon us with a painfully imploring look, said suddenly, his fingers upon Clarian's pulse,—

"You have something to say to us,—a confession to make, Clarian."

The boy flushed and shuddered, but did not falter, as he replied, "Yes."

"You must withhold it until you are well again. I know what it is."

Clarian quickly withdrew his hand from the Doctor's grasp.

"You know it, and yet here, touching me? Impossible! entirely impossible!"

"Oh, as to that," said Thorne, with a cool shrug of the shoulders, "you must remember that *our* relations are simply those of physician and patient. Other things have nought to do with it. And, as your physician, I require you to withhold the matter until you are well enough to face the world."

"No,—I must reap where I have sown. I have no right to impose upon my friends any longer."

"Bad news travel fast enough, Clarian, and there is no wisdom in losing a friend so long as you can retain him."

"I do not see the force of your reasoning, Dr. Thorne. I have enough to answer for, without the additional contumely of being called an impostor."

"For your mother's sake, Clarian, I command you to wait. Spare *her* what pain you can, at least."

"My mother! Oh, my God, do not name her! do not name her!"

And he burst into the only tears I ever saw him shed, hiding his face in the bed-clothes, and sobbing piteously.

"What does this mean?" said Mac, as soon as we were where Clarian could not hear us. "What have you found out?"

"Positively nothing more than you know already," answered Thorne.

"Nothing?" echoed Mac, very indignantly; "you speak very confidently for one having such poor grounds."

"My dear Mac," said Thorne, kindly, "do you think I am not as much concerned about Clarian as you are? Positively, I would give half I own to arrive at a satisfactory solution of this mystery. But what can we do? The boy believes himself a great criminal. Do you not see at once, that, if we permit him to confess his crime, he will insist upon taking himself out of our keeping,—commit

suicide, get himself sent to the madhouse, or anyhow lose our care and our soothing influence? We cannot relieve him until we restore his strength and composure. All we can do now is to watch him, soothe him, and by all means stave off this confession until he is stronger. It would kill him to face a charge now. I am inquiring quietly, and, if anything serious has happened, shall be sure to find out his connection with it."

Though we rebelled against the Doctor's conclusions, we could not but see the prudence of the course he advised, and so we sat down to watch our poor little friend, gnawed with bitter anxiety, and feeling a sad consciousness that the disease itself under which he suffered was beyond our skilfullest surgery, and one that inevitably threatened the saddest consequences. A man has grand powers of recovery, so long as his *spirit* is free; but let him once be persuaded that his soul is chained down forever in adamantine fetters, and, though, like Prometheus, he may endure with silence, patience, even divinely, he is nevertheless utterly incapable of any positive effort towards recuperation. His faith becomes, by a subtle law of our being, his fact; the mountain is gifted with actual motion, and rewards the temerity of his zeal by falling upon him and crushing him forever. Such a person moves on, perchance, like a deep, noble river, in calm and silence, but still moves on, inevitably destined to lose himself in the common ocean. And this was the promise of Clarian's case. Whatever was his hidden woe, however trivial its rational results, or baseless its causes, it had beyond remedy seized upon his soul, and we knew, that, unless it could be done away with at the source, the end was certain: first the fury, then the apathy of madness. He was no longer tortured with a visible haunting presence, such as had borne him down on that fatal night, but we saw plainly that he had taken the spectre into his own breast, and nursed it, as a bosom serpent, upon his rapidly exhausting energies.

Happily for us, — ere Clarian was quite beyond recovery, while Mac still tore his hair in rage at his own impotence, while the Doctor still pursued his researches with the sedateness of a philosopher, and I was using what power I had to alleviate my little friend's misery, — that subtle and mysterious agency, which, in our blindness and need, we term Chance, interposed its offices, rolled away the cloud from the mystery, and, like a good angel, rescued Clarian, even as he was tottering upon the very brink of the dismal precipice to whose borders he had innocently strayed.

I shall never forget that pleasant June day. It was the first time that Clarian had been out since his illness; and I was his single companion, as he strayed slowly along through the college grounds, leaning tremulously upon my arm, dragging his feet languidly over the pebbled walks, and drinking in the warm, fresh, quivering air with a manner that, although apathetic, still spoke of some power of enjoyment. It was during the hour for the forenoon recitation, and the elm-shaded campus was entirely free of students. As Clarian walked along, his eyes bent down, I heard him murmuring that delicious verse of George Herbert's, —

"Sweet day! so cool, so calm, so bright,
The bridal of the earth and sky!
The dew shall weep thy fall to-night,
For thou must die!"

"'For thou must die,' — so sad! And yet the thought itself of death is not that which saddens us so, do you think, Ned?" he went on, I hearing his words without heeding them, — for I was looking just then towards the outer gate next the President's house, through which I saw Dr. Thorne coming rapidly, accompanied by a stout, middle-aged man, having the dress and appearance of a well-to-do farmer, — "Not the thought, simply, 'Thou must die,'" repeated Clarian, in his plaintive murmur, "but the feeling that all this decay and death is of ourselves, and could be averted by ourselves, had we only self-control, could we only keep our-

selves pure, and so be ever near God and of Him. *There's* cause for a deeper melancholy, poignanter tears than ever Jacques shed."

Dr. Thorne and his companion were now quite near, coming towards us on the same path, when I saw the stranger slap his thigh energetically and catch Thorne by the arm, while he exclaimed in tones of boisterous surprise,—

"Why, there's the very little chap, as I'm alive!"

I had half a glimpse of the Doctor's seizing his companion and clapping one hand over his mouth, as if to prevent him from saying more,—but it was too late. At the sound of the man's voice I felt Clarian bound electrically. He looked up,—over his face began to come again that terrible anguish of the night of the picture, but the muscles seemed too weak to bring it all back,—he grew limp against me,—his arms hung inert at his side,—a word that sounded like "Spare me!" gurgled in his throat,—a feeble shudder shook him, and, ere I could interpose my arm, he sank in a heap at my feet, white, and cold, and lifeless. Before I had raised him, Thorne and the man sprang to my aid, and the latter, bending over with eager haste, took the thin white hands in his own, half caressing them, half fearing to grasp them, speaking to him the while in tones of frightened entreaty, that, on any other occasion, would have been ludicrous enough.

"Come, now, my little man," said he,— "come, don't be afeard, *don't* be afeard of me! Dan Buckhurst won't harm ye, not for the world, poor child! Come, stand up! 'Twas all a joke. Come, come! —My God! Doctor, he a'n't dead, is he?" cried he to Thorne, in horror.

"If he is, you have killed him, you damned old fool, you!" responded Thorne, impetuously, thrusting the man aside with an angry gesture, and bending down to examine the lad's inert form. "Thank God, Ned," said he at last, "it is only a swoon this time, and we'll soon have him all right. We must get him to bed, though. Here, Buckhurst, you are the strongest;

stop whimpering there, you old jackanapes, and bring him along."

Buckhurst quickly obeyed, lifting Clarian up in his arms as gently and tenderly as if he had been an infant, and following Thorne, who led the way to our rooms. There the lad was placed upon the bed with which he had become only too familiar, and the Doctor, by means of his restoratives, soon had the satisfaction of recalling breath and motion. As soon as the boy's sighs gave evidence of returning vitality, Thorne thrust us all from the room, including Mac, who had now come in from class, saying to Buckhurst,—

"Now, Sir, tell them all about it,—and wait here; I shall want you presently." With which words he closed the door upon us, and returned to his patient.

Mr. Buckhurst refused the chair tendered him by Mac, and paced up and down the room in a state of immense perturbation.

"Well, I never!" said he, "well, I never! It taken me all aback, Sir," added he, turning to me. "Did you ever see anything like it? Why, he's jest like a gal! Dang it, Sir! my Molly a'n't half as nervous as he is. I hope he'll get well,—I raelly do, now. I wouldn't hev had it happen for I dunno what, now, indeed!" And he resumed his walk, repeating to himself, "Well, I never! Who'd 'a' judged 'twas a child like that?"

"May I beg to know what you refer to, Mr. Buckhurst?" asked Mac, with considerable impatience in his tones.

"Eh,—what? He's mighty delicate, a'n't he?" said the man, with his thumb indicating the next room.

"Very delicate indeed, Sir,—perhaps you can explain the cause of his present attack," said I, angrily; for I had begun to think, from Buckhurst's manner, that he had been guilty of some practical joke upon Clarian. I saw the fire of a similar suspicion blazing in Mac's eyes; and I fear, had our conclusions been verified, the worthy Mr. Buckhurst would have fared very badly at our hands, spite the laws of hospitality.

“What! did he never tell you? Of course not, though, being sick ever sence, and thinking me dead, too. Well, I'll tell you: but mind, you mustn't banter the child about it, for he can't stand it,—though it's only a joke. Might have been serious, to be sure, but, as things turns out, a pretty good joke, to my notion,—though I'm rael sorry *he's* been so bad about it.”

Mac rose, removed his coat, and marched deliberately up to our guest. “See here, Sir,” said he in his deepest bass voice, which his dark frown made still more ominous, “do you mean us to infer that you have been making that child Clarion the victim of any of your infernal *jokes*, as you style them?”

Buckhurst stared a moment, and then, seeming to comprehend the drift of Mac's words, burst into a hearty laugh.

“No, Sir!” he shouted, “the shoe's on the other foot, thank the Lord! The boy himself played the joke, or trick, whatever it was. Dr. Thorne tells me he was kind of crazy, from drinking laudanum, or some sech pisonous matter. Howsever that was, I'm sure he didn't do it in airnest,—thought so from the very first,—and now I've had a good look at his face, I'd swear to it.”

“What did he do?” asked Mac, hurriedly.

Buckhurst laughed in that hearty way of his. Said he,—

“I'll wager you a stack of hay agin them books yander you couldn't guess in a week now. What d'ye think it was? Ho! ho! Why, why, the little rascal shoved me into the canawl!”

“Shoved you into the canal!” echoed I, while Mac, looking first at him, then at me, finally burst into a peal of laughter, shouting the while,—

“Bravo! There's your 'experience' philosophy, Ned Blount! Catch me teaching milksops agin! Go on, Buckhurst, tell us all about it.”

“Yes,” said Mr. Buckhurst, apparently quite pleased to see that we laughed with him. “It don't look like it was in the nature of things, somehow, does it?

Fact, though, he did indeed. Shoved me right in, so quick I didn't know what the Devil was the matter, until I soused kersplash! and see him taking out over the drawbridge like mad.”

“When was that, Mr. Buckhurst?”

“Jest inside of a month ago, Sir, one night.”

“*Sapperment*, Ned! that was the time of the 'herb Pantagrueion'!—Well, what were you doing on the canal at that hour?” asked Mac, slyly.

“No, you needn't, now,—I see you wink at him,—honor bright. I'd been up to town, to take a mess o' clams at Giberson's, with maybe a sprinklin' of his apple-jack,—nothing else,—and I was on my way home,—to Skillman's tavern at the *dépôt*, you know,—and I'd jest stopped a piece, and was a-standing there, looking at the moon in the water, when he tipped me over. I tell you, I was mad when I crawled out wet as a rat; and if I'd ketched him then, you may depend upon it, I'd 'a' given his jacket a precious warming. As I said, he run off, but jest as I turned towards the tavern, I see him a-coming back, kinder wild-like; so I slipped behind a lumber-pile, hoping he might come over the bridge, so I could lay my fingers on him. The moon was about its highest, so I could see his face, plain as day,—white,—skim-milk warn't a circumstance to it,—and his eyes wide open as they could stretch. I tell you, he was wild! He looked up and down a bit, mumbled somethin' I couldn't make out, and then what do you think that boy did? Why, he jumped in, clothes and all, bold as a lion,—plainly to save me from drowning, and me all the time a-spyin' at him from behind a lumber-pile! He was sarching for me, I knowed, for he swum up and down jest about there for the space maybe of a quarter of an hour. And when he give it up at last, and come out, he kinder sunk down on the tow-path, and I heard him say plain enough, though he only whispered it,—jest like a woman actor I see down to York oncet, playin' in 'Guy something or other,—she was a sort of an old gyp-

sy devil,— says he, 'I am a murderer, then!' Thinks I, 'Sonny, all but the murderer!' And as he stood up again, he 'peared to suffer so, his face was so white, and his knees so shaky, that I says to myself, 'Dan, you've carried the joke far enough.' So I sings out to him, and comes out from behind the lumber-stack, but, Lord bless ye! he jest peeped round over his shoulder oncet, gave a kind of chokin' scream like, and put out up the road as if the Devil was after him. I knowed it warn't no use to follow him, so I got on a dry shirt and went to bed. The next day I went home, and I'd mighty near forgot all about it, only to-day I came to see Dr. Thorne for somethin' to do my cold good, and he wantin' to know how I ketched it brought the whole matter back again."

"You're an old brick, Buckhurst!" cried Mac, giving the jovial farmer a thundering slap on the back, and a hearty grasp of his hand; "and you shall drink the boy's health with Ned and me this day, or I'll know the reason why. Ned Blount, a'n't it glorious? Said I not, you ill-omened bird, said I not, '*Il y a toujours un Dieu pour les enfans et pour les ivrognes*'? — So you came down with Thorne to ease the poor little fellow's mind, did you, Buckhurst? That's right, and you shall see the picture, by Jove! And you'll say, when you see it, that such a picture were cheap at the cost of duckings for a dozen Buckhursts. Now tell me truly, what do you think made him push you in?"

"Of course, it was the pison, Sir,— a baby like that wouldn't harm a flea. I thought maybe, until I see Dr. Thorne, that he done it out of mischievousness, as boys will do, you know,—jest as they steal a feller's apples, and knock his turkeys of'n the roost,— but yander's not one of them kind; so he must 'a' been crazy, and I'm rael sorry he's been so bad put to about it,— I am, indeed."

Here the inner door was opened, and Thorne joined us, with a moisture about his eyes that he used afterwards to deny most vehemently.

"Buckhurst, he wants to see you; go in there," said he,— adding, in a lower tone, "Now, mind you, the child's delicate as spun glass; so be careful."

"Come in, Mr. Buckhurst," called Clarion.

The worthy farmer looked to right and left, as if he would much rather have made his escape, but, impelled by a shove from the Doctor, he ran his fingers through his coarse hair, and, with a very red and "I-wish-I-was-out-of-this" face, went in, closing the door behind him.

"Phew!" said Thorne, seating himself somewhat testily, after having filled and lighted a pipe,— "Phew! So that's over, and I a'n't sorry; it's as bad as reading the 'Diary of a Physician.' The boy will be all right now, and the lesson won't hurt him, though it has been a rough one. But no more metaphysics for him, Ned Blount! And, boys, let this be a warning to you. He's too brittle a toy to be handled in your rough fashion."

"You needn't tell us that, Thorne," said Mac, drawing a long breath. "Catch me kicking over children's baby-houses again, or telling 'em ghost-stories in the dark!"

"He vows never again to touch brush, crayon, or pencil; and if he is the devotee you describe him to be, Ned, I would not advise you to oppose him in his determination. You must keep him here till vacation, and next term he can exchange his room. Macbeth's company will never be very agreeable to him, I should judge; and it will not do to let him destroy the picture."

Thorne puffed away vigorously for a minute or two.

"That boy ought to turn preacher, Mac. He touched me nearer just now than I have been touched for an age.

"His voice was a sweet tremble in mine ear,
Made tunable with every saddest grief,
Till those sad eyes, so spiritual and clear,'

almost persuaded me to follow the example of divine Achilles and 'refresh my soul with tears.' He has that tear-bringing privilege of genius, to a certainty."

And so it seemed, indeed; for presently the worthy Mr. Buckhurst made his reappearance in quite a sad state, mopping his red face and swollen eyes most vigorously with a figured cotton handkerchief, and proclaiming, with as much intelligibility as the cold in his head and the peculiar circumstances of the case would admit of, that he'd "be dagg'd ef he hadd't raver be chucked idto *two* cadawls dad 'ave dat iddocedt baby beggid his pardod about de codfouded duckid! Wat de hell did *he* care about gittid wet, he'd like to kdow? Dodsedse!—'twad all dud id fud, adyhow!"

—"And now *you*, my dear, dear friends," said Clarian, turning his sad, full eyes upon us, and calling us to his side, and to his arms.

But I shall draw a veil over that interview.

That night, after we had talked long and lovingly together, and were now sitting, each absorbed in his own thoughts, and emulating the quiet that reigned around college, Clarian softly joined us, and placed an open book in Mac's hands.

"Will you, dear Mac?" murmured he.

Then Mac, all full of solemn emotion, read through the grand periods of the Church Litany, and when he had finished, Clarian, with a thrilling "Let us pray," offered up such a thanksgiving

as I had never heard, praying to the kind Father who had so mercifully extricated him, that our paths might still be enlightened, and our walks made humble and righteous.

"Clarian," said Mac, after a pause, when we were again on our feet,—he laid his hands on the boy's shoulders, as he spoke, and looked into his eyes,— "Clarian, would it have happened, if you had not taken that foul drug?"

Clarian shuddered, and covered up his face in his hands.

"Do not ask me, dear Mac! do not ask me! Oh, be sure, my aims, I thought, were noble, and myself I thought so pure!—but—I cannot say, Mac, I cannot say.

"We are so weak, we know our motives least
In their confused beginning."

"At least, Clarian," said Mac, after a while, his deep voice wonderfully refined with strong emotion, "at least, the picture was not painted in vain. Even as it is in the play, Banquo died that his issue might reign after him; and this lesson of ours will bear fruit far mightier than the trifling pains of its parturition. Ay, Clarian, your picture has not been vainly painted.—And now, Ned," said he, rising, "we must put our baby to bed; for he is to wake early to-morrow, and know himself a man!"

SPRING.

Doves on the sunny eaves are cooing,
The chip-bird trills from the apple-tree,
Blossoms are bursting and leaves renewing,
And the crocus darts up the spring to see.

Spring has come with a smile of blessing,
Kissing the earth with her soft warm breath,
Till it blushes in flowers at her gentle caressing,
And wakes from the winter's dream of death.

Spring has come ! The rills, as they glisten,
Sing to the pebbles and greening grass ;
Under the sward the violets listen,
And dream of the sky as they hear her pass.

Coyest of roses feel her coming,
Swelling their buds with a promise to her, —
And the wild bee hears her, around them humming,
And booms about with a joyous stir.

Oaks, that the bark of a century covers,
Feel ye the spell, as ye groan and sigh ?
Say, — does her spirit that round you hovers
Whisper of youth and love gone by ?

Windows are open, — the pensive maiden
Leans o'er the sill with a wistful sigh,
Her heart with tender longings o'erladen,
And a happy sadness, she knows not why.

For we and the trees are brothers in nature ; —
We feel in our veins the season's thrill
In hopes that reach to a higher stature,
In blind dim longings beyond our will.

Whence dost thou come, O joyous spirit ?
From realms beyond this human ken,
To paint with beauty the earth we inherit,
And soften to love the hearts of men ?

Dear angel ! that blowest with breath of gladness
The trump to waken the year in its grave,
Shall we not hear, after death's deep sadness,
A voice as tender to gladden and save ?

Dost thou not sing a constant promise
That joy shall follow that other voice, —
That nothing of good shall be taken from us,
But all who hear it shall rise, to rejoice ?

RUFUS CHOATE.

MR. CHOATE'S mind was so complex, peculiar, and original,—so foreign in temperament and spirit to the more representative traits of New England character,—so large, philosophic, and sagacious in vision and survey of great questions, and so dramatic and vehement in their exposition and enforcement,—so judicial and conservative in always maintaining in his arguments the balance and relation of interdependent principles, and so often in details marring the most exquisite poetry with the wildest extravagancies of style,—so free from mere vulgar tricks of effect, and so full of imaginative tricksiness and surprises,—so mischievous, subtle, mysterious, elusive, Protean,—that it is no wonder he has been more admired and more misunderstood than any eminent American of his time. It was because of these unaccustomed qualities of mind that matter-of-fact lawyers and judges came slowly but surely to Mr. Webster's conclusion, that he was "the most accomplished of American lawyers," whether arguing to courts or juries. In the same way, critically correct but unimaginative scholars, who "can pardon anything but a false quantity,"—who "see the hair on the rope, but not the rope," and detect minute errors, but not poetic apprehension,—admitted at last the fulness and variety of his scholastic attainments. And perhaps the finest tribute to the power and subtlety of his influence was, that, to the last, juries, who began cases by steeling themselves against it, and who ended by giving him their verdicts, maintained that they were not at all influenced by him,—so profound, so complete, and so unconscious had been the spell this man of genius had woven around them.

When it is remembered that a great lawyer in the United States is called upon (as he is not in England) to practise in all our courts, civil and criminal, law, equity, and admiralty, and, in addition

to all the complicated questions between parties, involving life, liberty, and property, arising therein, that he is to know and discuss our whole scheme of government, from questions under its patent laws up to questions of jurisdiction and constitutional law,—it will be seen what a field there is for the exhibition of the highest talents, and how few lawyers in the country can become eminent in all these various and important departments of mental labor. In their whole extent Mr. Choate was not only thoroughly informed as a student and profound as a reasoner, but his genius produced such a fusion of imagination and understanding as to give creativeness to argumentation and philosophy to treatment of facts.

We propose to try to give some idea of those mental characteristics and peculiarities in which he differed from other lawyers, and to indicate some salient points of his genius and nature which went to make up so original and interesting an individuality. Immense labor and talent will no more produce genius or its results, than mere natural genius, without their aid and instrumentality, can reach and maintain the highest rank in any of the great departments of life or thought. With true genius, imagination is, to be sure, paramount to great and balanced faculties; but genius is always demonstrating its superiority to talent as well by its greater rapidity and certainty in seizing, arranging, and holding facts, and by the extent of its acquisitions, as by its superior philosophic and artistic grasp and vision.

Though Mr. Choate was so much more than a mere lawyer, it was in court that he displayed the full force and variety of his powers. *Hic currus et arma.* We shall, however, speak more especially of his jury-trials, because in them more of his whole nature was brought into play, and because of them and of his management of them there is and can be no full record. The arguments and triumphs of

the great advocate are almost as evanescent and traditionary as the conversation of great talkers like Coleridge. In what we have to say we cannot be expected to call up the arguments and cases themselves, and we must necessarily be confined to a somewhat general statement of certain mental qualities and characteristics which were of the secret of his power. We shall be rewarded, if we succeed in giving in mere outline some explanation of the fact, that so much of interest and something of mystery attach themselves throughout the country to his name and genius.

A jury-trial is in itself dramatic; but mere eloquence is but a small part of what is demanded of a great advocate. Luther Martin and Jeremiah Mason were the most eminent American examples of the very many great jury-lawyers who were almost destitute of all that makes up popular eloquence. A jury-lawyer is of course greater with it, but he can do entirely without it. Almost all great trials appeal to the intellects rather than to the passions of jurors. What an advocate needs first is thorough knowledge of law, and that adaptiveness and readiness of faculty which are never surprised into forgetfulness or confusion, so that he can instantly see, meet, reason upon, and apply his legal learning to the unexpected as well as the expected points of law and evidence as they arise in a case. Secondly, he must have thorough knowledge of human nature: he must not only profoundly discuss motives in their relations to the laws of the human mind, and practically reconcile motives with conduct as they relate to the parties and witnesses in his cases, but he must prepare, present, develop, guide, and finally argue his case, within the rules of law, with strict reference to its effect upon the differing minds of twelve men. It would be difficult to name any other field of public mental effort which demands and gives scope for such variety of faculty and accomplishment.

Whatever may have been Mr. Choate's defects of character or of style, no com-

petent judge ever saw his management of any case in court, from its opening to its close, without recognizing that he was a man of genius. It mattered not whether the amount involved was little or great, whether the parties were rich or poor, wise or ignorant, whether the subject-matter was dry or fertile,—such were his imaginative insight, his knowledge of law and of human nature, his perfection of arrangement, under which every point was treated fully, but none unduly, his consummate tact and tactics, his command of language in all its richness and delicacy to express the fullest force and the nicest shades of his meaning, and his haggard beauty of person and grace of nature, that every case rose to dramatic dignity and to its largest relations to law, psychology, and poetry; and thus, while giving it artistic unity and completeness, he all the more enforced his arguments and insured his success. How widely different in method and surroundings from the poet's exercise of the creative faculty in the calm of thought and retirement, on a selected topic and in selected hours of inspiration, was his entering, with little notice or preparation, into a case involving complicated questions of law and fact, with only a partial knowledge of the case of his antagonist! met at point after point by unexpected evidence and rulings of law, often involving such instantaneous decisions as to change his whole combinations and method of attack; examining witnesses with unerring skill, whom he was at once too chivalrous and too wise to browbeat; arguing to the court unexpected questions of law with full and available legal learning; carrying in his mind the case, and the known or surmised plan of attack of his antagonist, and shaping his own case to meet it; holding an exquisitely sensitive physical and mental organization in such perfect control as never to be irritated or disturbed; throwing his whole force on a given point, and rising to a joyousness of power in meeting the great obstacles to his success; and finally, with little or no respite for

preparation, weaving visibly, as it were, before the mental eye, from all these elicited materials, his closing argument, which, as we have said, was all the more effective, because profound reasoning and exquisite tact and influence were involved in it as a work of art.

He had the temperament of the great actors,—that of the elder Kean and the elder Booth, not of Kemble and Macready,—and, like them, had the power of almost instantly passing into the nature and thought and emotion of another, and of not only absolutely realizing them, but of realizing them all the more completely because he had at the same time perfect self-direction and self-control. The absurd question is often asked, whether an actor is ever the character he represents throughout a whole play. He could be so, only if insane. But every great actor and orator must be capable of instantaneous abandonment to his part, and of as instantaneous withdrawal from it,—like the elder Booth, joking one minute at a side-scene and in the next having the big tears of a realized Lear running down his cheeks. An eminent critic says,—“Genius always lights its own fire,”—and this constant double process of mind,—one of self-direction and self-control, the other of absolute abandonment and identification,—each the more complete for the other,—the dramatic poet, the impassioned orator, and the great interpretative actor, all know, whenever the whole mind and nature are in their highest action. Mr. Choate, therefore, from pure force of mental constitution, threw himself into the life and position of the parties and witnesses in a jury-case, and they necessarily became *dramatis personæ*, and moved in an atmosphere of his own creation. His narrative was the simplest and most artistic exhibition of his case thus seen and presented from the point of their lives and natures, and not from the dry facts and points of his case; and his argument was all the more perfect, because not exhibited in skeleton nakedness, but incorporated and intertwined with the interior and essential life

of persons and events. It was in this way that he effected the acquittal of Tirrell, whom any matter-of-fact lawyer, however able, would have argued straight to the gallows; and yet we have the highest judicial authority for saying that in that case he did his simple technical duty, without interposing his own opinions or convictions. We shall say a word, before we close, of the charge that he surrendered himself too completely to his client; but to a great degree the explanation and the excuse at once lie in this dramatic imagination, which was of the essence of his genius and influence, and through which he lived the life, shared the views, and identified himself, with a great actor's realization, in *the part* of his client.

In making real to himself the nature, life, and position of his client,—in gathering from him and his witnesses, in the preparation and trial of his case, its main facts and direction, as colored or inflamed by his client's opinions, passions, and motives,—and in seeking their explanation in the egotism and idiosyncrasy which his own sympathetic insight penetrated and harmonized into a consistent individuality,—he, of course, knew his client better than his client knew himself; he conceived him as an actor conceives character, and, in a great measure, saw with his eyes from his point of view, and, in the argument of his case, gave clear expression and consistent characterization to his nature and to his partisan views in their relations to the history of the case. We have seen his clients sit listening to the story of their own lives and conduct, held off in artistic relief and in dramatic relation, with tears running down cheeks which had not been moistened by the actual events themselves, re-presented by his arguments in such coloring and perspective.

As a part of this power of merging his own individuality in that of his client was his absolute freedom from egotism, conceit, self-assertion, and personal pride of opinion. Such an instance is, of course, exceptional. Nearly all the eminent jury-lawyers we have known have been, con-

sciously or unconsciously, self-asserting, and their individuality rather than that of their clients has been impressed upon juries. An advocate with a great jury-reputation has two victories to win: the first, to overcome the determination of the jury to steel themselves against his influence; the second, to convince their judgments. Mr. Choate's self-surrender was so complete that they soon forgot him, because he forgot himself in his case; nothing personally demonstrative or antagonistic induced obstinacy or opposition, and every door was soon wide open to sympathy and conviction. If an advocate is conceited, or vain, or self-important, or if he thinks of producing effects as well for himself as for his client, or if his nature is hard and unadaptive,—great abilities display these qualities, instead of hiding them, and they make a refracting medium between a case and the minds of a jury. Mr. Choate was more completely free from them than any able man we ever knew. Any one of them would have been in complete contradiction to the whole composition and current of his nature. Though conscious of his powers, he was thoroughly and lovingly modest. It was because he thought so little of himself and so much of his client that he never made personal issues, and was never diverted by them from his strict and full duty. Instead of "greatly finding quarrel in a straw," where some supposed honor was at stake, he would suffer himself rather than that his case should suffer. Early in his practice, when a friend told him he bore too much from opposing counsel without rebuking them, he said: "Do you suppose I care what those men say? I want to get my client's case." Want of pugnacity too often passes for want of courage. We have seen him in positions where we wished he could have been more personally demonstrative, and (to apply the language of the ring to the contests of the court-room) that he could have stood still and struck straight from the shoulder; but when we remember how perfectly he saw through and through the faults and foibles of men, how his mis-

chievous and genial irony, when it touched personal character, stamped and characterized it for life, and how keen was the edge and how fine the play of every weapon in his full armory of sarcasm and ridicule, (of which his speech in the Senate in reply to Mr. McDuffie's personalities gives masterly exhibition,) we are thankful that his sensibility was so exquisite and his temper so sweet, that he was a delight instead of a terror, and that he was loved instead of feared. Delicacy should be commensurate to power, that each may be complete. It would seem almost impossible that a lawyer with a practice truly immense, passing a great part of his life in public and heated contests and in discussing and often severely criticizing the motives and conduct of parties and witnesses, should not make many enemies; but he was so essentially modest, simple, gentlemanly, and tender, so considerate of the feelings of others, so evidently trying to mitigate the pain which it was often his duty to inflict, that we never heard of his searching and subtle examination of witnesses, or his profound and exhaustive analysis of character and motive, or his instantaneous and irresistible retorts upon counsel, creating or leaving behind him, in the bar or out of it, malice or ill-will in a human being. One of the most touching and beautiful things we ever saw in a court-room would have been in other hands purely painful and repulsive. It was his examination of the wretched women who were witnesses in the Tirrell case. His tact in eliciting what was necessary to be known, and which they would have concealed, was forgotten and lost in his chivalrous and Christian recognition of their common humanity, and in his gentlemanly thoughtfulness that even they were still women, with feelings yet sensitive to eye and word.

In jury-trials it would be foolish to judge style by severe or classic standards. If an advocate have skill and insight and adequate powers of expression, his style must yield and vary with the circumstances of different cases and the minds of dif-

ferent juries and jurors. When a friend of Erskine asked him, at the close of a jury-argument, why he so unusually and iteratively, and with such singular illustration, prolonged one part of his case, he said, — “It took me two hours to make that fat man with the buff waistcoat join the eleven!”

All men of great powers of practical influence over the minds of men know how stupid and dull of apprehension the mass of mankind are; and no one knows better than a great jury-lawyer in how many different ways it is often necessary to present arguments, and how they must be pressed, urged, and *hammered* into most men’s minds. He is endeavoring to persuade and convince twelve men upon a question in which they have no direct pecuniary or personal interest, and he must more or less know and adapt his reasoning and his style to each juror’s mind. He should know no audience but the judge and these twelve men. Retainers never seek and should not find counsel who address jurors with classical or formal correctness. Napoleon, at St. Helena, after reading one of his bulletins, which had produced the great and exact effect for which he had intended it, exclaimed, — “And yet they said I couldn’t write!”

The true Yankee is suspicious of eloquence, and “stops a metaphor like a suspected person in an enemy’s country.” A stranger, who looked in for a few minutes upon one of Mr. Choate’s jury-arguments, and saw a lawyer with a lithe and elastic figure of about five feet and eleven inches, with a face not merely of a scholarly paleness, but wrinkled all over, and, as it were, scathed with thought and with past nervous and intellectual struggles, yet still beautiful, with black hair curling as if from heat and dewy from heightened action and intensity of thought and feeling, and heard a clear, sympathetic, and varying voice uttering rapidly and unhesitatingly, sometimes with sweet cæsural and almost monotonous cadences, and again with startling and electric shocks, language now exquisitely delicate

and poetic, now vehement in its direct force, and again decorated and wild with Eastern extravagance and fervor of fancy, would have thought him the last man to have been born on New England soil, or to convince the judgments of twelve Yankee jurors. But those twelve men, if he had opened the case himself, had been quietly, simply, and sympathetically led into a knowledge of its facts in connection with its actors and their motives; they had seen how calmly and with what tact he had examined his witnesses, how ready, graceful, and unheated had been his arguments to the court, and how complete throughout had been his self-possession and self-control; they had, moreover, learned and become interested in the case, and were no longer the same hard and dispassionate men with whom he had begun, and they knew, as the casual spectator could not know, how systematically he was arguing while he was also vehemently enforcing his case. *He*, meanwhile, knew his twelve men, and what arguments, appeals, and illustrations were needed to reach the minds of one or all. He did not care how certain extravagances of style struck the critical spectator, if they stamped and riveted certain points of his case in the minds of his jury. With the keenest perception of the ridiculous himself, he did not hesitate to say things which, disconnected from his purpose, might seem ridiculous. One consequence of these audacities of expression was, that, when it became necessary for him to be iterative, he was never tedious. They gave full play to his imaginative humor and irony, and to his poetic unexpectedness and surprises. A wise observer, hearing him try a case from first to last, while recognizing those higher qualities of genius which we have before described, saw, that, for all the purposes of persuasion and argumentation, for conveying his meaning in its full force and in its most delicate distinctions and shadings, for analytic reasoning or for the “clothing upon” of the imagination, for all the essential objects and vital uses of

language, his style was perfect for his purpose and for his audience. His excesses came from surplus power and dramatic intensity, and were pardoned by all imaginative minds to the real genius with which they were informed.

Every great advocate must, at times, especially in the trial of capital cases, be held popularly responsible for the acquittal of men whom the public has prejudged to be guilty. This unreasoning, impulsive, and irresponsible public never stops to inform itself; never discriminates between legal acumen and pettifogging trickery, between doing one's full duty to his client and interposing or misrepresenting his own personal opinions; and never remembers that the functions of law and the practice of law are to prevent and to punish crime, to ascertain the truth, and to determine and enforce justice,—that trial by jury, and the other means and methods through which justice is administered, are founded in the largest wisdom, philanthropy, and experience,—that they cannot work perfectly, because human nature is imperfect, but they constitute the best practical system for the application of abstract principles of right to the complicated affairs of life which the world has yet seen, and which steadily improves as our race improves,—and that every great lawyer is aiding in elucidating truth and in administering justice, when doing his duty to his client under this system. Our trial by jury has its imperfections; but, laying aside its demonstrated value and necessity in great struggles for freedom, before and since the time of Erskine, no better scheme can be devised to do its great and indispensable work. The very things which seem to an uninformed man like rejection or confusion of truth are a part of the *sifting* by which it is to be reached. The admission or rejection of evidence under sound rules of law, the presenting of the whole case of each party and of the best argument which can be made upon it by his counsel, the charge of the judge and the verdict of the jury,—all are necessary parts of the process of reaching

truth and justice. Counsel themselves cannot know a whole case until tried to its end; their clients have a right to their best services, within the limits of personal honor; and lawyers are derelict in duty, not only to their clients, but to justice itself, if they do not present their cases to the best of their ability, when they are to be followed by opposing counsel, by the judge, and by the jury. The popular judgment is not only capricious,—it not only assumes that legal precedents, founded in justice for the protection of the honest, are petty technicalities or tricks through which the dishonest escape,—it is not only formed out of the court-room, with no opportunity to see witnesses and hear testimony, often very different in reality from what they seem in print,—but it visits upon counsel its ignorant prejudices against the theory and practice of the law itself, and forgets that lawyers cannot present to the jury a particle of evidence except with the sanction of the court under sound rules of law, and that the law is to be laid down by the court alone.

A man thoroughly in earnest in any direction is more or less a partisan. Histories are commonly uninfluential or worthless, unless written with views so earnest and decided as to show bias. As the greater interests of truth are best subserved by those whose zeal is commensurate to their scope of mind, so it is a part of the scheme of jury-trials, that, within the limits we have named, counsel shall throw their whole force into their cases, that thus they may be presented fully in all lights, and the right results more surely reached. The scheme of jury-trials itself thus providing for a lawyer's standing in the place of his client and deriving from him his partisan opinions, and for urging his case in its full force within the limits of sound rules of law, it almost invariably follows, that, the greater the talent and zeal of the advocate, and the more he believes in the views of his client, the more liable he is to be charged with overstating or misstating testimony. Mr. Choate never conceived

that his duty to his client should carry him up to the line of self-surrender drawn by Lord Brougham; but, recognizing his client's full and just claims upon him, entering into his opinions and nature with the sympathetic and dramatic realization we have described, he could not faithfully perform the prescribed and admitted duty of the advocate, — necessarily, with him, involving his throwing the whole force of his physical and intellectual vitality into every case he tried, — without being a vehement partisan, or without being sometimes charged with misstating evidence or going too far for his client. Occasionally this may have been true; but we see the explanation in the very quality of his genius and temperament, and not in conscious or intentional wrong-doing.

His ability and method in his strictly legal arguments to courts of law are substantially indicated in what we have already said. His manner, however, was here calm, his general views of his subject large and philosophic, his legal learning full, his reasoning clear, strong, and consequential, his discrimination quick and sure, and his detection of a logical fallacy unerring, his style, though sometimes fairly open to the charge of redundancy, graceful and transparent in its exhibition of his argument, and his mind always at home, and in its easiest and most natural exercise, when anything in his case rose into connection with great principles.

While exhibiting in his jury-trials, as we have shown, this double process of absolute identification and of perfect supervision and self-control, — of instantaneous imaginative dips into his work, and of as instantaneous withdrawal from it, — of purposely and yet completely throwing himself in one sentence into the realization of an emotion, thus perfectly conveying his meaning while living the thought, and yet coming out of it to see quicker than any one that it might be made absurd by displacement, — he always had, as it were, an air-drawn circle of larger thought and superintending relation far around the immediate question into which he passed

so dramatically. Within this outer circle, attached and related to it by everything in the subject-matter of real poetic or philosophic importance, was his case, creatively woven and spread in artistic light and perspective; and between the two (if we do not press our illustration beyond clear limits) was a heat-lightning-like play of mind, showing itself, at one moment, in unexpected flashes of poetic analogy, at another in Puck-like mischief, and again in imaginative irony or humor.

As he recovered himself from abandonment to some part of his case or argument to guide and mould the whole, so, going into his library, he could, as completely, for minutes or for hours, banish and forget his anxieties and dramatic excitements, and pass into the cooling air and loftier and purer stimulations of the great minds of other times and countries and of the great questions that overhang us all. His mind, capacious, informed, wise, doubting, "looking before and after," here found its highest pleasures, and its little, but most loved repose. "The more a man does, the more he can do"; and, notwithstanding his immense practice, and that by physical and intellectual constitution he couldn't *half do* anything, he never allowed a day of his life to pass, without reading some, if ever so little, Greek, and it was a surprise to those who knew him well to find that he kept up with everything important in modern literature. Rising and going to bed early, taking early morning exercise, having a strong constitution, though he was subject to sudden but quickly overcome nervous and bilious illness, wasting no time, caring nothing for the coarser social enjoyments, leading, out of court, a self-withdrawn and solitary life, though playful, genial, and stimulating in social intercourse, with a memory as tenacious and ready as his apprehension was quick, with high powers of detecting, mastering, arranging, and fusing his acquisitions, and of penetrating to the centre of historical characters and events, — it is not strange, though he may not have been critically

exact and nice in questions of quantity and college exercises, that his scholarship was large and available in all its higher aims and uses.

It will naturally be asked, how such qualities as we have described manifested themselves in character, and in political and other fields of thought and exertion. Fair abilities, zeal, industry, a sanguine temperament, and some special bent or fitness for the profession of the law, will make a good and successful lawyer. Such a man's mind will be entirely in and limited by the immediate case in hand, and virtually his intellectual life will be recorded in his cases. But with Mr. Choate, the dramatic genius and large scope and vision which made him superior to other great advocates at the same time prevented his overestimating the value of his work in kind or degree, showed him how ephemeral are the actual triumphs and how small the real value of nearly all the questions he thus vitalized into artistic reality, when compared with the great outlying truths and principles to which he allied them. Feeling this all through his cases, at the same time that he was moulding them and giving them dramatic vitality, they took their true position from natural reaction and rebound, with all the more sharpness of contrast, when he came out of them. With such a nature, it could be assumed *a priori* as a psychological certainty, at any rate it was the fact with him, that a certain unreality was at times thrown over life and its objects, that its projects and ambitions seemed games and mockeries, and "this brave o'erhanging firmament a pestilent congregation of vapors," and that grave doubts and fears on the great questions of existence were ever on the horizon of his mind. This gave perpetual play to his irony, and made it a necessity and a relief of mind. Except when in earnest in some larger matter, or closely occupied in accomplishing some smaller necessary purpose or duty, his imagination loved the tricky play of exhibiting the petty side of life in contrast to its realities, just as in his cases it found its exercise in lift-

ing them up to relations with what is poetic and permanent. But, though irony was thus the natural language of his mind, it did not pass beyond the limits of the mischievous and kindly, because there was nothing scoffing or bitter in his nature. It was fresh and natural, never studied for effect, and gave his conversation the charm of constant novelty and surprises. He loved to condense the results of thought and study into humorous or grotesque overstatements, which, while they amused his hearers, conveyed his exact meaning to every one who followed the mercurial movement of his mind. It will readily be seen how a person with neither insight into his nature nor apprehension of his meaning should, without intending it, misinterpret his life and caricature his opinions,—blundering only the more deeply when trying to be literally exact in reporting conversations or portraying character.

It has been shrewdly said, that, "when the Lord wants anything done in this world, he makes a man a little wrong-headed in the right direction." With this goes the disposition to overestimate the importance of one's work and to push principles and theories towards extremes. The saying is true of some individuals at or before certain crises in affairs; it is not true of the great inevitable historical movements, any more than the history of revolutions is the history of nations. Halifax is called a trimmer. William Wilberforce was a reformer. Each did a great work. But it would be simply absurd, except in the estimation of the moral purist, to call Wilberforce as great a man or as great an historical and influential person as Halifax. Halifax saw and acted in the clear light and large relations in which the great historian of our own times wrote the history of the Stuarts. Wilberforce was a purer man, who acted more conscientiously and persistently within his smaller range of life and thought. It would have been inconsistent with Mr. Choate's nature for him to have been "wrong-headed" in any direction. Such largeness of view, such dramatic and

interpretative imagination, such volatile play of thought and fancy, and such perception of the pettiness and hollowness of nearly all the aims and ambitions of daily life we cannot expect to find co-existing with the coarser "blood-sympathies," the direct passion, and the dogged and tenacious hold of temporary and smaller objects and issues, which distinguish the American politician, or with the narrowness of view, the zeal, and the moral persistency which characterize the practical reformer. There was, therefore, in his nature a certain want of the sturdier, harder, and more robust elements of character, which, though commonly manifesting themselves in connection with self-assertion and partisan zeal, are indispensable to the man who, in any large and political way, would take hold of practical circumstances and work a purpose out of them. We admire him for what he was. We do not condemn him for the absence of qualities not allied to such delicacy and breadth of nature. It is simply just to state the fact.

He had too little political ambition to seek his own advancement. He never could have been a strictly party man. His interest in our politics was a patriotic interest in the country. While he recognized the necessity of two great parties, he despised the arts and intrigues of the politician. His modesty, sensibility, large views, and want of political ambition and partisan spirit prevented interest, as they would have precluded success in party management. Had he spent many years instead of a few in the national Senate, he never could have been a leader in its great party struggles. He had not the hardier personal and constitutional qualities of mind and character which lead and control deliberative bodies in great crises. He would not have had that statesman-like prescience which in the case of Lord Chatham and others seems separable from great general scope of thought, and which one is tempted to call a faculty for government. But he must have been influential; for, besides being the

most eloquent man in the Senate, his speeches would have been distinguished for amplitude and judgment in design, and for tact and persuasiveness in enforcement. They might not have had immediate and commanding effect, but they would have had permanent value. His speech upon the Ashburton Treaty indicates the powers he would have shown, with a longer training in the Senate. More than ten years had passed between that speech and his two speeches in the Massachusetts Constitutional Convention, upon Representation and the Judiciary, and in that time a great maturing and solidifying work had been going on in his mind. Indeed, it was one sure test of his genius, that his intellect plainly grew to the day of his death. We would point to those two speeches as giving some adequate expression of his ability to treat large subjects simply, profoundly, artistically, and convincingly. Many of his earlier and some of his later speeches and addresses, though large in conception and stamped with unmistakable genius, want solid body of thought, and are, so to speak, too fluid in style. This obviously springs from the qualities of mind and from the circumstances we have indicated. In court, the necessities of his case and the determination and shaping of all his argument and persuasion to convincing twelve men, or a court only, on questions requiring prompt decision, kept his style free from everything foreign to his purpose. But, released from these restraints, and called upon for a treatment more general and comprehensive than acute and discriminating, his style often became inflamed and decorated with sensibility and fancy. His mind, moreover, was overtaken in his profession. His unremitting mental labor in the preparation and trial of so many cases was immense and exhausting. It shortened his life. That his genius might have that free and joyous exercise necessary to its full use and exhibition in literary or political directions, an abandonment of a great part of his professional duties was indispensable. This was to

him neither possible nor desirable. The mental heat and pressure, therefore, under which he wrote his speeches and addresses, and the necessity for the exercise of different methods of thought and treatment from those called into play at the bar, explain why (with a few noble exceptions) they do not give a fair or full exhibition of his genius and accomplishments. But in them his judgment never lost its anchorage. Unlike Burke, who was the god of his political idolatry, his sensibility never overmastered his reasoning. Through a style sometimes Eastern in flush and fervor, and again tropical in heat and luxuriance, were always seen the adjusting and tempering habit of thought and argument and the even balance of his mind.

We have said that his interest in politics was a patriotic interest in the nation. He knew her history and her triumphs and reverses on land and sea by heart. Though limited by no narrow love of country, he felt from sentiment and imagination that attachment to every symbol of patriotism and national power which makes the sailor suffer death with joy when he sees his country's flag floating in the smoke of victory. "The radiant ensign of the Republic" was to him the living embodiment of her honor and her power. He had for it the pride and passion of the boy, with the prophetic hopes of the patriot. Men of genius are ever revivifying the commonplace expressions and visible signs of popular enthusiasm with the poetic and historic realities which gave them birth. He felt the glow and impulse of the great sentiments of race and nationality in all their natural simplicity and poetic force. It is not now the time to discuss Mr. Choate's political preferences and opinions. No one who knew him well can hesitate to pronounce his motives pure and patriotic. We could not come to his conclusions on the policy and duty of our people at the last Presidential election. Our duties to the Union forced us to regard as paramount what he regarded as subsidiary. Our fear for the

Union sprang from other sources than his. But we believe he acted from the highest convictions of duty, and he certainly exposed himself with unflinching courage to obloquy and misinterpretation when silence would have been easy and safe.

In what we have said of him as a lawyer we are sure that in every essential respect we have not overstated or misstated his powers and characteristics as they were known and conceded by lawyers and judges in Massachusetts. We have confined ourselves mainly to his jury-trials, because into them he threw the whole force and vitality of his nature, and because we could thus more completely indicate the variety of his accomplishments and the essential characteristics of his genius and individuality. A knowledge of them is indispensable to a just estimate of the man, and it must die with him and his hearers, excepting only as it may be preserved by contemporaneous written criticism and judgment, and by indeterminate and shadowy tradition.

The labors of so great a lawyer are as much more useful as they are less conspicuous than those of any prominent politician or legislator, unless he be one of the very few who have high constructive or creative ability. There is little risk of overestimating the value of a life devoted to mastering that complex system of jurisprudence, the old, ever-expanding, and ever-improving common law which is interwoven with our whole fabric of government, property, and personal rights, and to applying it profoundly through trial by jury and before courts of law, not merely that justice may be obtained for clients, but that decisions shall be made determining the rights and duties of men for generations to come. And when such a life is not only full of immense work and achievement, but is penetrated and informed with genius, sensibility, and loving-kindness, it passes sweetly and untraceably, but influentially and immortally, into the life of the nation.

THE REGICIDE COLONELS IN NEW ENGLAND.

BEFORE the restoration of Charles the Second, in 1660, to the throne of his ancestors, he had issued a "Declaration," promising to all persons but such as should be excepted by Parliament a pardon of offences committed during the late disorderly times. In the Parliamentary Act of Indemnity which followed, such as had been directly concerned in the death of the late King were excepted from mercy. Colonel Whalley and Colonel Goffe were members of the High Court of Justice which convicted and sentenced him. It was known that they had fled from England; and one Captain Breedon, lately returned from Boston, reported that he had seen them there. The Ministry sent an order to Endicott, the Governor of Massachusetts, for their apprehension and transportation to England.

The friendly welcome which had in fact been extended to the distinguished fugitives cannot be confidently interpreted as an indication of favorable judgment of the act by which their lives were now endangered. No one of the New-England Colonies had formally expressed approval of the execution of King Charles the First, nor is there any other evidence of its having been generally regarded by them with favor. It is likely that in New England, as in the parent country, the opinions of patriotic men were divided in respect to the character of that measure. In New England, remote as it was from the scene of those crimes which had provoked so extreme a proceeding, it may be presumed that there was greater difficulty in admitting the force of the reasons by which it was vindicated. And the sympathy of New England would be more likely to be with Vane, who condemned it, than with Cromwell. But the strangers, however one act of theirs might be regarded, had been eminent among those who had fought for the rights of Englishmen, and they brought introductions from men ven-

erated and beloved by the people among whom a refuge was sought.

Edward Whalley, a younger son of a good family, first cousin of the Protector Oliver, and of John Hampden, distinguished himself at the Battle of Naseby as an officer of cavalry, and was presently promoted by Parliament to the command of a regiment. He commanded at the storm of Banbury, and at the first capture of Worcester. He was intrusted with the custody of the King's person at Hampton Court; he sat in the High Court of Justice at the trial of Charles, and was one of the signers of the death-warrant. After the Battle of Dunbar, at which he again won renown, Cromwell left him in Scotland in command of four regiments of horse. He was one of the Major-Generals among whom the kingdom was parcelled out by one of the Protector's last arrangements, and as such governed the Counties of Lincoln, Nottingham, Derby, Warwick, and Leicester. He sat as a member for Nottinghamshire in Cromwell's Second and Third Parliaments, and was called up to "the other House" when that body was constituted.

William Goffe, son of a Puritan clergyman in Sussex, was a member of Parliament, and a colonel of infantry soon after the breaking out of the Civil War. He married a daughter of Whalley. Like his father-in-law, he was a member of the High Court of Justice for the King's trial, a signer of the warrant for his execution, a member of the Protector's Third and Fourth Parliaments, and then a member of "the other House." He commanded Cromwell's regiment at the Battle of Dunbar, and rendered service particularly acceptable to him in the second expurgation of Parliament. As one of the ten Major-Generals, he held the government of Hampshire, Berkshire, and Sussex.

When Whalley and Goffe, upon the King's return, left England to escape

what they apprehended might prove the fate of regicides, the policy of the Court in respect to persons circumstanced as they were had not been promulgated. Arriving in Boston, in July, and having been courteously welcomed by the Governor, they proceeded the same day to Cambridge, which place for the present they made their home. For several months they appeared there freely in public. They attended the public religious meetings, and others held at private houses, at which latter they prayed, and *prophesied*, or preached. They visited some of the principal towns in the neighborhood, were often in Boston, and were received, wherever they went, with distinguished attention.

At the end of four months, intelligence came to Massachusetts of the Act of Indemnity, and that Whalley and Goffe were among those excepted from it, and marked for vengeance. Three months longer they lived at Cambridge unmolested; but in the mean while affairs had been growing critical between Massachusetts and the mother country, and, though some members of the General Court assured them of protection, others thought it more prudent that they should have a hint to provide for their safety in some way which would not imply an affront to the royal government on the part of the Colony. The Governor called a Court of Assistants, in February, and without secrecy asked their advice respecting his obligation to secure the refugees. The Court refused to recommend that measure, and four days more passed, at the end of which time — whether induced by the persuasion of others, or by their own conviction of the impropriety of involving their generous hosts in further embarrassment, or simply because they had been awaiting till then the completion of arrangements for their reception at New Haven — they set off for that place.

A journey of nine days brought them to the hospitable house of the Reverend Mr. Davenport, where again they moved freely in the society of the ministers and

the magistrates. But they had scarcely been at New Haven three weeks, when tidings came thither of the reception at Boston of a proclamation issued by the King for their arrest. To release their host from responsibility, they went to Milford, (as if on their way to New Netherland,) and there showed themselves in public; but returned secretly the same night to New Haven, and were concealed in Davenport's house. This was towards the last of March.

They had been so situated a month, when their friends had information from Boston that the search for them was to be undertaken in earnest. Further accounts of their having been seen in that place had reached England, and the King had sent a peremptory order to the Colonial governments for their apprehension. Endicott, to whom it was transmitted, could do no less than appear to interest himself to execute it; and this he might do with the less reluctance, because, under the circumstances, there was small likelihood that his exertions would be effectual. Two young English merchants, Thomas Kellond and Thomas Kirk, received from him a commission to prosecute the search in Massachusetts, and were also furnished with letters of recommendation to the Governors of the other Colonies. That they were zealous Royalists, direct from England, would be some evidence to the home government that the quest would be pursued in good faith. That they were foreigners, unacquainted with the roads and with the habits of the country, and betraying themselves by their deportment wherever they should go in New England, would afford comfortable assurance to the Governor that they would pursue their quest in vain.

From Boston, the pursuivants, early in May, went to Hartford, where they were informed by Winthrop, Governor of Connecticut, that "the Colonels," as they were called, had passed thence immediately before, on their way to New Haven. Thither the messengers proceeded, stopping on the way at Guilford, the

residence of Deputy-Governor Leete. Since the recent death of Governor Newman, Leete had been Chief Magistrate of the Colony of New Haven, which was now, and for a few years later, distinct from Connecticut.

The Deputy-Governor received them in the presence of several other persons. He looked over their papers, and then "began to read them audibly; whereupon we told him," say the messengers, "it was convenient to be more private in such concernments as that was." They desired to be furnished "with horses, &c.," for their further journey, "which was prepared with some delays." They were accosted, on coming out, by a person who told them that the Colonels were secreted at Mr. Davenport's, "and that, without all question, Deputy Leete knew as much"; and that "in the head of a company in the field a-training," it had lately been "openly spoken by them, that, if they had but two hundred friends that would stand by them, they would not care for Old or New England."

The messengers returned to Leete, and made an application for "aid and a power to search and apprehend" the fugitives. "He refused to give any power to apprehend them, nor order any other, and said he could do nothing until he had spoken with one Mr. Gilbert and the rest of his magistrates." New Haven, the seat of government of the Colony, was twenty miles distant from Guilford. It was now Saturday afternoon, and for a New-England Governor to break the Sabbath by setting off on a journey, or by procuring horses for any other traveller, was impossible. An Indian was observed to have left Guilford while the parley was going on, and was supposed to have gone on an errand to New Haven.

Monday morning the messengers proceeded thither. "To our certain knowledge," they write, "one John Meigs was sent a-horseback before us, and by his speedy and unexpected going so early before day was to give them an information, and the rather because by the delays

was used, it was break of day before we got to horse; so he got there before us. Upon our suspicion, we required the Deputy that the said John Meigs might be examined what his business was, that might occasion his so early going; to which the Deputy answered, that he did not know any such thing, and refused to examine him." Leete was in no haste to make his own journey to the capital. It was for the messengers to judge whether they would use such despatch as to give an alarm there some time before any magistrate was present, to be invoked for aid. He arrived, they write, "within two hours, or thereabouts, after us, and came to us to the Court chamber, where we again acquainted him with the information we had received, and that we had cause to believe they [the fugitives] were concealed in New Haven, and thereupon we required his assistance and aid for their apprehension; to which he answered, that he did not believe they were; whereupon we desired him to empower us, or order others for it; to which he gave us this answer, that he could not, or would not, make us magistrates. . . . We set before him the danger of that delay and their inevitable escape, and how much the honor and service of his Majesty was despised and trampled on by him, and that we supposed by his unwillingness to assist in the apprehension he was willing they should escape. After which he left us, and went to several of the magistrates, and were together five or six hours in consultation, and upon breaking up of their council they told us they would not nor could not do anything until they had called a General Court of the freemen."

The messengers labored with great earnestness to shake this determination, but all in vain. For precedents they appealed to the promptness of the Governors of Massachusetts and Connecticut, "who, upon the recite of his Majesty's pleasure and order concerning the said persons, stood not upon such niceties and formalities." They represented "how much the honor and justice of his Majesty was con-

cerned, and how ill his Sacred Majesty would resent such horrid and detestable concealments and abettings of such traitors and regicides as they were, and asked him whether he would honor and obey the King or no in this affair, and set before him the danger which by law is incurred by any one that conceals or abets traitors; to which the Deputy Leete answered, 'We honor his Majesty, but we have tender consciences'; to which we replied, that we believed that he knew where they were, and only pretended tenderness of conscience for a refusal. . . . We told them that for their respect to two traitors they would do themselves injury, and possibly ruin themselves and the whole Colony of New Haven."

"Finding them obstinate and pertinacious in their contempt of his Majesty," the messengers, probably misled by some false information, took the road to New Netherland, the next day, in further prosecution of their business. The Dutch Governor at that place promised them, that, if the Colonels appeared within his jurisdiction, he would give notice to Endicott, and take measures to prevent their escape by sea. Thereupon Kellond and Kirk returned by water to Boston, where they made oath before the magistrates to a report of their proceedings.

The fugitives had received timely notice of the chase. A week before Kellond and Kirk left Boston, they removed from Mr. Davenport's house to that of William Jones, son-in-law of Governor Eaton, and afterwards Deputy-Governor of Connecticut. On the day when the messengers were debating with Governor Leete at Guilford, Whalley and Goffe were conducted to a mill, at a short distance from New Haven, where they were hidden two days and nights. Thence they were led to a spot called *Hatchet Harbor*, about as much farther in a north-westerly direction, where they lay two nights more. Meantime, for fear of the effect of the large rewards which the messengers had offered for their capture, a more secure hiding-place had been pro-

vided for them in a hollow on the east side of West Rock, five miles from the town. In this retreat they remained four weeks, being supplied with food from a lonely farm-house in the neighborhood, to which they also sometimes withdrew in stormy weather. They caused the Deputy-Governor to be informed of their hiding-place; and on hearing that Mr. Davenport was in danger from a suspicion of harboring them, they left it, and for a week or two showed themselves at different times at New Haven and elsewhere. After two months more of concealment in their retreat on the side of West Rock, they betook themselves, just after the middle of August, to the house of one Tomkins, in or near Milford. There they remained in complete secrecy for two years, after which time they indulged themselves in more freedom, and even conducted the devotions of a few neighbors assembled in their chamber.

But the arrival at Boston of Commissioners from the King with extraordinary powers was now expected, and it was likely that they would be charged to institute a new search, which might endanger the fugitives, and would certainly be embarrassing to their protectors. Just at this time a feud in the churches of Hartford and Wethersfield had led to an emigration to a spot of fertile meadow forty miles farther up the river. Mr. Russell, hitherto minister of Wethersfield, accompanied the new settlers as their pastor. The General Court gave their town the name of Hadley. In this remotest northwestern frontier of New England a refuge was prepared for the fugitives. On hearing of the arrival of the Commissioners at Boston, they withdrew to their cave; but some Indians in hunting observed that it had been occupied, and its secrecy could no longer be counted on. They consequently directed their steps towards Hadley, travelling only by night, and there, in the month of October, 1664, were received into the house of Mr. Russell.

There — except for a remarkable mo-

mentary appearance of one of them, and except for the visits of a few confidential friends — they remained lost forever to the view of men. Presents were made to them by leading persons among the colonists, and they received remittances from friends in England. Governor Hutchinson, when he wrote his History, had in his hands the Diary of Goffe, begun at the time of their leaving London, and continued for six or seven years. They were for a time encouraged by a belief, founded on their interpretation of the Apocalypse, that the execution of their comrades was “the slaying of the witnesses,” and that their own triumph was speedily to follow. Letters passed between Goffe and his wife, purporting to be between a son and mother, and signed respectively with the names of Walter and Frances Goldsmith. Four of these letters survive; tender, magnanimous, and devout, they are scarcely to be read without tears.

In the tenth year of his abode at Hadley Whalley had become extremely infirm in mind and body, and he probably did not outlive that year. Mr. Russell’s house was standing till within a little more than half a century ago. At its demolition, the removal of a slab in the cellar discovered human remains of a large size. They are believed to have belonged to the stout frame which swept through Prince Rupert’s lines at Naseby. Goffe survived his father-in-law nearly five years, at least; how much longer, is not known. Once he was seen abroad, after his retirement to Mr. Russell’s house. The dreadful war, to which the Indian King Philip bequeathed his long execrated name, was raging with its worst terrors in the autumn of 1675. On the first day of September, the people of Hadley kept a fast, to implore the Divine protection in their distress. While they were engaged in their worship, a sentry’s shot gave notice that the stealthy savages were upon them. Hutchinson, in his History, relates what follows, as he had received it from the family of Gov-

ernor Leverett, who was one of the few visitors of Goffe in his retreat. “The people were in the utmost confusion. Suddenly a grave, elderly person appeared in the midst of them. In his mien and dress he differed from the rest of the people. He not only encouraged them to defend themselves, but put himself at their head, rallied, instructed, and led them on to encounter the enemy, who by this means were repulsed. As suddenly the deliverer of Hadley disappeared. The people were left in consternation, utterly unable to account for this strange phenomenon. It is not probable that they were ever able to explain it.”

In the first years of the retirement of the Colonels at Hadley, they enjoyed the society of a former friend, who did not feel obliged to use the same strict precautions against discovery. John Dixwell, like themselves, was a colonel in the Parliamentary service, a member of the High Court of Justice, and a signer of the death-warrant of the King. Nothing is known of his proceedings after the restoration of the monarchy, till he came to Hadley, three or four months later than Whalley and Goffe. After a residence of some years in their neighborhood, he removed to New Haven, where, bearing the name of James Davids, and affecting no particular privacy, he lived to old age. The home-government never traced him to America; and though, among his acquaintance, it was understood that he had a secret to keep, there was no disposition to penetrate it. He married twice at New Haven, and by his second nuptials established a family, one branch of which survives. In testamentary documents, as well as in communications, while he lived, to his minister and others, he frankly made known his character and history. He died just too early to hear the tidings, which would have renewed his strength like the eagle’s, of the expulsion of the House of Stuart. A fit monument directs the traveller to the place of his burial, in the square bounded on one side by the halls of Yale College.

TO THE CAT-BIRD.

YOU, who would with wanton art
 Counterfeit another's part,
 And with noisy utterance claim
 Right to an ignoble name, —
 Inharmonious! — why must you,
 To a better self untrue,
 Gifted with the charm of song,
 Do the generous gift such wrong?

Delicate and downy throat,
 Shaped for pure, melodious note, —
 Silvery wing of softest gray, —
 Bright eyes glancing every way, —
 Graceful outline, — motion free :
 Types of perfect harmony !

Ah! you much mistake your duty,
 Mating discord thus with beauty, —
 'Mid these heavenly sunset gleams,
 Vexing the smooth air with screams, —
 Burdening the dainty breeze
 With insane discordancies.

I have heard you tell a tale
 Tender as the nightingale,
 Sweeter than the early thrush
 Pipes at day-dawn from the bush.
 Wake once more the liquid strain
 That you poured, like music-rain,
 When, last night, in the sweet weather,
 You and I were out together.

Unto whom two notes are given,
 One of earth, and one of heaven,
 Were it not a shameful tale
 That the earth-note should prevail?

For the sake of those who love us,
 For the sake of God above us,
 Each and all should do their best
 To make music for the rest.
 So will I no more reprove,
 Though the chiding be in love :
 Uttering harsh rebuke to you,
 That were inharmonious, too.

THE PROFESSOR'S STORY.

CHAPTER XIII.

CURIOSITY.

PEOPLE will talk. *Ciascun lo dice* is a tune that is played oftener than the national air of this country or any other.

"That's what they say. Means to marry her, if she is his cousin. Got money himself, — that's the story, — but wants to come and live in the old place, and get the Dudley property by-and-by." — "Mother's folks was wealthy." — "Twenty-three to twenty-five year old." — "He a'n't more'n twenty, or twenty-one at the outside." — "Looks as if he knew too much to be only twenty year old." — "Guess he's been through the mill, — don't look so green, anyhow, — hey? Did y' ever mind that cut over his left eyebrow?"

So they gossiped in Rockland. The young fellows could make nothing of Dick Venner. He was shy and proud with the few who made advances to him. The young ladies called him handsome and romantic, but he looked at them like a many-tailed pacha who was in the habit of ordering his wives by the dozen.

"What do you think of the young man over there at the Venners'?" said Miss Arabella Thornton to her father.

"Handsome," said the Judge, "but dangerous-looking. His face is indictable at common law. Do you know, my dear, I think there is a blank at the Sheriff's office, with a place for his name in it?"

The Judge paused and looked grave, as if he had just listened to the verdict of the jury and was going to pronounce sentence.

"Have you heard anything against him?" said the Judge's daughter.

"Nothing. But I don't like these mixed bloods and half-told stories. Besides, I have seen a good many desperate fellows at the bar, and I have a fancy they all have a look belonging to them. The worst

one I ever sentenced looked a good deal like this fellow. A wicked mouth. All our other features are made for us; but a man makes his own mouth."

"Who was the person you sentenced?"

"He was a young fellow that undertook to garrote a man who had won his money at cards. The same slender shape, the same cunning, fierce look, smoothed over with a plausible air. Depend upon it, there is an expression in all the sort of people that live by their wits when they can, and by worse weapons when their wits fail them, that we old law-doctors know just as well as the medical counsellors know the marks of disease in a man's face. Dr. Kittredge looks at a man and says he is going to die; I look at another man and say he is going to be hanged, if nothing happens. I don't say so of this one, but I don't like his looks. I wonder Dudley Venner takes to him so kindly."

"It's all for Elsie's sake," said Miss Thornton; "I feel quite sure of that. He never does anything that is not meant for her in some way. I suppose it amuses her to have her cousin about the house. She rides a good deal since he has been here. Have you seen them galloping about together? He looks like my idea of a Spanish bandit on that wild horse of his."

"Possibly he has been one, — or is one," said the Judge, — smiling as men smile whose lips have often been freighted with the life and death of their fellow-creatures. "I met them riding the other day. Perhaps Dudley is right, if it pleases her to have a companion. What will happen, though, if he makes love to her? Will Elsie be easily taken with such a fellow? You young folks are supposed to know more about these matters than we middle-aged people."

"Nobody can tell. Elsie is not like anybody else. The girls that have seen most of her think she hates men, all but

'Dudley,' as she calls her father. Some of them doubt whether she loves him. They doubt whether she can love anything human, except perhaps the old black woman that has taken care of her since she was a baby. The village people have the strangest stories about her: you know what they call her?"

She whispered three words in her father's ear. The Judge changed color as she spoke, sighed deeply, and was silent as if lost in thought for a moment.

"I remember her mother," he said, "so well! A sweeter creature never lived. Elsie has something of her in her look, but those are not the Dudley eyes. They were dark, but soft, in all I ever saw of the race. Her father's are dark too, but mild, and even tender, I should say. I don't know what there is about Elsie's,—but do you know, my dear, I find myself curiously influenced by them? I have had to face a good many sharp eyes and hard ones,—murderers' eyes and pirates',—men that had to be watched in the bar, where they stood on trial, for fear they should spring on the prosecuting officers like tigers,—but I never saw such eyes as Elsie's; and yet they have a kind of drawing virtue or power about them,—I don't know what else to call it: have you never observed this?"

His daughter smiled in her turn.

"Never observed it? Why, of course, nobody could be with Elsie Venner and not observe it. There are a good many other strange things about her: did you ever notice how she dresses?"

"Why, handsomely enough, I should think," the Judge answered. "I suppose she dresses as she likes, and sends to the city for what she wants. What do you mean in particular? We men notice effects in dress, but not much in detail."

"You never noticed the colors and patterns of her dresses? You never remarked anything curious about her ornaments? Well! I don't believe you men know, half the time, whether a lady wears a ninepenny collar or a thread-lace cape worth a thousand dollars. I don't believe you know a silk dress from a bom-

bazine one. I don't believe you can tell whether a woman is in black or in colors, unless you happen to know she is a widow. Elsie Venner has a strange taste in dress, let me tell you. She sends for the oddest patterns of stuffs, and picks out the most curious things at the jeweller's, whenever she goes to town with her father. They say the old Doctor tells him to let her have her way about all such matters. Afraid of her mind, if she is contradicted, I suppose.—You've heard about her going to school at that place,—the 'Institoot,' as those people call it? They say she's bright enough in her way,—has studied at home, you know, with her father a good deal,—knows some modern languages and Latin, I believe: at any rate, she would have it so,—she must go to the 'Institoot.' They have a very good female teacher there, I hear; and the new master, that young Mr. Langdon, looks and talks like a well-educated young man. I wonder what they'll make of Elsie, between them!"

So they talked at the Judge's, in the calm, judicial-looking mansion-house, in the grave, still library, with the troops of wan-hued law-books staring blindly out of their titles at them as they talked, like the ghosts of dead attorneys fixed motionless and speechless, each with a thin, golden film over his unwinking eyes.

In the mean time, everything went on quietly enough after Cousin Richard's return. A man of sense,—that is, a man who knows perfectly well that a cool head is worth a dozen warm hearts in carrying the fortress of a woman's affections, (not yours, "Astarte," nor yours, "Viola,")—who knows that men are rejected by women every day because they, the men, love them, and are accepted every day because they do not, and therefore can study the arts of pleasing,—a man of sense, when he finds he has established his second parallel too soon, retires quietly to his first, and begins working on his covered ways again. [The whole art of love may be read in any Encyclopædia under the title *Fortification*, where the terms just used are explained.] After the little ad-

venture of the necklace, Dick retreated at once to his first parallel. Elsie loved riding,—and would go off with him on a gallop now and then. He was a master of all those strange Indian horseback-feats which shame the tricks of the circus-riders, and used to astonish and almost amuse her sometimes by disappearing from his saddle, like a phantom horseman, lying flat against the side of the bounding creature that bore him, as if he were a hunting leopard with his claws in the horse's flank and flattening himself out against his heaving ribs. Elsie knew a little Spanish too, which she had learned from the young person who had taught her dancing, and Dick enlarged her vocabulary with a few soft phrases, and would sing her a song sometimes, touching the air upon an ancient-looking guitar they had found with the ghostly things in the garret,—a quaint old instrument, marked E. M. on the back, and supposed to have belonged to a certain Elizabeth Mascarene, before mentioned in connection with a work of art,—a fair, dowerless lady, who smiled and sung and faded away, unwedded, a hundred years ago, as dowerless ladies, not a few, are smiling and singing and fading now,—God grant each of them His love,—and one human heart as its interpreter!

As for school, Elsie went or stayed away as she liked. Sometimes, when they thought she was at her desk in the great school-room, she would be on The Mountain,—alone always. Dick wanted to go with her, but she would never let him. Once, when she had followed the zigzag path a little way up, she looked back and caught a glimpse of him following her. She turned and passed him without a word, but giving him a look which seemed to make the scars on his wrist tingle, went to her room, where she locked herself up, and did not come out again till evening,—old Sophy having brought her food, and set it down, not speaking, but looking into her eyes inquiringly, like a dumb beast trying to feel out his master's will in his face. The evening was clear and the moon shining.

As Dick sat at his chamber-window, looking at the mountain-side, he saw a gray-dressed figure flit between the trees and steal along the narrow path that led upward. Elsie's pillow was unpressed that night, but she had not been missed by the household,—for Dick knew enough to keep his own counsel. The next morning she avoided him and went off early to school. It was the same morning that the young master found the flower between the leaves of his Virgil.

The girl got over her angry fit, and was pleasant enough with her cousin for a few days after this; but she shunned rather than sought him. She had taken a new interest in her books, and especially in certain poetical readings which the master conducted with the elder scholars. This gave Master Langdon a good chance to study her ways when her eye was on her book, to notice the inflections of her voice, to watch for any expression of her sentiments; for, to tell the truth, he had a kind of fear that the girl had taken a fancy to him, and, though she interested him, he did not wish to study her heart from the inside.

The more he saw her, the more the sadness of her beauty wrought upon him. She looked as if she might hate, but could not love. She hardly smiled at anything, spoke rarely, but seemed to feel that her natural power of expression lay all in her bright eyes, the force of which so many had felt, but none perhaps had tried to explain to themselves. A person accustomed to watch the faces of those who were ailing in body or mind, and to search in every line and tint for some underlying source of disorder, could hardly help analyzing the impression such a face produced upon him. The light of those beautiful eyes was like the lustre of ice; in all her features there was nothing of that human warmth which shows that sympathy has reached the soul beneath the mask of flesh it wears. The look was that of remoteness, of utter isolation. There was in its stony apathy, it seemed to him, the pathos which we find in the blind who show no film or

speck over the organs of sight; for Nature had meant her to be lovely, and left out nothing but love. And yet the master could not help feeling that some instinct was working in this girl which was in some way leading her to seek his presence. She did not lift her glittering eyes upon him as at first. It seemed strange that she did not, for they were surely her natural weapons of conquest. Her color did not come and go like that of young girls under excitement. She had a clear brunette complexion, a little sun-touched, it may be,—for the master noticed once, when her necklace was slightly displaced, that a faint ring or band of a little lighter shade than the rest of the surface encircled her neck. What was the slight peculiarity of her enunciation, when she read? Not a lisp, certainly, but the least possible imperfection in articulating some of the lingual sounds,—just enough to be noticed at first, and quite forgotten after being a few times heard.

Not a word about the flower on either side. It was not uncommon for the school-girls to leave a rose or pink or wild flower on the teacher's desk. Finding it in the Virgil was nothing, after all; it was a little delicate flower, that looked as if it were made to press, and it was probably shut in by accident at the particular place where he found it. He took it into his head to examine it in a botanical point of view. He found it was not common,—that it grew only in certain localities,—and that one of these was among the rocks of the eastern spur of The Mountain.

It happened to come into his head how the Swiss youth climb the sides of the Alps to find the flower called the *Edelweiss* for the maidens whom they wish to please. It is a pretty fancy, that of scaling some dangerous height before the dawn, so as to gather the flower in its freshness, that the favored maiden may wear it to church on Sunday morning, a proof at once of her lover's devotion and his courage. Mr. Bernard determined to explore the region where this flower was said to grow,

that he might see where the wild girl sought the blossoms of which Nature was so jealous.

It was on a warm, fair Saturday afternoon that he undertook his land-voyage of discovery. He had more curiosity, it may be, than he would have owned; for he had heard of the girl's wandering habits, and the guesses about her sylvan haunts, and was thinking what the chances were that he should meet her in some strange place, or come upon traces of her which would tell secrets she would not care to have known.

The woods are all alive to one who walks through them with his mind in an excited state, and his eyes and ears wide open. The trees are always talking, not merely whispering with their leaves, (for every tree talks to itself in that way, even when it stands alone in the middle of a pasture,) but grating their boughs against each other, as old horn-handed farmers press their dry, rustling palms together,—dropping a nut or a leaf or a twig, clicking to the tap of a woodpecker, or rustling as a squirrel flashes along a branch. It was now the season of singing-birds, and the woods were haunted with mysterious, tender music. The voices of the birds which love the deeper shades of the forest are sadder than those of the open fields: these are the nuns that have taken the veil, the hermits that have hidden themselves away from the world and tell their griefs to the infinite listening Silences of the wilderness,—for the one deep inner silence that Nature breaks with her fitful superficial sounds becomes multiplied as the image of a star in ruffled waters. Strange! The woods at first convey the impression of profound repose, and yet, if you watch their ways with open ear, you find the life which is in them is restless and nervous as that of a woman: the little twigs are crossing and twining and separating like slender fingers that cannot be still; the stray leaf is to be flattened into its place like a truant curl; the limbs sway and twist, impatient of their constrained attitude; and the rounded masses of foliage swell upward and sub-

side from time to time with long soft sighs, and, it may be, the falling of a few rain-drops which had lain hidden among the deeper shadows. I pray you, notice, in the sweet summer days which will soon see you among the mountains, this inward tranquillity that belongs to the heart of the woodland, with this nervousness, for I do not know what else to call it, of outer movement. One would say, that Nature, like untrained persons, could not sit still without nestling about or doing something with her limbs or features, and that high breeding was only to be looked for in trim gardens, where the soul of the trees is ill at ease perhaps, but their manners are unexceptionable, and a rustling branch or leaf falling out of season is an indecorum. The real forest is hardly still except in the Indian summer; then there is death in the house, and they are waiting for the sharp shrunk months to come with white raiment for the summer's burial.

There were many hemlocks in this neighborhood, the grandest and most solemn of all the forest-trees in the mountain regions. Up to a certain period of growth they are eminently beautiful, their boughs disposed in the most graceful pagoda-like series of close terraces, thick and dark with green crystalline leaflets. In spring the tender shoots come out of a paler green, finger-like, as if they were pointing to the violets at their feet. But when the trees have grown old, and their rough boles measure a yard through their diameter, they are no longer beautiful, but they have a sad solemnity all their own, too full of meaning to require the heart's comment to be framed in words. Below, all their earthward-looking branches are sapless and shattered, splintered by the weight of many winters' snows; above, they are still green and full of life, but their summits overtop all the deciduous trees around them, and in their companionship with heaven they are alone. On these the lightning loves to fall. One such Mr. Bernard saw,—or rather, what had been one such; for the bolt had torn the tree like an explosion from within,

and the ground was strewed all around the broken stump with flakes of rough bark and strips and chips of shivered wood, into which the old tree had been rent by the bursting rocket from the thunder-cloud.

—The master had struck up The Mountain obliquely from the western side of the Dudley mansion-house. In this way he ascended until he reached a point many hundred feet above the level of the plain, and commanding all the country beneath and around. Almost at his feet he saw the mansion-house, the chimney standing out of the middle of the roof, or rather, like a black square hole in it,—the trees almost directly over their stems, the fences as lines, the whole nearly as an architect would draw a ground-plan of the house and the inclosures round it. It frightened him to see how the huge masses of rock and old forest-growths hung over the home below. As he descended a little and drew near the ledge of evil name, he was struck with the appearance of a long narrow fissure that ran parallel with it and above it for many rods, not seemingly of very old standing,—for there were many fibres of roots which had evidently been snapped asunder when the rent took place, and some of which were still succulent in both separated portions.

Mr. Bernard had made up his mind, when he set forth, not to come back before he had examined the dreaded ledge. He had half persuaded himself that it was scientific curiosity. He wished to examine the rocks, *to see what flowers grew there*, and perhaps to pick up an adventure in the zoölogical line; for he had on a pair of high, stout boots, and he carried a stick in his hand, which was forked at one extremity, so as to be very convenient to hold down a *crotalus* with, if he should happen to encounter one. He knew the aspect of the ledge from a distance; for its bald and leprous-looking declivities stood out in their nakedness from the wooded sides of The Mountain, when this was viewed from certain points of the village. But the nearer aspect of

the blasted region had something frightful in it. The cliffs were water-worn, as if they had been gnawed for thousands of years by hungry waves. In some places they overhung their base so as to look like leaning towers that might topple over at any minute. In other parts they were scooped into niches or caverns. Here and there they were cracked in deep fissures, some of them of such width that one might enter them, if he cared to run the risk of meeting the regular tenants, who might treat him as an intruder.

Parts of the ledge were cloven perpendicularly, with nothing but cracks or slightly projecting edges in which or on which a foot could find hold. High up on one of these precipitous walls of rock he saw some tufts of flowers, and knew them at once for the same that he had found between the leaves of his *Virgil*. Not there, surely! No woman would have clung against that steep, rough parapet to gather an idle blossom. And yet the master looked round everywhere, and even up the side of that rock, to see if there were no signs of a woman's footstep. He peered about curiously, as if his eye might fall on some of those fragments of dress which women leave after them, whenever they run against each other or against anything else,—in crowded ball-rooms, in the brushwood after picnics, on the fences after rambles, scattered round over every place that has witnessed an act of violence, where rude hands have been laid upon them. Nothing. Stop, though, one moment. That stone is smooth and polished, as if it had been somewhat worn by the pressure of human feet. There is one twig broken among the stems of that clump of shrubs. He put his foot upon the stone and took hold of the close-clinging shrub. In this way he turned a sharp angle of the rock and found himself on a natural platform, which lay in front of one of the wider fissures,—whether the mouth of a cavern or not he could not yet tell. A flat stone made an easy seat, upon which he sat down, as he was very glad to do, and

looked mechanically about him. A small fragment splintered from the rock was at his feet. He took it and threw it down the declivity a little below where he sat. He looked about for a stem or a straw of some kind to bite upon,—a country-instinct,—relic, no doubt, of the old vegetable-feeding habits of Eden. Is that a stem or a straw? He picked it up. It was a hair-pin.

To say that Mr. Langdon had a strange sort of thrill shoot through him at the sight of this harmless little implement would be a statement not at variance with the fact of the case. That smooth stone had been often trodden, and by what foot he could not doubt. He rose up from his seat to look round for other signs of a woman's visits. What if there is a cavern here, where she has a retreat, fitted up, perhaps, as anchorites fitted their cells,—nay, it may be, carpeted and mirrored, and with one of those tiger-skins for a couch, such as they say the girl loves to lie on? Let us look, at any rate.

Mr. Bernard walked to the mouth of the cavern or fissure and looked into it. His look was met by the glitter of two diamond eyes, small, sharp, cold, shining out of the darkness, but gliding with a smooth, steady motion towards the light, and himself. He stood fixed, struck dumb, staring back into them with dilating pupils and sudden numbness of fear that cannot move, as in the terror of dreams. The two sparks of light came forward until they grew to circles of flame, and all at once lifted themselves up as if in angry surprise. Then for the first time thrilled in Mr. Bernard's ears the dreadful sound that nothing which breathes, be it man or brute, can hear unmoved,—the long, loud, stinging whirr, as the huge, thick-bodied reptile shook his many-jointed rattle and flung his jaw back for the fatal stroke. His eyes were drawn as with magnets toward the circles of flame. His ears rung as in the overture to the swooning dream of chloroform. Nature was before man with her anæsthetics: the cat's first shake stupefies the mouse; the lion's first shake deadens the man's

fear and feeling; and the *crotalus* paralyzes before he strikes. He waited as in a trance, — waited as one that longs to have the blow fall, and all over, as the man who shall be in two pieces in a second waits for the axe to drop. But while he looked straight into the flaming eyes, it seemed to him that they were losing their light and terror, that they were growing tame and dull; the open jaws closed, the neck fell backward and downward on the coil from which it rose, the charm was dissolving, the numbness was passing away, he could move once more. He heard a light breathing close to his ear; and, half turning, saw the face of Elsie Venner, looking motionless into the reptile's eyes, which had shrunk and faded under the stronger enchantment of her own.

CHAPTER XIV.

FAMILY SECRETS.

IT was commonly understood in the town of Rockland that Dudley Venner had had a great deal of trouble with that daughter of his, so handsome, yet so peculiar, about whom there were so many strange stories. There was no end to the tales that were told of her extraordinary doings. Yet her name was never coupled with that of any youth or man, until this cousin had provoked remark by his visit; and even then it was rather in the shape of wondering conjectures whether he would dare to make love to her, than in any pretended knowledge of their relations to each other, that the public tongue exercised its village-prerogative of tattle.

The more common version of the trouble at the mansion-house was this: — Elsie was not exactly in her right mind. Her temper was singular, her tastes were anomalous, her habits were lawless, her antipathies were many and intense, and she was liable to explosions of ungovernable anger. Some said that was not the worst of it. At nearly fifteen years old, when she was growing fast, and in an

irritable state of mind and body, she had had a governess placed over her for whom she had conceived an aversion. It was whispered among a few who knew more of the family secrets than others, that, worried and exasperated by the presence and jealous oversight of this person, Elsie had attempted to get finally rid of her by unlawful means, such as young girls have been known to employ in their straits, and to which the sex at all ages has a certain instinctive tendency, in preference to more palpable instruments for the righting of its wrongs. At any rate, this governess had been taken suddenly ill, and the Doctor had been sent for at midnight. Old Sophy had taken her master into a room apart, and said a few words to him which turned him as white as a sheet. As soon as he recovered himself, he sent Sophy out, called in the old Doctor, and gave him some few hints, on which he acted at once, and had the satisfaction of seeing his patient out of danger before he left in the morning. It is proper to say, that, during the following days, the most thorough search was made in every nook and cranny of those parts of the house which Elsie chiefly haunted, but nothing was found which might be accused of having been the intentional cause of the probably accidental sudden illness of the governess. From this time forward her father was never easy. Should he keep her apart, or shut her up, for fear of risk to others, and so lose every chance of restoring her mind to its healthy tone by kindly influences and intercourse with wholesome natures? There was no proof, only presumption, as to the agency of Elsie in the matter referred to. But the doubt was worse, perhaps, than certainty would have been, — for then he would have known what to do.

He took the old Doctor as his adviser. The shrewd old man listened to the father's story, his explanations of possibilities, of probabilities, of dangers, of hopes. When he had got through, the Doctor looked him in the face steadily, as if he were saying, *Is that all?*

The father's eyes fell. This was *not* all. There was something at the bottom of his soul which he could not bear to speak of,—nay, which, as often as it reared itself through the dark waves of unworded consciousness into the breathing air of thought, he trod down as the ruined angels tread down a lost soul trying to come up out of the seething sea of torture. Only this one daughter! No! God never would have ordained such a thing. There was nothing ever heard of like it; it could not be; she was ill,—she would outgrow all these singularities; he had had an aunt who was peculiar; he had heard that hysteric girls showed the strangest forms of moral obliquity for a time, but came right at last. She would change all at once, when her health got more firmly settled in the course of her growth. Are there not rough buds that open into sweet flowers? Are there not fruits, which, while unripe, are not to be tasted or endured, that mature into the richest taste and fragrance? In God's good time she would come to her true nature; her eyes would lose that frightful, cold glitter; her lips would not feel so cold when she pressed them mechanically against his cheek; and that faint birth-mark, her mother swooned when she first saw, would fade wholly out,—it was less marked, surely, now than it used to be!

So Dudley Venner felt, and would have thought, if he had let his thoughts breathe the air of his soul. But the Doctor read through words and thoughts and all into the father's consciousness. There are states of mind that may be shared by two persons in presence of each other, which remain not only unworded, but *unthoughted*, if such a word may be coined for our special need. Such a mutually interpenetrative consciousness there was between the father and the old physician. By a common impulse, both of them rose in a mechanical way and went to the western window, where each started, as he saw the other's look directed towards the white stone that stood in the midst of the small plot of green turf.

The Doctor had, for a moment, forgot-

ten himself, but he looked up at the clouds, which were angry, and said, as if speaking of the weather, "It is dark now, but we hope it will clear up by-and-by. There are a great many more clouds than rains, and more rains than strokes of lightning, and more strokes of lightning than there are people killed. We must let this girl of ours have her way, as far as it is safe. Send away this woman she hates, quietly. Get her a foreigner for a governess, if you can,—one that can dance and sing and will teach her. In the house old Sophy will watch her best. Out of it you must trust her, I am afraid,—for she will not be followed round, and she is in less danger than you think. If she wanders at night, find her, if you can; the woods are not absolutely safe. If she will be friendly with any young people, have them to see her,—young men, especially. She will not love any one easily, perhaps not at all; yet love would be more like to bring her right than anything else. If any young person seems in danger of falling in love with her, send him to me for counsel."

Dry, hard advice, but given from a kind heart, with a moist eye, and in tones that tried to be cheerful and were full of sympathy. This advice was the key to the more than indulgent treatment which, as we have seen, the girl had received from her father and all about her. The old Doctor often came in, in the kindest, most natural sort of way, got into pleasant relations with Elsie by always treating her in the same easy manner as at the great party, encouraging all her harmless fancies, and rarely reminding her that he was a professional adviser, except when she came out of her own accord, as in the talk they had at the party, telling him of some wild trick she had been playing.

"Let her go to the girls' school, by all means," said the Doctor, when she had begun to talk about it. "Possibly she may take to some of the girls or of the teachers. Anything to interest her. Friendship, love, religion,—whatever will set her nature at work. We must have headway on, or there will be no piloting her."

Action first of all, and then we will see what to do with it."

So, when Cousin Richard came along, the Doctor, though he did not like his looks any too well, told her father to encourage his staying for a time. If she liked him, it was good; if she only tolerated him, it was better than nothing.

"You know something about that nephew of yours, during these last years, I suppose?" the Doctor said. "Looks as if he had seen life. Has a scar that was made by a sword-cut, and a white spot on the side of his neck that looks like a bullet-mark. I think he has been what folks call a 'hard customer.'"

Dudley Venner owned that he had heard little or nothing of him of late years. He had invited himself, and of course it would not be decent not to receive him as a relative. He thought Elsie rather liked having him about the house for a while. She was very capricious,—acted as if she fancied him one day and disliked him the next. He did not know,—but (he said in a low voice) he had a suspicion that this nephew of his was disposed to take a serious liking to Elsie. What should he do about it, if it turned out so?

The Doctor lifted his eyebrows a little. He thought there was no fear. Elsie was naturally what they call a man-hater, and there was very little danger of any sudden passion springing up between two such young persons. Let him stay a while; it gives her something to think about.—So he stayed awhile, as we have seen.

The more Mr. Richard became acquainted with the family,—that is, with the two persons of whom it consisted,—the more favorably the idea of a permanent residence in the mansion-house seemed to impress him. The estate was large,—hundreds of acres, with woodlands and meadows of great value. The father and daughter had been living quietly, and there could not be a doubt that the property which came through the Dudleys must have largely increased of late years. It was evident enough that they had an

abundant income, from the way in which Elsie's caprices were indulged. She had horses and carriages to suit herself; she sent to the great city for everything she wanted in the way of dress. Even her diamonds—and the young man knew something about these gems—must be of considerable value; and yet she wore them carelessly, as it pleased her fancy. She had precious old laces, too, almost worth their weight in diamonds,—laces which had been snatched from altars in ancient Spanish cathedrals during the wars, and which it would not be safe to leave a duchess alone with for ten minutes. The old house was fat with the deposits of rich generations which had gone before. The famous "golden" fireset was a purchase of one of the family who had been in France during the Revolution, and must have come from a princely palace, if not from one of the royal residences. As for silver, the iron closet which had been made in the dining-room wall was running over with it: tea-kettles, coffee-pots, heavy-lidded tankards, chafing-dishes, punch-bowls, all that all the Dudleys had ever used, from the caudle-cup that used to be handed round the young mother's chamber, and the porringer from which children scooped their bread-and-milk with spoons as solid as ingots, to that ominous vessel, on the upper shelf, far back in the dark, with a spout like a slender italic *S*, out of which the sick and dying, all along the last century, and since, had taken the last drops that passed their lips. Without being much of a scholar, Dick could see well enough, too, that the books in the library had been ordered from the great London houses, whose imprint they bore, by persons that knew what was best and meant to have it. A man does not require much learning to feel pretty sure, when he takes one of those solid, smooth, velvet-leaved quartos, say a Baskerville Addison, for instance, bound in red morocco, with a margin of gold, as rich as the embroidery of a prince's collar, as Vandyck drew it,—he need not know much to feel pretty sure that a score or two of shelves full

of such books mean that it took a long purse, as well as a literary taste, to bring them together.

To all these attractions the mind of this thoughtful young gentleman may be said to have been fully open. He did not disguise from himself, however, that there were a number of drawbacks in the way of his becoming established as the heir of the Dudley mansion-house and fortune. In the first place, Cousin Elsie was, unquestionably, very piquant, very handsome, game as a hawk, and hard to please, which made her worth trying for. But then there was something about Cousin Elsie,—(the small, white scars began stinging, as he said this to himself, and he pushed his sleeve up to look at them,)—there was something about Cousin Elsie he couldn't make out. What was the matter with her eyes, that they sucked your life out of you in that strange way? What did she always wear a necklace for? Had she some such love-token on her neck as the old Don's revolver had left on his? How safe would anybody feel to live with her? Besides, her father would last forever, if he was left to himself. And he may take it into his head to marry again. That would be pleasant!

So talked Cousin Richard to himself, in the calm of the night and in the tranquillity of his own soul. There was much to be said on both sides. It was a balance to be struck after the two columns were added up. He struck the balance, and came to the conclusion that he would fall in love with Elsie Venner.

The intelligent reader will not confound this matured and serious intention of falling in love with the young lady with that mere impulse of the moment before mentioned as an instance of making love. On the contrary, the moment Mr. Richard had made up his mind that he should fall in love with Elsie, he began to be more reserved with her, and to try to make friends in other quarters. Sensible men, you know, care very little what a girl's present fancy is. The question is: Who manages her, and how can

you get at that person or those persons? Her foolish little sentiments are all very well in their way; but business is business, and we can't stop for such trifles. The old political wire-pullers never go near the man they want to gain, if they can help it; they find out who his intimates and managers are, and work through them. Always handle any positively electrical body, whether it is charged with passion or power, with some non-conductor between you and it, not with your naked hands.—The above were some of the young gentleman's working axioms; and he proceeded to act in accordance with them.

He began by paying his court more assiduously to his uncle. It was not very hard to ingratiate himself in that quarter; for his manners were insinuating, and his precocious experience of life made him entertaining. The old neglected billiard-room was soon put in order, and Dick, who was a magnificent player, had a series of games with his uncle, in which, singularly enough, he was beaten, though his antagonist had been out of play for years. He evinced a profound interest in the family history, insisted on having the details of its early alliances, and professed a great pride of race, which he had inherited from his father, who, though he had allied himself with the daughter of an alien race, had yet chosen one with the real azure blood in her veins, as proud as if she had Castile and Aragon for her dower and the Cid for her grandpapa. He also asked a great deal of advice, such as inexperienced young persons are in need of, and listened to it with great reverence.

It is not very strange that Uncle Dudley took a kinder view of his nephew than the Judge, who thought he could read a questionable history in his face,—or the old Doctor, who knew men's temperaments and organizations pretty well, and had his prejudices about races, and could tell an old sword-cut and a bullet-mark in two seconds from a scar got by falling against the fender, or a mark left by king's evil. He could not be ex-

pected to share our own prejudices; for he had heard nothing of the wild youth's adventures, or his scamper over the Pampas at short notice. So, then, "Richard Venner, Esquire, guest of Dudley Venner, Esquire, at his elegant mansion," prolonged his visit until his presence became something like a matter of habit, and the neighbors settled it beyond doubt that the fine old house would be illuminated before long for a grand marriage.

He had done pretty well with the father: the next thing was to gain over the nurse. Old Sophy was as cunning as a red fox or a gray woodchuck. She had nothing in the world to do but to watch Elsie; she had nothing to care for but this girl and her father. She had never liked Dick too well; for he used to make faces at her and tease her when he was a boy, and now he was a man there was something about him—she could not tell what—that made her suspicious of him. It was no small matter to get her over to his side.

The jet-black Africans know that gold never looks so well as on the foil of their dark skins. Dick found in his trunk a string of gold beads, such as are manufactured in some of our cities, which he had brought from the gold region of Chili,—so he said,—for the express purpose of giving them to old Sophy. These Africans, too, have a perfect passion for gay-colored clothing; being condemned by Nature, as it were, to a perpetual mourning-suit, they love to enliven it with all sorts of variegated stuffs of sprightly patterns, aflame with red and yellow. The considerate young man had

remembered this, too, and brought home for Sophy some handkerchiefs of rainbow hue, which had been strangely overlooked till now, at the bottom of one of his trunks. Old Sophy took his gifts, but kept her black eyes open and watched every movement of the young people all the more closely. It was through her that the father had always known most of the actions and tendencies of his daughter.

In the mean time the strange adventure on The Mountain had brought the young master into new relations with Elsie. She had saved him in the extremity of peril by the exercise of some mysterious power. He was grateful, and yet shuddered at the recollection of the whole scene. In his dreams he was pursued by the glare of cold glittering eyes,—whether they were in the head of a woman or of a reptile he could not always tell, the images had so run together. But he could not help seeing that the eyes of the young girl had been often, very often, turned upon him when he had been looking away, and fell as his own glance met them. Helen Darley told him very plainly that this girl was thinking about him more than about her book. Dick Venner found she was getting more constant in her attendance at school. He learned, on inquiry, that there was a new master, a handsome young man. The handsome young man would not have liked the look that came over Dick's face when he heard this fact mentioned.

In short, everything was getting tangled up together, and there would be no chance of disentangling the threads in this chapter.

ON THE FORMATION OF GALLERIES OF ART.

It is barely fifty years since England refused the gift of the pictures that now constitute the Dulwich Gallery. So rapidly, however, did public opinion and taste become enlightened, that twenty-five years afterwards Parliament voted seventy-three thousand pounds for the purchase of thirty-eight pictures collected by Mr. Angerstein. This was the commencement of their National Gallery. In 1790 but three national galleries existed in Europe,—those of Dresden, Florence, and Amsterdam. The Louvre was then first originated by a decree of the Constituent Assembly of France. England now spends with open hand on schools of design, the accumulation of treasures of art of every epoch and character, and whatever tends to elevate the taste and enlarge the means of the artistic education of her people,—perceiving, with far-sighted wisdom, that, through improved manufacture and riper civilization, eventually a tenfold return will result to her treasury. The nations of Europe exult over a new acquisition to their galleries, though its cost may have exceeded a hundred thousand dollars.

We are in that stage of indifference and neglect that one of our wealthiest cities recently refused to accept the donation of a gallery of some three hundred pictures, collected with taste and discrimination by a generous lover of art, because it did not wish to be put to the expense of finding wall-room for them. But this spirit is departing, and now our slowness or reluctance is rather the result of a want of knowledge and critical judgment than of a want of feeling for art.

To stimulate this feeling, it is requisite that our public should have free access to galleries in which shall be exhibited in chronological series specimens of the art of all nations and schools, arranged according to their motives and the special influences that attended their development. After this manner a mental and

artistic history of the world may be spread out like a chart before the student, while the artist with equal facility can trace up to their origin the varied methods, styles, and excellences of each prominent epoch. A gallery of art is a perpetual feast of the most intense and refined enjoyment to every one capable of entering into its phases of thought and execution, analyzing its external and internal being, and tracing the mysterious transformations of spirit into form. It has been well said, that a complete gallery, on a broad foundation, in which all tastes, styles, and methods harmoniously mingle, is a court of final appeal of one phase of civilization against another, from an examination of which we can sum up their respective qualities and merits, drawing therefrom for our own edification as from a perpetual wellspring of inspiration and knowledge. But if we sit in judgment upon the great departed, they likewise sit in judgment upon us. And it is precisely where such means of testing artistic growth best exist that modern art is at once most humble and most aspiring: conscious of its own power and in many respects superior technical advantages, both it and the public are still content to go to the past for instruction, and each to seek to rise above the transitory bias of fashion or local passions to a standard of taste that will abide world-wide comparison and criticism.

An edifice for a gallery or museum of art should be fire-proof, sufficiently isolated for light and effective ornamentation, and constructed so as to admit of indefinite extension. Its chief feature should be the suitable accommodation and exhibition of its contents. But provision should be made for its becoming eventually in architectural effect consistent with its object. The skeleton of such a building need not be costly. Its chief expense would be in its ultimate adorn-

ment with marble facings, richly colored stones, sculpture or frescoes, according to a design which should enforce strict purity of taste and conformity to its motive. This gradual completion, as happened to the mediæval monuments of Europe, could be extended through many generations, which would thus be linked with one another in a common object of artistic and patriotic pride gradually growing up among them, as a national monument, with its foundations deeply laid in a unity of feeling and those desirable associations of love and veneration which in older civilizations so delightfully harmonize the past with the present. Each epoch of artists would be instructed by the skill of its predecessor, and stimulated to connect its name permanently with so glorious a shrine. Wealth, as in the days of democratic Greece and Italy, would be lavished upon the completion of a temple of art destined to endure as long as material can defy time, a monument of the people's taste and munificence. There would be born among them the spirit of those Athenians who said to Phidias, when he asked if he should use ivory or marble for the statue of their protecting goddess, "Use that material which is most *worthy* of our city."

Until recently, no attention has been paid, even in Europe, to historical sequence and special motives in the arrangement of galleries. As in the Pitti Gallery, pictures were generally hung so as to conform to the symmetry of the rooms,—various styles, schools, and epochs being intermixed. As the progress of ideas is of more importance to note than the variations of styles or the degree of technical merit, the chief attention in selection and position should be given to lucidly exhibiting the varied phases of artistic thought among the diverse races and widely separated eras and inspirations which gave them being. The mechanism of art is, however, so intimately interwoven with the idea, that by giving precedence to the latter we most readily arrive at the best arrangement of the former. Each cycle of civilization should

have its special department, Paganism and Christianity being kept apart, and not, as in the Florentine Gallery, intermixed,—presenting a strange jumble of classical statuary and modern paintings in anachronistic disorder, to the loss of the finest properties of each to the eye, and the destruction of that unity of motive and harmonious association so essential to the proper exhibition of art. For it is essential that every variety of artistic development should be associated solely with those objects or conditions most in keeping with its inspirations. In this way we quickest come to an understanding of its originating idea, and sympathize with its feeling, tracing its progress from infancy to maturity and decay, and comparing it as a whole with corresponding or rival varieties of artistic development. This systematized variety of one great unity is of the highest importance in placing the spectator in affinity with art as a whole and with its diversities of character, and in giving him sound stand-points of comparison and criticism. In this way, as in the Louvre, feeling and thought are readily transported from one epoch of civilization to another, grasping the motives and execution of each with pleasurable accuracy. We perceive that no conventional standard of criticism, founded upon the opinions or fashions of one age, is applicable to all. To rightly comprehend each, we must broadly survey the entire ground of art, and make ourselves for the time members, as it were, of the political and social conditions of life that give origin to the objects of our investigations. This philosophical mode of viewing art does not exclude an æsthetic point of view, but rather heightens that and makes it more intelligible. Paganism would be subdivided into the various national forms that illustrated its rise and fall. Egypt, India, China, Assyria, Greece, Etruria, and Rome, would stand each by itself as a component part of a great whole: so with Christianity, in such shapes as have already taken foothold in history, the Latin, Byzantine, Lombard, Mediæval, Re-

naissant, and Protestant art, subdivided into its diversified schools or leading ideas, all graphically arranged so as to demonstrate, amid the infinite varieties of humanity, a divine unity of origin and design, linking together mankind in one common family.

Beside statuary and paintings, an institution of this nature should contain specimens of every kind of industry in which art is the primary inspiration, to illustrate the qualities and degrees of social refinement in nations and eras. This would include every variety of ornamental art in which invention and skill are conspicuous, as well as those works more directly inspired by higher motives and intended as a joy forever. Architecture and objects not transportable could be represented by casts or photographs. Models, drawings, and engravings also come within its scope; and there should be attached to the parent gallery a library of reference and a lecture- and reading-room.

Connected with it there might be schools of design for improvement in ornamental manufacture, the development of architecture, and whatever aids to refine and give beauty to social life, including a simple academic system for the elementary branches of drawing and coloring, upon a scientific basis of accumulated knowledge and experience, providing models and other advantages not readily accessible to private resources, but leaving individual genius free to follow its own promptings upon a well-laid technical foundation. As soon as the young artist has acquired the grammar of his profession, he should be sent forth to study directly from Nature and to mature his invention unfettered by authoritative academic system, which more frequently fosters conventionalism and imposes trammels upon talent than endows it with strength and freedom.

Such is a brief sketch of institutions feasible amongst us from humble beginnings by individual enterprise. Once founded and their value demonstrated, the countenance of the state may be hopefully invoked. Their very existence

would become an incentive to munificent gifts. Individuals owning fine works of art would grow ambitious to have their memories associated with patriotic enterprise. Art invokes liberality and evokes fraternity. The sentiment, that there is a common property in the productions of genius, making possession a trust for the public welfare, will increase among those by whose taste and wealth they have been accumulated. Masterpieces will cease to be regarded as the selfish acquisitions of covetous amateurs, but, like spoken truth, will become the inalienable birthright of the people,—finding their way freely and generously, through the magnetic influences of public spirit and pertinent examples, to those depositories where they can most efficaciously perform their mission of truth and beauty to the world. Then the people themselves will begin to take pride in their artistic wealth, to honor artists as they now do soldiers and statesmen, and to value the more highly those virtues which are interwoven with all noble effort.

In 1823, when the National Gallery of England was founded, the English were nearly as dead to art as we are now. A few amateurs alone cultivated it, but there was no general sympathy with nor knowledge of it. Yet by 1837, in donations alone, the gallery had received one hundred and thirty-seven pictures. Since that period gifts have increased tenfold in value and numbers. Connected with it, and a part of that noble, comprehensive, and munificent system of art-education which the British government has inculcated, are the British and Kensington Museums. Schools of design, with every appliance for the growth of art, have rapidly sprung into existence. Private enterprise and research have correspondingly increased. British agents, with unstinted means, are everywhere ransacking the earth in quest of everything that can add to the value and utility of their national and private collections. A keen regard for all that concerns art, a desire for its national development, an enlightened standard of criticism, and

with it the most eloquent art-literature of any tongue, have all recently sprung into existence in our motherland. All honor to those generous spirits that have produced this,—and honor to the nation that so wisely expends its wealth! A noble example for America! England also throws open to the competition of the world plans for her public buildings and monuments. Mistakes and defects there have been, but an honest desire for amendment and to promote the intellectual growth of the nation now characterizes her pioneers in this cause. And what progress! Between 1823 and 1850, in the Museum alone, there have been expended \$10,000,000. Within twelve years, \$450,000 have been expended on the National Gallery for pictures, and yet its largest accession of treasures is by gifts and bequests. Lately, beside the Pisani Veronese bought for \$70,000, eight other paintings have been purchased at a cost of \$50,000. In 1858, \$36,000 were given for the choice of twenty, of the early Italian schools, from the Lombardi Gallery at Florence,—not masterpieces, but simply characteristic specimens, more or less restored. The average cost of late acquisitions has been about \$6,000

each. In 1858, there were 823,000 visitors to both branches of the National Gallery. Who can estimate not alone the pleasure and instruction afforded by such an institution to its million of annual visitors, but the ideas and inspiration thence born, destined to grow and fructify to the glory and good of the nation? At present there are seventy-seven schools of art in England, attended by 68,000 students. In 1859, they and kindred institutions received a public grant of nearly \$450,000. The appropriation for the British Museum alone, for 1860, is £77,452.

To the Louvre Louis XVIII. added one hundred and eleven pictures, at a cost of about \$132,000; Charles X., twenty-four, at \$12,000; Louis Philippe, fifty-three, at \$14,500; and Napoleon III., thus far, thirty paintings, costing \$200,000, one of which, the Murillo, cost \$125,000. Russia is following in the same path. Italy, Greece, and Egypt, by stringent regulations, are making it yearly more difficult for any precious work to leave their shores. If, therefore, America is ever to follow in the same path, she must soon bestir herself, or she will have nothing but barren fields to glean from.

DARWIN ON THE ORIGIN OF SPECIES.

NOVELTIES are enticing to most people: to us they are simply annoying. We cling to a long-accepted theory, just as we cling to an old suit of clothes. A new theory, like a new pair of breeches, ("The Atlantic" still affects the older type of nether garment,) is sure to have hard-fitting places; or even when no particular fault can be found with the article, it oppresses with a sense of general discomfort. New notions and new styles worry us, till we get well used to them, which is only by slow degrees.

Wherefore, in Galileo's time, we might have helped to proscribe, or to burn—had he been stubborn enough to warrant cremation—even the great pioneer of inductive research; although, when we had fairly recovered our composure, and had leisurely excogitated the matter, we might have come to conclude that the new doctrine was better than the old one, after all, at least for those who had nothing to unlearn.

Such being our habitual state of mind, it may well be believed that the perusal

of the new book "On the Origin of Species by Means of Natural Selection" left an uncomfortable impression, in spite of its plausible and winning ways. We were not wholly unprepared for it, as many of our contemporaries seem to have been. The scientific reading in which we indulge as a relaxation from severer studies had raised dim forebodings. Investigations about the succession of species in time, and their actual geographical distribution over the earth's surface, were leading up from all sides and in various ways to the question of their origin. Now and then we encountered a sentence, like Professor Owen's "axiom of the continuous operation of the ordained becoming of living things," which haunted us like an apparition. For, dim as our conception must needs be as to what such oracular and grandiloquent phrases might really mean, we felt confident that they presaged no good to old beliefs. Foreseeing, yet deprecating, the coming time of trouble, we still hoped, that, with some repairs and make-shifts, the old views might last out our days. *Après nous le déluge*. Still, not to lag behind the rest of the world, we read the book in which the new theory is promulgated. We took it up, like our neighbors, and, as was natural, in a somewhat captious frame of mind.

Well, we found no cause of quarrel with the first chapter. Here the author takes us directly to the barn-yard and the kitchen-garden. Like an honorable rural member of our General Court, who sat silent until, near the close of a long session, a bill requiring all swine at large to wear pokes was introduced, when he claimed the privilege of addressing the house, on the proper ground that he had been "brought up among the pigs, and knew all about them,"—so we were brought up among cows and cabbages; and the lowing of cattle, the cackling of hens, and the cooing of pigeons were sounds native and pleasant to our ears. So "Variation under Domestication" dealt with familiar subjects in a natural way, and gently introduced "Variation under Nature," which seemed likely enough. Then fol-

lows "Struggle for Existence,"—a principle which we experimentally know to be true and cogent,—bringing the comfortable assurance, that man, even upon Leviathan Hobbes's theory of society, is no worse than the rest of creation, since all Nature is at war, one species with another, and the nearer kindred the more internecine,—bringing in thousand-fold confirmation and extension of the Malthusian doctrine, that population tends far to outrun means of subsistence throughout the animal and vegetable world, and has to be kept down by sharp preventive checks; so that not more than one of a hundred or a thousand of the individuals whose existence is so wonderfully and so sedulously provided for ever comes to anything, under ordinary circumstances; so the lucky and the strong must prevail, and the weaker and ill-favored must perish;—and then follows, as naturally as one sheep follows another, the chapter on "Natural Selection," Darwin's *cheval de bataille*, which is very much the Napoleonic doctrine, that Providence favors the strongest battalions,—that, since many more individuals are born than can possibly survive, those individuals and those variations which possess any advantage, however slight, over the rest, are in the long run sure to survive, to propagate, and to occupy the limited field, to the exclusion or destruction of the weaker brethren. All this we pondered, and could not much object to. In fact, we began to contract a liking for a system which at the outset illustrates the advantages of good breeding, and which makes the most "of every creature's best."

Could we "let by-gones be by-gones," and, beginning now, go on improving and diversifying for the future by natural selection,—could we even take up the theory at the introduction of the actually existing species, we should be well content, and so perhaps would most naturalists be. It is by no means difficult to believe that varieties are incipient or possible species, when we see what trouble naturalists, especially botanists, have to distinguish between them,—one regard-

ing as a true species what another regards as a variety; when the progress of knowledge increases, rather than diminishes, the number of doubtful instances; and when there is less agreement than ever among naturalists as to what the basis is in Nature upon which our idea of species reposes, or how the word is practically to be defined. Indeed, when we consider the endless disputes of naturalists and ethnologists over the human races, as to whether they belong to one species or to more, and if to more, whether to three, or five, or fifty, we can hardly help fancying that both may be right,—or rather, that the uni-humanitarians would have been right several thousand years ago, and the multi-humanitarians will be a few thousand years later; while at present the safe thing to say is, that, probably, there is some truth on both sides. “Natural selection,” Darwin remarks, “leads to divergence of character; for more living beings can be supported on the same area the more they diverge in structure, habits, and constitution,” (a principle which, by the way, is paralleled and illustrated by the diversification of human labor,) and also leads to much extinction of intermediate or unimproved forms. Now, though this divergence may “steadily tend to increase,” yet this is evidently a slow process in Nature, and liable to much counteraction wherever man does not interpose, and so not likely to work much harm for the future. And if natural selection, with artificial to help it, will produce better animals and better men than the present, and fit them better to “the conditions of existence,” why, let it work, say we, to the top of its bent. There is still room enough for improvement. Only let us hope that it always works for good: if not, the divergent lines on Darwin’s diagram of transmutation made easy ominously show what small deviations from the straight path may come to in the end.

The prospect of the future, accordingly, is on the whole pleasant and encouraging. It is only the backward glance, the gaze up the long vista of the past, that reveals anything alarming. Here

the lines converge as they recede into the geological ages, and point to conclusions which, upon the theory, are inevitable, but by no means welcome. The very first step backwards makes the Negro and the Hottentot our blood-relations;—not that reason or Scripture objects to that, though pride may. The next suggests a closer association of our ancestors of the olden time with “our poor relations” of the quadrumanous family than we like to acknowledge. Fortunately, however,—even if we must account for him scientifically,—man with his two feet stands upon a foundation of his own. Intermediate links between the *Bimana* and the *Quadrumana* are lacking altogether; so that, put the genealogy of the brutes upon what footing you will, the four-handed races will not serve for our forerunners;—at least, not until some monkey, live or fossil, is producible with great-toes, instead of thumbs, upon his nether extremities; or until some lucky geologist turns up the bones of his ancestor and prototype in France or England, who was so busy “napping the chuckie-stanes” and chipping out flint knives and arrow-heads in the time of the drift, very many ages ago,—before the British Channel existed, says Lyell,*—and until these men of the olden time are shown to have worn their great-toes in a divergent and thumb-like fashion. That would be evidence indeed: but until some testimony of the sort is produced, we must needs believe in the separate and special creation of man, however it may have been with the lower animals and with plants.

No doubt, the full development and symmetry of Darwin’s hypothesis strongly suggest the evolution of the human no less than the lower animal races out of some simple primordial animal,—that all are equally “lineal descendants of some few beings which lived long be-

* Vide *Proceedings of the British Association for the Advancement of Science*, 1859, and London *Athenæum*, passim. It appears to be conceded that these “celts” or stone knives are artificial productions, and of the age of the mammoth, the fossil rhinoceros, etc.

fore the first bed of the Silurian system was deposited." But, as the author speaks disrespectfully of spontaneous generation, and accepts a supernatural beginning of life on earth, in some form or forms of being which included potentially all that have since existed and are yet to be, he is thereby not warranted to extend his inferences beyond the evidence or the fair probability. There seems as great likelihood that one special origination should be followed by another upon fitting occasion, (such as the introduction of man,) as that one form should be transmuted into another upon fitting occasion, as, for instance, in the succession of species which differ from each other only in some details. To compare small things with great in a homely illustration: man alters from time to time his instruments or machines, as new circumstances or conditions may require and his wit suggest. Minor alterations and improvements he adds to the machine he possesses: he adapts a new rig or a new rudder to an old boat: this answers to *variation*. If boats could engender, the variations would doubtless be propagated, like those of domestic cattle. In course of time the old ones would be worn out or wrecked; the best sorts would be chosen for each particular use, and further improved upon, and so the primordial boat be developed into the scow, the skiff, the sloop, and other species of water-craft,—the very diversification, as well as the successive improvements, entailing the disappearance of many intermediate forms, less adapted to any one particular purpose; wherefore these go slowly out of use, and become extinct species: this is *natural selection*. Now let a great and important advance be made, like that of steam-navigation: here, though the engine might be added to the old vessel, yet the wiser and therefore the actual way is to make a new vessel on a modified plan: this may answer to *specific creation*. Anyhow, the one does not necessarily exclude the other. Variation and natural selection may play their part, and so may specific creation also. Why not?

This leads us to ask for the reasons which call for this new theory of transmutation. The beginning of things must needs lie in obscurity, beyond the bounds of proof, though within those of conjecture or of analogical inference. Why not hold fast to the customary view, that all species were directly, instead of indirectly, created after their respective kinds, as we now behold them,—and that in a manner which, passing our comprehension, we intuitively refer to the supernatural? Why this continual striving after "the unattained and dim,"—these anxious endeavors, especially of late years, by naturalists and philosophers of various schools and different tendencies, to penetrate what one of them calls "the mystery of mysteries," the origin of species? To this, in general, sufficient answer may be found in the activity of the human intellect, "the delirious yet divine desire to know," stimulated as it has been by its own success in unveiling the laws and processes of inorganic Nature,—in the fact that the principal triumphs of our age in physical science have consisted in tracing connections where none were known before, in reducing heterogeneous phenomena to a common cause or origin, in a manner quite analogous to that of the reduction of supposed independently originated species to a common ultimate origin,—thus, and in various other ways, largely and legitimately extending the domain of secondary causes. Surely the scientific mind of an age which contemplates the solar system as evolved from a common, revolving, fluid mass,—which, through experimental research, has come to regard light, heat, electricity, magnetism, chemical affinity, and mechanical power as varieties or derivative and convertible forms of one force, instead of independent species,—which has brought the so-called elementary kinds of matter, such as the metals, into kindred groups, and raised the question, whether the members of each group may not be mere varieties of one species,—and which speculates steadily in the direction of the ultimate unity of matter,

of a sort of prototype or simple element which may be to the ordinary species of matter what the *protozoa* or component cells of an organism are to the higher sorts of animals and plants, — the mind of such an age cannot be expected to let the old belief about species pass unquestioned. It will raise the question, how the diverse sorts of plants and animals came to be as they are and where they are, and will allow that the whole inquiry transcends its powers only when all endeavors have failed. Granting the origin to be supernatural, or miraculous even, will not arrest the inquiry. All real origination, the philosophers will say, is supernatural; their very question is, whether we have yet gone back to the origin, and can affirm that the present forms of plants and animals are the primordial, the miraculously created ones. And even if they admit that, they will still inquire into the order of the phenomena, into the form of the miracle. You might as well expect the child to grow up content with what it is told about the advent of its infant brother. Indeed, to learn that the new-comer is the gift of God, far from lulling inquiry, only stimulates speculation as to how the precious gift was bestowed. That questioning child is father to the man, — is philosopher in short-clothes.

Since, then, questions about the origin of species will be raised, and have been raised, — and since the theorizings, however different in particulars, all proceed upon the notion that one species of plant or animal is somehow derived from another, that the different sorts which now flourish are lineal (or unlineal) descendants of other and earlier sorts, — it now concerns us to ask, What are the grounds in Nature, the admitted facts, which suggest hypotheses of derivation, in some shape or other? Reasons there must be, and plausible ones, for the persistent recurrence of theories upon this genetic basis. A study of Darwin's book, and a general glance at the present state of the natural sciences, enable us to gather the following as perhaps the most suggestive

and influential. We can only enumerate them here, without much indication of their particular bearing. There is, —

1. The general fact of variability; — the patent fact, that all species vary more or less; that domesticated plants and animals, being in conditions favorable to the production and preservation of varieties, are apt to vary widely; and that by interbreeding, any variety may be fixed into a race, that is, into a variety which comes true from seed. Many such races, it is allowed, differ from each other in structure and appearance as widely as do many admitted species; and it is practically very difficult, perhaps impossible, to draw a clear line between races and species. Witness the human races, for instance. Wild species also vary, perhaps about as widely as those of domestication, though in different ways. Some of them appear to vary little, others moderately, others immoderately, to the great bewilderment of systematic botanists and zoologists, and their increasing disagreement as to whether various forms shall be held to be original species or marked varieties. Moreover, the degree to which the descendants of the same stock, varying in different directions, may at length diverge is unknown. All we know is, that varieties are themselves variable, and that very diverse forms have been educed from one stock.

2. Species of the same genus are not distinguished from each other by equal amounts of difference. There is diversity in this respect analogous to that of the varieties of a polymorphous species, some of them slight, others extreme. And in large genera the unequal resemblance shows itself in the clustering of the species around several types or central species, like satellites around their respective planets. Obviously suggestive this of the hypothesis that they were satellites, not thrown off by revolution, like the moons of Jupiter, Saturn, and our own solitary moon, but gradually and peacefully detached by divergent variation. That such closely related species may be only varieties of higher grade, earlier origin, or

more favored evolution, is not a very violent supposition. Anyhow, it was a supposition sure to be made.

3. The actual geographical distribution of species upon the earth's surface tends to suggest the same notion. For, as a general thing, all or most of the species of a peculiar genus or other type are grouped in the same country, or occupy continuous, proximate, or accessible areas. So well does this rule hold, so general is the implication that kindred species are or were associated geographically, that most trustworthy naturalists, quite free from hypotheses of transmutation, are constantly inferring former geographical continuity between parts of the world now widely disjoined, in order to account thereby for the generic similarities among their inhabitants. Yet no scientific explanation has been offered to account for the geographical association of kindred species, except the hypothesis of a common origin.

4. Here the fact of the antiquity of creation, and in particular of the present kinds of the earth's inhabitants, or of a large part of them, comes in to rebut the objection, that there has not been time enough for any marked diversification of living things through divergent variation, — not time enough for varieties to have diverged into what we call species.

So long as the existing species of plants and animals were thought to have originated a few thousand years ago and without predecessors, there was no room for a theory of derivation of one sort from another, nor time enough even to account for the establishment of the races which are generally believed to have diverged from a common stock. Not that five or six thousand years was a short allowance for this; but because some of our familiar domesticated varieties of grain, of fowls, and of other animals, were pictured and mummified by the old Egyptians more than half that number of years ago, if not much earlier. Indeed, perhaps the strongest argument for the original plurality of human species was drawn from the identification of some of

the present races of men upon these early historical monuments and records.

But this very extension of the current chronology, if we may rely upon the archæologists, removes the difficulty by opening up a longer vista. So does the discovery in Europe of remains and implements of pre-historic races of men to whom the use of metals was unknown, — men of the *stone age*, as the Scandinavian archæologists designate them. And now, "axes and knives of flint, evidently wrought by human skill, are found in beds of the drift at Amiens, (also in other places, both in France and England,) associated with the bones of extinct species of animals." These implements, indeed, were noticed twenty years ago; at a place in Suffolk they have been exhumed from time to time for more than a century; but the full confirmation, the recognition of the age of the deposit in which the implements occur, their abundance, and the appreciation of their bearings upon most interesting questions, belong to the present time. To complete the connection of these primitive people with the fossil ages, the French geologists, we are told, have now "found these axes in Picardy associated with remains of *Elephas primigenius*, *Rhinoceros tichorhinus*, *Equus fossilis*, and an extinct species of *Bos*."* In plain language, these workers in flint lived in the time of the mammoth, of a rhinoceros now extinct, and along with horses and cattle unlike any now existing, — specifically different, as naturalists say, from those with which man is now associated. Their connection with existing human races may perhaps be traced through the intervening people of the stone age, who were succeeded by the people of the bronze age, and these by workers in iron.† Now, various evidence carries back the existence of many

* See Correspondence of M. Nicklès, in *American Journal of Science and Arts*, for March, 1860.

† See Morlet, *Some General Views on Archæology*, in *American Journal of Science and Arts*, for January, 1860, translated from *Bulletin de la Société Vaudoise*, 1859.

of the present lower species of animals, and probably of a larger number of plants, to the same drift period. All agree that this was very many thousand years ago. Agassiz tells us that the same species of polyps which are now building coral walls around the present peninsula of Florida actually made that peninsula, and have been building there for centuries which must be reckoned by thousands.

5. The overlapping of existing and extinct species, and the seemingly gradual transition of the life of the drift period into that of the present, may be turned to the same account. Mammoths, mastodons, and Irish elks, now extinct, must have lived down to human, if not almost to historic times. Perhaps the last dodo did not long outlive his huge New Zealand kindred. The auroch, once the companion of mammoths, still survives, but apparently owes his present and precarious existence to man's care. Now, nothing that we know of forbids the hypothesis that some new species have been independently and supernaturally created within the period which other species have survived. It may even be believed that man was created in the days of the mammoth, became extinct, and was re-created at a later date. But why not say the same of the auroch, contemporary both of the old man and of the new? Still it is more natural, if not inevitable, to infer, that, if the aurochs of that olden time were the ancestors of the aurochs of the Lithuanian forests, so likewise were the men of that age — if men they were — the ancestors of the present human races. Then, whoever concludes that these primitive makers of rude flint axes and knives were the ancestors of the better workmen of the succeeding stone age, and these again of the succeeding artificers in brass and iron, will also be likely to suppose that the *Equus* and *Bos* of that time were the remote progenitors of our own horses and cattle. In all candor we must at least concede that such considerations suggest a genetic descent from the drift period down to the present, and allow time enough — if time is of

any account — for variation and natural selection to work out some appreciable results in the way of divergence into races or even into so-called species. Whatever might have been thought, when geological time was supposed to be separated from the present era by a clear line, it is certain that a gradual replacement of old forms by new ones is strongly suggestive of some mode of origination which may still be operative. When species, like individuals, were found to die out one by one, and apparently to come in one by one, a theory for what Owen sonorously calls "the continuous operation of the ordained becoming of living things" could not be far off.

That all such theories should take the form of a derivation of the new from the old seems to be inevitable, perhaps from our inability to conceive of any other line of secondary causes, in this connection. Owen himself is apparently in travail with some transmutation theory of his own conceiving, which may yet see the light, although Darwin's came first to the birth. Different as the two theories will probably be in particulars, they cannot fail to exhibit that fundamental resemblance in this respect which betokens a community of origin, a common foundation on the general facts and the obvious suggestions of modern science. Indeed, — to turn the point of a taking simile directed against Darwin, — the difference between the Darwinian and the Owenian hypotheses may, after all, be only that between homœopathic and heroic doses of the same drug.

If theories of derivation could only stop here, content with explaining the diversification and succession of species between the tertiary period and the present time, through natural agencies or secondary causes still in operation, we fancy they would not be generally or violently objected to by the *savans* of the present day. But it is hard, if not impossible, to find a stopping-place. Some of the facts or accepted conclusions already referred to, and several others, of a more general character, which must be taken into the

account, impel the theory onward with accumulated force. *Vires* (not to say *virus*) *acquirit eundo*. The theory hitches on wonderfully well to Lyell's uniformitarian theory in geology, — that the thing that has been is the thing that is and shall be, — that the natural operations now going on will account for all geological changes in a quiet and easy way, only give them time enough, so connecting the present and the proximate with the farthest past by almost imperceptible gradations, — a view which finds large and increasing, if not general, acceptance in physical geology, and of which Darwin's theory is the natural complement.

So the Darwinian theory, once getting a foothold, marches boldly on, follows the supposed near ancestors of our present species farther and yet farther back into the dim past, and ends with an analogical inference which "makes the whole world

kin." As we said at the beginning, this upshot discomposes us. Several features of the theory have an uncanny look. They may prove to be innocent: but their first aspect is suspicious, and high authorities pronounce the whole thing to be positively mischievous.

In this dilemma we are going to take advice. Following the bent of our prejudices, and hoping to fortify these by new and strong arguments, we are going now to read the principal reviews which undertake to demolish the theory; — with what result our readers shall be duly informed.

Meanwhile, we call attention to the fact, that the Appletons have just brought out a second and revised edition of Mr. Darwin's book, with numerous corrections, important additions, and a preface, all prepared by the author for this edition, in advance of a new English edition.

VANITY (1).

(ON A PICTURE OF HERODIAS'S DAUGHTER BY LUINI.)

ALAS, Salome! Could'st thou know
 How great man is, — how great thou art, —
 What destined worlds of weal or woe
 Lurk in the shallowest human heart, —

From thee thy vanities would drop,
 Like lusts in noble anger spurned
 By one who finds, beyond all hope,
 The passion of his youth returned.

Ah, sun-bright face, whose brittle smile
 Is cold as sunbeams flashed on ice!
 Ah, lips how sweet, yet hard the while!
 Ah, soul too barren even for vice!

Mirror of Vanity! Those eyes
 No beam the less around them shed,
 Albeit in that red scarf there lies
 The Dancer's meed, — the Prophet's head.

VANITY (2.)

I.

FALSE and Fair! Beware, beware!
 There is a Tale that stabs at thee!
 The Arab Seer! he stripped thee bare
 Long since! He knew thee, Vanity!
 By day a mincing foot is thine:
 Thou runnest along the spider's line:—
 Ay, but heavy sounds thy tread
 By night, among the uncoffined dead!

II.

Fair and Foul! Thy mate, the Ghoul,
 Beats, bat-like, at thy golden gate!
 Around the graves the night-winds howl:
 "Arise!" they cry, "thy feast doth wait!"
 Dainty fingers thine, and nice,
 With thy bodkin picking rice!—
 Ay, but when the night's o'erhead,
 Limb from limb they rend the dead!

REVIEWS AND LITERARY NOTICES.

Popular Astronomy. A Concise Elementary Treatise on the Sun, Planets, Satellites, and Comets. By O. M. MITCHELL, Director of the Cincinnati and Dudley Observatories. New York. 1860.

In this volume Professor Mitchell gives a very clear, and, in the general plan pursued, a very good account of the methods and results of investigation in modern astronomy. He has explained with great fulness the laws of motion of the heavenly bodies, and has thus aimed at giving more than the collection of disconnected facts which frequently form the staple of elementary works on astronomy.

In doing this, however, he has fallen into errors so numerous, and occasionally so grave, that they are difficult to be accounted for, except on the supposition that some portions of the work were written in great haste. Passing over a few mere oversights, such as a statement from which it would follow that a transit of Venus occurred

every eight years, mistakes of dates, etc., we cite the following.

On page 114, speaking of Kepler's third law, the author says, "And even those extraordinary objects, the revolving double stars, are subject to the same controlling law." Since Kepler's third law expresses a relationship between the motions of three bodies, two of which revolve around a third much larger than either, it is a logical impossibility that a system of only two bodies should conform to this law.

On page 182, it is stated, that Newton's proving, that, if a body revolved in an elliptical orbit with the sun as a focus, the force of gravitation toward the sun would always be in the inverse ratio of the square of its distance, "was equivalent to proving, that, if a body in space, free to move, received a single impulse, and at the same moment was attracted to a fixed centre by a force which diminished as the square of the distance at which it operated increased, such a body, thus deflected from its rectilinear

path, would describe an ellipse," etc. Not only does this deduction, being made in the logical form,

If A is B, X is Y;
but X is Y;
therefore A is B,

not follow at all, but it is absolutely not true. The body under the circumstances might describe an hyperbola as well as an ellipse, as Professor Mitchell himself subsequently remarks.

The author's explanation of the manner in which the attraction of the sun changes the position of the moon's orbit is entirely at fault. He supposes the line of nodes of the moon's orbit perpendicular to the line joining the centres of the earth and sun, and the moon to start from her ascending node toward the sun, and says that in this case the effect of the sun's attraction will be to diminish the inclination of the moon's orbit during the first half of the revolution, and thus cause the node to retrograde; and to increase it during the second half, and thus cause the nodes to retrograde. But the real effect of the sun's attraction, in the case supposed, would be to diminish the inclination during the first quarter of its revolution, to increase it during the second, to diminish it again during the third, and increase it again during the fourth, as shown by Newton a century and a half ago.

In Chapter XV. we find the greatest number of errors. Take, for example, the following computation of the diminution of gravity at the surface of the sun in consequence of the centrifugal force,—part of the data being, that a pound at the earth's surface will weigh twenty-eight pounds at the sun's surface, and that the centrifugal force at the earth's equator is $\frac{1}{289}$ of gravity.

"Now, if the sun rotated in the same time as the earth, and their diameters were equal, the centrifugal force on the equators of the two orbs would be equal. But the sun's radius is about 111 times that of the earth, and if the period of rotation were the same, the centrifugal force at the sun's equator would be greater than that at the earth's in the ratio of $(111)^2$ to 1, or, more exactly, in the ratio of 12,342.27 to 1. But the sun rotates on its axis much slower than the earth, requiring more than 25 days for one revolution. This will reduce the above in the ratio of 1 to $(25)^2$, or 1 to 625; so that we shall have the earth's equatorial centrifugal force $\frac{1}{289} \times 12,342.27$

$\div 625 = \frac{12,342.27}{180,605} = 0.07$ nearly for the sun's equatorial centrifugal force. Hence the weight before obtained, 28 pounds, must be reduced seven hundredths of its whole value, and we thus obtain $28 - 0.196 = 27.804$ pounds as the true weight of one pound transported from the earth's equator to that of the sun."

In this calculation we have three errors, the effect of one of which would be to increase the true answer 111 times, of another 28 times, and of a third to diminish it 10 times; so that the final result is more than 300 times too great. If this result were correct, Leverrier would have no need of looking for intermercurial planets to account for the motion of the perihelion of Mercury; he would find a sufficient cause in the ellipticity of the sun.

Considered from a scientific point of view, some of the gravest errors into which the author has fallen are the suppositions, that the perihelia and nodes of the planetary orbits move uniformly, and that they can ever become exactly circular. At the end of about twenty-four thousand years the eccentricity of the earth's orbit will be smaller than at any other time during the next two hundred thousand, at least; but it will begin to increase again long before the orbit becomes circular. Astronomers have long known that the eccentricity of Mercury's orbit will never be much greater or much less than it is now; and moreover, instead of diminishing, as stated by Professor Mitchell, it is increasing, and has been increasing for the last hundred thousand years.

Finally, the chapter closes with an attempt to state the principle known to mathematicians as "the law of the conservation of areas," which statement is entirely unlike the correct one in nearly every particular.

It will be observed that we have criticized this work from a scientific rather than from a popular point of view. As questions of popular interest, it is perhaps of very little importance whether the earth's orbit will or will not become circular in the course of millions of years, or in what the principle of areas consists or does not consist. But if such facts or principles are to be stated at all, we have a right to see them stated correctly. However, in the first nine chapters, which part of the book will be most read, few mistakes of any impor-

tance occur, and the method pursued by Newton in deducing the law of gravitation is explained in the author's most felicitous style.

El Fureidîs. By the Author of "The Lamplighter" and "Mabel Vaughan." Boston: Ticknor & Fields. 16mo.

THAT large army of readers whose mere number gave celebrity at once to the authoress of "The Lamplighter" will at first be disappointed with what they may call the *location* of this new romance by Miss Cummins. The scene is laid in Syria, instead of New England, and the "village" known to New Yorkers as Boston gives way to "El Fureidîs," a village in the valley of Lebanon. But while so swift a transition from the West to the East may disappoint that "Expectation" which Fletcher tells us "sits i' the air," and which we all know is not to be balked with impunity, there can be no doubt, that, in shifting the scene, the authoress has enabled us to judge her essential talent with more accuracy. Possessing none of the elements which are thought essential to the production of a sensation, "The Lamplighter" forced itself into notice as a "sensation book." The writer was innocent of all the grave literary crimes implied in such a distinction. The first hundred and fifty pages were as simple, and as true to ordinary nature, as the daisies and buttercups of the common fields; the remaining two hundred pages repeated the stereotyped traditions and customary hearsays which make up the capital of every professional story-teller. The book began in the spirit of Jane Austen, and ended in that of Jane Porter.

In "El Fureidîs" everything really native to the sentiment and experience of Miss Cummins is exhibited in its last perfection, with the addition of a positive, though not creative, faculty of imagination. Feeling a strong attraction for all that related to the East, through an accidental connection with friends who in conversation discoursed of its peculiarities and wonders, she was led to an extensive and thorough study of the numerous eminent scholars and travellers who have recorded their experience and researches in Syria and Damascus. Gradually she obtained a

vivid internal vision of the scenery, and a practical acquaintance with the details of life, of those far-off Eastern lands. On this imaginative reproduction of the external characteristics of the Orient she projected her own standards of excellence and ideals of character; and the result is the present romance, the most elaborate and the most pleasing expression of her genius.

There is hardly anything in the work which can rightfully be called plot. The incidents are not combined, but happen. A shy, sensitive, fastidious, high-minded, and somewhat melancholy and dissatisfied Englishman, by the name of Meredith, travelling from Beyrout to Lebanon, falls in love with a Christian maiden by the name of Havilah. She rejects him, on the ground, that, however blessed with all human virtues, he is deficient in Christian graces. One of those rare women who combine the most exquisite sensuous beauty with the beauty of holiness, she cannot consent to marry, unless souls are joined, as well as hands. Meredith, in the course of the somewhat rambling narrative, "experiences religion," and the heroine then feels for him that affection which she did not feel even in those moments when he recklessly risked his life to save hers. In regard to characterization, Meredith, the hero, is throughout a mere name, without personality; but the authoress has succeeded in transforming Havilah from an abstract proposition into an individual existence. Her Bedouin lover, the wild, fierce, passionate Arab boy, Abdoul, with his vehement wrath and no less vehement love, passing from a frustrated design to assassinate Meredith, whom he considered the accepted lover of Havilah, to an abject prostration of his whole being, corporeal and mental, at the feet of his mistress, saluting them with "a devouring storm of kisses," is by far the most intense and successful effort at characterization in the whole volume. The conclusion of the story, which results in the acceptance by Meredith of the conditions enforced by the celestial purity of the heroine, will be far less satisfactory to the majority of readers than if Havilah had been represented as possessed of sufficient spiritual power to convert her passionate Arab lover into a being fit to be a Christian husband. By all the accredited rules of the logic of passion, Abdoul deserved her, rather than

Meredith. Leaving, however, all those considerations which relate to the management of the story as connected with the impulses of the characters, great praise cannot be denied to the authoress for her conception and development of the character of Havilah. Virgin innocence has rarely been more happily combined with intellectual culture, and the reader follows the course of her thoughts — and so vital are her thoughts that they cause all the real events of the story — with a tranquil delight in her beautiful simplicity and intelligent affectionateness, compared with which the pleasure derived from the ordinary stimulants of romance is poor and tame. At least two-thirds of the volume are devoted to descriptions of Eastern scenery, habits, customs, manners, and men, and these are generally excellent. Altogether, the book will add to the reputation of the authoress.

Life and Times of General Sam. Dale, the Mississippi Partisan. By J. F. H. CLAIBORNE. Illustrated by John M'Lenan. New York: Harper & Brothers.

THE adventures of General Dale, Mr. Claiborne tells us, were taken from his own lips by the author and two friends, and from the notes of all three a memoir was compiled, but the MSS. were lost in the Mississippi. We regret that Dale's own words were thus lost; for the stories of the hardy partisan are not improved by his biographer's well-meant efforts to tell them in more graceful language. Mr. Claiborne's cheap eloquence is perhaps suited to the unfastidious taste of a lower latitude; but we prefer those stories, too few in number, in which the homely words of Dale are preserved.

Dale does not appear to have done anything to warrant this "attempt on his life," being no more remarkable than hundreds of others. He saw several distinguished men; but of his anecdotes about them we can only quote the old opinion, that the good stories are not new, and the new are not good. As there is nothing particularly interesting in the subject, so there is no peculiar charm thrown around it by the manner in which Mr. Claiborne has executed his task. A noticeable and very comic feature is presented in the

praises which he has interpolated, whenever any acquaintance of his is referred to. We readily acquiesce, when we are told that Mr. A is a model citizen, and that Mr. B is alike unsurpassed in public and private life; but the latter statement becomes less intensely gratifying when we learn the fact that Mr. C also has no superior, and that there are no better or abler men than D, E, F, or G. We were aware that Mississippi was uncommonly fortunate in having meritorious sons, but not that so singularly exact an equality existed among them. Are they all best? It is like the case of the volunteer regiment in which they were all Major-Generals. Occasional eminence we can easily believe, but a table-land of merit is more than we are prepared for; and we are strongly led to suspect that praise so lavishly given may be cheaply won.

The Money-King and Other Poems. By JOHN G. SAXE. Boston: Ticknor & Fields. 16mo.

WE regret having overlooked this pleasant volume so long. In a previous collection of poems, which has run through fifteen editions, Mr. Saxe fully established his popularity; and the present volume, which is better than its predecessor, has in it all the elements of a similar success. The two longest poems, "The Money-King" and "The Press," have been put to the severe test of repeated delivery before lyceum audiences in different parts of the country; and a poet is sure to learn by such a method of publication, what he may not learn by an appearance in print, the real judgment of the miscellaneous public on his performance. He may doubt the justice of the praise or the censure of the professional critic; but it is hard for him to resist the fact of failure, when it comes to him palpably in the satire that scowls in an ominous stare and the irony that lurks in an audible yawn,—hard for him to question the reality of triumph, when teeth flash at every gleam of his wit and eyes moisten at every touch of his sentiment. Having tried each of these poems before more than a hundred audiences, Mr. Saxe has fairly earned the right to face critics fearlessly; and, indeed, the poems themselves so abound in sense,

shrewdness, sagacity, and fancy, in sayings so pithy and wit so sparkling, are so full of humor and good-humor, and flow on their rhythmic and rhyming way with so much of the easy abandonment of vivacious conversation, that few critics will desire to reverse the favorable decisions of the audiences they have enlivened.

Among the miscellaneous poems, there are many which, in brilliancy, in keen, good-natured satire, in facility and variety of versification, in ingenious fancy, in joyousness of spirit and pure love of fun, excel the longer poems to which we have just referred. We have found the great majority of them exceedingly exhilarating reading, and, if our limits admitted an extended examination, we feel sure that the result of the analysis would be the eliciting of unexpected merits rather than the detection of hidden defects.

Say and Seal. By the Author of "Wide, Wide World," and the Author of "Dollars and Cents." In Two Volumes. Philadelphia: J. B. Lippincott & Co.

ANOTHER story from "Elizabeth Wetherell" is a welcome addition to our scanty stock of American novels. Our real American novels may be counted on our fingers, while the tales that claim the name may be weighed by the ton. At the present time, we count Hawthorne among our novelists, and Mrs. Stowe, and perhaps Curtis, since his "Trumps"; but as for our thousand and one unrivalled authors, "whose matchless knowledge of the human heart and wonderful powers of delineation place them far above Dickens or Thackeray," they are all, from Sylvanus Cobb, Junior, down to Ned Buntline and Gilmore Simms, beneath serious notice, and may be left to the easy verdict of the readers of the cheap magazines and illustrated newspapers, in whose columns they have gained a world-wide obscurity. Miss Warner's books have always a genuine flavor of originality, and an acute, living appreciation of Yankee character, that give them a right to rank, unchallenged, as real and valuable novels. In their simplicity, their freshness, their quiet humor and not less quiet fun, their frequent narrowness and stiffness, and their deep and true religious sentiment, they have the

real essence of the New England character.

In every novel there are three principal elements, — the Hero, the Heroine, the Villain, — all three gracefully blending in the Plot. We cannot especially congratulate our authors upon their Hero. In a favorite farce, the slightly bewildered Mr. Lullaby observes musingly, "Brown? Brown? That name sounds familiar! I must have heard that name before! I'll swear I've heard that name before!" We have a dim consciousness of having met "Mr. Linden" before, albeit under a different name. A certain Mr. Humphreys, whom we remember of old, strongly resembles him: so does one Mr. Guy Carleton. We were very well pleased with our old friend Humphreys, (or Carleton,) and would by no means hint at any reluctance to meet him again; but a new novel, by its very announcement, implies a new hero, — and if we come upon a plain family-party, when fondly hoping for an introduction to some distinguished stranger, we may be excused for thinking ourselves hardly treated. Is it so infallible a sign of superiority, moreover, to speak constantly in riddles? This Sphinx-like style is eminently characteristic of Mr. Linden. Then again, our authors have been too ambitious. They laboriously assert Mr. Linden to be a marvel of learning, — a man of vast and curious literary attainments: but all that their hero does to maintain this reputation and vindicate their opinion is to quote trite passages of poetry, which are all very well, but which every gentleman of ordinary cultivation is expected to know, and which no gentleman of ordinary cultivation is expected to quote, — things that are remembered only to be avoided as utterly threadbare. One unfortunate instance may be found at the beginning of the second volume. Mr. Linden's acquirements are to receive peculiar lustre from a triumph over no ordinary competitor, — over the intelligent and well-read Doctor Harrison. Naturally, we expect something recondite, and are by no means satisfied with the trite

"Cupid and my Campaspe played
At cards for kisses," etc.

Mr. Linden might as well have astonished the company by such a transcendent proof of erudition as

“All the world’s a stage,
And all the men and women,” etc.

Or, passing “from grave to gay, from lively to severe,” (for novelty in quotations we find to be contagious,) have recounted the wildly erratic history “of that false matron, known in nursery rhyme, Insidious Morey,” or quoted

“How doth the little busy bee.”

After which he might have soared into unapproachable heights of surpassing literary erudition, by informing his awe-struck hearers that the latter poem was written by Doctor Watts! The fact is, any attempt to give the novelist’s characters a learning which the novelist does not possess is always hazardous.

The Heroine, Miss Faith Derrick, is a pretty, but not remarkably original creation, who taxes our magnanimity sorely at times by her blind admiration of her lover when he is peculiarly absurd, but whose dumb rejection of Doctor Harrison, though a trifle theatrical, is really charming. Faith is better than Linden: Linden is “*superbe, magnifique*”; but Faith is “pretty good.”

But the conception of the Villain is very fine. In Doctor Harrison we hail a new development of that indispensable character. Of course, the gentlemanly, good-humored Doctor is not to be considered a villain in the ordinary acceptance of the word; he is only a technical villain,—a villain of eminent respectability. It is almost unnecessary to add, that he is immeasurably more attractive than the real hero, Mr. Linden.

We regret to say that the conception is not carried out so well as it deserves to be. Doctor Harrison descends to some low business, quite unworthy of him, such as tampering with the mails. This is not only mortifying, but entirely unnecessary; inasmuch as Doctor Harrison has a subordinate villain to do all the low villany, in the person of Squire Deacon, who shoots at Mr. Linden from behind a hedge (!), and is never called to account therefor,—a strange remissness on the part of everybody, which seems to have no recommendation except that it leaves him free to do this very work of robbing the mails, and which, by his failure to do it, is left utterly unexplained and profoundly mysterious. All this is

very bad. The Doctor’s meanness is utterly inconsistent; and the bare thought of a sober and uncommonly awkward Yankee, like Squire Deacon, deliberately making *two* separate attempts at assassination, is unspeakably ludicrous. Moreover, we are hopelessly unable to see the need of having the unfortunate Mr. Linden shot at all. Everything was going on very well before, as nearly as we could see, and nothing appears to come of it, after all,—not even the condign punishment of the incongruous and never-to-be-sufficiently-marvelled-at assassin, who is suspected by several people, and yet remains as unharmed as if murder on the highway were altogether too common an occurrence in New England to excite more than a moment’s thought.

This leads us to speak of the Plot; and we are constrained to say that a more inartistic, unfinished piece of work we cannot remember. There is a lamentable waste of capital on Squire Deacon’s sportsmanlike propensities. Why not have something come of them? We are not anxious to have the man hanged, or even indicted; but we did expect a magnanimous pardon to be extended to him by Mr. Linden; and although that gentleman was altogether too magnanimous before, we should have acquiesced mildly. And what becomes of Mrs. Derrick? There we are in earnest; for Mrs. Derrick is an especial favorite with us. It seems as if our authors had become bewildered, and, finding themselves fairly at a loss what to do with their characters, who drift helplessly along through a great part of the second volume, had seized desperately on the hero and heroine, determined to save them at least, and, having borne them to a place of refuge, had concluded to let the others look after themselves.

What redeems the novel, and gives it its peculiar and exquisite charm, is the execution of certain detached passages. We have never seen the drollery of a genuine Yankee to more advantage than in “Say and Seal.” An occasional specimen we venture to quote.

On Mr. Linden’s first appearance at Mrs. Derrick’s house, where he is known only as the new teacher, nobody knows and nobody dares ask his name; and recourse is accordingly had to the diplomacy of the “help.”

“ ‘Child,’ said Mrs. Derrick, ‘what on earth is his name?’ ”

“ ‘Mother, how should I know? I didn’t ask him.’ ”

“ ‘But the thing is,’ said Mrs. Derrick, ‘I *did* know; the Committee told me all about him. And of course he thinks I know,—and I don’t,—no more than I do my great-grand-mother’s name, which I never did remember yet.’ ”

“ ‘Mother, shall I go and ask him, or wait till after supper?’ ”

“ ‘Oh, you sha’n’t go,’ said her mother. ‘Wait till after supper, and we’ll send Cindy. He won’t care about his name till he gets his tea, I’ll warrant. . . . Faith, don’t you think he liked his supper?’ ”

“ ‘I should think he would, after having no dinner,’ said Faith.

“ ‘There’s Cindy, this minute! Run and tell her to go right away, and find out what his name is,—tell her *I* want to know,—you can put it in good words.’ ”

“ Cindy presently came back, and handed a card to Faith.

“ ‘It’s easy done,’ said Cindy. ‘I jest asked him if he’d any objections towards tellin’ his name,—and he kinder opened his eyes at me, and said, “No.” Then I said, says I, “Mis’ Derrick do’ know, and she’d like ter.” “Miss Derrick!” says he, and he took out his pencil and writ that. But I’d like ter know *what* he cleans his pencil with,’ said Cindy, in conclusion, for I’m free to confess *I* never see brass shine so in *my* born days.’ ”

Cindy’s “free confessions” are an important feature of the book.

In Chapter VI., Squire Deacon and his sister hold a brief Yankee dialogue, of which this is a sample:—

“ ‘Sam! what are you bothering yourself about Mr. Linden for?’ ”

“ ‘How long since you was made a trustee?’ said the Squire, beginning his sentence with an untranslatable sort of grunt, and ending it in his teacup.

“ ‘I’ve been *your* trustee ever since you was up to anything,’ said his sister. ‘Come, Sam,—don’t you begin now! What’s made you so crusty?’ ”

“ ‘It a’n’t the worst thing to be crusty,’ said the Squire. ‘Shows a man’s more’n half baked, anyhow.’ ”

“ ‘Well, what has he done?’ ”

“ ‘Sure enough!’ said the Squire, ‘what *has* he done? That’s just what I can’t find out.’ ”

“ ‘What do you want to find out for? What ails him?’ ”

“ ‘Suppose he hasn’t done nothin’. Is that

the sort o’ man to teach litteratur in Patta-quasset?’ ”

“ ‘Now, Sam Deacon, what do you expect to do by all this fuss you’re making?’ said his sister, judicially.

“ ‘What’s the use of cross-examining a man at that rate? When I do anything, you’ll know it.’ ”

The characters are all invested with reality by skilfully introduced anecdotes, or by personal traits carelessly and happily sketched. But it is a costly expedient to give this reality, when our authors bring in pet names, and other “love-lispings,” which are sacred in privacy and painfully ridiculous when exposed to the curious light. Many of us readers find all this mawkish and silly, and others of us are pained that to such scrutiny should be exposed the dearest secrets of affection, and are not anxious to have them exposed to our own gaze. It is too trying a confidence, too high an honor, to be otherwise than unwelcome. With this criticism we close our notice of “Say and Seal,” in which we have been sparing neither of praise nor blame, earnestly thanking the authors for a book that is worth finding fault with.

How Could He Help It? or, The Heart Triumphant. By A. S. ROE. New York: Derby & Jackson.

A FAIR representative of a class of books that are always pleasant reading, although written without taste, cultivation, or originality,—because they are obviously dictated by a kind heart and genuine earnestness. In this volume the numerous heroes (so similar in every respect that one might fancy them to be only one hero mysteriously multiplied, like Kehama) and the fair heroines (exactly equalling the heroes in number, we are happy to assure the tenderhearted reader) are not in the least interesting, except for sheer goodness of heart. This unaided moral excellence, however, fairly redeems the book, and so far softens even our critical asperity that we venture only to suggest,—first, that the utterly unprecedented *patois* of Mrs. Kelly is not Irish, for which a careful examination of the context leads us to think it was intended,—secondly, that “if he had have done it” is equally guiltless of being Eng-

lish,—thirdly, that, if our author, desiring to describe the feelings of a lover holding his mistress's hand, was inspired by Tennyson's phrase of "dear wonder," he failed, in our opinion, to improve on his original, when he substituted "the fleshy treasure in his grasp."

The New Tariff-Bill. Washington. 1860.

WE do not propose to submit the English of this new literary effort of the House of Representatives at Washington to a critical examination, (though it strikingly reminds us of some of the poems of Mr. Whitman, and is a very fair piece of descriptive verse in the *b'hoy-energetic* style,) or to attempt any argument on the vexed question of Protection. But there is a section of the proposed act which has a direct interest not only for all scholars, but for that large and constantly increasing class whose thirst for what may be called voluminous knowledge prompts them to buy all those shelf-ornamenting works without which no gentleman's library can be considered complete. Though in the matter of book-buying the characters of gentleman and scholar, so seldom united, are distinguished from each other with remarkable precision,—the desire of the former being to cover the walls of what he superstitiously calls his "study," and that of the latter to line his head, while the resultant wisdom is measured respectively by volume and by mass,—yet it is equally important to both that the literary furniture of the one and the intellectual tools of the other should be cheap.

The "Providence Journal" deserves the thanks of all students for having called attention to the fact, that, under the proposed tariff, the duties will be materially increased on two classes of foreign books: the cheap ones, like "Bohn's Library,"—and the bulky, but often indispensable ones, such as the "Encyclopædia Britannica." The new bill, in short, proposes to substitute for the old duty of eight *per cent. ad valorem* a new one of fifteen cents the pound weight. Could we suspect a Committee of Members of Congress of a joke appreciable by mere members of the human family, could we suppose them in a thoughtless moment to have carried into legislation a mildened modicum of that

metaphorical language which forms the staple of debate, we should make no remonstrance. We recognize the severe justice of an ideal *avoidupois* in literary criticism. We remember the unconscious sarcasm of the Atlantic Telegraph, as it sank heart-broken under the strain of conveying the answer of the Heavy Father of our political stage to the graceful "good-morning" of Victoria. The enthusiastic member of the Academy of Lagado, who had spent eight years in a vain attempt to extract sunbeams from cucumbers, might have found profitable employment in smelting the lead even from light literature, not to speak of richer deposits. Under an act thus dubiously worded, and in a country which makes Bancroft a collector of the customs and Hawthorne a weigher and gauger, the works of an Alison and a Tupper would be put beyond the reach of all but the immensely rich. The man of moderate means would be deprived of the exhaustless misinformation of the Scottish Baronet, who has so completely disproved the old charge against his countrymen of possessing an *ingenium perfervidum*, (which Dr. Johnson would have translated by *brimstone temperament*,) and of the don't-fail-to-spread-your-umbrella-when-it-rains-or-you'll-spoil-your-hat wisdom of the English Commoner, who seems to have named his chief work in a moment of abnormal inspiration, since it has become proverbial as the severest test of human philosophy.

But we cannot suspect the Congressional Committee of a joke, still less of a joke at the expense of those anglers in the literary current whose tackle, however bare of bait, never fails of a sinker at the end of every line. They have been taught to look upon books as in no wise differing from cotton and tobacco, and rate them accordingly by a merely material standard. It has been the dealers in books, and not the makers of them, who have hitherto contrived to direct public opinion in this matter. We look upon Public Opinion with no superstitious reverence,—for Tom's way of thinking is none the wiser because the million other Toms and Dicks and Harries agree with him,—nevertheless, even a fetish may justly become an object of respectful interest to one who is to be sacrificed to it.

However it may be with iron, wool, and manufactured cotton, it is clear that a du-

ty on books is not protective of American literature, but simply a tax on American scholarship and refinement. The imperfectness of our public libraries compels every student to depend more or less upon his own private collection of books; and it is a fact of some significance, that, with the single exception of Hildreth, all our prominent historians, Sparks, Irving, Bancroft, Prescott, Ticknor, Motley, and Palfrey, have been men of independent fortune. If anything should be free of duty, it should seem to be the material of thought.

If Congress be really desirous of doing something for the benefit of American authors, it would come nearer the mark, if it directed its attention to the establishment on equitable grounds of some system of International Copyright. A well-considered enactment to this end would, we are convinced, be quite as advantageous to the manufacturers as to the producers of books. We believe that a majority of the large publishing houses of the country have been gradually convinced of the inconveniences of the present want of system. Many of them have found it profitable to enter into an agreement with popular English authors for the payment of copyright, and works thus reprinted cost the buyer no more than under the privateering policy. But without some definite establishment of legal rights and remedies, the publisher is at the mercy of a dishonorable, sometimes of a vindictive competition, and must run the risk of having the market flooded within a week with a cheaper and inferior edition, reprinted from the sheets of his own which had been honorably paid for. We do not pretend to argue the question of literary property, the principle of it being admitted in the fact that we have any copyright-laws at all. Our wish is to show, that, in the present absence of settled law, the honest publisher is subjected to risks from the resultant evils of which the whole reading community suffers. The publisher, to protect himself, is forced to make his reprint as cheaply as possible, and to hurry it through the press with the disregard of accuracy inseparable from hasty publication,—while the reader is put in possession of a book destructive of eyesight, crowded with blunders, and unsightly in appearance. Maps and plates

are omitted, or copied so carelessly as to be worse than useless; and whoever needs the book for study or reference must still buy the original edition, made more costly because imported in single copies, and because taxed for the protection of a state of things discreditable in every way, and not only so, but hostile to the true interests of both publishers and public.

We do not claim any protection of American authorship from foreign competition, but we cannot but think it unfair that British authorship should be protected (as it now practically is) at the cost of our own, and for the benefit of such publishers as are willing to convey an English book without paying for it. The reprint of a second-rate work by an English author has not only the advantage of a stolen cheapness over a first-rate one on the same subject by an American, but may even be the means of suppressing it altogether. The intellectual position of an American is so favorable for the treatment of European history as to overbalance in some instances the disadvantages arising from want of access to original documents; yet an American author whose work was yet in manuscript could not possibly compete with an English rival, even of far inferior ability, who had already published. If, within the last few years, a tolerably popular history of France had been published in England, and cheaply reprinted here, (as it surely would have been,) we doubt whether Mr. Godwin would have undertaken his laborious and elaborate work,—or, if he had, whether he would have readily found a bookseller bold enough to pay an adequate price for the copyright. And it is to be remembered that an American publisher gives this preference to an English over an American book simply because he can get it for nothing, by defrauding its author of the just reward of his industry or genius. That an author loses his equitable claim to copyright for the simple reason that by publication he has put himself in our power is an argument fit to be used only by one who would make use of a private letter that had accidentally come into his possession to the damage of the writer.

The necessity of some kind of equitable arrangement was so strongly felt by American publishers that a kind of unwritten law gradually established itself among them. It was tacitly understood,

that, when a publisher had paid an English author for advance sheets, no rival American edition should be published. But it already appears too plainly that an arrangement with no guaranty but a private sense of honor is liable to constant infringement for the gratification of personal enmity, or in the hope of immediate profit. The rewards of uprightness and honorable dealing are slow in coming, while those of unscrupulous greed are immediate, even though dirty. Under existing circumstances, free-trade and fair-play exist only in appearance: for the extraordinary claim has been set up, that an American bookseller has an exclusive right to all the future works of an English author any one of whose former productions he has reprinted, whether with or without paying for it; so that, however willing another publisher may be to give the author a fair price for his book, or however desirous the latter may be to conclude such a bargain, it is practically impossible, so long as privateering is tolerated in the trade.

We have said nothing of the advantages which would accrue to our own authors from a definite settlement of the question of international copyright between England and America. How great these would be is plain from the fact that the editions of American books republished in England are already numbered by thousands. With the growth of the English Colonies the value to an American author of an English copyright is daily increasing. Indeed, it

is a matter of consideration for our publishers, whether Canada may not before long retaliate upon them, and by cheaper reprints become as troublesome to them as Belgium once was to France.

It is not creditable that America should be the last of civilized nations to acknowledge the justice of an author's claim to a share in the profits of a commercial value which he has absolutely created. England is more liberal to our authors than we to hers, but it is only under certain strictly limited contingencies that an American can acquire copyright there. Were all our booksellers as scrupulous as the few honorably exceptional ones among them now are, there would be no need of legislative regulation; but, in the present condition of things, he who undertakes to reprint an English book which he has honestly paid for is at the mercy of whoever can get credit for poor paper and worse printing. There is no reason why a distinction should be made between copy-right and patent-right; but, if our legislators refuse to admit any abstract right in the matter, they might at least go so far as to conclude an international arrangement by which a publisher in either country who was willing to pay for the right of publication should be protected in its exercise. No just objection could be made to a plan of this kind, which, if not so honest as a general international law of copyright, would be profitable to our publishers, and to such of our authors at least as had acquired any foreign reputation.

RECENT AMERICAN PUBLICATIONS

RECEIVED BY THE EDITORS OF THE ATLANTIC MONTHLY.

The Church of the First Three Centuries; or, Notices of the Lives and Opinions of Some of the Early Fathers, with Special Reference to the Doctrine of the Trinity; illustrating its Late Origin and Gradual Formation. By Alvan Lamson, D. D. Boston. Walker, Wise, & Co. 8vo. pp. xii., 352.

Plato's Apology and Crito; with Notes, by W. S. Tyler, Graves Professor of Greek in Amherst College. New York. Appleton & Co. 12mo. pp. 180. 75 cts.

Poems. By William H. Holcombe, M. D. New York. Mason Brothers. 12mo. pp. 360. \$1.25.

Science in Theology. Sermons preached in St. Mary's, Oxford, before the University. By Adam S. Farrar, M. A., F. G. S., F. R. A. S., Michel Fellow of Queen's College, Oxford; late One of the Select Preachers to the University; and Preacher at the Chapel Royal, Whitehall. Philadelphia. Smith, English, & Co. 12mo. pp. 250. 85 cts.

Remembered Words from the Sermons of Rev. I. Nichols, late Pastor of the First Parish in Portland, Maine. Boston. Crosby, Nichols, Lee, & Co. 12mo. pp. viii., 141. 75 cts.

The Throne of David; from the Consecration of the Shepherd of Bethlehem to the Rebellion of Prince Absalom. Being an Illustration of the Splendor, Power, and Dominion of the Reign of the Shepherd, Poet, Warrior, King, and Prophet, Ancestor and Type of Jesus; in a Series of Letters addressed by an Assyrian Ambassador, Resident at the Court of Saul and David, to his Lord and King on the Throne of Nineveh; wherein the Glory of Assyria, as well as the Magnificence of Judea, is presented to the Reader as by an Eyewitness. By the Rev. J. H. Ingraham, LL.D., Author of "The Prince of the House of David," and of "The Pillar of Fire." Philadelphia. Evans. 12mo. pp. 603. \$1.25.

The Boy-Inventor; a Memoir of Matthew Edwards, Mathematical Instrument-Maker. Boston. Walker, Wise, & Co. 16mo. pp. 109. 50 cts.

History of the Republic of the United States of America, as traced in the Writings of Alexander Hamilton and of his Contemporaries. By John C. Hamilton. Volume VI. New York. Appleton & Co. 8vo. pp. xii., 620. \$2.50.

A Course of Exercises in All Parts of French Syntax, methodically arranged after Poitevin's "Syntaxe Française"; to which are added Ten Appendices. Designed for the Use of Academies, Colleges, and Private Learners. By Frederick T. Winkelmann, A. M., Ph. D., Professor of Latin, French, and German in the Packer Collegiate Institute of Brooklyn, N. Y. New York. Appleton & Co. 16mo. pp. xvi., 366. \$1.00.

Letters on the Divine Trinity, addressed to Henry Ward Beecher. By B. F. Barrett. New York. Mason Brothers. 16mo. pp. 137. 50 cts.

Echoes of Harper's Ferry. By James Redpath. Boston. Thayer & Eldridge. 12mo. pp. 513. \$1.25.

The Right of American Slavery. By T. W. Hoit, of the St. Louis Literary and Philosophical Association. Southern and Western Edition. St. Louis. L. Bushnell. 8vo. pp. 51. 25 cts.

El Fureidts. By the Author of "The Lamp-lighter" and "Mabel Vaughan." Boston. Ticknor & Fields. 16mo. pp. iv., 379. \$1.00.

Dickens's Short Stories. Containing Thirty-One Stories never before published in this Country. By Charles Dickens. Philadelphia. Peterson & Brothers. 12mo. pp. 298. \$1.25.

A Mother's Trials. By the Author of "My Lady." New York. Harper & Brothers. 12mo. pp. 400. \$1.00.

Letters of Alexander von Humboldt to Varnhagen von Ense. From 1827 to 1858. With Extracts from Varnhagen's Diaries, and Letters of Varnhagen and Others to Humboldt. Translated from the Second German Edition, by Friedrich Kapp. New York. Rudd & Carleton. 12mo. pp. 407. \$1.25.

Our Living Representative Men. From Official and Original Sources. By John Savage. Philadelphia. Childs & Peterson. 12mo. pp. xxx., 503. \$1.25.

Leaves of Grass. By Walt Whitman. Boston. Thayer & Eldridge. 12mo. pp. 456. \$1.25.

Salmagundi; or, The Whim-Whams and Opinions of Launcelot Langstaff, Esq., and Others. By William Irving, James Kirke Paulding, and Washington Irving. Printed from the Original Edition, with a Preface and Notes by Evert A. Duyckinck. New York. Putnam. 12mo. pp. xiv., 412. \$1.50.

Text-Book in Intellectual Philosophy, for Schools and Colleges; containing an Outline of the Science, with an Abstract of its History. By J. T. Champlin, D.D., President of Waterville College. Boston. Crosby, Nichols, Lee, & Co. 12mo. pp. 240. 75 cts.

Katherine Morris: an Autobiography. By the Author of "Step by Step" and "Here and Hereafter." Boston. Walker, Wise, & Co. 12mo. pp. 353. \$1.00.

The School and Family Primer: Introductory to the Series of School and Family Readers. By Marcius Willson, Author of "American History," "Outlines of General History," etc. New York. Harper & Brothers. 12mo. pp. 48. 15 cts.

The First Reader, of the School and Family Series. By Marcius Willson. New York. Harper & Brothers. 12mo. pp. 84. 20 cts.

The Second Reader, of the School and Family Series. By Marcius Willson. New York. Harper & Brothers. 12mo. pp. 156. 30 cts.

The Third Reader, of the School and Family Series. By Marcius Willson. New York. Harper & Brothers. 12mo. pp. 264. 50 cts.

The Fourth Reader, of the School and Family Series. By Marcius Willson. New York. Harper & Brothers. 12mo. pp. 360. 66 cts.

Kit Kelvin's Kernels. With Illustrations. New York. Rollo. 12mo. pp. 270. \$1.00.

Sermons. By Joseph Addison Alexander, D. D. In Two Volumes. New York. Charles Scribner. 12mo. pp. 414, 425. \$2.50.

Lectures on Natural History: its Relations to Intellect, Taste, Wealth, and Religion. By P. A. Chadbourne, Professor, etc. New York. A. S. Barnes & Burr. 12mo. pp. 160.

The Elementary Spelling-Book. Being an Improvement on "The American Spelling-Book." By Noah Webster, LL.D. New York. Appleton & Co. 16mo. pp. 168. 12 cts.

Home and College. A Public Address delivered in the Hall of the Massachusetts House of Representatives, March 8, 1860. By F. D. Huntington, Preacher to the University, and Plummer Professor of Christian Morals in Harvard College. Boston. Crosby, Nichols, Lee, & Co. 12mo. pp. 70. 50 cts.

What will He Do with It? By Pisistratus Caxton. A Novel. By Sir Edward Bulwer Lytton, Bart. Library Edition. In Three Volumes. Philadelphia. Lippincott & Co. 16mo. pp. 408, 444, 442. \$3.00.

Devereux. A Tale. By Sir Edward Bulwer Lytton, Bart. Library Edition. In Two Volumes. Philadelphia. Lippincott & Co. 12mo. pp. 344, 350. \$2.00.

The Last Days of Pompeii. By Sir Edward Bulwer Lytton, Bart. Library Edition. In Two Volumes. Philadelphia. Lippincott & Co. 12mo. pp. 320, 334. \$2.00.

Norton's Hand-Book to Europe; or, How to Travel in the Old World. By J. H. Siddons. New York. Charles B. Norton. 12mo. pp. 243. \$1.00.

Church Choral Book. Containing Tunes and Hymns for Congregational Singing, and adapted to Choirs and Social Worship. By B. F. Baker and J. W. Tufts. Boston. Crosby, Nichols, Lee, & Co. 12mo. pp. 208.

Home as Found. Sequel to "Homeward Bound." By J. Fenimore Cooper. Illustrated from Drawings by F. O. C. Darley. New York. W. A. Townsend & Co. 12mo. pp. 507. \$1.50.

The West Indies and the Spanish Main. By Anthony Trollope, Author of "Doctor Thorne," etc. New York. Harper & Brothers. 12mo. pp. 385. \$1.00.

The New Discussion of the Trinity. Containing Notices of Professor Huntington's Recent Defence of that Doctrine, reprinted from Various Sources; together with Sermons by Rev. Thos. Starr King and Dr. Orville Dewey. Boston. Walker, Wise, & Co. 12mo. pp. viii., 244. 63 cts.

Life of George Washington. By Washington Irving. National Edition. Vol. I. New York. Putnam. 12mo. pp. xvi., 444. \$1.50.

American National Lyrics and Sonnets. By O. Prescott Hiller, Author of "The Pleasures of Religion, and Other Poems." Boston. Otis Clapp. 16mo. pp. viii., 80.

Hawksview. A Familiar History of our Own Times. By Holme Lee, Author of "Against Wind and Tide," etc. New York. W. A. Townsend & Co. 12mo. pp. 330. \$1.00.

Forty Years' Familiar Letters of James W. Alexander, D.D. Constituting, with the Notes, a Memoir of his Life. Edited by his Surviving Correspondent, John Hall, D.D. In Two Volumes. New York. Charles Scribner. 12mo. pp. viii., 412, 379. \$2.50.

A Discourse on the Life, Character, and Genius of Washington Irving, delivered before the New York Historical Society, at the Academy of Music in New York, April 3, 1860. By William Cullen Bryant. New York. Putnam. 12mo. pp. 46.

Analytic Orthography: an Investigation of the Sounds of the Voice, and their Alphabetic Notation; including the Mechanism of Speech, and its Bearing upon Etymology. By S. S. Haldeman, A. M., Professor in Delaware College, etc. Philadelphia. Lippincott & Co. 4to. pp. viii., 148.

The Elements of Christian Doctrine, and its Development. Five Sermons, preached before the South Congregational Society, Boston, in January, February, and March, 1860, and printed at its Request. By Edward E. Hale. Boston. Walker, Wise, & Co. pp. 68.

Mary Bunyan, the Blind Dreamer's Daughter. A Tale of Religious Persecution. By Sallie Rochester Ford, Author of "Grace Truman." New York. Sheldon & Co. 12mo. pp. 488. \$1.00.

Unitarianism Defined: The Scripture Doctrine of the Father, Son, and Holy Ghost. A Course of Lectures, by Frederick A. Farley, D. D., Pastor of the Church of the Saviour, Brooklyn, N. Y. Boston. Walker, Wise, & Co. 12mo. pp. 272.

State-Pride. An Oration, delivered before the Calliopean and Polytechnic Societies of the State Military School, at Charleston. By William D. Porter. Charleston. Walker, Evans, & Co. 8vo. pp. 23.

Student-Songs. Kenyon College, Gambier, Ohio. Pittsburgh. W. S. Haven. 12mo. pp. 50.

Tom Brown at Oxford: a Sequel to School-Days at Rugby. By Thomas Hughes, Author of "School-Days at Rugby." Part VI. Boston. Ticknor & Fields. 16mo. pp. 72. 12 cts.

The Countess and the Page. A Tale of Florentine Society. By G. W. M. Reynolds. Philadelphia. Peterson & Brothers. 8vo. pp. 190. 50 cts.

Lucile. By Owen Meredith, Author of "The Wanderer," "Clytemnestra," etc. Boston. Ticknor & Fields. 32mo. pp. 352. 75 cts.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. VI.—AUGUST, 1860.—NO. XXXIV.

THE CARNIVAL OF THE ROMANTIC.

WHITHER went the nine old Muses, daughters of Jupiter and the Goddess of Memory, after their seats on Helicon, Parnassus, and Olympus were barbarized? Not far away. They hovered like witches around the seething caldron of early Christian Europe, in which, "with bubble, bubble, toil and trouble," a new civilization was forming, mindful of the brilliant lineage of their worshippers, from Homer to Boethius, looking upon the vexed and beclouded Nature, and expecting the time when Humanity should gird itself anew with the beauty of ideas and institutions. They were sorrowful, but not in despair; for they knew that the children of men were strong with recuperative power.

The ear of Fancy, not long since, heard the hoofs of winged Pegasus striking the clouds. The long-idle Muses, it seemed, had become again interested in human efforts, and were paying a flying visit to the haunts of modern genius from the Hellespont to the Mississippi. They lingered in sunny Provence, and in the dark forest-land of the Minnesingers. In the great capitals, as Rome, Berlin, Paris, London,—in smaller capitals, as Florence, Weimar, and Boston,—in many a village which had a charm for them, as Stratford-on-Avon, Ferney, and Concord

in Massachusetts,—in the homes of wonderful suffering, as Ferrara and Haworth,—on many enchanted waters, as the Guadalquivir, the Rhine, the Tweed, the Hudson, Windermere, and Leman,—in many a monastic nook whence had issued a chronicle or history, in many a wild birthplace of a poem or romance, around many an old castle and stately ruin, in many a decayed seat of revelry and joyous repartee,—through the long list of the nurseries of genius and the laboratories of art, they wandered pensive and strangely affected. At length they rested from their journey to hold a council on modern literature. The long results of Christian time were unrolled before them as in a chart. They beheld the dawn of a new historic day, marked by songs of fantastic tenderness, and unwieldy, long, and jointless romances and poems, like the monsters which played in the unfinished universe before the creation of man. The Muses smiled with a look more of complaisance than approval, as they reviewed the army of Troubadours and Minnesingers and the crowd of romancers who followed in their train. They decided that the joyous array of early mediæval literature was full of promise, though something of its tone and temper was past the comprehension

of pagan goddesses. The legends of saints and pictures of martyrdoms were especially mysterious to them, and they regarded them raptly, not smilingly, and bowed their heads. Anon their eyes rested on an Italian city, where uprose, as if in interstellar space, an erect figure, with a piercing eye, pleasant as Plato's voice. His countenance was fixed upon the empyrean, and a more than Minerva-like form hovered above him, interpreting the Christian universe; and as he wrote what she dictated, the verses of his poem were musical even to the Muses. Dante, Beatrice, and the "Divine Comedy," with a Gothic church as a make-weight, were balanced in Muses' minds in comparison with the "Iliad" and the age of Pericles; and again they put on the rapt look of mystery, but a smile also, and their admiration and applause were more and more. To England they soon turned, and contemplated the round, many-colored globe of Shakspeare's works. As playful swallows sometimes dart round and round a lithe and wondering wingless animal, so they, admiringly and timidly, attracted, yet hesitating, delighting in his alertness, but not quite understanding it, flitted like a troubled and beautiful flock around the great magician of modern civilization. Their glance became lighter and less intent, as if they were nearer to knowledge, the pain of perplexity disappeared like a shadow from their countenances, their plaudits were more unreserved, and it seemed likely that the high desert of Shakspeare would win for our new literature a favorable recognition from the aristocratic goddesses of antiquity. Knowing that Jove had made perfection unattainable by mortals, they yet found in the chart before them epics, dramas, lyrics, histories, and philosophies that were no unworthy companions to the creations of classical genius, and they were jubilant in the triumphs of a period in which they had been rather ignorantly and ironically worshipped. Their sitting was long, and their review thorough, yet they found but one department of mod-

ern literature which was regarded with a distrust that grew to an aversion. The romances, the tales, the stories, the novels were contemned more and more, from the first of them to the last. Nothing like them had been known among the glories of Hellenic literary art, and no Muse now stood forth to be their defender and patron. Calliope declared that they were not epical, Euterpe and Erato that they were not lyrical, Melpomene and Thalia that they were neither tragical nor comical, Clio that they were not historical, Urania that they were not sublime in conception, Polymnia that they had no stately or simple charm in execution, and Terpsichore, who had joined with Melpomene in admiring the opera, found nothing in the novel which she could own and bless. Fleeting passages, remote and slight fragments, were pleasing to them all, like the oases of a Sahara, or the sites of high civilization on the earth; but the whole world of novels seemed to them a chaos undisciplined by art and unformed to beauty. The gates of the halls where the classics live in immortal youth were beginning to close against the voluminous prose romances that have sprung from modern thought, when the deliberations of the Muses were suddenly interrupted. They had disturbed the divine elements of modern society. Forth from all the recesses of the air came troops of Gothic elves, trolls, fairies, sprites, and all the other romantic beings which had inspired the modern mind to novel-writing,—marching or gambolling, pride in their port, defiance in their eye, mischief in their purpose,—and began so vigorous an attack upon their classic visitors and critics, that the latter were glad to betake themselves to the mighty-winged Pegasus, who rapidly bore them in retreat to the present home of the *Dii Majores*, that point of the empyrean directly above Olympus.

And well, indeed, might the Muses wonder at the rise of the novel and its vast developments, for the classic literature presents no similar works. One of Plato's dialogues or Æsop's fables is as

near an approach to a prose romance as antiquity in its golden eras can offer. The few productions of the kind which appeared during the decline of literature in the early Christian centuries, as the "Golden Ass" of Apuleius and the "Æthiopica" of Heliodorus, were freaks of Nature, an odd growth rather than a distinct species, and are also to be contrasted rather than compared with the later novel. Such as they are, moreover, they were produced under Christian as much as classic influences. The æsthetic Hellenes admitted into their literature nothing so composite, so likely to be crude, as the romance. Their styles of art were all pure, their taste delighted in simplicity and unity, and they strictly forbade a medley, alike in architecture, sculpture, and letters. The history of their development opens with an epic yet unsurpassed, and their literary creations have been adopted to be the humanities of Christian universities. A writer has recently proposed to account for their success in the arts from the circumstance that the features of Nature around them were small, — that their hornet-shaped peninsula was cut by mountains and inlets of the sea into minute portions, which the mind could easily compass, the foot measure, and the hand improve, — that therefore every hillock and fountain, every forest and by-way was peopled with mythological characters and made significant with traditions, and the cities were adorned with architectural and sculptured masterpieces. Greece thus, like England in our own time, presented the character of a highly wrought piece of ground, — England being the more completely developed for material uses, and Greece being the more heavily freighted with legends of ideal meaning. Small-featured and large-minded Greece is thus set in contrast with Asia, where the mind and body were equally palsied in the effort to overcome immense plains and interminable mountain-chains. But whatever the reason, whether geographical or ethnological, it is certain that the people of Greece were endowed with a transcendent ge-

nus for art, which embraced all departments of life as by an instinct. Every divinity was made a plain figure to the mind, every mystery was symbolized in some positive beautiful myth, and every conception of whatever object became statuesque and clear. This artistic character was possible to them from the comparatively limited range of pagan imagination; their thought rarely dwelt in those regions where reason loves to ask the aid of mysticism, and all remote ideas, like all remote nations, were indiscriminately regarded by them as barbarous. But guarded by the bounds of their civilization, as by the circumfluent ocean-stream of their olden tradition, they were prompted in all their movements by the spirit of beauty, and philosophers have accounted them the very people whose ideas were adequately and harmoniously represented in sensible forms, — unlike the nations of the Orient, where mind is overawed by preponderating matter, and unlike the nations of Christendom, where the current spiritual meanings reach far into the shadowy realm of mystery and transcend the power of material expression.

Thus art was the main category of the Greeks, the absolute form which embraced all their finite forms. It moulded their literature, as it did their sculpture, architecture, and the action of their gymnasts and orators. They therefore delighted only in the highest orders and purest specimens of literature, refused to retain in remembrance any of the unsuccessful attempts at poetry which may be supposed to have preceded Homer, and gave their homage only to masterpieces in the dignified styles of the epic, the drama, the lyric, the history, or the philosophical discussion. Equal to the highest creations, they refused to tolerate anything lower; and they knew not the novel, because their poetical notions were never left in a nebulous, prosaic state, but were always developed into poetry.

Another reason, doubtless, was the wonderful activity of the Greek mind, finding its amusement and relaxation in the fo-

rum, theatre, gymnasium, or even the barber's shop, in constant mutual contact; in learning wisdom and news by word of mouth. The long stories which they may have told to each other, as an outlet for their natural vitality, as extemporaneous exercises of curiosity and wit and fancy, did not creep into their literature, which included only more mature and elaborate attempts.

The modern novel was born of Christianity and feudalism. It is the child of contemplation, — of that sort of luxurious intellectual mood which has always distinguished the Oriental character, and was first Europeanized in the twilight of the mediæval period. The fallen Roman Empire was broken into countless fragments, which became feudal baronies. The heads of the newly organized society were lordly occupants of castles, who in time of peace had little to do. They were isolated from their neighbors by acres, forests, and a stately etiquette, if not actual hostility. There was no open-air theatre in the vicinity, no forum alive with gossip and harangues, no public games, not even a loquacious barber's shop. During the intervals between public or private wars, — when the Turks were unmolested, the crescent and the dragon left in harmless composure, and no Christians were in mortal turmoil with each other, — it is little wonder that restless knights went forth from their loneliness errant in quest of adventures. What was there to occupy life in those barricaded stone-towers?

It was then that the domestic passion, love, rose into dignity. Homage to woman assumed the potency of an idea, chivalry arose, and its truth, honor, and obedience were the first social responses from mankind to Christianity. The castle was the emblem and central figure of the time: it was the seat of power, the arena of manners, the nursery of love, and the goal of gallantry; and around it hovered the shadows of religion, loyalty, heroism. Domestic events, the private castellar life, were thus exalted; but they could hardly suffice to engross and satisfy the spirit of

a warrior and crusader. A new diversion and excitement were demanded, and soon, in response to the call, minstrels began to roam from castle to castle, from court to court, telling long stories of heroism and singing light songs of love. A spark from the Saracenic schools and poets of Spain may have flitted into Provence to kindle the elements of modern literature into its first development, the songs of the Troubadours. Almost contemporary were the lays of the Minnesingers in Germany and the romances of the Trouvères in Northern France. Beneath the brooding spirit of a new civilization signs of life had at length appeared, and Europe became vocal in every part with fantastic poems, lyrical in the South, epical in the North. They were wildly exuberant products, because severe art was unknown, but simple, *naïve*, and gay, and suited to the taste of a time when the classics were regarded as superstitiously as the heavens. Love and heroism, which somehow are the leading themes of literature in all ages, now assumed the chivalric type in the light hands of the earliest modern poets.

Yet these songs and metrical romances were most inadequate representatives of the undeveloped principles which lay at the root of Christian civilization. Even Hellenic genius might here have been at fault, for it was a far harder task to give harmonious and complete expression to the tendencies of a new religion and the germs of new systems, than to frame into beauty the pagan clear-cut conceptions. The Christian mind awoke under a fascination, and, for a time, could only ejaculate its meanings in fragments, or hint them in vast disproportions, could only sing snatches of new tunes. Its first signs were gasps, rather than clear-toned notes, after the long perturbations and preparations of history. The North and the South, the East and the West had been mingled together; the heated and heaving mass had been tempered by the leaven of Christianity: — and had all this been done only to produce an octo-syllabic metre in praise of fantastic and semi-

barbaric sentiments and exploits? Had there been such commotions of the universe only for a song? Surely these first creations of art, these first attempts at literature, these first carvings of a rude spiritual intensity, were only such as the Greeks may have forgotten any quantity of before Homer came, their first glory and their oldest reminiscence.

One reason, perhaps, why mediæval literature assumed so light and unartistic a form was, that by necessity it could not be full-orbed. Religion could not enter into it as a plastic element, but was fixed, a veiled, external figure, radiating indeed color and fragrance, but not making one of the struggling, independent vitals of the heart. Literature could play about this figure, but could not grasp it, and take it in among the materials to be fashioned. The Church, through its clergy, held jealous command of divine knowledge, beneath divine guidance, and left no developments of it possible to the lay mind, which culminated in minstrels and romancers. The Greeks, on the contrary, whose religion was an apotheosis of the earth, framed upwards and only by fiction of fancy handed downwards, derived all their theology from the poets. Prophecy and taste were combined in Homer,—Isaiah and the king's jester in Pindar. The care of the highest, not less than the lowest departments of thought, fell upon the creative author, and a happy suggestion became a new article in the Hellenic creed. His composition thus bore the burden and was hallowed by the sanctity of piety, the key to every human perfect thing. But the Provençal celebrators of love and chivalry had no such dignity in their task. The solemnities of thought and life were cared for and hedged about by the Church as its own peculiar treasure, and to them there remained only the lighter office of amusing. The age was eminently religious, but the poet could not aid in erecting and adorning its temples. Every fair work of art must have a central idea; but the proper principle of unity for all grand artistic efforts not being within the reach of authors, it followed that their produc-

tions were not symmetrical, did not have an even outline nor cosmical meaning, did not consist of balanced parts, were poorly framed and articulated, and were charming only by their flavor, and not by their form. The cultured intellect will not seriously work short of a final principle; and if a materialized religion, an ecclesiastical structure, be firmly planted on the earth by the same hand that established the universe and tapestried it with morning and evening, and if its gates and archways, its altar, columns, and courts be given in trust to chosen stewards as a divine priesthood, then the highest problem of being is not a human problem, and the mind of the laity has nothing more important to do than to play with the flowers of gallant love and heroism. Such was the feeling, perhaps the unconscious reasoning, of the founders of modern literature, as they began their labors in the alcoves of that church architecture which covered Christendom, embracing and symbolically expressing all its ideas and institutes. Therefore some vice of imperfection, a character of frivolity, or an artificially serious treatment of lightsome subjects marked all the literature of the time, which resembled that grotesque and unaccountable mathematical figure that has its centre outside of itself.

Modern literature thus had its origin in romantic metrical pieces, which, in the next stage, were transformed into prose novels. Two circumstances contributed to this change,—a change which could not have been anticipated; for the Trouvère *fabliaux* and *romans* promised only epics, and the Troubadour *chansons* and *tensons* promised only lyrics and dramas. But the mind was now obliged to traverse the unbeaten paths of the Christian universe; it was overwhelmed by the extent of its range, the richness and delicacy of its materials; it could with difficulty poise itself amid the indefinite heights and depths which encompassed it, and with greater difficulty could wield the magician's rod which should sway the driving elements into artistic reconstruction. This mental inadequacy alone would

not have created the novel, but would only have made lyrics and epics rare, the works of superior minds. The second and coöperating circumstance was the prevalence of the Christian and feudal habit of contemplation, which made constant literature a necessity. Nothing less than eternal new romances could save the lords, the ladies, and the dependents from *ennui*. But to supply these in a style of proper and antique dignity was beyond the power of the poets. In the wild forests of the mind they could rarely capture a mature idea, and they were as yet unpractised artists. Yet contemplative leisure called eagerly for constant titbits of romance to tickle the palate and furnish a diversion, while the genius of Christian poetry was yet in infantile weakness. The dilemma lasted but a moment, and was solved by an heroic effort of the poets to do, not what they would, but what they could. Yielding to practical necessities, they renounced the traditions of the classical past, which now seemed to belong to another hemisphere, abandoned the attempt to realize pure forms, postponed high art; melody gave way to prose, the romance degenerated into the novel, and prose fiction, which erst had flitted only between the tongue and ear, entered, a straggling and reeling constellation, into the firmament of literature. Hence the novel is the child of human impotency and despair. The race thereby, with merriment and jubilee, confessed its inability to fulfil at once its Christian destiny as completely as the Greeks had fulfilled their pagan possibilities. Purity of art was left to the future, to Providence, or to great geniuses, but the novel became popular.

Thus the modern novel had its genesis not merely in a contemplative mood, but in contemplation which was forced by the impetuous temper of the times to fail of ever reaching the dignity of thoughtfulness. It was the immature product of an immature mental state; and richly as sometimes it was endowed by every human faculty, by imagination, wit, taste, or even profound thought, it yet never

reached the goal of thought, never solved a problem, and, in its highest examples, professed only to reveal, but not to guide; the reigning manners and customs. Rarely did its materials pass through the fiery furnace whence art issues; it was a work of unfaithful intellect, prompted by ideas which never culminated and were never realized; and it did not rise much above the "stuffs" of life, as distinguished from the organic creations of the mind. A many-limbed and shambling creature, which was not made a spirit by the power of an idea, it fluttered amid all the culture of a people,—amid the ideas and modes of the state, the church, the family; the world of society,—like a bungler among paint-pots; but the paints still remained paints on the canvas, instead of being blended and transfigured into a thing of beauty. It was the organ of society, but not of the essential truths which vitalize society, and its incidents did not rise much above the significance of accidents.

What the novel was in knightly days, that it has continued to be. There is a mysterious practical potency in precedent. All ideas and institutes seem to grow in the direction of their first steps, as if from germs. Thus, the doctrines of the Church fathers are still peculiarly authoritative in theology, and the immemorial traditions of the common law are still binding in civil life. Man seems to be an experimental far more than a freely rational animal; for a fact in the past exerts a greater influence in determining future action than any new idea. A revolution must strike deep to eradicate the presumption in favor of ages. Learned men are now trying to read the hieroglyphics of the East, the records of an unknown history. Perhaps the result of their labors will temper the next period in the course of the world more than all our thinkers. Destiny seems to travel in the harness of precedents.

Thus, in obedience to the law of precedent, the mild gambols, the *naïve* superficiality, the child-like irresponsibility for thinking, which were the characteristics

of the first European novels, have generally distinguished the unnumbered and unclassified broods of them which have abounded in subsequent literature. Designed chiefly to amuse, to divert for a moment rather than to present an admirable work of art, to interest rather than to instruct and elevate, the modern romance has in general excused itself from thorough elaboration. Instead of being a chastened and symmetrical product of the whole organic mind, it has mainly been inspired by the imagination, which has been called the fool in the family of the faculties, and wrought out by the assistance of memory, which mechanically links the mad suggestions of its partner with temporal events. It is in literature something like what a feast presided over by the king's jester and steward would have been in mediæval social life. Let any novel be finished, let all the resources of the mind be conscientiously expended on it, let it become a thorough intellectual creation, and, instead of remaining a novel, it would assume the dignity of an epic, lyric, drama, philosophy, or history. Its nebulæ would be resolved into stars.

Has, then, the mild and favorite blossom, the *fabula romanensis*, which was so abundant in the Middle Ages, which has grown so luxuriantly and given so general delight in modern times,—has it no place in the natural history of literature? Shall it be mentioned only as an uncompleted something else,—as an abortive effort of thought,—as a crude *mélange* of elements that have not been purified and fused together in the focus of the mind? And were the Muses right in refusing to admit it into their sacred realm of art?

An affirmative answer can hardly be true; for an absurdity appears in the reduction that it would cause in the quantity of our veritable literature, and in the condemnation that it would pass on the tastes of many most intelligent writers and readers. Yet a comparison of the novel with the classical and pure forms of literature will show its unlikeness to

them in design, dignity, and essential quality.

It was a favorite thesis of Fielding, often repeated by his successors, that the novel is a sort of comic epopee. Yet the romantic and the epic styles have nothing in common, except that both are narrative. The epic, the rare and lofty cypress of literature, is the story of a nation and a civilization; the novel, of a neighborhood and a generation. A thousand years culminate in the former; it sums up the burden and purpose of a long historical period; and its characters are prominent types in universal history and in highest thought. But the novel is the child of a day; it is the organ of manners and phases, not of principles and passions; it does not see the phenomena of earth in heavenly or logical relations, does not transform life into art, and is a panorama, but not a picture. So long as man and heroism and strife endure, shall Achilles, Godfrey, Satan, and Mephistopheles be types; for they are artistic expressions of essential and historical realities. But though the beck of curiosity lead us through the labyrinthine plot of a novel, long as Gibbon's way through the Dark Ages, yet, when we have finished it, the bubble collapses, the little heavens which had been framed about us roll away, and most rarely does a character remain poetically significant in the mind.

A contrast of any page of an epic with one of a romance will show their essential unlikeness. Note, for instance, the beginning of the "Gerusalemme Liberata." The first stanza presents "the illustrious captain who warred for Heaven and saved the sepulchre of Christ,—the many deeds which he wrought by arms and by wisdom,—his great toil, and his glorious achievement. Hell opposed him, the mingled populations of Asia and Africa leagued against him,—but all in vain, for Heaven smiled, and guided the wandering bands beneath his sacred ensigns." Such are the splendid elements of the poem, outlining in a stanza the finest type, objects, and scenery of mediæval heroism. The second stanza invokes the

Muse, — “Not thou whose brow was wreathed with the unenduring bays of Helicon, but thou who in angelic choirs hast a golden crown set with immortal stars, — do thou breathe celestial ardor into the poet’s heart!” Then follows an allusion to a profound matter of temper and experience. He prays that “the Muse will pardon, if sometimes he adorn his page with other charms than her own; for thus, perhaps, he may win the world to his higher meanings, shrouding severe truths in soft verses. As the rim of the bitter cup is sweetened which is extended to the sick child, so may he, by beauties not quite Christian, attract mankind to read his whole poem to their health.” Such is the stately soaring of the epical Muse, the Muse of ideal history. Scholars find Greece completely prefigured in Homer, and the time may come when Dante and Tasso shall be the leading authorities for the history of the Middle Ages, and Milton for that of the ages of Protestantism.

In such comparison novels are insignificant and imbecile. Though, like “*Contarini Fleming*,” they may begin with a magnificent paragraph, and fine passages be scattered through the volumes, they are yet rarely stories of ideas as well as persons, rarely succeed in involving events of more than temporary interest, and rarely, perhaps, should be called great mental products.

Not less strikingly does the difference between the epic and the novel appear in their different uses. The one is the inspiration of great historical action, the other of listless repose. The statesman, in the moment of debate, and in the dignity of conscious power, finds sympathy and encouragement in a passage of his favorite epic. Its grand types are ever in fellowship with high thoughts. The novel is for the lighter moment after the deed is done, when he is no longer brunting Fate, but reclining idly, and reflecting humorously or malignly on this life. The epic is closely and strongly framed, like the gladiator about to strike a blow: the novel is relaxed and at careless ease,

like the club-man after lighting his pipe. The latter does not bear the burden of severe responsibility, but is a thing of holidays and reactions. Still, as of old, it answers to the contemplative castellar cry, — “Hail, romancer! come and divert me, — make me merry! I wish to be occupied, but not employed, — to muse passively, not actively. Therefore, hail! tell me a story, — sing me a song! If I were now in the van of an army and civilization, higher thoughts would engross me. But I am unstrung, and wish to be fanned, not helmeted.”

It has sometimes been claimed that the romantic style is essentially lyrical. But though the idea from which many novels start was perhaps the proper germ for one or more lyrics, it never attains in romance a pure and unincumbered development. We may illustrate the different intellectual creations founded on a common conception by imagining how one of Wordsworth’s lyrical fancies might have been developed in three volumes of romance instead of three stanzas of poetry.

“She dwelt among the untrodden ways,
Beside the springs of Dove,
A maid whom there were none to praise,
And very few to love.”

The first line, romantically treated, would include description, soliloquy, and narrative, to show that in solitude the maiden had habits, duties, something to think about and be interested in. The accidental approach of some cosmopolitan visitor would give occasion to illustrate dramatically the contrast between life in retirement and in society. Some novelists also would inflict, either by direct lecture or by conversation of the actors, very admirable reflections on the comparative advantages of the two conditions. The second line would perhaps suggest only geographical lore and descriptions of scenery, though historical episodes might be added. The third line would involve a minute description of dress, complexion, stature, and wild gracefulness. In a psychological investigation it would come out what strange

and simple notions she entertained of the great world, and what charming qualities of unsophisticated character belonged to her as she merrily or pensively went through her accustomed tasks. The fourth line, in which love is the text, would swell into mammoth proportions. New characters would be especially necessary in this culminating part of the story; and though they should be "very few," they would long occupy the novelist with their diverse excellencies or villainies, their rivalries and strategies. It is probable that the complete development of the stanza *à la romance* would give a circumstantial history of the maiden from her birth, with glimpses more or less clear of all the remarkable people who dwelt near or occasionally visited the springs of Dove. Thus the same conception would become a stanza or a volume, according as its treatment were lyrical or romantic.

It need hardly be shown that the novel is not a drama, not a history, nor fable, nor any sort of philosophical treatise. It may have sentences, paragraphs, or perhaps chapters, in every style and of the highest excellence, as a shapeless architectural pile may rejoice in some exquisite features or ornaments; but combined passages, though they were the collected charms of literature, do not make a work of art. The styles are mixed, — a certain sign, according to Lessing, of corruption of taste. Novels present the anomaly of being fiction, but not poetry, — of being fruits of imagination, but of imagination improvising its creations from local and temporal things, instead of speaking from a sublime stand-point and linking series of facts with processions of ideas. Sources of history, guides of philosophical retrospection, they may come some time to be; yet one cannot check a feeling of pity for the future historian who, in searching the "Pickwick Papers" for antiquities, finds himself bothered and confused by all the undisciplined witches of Mr. Dickens's imagination.

If the novel be thus excluded from all the classical orders of literature, a trem-

bling question is suggested, whether it may not be nevertheless a legitimate work of art. Though it be a *mélange* of styles, a story told, in literature what the story-teller is in society, yet why should it not have the honor among readers which the story-teller in all ages has had among listeners? Though by its es-cutcheon it assume a place among the amusing rather than the instructive class of books, why should not its nobility be recognized?

The answer is found in the essential nature of art, in the almost eternal distinction between life and thought, between actual and ideal realities. Unity amid diversity is the type of intellectual beauty and the law of the universe; to comprehend it is the goal of science, and to reproduce it in human works is the aim of art. Yet how hard it is to find the central and essential idea in a world of apparent accidents and delusions! to chase the real and divine thing as it plays among cheats and semblances! Hence the difficulty of thorough thought, of faithful intellectual performance, of artistic creation. To the thoughtless man life is merely the rough and monotonous exterior of the cameo-stone; but the artist sees through its strata, discerns its layers of many colors, and from its surface to its vital centre works them all together into varied beauty. To live is common; but art belongs only to the finest minds and the best moments. Life is a burden of present multitudinous phenomena; but art has the simple unity of perfect science, and is a goal and aspiration. Life comes by birth, art by thought, and the travail that produces art is oftentimes the severer. The fashions of life are bubbles on the surface, and pass away with the season; but the creations of art belong to the depths of the spiritual world, where they shine like stars and systems in the physical universe.

Story-telling is the most charming of occupations, and, whatever its relation to literary art, it is one of the graces of the art of life. Old as the race, it has always been in fashion on the earth, the

delight of every clime from the Orient to the Occident, and of every age from childhood to second childhood. We live in such a concatenation of things,—our hopes, fears, loves, hates, struggles, sympathies, defeats, and triumphs make such a medley, with a sort of divine fascination about it,—that we are always interested to hear how anybody has borne himself through whatever varieties of fortune. At the basis of every other character which can be assumed by man lie the conceiver and the teller of stories; story-telling is the *primâ facie* quality of an intelligent and sociable being leading a life full of events in a universe full of phenomena. The child believes the wonders of romance by a right instinct; narratives of love and peril and achievement come home to the spirit of the youth; and the mystical, wonder-expecting eye of childhood returns to old age. The humor, wit, piety, and pathos of every age abound in the written stories of its people and children.

Yet between the vocal story and the story in literature there is an immense difference, like that between talking and writing, between life and art. The qualities which in the story-teller make even frivolity weighty and dulness significant—the play of the eye, the lips, the countenance, the voice, the whole sympathetic expression of the person—are wanting to the novel; it has passed from the realm of life to that of art; it loses the charm which personal relations give even to trifles; it must have the charm which the mind can lend only to its cherished offspring.

Considered as a thing of literature, no other sort of book admits of such variety of topics, style, and treatment as the novel. As diverse in talent and quality as the story-teller himself,—now harlequin, now gossip, now threnodist,—with weird ghostliness, moping melancholy, uncouth laughter, or gentle serious smile,—now relating the story, with childlike interest in it, now with a good heart and now with a bad heart ridiculing mankind, now allegorical with rich meanings, now freighting the little story-cricket that creeps along from

page to page with immense loads of science, history, politics, ethics, religion, criticism, and prophecy,—always regarded with kindness, always welcomed in idleness, always presenting in a simple way some spectacle of merriment or grief, as changeful as the seasons or the fashions,—with all its odd characteristics, the novel is remarkably popular, and not lightly to be esteemed as an element in our social and mental culture.

There is probably no other class of books, with literary pretensions, that contain so little thinking, in proportion to their quantity of matter, as novels. They can scarcely be called organic productions, for they may be written and published in sections, like one of the lowest classes of animals, which have no organization, but live equally well in parts, and run off in opposite directions when cut in halves. Thoughts and books, like living creatures, have their grades, and it is only those which stand lowest in respect of intellectuality that admit of fractional existence. A finished work of the mind is so delicately adjusted and closely related, part to part, that a fracture would be fatal. Conceive of Phidias sending off from his studio at Athens his statue of Jupiter Olympius in monthly numbers,—despatching now the feet, now the legs, now the trunk, in successive pieces, now the shoulders, and at last crowning the whole with a head!

The composition of novels must be reckoned, in design at least, one of the fine arts, but in fact they belong rather to periodical than to immortal literature. They do not submit to severity of treatment, abide by no critical laws, but are the gypsies and Bohemians of literature, bringing all the savagery of wild genius into the *salons* of taste. Though tolerated, admired, and found to be interesting, they do not belong to the system of things, play no substantial part in the serious business of life, but, as the world moves on, give place to their successors, not having developed any principle, presented any picture, or stated any fact, in a way to suggest ideas more than social phenom-

ena. They are not permanent, therefore, because finally only ideas, and not facts, are generally remembered; the past is known to us more, and exclusively as it becomes remote, by the conceptions of poets and philosophic historians, the myriads of events which occupied a generation being forgotten, and all the pith and meaning of them being transmitted in a stanza or a chapter. Poetry never grows old, and whatsoever masterpieces of thought always win the admiration of the enlightened; but many a novel that has been the lion of a season passes at once away, never more to be heard of here. With few exceptions, the splendid popularity that greets the best novels fades away in time slowly or rapidly. A half-century is a fatal trial for the majority; few are revived, and almost none are read, after a century; will anybody but the most curious antiquary be interested in them after one or two thousand years? Without delaying to give the full rationale of exceptions which vex this like every other general remark, it may be added briefly that fairy stories are in their nature fantastic mythological poems, most proper to the heroic age of childhood, that historical romances may be in essence and dignity fantastic histories or epics, and that, from whatever point of view, Cervantes remains hardly less admirable than Ariosto, or the "Bride of Lammermoor" than the "Lay of the Last Minstrel."

In the mental as in the physical world, diamonds and gems come by long elaboration. A thoughtless man may write perennially, while the result of silent meditation and a long tortured soul may be expressed in a minute. The work of the former is akin to conversation, one of the fugitive pleasures of a day; that of the latter will, perchance, be a star in the firmament of the mind. Eugène Sue and Béranger both wished to communicate their reflections on society. The former dissipated his energies in the *salons*, was wise and amusing over wine, exchanged learning and jests, studied the drawing-room as if it were the macrocosm, re-

turned to his chamber, put on kid gloves, and from the odds and ends of his dishevelled wits wrote at a gallop, without ever looking back, his "Mystères de Paris." The latter lived in an attic year after year, contemplated with cheerful anxiety the volatile world of France and the perplexed life of man, and elaborated word by word, with innumerable revisions, his short songs, which are gems of poetry, charming at once the ear and the heart. Novels are perhaps too easily written to be of lasting value. An unpremeditated word, in which the thoughts of years are exploded, may be one of the most admirable of intellectual phenomena, but an unpremeditated volume can only be a demonstration of human weakness.

The argument thus far has been in favor of the Muses. Hellenic taste and the principles of high art ratify the condemnation passed on the novel by the æsthetic goddesses. A wider view, however, will annul the sentence, giving in its stead a warning and a lesson. If the prose romance be not Hellenic, it is nevertheless humane, and has been in honor almost universally throughout the Orient and the Occident. Its absence from the classical literature was a marvel and exception, a phenomenon of the clearest-minded and most active of races, who thought, but did not contemplate,—whose ideal world consisted only of simple, but stately legends of bright-limbed gods and heroes. A felicitous production of high art, also, is among the rarest of exceptions, and will be till the Millennium. Myriads of comparative failures follow in the suite of a masterpiece. We have, therefore, judged the novel by an impracticable standard, by a comparison with the highest aims rather than the usual attainments of other branches of literary art. Human weakness makes poetry, philosophy, and history imperfect in execution, though they aspire to absolute beauty and truth; human weakness suggested the novel, which is imperfect in design, written as an amusement and relief, in despair of sounding the universe. A novel is in its nature and as a matter of neces-

sity an artistic failure; it pretends to nothing higher; but under the slack laws which govern its composition, multitudes of fine and suggestive characters, incidents, and sayings may be smuggled into it, contrary to all the usages and rules of civilized literature. Hence the secret of its popularity, that it is the organ of average as distinguished from highest thought. Science and art are the goals of destiny, but rarely is there a thinker or writer who has an eye single to them. It is an heroic, self-sacrificing, and small platoon which in every age brunts Fate, and, fighting on the shadowy frontier, makes conquests from the realm of darkness. Their ideas are passed back from hand to hand, and become known in fragments and potent as tendencies among the mass of the race, who live in the circle of the attained and travel in the routine of ages. The novelist is one of the number who half comprehend them, and borrows them from all quarters to introduce into the rich *mélange* of his work. To solve a social problem, to reproduce an historical age or character, or to develop the truth and poetry latent in any event, is difficult, and not many will either lead or follow a severe attempt; but the novelist will merrily chronicle his story and link with it in a thousand ways some salient reminiscences of life and thought.

What, then, is the highest excellence that the novel can attain? It is the carnival of literary art. It deals sympathetically and humorously, not philosophically and strictly, with the panorama and the principles of life. A transcript, but not a transfiguration of Nature, it assumes a thousand forms, surpassing all other books in the immense latitude left to the writer, in the wild variety of things which it may touch, but need not grasp. Its elements are the forests, the cities, and the seven ages of man,—characters and fortunes how diversified! All species of thinkers and actors, of ideas and passions, all the labyrinthine complications and scenery of existence, may be illustrated in persons or introduced by-the-by; into whatever colors make up the phantasmagoria of

collective humanity the novelist may dip his brush, in painting his moving picture. Yet problems need not be fully appreciated, nor characters or actions profoundly understood. It must be an engrossing story, but the theme and treatment are as lawless as the conversation of an evening party. The mind plays through all the realm of its knowledge and experience, and sheds sparks from all the torches of thought, as scenes and topics succeed each other. The pure forms of literature may be reminiscences present to the imagination, the germs of new truths and social arrangements may occupy the reason; but the novelist is neither practical, nor philosophical, nor artistic; he is simply in a dream; and pictures of the world and fragments of old ideas pass before him, as the sacred meanings of religion flitted about the populace in a grotesque mediæval festival of the Church. Conceive the stars dropped from their place in the apparent heavens, and playing at shuttlecock with each other and with boys, and having a heyday of careless joyousness here below, instead of remaining in sublime dignity to guide and inspire men who look up to them by night! Even such are the epic, the lyric, the drama, the history, and the philosophy, as collected together in the revelries of the novel. To state the degree of excellence possible to a style as perverse as it is entertaining, to measure the wisdom of essential folly, is difficult; and yet it may be said that the strength of the novel is in its lawlessness, which leaves the author of genius free to introduce his creations just as they occur to him, and the author of talent free to range through all books and all time and reproduce brilliant sayings and odd characters,—which, with no other connecting thread than a story, freaks like a spirit through every shade of feeling and region of thought, from the domestic hearth to the ultimate bounds of speculative inquiry,—and which, by its daring and careless combinations of incongruous elements, exhibits a free embodiment in prose of the peculiar genius of the romantic.

And some philosophers have styled romance the special glory of Christianity. It is certainly the characteristic of critical as distinguished from organic periods,—of the mind acting mystically in a savage and unknown universe, rather than of the mind that has reduced the heavens and earth to its arts and sciences. The novel, therefore, as the wildest organ of romance, is most appropriate to a time of great intellectual agitation, when intellectual men are but half-conscious of the tendencies that are setting about them, and consequently cease to propose to themselves final goals, do not attempt scrupulous art, but play jubilantly with current facts. Hence, perhaps, its popularity since the first conflicts of the Protestant Reformation, and especially since the great French Revolution, when amid new inventions and new ideas mankind has contemplatively looked for the coming events, the new historical eras, which were casting their shadows before.

When, some time, Christian art shall become classical, and Christian ideas be

developed by superior men as fairly as the Hellenic conceptions were, the novel may either assume to itself some peculiar excellency, or may cease to hold the comparative rank in literature which it enjoys at present. Then the numberless prose romances which occupy the present generation of readers will, perhaps, be collected in some immense *corpus*, like the Byzantine historians, will be reckoned among the curiosities of literature, and will at least have the merit of making the study of antiquities easy and interesting.

There is an old couplet, —

“Of all those arts in which the wise excel,
Nature’s chief masterpiece is writing well.”

At a time when extemporaneous composition and thoughtless reading are much in fashion, it will not be amiss to invoke profounder studies, and slower, but more useful and permanent results. Let it be remembered that even the Divine Mind first called into being the chaos of creation, and then in seven days reviewed and elaborated it into a beautiful order.

A LEGEND OF MARYLAND.

“AN OWRE TRUE TALE.”

[Concluded.]

CHAPTER VII.

THE OLD CITY.

LET me now once more shift the scene. In the summer of 1684, the peaceful little port of St. Mary’s was visited by a phenomenon of rare occurrence in those days. A ship of war of the smaller class, with the Cross of St. George sparkling on her broad flag, came gliding to an anchorage abreast the town. The fort of St. Inigoes gave the customary salute, which I have reason to believe was not returned. Not long after this, a bluff, swaggering, vul-

gar captain came on shore. He made no visit of respect or business to any member of the Council. He gave no report of his character or the purpose of his visit, but strolled to the tavern,—I suppose to that kept by Mr. Cordea, who, in addition to his calling of keeper of the ordinary, was the most approved shoemaker of the city,—and here regaled himself with a potation of strong waters. It is likely that he then repaired to Mr. Blakiston’s, the King’s Collector,—a bitter and relentless enemy of the Lord Proprietary,—and there may have met Kenelm Chiseldine, John

Coode, Colonel Jowles, and others noted for their hatred of the Calvert family, and in such company as this indulged himself in deriding Lord Baltimore and his government. During his stay in the port, his men came on shore, and, imitating their captain's unamiable temper, roamed in squads about the town and its neighborhood, conducting themselves in a noisy, hectoring manner towards the inhabitants, disturbing the repose of the quiet burghers, and shocking their ears with ribald abuse of the authorities. These roystering sailors — I mention it as a point of historical interest — had even the audacity to break into Alderman Garret Van Swearingen's garden, and to pluck up and carry away his cabbages and other vegetables, and — according to the testimony of Mr. Cordea, whose indignation was the more intense from his veneration for the Alderman, and from the fact that he made his Worship's shoes — they would have killed one of his Worship's sheep, if his (Cordea's) man had not prevented them; and after this, as if on purpose more keenly to lacerate his feelings, they brought these cabbages to Cordea's house, and there boiled them before his eyes, — he being sick and not able to drive them away.

After a few days spent in this manner, the swaggering captain — whose name, it was soon bruited about, was Thomas Allen, of his Majesty's Navy — went on board of his ketch, — or brig, as we should call it, — the Quaker, weighed anchor, and set sail towards the Potomac, and thence stood down the Bay upon the coast of Virginia. Every now and then, after his departure, there came reports to the Council of insults offered by Captain Allen to the skippers of sundry Bay craft and other peaceful traders on the Chesapeake; these insults consisting generally in wantonly compelling them to heave to and submit to his search, in vexatiously detaining them, overhauling their papers, and offending them with coarse vituperation of themselves, as well as of the Lord Proprietary and his Council.

About a month later the Quaker was observed to enter the Patuxent River, and cast anchor just inside of the entrance, near the Calvert County shore, and opposite Christopher Rousby's house at Drum Point. This was — says my chronicle — on Thursday, the 30th of October, in this year 1684. As yet Captain Allen had not condescended to make any report of his arrival in the Province to any officer of the Proprietary.

On Sunday morning, the 2d of November, the city was thrown into a state of violent ebullition — like a little red-hot tea-kettle — by the circulation of a rumor that got wind about the hour the burghers were preparing to go to church. It was brought from Patuxent late in the previous night, and was now whispered from one neighbor to another, and soon came to boil with an extraordinary volume of steam. Stripping it of the exaggeration natural to such an excitement, the rumor was substantially this: That Colonel Talbot, hearing of the arrival of Captain Allen in the Patuxent on Thursday, and getting no message or report from him, set off on Friday morning, in an angry state of mind, and rode over to Patuxent, determined to give the unmannerly captain a lesson upon his duty. That as soon as he reached Mattapony House, he took his boat and went on board the ketch. That there he found Christopher Rousby, the King's Collector, cronying with Captain Allen, and upholding him in his disrespect to the government. That Colonel Talbot was very sharp upon Rousby, not liking him for old grudges, and more moved against him now; and that he spoke his mind both to Captain Allen and Christopher Rousby, and so got into a high quarrel with them. That when he had said all he desired to say to them, he made a move to leave the ketch in his boat, intending to return to Mattapony House; but they who were in the cabin prevented him, and would not let him go. That thereupon the quarrel broke out afresh, and became more bitter; and it being now in the night, and all in a great heat

of passion, the parties having already come from words to blows, Talbot drew his skean, or dagger, and stabbed Rousby to the heart. That nothing was known on shore of the affray till Saturday evening, when the body was brought to Rousby's house; after which it became known to the neighborhood; and one of the men of Major Sewall's plantation, which adjoined Rousby's, having thus heard of it, set out and rode that night over to St. Mary's with the news, which he gave to the Major before midnight. It was added, that Colonel Talbot was now detained on board of the ketch, as a prisoner, by Captain Allen.

This was the amount of the dreadful story over which the gossips of St. Mary's were shaking their wise heads and discoursing on "crown's quest law" that Sunday morning.

As soon as Major Sewall received these unhappy midnight tidings, he went instantly to his colleague, Colonel Darnall, and communicated them to him; and they, being warm friends of Talbot's, were very anxious to get him out of the custody of this Captain Allen. They therefore, on Sunday morning, issued a writ directed to Roger Brooke, the sheriff of Calvert County, commanding him to arrest the prisoner and bring him before the Council. Their next move was to ride over—the same morning—to Patuxent, taking with them Mr. Robert Carvil, and John Llewellyn, their secretary. Upon reaching the river, all four went on board the ketch to learn the particulars of the quarrel. These particulars are not preserved in the record; and we have nothing better than our conjectures as to what they disclosed. We know nothing specific of the cause or character of the quarrel. The visitors found Talbot loaded with irons, and Captain Allen in a brutal state of exasperation, swearing that he would not surrender his prisoner to the authorities of the Province, but would carry him to Virginia and deliver him to the government there, to be dealt with as Lord Effingham should direct. He was grossly in-

sulting to the two members of the Council who had come on this inquiry; and after they had left his vessel, in the pinnace, to return to the shore, he affected to believe that they had some concealed force lying in wait to seize the pinnace and its crew, and so ordered them back on board, but after a short detention thought better of it, and suffered them again to depart.

The contumacy of the captain, and the declaration of his purpose to carry away Talbot out of the jurisdiction of the Province within which the crime was committed, and to deliver him to the Governor of Virginia, was a grave assault upon the dignity of the government and a gross contempt of the public authorities, which required the notice of the Council. A meeting of this body was therefore held on the Patuxent, at Rich Neck, on the morning of the 4th of November. I find that five members were present on that occasion. Besides Colonel Darnall and Major Sewall, there were Counsellor Tailler and Colonels Digges and Burgess. Here the matter was debated and ended in a feeble resolve,—that, if this Captain Allen should persist in his contumacy and take Talbot to Virginia, the Council should immediately demand of Lord Effingham his redelivery into this Province. Alas, they could only scold! This resolution was all they could oppose to the bullying captain and the guns of the troublesome little Quaker.

Allen, after hectoring awhile in this fashion, and raising the wrath of the Colonels of the Council until they were red in the cheeks, defiantly took his departure, carrying with him his prisoner, in spite of the vehement indignation of the liegemen of the Province.

We may imagine the valorous anger of our little metropolis at this act or crime of lese-majesty. I can see the group of angry burghers, collected on the porch of Cordea's tavern, in a fume as they listen to Master John Llewellyn's account of what had taken place,—Llewellyn himself as peppery as his namesake when

he made Ancient Pistol eat his leek; and I fancy I can hear Alderman Van Swearingen's choleric explosion against Lord Effingham, supposing his Lordship should presume to slight the order of the Council in respect to Talbot's return.

But these fervors were too violent to last. Christopher Rousby was duly deposited under the greensward upon the margin of Harper's Creek, where I found him safe, if not sound, more than a hundred and fifty years afterwards. The metropolis gradually ceased to boil, and slowly fell to its usual temperature of repose, and no more disturbed itself with thoughts of the terrible captain. Talbot, upon being transferred to the dominion of Virginia, was confined in the jail of Gloucester County, in the old town of Gloucester, on the northern bank of York River.

The Council now opened their correspondence with Lord Effingham, demanding the surrender of their late colleague. On their part, it was marked by a deferential respect, which, it is evident, they did not feel, and which seems to denote a timid conviction of the favor of Virginia and the disgrace of Maryland in the personal feelings of the King. It is manifest they were afraid of giving offence to the lordly governor of the neighboring Province. On the part of Lord Effingham, the correspondence is cavalier, arrogant, and peremptory.

The Council write deplorably to his Lordship. They "pray"—as they phrase it—"in humble, civil, and obliging terms, to have the prisoner safely returned to this government." They add,—“Your Excellency's great wisdom, prudence, and integrity, as well as neighborly affection and kindness for this Province, manifested and expressed, will, we doubt not, spare us the labor of straining for arguments to move your Excellency's consideration to this our so just and reasonable demand.” Poor Colonel Darnall, Poor Colonel Digges, and the rest of you Colonels and Majors,—to write such whining hypocrisy as this! George Talbot would not have written to Lord Effingham in such

phrase, if one of you had been unlawfully transported to his prison and Talbot were your pleader!

The nobleman to whom this servile language was addressed was a hateful despot, who stands marked in the history of Virginia for his oppressive administration, his arrogance, and his faithlessness.

To give this beseeching letter more significance and the flattery it contained more point, it was committed to the charge of two gentlemen who were commissioned to deliver it in person to his Lordship. These were Mr. Clement Hill and Mr. Anthony Underwood.

Effingham's answer was cool, short, and admonitory. The essence of it is in these words:—“We do not think it warrantable to comply with your desires, but shall detain Talbot prisoner until his Majesty's particular commands be known therein.” A postscript is added of this import:—“I recommend to your consideration, that you take care, as far as in you lies, that, in the matter of the Customs, his Majesty receive no further detriment by this unfortunate accident.”

One almost rejoices to read such an answer to the fulsome language which drew it out. This correspondence runs through several such epistles. The Council complain of the rudeness and coarse behavior of Captain Allen, and particularly of his traducing Lord Baltimore's government and attempting to excite the people against it. Lord Effingham professes to disbelieve such charges against “an officer who has so long served his King with fidelity, and who could not but know what was due to his superiors.”

Occasionally this same faithful officer, Captain Allen himself, reappears upon the stage. We catch him at a gentleman's house in Virginia, boasting over his cups—for he seems to have paid habitual tribute to a bowl of punch—that he will break up the government of Maryland, and annex this poor little Province of ours to Virginia: a fact worth notice just now, as it makes it clear that annexation is not the new idea of the Nine-

teenth Century, but lived in very muddy brains a long time ago. I now quit this correspondence to look after a bit of romance in a secret adventure.

CHAPTER VIII.

A PLOT.

WE must return to the Manor of New Connaught upon the Elk River.

There we shall find a sorrowful household. The Lord of the Manor is in captivity; his people are dejected with a presentiment that they are to see him no more; his wife is lamenting with her children, and counting the weary days of his imprisonment.

“His hounds they all run masterless,
His hawks they flee from tree to tree.”

Everything in the hospitable woodland home is changed. November, December, January had passed by since Talbot was lodged in the Gloucester prison, and still no hope dawned upon the afflicted lady. The forest around her howled with the rush of the winter wind, but neither the wilderness nor the winter was so desolate as her own heart. The fate of her husband was in the hands of his enemies. She trembled at the thought of his being forced to a trial for his life in Virginia, where he would be deprived of that friendly sympathy so necessary even to the vindication of innocence, and where he ran the risk of being condemned without defence, upon the testimony of exasperated opponents.

But she was a strong-hearted and resolute woman, and would not despair. She had many friends around her, — friends devoted to her husband and herself. Amongst these was Phelim Murray, a cornet of cavalry under the command of Talbot, — a brave, reckless, true-hearted comrade, who had often shared the hospitality, the adventurous service, and the sports of his commander.

To Murray I attribute the planning of the enterprise I am now about to relate. He had determined to rescue his chief from his prison in Virginia. His scheme

required the coöperation of Mrs. Talbot and one of her youngest children, — the pet boy, perhaps, of the family, some two or three years old, — I imagine, the special favorite of the father. The adventure was a bold one, involving many hardships and perils. Towards the end of January, the lady, accompanied by her boy with his nurse, and attended by two Irish men-servants, repaired to St. Mary's, where she was doubtless received as a guest in the mansion of the Proprietary, now the residence of young Benedict Leonard and those of the family who had not accompanied Lord Baltimore to England.

Whilst Mrs. Talbot tarried here, the Cornet was busy in his preparations. He had brought the Colonel's shallop from Elk River to the Patuxent, and was here concerting a plan to put the little vessel under the command of some ostensible owner who might appear in the character of its master to any over-curious or inopportune questioner. He had found a man exactly to his hand in a certain Roger Skreene, whose name might almost be thought to be adopted for the occasion and to express the part he had to act. He was what we may call the sloop's husband, but was bound to do whatever Murray commanded, to ask no questions, and to be profoundly ignorant of the real objects of the expedition. This pliant auxiliary had, like many thrifty — or more probably thriftless — persons of that time, a double occupation. He was amphibious in his habits, and lived equally on land and water. At home he was a tailor, and abroad a seaman, frequently plying his craft as a skipper on the Bay, and sufficiently known in the latter vocation to render his present employment a matter to excite no suspicious remark. It will be perceived in the course of his present adventure that he was quite innocent of any avowed complicity in the design which he was assisting.

Murray had a stout companion with him, a good friend to Talbot, probably one of the familiar frequenters of the

Manor House of New Connaught, — a bold fellow, with a hand and a heart both ready for any perilous service. He may have been a comrade of the Cornet's in his troop. His name was Hugh Riley, — a name that has been traditionally connected with dare-devil exploits ever since the days of Dermot McMorrogh. There have been, I believe, but few hard fights in the world, to which Irishmen have had anything to say, without a Hugh Riley somewhere in the thickest part of them.

The preparations being now complete, Murray anchored his shallop near a convenient landing, — perhaps within the Mattapony Creek.

In the dead of winter, about the 30th of January, 1685, Mrs. Talbot, with her servants, her child, and nurse, set forth from the Proprietary residence in St. Mary's, to journey over to the Patuxent, — a cold, bleak ride of fifteen miles. The party were all on horseback: the young boy, perhaps, wrapped in thick coverings, nestling in the arms of one of the men: Mrs. Talbot braving the sharp wind in hood and cloak, and warmed by her own warm heart, which beat with a courageous pulse against the fierce blasts that swept and roared across her path. Such a cavalcade, of course, could not depart from St. Mary's without observation at any season; but at this time of the year so unusual a sight drew every inhabitant to the windows, and set in motion a current of gossip that bore away all other topics from every fireside. The gentlemen of the Council, too, doubtless had frequent conference with the unhappy wife of their colleague, during her sojourn in the Government House, and perhaps secretly counselled with her on her adventure. Whatever outward or seeming pretext may have been adopted for this movement, we can hardly suppose that many friends of the Proprietary were ignorant of its object. We have, indeed, evidence that the enemies of the Proprietary charged the Council with a direct connivance in the scheme of Talbot's escape, and made it a subject

of complaint against Lord Baltimore that he afterwards approved of it.

Upon her arrival at the Patuxent, Mrs. Talbot went immediately on board of the sloop, with her attendants. There she found the friendly cornet and his comrade, Hugh Riley, on the alert to distinguish their loyalty in her cause. The amphibious Master Skreene was now at the head of a picked crew, — the whole party consisting of five stout men, with the lady, her child, and nurse. All the men but Skreene were sons of the Emerald Isle, — of a race whose historical boast is the faithfulness of their devotion to a friend in need and their chivalrous courtesy to woman, but still more their generous and gallant championship of woman in distress. On this occasion this national sentiment was enhanced when it was called into exercise in behalf of the sorrowful lady of the chief of their border settlements.

They set sail from the Patuxent on Saturday, the 31st of January. On Wednesday, the fifth day afterwards, they landed on the southern bank of the Rappahannock, at the house of Mr. Ralph Wormeley, near the mouth of the river. This long voyage of five days over so short a distance would seem to indicate that they departed from the common track of navigation to avoid notice.

The next morning Mr. Wormeley furnished them horses and a servant, and Mrs. Talbot, with the nurse and child, under the conduct of Cornet Murray, set out for Gloucester, — a distance of some twenty miles. The day following, — that is, on Friday, — the servant returned with the horses, having left the party behind. Saturday passed and part of Sunday, when, in the evening, Mrs. Talbot and the Cornet reappeared at Mr. Wormeley's. The child and nurse had been left behind; and this was accounted for by Mrs. Talbot's saying she had left the child with his father, to remain with him until she should return to Virginia. I infer that the child was introduced into this adventure to give some seeming to the visit which might lull suspicion and

procure easier access to the prisoner; and the leaving of him in Gloucester proves that Mrs. Talbot had friends, and probably confederates there, to whose care he was committed.

As soon as the party had left the shallop, upon their first arrival at Mr. Wormeley's, the wily Master Skreene discovered that he had business at a landing farther up the river; and thither he straightway took his vessel, — Wormeley's being altogether too suspicious a place for him to frequent. And now, when Mrs. Talbot had returned to Wormeley's, Roger's business above, of course, was finished, and he dropped down again opposite the house on Monday evening; and the next morning took the Cornet and the lady on board. Having done this, he drew out into the river. This brings us to Tuesday, the 10th of February.

As soon as Mrs. Talbot was once more embarked in the shallop, Murray and Riley (I give Master Skreene's own account of the facts, as I find it in his testimony subsequently taken before the Council) made a pretext to go on shore, taking one of the men with them. They were going to look for a cousin of this man, — so they told Skreene, — and besides that, intended to go to a tavern to buy a bottle of rum: all of which Skreene gives the Council to understand he verily believed to be the real object of their visit.

The truth was, that, as soon as Murray and Riley and their companion had reached the shore, they mounted on horseback and galloped away in the direction of Gloucester prison. From the moment they disappeared on this gallop until their return, we have no account of what they did. Roger Skreene's testimony before the Council is virtuously silent on this point.

After this party was gone, Mrs. Talbot herself took command, and, with a view to more privacy, ordered Roger to anchor near the opposite shore of the river, taking advantage of the concealment afforded by a small inlet on the northern side. Skreene says he did this at her

request, because she expressed a wish to taste some of the oysters from that side of the river, which he, with his usual facility, believed to be the only reason for getting into this unobserved harbor; and, merely to gratify this wish, he did as she desired.

The day went by slowly to the lady on the water. Cold February, a little sloop, and the bleak roadstead at the mouth of the Rappahannock brought but few comforts to the anxious wife, who sat muffled upon that unstable deck, watching the opposite shore, whilst the ceaseless plash of the waves breaking upon her ear numbered the minutes that marked the weary hours, and the hours that marked the still more weary day. She watched for the party who had galloped into the sombre pine-forest that sheltered the road leading to Gloucester, and for the arrival of that cousin of whom Murray spoke to Master Skreene.

But if the time dragged heavily with her, it flew with the Cornet and his companions. We cannot tell when the twenty miles to Gloucester were thrown behind them, but we know that the whole forty miles of going and coming were accomplished by sunrise the next morning. For the deposition tells us that Roger Skreene had become very impatient at the absence of his passengers, — at least, so he swears to the Council; and he began to think, just after the sun was up, that, as they had not returned, they must have got into a revel at the tavern, and forgotten themselves; which careless demeanor of theirs made him think of recrossing the river and of going ashore to beat them up; when, lo! all of a sudden, he spied a boat coming round the point within which he lay. And here arises a pleasant little dramatic scene of some interest to our story.

Mrs. Talbot had been up at the dawn, and watched upon the deck, straining her sight, until she could see no more for tears; and at length, unable to endure her emotion longer, had withdrawn to the cabin. Presently Skreene came hurrying down to tell her that the boat

was coming,— and, what surprised him, there were *four* persons in it. “Who is this fourth man?” he asked her, with his habitual simplicity, “and how are we to get him back to the shore again?”— a very natural question for Roger to ask, after all that had passed in his presence! Mrs. Talbot sprang to her feet, — her eyes sparkling, as she exclaimed, with a cheery voice, “Oh, his cousin has come!”— and immediately ran upon the deck to await the approaching party. There were pleasant smiling faces all around, as the four men came over the sloop’s side; and although the testimony is silent as to the fact, there might have been some little kissing on the occasion. The new-comer was in a rough dress, and had the exterior of a servant; and our skipper says in his testimony, that “Mrs. Talbot spoke to him in the Irish language”: very volubly, I have no doubt, and that much was said that was never translated. When they came to a pause in this conversation, she told Skreene, by way of interpretation, “he need not be uneasy about the stranger’s going on shore, nor delay any longer, as this person had made up his mind to go with them to Maryland.”

So the boat was made fast, the anchor was weighed, the sails were set, and the little sloop bent to the breeze and kissed the wave, as she rounded the headland and stood up the Bay, with Colonel George Talbot encircling with his arm his faithful wife, and with the gallant Cornet Murray sitting at his side.

They had now an additional reason for caution against search. So Murray ordered the skipper to shape his course over to the eastern shore, and to keep in between the islands and the main. This is a broad circuit outside of their course; but Roger is promised a reward by Mrs. Talbot, to compensate him for his loss of time; and the skipper is very willing. They had fetched a compass, as the Scripture phrase is, to the shore of Dorset County, and steered inside of Hooper’s Island, into the mouth of Hungary River. Here it was part of the scheme

to dismiss the faithful Roger from further service. With this view they landed on the island and went to Mr. Hooper’s house, where they procured a supply of provisions, and immediately afterwards reëmbarked, — having clean forgotten Roger, until they were once more under full sail up the Bay, and too far advanced to turn back!

The deserted skipper bore his disappointment like a Christian; and being asked, on Hungary River, by a friend who met him there, and who gave his testimony before the Council, “What brought him there?” he replied, “He had been left on the island by Madam Talbot.” And to another, “Where Madam Talbot was?” he answered, “She had gone up the Bay to her own house.” Then, to a third question, “How he expected his pay?” he said, “He was to have it of Colonel Darnall and Major Sewall; and that Madam Talbot had promised him a hogshead of tobacco extra, for putting ashore at Hooper’s Island.” The last question was, “What news of Talbot?” and Roger’s answer, “He had not been within twenty miles of him; neither did he know anything about the Colonel”!! But, on further discourse, he let fall, that “he knew the Colonel never would come to a trial,” — “that *he* knew this; but neither man, woman, nor child should know it, but those who knew it already.”

So Colonel George Talbot is out of the hands of the proud Lord Effingham, and up the Bay with his wife and friends; and is buffeting the wintry head-winds in a long voyage to the Elk River, which, in due time, he reaches in safety.

CHAPTER IX.

TROUBLES IN COUNCIL.

LET us now turn back to see what is doing at St. Mary’s.

On the 17th of February comes to the Council a letter from Lord Effingham. It has the superscription, “These, with the greatest care and speed.” It is dated on the 11th of February from Po-

ropotanck, an Indian point on the York River above Gloucester, and memorable as being in the neighborhood of the spot where, some sixty years before these events, Pocahontas saved the life of that mirror of chivalry, Captain John Smith.

The letter brings information "that last night [the 10th of February] Colonel Talbot escaped out of prison,"—a subsequent letter says, "by the corruption of his guard,"—and it is full of admonition, which has very much the tone of command, urging all strenuous efforts to recapture him, and particularly recommending a proclamation of "hue and cry."

And now, for a month, there is a great parade in Maryland of proclamation, and hue and cry, and orders to sheriffs and county colonels to keep a sharp look-out everywhere for Talbot. But no person in the Province seems to be anxious to catch him, except Mr. Nehemiah Blakiston, the Collector, and a few others, who seem to have been ministering to Lord Effingham's spleen against the Council for not capturing him. His Lordship writes several letters of complaint at the delay and ill success of this pursuit, and some of them in no measured terms of courtesy. "I admire," he says in one of these, "at any slow proceedings in service wherein his Majesty is so concerned, and hope you will take off all occasions of future trouble, both unto me and you, of this nature, by manifesting yourselves zealous for his Majesty's service." They answer, that all imaginable care for the apprehending of Talbot has been taken by issuing proclamations, etc.,—but all have proved ineffectual, because Talbot upon all occasions flies and takes refuge "in the remotest parts of the woods and deserts of this Province."

At this point we get some traces of Talbot. There is a deposition of Robert Kemble of Cecil County, and some other papers, that give us a few particulars by which I am enabled to construct my narrative.

Colonel Talbot got to his own house about the middle of February,—nearly at the same time at which the news of his

escape reached St. Mary's. He there lay warily watching the coming hue and cry for his apprehension. He collected his friends, armed them, and set them at watch and ward, at all his outposts. He had a disguise provided, in which he occasionally ventured abroad. Kemble met him, on the 19th of February, at George Oldfield's, on Elk River; and although the Colonel was disguised in a flaxen wig, and in other ways, Kemble says he knew him by hearing him cough in the night, in a room adjoining that in which Kemble slept. Whilst this witness was at Oldfield's, "Talbot's shallop," he says, "was busking and turning before Oldfield's landing for several hours." The roads leading towards Talbot's house were all guarded by his friends, and he had a report made to him of every vessel that arrived in the river. By way of more permanent concealment, until the storm should blow over, he had made preparations to build himself a cabin, somewhere in the woods out of the range of the thoroughfares of the district. When driven by a pressing emergency which required more than ordinary care to prevent his apprehension, he betook himself to the cave on the Susquehanna, where, most probably, with a friend or two,—Cornet Murray I hope was one of them,—he lay perdu for a few days at a time, and then ventured back to speak a word of comfort and encouragement to the faithful wife who kept guard at home.

In this disturbed and anxious alternation of concealment and flight Talbot passed the winter, until about the 25th of April, when, probably upon advice of friends, he voluntarily surrendered himself to the Council at St. Mary's, and was committed for trial in the provincial Court. The fact of the surrender was communicated to Lord Effingham by the Council, with a request that he would send the witnesses to Maryland to appear at his trial. Hereupon arose another correspondence with his Lordship, which is worthy of a moment's notice. Lord Effingham has lost nothing of his arro-

gance. He says, on the 12th of May, 1685, "I am so far from answering your desires, that I do hereby demand Colonel Talbot as my prisoner, in the King of England's name, and that you do forthwith convey him into Virginia. And to this my demand I expect your ready performance and compliance, upon your allegiance to his Majesty."

I am happy to read the answer to this insolent letter, in which it will be seen that the spirit of Maryland was waked up on the occasion to its proper voice. — It is necessary to say, by way of explanation to one point in this answer, that the Governor of Virginia had received the news of the accession and proclamation of James the Second, and had not communicated it to the Council in Maryland. The Council give an answer at their leisure, having waited till the 1st of June, when they write to his Lordship, protesting against Virginia's exercising any superintendence over Maryland, and peremptorily refusing to deliver Talbot. They tell him "that we are desirous and conclude to await his Majesty's resolution, [in regard to the prisoner,] which we question not will be agreeable to his Lordship's Charter, and, consequently, contrary to your expectations. In the mean time we cannot but resent in some measure, for we are willing to let you see that we observe, the small notice you seem to take of this Government, (contrary to that amicable correspondence so often promised, and expected by us,) in not holding us worthy to be advised of his Majesty's being proclaimed, without which, certainly, we have not been enabled to do our duty in that particular. Such advice would have been gratefully received by your Excellency's humble servants." Thanks, Colonels Darnall and Digges and you other Colonels and Majors, for this plain outspokening of the old Maryland heart against the arrogance of the "Right Honorable Lord Howard, Baron of Effingham, Captain General and Chief Governor of his Majesty's Colony of Virginia," as he styles himself! I am glad to see this change

of tone, since that first letter of obsequious submission.

Perhaps this change of tone may have had some connection with the recent change on the throne, in which the accession of a Catholic monarch may have given new courage to Maryland, and abated somewhat the confidence of Virginia. If so, it was but a transitory hope, born to a sad disappointment.

The documents afford but little more information.

Lord Baltimore, being in London, appears to have interceded with the King for some favor to Talbot, and writes to the Council on the third of July, "that it formerly was and still is the King's pleasure, that Talbot shall be brought over, in the Quaker Ketch, to England, to receive his trial there; and that, in order thereto, his Majesty had sent his commands to the Governor of Virginia to deliver him to Captain Allen, commander of said ketch, who is to bring him over." The Proprietary therefore directs his Council to send the prisoner to the Governor of Virginia, "to the end that his Majesty's pleasure may be fulfilled."

This letter was received on the 7th of October, 1685, and Talbot was accordingly sent, under the charge of Gilbert Clarke and a proper guard, to Lord Effingham, who gives Clarke a regular business receipt, as if he had brought him a hogshead of tobacco, and appends to it a short apologetic explanation of his previous rudeness, which we may receive as another proof of his distrust of the favor of the new monarch. "I had not been so urgent," he says, "had I not had advices from England, last April, of the measures that were taken there concerning him."

After this my chronicle is silent. We have no further tidings of Talbot. The only hint for a conjecture is the marginal note of "The Landholder's Assistant," got from Chalmers: "He was, I believe," says the note, "tried and convicted, and finally pardoned by James the Second."

This is probably enough. For I suppose him to have been of the same fam-

ily with that Earl of Tyrconnel equally distinguished for his influence with James the Second—as for his infamous life and character, who held at this period unbounded sway at the English Court. I hope, for the honor of our hero, that he preserved no family-likeness to that false-hearted, brutal, and violent favorite, who is made immortal in Macaulay's pages as Lying Dick Talbot. Through his intercession his kinsman may have been pardoned, or even never brought to trial.

CHAPTER X.

CONCLUSION.

THIS is the end of my story. But, like all stories, it requires that some satisfaction should be given to the reader in regard to the dramatic proprieties. We have our several heroes to dispose of. Phelim Murray and Hugh Riley, who had both been arrested by the Council to satisfy public opinion as to their complicity in the plot for the escape, were both honorably discharged,—I suppose being found entirely innocent! Roger Skreene swore himself black and blue, as the phrase is, that he had not the least suspicion of the business in which he was engaged; and so he was acquitted! I am also glad to be able to say that our gallant Cornet Murray, in the winding-up of this business, was promoted by the Council to a captaincy of cavalry, and put in command of Christiana Fort and its neighborhood, to keep that formidable Quaker, William Penn, at a respectful distance. It would gratify me still more, if I could find warrant to add, that the Cornet enjoyed himself, and married the lady of his choice, with whom he has, unknown to us, been violently in love during these adventures, and that they lived happily together for many years. I hope this was so,—although the chronicle does not allow one to affirm it,—it being but a proper conclusion to such a romance as I have plucked out of our history.

And so I have traced the tradition of the Cave to the end. What I have been able to certify furnishes the means of a

shrewd estimate of the average amount of truth which popular traditions generally contain. There is always a fact at the bottom, lying under a superstructure of fiction,—truth enough to make the pursuit worth following. Talbot did not live in the Cave, but fled there occasionally for concealment. He had no hawks with him, but bred them in his own mews on the Elk River. The birds seen in after times were some of this stock, and not the solitary pair they were supposed to be. I dare say an expert naturalist would find many specimens of the same breed now in that region. But let us not be too critical on the tradition, which has led us into a quest through which I have been able to supply what I hope will be found to be a pleasant insight into that little world of action and passion,—with its people, its pursuits, and its gossips,—that, more than one hundred and seventy years ago, inhabited the beautiful banks of St. Mary's River, and wove the web of our early Maryland history.

POSTSCRIPT.

I HAVE another link in the chain of Talbot's history, furnished me by a friend in Virginia. It comes since I have completed my narrative, and very accurately confirms the conjecture of Chalmers, quoted in the note of "The Landholder's Assistant." "As for Colonel Talbot, he was conveyed for trial to Virginia, from whence he made his escape, and, after being retaken, and, *I believe*, tried and convicted, was finally pardoned by King James II." This is an extract from the note. It is now ascertained that Talbot was not taken to England for trial, as Lord Baltimore, in his letter of the 6th of July, 1685, affirmed it was the King's pleasure he should be; but that he was tried and convicted in Virginia on the 22d of April, 1686, and, on the 26th of the same month, reprieved by order of the King; after which we may presume he received a full pardon, and perhaps was taken to England in obedience to the royal command, to await it there. The conviction and reprieve are recorded in

a folio of the State Records of Virginia at Richmond, on a mutilated and scarcely legible sheet,—a copy of which I present to my reader with all its obliterations and broken syllables and sad gashes in the text, for his own deciphering. The MS. is in keeping with the whole story, and may be looked upon as its appropriate emblem.

The story has been brought to light by chance, and has been rendered intelligible by close study and interpretation of

fragmentary and widely separated facts, capable of being read only by one conversant with the text of human affairs, and who has the patience to grope through the trackless intervals of time, and the skill to supply the lost words and syllables of history by careful collation with those which are spared. How faithfully this accidentally found MS. typifies such a labor, the reader may judge from the literal copy of it I now offer to his perusal.

“By his Excellency

“Whereas his most Sacred Majesty has been Graciously pleased by his Royall Com'ands to Direct and Com'and Me ffrancis Lord Howard of Effingham his Majties Lieut and Govr. Gen^l. of Virginia that if George Talbott Esq^r. upon his Tryall should be found Guilty of Killing M^r Christopher Rowsby, that Execution should be suspended untill his Majesties pleasure should be further signified unto Me; And forasmuch as the sd George Talbott was Indicted upon the Statute of Stabbing and hath Received a full and Legall Tryall in open Court on ye Twentieth and One and Twentieth dayes of this Instant Aprill, before his Majesties Justices of Oyer and Terminer, and found Guilty of ye aforesaid fact and condemned for the Same, I, therefore, ffrancis Lord Howard, Baron of ftingham, his Majesties Lieut and Govr. Gen^l. of Virginia, by Virtue of ^{ajties} Royall Com'ands to Me given there doe hereby Suspend ^{tion of the} Sentence of death ^{his Majties Justices} Terminer on the ^{till his Majesties} herein be ^{nor any} fail as yo ^{uttmmost} and for y^r soe doing this sh

PRINCE ADEB.

IN Sana, oh, in Sana, God, the Lord,
Was very kind and merciful to me !
Forth from the Desert in my rags I came,
Weary and sore of foot. I saw the spires
And swelling bubbles of the golden domes
Rise through the trees of Sana, and my heart
Grew great within me with the strength of God ;
And I cried out, " Now shall I right myself,—
I, Adeb the Despised,— for God is just !"
There he who wronged my father dwelt in peace,—
My warlike father, who, when gray hairs crept
Around his forehead, as on Lebanon
The whitening snows of winter, was betrayed
To the sly Imam, and his tented wealth
Swept from him, 'twixt the roosting of the cock
And his first crowing,— in a single night :
And I, poor Adeb, sole of all my race,
Smeared with my father's and my kinsmen's blood,
Fled through the Desert, till one day a tribe
Of hungry Bedouins found me in the sand,
Half mad with famine, and they took me up,
And made a slave of me,— of me, a prince !
All was fulfilled at last. I fled from them,
In rags and sorrow. Nothing but my heart,
Like a strong swimmer, bore me up against
The howling sea of my adversity.
At length o'er Sana, in the act to swoop,
I stood like a young eagle on a crag.
The traveller passed me with suspicious fear :
I asked for nothing ; I was not a thief.
The lean dogs snuffed around me : my lank bones,
Fed on the berries and the crusted pools,
Were a scant morsel. Once, a brown-skinned girl
Called me a little from the common path,
And gave me figs and barley in a bag.
I paid her with a kiss, with nothing more,
And she looked glad ; for I was beautiful,
And virgin as a fountain, and as cold.
I stretched her bounty, pecking, like a bird,
Her figs and barley, till my strength returned.
So when rich Sana lay beneath my eyes,
My foot was as the leopard's, and my hand
As heavy as the lion's brandished paw ;
And underneath my burnished skin the veins
And stretching muscles played, at every step,
In wondrous motion. I was very strong.
I looked upon my body, as a bird
That bills his feathers ere he takes to flight,—

I, watching over Sana. Then I prayed;
 And on a soft stone, wetted in the brook,
 Ground my long knife; and then I prayed again.
 God heard my voice, preparing all for me,
 As, softly stepping down the hills,
 I saw the Imam's summer-palace all ablaze
 In the last flash of sunset. Every fount
 Was spouting fire, and all the orange-trees
 Bore blazing coals, and from the marble walls
 And gilded spires and columns, strangely wrought,
 Glared the red light, until my eyes were pained
 With the fierce splendor. Till the night grew thick,
 I lay within the bushes, next the door,
 Still as a serpent, as invisible.
 The guard hung round the portal. Man by man
 They dropped away, save one lone sentinel,
 And on his eyes God's finger lightly fell;
 He slept half standing. Like a summer wind
 That threads the grove, yet never turns a leaf,
 I stole from shadow unto shadow forth;
 Crossed all the marble court-yard, swung the door,
 Like a soft gust, a little way ajar, —
 My body's narrow width, no more, — and stood
 Beneath the cresset in the painted hall.
 I marvelled at the riches of my foe;
 I marvelled at God's ways with wicked men.
 Then I reached forth, and took God's waiting hand:
 And so He led me over mossy floors,
 Flowered with the silken summer of Shirar,
 Straight to the Imam's chamber. At the door
 Stretched a brawn eunuch, blacker than my eyes:
 His woolly head lay like the Kaba-stone
 In Mecca's mosque, as silent and as huge.
 I stepped across it, with my pointed knife
 Just missing a full vein along his neck,
 And, pushing by the curtains, there I was, —
 I, Adeb the Despised, — upon the spot
 That, next to heaven, I longed for most of all.
 I could have shouted for the joy in me.
 Fierce pangs and flashes of bewildering light
 Leaped through my brain and danced before my eyes.
 So loud my heart beat that I feared its sound
 Would wake the sleeper; and the bubbling blood
 Choked in my throat, till, weaker than a child,
 I reeled against a column, and there hung
 In a blind stupor. Then I prayed again;
 And, sense by sense, I was made whole once more.
 I touched myself; I was the same; I knew
 Myself to be lone Adeb, young and strong,
 With nothing but a stride of empty air
 Between me and God's justice. In a sleep,
 Thick with the fumes of the accursed grape,

Sprawled the false Imam. On his shaggy breast,
Like a white lily heaving on the tide
Of some foul stream, the fairest woman slept
These roving eyes have ever looked upon.
Almost a child, her bosom barely showed
The change beyond her girlhood. All her charms
Were budding, but half opened; for I saw
Not only beauty wondrous in itself,
But possibility of more to be
In the full process of her blooming days.
I gazed upon her, and my heart grew soft,
As a parched pasture with the dew of heaven.
While thus I gazed, she smiled, and slowly raised
The long curve of her lashes; and we looked
Each upon each in wonder, not alarm, —
Not eye to eye, but soul to soul, we held
Each other for a moment. All her life
Seemed centred in the circle of her eyes.
She stirred no limb; her long-drawn, equal breath
Swelled out and ebbed away beneath her breast,
In calm unbroken. Not a sign of fear
Touched the faint color on her oval cheek,
Or pinched the arches of her tender mouth.
She took me for a vision, and she lay
With her sleep's smile unaltered, as in doubt
Whether real life had stolen into her dreams,
Or dreaming stretched into her outer life.
I was not graceless to a woman's eyes.
The girls of Damar paused to see me pass,
I walking in my rags, yet beautiful.
One maiden said, "He has a prince's air!"
I am a prince; the air was all my own.
So thought the lily on the Imam's breast;
And lightly as a summer mist, that lifts
Before the morning, so she floated up,
Without a sound or rustle of a robe,
From her coarse pillow, and before me stood
With asking eyes. The Imam never moved.
A stride and blow were all my need, and they
Were wholly in my power. I took her hand,
I held a warning finger to my lips,
And whispered in her small expectant ear,
"Adeb, the son of Akem!" She replied
In a low murmur, whose bewildering sound
Almost lulled wakeful me to sleep, and sealed
The sleeper's lids in tenfold slumber, "Prince,
Lord of the Imam's life and of my heart,
Take all thou seest, — it is thy right, I know, —
But spare the Imam for thy own soul's sake!"
Then I arrayed me in a robe of state,
Shining with gold and jewels; and I bound
In my long turban gems that might have bought

The lands 'twixt Babelmandeb and Sahan.
I girt about me, with a blazing belt,
A scimitar o'er which the sweating smiths
In far Damascus hammered for long years,
Whose hilt and scabbard shot a trembling light
From diamonds and rubies. And she smiled,
As piece by piece I put the treasures on,
To see me look so fair, — in pride she smiled.
I hung long purses at my side. I scooped,
From off a table, figs and dates and rice,
And bound them to my girdle in a sack.
Then over all I flung a snowy cloak,
And beckoned to the maiden. So she stole
Forth like my shadow, past the sleeping wolf
Who wronged my father, o'er the woolly head
Of the swart eunuch, down the painted court,
And by the sentinel who standing slept.
Strongly against the portal, through my rags, —
My old, base rags, — and through the maiden's veil,
I pressed my knife, — upon the wooden hilt
Was "Adeb, son of Akem," carved by me
In my long slavehood, — as a passing sign
To wait the Imam's waking. Shadows cast
From two high-sailing clouds upon the sand
Passed not more noiseless than we two, as one,
Glided beneath the moonlight, till I smelt
The fragrance of the stables. As I slid
The wide doors open, with a sudden bound
Uprose the startled horses; but they stood
Still as the man who in a foreign land
Hears his strange language, when my Desert call,
As low and plaintive as the nested dove's,
Fell on their listening ears. From stall to stall,
Feeling the horses with my groping hands,
I crept in darkness; and at length I came
Upon two sister mares, whose rounded sides,
Fine muzzles, and small heads, and pointed ears,
And foreheads spreading 'twixt their eyelids wide,
Long slender tails, thin manes, and coats of silk,
Told me, that, of the hundred steeds there stalled,
My hand was on the treasures. O'er and o'er
I felt their long joints, and down their legs
To the cool hoofs; — no blemish anywhere:
These I led forth and saddled. Upon one
I set the lily, gathered now for me, —
My own, henceforth, forever. So we rode
Across the grass, beside the stony path,
Until we gained the highway that is lost,
Leading from Sana, in the eastern sands:
When, with a cry that both the Desert-born
Knew without hint from whip or goading spur,
We dashed into a gallop. Far behind

In sparks and smoke the dusty highway rose ;
 And ever on the maiden's face I saw,
 When the moon flashed upon it, the strange smile
 It wore on waking. Once I kissed her mouth,
 When she grew weary, and her strength returned.
 All through the night we scoured between the hills :
 The moon went down behind us, and the stars
 Dropped after her ; but long before I saw
 A planet blazing straight against our eyes,
 The road had softened, and the shadowy hills
 Had flattened out, and I could hear the hiss
 Of sand spurned backward by the flying mares. —
 Glory to God ! I was at home again !
 The sun rose on us ; far and near I saw
 The level Desert ; sky met sand all round.
 We paused at midday by a palm-crowned well,
 And ate and slumbered. Somewhat, too, was said :
 The words have slipped my memory. That same eve
 We rode sedately through a Hamoum camp, —
 I, Adeb, prince amongst them, and my bride.
 And ever since amongst them I have ridden,
 A head and shoulders taller than the best ;
 And ever since my days have been of gold,
 My nights have been of silver. — God is just !

ELEUSINIA.*

THE SAVIOURS OF GREECE.

LIFE, in its central idea, is an entire and eternal solitude. Yet each individual nature so repeats — and is itself repeated in — every other, that there is insured the possibility both of a world-revelation in the soul, and of a self-incarnation in the world ; so that every man's life, like Agrippa's mirror, reflects the universe, and the universe is made the embodiment of his life, — is made to beat with a human pulse.

We do all, therefore, — Hindu, Egyptian, Greek, or Saxon, — claim kinship both with the earth and the heavens : with the sense of sorrow we kneel upon the earth, with the sense of hope we look into the heavens.

The two Presences of the Eleusinia, —

* See Number XXIII., September, 1859.

the earthly Demeter,* the embodiment of human sorrow, and the heavenly Dionysus,† the incarnation of human hope, — these are the two Great Presences of the Universe ; about whom, as separate centres, — the one of measureless wanderings, the other of triumphant rest, — we marshal, both in the interpretations of Reason and in the constructions of our Imagination, all that is visible or that is invisible, — whatsoever is palpable in sense or possible in idea, in the world which is or the world to come. Incarnations of the life within us, in its two developments of Sorrow and Hope, — they are also the centres through which this life develops itself in the world : it is through them that all things have their genesis

* Demeter is Γῆ-μήτηρ, Mother Earth.

† The same as Iacchus and the Latin Bacchus.

from the human heart, and through them, therefore, that all things are unveiled to us.

But these Two Presences have their highest interest and significance as *foci* of the religious development of the race: and inasmuch as all growth is ultimately a religious one, it is in this phase that their organic connections with life are widest and most profound. As such they appear in the Eleusinia; and in all mythology they furnish the only possible key for the interpretation of its mystic symbolism, its hieroglyphic records, and its ill-defined traditions.

Accordingly we find that all mythology naturally and inevitably flows about these centres into two distinct developments, which are indicated,—

1. In Nature; inasmuch as they are first made manifest through symbols which point to the two great forces, the *active* and the *passive*, which are concerned in all natural processes (*sol et terra subjacens soli*); and,

2. In the primitive belief among all nations, that men are the offspring of the earth and the heavens,—and in the worship equally prevalent of the sun, the personal Presence of the heavens, as Saviour Lord, and of the earth as sorrowing Lady and Mother.

Why the earth, in this primitive symbolism and worship, was represented as the Sorrowing One, and the sun as Saviour, is evident at a glance. It was the bosom of the earth which was shaken with storm and rent with earthquake. She was the Mother, and hers was the travail of all birth; in sorrow she forever gathered to herself her Fate-conquered children; her sorrowful countenance she veiled in thick mists, and, year after year, shrouded herself in wintry desolation: while he was the Eternal Father, the Revealer of all things, he drove away the darkness, and in his presence the mist became an invisible exhalation; and, as out of darkness and death, he called into birth the flowers and the numberless forests,—even as he himself was every morning born anew out of darkness,—so he called the children of the earth to a

glorious rising in his light. Everything of the earth was inert, weighing heavily upon the sense and the heart, only waiting its transfiguration and exaltation through his power, until it should rise into the heavens; which was the type of his translation to himself of his grief-oppressed children.

Under these symbols our Lord and Lady have been worshipped by an overwhelming majority of the human race. They swayed the ancient world, from the Indians by the Ganges, and the Tartar tribes, to the Britons and Laplanders of Northwestern Europe,—having their representatives in every system of faith,—in the Hindu *Isi and Isana*, the Egyptian *Isis and Osiris*, the Assyrian *Venus and Adonis*, the *Demeter and Dionysus* of Greece, the Roman *Ceres and Bacchus*, and the *Disa and Frey* of Scandinavia,—in connection with most, if not all, of whom there existed festivals corresponding, in respect of their meaning and use, with the Grecian Eleusinia.

Moreover, the various divinities of any one mythology—for example, the Greek—were at first only representatives of partial attributes or incidental functions of these Two Presences. Thus, Jove was the power of the heavens, which, of course, centred in the sun; Apollo is admitted to have been only another name for the sun; Æsculapius represents his healing virtues; Hercules his saving strength; and Prometheus, who gave fire to men, as Vulcan, the god of fire, was probably connected with Eastern fire-worship, and so in the end with the worship of the sun. Some of the goddesses come under the same category,—such as Juno, sister and wife of Jove, who shared with him his aerial dynasty; as also Diana, who was only the reflection of Apollo,* as the moon of the sun, carrying his power on

* This connection of Diana with Apollo has led some to the hasty inference, that the sun and moon—not the sun and earth—were the primitive centres of mythological symbolism. But it is plain that the sun and moon, as *active* forces referable to a single centre, stood over against the earth as *passive*.

into the night, and exercising among women the functions which he exercised among men. The representatives of our Lady, on the other hand, are such as the ancient Rhea, — Latona, with her dark and starry veil, — Tethys, the world-nurse, — and the Artemis of the East, or Syrian Mother; to say nothing of Oreads, Dryads, and Nereids, that without number peopled the mountains, the forests, and the sea.

The confusion of ancient mythology did not so much regard its subjective elements as its external development, and even here is easily accounted for by the mingling of tribes and nations, hitherto isolated in their growth, — but who, as they came together, in their mutual recognition of a common faith under different names and rites, must inevitably have introduced disorder into the external symbolism. But even out of this confusion we shall find the whole Pantheon organized about two central shrines, — those of the *Mater Dolorosa* and the *Dominus Salvator*, — which are represented also in Christendom, though detached from natural symbols, in the connection of Christianity with the worship of the Virgin.

The Eleusinia, collecting together, as it did, all the prominent elements of mythology, furnishes, in its dramatic evolution through Demeter and Dionysus, the highest and most complete representation of ancient faith in both of its developments. In a former paper, we have endeavored to give this drama its deepest interpretation by pointing to the human heart as the central source of all its movements. We shall now ask our readers to follow us out into these movements themselves, — that, as before we saw how the world is centred in each human soul, we may now see how each soul develops itself in the world; for thither it is that the ever-widening cycles of the Eleusinian epos will inevitably lead us.

And first as an epos of sorrow: though centring in the earthly Demeter, yet its movement does not limit itself by the

remembrance of *her* nine days' search; but, in the torch-light procession of the fifth night, widens indefinitely and mysteriously in the darkness, until it has inclosed all hearts within the circuit of its tumultuous flight. Thus, by some secret sympathy with her movements, are gathered together about the central Achtheia all the *Matres Dolorosæ*, — our Ladies of Sorrow; — for, like her, they were all wanderers.

They were so by necessity. All unrest involves loss, and thus leads to search. It matters not if the search be unsuccessful; though the gadfly sting as sharply the next moment as it did the last, still so must continue her wanderings. Therefore that Jew, whose mythic fate it is to wait forever upon the earth, the victim of an everlasting sorrow, is also an everlasting wanderer. All suffering necessitates movement, — and when the suffering is intense, the movement passes over into flight.

Therefore it is that the epos of suffering requires not merely time for its accomplishment, but also space. Ulysses, the "much-suffering," is also the "much-wandering."

Thus our Lady in the Eleusinian procession of search represents the restless search of all her children.

Migrations and colonizations, ancient or modern, — what were they but flights from some phase of suffering, — name it as we may, — poverty, oppression, or slavery? It was the same suffering Io who brought civilization to the banks of the Nile.

Thus, from the very beginnings of history or human tradition, out of the severities of Scythian deserts there has been an endless series of flights, — nomadic invasions of tribes impelled by no merely barbarian impulse, but by some deep sense of suffering, flying from their Northern wastes to the happy gardens of the South. In no other way can you account for these movements. If you attribute them to ferocity, what was it that engendered and nourished *that*? Call them the results of a Divine Provi-

dence, seeking by a fresher current of life to revive systems of civilization which through long ages of luxury have come to frailty,—still it was through this severity of discipline alone that Providence accomplished its end. Besides, these nomads were fully conscious of their bitter lot; and those who fled not in space fled at least in their dreams,—waiting for death at last to introduce them to inexhaustible hunting-grounds in their happy Elysium.

The very mention of Rome suggests the same continually repeated series of antecedent tragedy and consequent wandering,—pointing backward to the fabled siege of Troy and the flight of Æneas,—“*profugus*” from Asia to Italy,—and forward to the quick-coming footsteps of the Northern *profugi*, who were eager, even this side the grave, to enter the Valhalla of their dreams.

It is said that the Phœnician cities sent out colonies from a desire of gain, and because they were crowded at home. It is said, too, that, in search of gold, thousands upon thousands went to El Dorado, to California, and Australia; but who does not know that the greater part of these thousands left their homes for reasons which, if fully exposed, would reveal a tragedy in view of which gold appears a glittering mockery?

The great movement of the race westward is but an extension of this epic flight. Thus, the Pilgrim Fathers of New England,—the grandest *profugi* of all time,—or even the bold adventurers of Spain, would have been moved only by intense suffering, in some form, to exchange their homes for a wilderness.

The world is full of these wanderings, under various pretences of gain, adventure, or curiosity, hiding the real impulse of flight. So with the strong-flowing current in the streets of a great city; for how else shall we interpret this intricate net-work of human feature and movement,—this flux of life toward some troubled centre, and then its reflux toward some uncertain and undefined circumference?

And as Nature is the mirror of human life, so at the source of those vast movements by which she buries in oblivion her own works and the works of man there is hidden the type of human suffering, both for the race and the individual. And hence it is, that, over against the eternal solitude within us, there ever waits without us a second solitude, into which, sooner or later, we pass with restless flight,—a solitude vast, shadowy, and unfamiliar in its outline, but inevitable in its reality,—haunting, bewildering, overshadowing us!

“Who is it that shall interpret this intricate evolution of human footsteps, in its meaning of sorrow?—who is it that shall give us rest?” Such is the half-conscious prayer of all these fugitives,—of our Lady and all her children. This it is which gives meaning to the torch-light procession on the fifth night of the Festival; but to-morrow it shall find an answer in the Saviour Dionysus, who shall change the flight of search into the pomp of triumph.

But let us pause a moment. It is Palm Sunday! We are not, indeed, in Syria, the land of palms. Yet, even here,—lost in some far-reaching avenue of pines, where one could hardly walk upon a summer Sunday without such sense of joy as would move him to tears,—even here all the movements of the earth and the heavens hint of most jubilant triumph. Thus, the green grass rises above the dead grass at our feet; the leaf-buds new-born upon the tree, like lotus-buds springing up from Ethiopian marble, give token of resurrection; the trees themselves tower heavenward; and in victorious ascension the clouds unite in the vast procession, dissolving in exhalation at the “gates of the sun”; while from unnumbered choirs arise songs of exultant victory from the hearts of men to the throne of God!

But whither, in divine remembrance,—whither is it that upon this Sunday of all Sundays the thoughts of Christen-

dom point? Back through eighteen hundred years to the triumphant entry of Jesus into Jerusalem, followed by the children crying, "Hosanna in the highest heavens!" Of this it is that the processions of Nature, in the resurrections of birth and the aërial ascension of clouds, — of this that the upward processions of our thoughts are commemorative!

Thus was the sixth day of the Eleusinia, — when the ivy-crowned Dionysus was borne in triumph through the mystic entrance of Eleusis, and from the Eleusinian plains, as from our choirs to-day, ascended the jubilant Hosannas of the countless multitude; — this was the Palm Sunday of Greece.

Close upon the chariot-wheels of the Saviour Dionysus followed, in the faith of Greece, Æsculapius and Hercules: the former the Divine Physician, whose very name was healing, and who had power over death, as the child of the Sun; and the latter, who by his saving strength delivered the earth from its Augean impurities, and, arrayed in celestial panoply, subdued the monsters of the earth, and at last, descending to Hades, slew the three-headed Cerberus and took away from men much of the fear of death. Such was the train of the Eleusinian Dionysus. If Demeter was the wanderer, he was the conqueror and centre of all triumph.

And this reminds us of his Indian conquest. What did it mean? Admit that it may have been only the fabulous march in triumph of some forgotten king of mortal birth to the farthest limits of the East. Still the fact of its association with Dionysus stands as evidence of the connection of human faith with human victory. Let it be that Dionysus himself was only the apotheosis of victorious humanity. In strict logic this is more than probable. Yet why apotheosize conquerors at all? Why exalt all heroes to the rank of gods?

The reason is, that men are unwilling to draw a limited meaning from any human act. How could they, then, connect-

ing, as they did, all victory with hope, — how could they fall short of the most exalted hope, of the most excellent victory; especially in instances like the one now under our notice, where the material circumstances of the conquest as well as of the conqueror's life have passed out of remembrance; when for generations men have dwelt upon the dim tradition in their thoughts, and it has had time to grow into its fullest significance, — even finding an elaborate expression in sacred writings, in symbolic ritual, and monumental entablature? Osiris, who subjected men to his reign of peace, was also held to be the Preserver of their souls. Even Cæsar, had he lived two thousand years before, might have been worshipped as Saviour. All extended power, measured by duration in time or vast areas of space, becomes an incarnate Presence in the world, which awes to the dust all who resist it, and exalts with its own glory all who trust in it. Achtheia mourns all failures; and here it is that the human touches the earth. But they who conquer, these are our Saviours; they shall follow in the train of Dionysus; they shall lift us to the heavens, and sanctify in our remembrance the Sunday of Palms!

But Dionysus not only looks back with triumphant remembrance to ancient conquest, but has his victories in the present, also, and in the great Hereafter. For triumph was connected with all Dionysiac symbols, hints of which are preserved to us in representations found upon ancient vases: such, for instance, as the figure of Victory surmounting the heads of the ivy-crowned Bacchantes in their mystic orgies; or the winged serpents which bear the chariot of the victor-god, — as if in this connection even the reptiles, whose very name (*serpentes*) is a synonyme for what creeps, are to be made the ministrants of his conquering flight. The tombs of the ancients from Egypt to Etruria are full of these symbols. Many of them have become dim as to their meaning by oblivious time; but enough is evident to indicate the prominence of hope in ancient faith. This appears in the very

multiplicity of Dionysiac symbols as compared with any other class. Thus, out of sixty-six vases at Polignano, all but one or two were found to be Dionysiac in their symbolism. And this instance stands for many others. The *character* of the scenes represented indicates the same prominence of hope, sometimes as connected with the relations of life, — as, for example, the representation, found upon a sepulchral cone, of a husband and wife uniting with each other in prayer to the Sun. Frequent inscriptions — such as those in which the deceased is carefully committed to Osiris, the Egyptian Dionysus — point in the same direction; as also the genii who presided over the embalmed dead, a belief in whose existence surely indicated a hopeful trust in some divine care which would not leave them even in the grave. Statues of Osiris are found among the ruins of palaces and temples; but it was in the monuments associated with death that they dwelt most upon his name and expressed their faith in most frequent incarnation and inscription.

The epic movement of Eleusinian triumph was in its range as unlimited as the movement of sorrow. Each found expression in sculptured monument, — the one hinting of flight into darkness, and the other of resurrection into light; each in its cycle inclosed the world; each widened into the invisible; as the wail of Achtheia reached the heart of Hades, so the pæan of Dionysus was lost in the heavens.

But in what manner did this Dionysus make his *avatar* in the world? For he must needs have first touched the earth as human child, ere he could be worshipped as Divine Saviour. Latona must leave the heavens and come to Delos ere she can give birth to Apollo; for, in order to slay the serpent, the child must himself be earth-born, — indeed, according to one representation, he slew the Python out of his mother's arms. Neither the serpent of Genesis nor the dragon of Revelation can be conquered

save by the seed of the woman. From this necessity of his earthly birth, the connection of the Saviour-Child with the *Mater Dolorosa* becomes universal, — finding its counterpart in the Assyrian Venus with babe in arm, in Isis suckling the child Horus, and even in the Scandinavian Disa at Upsal accompanied by an infant. It is from swaddling-clothes, as the nursling of our Lady, and out of the sorrowful discipline of earth, that the child grows to be the Saviour, both for our Lady and for all her children.

Hence, according to the tradition, Dionysus was born of Semele of the royal house at Thebes; and Jove was his father. A little before his time of birth, — so the story goes, — Jove visited Semele, at her own rash request, in all the majesty of his presence, with thunderings and lightnings, so that the bower of the virgin mother was laid in ruins, and she herself, unable to stand before the revealed god, was consumed as by fire. But Jove out of her ashes perfected the birth of his son; whence he was called the Child of Fire, (*πυρίπαις*,) — which epithet, as well as this part of the fable, probably points to his connection with the Oriental symbolism of fire in the worship of the Sun.

And it is worth while, in connection with this, to notice the gradations by which in the ancient mind everything ascended from the gross material to a refined spirituality. As in Nature there was forever going on a subtilizing process, so that

“ from the root
Springs lighter the green stalk, from thence
the leaves
More æëry, last the bright consummate flower
Spirits odorous breathes,” —

and as, in their philosophy, from the earth, as the principle of Nature, they ascended through the more subtile elements of water, air, and fire, to a spiritual conception of the universe; so, as regards their faith, its highest incarnation was through the symbolism of fire, as representative of that central Power under whose influence all things arose through endless grades of exaltation to Himself, — so that

the earthly rose into the heavenly, and all that was human became divine.

The enthusiasm of victory and exaltation in the worship of Dionysus tended of course to connect with him whatsoever was joyous and jubilant in life. He was the god of all joy. Hence the fable which makes him the author and giver of wine to men. Wherever he goes, he is surrounded by the clustering vine and ivy, hinting of his summer glory and of his kingly crown. Thus, the line of his conquests leads through the richest fields of Southern Asia, — through the incense-breathing Arabia, across the Euphrates and the Tigris, and through the flowery vales of Cashmere to the Indian garden of the world: and as from sea to sea he establishes his reign by bloodless victories, he is attended by Fauns and Satyrs and the jovial Pan; wine and honey are his gifts; and all the earth is glad in his gracious presence. Hence he was ever associated with Oriental luxuriance, and was worshipped even among the Greeks with a large infusion of Oriental extravagance, though tempered by the more subdued mood of the West.

But that depth of Grecian genius, which made it possible for Greece alone of all ancient nations to develop tragedy to anything like perfection, insured also even in the most impassioned life the most profound solemnity. Into the praises of Apollo, joyous as they were, — where, to the exultant anthem was joined the evolution of the dance beneath the vaulted sky, as if in his very presence, — for the sun was his shechinah, — there enters an element of solemnity, which, in certain connections, is almost overwhelming: as, for instance, in the first book of the "Iliad," — where, after the pestilence which has sent up an endless series of funeral pyres, — after the strife of heroes and the return of Chryseis to her father, the priest of the angry Apollo, — after the feast and the libation from the wine-crowned cups, there follow the *apotropæa*, and the Grecian youths unite in the song and the dance, which last, both the joyous pæan and the tread of exultant feet, until the

setting sun. I know of nothing which to an equal degree suggests this element of solemnity, that is almost awe-inspiring from its depth, short of the jubilant procession of saints, in the Apocalypse, with palms in their hands.

This element is also evident in the worship of Dionysus, — so that the inspiration of joy must not be taken for the frenzy of intoxication, though the symbol of the vine has often led to just this misapprehension. Besides, Dionysus must not be too closely identified with the Bacchanalian orgies, which were only a perversion of rites which retained their original purity in the Eleusinia: and this latter institution, it must be remembered, was from the first under the control of the state, — and that state at the time the most refined on the face of the earth.

Surely, it is not more difficult to give a pure and spiritual significance to a vintage-festival or to the symbolic wine-cup of Dionysus, than in the rhapsodies of a Persian or Hindu poet to symbolize the attraction between the Divine Goodness and the human soul by the loves of Laili and Majnum, or of Crishna and Radha, — to say nothing of the exalted symbolism attached to the love of Solomon for his Egyptian princess, and sanctioned by the most delicate taste.

Indeed, is it not true that whatsoever is most sensuous in connection with human joy, and at the same time pure, is the very flower of life, and therefore the most consummate revelation of holiness? Nothing in Nature is so intensely solemn as her summer, in its infinite fullness of growth and the unmeasured altitude of its heavens. And within the range of human associations which shall we select as revealing the most profound solemnity? Surely not the sight of the funeral train, nor of the urn crowned with cypress, — of nothing which is associated with death or weakness in any shape; — but the sight of gayest festivals, or the paraphernalia of palace-halls, — the vision of some youthful maiden of transcendent beauty crowned with an orange-wreath, within hearing of marriage-bells

and the whisperings of holy love,— or the aspirations of the dance and the endless breathings of triumphant music. These are they which come up most prominently in remembrance,— even as the whole race, in its remembrances, instinctively looks back to the Orient,— to some Homeric island of the morning, where are the palaces, the choral dances, and the risings of the sun.* And as Memory has the power to purify the past of all material grossness, Faith has the same power as regards the present. Hence, the closest connection of religious faith with the most joyous festivals, with a finely moulded Venus or Apollo, with an Ephesian temple or a splendid cathedral, or the sweetest symphonies of music, does not mar, but reveals its natural beauty and strength.

But most certainly the Greeks gave a profound spiritual meaning to the Eleusinia, as also to the mystic connection of Demeter with Dionysus. She gave them bread: but they never forgot that she gave them the bread of life. "She gave us," says the ancient Isocrates, "two gifts that are the most excellent: fruits, that we might not live like beasts; and that initiation, those who have part in which have sweeter hope,— both as regards the close of life, and for all eternity." So Dionysus gave them wine, not only to lighten the cares of life, but as a token, moreover, of efficient deliverance from the fear of death, and of the higher joy which he would give them in some happier world. And thus it is, that, from the earliest times and in all the world, bread and wine have been symbols of sacramental significance.

Human life so elevates all things with its exaltation and clothes them with its glory, that nothing vain, nothing trifling, can be found within its range. He who opposes himself to a single fact thus of necessity opposes himself to the whole onward and upward current, and must fall. We have heard of Thor, who with his magic mallet and his two celestial comrades went to Jötunheim in quest of

adventures: and we remember the goblet which he could not exhaust because of its mysterious connection with the inexhaustible Sea; the race with Hugi, which in the end proved to be a race with Thought; and the wrestle with the old nurse Elli, who was no other than Time herself, and therefore irresistible. So do we all get us mallets ingeniously forged by the dark elves;— we try a race with human thought, and look vainly to come out ahead; we laugh at things because they are old, but with which we struggle to no purpose; and the cup which we confidently put to our lips has no bottom;— in fact, the great world of Jötunheim has grown for so long a time and so widely that it is quite too much for us,— and its tall people, though we come down upon them, like Thor and his companions, from celestial heights, are too stout for our mallet.

Nothing human is so insignificant, but that, if you will give it time and room, it will become irresistible. The *plays* of men become their *dramas*; their holidays change to holy days. The representations, through which, under various names, they have repeated to themselves the glory and the tragedy of their life,— old festivals once celebrated in Egypt far back beyond the dimmest myths of human remembrance,— the mystic drama of the Eleusinia, which we have been considering in its overwhelming sorrow developed in hurried flight, and its lofty hope through triumphal pomp and the significant symbolism of resurrection,— the epos and the epic rhapsodies,— the circus and the amphitheatre,— and even the impetuous song and dance of painted savages,— all these, which at first we may pass by with a glance, have for our deeper search a meaning which we can never wholly exhaust. Let it be that they have grown from feeble beginnings, they have grown to gigantic dimensions; and not their infantile proportions, but their fullest growth is to be taken as the measure of their strength,— if, indeed, it be not wholly immeasurable.

Upon some day, seemingly by chance,

* *Odyssey*, xii., 4.

but really having its antecedent in the remotest antiquity, a company of men participate in some simple act,—of sacrifice, it may be, or of amusement. Now that act will be reiterated.

“Quod semel dictum est stabilisque rerum
Terminus servet.”

The subtle law of repetition, as regards the human will, is as sure in Determination as it is in Consciousness. Habit is as inevitable as Memory; and as nothing can be forgotten, but, when once known, is known forever,—so nothing is done but will be done again. Lethe and Annihilation are only myths upon the earth, which men, though suspicious of their eternal falsehood, name to themselves in moments of despair and fearful apprehension. The poppy has only a fabled virtue; but, like Persephone, we have all tasted of the pomegranate, and must ever to Hades and back again; for while death and oblivion only *seem* to be, remembrances and resurrections there must be, and without end. Therefore this before-mentioned act of sacrifice or amusement will be reiterated at given intervals; about it, as a centre, will be gathered all the associations of intense interest in human life; and the names connected with its origin—once human names upon the earth—will pass upon the stars, so that the *nomina* shall have changed to *numina*, and be taken upon the lips with religious awe. So it was with these old festivals,—so with all the representations of human life in stone or upon the canvas, in the fairy-tale, the romance, and the poem; at every successive repetition, at every fresh resurrection, is evolved by human faith and sympathy a deeper significance, until they become the centres of national thought and feeling, and men believe in them as in revelations from heaven; and even the oracles themselves, in respect of their inherent meaning, as also of their origin and authority, rise by the same ascending series of repeated birth,—like that at Delphi, which, at first attributed to the Earth, then to Themis, daughter of Earth and Heaven, was at last connected with the

Sun and constituted one of the richest gems in Apollo's diadem of light.

In the end we shall find that the whole world organizes about its centre of Faith. Thus, under three different religious systems, Jerusalem, Delphi, and Mecca were held to be each in its turn the *omphalos* or navel of the world. It follows inevitably that the *main* movement of the world must always be joyous and hopeful. By reason of this joy it is that every religious system has its feast; and the sixth day—the day of Iacchus—is the great day of the festival. The inscription which rises above every other is “To the Saviour Gods.”

We must look at history as a succession of triumphs from the beginning; and each trophy that is erected outdoes in its magnificence all that were ever erected before it. Nothing has suffered defeat, except as it has run counter to the main movement of conquest. No system of faith, therefore, can by any possibility pass away. Involved it may be in some fuller system; its *material* bases may be modified; its central source become more central in the human heart, and so stronger in the world and more immediate in its connection with the eternal; but the life itself of the system must live forever and grow forever.

Still it is true that in the widest growth there is the largest liability to weakness. “Thus it is,” says Fouqué, “with poor, though richly endowed man. All lies within his power so long as action is at rest within him; nothing is in his power the moment action has displayed itself, even by the lifting-up of a finger on the immeasurable world.” In the very extent of the empire of an Alexander, a Cæsar, or a Tamerlane, rests the possibility of its rapid dissolution. At the giddiest altitude of triumph it is that the brain grows dizziest and there is revealed the deepest chasm of possible defeat; and the conqueror,

“Having his ear full of his airy fame,”

is just then most likely to fall like Herod

from his aërial pomp to the very dust. This consciousness, revealing at the highest moment of joy its utmost frailty, led the ancients to suspect the presence of some Ate or Nemesis in all human triumphs. We all remember the king who threw his signet-ring into the sea, that he might in his too happy fortunes avert this suspected presence; we remember, too, the apprehension of the Chorus in the "Seven against Thebes," looking forward from the noontide prosperity of the Theban king to some coming catastrophe.

But it is not without us that this Nemesis waits; she is but another name for the fearful possibility which lurks in every human will, of treachery to itself. And as solemnity rises to its acme in the most sensuous manifestation of the glory of life, — so in all that most fascinates and bewilders, at the very crisis of victorious exaltation, at the very height of joyous sensibility, does this mysterious power of temptation reveal her subtlest treachery; and sometimes in a single moment does she change the golden-filleted Horæ, that are our ministers, into frightful furies, which drive us back again from triumph into flight.

What was it, then, which saved the Eleusinia from this defeat, — which kept the movement of the Dionysiac procession from the ruin inevitably consequent upon all intemperate joy? It was the presence of our Lady, the sorrowing Achtheia, who was the inseparable companion of the joyous conqueror, — who subdued the joy of victory, and preserved the strength and holy purity of the great Festival. Demeter was thus necessary to Dionysus, — as Dionysus to Demeter; and if in remembrance of him the sepulchral walls were covered with scenes associated with festivity, — in remembrance of her there must needs be a skeleton at every feast.

How inseparably connected in human thought is sorrow with all permanent hope is indicated in the penances which men have imposed upon themselves, from the earliest Gymnosophists of India, and

the Stylitæ of Syria, down to the monastic orders of the Romish Church in later times. This is the meaning of the old Indian fable which made two of the *Rishis* or penitents to have risen by the discipline of sorrow from some low caste, — it may be, from very Pariahs, — first to the rank of Brahmins, and at last to the stars. The first initiation in which we veil our eyes, losing all, is essential to our fresher birth, by which in the second initiation all things are unveiled to us as our inheritance: indeed, it is only through that which veils that anything is ever revealed or possessed.

Through the same gate we pass both to glory and to tragic suffering, each of which heightens and measures the other; and it is only so that we can understand the function of sorrow in the Providence of God, or interpret the sudden calamities which sometimes overwhelm human hopes at their highest aspiration, — which from the most serene and cloudless sky evoke storms which leave not even a wreck from their vast ruin.

Nor merely is sorrow efficient in those who hope, but in even a higher sense does it attach to the character of Saviour. Apollo is, therefore, fabled to have been an exile from heaven and a servant of Admetus; indeed, Danaüs, in "The Suppliants" of Æschylus, appeals to Apollo for protection on this very plea, addressing him as "the Holy One, and an exiled God from heaven." Thus Hercules was compelled to serve Eurystheus; and his twelve labors were typed in the twelve signs of the zodiac. Æsculapius and Prometheus both suffered excruciating tortures and death for the good of men. And Dionysus — himself the centre of all joy — was persecuted by the Queen of Heaven and compelled to wander in the world. Thus he wandered through Egypt, finding no abiding-place, and finally, as the story runs, came to the Phrygian Cybele, that he might know in their deepest meaning — even by the initiation of sorrow — the mysteries of the Great Mother. And, very significantly, it is from this same initiation that *His* wan-

derings have their end and his world-wide conquest its beginning; as if only thus could be realized the possibility both of triumph for himself and of hope for his followers. For these wanderers can find rest only in a *suffering* Saviour, by the vision of whose deeper Passion they lose their sense of grief,—as Io on Caucasus in sight of the transfixed Prometheus, and the Madonna at the Cross.

It is worthy of more attention than we can give it here, yet we cannot pass over in silence the fact, so important in this relation, that Grecian Tragedy, in all its wonderful development under the three great masters, was directly associated, and in its ruder beginnings completely identified, with the worship of Dionysus. And this confirms our previous hint, that the same element which made tragedy possible for Greece must also be sought for in the development of its faith. There are those who decry Grecian faith,—at the same time that they laud the Grecian drama to the skies: but to the Greeks themselves, who certainly knew more than we do as regards either, the drama was only an outgrowth of their faith, and derived thence its highest significance. Thus the mystic symbolism of the dramatic Choruses, taken out of its religious connections, becomes an insoluble enigma; and naturally enough; for its first use was in religious worship,—though afterwards it became associated with traditional and historic events. Besides, it was supposed that the tragedians wrote under a divine inspiration; and the subjects and representations which they embodied were for the most part susceptible of a deep spiritual interpretation. Indeed, upon a careful examination, we shall find that very many of the dramas directly suggest the two Eleusinian movements, representing first the flight of suppliants—as of the Heraclidæ, the daughters of Danaüs, and of Œdipus and Antigone—from persecution to the shrine of some Saviour Deity,—and finally a deliverance effected through sacrifice or divine interposition. Examples of this are so

numerous that we have no space for a minute consideration.

But certainly it is plain that the Eleusinia, as being more central, more purely spiritual, must in the thought of Greece have risen high above the drama. The very dress in which the *mystæ* were initiated was preserved as most sacred or deposited in the temple. Or if we insist upon measuring their appreciation of the Festival by the more palpable standard of numbers,—the temple at Eleusis, by the account of Strabo, was capable of holding even in its mystic cell more persons than the theatre. To be sure, the celebration was only once in five years,—but it was all the more sacred from this very infrequency. Nothing in all Greece—and that is saying very much—could compare with it in its depth of divine mystery. If anything could, it would have been the drama; but no wailings were ever heard from beneath the masks of the stage like the wailings of Achtheia,—no jubilant song of the Chorus ever rose like the pæan of Dionysiac triumph.

Thus was the name of Dionysus connected with the palace and the temple, with the sepulchral court of death and the dramatic representations of life,—and everywhere associated with our Lady.

Sometimes, indeed, she seems to overshadow and hide him from our vision. Thus was it when the Eumenides in their final triumph swept the stage, and victory seemed all in the hands of invisible Powers, with no human participant: even as throughout the Homeric epos there runs an undercurrent of unutterable sadness; because, while to the Gods there ever remains a sure seat upon Olympus, unshaken by the winds, untouched by rain or snow, crowned with a cloudless radiance,—yet upon man come vanity, sorrow, and strife; like the leaves of the forest he flourisheth, and then passeth away to the “weak heads of the dead,” (*νεκύων ἀμνηνὰ κάρηνα*,) conquered by purple Death and strong Fate.

To the eye of sense, and in the circumscribed movements of this world, the desolation seems complete and the defeat final. But the snows of winter are necessary to the blossoms of spring,—the waste of death to the resurrection of life;

and from the vastest of all desolations does our Lady lead her children in the loftiest of all flights,—even from all sorrow and solitude,—from the wastes of earth and the desolation of *Æons*, to ineffable joy in her Saviour Lord.

VICTOR AND JACQUELINE.

I.

JACQUELINE GABRIE and Elsie Ménil could not occupy one room, and remain, either of them, indifferent to so much as might be manifested of the other's inmost life. They could not emigrate together, peasants from Domrémy,—Jacqueline so strong, Elsie so fair,—could not labor in the same harvest-fields, children of old neighbors, without each being concerned in the welfare and affected by the circumstances of the other.

It was near ten o'clock, one evening, when Elsie Ménil ran up the common stairway, and entered the room in the fourth story where she and Jacqueline lodged.

Victor Le Roy, student from Picardy, occupied the room next theirs, and was startled from his slumber by the voices of the girls. Elsie was fresh from the theatre, from the first play she had ever witnessed; she came home excited and delighted, ready to repeat and recite, as long as Jacqueline would listen.

And here was Jacqueline.

Early in the evening Elsie had sought her friend with a good deal of anxiety. A fellow-lodger and field-laborer had invited her to see the play,—and Jacqueline was far down the street, nursing old Antonine Duprè. To seek her, thus occupied, on such an errand, Elsie had the good taste, and the selfishness, to refrain from doing.

Therefore, after a little deliberation, she had gone to the theatre, and there

forgot her hard day-labor in the wonders of the stage,—forgot Jacqueline, and Antonine, and every care and duty. It was hard for her, when all was ended, to come back to compunction and explanation, yet to this she had come back.

Neither of the girls was thinking of the student, their neighbor; but he was not only wakened by their voices, he amused himself by comparing them and their utterances with his preconceived notions of the girls. They might not have recognized him in the street, though they had often passed him on the stairs; but he certainly could have distinguished the pretty face of Elsie, or the strange face of Jacqueline, wherever he might meet them.

Elsie ran on with her story, not careful to inquire into the mood of Jacqueline,—suspicious of that mood, no doubt,—but at last, made breathless by her haste and agitation, she paused, looked anxiously at Jacqueline, and finally said,—

“You think I ought not to have gone?”

“Oh, no,—it gave you pleasure.”

A pause followed. It was broken at length by Elsie, exclaiming, in a voice changed from its former speaking,—

“Jacqueline Gabrie, you are homesick! horribly homesick, Jacqueline!”

“You do not ask for Antonine: yet you know I went to spend the day with her,” said Jacqueline, very gravely.

“How is Antonine Duprè?” asked Elsie.

“She is dead. I have told you a good

many times that she must die. Now, she is dead."

"Dead?" repeated Elsie.

"You care as much as if a candle had gone out," said Jacqueline.

"She was as much to me as I to her," was the quick answer. "She never liked me. She did not like my mother before me. When you told her my name, the day we saw her first, I knew what she thought. So let that go. If I could have done her good, though, I would, Jacqueline."

"She has everything she needs,—a great deal more than we have. She is very happy, Elsie."

"Am not I? Are not you, in spite of your dreadful look? Your look is more terrible than the lady's in the play, just before she killed herself. Is that because Antonine is so well off?"

"I wish that I could be where she is," sighed Jacqueline.

"You? You are tired, Jacqueline. You look ill. You will not be fit for to-morrow. Come to bed. It is late."

As Jacqueline made no reply to this suggestion, Elsie began to reflect upon her words, and to consider wherefore and to whom she had spoken. Not quite satisfied with herself could she have been, for at length she said in quite another manner,—

"You always said, till now, you wished that you might live a hundred years. But it was not because you were afraid to die, you said so, Jacqueline."

"I don't know," was the answer,—sadly spoken. "Don't remind me of things I have said. I seem to have lost myself."

The voice and the words were effectual, if they were intended as an appeal to Elsie. Fain would she now exclude the stage and the play from her thoughts,—fain think and feel with Jacqueline, as it had long been her habit to do.

Jacqueline, however, was not eager to speak. And Elsie must draw yet nearer to her, and make her nearness felt, ere she could hope to receive the thought of her friend. By-and-by these words

were uttered, solemn, slow, and dirge-like:—

"Antonine died just after sundown. I was alone with her. She did not think that she would die so soon. I did not. In the morning, John Leclerc came in to inquire how she spent the night. He prayed with her. And a hymn,—he read a hymn that she seemed to know, for all day she was humming it over. I can say some of the lines."

"Say them, Jacqueline," said the softened voice of Elsie.

Slowly, and as one recalls that of which he is uncertain, Jacqueline repeated what I copy more entire:—

"In the midst of life, behold,
 Death hath girt us round!
 Whom for help, then, shall we pray?
 Where shall grace be found?
 In thee, O Lord, alone!
 We rue the evil we have done,
 That thy wrath on us hath drawn.
 Holy Lord and God!
 Strong and holy God!
 Merciful and holy Saviour!
 Eternal God!
 Sink us not beneath
 Bitter pains of endless death!
 Kyrie, eleison!"

"Then he went away," she continued. "But he did not think it was the last time he should speak to Antonine. In the afternoon I thought I saw a change, and I wanted to go for somebody. But she said, 'Stay with me. I want nothing.' So I sat by her bed. At last she said, 'Come, Lord Jesus! come quickly!' and she started up in her bed, as if she saw him coming. And as if he were coming nearer, she smiled. That was the last,—without a struggle, or as much as a groan."

"No priest there?" asked Elsie.

"No. When I spoke to her about it, she said her priest was Jesus Christ the Righteous,—and there was no other,—the High-Priest. She gave me her Bible. See how it has been used! 'Search the Scriptures,' she said. She told me I was able to learn the truth. 'I loved your mother,' she said; 'that is the reason I am so anxious you should know. It is

by my spirit, said the Lord. Ask for that spirit,' she said. 'He is more willing to give than earthly parents are to give good gifts to their children.' She said these things, Elsie. If they are true, they must be better worth believing than all the riches of the world are worth the having."

The interest manifested by the student in this conversation had been on the increase since Jacqueline began to speak of Antonine Duprè. It was not, at this point of the conversation, waning.

"Your mother would not have agreed with Antonine," said Elsie, as if there were weight in the argument;—for such a girl as Jacqueline could not speak earnestly in the hearing of a girl like Elsie without result, and the result was at this time resistance.

"She believed what she was taught in Domrémy," answered Jacqueline. "She believed in Absolution, Extreme Unction, in the need of another priest than Jesus Christ,—a representative they call it." She spoke slowly, as if interrogating each point of her speech.

"I believe as they believed before us," answered Elsie, coldly.

"We have learned many things since we came to Meaux," answered Jacqueline, with a patient gentleness, that indicated the perplexity and doubt with which the generous spirit was departing from the old dominion. She was indeed departing, with that reverence for the past which is not incompatible with the highest hope for the future. "Our Joan came from Domrémy, where she must crown the king," she continued. "We have much to learn."

"She lost her life," said Elsie, with vehemence.

"Yes, she did lose her life," Jacqueline quietly acquiesced.

"If she had known what must happen, would she have come?"

"Yes, she would have come."

"How late it is!" said Elsie, as if in sleep were certain rest from these vexatious thoughts.

Victor Le Roy was by this time lost in

his own reflections. These girls had supplied an all-sufficient theme; whether they slept or wakened was no affair of his. He had somewhat to argue for himself about extreme unction, priestly intervention, confession, absolution,—something to say to himself about Leclerc, and the departed Antonine.

Late into the night he sat thinking of the marvel of Domrémy and of Antonine Duprè, of Picardy and of Meaux, of priests and of the High-Priest. Brave and aspiring, Victor Le Roy could not think of these things, involved in the names of things above specified, as more calculating, prudent spirits might have done. It was his business, as a student, to ascertain what powers were working in the world. All true characters, of past time or present, must be weighed and measured by him. Result was what he aimed at.

Jacqueline's words had not given him new thoughts, but unawares they did summon him to his appointed labor. He looked to find the truth. He must stand to do his work. He must haste to make his choice. Enthusiastic, chivalrous, and strong, he was seeking the divine right, night and day,—and to ascertain that, as it seemed, he had come from Picardy to Meaux.

Elsie Méril went to bed, as she had invited Jacqueline to do; to sleep, to dream, she went,—and to smile, in her dreaming, on the world that smiled on her.

Jacqueline sat by the window; leaned from the window, and prayed; her own prayer she prayed, as Antonine had said she must, if she would discover what she needed, and obtain an answer.

She thought of the dead,—her own. She pondered on the future. She recalled some lines of the hymn Antonine had repeated, and she wished—oh, how she wished!—that, while the woman lived, and could reason and speak, she had told her about the letter she had received from the priest of Domrémy. Many a time it had been on her lips to tell, but she failed in courage to bring her poor affairs

into that chamber and disturb that dying hour. Now she wished that she had done it. Now she felt that speech had been the merest act of justice to herself.

But there was Leclerc, the wool-comber, and his mother; she might rely on them for the instruction she needed.

Old Antonine's faith had made a deep impression on the strong-hearted and deep-thinking girl; as also had the prayers of John Leclerc,—especially that last prayer offered for Antonine. It seemed to authenticate, by its strong, unfaltering utterance, the poor old woman's evidence. "Jesus Christ, the same yesterday, to-day, and forever," were strong words that seemed about to take possession of the heart of Jacqueline.

Therefore, while Elsie slept, she prayed;—looking farther than the city-streets, and darkness,—looking farther than the shining stars. What she sought, poor girl, stood in her silent chamber, stood in her waiting heart. But she knew Him not, and her ear was heavy; she did not hear the voice, that she should answer Him, "Rabboni!"

II.

A FORTNIGHT from this night, after the harvesters had left the fields of M. Flaval, Jacqueline was lingering in the twilight.

The instant the day's work was done, the laborers set out for Meaux. Their haste suggested some unusual cause.

John Leclerc, wool-comber, had received that day his sentence. Report of the sentence had spread among the reapers in the field and all along the vineyards of the hill-sides. Not a little stir was occasioned by this sentence: three days of whipping through the public streets, to conclude with branding on the forehead. For this Leclerc, it seemed, had profanely and audaciously declared that a man might in his own behalf deal with the invisible God, by the mediation of Christ, the sole Mediator between God and man. Viewed in the light of his offence, his punishment certainly was of

the mildest. Tidings of his sentence were received with various emotion: by some as though they were maddened with new wine; others wept openly; many more were pained at heart; some brutally rejoiced; some were incredulous.

But now they were all on their way to Meaux; the fields were quite deserted. Urged by one desire, to ascertain the facts of the trial, and the time when the sentence would be executed, the laborers were returning to the town.

Without demonstration of any emotion, Jacqueline Gabrie, quiet, silent, walked along the river-bank, until she came to the clump of chestnut-trees, whose shadow fell across the stream. Many a time, through the hot, dreadful day, her eyes turned wistfully to this place. In the morning Elsie Méril had promised Jacqueline that at twilight they would read together here the leaves the poor old mother of Leclerc gave Jacqueline last night: when they had read them, they would walk home by starlight together. But now the time had come, and Jacqueline was alone. Elsie had returned to town with other young harvesters.

"Very well," said Jacqueline, when Elsie told her she must go. It was not, indeed, inexplicable that she should prefer the many voices to the one,—excitement and company, rather than quiet, dangerous thinking.

But, thus left alone, the face of Jacqueline expressed both sorrow and indignation. She would exact nothing of Elsie; but latterly how often had she expected of her companion more than she gave or could give!

Of course the young girl was equal to others in pity and surprise; but there were people in the world beside the wool-comber and his mother. Nothing of *vast* import was suggested by his sentence to her mind. She did not see that spiritual freedom was threatened with destruction. If she heard the danger questioned, she could not apprehend it. Though she had listened to the preaching of Leclerc and had been moved by it, her sense of truth

and of justice was not so acute as to lead her willingly to incur a risk in the maintaining of the same.

She would not look into Antonine's Bible, which Jacqueline had read so much during the last fortnight. She was not the girl to torment herself about her soul, when the Church would save it for her by mere compliance with a few easy regulations.

More and more was Elsie disappointing Jacqueline. Day by day these girls were developing in ways which bade fair to separate them in the end. When now they had most need of each other, their estrangement was becoming more apparent and decided. The peasant-dress of Elsie would not content her always, Jacqueline said sadly to herself.

Jacqueline's tracts, indeed, promised poorly as entertainment for an hour of rest,—rest gained by hours of toil. The confusion of tongues and the excitement of the city pleased Elsie better. So she went along the road to Meaux, and was not talking, neither thinking, all the way, of the wrongs of John Leclerc, and the sorrows of his mother,—neither meditating constantly, and with deep-seated purpose, "I will not let thee go, except thou bless me!"—neither on this problem, agitated then in so many earnest minds, "What shall a man give in exchange for his soul?"

Thus Jacqueline sat alone and thought that she would read by herself the tracts Leclerc had found it good to study. But unopened she held the little printed scroll, while she watched the home-returning birds, whose nests were in the mighty branches of the chestnut-trees.

She needed the repose more than the teaching, even; for all day the sun had fallen heavily on the harvesters,—and toiling with a troubled heart, under a burning sun, will leave the laborer not in the best condition for such work as Jacqueline believed she had to do.

But she had promised the old woman she would read these tracts, and this was her only time, for they must be returned that night: others were waiting for them

with an eagerness and longing of which, haply, tract-dispensers see little now. Still she delayed in opening them. The news of Leclerc's sentence had filled her with dismay.

Did she dread to read the truth,— "the truth of Jesus Christ," as his mother styled it? The frightful image of the bleeding, lacerated wool-comber would come between her and the book in which that faith was written for maintaining which this man must suffer. Strange contrast between the heavy gloom and terror of her thoughts and the peaceful "river flowing on"! How tranquil were the fields that spread beyond her sight! But there is no rest or joy in Nature to the agitated and foreboding spirit. Must we not have conquered the world, if we serenely enter into Nature's rest?

Fain would Jacqueline have turned her face and steps in another direction that night than toward the road that led to Meaux: to the village on the border of the Vosges,—to the ancient Domrémy. Once her home was there; but Jacqueline had passed forth from the old, humble, true defences: for herself must live and die.

Domrémy had a home for her no more. The priest, on whom she had relied when all failed her, was still there, it is true; and once she had thought, that, while he lived, she was not fatherless, not homeless: but his authority had ceased to be paternal, and she trusted him no longer.

She had two graves in the old village, and among the living a few faces she never could forget. But on this earth she had no home.

Musing on these dreary facts, and on the bleeding, branded image of Leclerc, as her imagination rendered him back to his friends, his fearful trial over, a vision more familiar to her childhood than her youth opened to Jacqueline.

There was one who used to wander through the woods that bordered the mountains in whose shadow stood Domrémy,—one whose works had glorified her name in the England and the France that made a martyr of her. Jeanne d'Arc

had ventured all things for the truth's sake: was she, who also came forth from that village, by any power commissioned?

Jacqueline laid the tracts on the grass. Over them she placed a stone. She bowed her head. She hid her face. She saw no more the river, trees, or home-returning birds; heard not the rush of water or of wind,—nor, even now, the hurry and the shout that possibly to-morrow would follow the poor wool-comber through the streets of Meaux,—and on the third day they would brand him!

She remembered an old cottage in the shadow of the forest-covered mountains. She remembered one who died there suddenly, and without remedy,—her father, unabsolved and unanointed, dying in fear and torment, in a moment when none anticipated death. She remembered a strong-hearted woman who seemed to die with him,—who died to all the interests of this life, and was buried by her husband ere a twelvemonth had passed,—her mother, who was buried by her father's side.

Burdened with a solemn care they left their child. The priest of Domrémy, and none beside him, knew the weight of this burden. How had he helped her bear it? since it is the *business* of the shepherd to look after the younglings of the flock. Her hard earnings paid him for the prayers he offered for the deliverance of her father from his purgatorial woes. Burdened with a dire debt of filial love, the priest had let her depart from Domrémy; his influence followed her as an oppression and a care,—a degradation also.

Her life of labor was a slavish life. All she did, and all she left undone, she looked at with sad-hearted reference to the great object of her life. Far away she put all allurements to tempting, youthful joy. What had she to do with merriment and jollity, while a sin remained unexpiated, or a moment of her father's suffering and sorrow could be anticipated?

How, probably, would these new doctrines, held fast by some through persecution and danger, these doctrines

which brought liberty to light, be received by one so fast a prisoner of Hope as she? She had pledged herself, with solemn vows had promised, to complete the work her mother left unfinished when she died.

Some of the laborers in the field, Elsie among them, had hoped, they said, that the wool-comber would retract from his dangerous position. Recalling their words, Jacqueline asked herself would *she* choose to have him retract? She reminded herself of the only martyr whose memory she loved, the glorious girl from Domrémy, and a lofty and stern spirit seemed to rouse within her as she answered that question. She believed that John had found and taught the truth; and was Truth to be sacrificed to Power that hated it? Not by a suicidal act, at least.

She took the tracts, so judging, from underneath the stone, wistfully looked them over, and, as she did so, recalled these words: "You cannot buy your pardon of a priest; he has no power to sell it; he cannot even give it. Ask of God, who giveth to all men liberally, upbraiding not. 'If ye, being evil, know how to give good gifts to your children, how much more shall your Heavenly Father give his Holy Spirit to them that ask him!'"

She could never forget these words. She could never forget the preacher's look when he used them; nor the solemnity of the assenting faith, as attested by the countenances of those around her in that "upper room."

But her father! What would this faith do for the departed?

Yet again she dared to pray,—here in this solitude, to ask for that Holy Spirit, the Enlightener. And it was truly with trembling, in the face of all presentiments of what the gift might possibly, must certainly, import to her. But what was she, that she could withstand God, or His gift, for any fear of the result that might attend the giving of the gift?

Divinely she seemed to be inspired with that courageous thought. She rose up, as if to follow the laborers who had al-

ready gone to Meaux. But she had not passed out from the shadow of the great trees when another shadow fell along her path.

III.

It was Victor Le Roy who was so close at hand. He recognized Jacqueline; for, as he came down the road, now and then he caught a glimpse of her red peasant-dress. And he accepted his persuasion as it had been an assurance; for he believed that on such a night no other girl would linger alone near the place of her day's labor. Moreover, while passing the group of harvesters, he had observed that she was not among them.

The acquaintance of these young persons was but slight; yet it was of such a character as must needs increase. Within the last fortnight they had met repeatedly in the room of Leclerc's mother. On the last night of her son's preaching they had together listened to his words. The young student with manly aspirations, ambitious, courageous, inquiring, and the peasant girl who toiled in fields and vineyards, were on the same day hearkening to the call, "Ho, every one that thirsteth!" with the consciousness that the call was meant for them.

When Victor Le Roy saw that Jacqueline perceived and recognized him, he also observed the tracts in her hand and the trouble in her countenance, and he wondered in his heart whether she could be ignorant of what had passed that day at Meaux, and if it could be possible that her manifest disturbance arose from any perplexity or disquietude independent of the sentence that had been passed on John Leclerc. His first words brought an answer that satisfied his doubt.

"She has chosen that good part which shall not be taken from her," said he, as he came near. "The country is so fair, could no one of them all except Jacqueline see that? Were they all drawn away by the bloody fascination of Meaux? even Elsie?"

"It was the news that hurried her home

with the rest," answered she, almost pleased at this disturbance of the solitude.

"Did that keep you here, Jacqueline?" he asked. "It sent me out of the city. The dust choked me. Every face looked like a devil's. To-morrow night, to-morrow night, the harvesters will hurry all the faster. Terrible curiosity! And if they find traces of his blood along the streets, there will be enough to talk about through the rest of the harvesting. Jacqueline, if the river could be poured through those streets, the sacred blood could never be washed out. 'Tis not the indignity, nor the cruelty, I think of most, but the barbarous, wild sin. Shall a man's truest liberty be taken from him, as though, indeed, he were not a man of God, but the spiritual subject of his fellows? If that is their plan, they may light the fires, — there are many who will not shrink from sealing their faith with their blood."

These words, spoken with vehemence, were the first free utterance Victor Le Roy had given to his feelings all day. All day they had been concentrating, and now came from him fiery and fast.

It was time for him to know in whom and in what he believed.

Greatly moved by his words, Jacqueline said, giving him the tracts, —

"I came from Domrémy. I am free. No one can be hurt by what befalls me. I want to know the truth. I am not afraid. Did John Leclerc never give way for a moment? Is he really to be whipped through the streets, and on the third day to be branded? Will he not retract?"

"Never!" was the answer, — spoken not without a shudder. "He did not flinch through all the trial, Jacqueline. And his old mother says, 'Blessed be Jesus Christ and his witnesses!'"

"I came from Domrémy," seemed to be in the girl's thought again; for her eyes flashed when she looked at Victor Le Roy, as though she could believe the heavens would open for the enlightening of such believers.

"She gave me those to read," said she, pointing to the tracts she had given him.

“And have you been reading them here by yourself?”

“No. Elsie and I were to have read them together; but I fell to thinking.”

“You mean to wait for her, then?”

“I was afraid I should not make the right sense of them.”

“Sit down, Jacqueline, and let me read aloud. I have read them before. And I understand them better than Elsie does, or ever will.”

“I am afraid that is true, Sir. If you read, I will listen.”

But he did not, with this permission, begin instantly.

“You came from Domrémy, Jacqueline,” said he. “I came from Picardy. My home was within a stone’s throw of the castle where Jeanne d’Arc was a prisoner before they carried her to Rouen. I have often walked about that castle and tried to think how it must have been with her when they left her there a prisoner. God knows, perhaps we shall all have an opportunity of knowing, how she felt when a prisoner of Truth. Like a fly in a spider’s net she was, poor girl! Only nineteen! She had lived a life that was worth the living, Jacqueline. She knew she was about to meet the fate her heart must have foretold. Girls do not run such a course and then die quietly in their beds. They are attended to their rest by grim sentinels, and they light fagots for them. I have read the story many a time, when I could look at the window of the very room where she was a prisoner. It was strange to think of her witnessing the crowning of the King, with the conviction that her work ended there, and then,—of the women who brought their children to touch her garments or her hands, to let her smile on them, or speak to them, or maybe kiss them. And the soldiers deemed their swords were stronger when they had but touched hers. And they knelt down to kiss her standard, that white standard, so often victorious! I have read many a time of that glorious day at Rheims.”

“And she said, *that* day, ‘Oh, why can

I not die here?’” said Jacqueline, with a low voice.

“And when the Archbishop asked her,” continued Victor, “‘Where do you, then, expect to die?’ she answered, ‘I know not. I shall die where God pleases. I have done what the Lord my God commanded me; and I wish that He would now send me to keep my sheep with my mother and sister.’”

“Because she loved Domrémy, and her work was done,” said Jacqueline, sadly. “And so many hated her! But her mother would be sure to love. Jeanne would never see an evil eye in Domrémy, and no one would lie in wait to kill her in the Vosges woods.”

“It was such as you, Jacqueline, who believed in her, and comforted her. And to every one that consoled her Christ will surely say, ‘Ye blessed of my Father, ye did it unto me!’ Yes, to be sure, there were too many who stood ready to kill her in all France,—besides those who were afraid of her, and fought against our armies. Even when they were taking her to see the Dauphin, the guard would have drowned her, and lied about it, but they were restrained. It is something to have been born in Domrémy,—to have grown up in the very place where she used to play, a happy little girl. You have seen that fountain, and heard the bells she loved so much. It was good for you, I know.”

“Her prayers were everywhere,” Jacqueline replied. “Everywhere she heard the voices that called her to come and deliver France. But her father did not believe in her. He persecuted Jeanne.”

“A man’s foes are of his own household,” said Victor. “You see the same thing now. It is the very family of Christ—yes! so they dare call it—who are going to tear and rend Leclerc to-morrow for believing the words of Christ. A hundred judges settled that Jeanne should be burned; and for believing such words as are in these books”——

“Read me those words,” said Jacqueline.

So they turned from speaking of Joan

and her work, to contemplate another style of heroism, and to question their own hearts.

Jacqueline Gabriele had lived through eighteen years of hardship and exposure. She was strong, contented, resolute. Left to herself, she would probably have suffered no disturbance of her creed,— would have lived and died conforming to the letter of its law. But thrown under the influence of those who did agitate the subject, she was brave and clear-headed. She listened now, while, according to her wish, her neighbor read,— listened with clear intelligence, intent on the truth. That, or any truth, accepted, she would hardly shrink from whatever it involved. This was the reason why she had really feared to ask the Holy Ghost's enlightenment! So well she understood herself! Truth was truth, and, if received, to be abided by. She could not hold it loosely. She could not trifle with it. She was born in Domrémy. She had played under the Fairy Oak. She knew the woods where Joan wandered when she sought her saintly solitude. The fact was acting on her as an inspiration, when Domrémy became a memory, when she labored far away from the wooded Vosges and the meadows of Lorraine.

She listened to the reading, as girls do not always listen when they sit in the presence of a reader such as young Le Roy.

And let it here be understood — that the conclusion bring no sorrow, and no sense of wrong to those who turn these pages, thinking to find the climax dear to half-fledged imagination, incapable from inexperience of any deeper truth, (I render them all homage!) — this story is not told for any sake but truth's.

This Jacqueline did listen to this Victor, thinking actually of the words he read. She looked at him really to ascertain whether her apprehension of these things was all the same as his. She questioned him, with the simple desire to learn what he could tell her. Her hands were very hard, so constant had been her dealing with the rough facts of this life; but

the hard hand was firm in its clasp, and ready with its helpfulness. Her eyes were open, and very clear of dreams. There was room in them for tenderness as well as truth. Her voice was not the sweetest of all voices in this world; but it had the quality that would make it prized by others when heart and flesh were failing; for it would be strong to speak then with cheerful faith and an unflinching courage.

Jacqueline sat there under the chestnut-trees, upon the river-bank, strong-hearted, high-hearted, a brave, generous woman. What if her days were toilsome? What if her peasant-dress was not the finest woven in the looms of Paris or of Meaux? Her prayers were brief, her toil was long, her sleep was sound,— her virtue firm as the everlasting mountains. Jacqueline, I have singled you from among hordes and tribes and legions upon legions of women, one among ten thousand, altogether lovely,— not for dalliance, not for idleness, not for dancing, which is well; not for song, which is better; not for beauty, which, perhaps, is best; not for grace, or power, or passion. There is an attribute of God which is more to His universe than all evidence of power. It is His truth. Jacqueline, it is for this your name shall shine upon my page.

And, manifestly, it is by virtue of this quality that her reader is moved and attracted at this hour of twilight on the river-bank.

Her intelligence is so quick! her apprehension so direct! her conclusions so true! He intended to aid her; but Mazurier himself had never uttered comments so entirely to the purpose as did this young girl, speaking from heart and brain. Better fortune, apparently, could not have befallen him than was his in this reading; for with every sentence almost came her comment, clear, earnest, to the point.

He had need of such a friend as Jacqueline seemed able to prove herself. His nearest living relative was an uncle, who had sent the ambitious and capable

young student to Meaux; for he gave great promise, and was worth an experiment, the old man thought,—and was strong to be thrown out into the world, where he might ascertain the power of self-reliance. He had need of friends, and, of all friends, one like Jacqueline.

From the silence and retirement of his home in Picardy he had come to Meaux,—the town that was so astir, busy, thoroughly alive! Inexperienced in worldly ways he came. His face was beautiful with its refinement and power of expression. His eyes were full of eloquence; so also was his voice. When he came from Picardy to Meaux, his old neighbors prophesied for him. He knew their prophecies, and purposed to fulfil them. He ceased from dreaming, when he came to Meaux. He was not dreaming, when he looked on Jacqueline. He was aware of what he read, and how she listened, under those chestnut-trees.

The burden of the tracts he read to Jacqueline was salvation by faith, not of works,—an iconoclastic doctrine, that was to sweep away the great mass of Romish superstition, invalidating Papal power. Image-worship, shrine-frequenting sacrifices, indulgences, were esteemed and proved less than nothing worth in the work of salvation.

“Did you understand John, when he said that the priests deceived us and were full of robberies, and talked about the masses for the dead, and said the only good of them was to put money into the Church?” asked Jacqueline.

“I believe it,” he replied, with spirit.

“That the masses are worth nothing?” she asked,—far from concealing that the thought disturbed her.

“What can they be worth, if a man has lived a bad life?”

“*That* my father did *not!*” she exclaimed.

“If a man is a bad man, why, then he is. He has gone where he must be judged. The Scripture says, As a tree falls, it must lie.”

“My father was a good man, Victor.

But he died of a sudden, and there was no time.”

“No time for what, Jacqueline? No time for him to turn about, and be a bad man in the end?”

“No time for confession and absolution. He died praying God to forgive him all his sins. I heard him. I wondered, Victor, for I never thought of his committing sins. And my mother mourned for him as a good wife should not mourn for a bad husband.”

“Then what is your trouble, Jacqueline?”

“Do you know why I came here to Meaux? I came to get money,—to earn it. I should be paid more money here than I got for any work at home, they said: that was the reason. When I had earned so much,—it was a large sum, but I knew I should get it, and the priest encouraged me to think I should,—he said that my heart’s desire would be accomplished. And I could earn the money before winter is over, I think. But now, if”——

“Throw it into the Seine, when you get it, rather than pay it to the liar for selling your father out of a place he was never in! He is safe, believe me, if he was the good man you say. Do not disturb yourself, Jacqueline.”

“He never harmed a soul. And we loved him that way a bad man could not be loved.”

As Jacqueline said this, a smile more sad than joyful passed over her face, and disappeared.

“He rests in peace,” said Victor Le Roy.

“It is what I must believe. But what if there should be a mistake about it? It was all I was working for.”

“Think for yourself, Jacqueline. No matter what Leclerc thinks or I think. Can you suppose that Jesus Christ requires any such thing as this of you, that you should make a slave of yourself for the expiation of your father? It is a monstrous thought. Doubt not it was love that took him away so quickly. And love can care for him. Long before this,

doubtless, he has heard the words, 'Come, ye blessed of my father!' And what is required of you, do you ask? You shall be merciful to them that live; and trust Him that He will care for those who have gone beyond your reach. Is it so? Do I understand you? You have been thinking to *buy* this good *gift* of God, eternal life for your father, when of course you could have nothing to do with it. You have been imposed upon, and robbed all this while, and this is the amount of it."

"Well, do not speak so. If what you say is true,—and I think it may be,—what is past is past."

"But won't you see what an infernal lie has been practised on you, and all the rest of us who had any conscience or heart in us, all this while? There is no purgatory; and it is nonsense to think, that, if there were, money could buy a man out of it. Jesus Christ is the one sole atonement for sin. And by faith in Him shall a man save his soul alive. That is the only way. If I lose my soul, and am gone, the rest is between me and God. Do you see it *should* be so, and must be so, Jacqueline?"

"He was a good man," said Jacqueline.

She did not find it quite easy to make nothing of all this matter, which had been the main-spring of her effort since her father died. She could not in one instant drop from her calculations that on which she had heretofore based all her activity. She had labored so long, so hard, to buy the rest and peace and heavenly blessedness of the father she loved, it was hardly to be expected that at once she would choose to see that in that rest and peace and blessedness, she, as a producing power, had no part whatever.

As she more than hinted, the purpose of her life seemed to be taken from her. She could not perceive that fact without some consternation; could not instantly connect it with another, which should enable her to look around her with the deliberation of a liberated spirit, choosing her new work. And in this she was acted upon by more than the fear arising

from the influences of her old belief. Of course she should have been, and yet she was not, able to drop instantly and forever from recollection the constant sacrifices she had made, the deprivation she had endured, with heroic persistence,—the putting far away every personal indulgence whose price had a market value. Her father was not the only person concerned in this work; the priest; herself. She had believed in the pastor of Domrémy. Yet he had deceived her. Else he was self-deceived; and what if the blind should strive to lead the blind? *Could* she accept the new faith, the great freedom, with perfect rejoicing?

Victor Le Roy seemed to have some suspicion of what was passing in her thoughts. He did not need to watch her changeful face in order to understand them.

"I advise you to still think of this," said he. "Recall your father's life, and then ask yourself if it is likely that He who is Love requires the sacrifice of your youth and your strength before your father shall receive from Him what He has promised to give to all who trust in Him. Take God at his word, and you will be obliged to give up all this priest-trash."

IV.

VICTOR LE ROY spoke these words quietly, as if aware that he might safely leave them, as well as any other true words, to the just sense of Jacqueline.

She was none the happier for them when she returned that night to the little city room, the poor lodging whose high window overlooked both town and country, city streets and harvest-fields, and the river flowing on beyond the borders of the town,—no happier through many a moment of thinking, until, as it were by an instant illumination, she began to see the truth of the matter, as some might wonder she did not instantly perceive it, if they could omit from observation this leading fact, that the orphan girl was Jacqueline Gabriele, child of the Church,

and not a wise and generous person, who had never been in bondage to superstitions.

For a long time after her return to her lodging she was alone. Elsie was in the street with the rest of the town, talking, as all were talking, of the sight that Meaux should see to-morrow.

Besides Jacqueline, there was hardly another person in this great building, six stories high, every room of which had usually a tenant at this hour. She sat by her window, and looked at the dusky town, over which the moon was rising. But her thoughts were far away; over many a league they wandered.

Once more she stood on the playground of her toilsome childhood. She recalled many a year of sacrificing drudgery, which now she could not name such, — for another reason than that which had heretofore prevented her from calling it a sacrifice. She remembered these years of wrong and of extortion, — they received their proper name now, — years whose mirth and leisure she had quietly foregone, but during which she had borne a burden that saddened youth, while it also dignified it, — a burden which had made her heart's natural cheerfulness the subject of self-reproach, and her maiden dreams and wishes matter for tears, for shame, for confession, for prayer.

Now Victor Le Roy's words came to her very strangely; powerfully they moved her. She believed them in this solitude, where at leisure she could meditate upon them. A vision more fair and blessed than she had ever imagined rose before her. There was no suffering in it, and no sorrow; it was full of peace. Already, in the heaven to which she had hoped her toil would give him at length admission, her father had found his home. There was a glory in his rest not reflected from her filial love, but from the all-availing love of Christ.

Then — delay the rigor of your judgment! — she began, — yes, she, this Jacqueline, began to count the cost of what she had done. She was not a sordid

soul, she had not a miserly nature. Before she had gone far in that strange computation, she paused abruptly, with a crimsoned face, and not with tearless eyes. Counting the cost! Estimating the sacrifice! Had, then, her purpose been less holy because excited by falsehood and sustained through delusion? Was she less loving and less true, because deceived? And was she to lament that Christ, the one and only Priest, rather than another instrumentality, was the deliverer of her beloved from the power of death?

No ritual was remembered, and no formula consulted, when she cried out, — “It is so! and I thank Thee! Only give me now, my Jesus, a purpose as holy as that Thou hast taken away!”

But she had not come into her chamber to spend a solitary evening there. Turning away from the window, she bestowed a little care upon her person, smoothed away the traces of her day's labor, and after all was done she lingered yet longer. She was going out, evidently. Whither? To visit the mother of John Leclerc. She must carry back the tracts the good woman had lent her. Their contents had firm lodgement in her memory.

Others might run to and fro in the streets, and talk about the corners, and prognosticate with passion, and defy, in the way of cowardice, where safety rather than the truth is well assured. If one woman could console another, Jacqueline wished that she might console Leclerc's mother. And if any words of wisdom could drop from the poor old woman's lips while her soul was in this strait, Jacqueline desired to hear those words.

Down the many flights of stairs she went across the court, and then along the street, to the house where the wool-comber lived.

A brief pause followed her knock for admittance. She repeated it. Then was heard a sound from within, — a step crossing the floor. The door opened, and there stood the mother of Leclerc, ready to face any danger, the very Fiend himself.

But when she saw that it was Jacqueline, only Jacqueline, — an angel, as one might say, and not a devil, — the terrible look passed from her face; she opened the door wide.

“Come in, child! come in!”

So Jacqueline went into the room where John had worked and thought, reasoned, argued, prayed.

This is the home of the man because of whom many are this night offended in the city of Meaux. This is the place whence issued the power that has set the tongues to talking, and the minds to thinking, and the hearts to hoping, and the authorities to avenging.

A grain of mustard-seed is the kingdom of heaven in a figure; the wandering winds a symbol of the Pentecostal power: a dove did signify the descent of God to man. This poor chamber, so pent in, and so lowly, so obscure, has its significance. Here has a life been lived; and not the least does it import, that walls are rough and the ceiling low.

But the life of John Leclerc was not to be limited. A power has stood here which by its freedom has set at defiance the customary calculation of the worldly-wise. In high places and in low the people are this night disturbed because of him who has dared to lift his voice in the freedom of the speech of God. In drawing-rooms odorous with luxury the man's name has mention, and the vulgarity of his liberated speech and courageous faith is a theme to move the wonder and excite the reprobation of hearts whose languid beating keeps up their show of life, — to what sufficient purpose expect me not to tell. His voice is loud and harsh to echo through these music-loving halls; it rends and tears, with almost savage strength, the dainty silences.

But busier tongues are elsewhere more vehement in speech; larger hearts beat faster indignation; grief and vulgarest curiosity are all manifesting themselves after their several necessity. In solitary places heroes pray throughout the night, wrestling like Jacob, agonizing like Saul, and with some of them the angel left his

blessing; for some the golden harp was struck that soothed their souls to peace. Angels of heaven had work to do that night. Angels of heaven and hell did prove themselves that night in Meaux: night of unrest and sleeplessness, or of cruel dreaming; night of bloody visions, tortured by the apprehension of a lacerated body driven through the city streets, and of the hooting shouts of Devildom; night haunted by a gory image; — the defiled temple of the Holy Ghost.

Did the prospect of torture keep *him* wakeful? Could the man bear the disgrace, the derision, shouting, agony? Was there nothing in this thought, that as a witness of Jesus Christ he was to appear next day, that should soothe him even unto slumber? Upon the silence of his guarded chamber let none but ministering angels break. Sacred to him, and to Him who watched the hours of the night, let the night go!

But here — his mother, Jacqueline with her — we may linger with these.

V.

WHEN the old woman saw that it was Jacqueline Gabrie who stood waiting admittance, she opened the door wider, as I said; and the dark solemnity of her countenance seemed to be, by so much as a single ray, enlivened for an instant.

She at once perceived the tracts which Jacqueline had brought. Aware of this, the girl said, —

“I stayed to hear them read, after I heard that for the sake of the truth in them” — she hesitated — “this city will invite God's wrath to-morrow.”

And she gave the papers to the old woman, who took them in silence.

By-and-by she asked, —

“Are you just home, Jacqueline?”

“Since sunset, — though it was nearly dark when I came in,” — she answered. “Victor Le Roy was down by the river-bank, and he read them for me.”

“He wanted to get out of town, maybe. You would surely have thought it was

a holiday, Jacqueline, if you could have seen the people. Anything for a show: but some of them might well lament. Did you want to know the truth he pays so dear for teaching? But you have heard it, my child."

"We all heard what he must pay for it, in the fields at noon. Yes, mother, I wanted to know."

"But if you shall believe it, Jacqueline, it may lead you into danger, into sad straits," said the old woman, looking at the young girl with earnest pity in her eyes.

She loved this girl, and shuddered at the thought of exposing her to danger.

Jacqueline had nursed her neighbor, Antonine, and more than once, after a hard day's labor, which must be followed by another, she had sat with her through the night; and she could pay this service only with love, and the best gift of her love was to instruct her in the truth. John and she had proved their grateful interest in her fortunes by giving her that which might expose her to danger, persecution, and they could not foresee to what extremity of evil.

And now the old woman felt constrained to say this to her, even for her love's sake,—"It may lead you into danger."

"But if truth is dangerous, shall I choose to be safe?" answered Jacqueline, with stately courage.

"It is truth. It *will* support him. Blessed be Jesus Christ and His witnesses! To-night, and to-morrow, and the third day, our Jesus will sustain him. They think John will retract. They do not know my son: They do not know how he has waited, prayed, and studied to learn the truth, and how dear it is to him. No, Jacqueline, they do not. But when they prove him, they will know. And if he is willing to witness, shall I not be glad? The people will understand him better afterward,—and the priests, maybe. 'I can do all things,' said he, 'Christ strengthening me'; and that was said long ago, by one who was proved. Where shall you be, Jacqueline?"

"Oh," groaned Jacqueline, "I shall be

in the fields at work, away from these cruel people, and the noise and the sight. But, mother, where shall you be?"

"With the people, child. With him, if I live. Yes, he is my son; and I have never been ashamed of the brave boy. I will not be ashamed to-morrow. I will follow John; and when they bind him, I will let him see his mother's eyes are on him,—blessing him, my child!—Hark! how they talk through the streets!—Jacqueline, he was never a coward. He is strong, too. They will not kill him, and they cannot make him dumb. He will hold the truth the faster for all they do to him. Jesus Christ on his side, do you think he will fear the city, or all Paris, or all France? He does not know what it is to be afraid. And when God opened his eyes to the truth of his gospel, which the priests had hid, he meant that John should work for it,—for he is a working-man, whatever he sets about."

So this old woman tried, and not without success, to comfort herself, and sustain her tender, proud, maternal heart. The dire extremity into which she and her son had fallen did not crush her; few were the tears that fell from her eyes as she recalled for Jacqueline the years of her son's boyhood,—told her of his courage, as in various ways it had made itself manifest: how he had always been fearless in danger,—a conqueror of pain,—seemingly regardless of comfort,—fond of contemplation,—contented with his humble state,—kindly, affectionate, generous, but easily stirred to wrath by injustice, when manifested by the strong toward the weak,—or by cruelty, or by falsehood.

Many an anecdote of his career might she relate; for his character, under the pressure of this trial, which was as searching and severe a test of her faith as of his, seemed to illustrate itself in manifold heroic ways, all now of the highest significance. With more majesty and grandeur his character arose before her; for now in all the past, as she surveyed it, she beheld a living power, a capability, and a necessity of new and grand signifi-

cance, and her heart revered the spirit she had nursed into being.

Removed to the distance of a prison from her sight, separated from her love by bolts and bars, and the wrath of tyranny and close-banded bigotry, he became a power, a hero, who moved her, as she recalled his sentence, and prophesied the morrow, to a feeling tears could not explain.

They passed the night together, the young woman and the old. In the morning Jacqueline must go into the field again. She was in haste to go. Leaving a kiss on the old woman's cheek, she was about to steal away in silence; but as she laid her hand upon the latch, a thought arrested her, and she did not open the door, but went back and sat beside the window, and watched the mother of Leclerc through the sleep that must be brief. It was not in her heart to go away and leave those eyes to waken upon solitude. She must see a helpful hand and hopeful face, and, if it might be, hear a cheerful human voice, in the dawning of that day.

She had not long to wait, and the time she may have lost in waiting Jacqueline did not count or reckon, when she heard her name spoken, and could answer, "What wilt thou? here am I."

Not in vain had she lingered. What were wages, more or less, that they should be mentioned, thought of, when she might give and receive here what the world gives not, and never has to give,—and what a mortal cannot buy, the treasure being priceless? Through the quiet of that morning hour, soothing words, and strong, she felt and knew to speak; and when at last she hurried away from the city to the fields, she was stronger than of nature, able to bear witness to the faith that speaks from the bewilderment of its distresses, "Though He slay me, yet will I trust in Him."

Not alone had her young, frank, loving eyes enlivened the dreary morning to the heart of Leclerc's mother. Grace for grace had she received. And words of the hymn that were always on John's lips had found echo from his mother's

memory this morning: they lodged in the heart of Jacqueline. She went away repeating,—

"In the midst of death, the jaws
Of hell against us gape.
Who from peril dire as this
Openeth us escape?
'Tis thou, O Lord, alone!
Our bitter suffering and our sin
Pity from thy mercy win,
Holy Lord and God!
Strong and holy God!
Merciful and holy Saviour!
Eternal God!
Let us not despair
For the fire that burneth there!
Kyrie, eleison!"

Jacqueline met Elsie on her way to the fields. But the girls had not much to say to each other that morning in their walk. Elsie was manifestly conscious of some great constraint; she might have reported to her friend what she had heard in the streets last night, but she felt herself prevented from such communication,—seemed to be intent principally on one thing: she would not commit herself in any direction. She was looking with suspicion upon Jacqueline. Whatever became of her soul, her body she would save alive. She was waking to this world's enjoyment with vision alert, senses keen. Martyrdom in any degree was without attraction to her, and in Truth she saw no beauty that she should desire it. It was a root out of dry ground indeed, that gave no promise of spreading into goodly shelter and entrancing beauty.

As to Jacqueline, she was absorbed in her heroic and exalted thoughts. Her heart had almost failed her when she said farewell to John's mother; tearfully she had hurried on her way. One vast cloud hung between her and heaven; darkly rolled the river; every face seemed to bear witness to the tragedy that day should witness.

Not the least of her affliction was the consciousness of the distance increasing between herself and Elsie Ménil. She knew that Elsie was rejoicing that she had in no way endangered herself yet; and sure was she that in no way would

Elsie invite the fury of avenging tyranny and reckless superstition.

Jacqueline asked her no questions, — spoke few words to her, — was absorbed in her own thoughts. But she was kindly in her manner, and in such words as she spoke. So Elsie perceived two things, — that she should not lose her friend, neither was in danger of being seized by the heretical mania. It was her way of drawing inferences. Certain that she had not lost her friend, because Jacqueline did not look away, and refuse to recognize her; congratulating herself that she was not the object of suspicion, either justly or unjustly, among the dreadful priests.

But that friend whose steady eye had balanced Elsie was already sick at heart, for she knew that never more must she rely upon this girl who came with her from Domrémy.

As they crossed the bridge, lingering thereon a moment, the river seemed to moan in its flowing toward Meaux. The day's light was sombre; the birds' songs had no joyous sound, — plaintive was their chirping; it saddened the heart to hear the wind, — it was a wind that seemed to take the buoyancy and freshness out of every living thing, an ugly southeast wind. They went on together, — to the wheat-fields together; — it was to be day of minutes to poor Jacqueline.

To be away from Meaux bodily was, it appeared, only that the imagination might have freer exercise. Yes, — now the people must be moving through the streets; shopmen were not so intent on profits this day as they were on other days. The priests were thinking with vengeful hate of the wrong to themselves which should be met and conquered that day. The people should be swiftly brought into order again! John in his prison was preparing, as all without the prison were.

The crowd was gathering fast. He would soon be led forth. The shameful march was forming. Now the brutal hand of Power was lifted with scourges. The bravest man in Meaux was driven through the streets, — she saw with what

a visage, — she knew with what a heart. Her heart was awed, with thinking thereupon. A bloody mist seemed to fall upon the environs of Meaux; through that red horror she could not penetrate; it shrouded and it held poor Jacqueline.

Of the faith that would sustain him she began once more to inquire. It is not by a bound that mortals ever clear the heights of God. Step by step they scale the eminences, toiling through the heavenly atmosphere. Only around the summit shines the eternal sun.

So she must now recall the words that Victor Le Roy read for her last night; and the words he spoke from out his heart, — these also. And she did not fear now, as yesterday, to ask for light. Let the light dawn, — oh, let it shine on her!

The mother of Leclerc had uttered mysterious words which Jacqueline took for truth; the light was joyful and blessed, and of all things to be desired, though it smote the life from one like lightning. She waited alone with faith, watching till it should come, — left alone with this beam glimmering like a moth through darkness! — for thus was a believer, or one who resolved on believing, left in that day, when he turned from the machinery of the Church, and stood alone, searching for God without the aid of priestly intervention.

VI.

THERE was something awful in such loneliness.

Jacqueline knew little of it until now, as she walked toward the fields, by the side of Elsie Ménil.

She saw how she had depended on the priest of Domrémy, as he had been the lawgiver and the leader of her life. A spiritual life, to be sustained only by the invisible spirit, to be lived by faith, not in man, but in God, without intervention of saint or angel or Blessed Virgin, — was the world's life liberated by such freedom?

By faith, and not by sight, the just must live. Would He bow his heavens and

come down to dwell with the contrite and the humble?

Wondrous strange it seemed,—incomprehensible,—more than she could manage or control. There are prisoners whose pardon proves the world too large for them: they find no rest until their prison-door is opened for them again.

Of this class was Elsie,—not Jacqueline. Elsie was afraid of freedom,—not equal to it,—unable to deal with it; satisfied with being a child, with being a slave, when it came to be a question whether she should accept and use her highest privilege and dignity. At this hour, and among all persuasions, you will find that Elsie does not stand alone. Little children there are, long as the world shall stand,—though not precisely such as we think of when we remember, “Of such is the kingdom of heaven.”

It was enough for Elsie—it is enough for multitudes through all the reformations—that she had an earthly defence, even such as she relied on without trouble. She lived in the hour. She had never toiled to deliver her darling from the lions,—to redeem a soul from purgatory. She eased her conscience, when it was troubled, by such shallow discovery of herself as she deemed confession. She loved dancing, and all other amusements,—hated solitude, knew not the meaning of self-abnegation. And let her dance and enjoy herself!—some service to the body is rendered thereby. She might do greatly worse, and is incapable of doing greatly better. Will you stint the idiots of comfort,—or rather build them decent habitations, and even vex yourself to feed and clothe them, in reverent confidence that the Future shall surely take them up and bless them, unstop their ears, open their eyes, give speech to them and absolute deliverance?

There are others beside Elsie who congratulate themselves on non-committal,—they covet not the advanced and dangerous positions. Honorable, but dangerous positions! The head might be taken off, do you not see? And could all eternity compensate for the loss of time? Ah,

the body might be mutilated,—the liberty restrained: as if, indeed, a man's freedom were not eternally established, when his enemies, howling around, must at least crucify him! as if a divine voice were not ever heard through the raging of the people, saying, “Come up higher!”

But a fern-leaf cannot grow into a mighty hemlock-tree. From the ashes of a sparrow the phoenix shall not rise. You will not to all eternity, by any artificial means, nor by a miracle, bring forth an eagle from a mollusk.

There was not a sadder heart in all those fields of Meaux than the heart of Jacqueline Gabrie. There was not a stronger heart. Not a hand labored more diligently. Under the broad-brimmed peasant-hat was a sad countenance,—under the peasant-dress a heavily burdened spirit. Silent, all day, she labored. She was alone at noon under the river-bordered trees, eating her coarse fare without zest, but with a conscience,—to sustain the body that was born to toil. But in the maelström of doubt and anxiety was she tossed and whirled, and she cared not for her life. To be rid of it, now for the first time, she felt might be a blessing. What purpose, indeed, had she? She turned her thought from this question, but it would not let her alone. Again and yet again she turned to meet it, and thus would surely have at length its satisfying answer.

John Leclerc might pass through this ordeal, as from the first she had expected of him. But she listened to the speech of many of her fellow-laborers. Some prophecies which had a sound incredible escaped them. She did not credit them, but they tormented her. They contended with one another. John, some foretold, would certainly retract. One day of public whipping would suffice. When the blood began to flow, he would see his duty clearer! The men were prophesying from the depths and the abundance of their self-consciousness. Others speculated on the final result of the executed sentence. They believed that the “obsti-

nacy" and courage of the man would provoke his judges, and the executors of his sentence,—that with rigor they would execute it,—and that, led on by passion, and provoked by such as would side with the victim, the sentence would terminate in his destruction. Sooner or later, nothing but his life would be found ultimately to satisfy his enemies.

It might be so, thought Jacqueline Gabriele. What then? what then?—she thought. There was inspiration to the girl in that cruel prophecy. Her life-work was not ended. If Christ was the One Ransom, and it did truly fall on Him, and not on her, to care for those beloved, departed from this life, her work was still for love.

John Leclerc disabled or dead, who should care then for his aged mother? Who should minister to him? Who, indeed, but Jacqueline?

Living or dying, she said to herself, with grand enthusiasm,—living or dying, let him do the Master's pleasure! She also was here to serve that Master; and while in spiritual things he fed the hungry, clothed the naked, gave the cup of living water, visited the imprisoned, and the sick of sin, she would bind herself to minister to him and his old mother in temporal things; so should he live above all cares save those of heavenly love. She could support them all by her diligence, and in this there would be joy.

She thought this through her toil; and the thought was its own reward. It strengthened her like an angel,—strengthened heart and faith. She labored as no other peasant-woman did that day,—like a beast of burden, unresisting, patient,—like a holy saint, so peaceful and assured, so conscious of the present very God!

[To be continued.]

MIDSUMMER.

AROUND this lovely valley rise
The purple hills of Paradise.

Oh, softly on yon banks of haze
Her rosy face the Summer lays!

Becalmed along the azure sky,
The argosies of cloudland lie,
Whose shores, with many a shining rift,
Far off their pearl-white peaks uplift.

Through all the long midsummer-day
The meadow-sides are sweet with hay.
I seek the coolest sheltered seat
Just where the field and forest meet,—
Where grow the pine-trees tall and bland,
The ancient oaks austere and grand,

And fringy roots and pebbles fret
The ripples of the rivulet.

I watch the mowers as they go
Through the tall grass, a white-sleeved row ;
With even stroke their scythes they swing,
In tune their merry whetstones ring ;
Behind the nimble youngsters run
And toss the thick swaths in the sun ;
The cattle graze ; while, warm and still,
Slopes the broad pasture, basks the hill,
And bright, when summer breezes break,
The green wheat crinkles like a lake.

The butterfly and humble-bee
Come to the pleasant woods with me ;
Quickly before me runs the quail,
The chickens skulk behind the rail,
High up the lone wood-pigeon sits,
And the woodpecker pecks and flits.
Sweet woodland music sinks and swells,
The brooklet rings its tinkling bells,
The swarming insects drone and hum,
The partridge beats his throbbing drum.
The squirrel leaps among the boughs,
And chatters in his leafy house.
The oriole flashes by ; and, look !
Into the mirror of the brook,
Where the vain blue-bird trims his coat,
Two tiny feathers fall and float.

As silently, as tenderly,
The down of peace descends on me.
Oh, this is peace ! I have no need
Of friend to talk, of book to read :
A dear Companion here abides ;
Close to my thrilling heart He hides ;
The holy silence is His Voice :
I lie and listen, and rejoice.

TOBACCO.

“Tobacco, divine, rare, superexcellent tobacco, which goes far beyond all the panaceas, potable gold, and philosopher’s stones, a sovereign remedy to all diseases! a good vomit, I confess, a virtuous herb, if it be well qualified, opportunely taken, and medicinally used. But as it is commonly abused by most men, which take it as tinkers do ale, ’tis a plague, a mischief, a violent purger of goods, lands, health: hellish, devilish, and damned tobacco, the ruin and overthrow of body and soul!”—BURTON. *Anatomy of Melancholy*.

A DELICATE subject? Very true; and one which must be handled as tenderly as *biscuit de Sèvres*, or Venetian glass. Whichever side of the question we may assume, as the most popular, or the most right, the feelings of so large and respectable a minority are to be consulted, that it behooves the critic or reviewer to move cautiously, and, imitating the actions of a certain feline household reformer, to show only the *patte de velours*.

The omniscient Burton seems to have reached the pith of the matter. The two hostile sections of his proposition, though written so long since, would very well fit the smoker and the reformer of to-day. That portion of the world which is enough advanced to advocate reforms is entirely divided against itself on the subject of Tobacco. Immense interests, economical, social, and, as some conceive, moral, are arrayed on either side. The reformers have hitherto had the better of it in point of argument, and have pushed the attack with most vigor, yet with but trifling results. Smokers and chewers, *et id omne genus*, mollified by their habits, or laboring under guilty consciences, have made but a feeble defence. Nor in all this is there anything new. It is as old as the knowledge of the “weed” among thinking men,—in other words, about three centuries. The English adventurers under Drake and Raleigh and Hawkins, and the multitude of minor Protestant “filibusters” who followed in their train, had no sooner imported the habit of smoking tobacco, among the other outlandish customs which they brought home from the new Indies and the Spanish Main, than the higher powers rebuked the practice, which novelty and its own fascinations were rendering so fashion-

able, in language more forcible than elegant. The philippic of King James is so apposite that we may be pardoned for transcribing one oft-quoted sentence:—“But herein is not only a great vanity, but a great contempt of God’s good gifts, that the sweetness of man’s breath, being a good gift of God, should be wilfully corrupted by this stinking smoke. . . . A custom loathsome to the eye, hateful to the nose, harmful to the brain, dangerous to the lungs, and in the black stinking fume thereof nearest resembling the horrible Stygian smoake of the pit that is bottomless.”*

The Popes Urban VIII. and Innocent XII. fulminated edicts of excommunication against all who used tobacco in any form; from which we may conclude that the new habit was spreading rapidly over Christendom. And not only the successors of St. Peter, but those also of the Prophet, denounced the practice, the Sultan Amurath IV. making it punishable with death. The Viziers of Turkey spit-
ted the noses of smokers with their own pipes; the more considerate Shah of Persia cut them entirely off. The knout greeted in Russia the first indulgence, and death followed the second offence. In some of the Swiss cantons smoking was considered a crime second only to adultery. Modern republics are not quite so severe.

It is not to be supposed that in England the royal pamphlet had its desired effect. For we find that James laid many rigid sumptuary restrictions upon the practice which he abominated, based chiefly upon the extravagance it occasioned,—the expenses of some smokers being estimated at several hundred pounds

* *Counterblast to Tobacco*.

a year. The King, however, had the sagacity to secure a preëmption-right as early as 1620.

Yet how could the practice but have increased, when, as Malcolm relates the tradition, such men as Sir Walter Raleigh and Sir Hugh Middleton sat smoking at their doors?—for “the public manner in which it was exhibited, and the aromatic flavor inhaled by the passengers, exclusive of the singularity of the circumstance and the eminence of the parties,” could hardly have failed to favor its dissemination.

The silver-tongued Joshua Sylvester hoped to aid the royal cause by writing a poem entitled, “Tobacco battered, and the pipes shattered, (about their ears who idly idolize so base and barbarous a weed, or at least-wise overlove so loathsome a vanity,) by a volley of holy shot thundered from Mount Helicon.” If the smoothness of the verses equalled the euphony of the title, this must have proved a moving appeal.

Stow contents himself with calling tobacco “a stinking weed, so much abused to God’s dishonor.”

Burton exhausts the subject in a single paragraph. Ben Jonson, though a jolly good fellow, was opposed to the habit of smoking. But Spenser mentions “divine tobacco.” Walton’s “Piscator” indulges in a pipe at breakfast, and “Venator” has his tobacco brought from London to insure its purity. Sweet Izaak could have selected no more soothing minister than the pipe to the “contemplative man’s recreation.”

As the new sedative gains in esteem, we find Francis Quarles, in his “Emblems,” treating it in this serio-comic vein:—

“Flint-hearted Stoics, you whose marble eyes
Contemn a wrinkle, and whose souls despise
To follow Nature’s too affected fashion,
Or travel in the regent walk of passion,—
Whose rigid hearts disdain to shrink at
fears,
Or play at fast-and-loose with smiles and
tears,—
Come, burst your spleens with laughter to
behold

A new-found vanity, which days of old
Ne’er knew,—a vanity that has beset
The world, and made more slaves than Ma-
homet,—

That has condemned us to the servile yoke
Of slavery, and made us slaves to smoke.

But stay! why tax I thus our modern
times

For new-born follies and for new-born
crimes?

Are we sole guilty, and the first age free?
No: they were smoked and slaved as well
as we.

What’s sweet-lipped honor’s blast, but
smoke? what’s treasure,

But very smoke? and what’s more smoke
than pleasure?”

Brand gives us the whole matter in a nutshell, in the following quaint epigram, entitled “A Tobacconist,” taken from an old collection:—

“All dainty meats I do defy
Which feed men fat as swine;
He is a frugal man, indeed,
That on a leaf can dine.

“He needs no napkin for his hands
His fingers’ ends to wipe,
That keeps his kitchen in a box,
And roast meat in a pipe.”

And so on, the singers of succeeding years, *usque ad nauseam*,—a loathing equalled only by that of the earlier writers for the plant, now so lauded.

Tobacco-worship seems to us to culminate in the following stanza from a German song:—

“Tabak ist mein Leben,
Dem hab’ ich mich ergeben, ergeben;
Tabak ist meine Lust.
Und eh’ ich ihn sollt’ lassen,
Viel lieber wollt’ ich hassen,
Ja, hassen selbst eines Mädchens Kuss.”

As it is with your sex; my dear Madam, that this question of Tobacco is to be mainly argued,—for, to your honor be it spoken, you have always been of the reformatory party,—let us hope, that, provided you have not read or translated the last verse, you have recovered your natural amiability, ruffled perhaps by this odious subject, and are prepared to believe us when we tell you that these opposite opinions cannot be wholly reconciled, and to follow us patiently while

we attempt to show that a certain gentleman, introduced to your maternal ancestor at a very remote period of the world's history, is not so black as he is sometimes painted. Let us keep good-natured, at least, in this discussion; for we propose to settle it without taking off the gloves, as we intimated in the opening paragraph. Your patience will be much needed for the sad army of facts and figures which is to follow. Therefore it is but just that you should speak now, after these long sentences.

Your George will never smoke? Excuse me. *When* he will smoke depends upon the precocity of his individual generation; and that increases in a direct ratio with time itself, in this country. Thus, to state the matter in an approximate inverse arithmetical progression, and dating the birth of "young America" about the year 1825, — previously to which reigned the dark ages of old-fogydom, so called, — we find as follows: — From 1825 to 1835, young gentlemen learned to smoke when from 25 to 20 years of age; from 1835 to 1845, young *gents*, ditto, ditto, from 20 to 15 years; 1845 to 1855, from 15 to 10; 1855 to 1865, 10 to 5; 1865 to 1875, 5 to 0; and, if we continue, 1875 to 1885, zero to minus: but really the question is becoming too nebulous. *Corollary.* In about ten years, the youth of the United States will smoke contemporaneously with the infant Burmese, who, we are credibly informed, begin the habit *æt.* 3, or as soon as they have cut enough teeth to hold a cigar.

Therefore, we will say, Madam, at some indefinite period of his childhood or youth, — for we would not be so impolite as to infer your age by asking that of your son, — the *susdit* George will come home late from play some afternoon, languid, pale, and disinclined for tea. He will indignantly repel the accusation of feeling ill, and there will lurk about his person an indescribable odor of stale cinnamon, which you will be at a loss to account for, but which his elder brother will recognize as the natural result of smoking

"cinnamon cigars," wherewith certain wicked tobacconists of this city tempt curious youth. If you follow him to his chamber, you will probably discover more damning evidence of his guilt.

We will draw the curtain over the scene of the Spartan mother — we hope you belong to that nearly extinct class — which is to follow. Let us suppose all differences settled, the habit ostensibly given up, and your darling, grown more honest or more artful, — the result is the same to your blissful ignorance, — studiously pursuing his way until he enters college. Some fine day you drive over to the neighboring university, and, entering his room unannounced, you find him coloring his first (factitious) meerschaum! — also a sad deficiency in his wardrobe of half-worn clothes. *C'est une pipe qui coûte cher à culotter*, the college meerschaum, — and in more ways than one, according to the "Autocrat": — "I do not advise you, young man, to consecrate the flower of your life to painting the bowl of a pipe," *et seq.* More bold, the Sophomore will smoke openly at home; and by the end of the third vacation, it is one of those unyielding *faits accomplis* against which reformers, household or peripatetic, beat their heads in vain.

Perhaps your husband smokes? If so, at what period of the twenty-four hours have you invariably found Mr. ——— most lenient to your little pecuniary peccadilloes? Is he not always most good-natured when his cigar is about one-third consumed, the ash evenly burnt and adherent, and not fallen into his shirt-bosom? Depend upon it, tobacco is a great soother of domestic differences.

Let us, then, look an existing, firmly rooted evil — if you will call it so — in the face, and see if it is quite so bad as it is represented. It is too wide-spread to be sneered away, — for we might almost say that smokers were the rule, and non-smokers the exception, among all civilized men. Charles Kingsley supports us here: — " 'Man a cooking animal,' my dear Doctor Johnson? Pooh! man is a *smoking* animal. There is his *ergon*, his

‘differential energy,’ as the Aristotelians say,—his true distinction from the orang-outang. Ponder it well.”

Query.—What did the old Roman do without a cigar? How idle through the day? How survive his interminable *post-cænal* potations?—The thought is not our own. It occurs somewhere in De Quincey, we believe. It is one of those self-evident propositions you wonder had not occurred to you before.—What an accessory of luxury the pipe would have been to him who passed the livelong day under the mosaic arches of the *Thermæ!* The *strigiles* would have vanished before the meerschaum, had that magic clay then been known. How completely would the *hookah* and the *narghileh* have harmonized with the *crater*, *cyathi*, and tripods of the *triclinium* in that portraiture of the “Decadence of Rome” which hangs in the Luxembourg Gallery! Poor fellows! they managed to exist without them.

Though pipes are found carved on very old sculptures in China, and the habit of smoking was long since extensively followed there, according to Pallas, and although certain species of the tobacco-plant, as the *Nicotiana rustica*, would appear to be indigenous to the country, yet we have the best reason to conclude that America, if not the exclusive home of the herb, was the birthplace of its use by man. The first great explorer of the West found the sensuous natives of Hispaniola rolling up and smoking tobacco-leaves with the same persistent indolence that we recognize in the Cuban of the present day. Rough Cortés saw with surprise the luxurious Aztec composing himself for the *siesta* in the middle of the day as invariably as his fellow Dons in Castile. But he was amazed that the barbarians had discovered in tobacco a sedative to promote their reveries and compose them to sleep, of which the *hidalgos* were as yet ignorant, but which they were soon to appropriate with avidity, and to use with equal zest. Humboldt says that it had been cultivated by the people of Orinoco from time

immemorial, and was smoked all over America at the time of the Spanish Conquest,—also that it was first discovered by Europeans in Yucatan, in 1520, and was there called *Petum*. Tobacco, according to the same authority, was taken from the word *tabac*, the name of an instrument used in the preparation of the herb.

Though Columbus and his immediate followers doubtless brought home specimens of tobacco among the other spoils of the New World, Jean Nicot, ambassador to Portugal from Francis II., first sent the seeds to France, where they were cultivated and used about the year 1560. In honor of its sponsor, Botany has named the plant *Nicotiana tabacum*, and Chemistry distinguished as *Nicotin* its active alkaloid. Sir Francis Drake first brought tobacco to England about 1586. It owed the greater part of its early popularity, however, to the praise and practice of Raleigh: his high standing and character would have sufficed to introduce still more novel customs. The weed once inhaled, the habit once acquired, its seductions would not allow it to be easily laid aside; and we accordingly find that royal satire, public odium, and ruinous cost were alike inadequate to restrain its rapidly increasing consumption. Somewhere about the year 1600 or 1601 tobacco was carried to the East, and introduced among the Turks and Persians,—it is not known by whom: the devotion of modern Mussulmans might reasonably ascribe it to Allah himself. It seems almost incredible that the Oriental type of life and character could have existed without tobacco. The pipe seems as inseparable as the Koran from the follower of Mahomet.

Barely three centuries ago, then, the first seeds of the *Nicotiana tabacum* germinated in European soil: now, who shall count the harvests? Less than three centuries ago, Raleigh attracted a crowd by sitting smoking at his door: now, the humblest bog-trotter of Ireland must be poor indeed who cannot own or borrow a pipe. A little more than

a century and a half ago, the import into Great Britain was only one hundred and twenty thousand pounds, and part of that was reëxported: now, the imports reach thirty million pounds, and furnish to government a revenue of twenty millions of dollars, — being an annual tax of three shillings four pence on every soul in the United Kingdom. Nor is the case of England an exceptional one. The tobacco-zone girdles the globe. From the equator, through fifty degrees of latitude, it grows and is consumed on every continent. On every sea it is carried and used by the mariners of every nation. Its incense rises in every clime, as from one vast altar dedicated to its worship, — before which ancient holocausts, the smoke of burnt-offerings in the old Jewish rites, the censers of the Church, and the joss-sticks of the East, must “pale their ineffectual fires.” All classes, all ages, in all climates, and in some countries both sexes, use tobacco to dispel heat, to resist cold, to soothe to reverie, or to arouse the brain, according to their national habits, peculiarities, or habits.

This is not the language of hyperbole. With a partial exception in favor of the hop, tobacco is the *sole recognized narcotic* of civilization. Opium and hemp, if indulged in, are concealed, by the Western nations: public opinion, public morality, are at war with them. Not so with tobacco, which the majority of civilized men use, and the minority rather deprecate than denounce. We shall avail ourselves of some statistics and computations, which we find ready-calculated, at various sources, to support these assertions. The following are the amounts of tobacco consumed *per head* in various countries: —

“In Great Britain, 17 ounces per head; in France, 18½ ounces, — three-eighths of this quantity being used in the form of snuff; in Denmark, 70 ounces (4½ lbs.) per head; and in Belgium, 73½ ounces per head; — in New South Wales, where there are no duties, by official returns, 14 pounds per head.” We doubt if these quantities much exceed the European

average, particularly of Germany and Turkey in Europe. “In some of the States of North America the proportion is much larger, while among Eastern nations, where there are no duties, it is believed to be greater still.”

The average for the whole human race of one thousand millions has been reasonably set at seventy ounces per head; which gives a total produce and consumption of tobacco of two millions of tons, or 4,480,000,000 of pounds! “At eight hundred pounds an acre, this would require five and a half million acres of rich land to be kept constantly under tobacco-cultivation.”

“The whole amount of wheat consumed by the inhabitants of Great Britain weighs only four and one-third million tons.” The reader can draw his own inferences.

The United States are among the largest producers of tobacco, furnishing one-twentieth of the estimated production of the whole world. According to the last census, we raised in 1850 about two hundred million pounds. All the States, with five exceptions, — and two of these are Utah and Minnesota, — shared, in various degrees, in the growth of this great staple. Confining our attention to those which raised a million of pounds and upwards, we find Connecticut and Indiana cited at one million each; Ohio and North Carolina, at ten to twelve millions; Missouri, Tennessee, and Maryland, from seventeen to twenty-one millions; Kentucky and Virginia, about fifty-six million pounds.

Of this gross two hundred million pounds, we export one hundred and twenty-two millions, leaving about seventy-eight millions for home consumption.

Not satisfied with the quality of this modest amount, we import also, from Cuba, Turkey, Germany, etc., about four million pounds, in Havana and Manila cigars and Turkish and German manufactured smoking-tobacco. Thus we increase the total of our consumption to eighty-two million pounds, which gives

about three pounds eight ounces to every inhabitant of the United States, against seventeen ounces in England, and eighteen ounces in France. From 1840 to 1850, the consumption in the United States, per head, increased from two pounds and half an ounce to three pounds eight ounces. Here, we buy our tobacco at a fair profit to the producer. In most of the countries of Europe it is either subject to a high tax, or made a government monopoly, both as regards its cultivation, and its manufacture and sale. France consumes about forty-one million pounds, and the imperial exchequer is thereby enriched eighty-six million francs *per annum*. Not only is the poor man thus obliged to pay an excessive price, but the tobacco furnished him is of a much inferior quality to ours. "*Petit-caporal*" smoking-tobacco, the delight of the middling classes of Paris, hardly suits an American's taste. In Italy more than one *pubblicano* has enriched himself and bought nobility by farming the public revenues from tobacco and salt. In Austria the cigars are detestable, though Hungary grows good tobacco, and its Turkish border furnishes some of the meerschaum clay. German smoking-tobaccoes are favorites with students here, but owe their excellence to their mode of manufacture.

Tobacco, according to some authorities, holds the next place to salt, as the article most universally and largely used by man,—we mean, of course, apart from cereals and meats. It is unquestionably the widest-used narcotic. Opium takes the second rank, and hemp the third; but the opium- and hashish-eaters usually add the free smoking of tobacco to their other indulgences.

From these great columns of consumption we may logically deduce two prime points for our argument.

1st. That an article so widely used must possess some peculiar quality producing a *desirable effect*.

2d. That an article so widely used cannot produce *any marked deleterious effect*.

For it must meet some instinctive crav-

ing of the human being,—as bread and salt meet his absolute needs,—to be so widely sought after and consumed. Fashion does not rule this habit, but it is equally grateful to the savage and the sage. And it cannot be so ruinous to body and mind as some reformers assert; otherwise, in the natural progress of causes and effects, whole nations must have already been extinguished under its use. Many mighty nations have used it for centuries, and show no aggregated deterioration from its employment. Individual exceptions exist in every community. They arise either from idiosyncrasy or from excess, and they have no weight in the argument.

Now, what are these qualities and these effects? We can best answer the first part of the question by a quotation.

"In ministering fully to his natural wants and cravings, man passes through three successive stages.

"First, the necessities of his material nature are provided for. Beef and bread represent the means by which, in every country, this end is attained. And among the numerous forms of animal and vegetable food a wonderful similarity of chemical composition prevails.

"Second, he seeks to assuage the cares of his mind, and to banish uneasy reflections. Fermented liquors are the agents by which this is effected." [They are variously produced by every people, and the active principle is in all the same, namely, Alcohol.]

"Third, he desires to multiply his enjoyments, intellectual and animal, and for the time to exalt them. This he attains by the aid of narcotics. And of these narcotics, again, it is remarkable that almost every country or tribe has its own, either aboriginal or imported; so that the universal instinct of the race has led, somehow or other, to the universal supply of this want or craving also."

These narcotics are Opium, Hemp, the Betel, Coca, Thorn-Apple, Siberian Fungus, Hops, Lettuce, Tobacco. The active principles vary in each, thus differing from foods and stimulants. Our business

is now to inquire into the chemical constituents of tobacco.

The leaves of this plant owe their properties to certain invariable active principles, which chemistry has enabled us to separate from those ingredients which are either inert or common to it and other forms of vegetation. They are two in number, — a volatile alkali, and a volatile oil, called *nicotin* and *nicotianin*, respectively. A third powerful constituent is developed by combustion, which is named the *empyreumatic oil*.

Starch, gum, albumen, resin, lignin, extractive, and organic acids exist in tobacco, as they do, in varying proportions, in other plants. But the herb under consideration contains a relatively larger proportion of inorganic salts, as those of lime, potassa, and ammonia,—and especially of highly nitrogenized substances; which explains why tobacco is so exhausting a crop to the soil, and why ashes are among its best fertilizers.

The organic base, *nicotin*, (or *nicotia*, as some chemists prefer to call it,) exists in tobacco combined with an acid in excess, and in this state is not volatile. As obtained by distillation with caustic soda, and afterwards treated with sulphuric acid, etc., it is a colorless fluid, volatilizable, inflammable, of little smell when cold, but of an exceedingly acrid, burning taste, and alkaline. *Nicotia* contains a much larger proportion of nitrogen than most of the other organic alkalies. In its action on the animal system it is one of the most virulent poisons known. It exists in varying, though small proportion, in all species of tobacco. Those called mild, and most esteemed, seem to contain the least. Thus, according to Orfila, Havana tobacco yields two per cent. of the alkaloid, and Virginia nearly seven per cent. In the rankest varieties it rarely exceeds eight parts to the hundred. The same toxicologist says that it has the remarkable property of resisting decomposition in the decaying tissues of the body, and he detected it in the bodies of animals destroyed by it, several months after their death. In this particular it resembles arsenic.

Nicotianin, or the volatile oil, is probably the odorous principle of tobacco. According to some, it does not exist in the fresh leaves, but is generated in the drying process. When obtained by distillation, a pound of leaves will yield only two grains; it is therefore in a much smaller proportion than the alkaloid, forming only one half of one per cent. It is a fatty substance, having the odor of tobacco-smoke, and a bitter taste. Applied to the nose, it occasions sneezing, and taken internally, giddiness and nausea. It is therefore one of the active constituents of tobacco, though to a much less degree than *nicotin* itself. For while Hermstadt swallowed a grain of *nicotianin* with impunity, the vapor of pure *nicotin* is so irritating that it is difficult to breathe in a room in which a single drop has been evaporated.

When distilled in a retort, at a temperature above that of boiling water, or burned, as we burn it in a pipe, tobacco affords its third poison, the *empyreumatic oil*. This is acrid, of a dark brown color, and having a smell as of an old pipe, in the pores of which, particularly of meerschau clay, it may be found. It is also narcotic and very poisonous, one drop killing reptiles, as if by an electric shock: in this mode of action it is like prussic acid. But this *empyreumatic oil* consists of two substances; for, if it be washed with acetic acid, it loses its poisonous quality. It contains, therefore, a harmless oil, and a poisonous alkaline substance, which the acetic acid combines with and removes. It has been shown to contain the alkaloid *nicotia*, and this is probably its only active component.

Assuming, therefore, that *nicotianin*, from its feebler action and small amount, is not a very efficient principle in producing the narcotic effects of tobacco, and that the *empyreumatic oil* consists only of fatty matters holding the alkali in solution, we are forced to believe that the only constituent worthy of much attention, as the very soul and essence of the plant, is the organic base, *nicotin*, or *nicotia*.

It is probable that the tobacco-chewer, by putting fifty grains of the "Solace," "Honey-Dew," or "Cavendish" into his mouth for the purpose of mastication, introduces at the same time from one to four grains of nicotin with it, according to the quality of the tobacco he uses. It is *not* probable that anything like this amount is absorbed into the system. Nature protects itself by salivation. It is possible, that, in smoking one hundred grains of tobacco, there *may* be drawn into the mouth two grains or more of the same poison; "for, as nicotin volatilizes at a temperature below that of burning tobacco, it is constantly present in the smoke." It is not probable that here, again, so much is absorbed.

But we will return to this question of the relative effects of chewing, cigar- and pipe-smoking, and snuff-taking, presently. For we suppose that the anxious mother, if she has followed us so far, is by this time in considerable alarm at this wholesale poisoning.

Poisons are to be judged by their effects; for this is the only means we have of knowing them to be such. And if a poison is in common use, we must embrace all the results of such use in a perfect generalization before we can decide impartially. We do not hesitate to eat peaches, though we know they owe much of their peculiar flavor to prussic acid. It is but fair to apply an equally large generalization to tobacco. Chemistry can concentrate the sapid and odorous elements of the peach and the bitter almond into a transparent fluid, of which the smell shall be vertiginous and the taste death. But chemistry is often misunderstood, in two ways: in the one case, by the incredulity of total ignorance; in the other, by the overcredulity of imperfect knowledge. That poor woman who murdered her husband by arsenic not long since was an instance of the first. She laughed to scorn the idea that the chemists could discover anything in the ejected contents of the stomach of her victim, which she voluntarily left in their way. She could not conceive that the

scattered crystals of the fatal powder might be gathered into a metallic mirror, the first glance at which would reflect her guilt.

They who gape, horror-struck, at the endless revelations of chemistry, without giving reason time to act, err in the second manner. Led away by the brilliant hues and wonderful transformations of the laboratory, they forget the size of the world outside, in which these changes are enacted, and the quiet way in which Nature works. The breath of chlorine is deadly, but we daily eat it in safety, wrapped in its poison-proof envelope of sodium, as common salt. Carbonic acid is among the gases most hostile to man, but he drinks it in soda-water or Champagne with impunity. So we cannot explain how a poison will act, if introduced into the body in the diluted form in which Nature offers it, and there subjected to the complicated chemico-vital processes which constitute life.

In the alembic of the chemist we may learn analysis, and from it infer, but not imitate, save in a few instances, the synthesis of Nature. Changes in the arrangement of atoms, without one particle altered that we can discover, may make all the difference between starch and sugar. By an obscure change, which we call fermentation, these may become alcohol, the great stimulant of the world. By subtracting one atom of water from its elements we change this to ether, the new-found *lethe* of pain. As from the inexhaustible bottle of the magician, the chemist can furnish us from the same two elements air or aquafortis. We may be pardoned these familiar examples to prove that we must not judge of things by their palpable qualities, when concentrated or in the gross. That fiery demon, nitric acid, is hid, harmless in its imperceptible subdivision, in the dew on every flower.

From all this we conclude that the evil effects of tobacco are to be determined by their proved *physiological* effects; and also that we must aid our decision by a survey of its general asserted effects.

In treating of these effects, we shall speak, first, of what is known; second, of what its opponents assert; and, third, of what we claim as the results of its use.

What is absolutely known is very little. We see occasional instances of declining health; we learn that the sufferers smoke or chew, and we are very apt to ascribe all their maladies to tobacco. So far as we are aware, the most notorious organic lesion which has been supposed due to this practice is a peculiar form of cancer of the lip, where the pipe, and particularly the clay pipe, has pressed upon the part. But more ample statistics have disproved this theory.

We have as yet become acquainted with no satisfactory series of experiments upon tobacco analogous to those which have been made of some articles of food.

The opponents of tobacco, upon whom we consider the burden of proof to rest, in the absence of any marked ill effects palpable in so large a consumption of the herb, are thus reduced to generalities.

Tobacco is said to produce derangement of the digestion, and of the regular, steady action of the nervous system. These effects must be in a measure connected; but one distinct effect of tobacco is claimed, upon the secretions of the mouth, with which it comes into direct contact. It is said to cause a waste and a deterioration of the saliva. Let us examine this first.

The waste of saliva in young smokers and in immoderate chewers we admit. The amount secreted by a healthy man has been variously estimated at from one and a half to three pounds *per diem*. And it certainly seems as if the whole of this was to be found upon the vile floors of cars, hotels, and steamboats. The quantity secreted varies much with circumstances; but experiments prove the *quality* to be not affected by the amount.

To show how the deterioration of this fluid may affect digestion, we must inquire into its normal physiological constitution and uses. Its uses are of two kinds: to moisten the food, and to con-

vert starch into sugar. The larger glands fulfil the former; the smaller, mostly, the latter office. Almost any substance held in the mouth provokes the flow of saliva by mechanical irritation. Mental causes influence it; for the thought of food will "make the mouth water," as well as its presence within the lips. No one who has tried to eat unmoistened food, when thirsty, will dispute its uses as a solvent. Tobacco seems to be a direct stimulant to the salivary apparatus. Habit blunts this effect only to a limited extent. The old smoker has usually some increase of this secretion, although he does not expectorate. But if he does not waste this product, he swallows it, it is said, in a state unfit to promote digestion. The saliva owes its peculiarity to one of its components, called *ptyalin*. And this element possesses the remarkable power of converting starch into sugar, which is the first step in its digestion. Though many azotized substances in a state of decomposition exert a similar agency, yet it is possessed by *ptyalin* in a much greater degree. The gastric juice has probably no action on farinaceous substances. And it has been proved by experiments, that food moistened with water digests more slowly than when mixed with the saliva.

More than this, the conversion of starch into sugar has been shown to be positively retarded in the stomach by the acidity of the gastric secretions. Only after the azotized food has been somewhat disintegrated by the action of the gastric juice, and the fluids again rendered alkaline by the presence of saliva, swallowed in small quantities for a considerable time after eating, does the saccharifying process go on with normal rapidity and vigor.

Now starch is the great element, in all farinaceous articles, which is adapted to supply us with calorific food. "In its original condition, either raw or when broken up by boiling, it does not appear that starch is capable of being absorbed by the alimentary canal. By its conversion into sugar it can alone become a useful aliment." This is effected almost in-

stantaneously by the saliva in the mouth, and at a slower rate in the stomach.

Obviously, then, if the use of tobacco interferes with the normal action of the saliva, and if the digestion of starch ends in the stomach, here is the strong point in the argument of the opponents of tobacco. We should wonder at the discrepancy between physiology and facts, theory and the evidence of our senses and daily experience among the world of smokers, and be ready to renounce either science or "the weed." Fortunately for our peace of mind and for our respect for physiology, the first point of the proposition is not satisfactorily proved, and the second is untrue. We are not certain that nicotin ruins ptyalin; we are certain that the functions of other organs are vicarious of those of the salivary glands.

We say that it is not satisfactorily proved that tobacco impairs the sugar-making function of the saliva. At least, we have never seen the proof from recorded experiments. Such may exist, but we have met only with loose assertions to this effect, of a similar nature to those hygienic *dicta* which we find bandied about in the would-be-physiological popular journals, which are so plentiful in this country, and which may be styled the "yellow-cover" literature of science.

We acknowledge this to be the weak point in our armor, and are open to further light. Yet more, for the sake of hypothesis, we will assume it proved. What follows? Are we to get no more sugar while we smoke? By no means. Hard by the stomach lies the *pancreas*, an organ so similar in structure to the salivary glands, that even so minute an observer as Kölliker does not think it requisite to give it a separate description. Its secretion, which is poured into the second stomach, contains a ferment analogous to that of the saliva, and amounts probably to about seven ounces a day. The food, on leaving the stomach, is next subjected to its influence, together with that of the bile. It helps digest fatty matters by its emulsive powers; it has been more re-

cently supposed to form a sort of *peptone* with nitrogenized articles also; but, what is more to our purpose, it turns starch into sugar even more quickly than the saliva itself. And even if the reformers were to beat us from this stronghold, by proving that tobacco impaired the saccharifying power of this organ also, we should still find the mixed fluids supplied by the smaller, but very numerous glands of the intestines, sufficient to accomplish the requisite modification of starch, though more slowly and to a less degree.

We come now to the second count in the indictment,—that tobacco injuriously affects the nervous system, and through it the digestion. The accusation is here more vague and indefinite, and the answer also is less susceptible of proof. Both sides must avail themselves of circumstantial, rather than direct evidence.

That digestion is in direct dependence upon the nervous system, and that even transitory or emotional states of the latter affect the former, there can be no doubt. It is so familiar a fact, that instances need hardly be cited to prove it. Hence we are told, that tobacco, by deranging the one, disorders the other,—that nervousness, or morbid irritability of the nerves, palpitations and tremulousness, are soon followed by emaciation and dyspepsia, or more or less inability to digest.

We conceive Prout, an eminent authority, to be near the truth, when he says of tobacco, "The strong and healthy suffer comparatively little, while the weak and predisposed to disease fall victims to its poisonous operation." The hod-carrier traversing the walls of lofty buildings, and the sailor swinging on the yard-arm, are not subject to nervousness, though they smoke and chew; nor are they prone to dyspepsia, unless from excesses of another kind.

It has not been shown that tobacco either hastens or delays the metamorphosis of tissue,—that it drains the system by waste, or clogs it by retarding the natural excretions. We must turn, then, to its direct influence upon the nervous system

to convince ourselves of its ill effects, if such exist.

Nor has it been proved that the nervous influence is affected in such a way as directly to impair the innervation of the organic functions, which derive their chief impulse to action from the scattered ganglia of the sympathetic system. Opium, the most powerful narcotic, benumbs the brain into sleep; produces a corresponding reaction, on awakening; shuts up the secretions, except that of the skin, and thus deranges the alimentary functions. The decriers of tobacco will, we conceive, be unable to show that it produces such effects.

The reformers are reduced, then, to the vague generality, that smoking and chewing "affect the nerves."

Students, men of sedentary, professional habits, persons of a very nervous temperament, or those subject to much excitement in business and politics, sometimes show debility and languor, or agitation and nervousness, while they smoke and chew. Are there no other causes at work, sufficient in themselves to produce these effects? Are want of exercise, want of air, want of rest, and want of inherited vigor to be eliminated from the estimate, while tobacco is made the scape-goat of all their troubles?

Climate, and the various influences affecting any race which has migrated after a stationary residence of generations to a new country extending under different parallels of latitude, have been reasonably accused of rendering us a nervous people. It is not so reasonable to charge one habit with being the sole cause of this, although we should be more prudent in not following it to excess. The larger consumption of tobacco here is due both to the cheapness of the product and to the wealth of the consumer. But it does not follow that we are more subjected to its narcotic influences because we use the best varieties of the weed. On the contrary, the poor and rank tobaccos, grown under a northern sky, are the richest in nicotin.

But it will be better to continue the argument about its effects upon the ner-

vous system in connection with the assertions of the reformers. The following is a list, by no means complete, of these asserted ill effects from its use.

Tobacco is said to cause softening of the brain,—dimness of vision,—("the Germans smoke; the Germans are a *spectacled* nation!" *post hoc, ergo propter hoc?* the laborious intellectual habits of this people, and their trying "text," are considered of no account,)—cancer of the stomach,—disease of the liver,—dyspepsia,—enfeebled nutrition, and consequent emaciation,—dryness of the mouth,—"the clergyman's sore-throat" and loss of voice,—irritability of the nervous system,—tremulousness,—palpitation and paralysis,—and, among the moral ills, loss of energy, idleness, drunkenness. A fearful catalogue, which would dedicate the *tabatière* to Pandora, were it true.

Hygienic reformers are usually unequalled in imaginary horrors, except by the charlatans who vend panaceas.

We have no reasons for believing that tobacco causes softening of the brain equal in plausibility to those which ascribe it to prolonged and excessive mental effort. The statistics of disease prove cancers of other organs to be twice as frequent, among females, as cancer of the stomach is among males; and an eminent etilogist places narcotics among the least proved causes of this disease. A hot climate, abuse of alcohol, a sedentary life, and sluggish digestion happen, rather curiously, to be very frequent concomitants, if not causes, of disease of the liver. Dyspepsia haunts both sexes, and, we venture to assert, though we cannot bring figures to prove it, is as frequent among those who do not use tobacco as among those who do. We are ready to concede that excessive chewing and smoking, particularly if accompanied by large expectoration, may impair nutrition and cause emaciation: that the mass of mankind eat and digest and live, as well as use "the weed," is proof that its moderate employment is not ordinarily followed by this result. Dryness of the mouth follows expectoration as a matter of course; but

the salivation excited in an old smoker by tobacco is very moderate, and not succeeded by thirst, unless the smoke be inhaled too rapidly and at too high a temperature.

We come next to a very tender point with reformers, the laryngeal cough and failing voice of the reverend clergy. The later generations of ministers of this vicinity, as a body, have abandoned tobacco, and yet the evil has not diminished. An eminent divine of our acquaintance, who does not smoke daily, always finds a cigar relieve a trifling bronchitis, to which he is occasionally subject. The curious will find in the "Medical Journal" of this city, for 1839, that quite as much can be said on one side as on the other of this subject.

The minor, rarely the graver affections of the nervous system, do follow the use of tobacco in excess. We admit this willingly; but we deny these effects to its moderate use by persons of ordinary health and of no peculiar idiosyncrasy. Numerous cases of paralysis among tobacco-takers in France were traced to the lead in which the preparation was enveloped.

We pass next to what we claim as the effects of *moderate* tobacco-using, and will take first the evidence of the toxicologists. Both Pereira and Christison agree that "no well-ascertained ill effects have been shown to result from the habitual practice of smoking." Beck, a modern authority, says, "Common observation settles the question, that the moderate and daily use of tobacco *does not* prove injurious. This is a general rule": and he adds, that exceptions necessarily exist, etc.

The repugnance and nausea which greet the smoker, in his first attempts to use tobacco, are not a stronger argument against it than the fact that the system so soon becomes habituated to these effects is a proof of its essential innocuousness.

Certainly the love of tobacco is not an instinctive appetite, like that for nitrogen and carbon in the form of food. Man was not born with a cigar in his mouth, and it is not certain that the *Nicotiana*

tabacum flourished in the Garden of Eden. But history proves the existence of an instinct among all races — call it depraved, if you will, the fact remains — leading them to employ narcotics. And narcotics all nations have sought and found. We venture to affirm that tobacco is as harmless as any. The betel and the hop can alone compare with it in this respect; and the hop is not a narcotic which satisfies alone; others are used with it. Opium and Indian hemp are not to be mentioned in comparison; while coca, in excess, is much more hurtful.

Tobacco may more properly be called a sedative than a narcotic. Opium, the type of the latter class, is in its primary action excitant, but secondarily narcotic. The opium-eaters are familiar with this, and learn by experience to regulate the dose so as to prolong the first and shorten the second effects, as much as possible.

Tobacco, on the other hand, is primarily sedative and relaxing. A high authority says of its physiological action: —

"First, That its greater and first effect is to assuage and allay and soothe the system in general.

"Second, That its lesser and second, or after effect, is to excite and invigorate, and at the same time give steadiness and fixity to the powers of thought."

Either of these effects will predominate, we conceive, according to the intellectual state and capacity of the individual, as well as in accordance with the amount used.

The dreamy Oriental is sunk into deeper reverie under the influence of tobacco, and his happiness while smoking seems to consist in thinking of nothing. The studious German, on the contrary, "thinks and dreams, and dreams and thinks, alternately; but while his body is soothed and stilled, his mind is ever awake."

This latter description resembles, to compare small things with great, the effects of opium, as detailed by De Quincy.

"In habitual smokers," says Pereira, "the practice, when moderately indulged, produces that remarkably soothing and

tranquillizing effect on the mind which has caused it to be so much admired and adopted by all classes of society."

The pleasure derived from tobacco is very hard to define, since it is negative rather than positive, and to be estimated more by what it prevents than by what it produces. It relieves the little vexations and cares of life, soothes the harassed mind, and promotes quiet reflection. This it does most of all when used sparingly and after labor. But if incessantly consumed, it keeps up a constant, but mild cerebral exhilaration. The mind acts more promptly and more continuously under its use. We think any tobacco-consumer will bear us out in this definition of its varying effects.

After a full meal, if it does not help, it at least hides digestion. "It settles one's dinner," as the saying is, and gives that feeling of quiet, luxurious *bien-aise* which would probably exist naturally in a state of primeval health. It promotes, with most persons, the peristaltic movements of the alimentary passages by its relaxing properties.

Smoking is eminently social, and favors domestic habits. And in this way, we contend, it prevents drinking, rather than leads to it. Many still associate the cigar with the bar-room. This notion should have become obsolete ere this, for it has an extremely limited foundation in fact. Bachelors and would-be-manly boys are not the only consumers of tobacco, though they are the best patrons of the bar. The poor man's pipe retains him by his own fireside, as well as softens his domestic asperities.

Excess in tobacco, like excess in any other material good meant for moderate use, is followed by evil effects, more or less quickly, according to the constitution and temperament of the abuser. The lymphatic and obese can smoke more than the sanguine and nervous, with impunity. How much constitutes excess varies with each individual. Manufacturers of tobacco do not appear to suffer. Christison states, as the result of the researches of MM. Parent-Duchatelet and D'Arcet

among four thousand workmen in the tobacco-manufactories of France, that they found no evidence of its being unwholesome. Moderate tobacco-users attain a longevity equal to that of any other class in the community.

We will cite only the following brief statistics from an old physician of a neighboring town. In looking over the list of the oldest men, dead or alive, within his circle of acquaintance, he finds a total of 67 men, from 73 to 93 years of age. Their average age is 78 and a fraction. Of these 67, 54 were smokers or chewers; 9 only, non-consumers of tobacco; and 4 were doubtful, or not ascertained. About nine-elevenths smoked or chewed. The compiler quaintly adds, "How much longer these men might have lived without tobacco, it is impossible to determine."

The tobacco-leaf is consumed by man usually in three ways: by smoking, snuffing, or chewing. The first is the most common; the last is the most disagreeable.

Tobacco is smoked in the East Indies, China, and Siam; in Turkey and Persia; over Europe generally; and in North and South America. Cigars are preferred in the East and West Indies, Spain, England, and America. China, Turkey, Persia, and Germany worship the pipe. In Europe the pipe is patronized on account of its cheapness. Turks and Persians use the mildest forms of pipe-smoking, choosing pipes with long, flexible stems, and having the smoke cooled and purified by passing through water. The Germans prefer the porous meerschaum,—the Canadians, the common clay. Women smoke habitually in China, the East and West Indies, and to a less extent in South America, Spain, and France.

We have no fears that any reasoning of ours would induce the other sex to use tobacco. The ladies set too just a value on the precious commodity of their charms for that. There is little danger that they would do anything which might render them disagreeable. The practice of snuff-taking is about the only form they patronize, and that to a slight extent.

France is the home of snuff. A large proportion of all the tobacco consumed there is used in this form. The practice prevails to a large extent also in Iceland and Scotland. The Icelander uses a small horn, like a powder-horn, to hold his snuff. Inserting the smaller end into the nostril, he elevates the other, and thus conveys the pungent powder directly to the part. The more delicate Highlander carries the snuff to his nose on a little shovel. This can be surpassed only by the habit of "dipping," peculiar to some women of the United States, and whose details will not bear description.

Chewing prevails *par excellence* in our own country, and among the sailors of most nations,—to some extent also in Switzerland, Iceland, and among the Northern races. It is the safest and most convenient form at sea.

By smoking, each of the three active ingredients of tobacco is rendered capable of absorption. The empyreumatic oil is produced by combustion. The pipe retains this and a portion of the nicotin in its pores. The cigar, alone, conveys all the essential elements into the system.

Liebig once asserted that cigar-smoking was prejudicial from the amount of gaseous carbon inhaled. We cannot believe this. The heat of cigar-smoke may have some influence on the teeth; and, on the whole, the long pipe, with a porous bowl, is probably the best way of using tobacco in a state of ignition.

By repeated fermentations in preparing snuff, much of the nicotin is evaporated and lost. Yet snuff-takers impair the sense of smell, and ruin the voice, by clogging up the passages with the finer particles of the powder. The functions of the labyrinthine caverns of the nose and forehead, and of the delicate osseous laminae which constitute the sounding-boards of vocalization, are thus destroyed.

Chewing is the most constant, as it is the nastiest habit. The old chewer, safe in the blunted irritability of the salivary glands, can continue his practice all night,

if he be so infatuated, without inconvenience. In masticating tobacco, nicotin and nicotianin are rolled about in the mouth with the quid, but are not probably so quickly absorbed as when in the gaseous state. Yet chewers are the greatest spitters, and have a characteristic drooping of the angle of the lower lip, which points to loss of power in the *levator* muscles.

Latakia, Shiraz, Manila, Cuba, Virginia, and Maryland produce the most valuable tobaccos. Though peculiar soils and dressings may impart a greater aroma and richness to the plant, by the variations in the quantity of nicotianin, as compared with the other organic elements, yet we are inclined to think that the diminished proportion of nicotin in the best varieties is the cause of their superior flavor to the rank Northern tobaccos, and that it is mainly because they are milder that they are most esteemed. So, too, the cigar improves with age, because a certain amount of nicotin evaporates and escapes. Taste in cigars varies, however, from the Austrian government article, a very rank "long-nine," with a straw running through the centre to improve its suction, to the Cuban *cigarrito*, whose ethereal proportions three whiffs will exhaust.

The manufacture of smoking-tobaccos is as much an art in Germany as getting up a fancy brand of cigars is here; and the medical philosopher of that country will gravely debate whether "Kanaster" or "Varinas" be best suited for certain forms of convalescence; tobacco being almost as indispensable as gruel, in returning health. We think the light pipe-smoker will find a combination of German and Turkish smoking-tobaccos a happy thought. The old smoker may secure the best union of delicacy and strength in the Virginia "natural leaf."

Among the eight or ten species of the tobacco-plant now recognized by botanists, the *Nicotiana tabacum* and the *Nicotiana rustica* hold the chief place. Numerous varieties of each of these, however, are named and exist.

We condense from De Bow's "Industrial Resources of the South and West" a brief account of tobacco-culture in this country. "The tobacco is best sown from the 10th to the 20th of March, and a rich loam is the most favorable soil. The plants are dressed with a mixture of ashes, plaster, soot, salt, sulphur, soil, and manure." After they are transplanted, we are told that "the soil best adapted to the growth of tobacco is a light, friable one, or what is commonly called a sandy loam; not too flat, but rolling, undulating land." Long processes of hand-weeding must be gone through, and equal parts of plaster and ashes are put on each plant. "Worms are the worst enemy," and can be effectually destroyed only by hand. "When the plant begins to yellow, it is time to put it away; and it is cut off close to the ground." After wilting a little on the ground, it is dried on sticks, by one of the three processes called "pegging, spear-ing, and splitting." "When dry, the leaves are stripped off and tied in bundles of one fifth or sixth of a pound each. It is sorted into three or four qualities, as Yellow, Bright, Dull, etc." Next it is "bulked," or put into bundles, and these again dried, and afterwards "conditioned," and packed in hogsheads weighing from six hundred to a thousand pounds each.

It would be too long to detail the processes of cigar- and snuff-making, the latter of which is quite complicated.

We were happy to learn from the fearful work of Hassall on "Food and its Adulterations," that tobacco was one of the articles least tampered with; and particularly that there was no opium in cheroots, but nothing more harmful than hay and paper. He ascribes this immunity mainly to the vigilance of the excisemen. But we have recently seen a work on the adulteration of tobacco, whose microscopic plates brought back our former misgivings. Molasses is a very common agent used to give color and render it toothsome. Various vegetable leaves, as the rhubarb, beech, wal-

nut, and mullein, as well as the less delectable bran, yellow ochre, and hellebore, in snuff, are also sometimes used to defraud. Saltpetre is often sprinkled on, in making cigars, to improve their burning.

The Indians mixed tobacco in their pipes with fragrant herbs. Cascarilla bark is a favorite with some smokers; it is a simple aromatic and tonic, but, when smoked, is said sometimes to occasion vertigo and intoxication.

We have before observed that tobacco is a very exhausting crop to the soil. The worn-out tobacco-plantations of the South are sufficient practical proof of this, while it is also readily explained by chemistry. The leaves of tobacco are among the richest in incombustible ash, yielding, when burned, from 19 to 28 *per cent.* of inorganic substance. This forms the abundant ashes of tobacco-pipes and of cigars. All this has been derived from the soil where it was raised, and it is of a nature very necessary to vegetation, and not very abundant in the most fertile lands. "Every ton of dried tobacco-leaves carries off from four to five hundred-weight of this mineral matter,—as much as is contained in fourteen tons of the grain of wheat." It follows that scientific agriculture can alone restore this waste to the tobacco-plantation.

There is one other aspect of this great subject, which is almost peculiar to New England, the home of reform. Certain Puritanical pessimists have argued that the use of tobacco is immoral. There are few, except our own sober people, who would admit this question at all. We would treat this prejudice with the respect due to all sincere reforms. And we have attempted to show, that, since all races have used and will use narcotics, we had better yield a little, lest more be taken, and concede them tobacco, which is more harmless than many that are largely consumed. We have proved to our own satisfaction, and we hope to theirs, that tobacco *in moderation* neither affects the health nor shortens life; that it does not create an appetite for

stimulants, but rather supplies their place; and that it favors sociality and domestic habits more than the reverse.

If the formation of any habit be objected to, we reply, that this is a natural tendency of man, that things become less prejudicial by repetition, and that a high hygienic authority advises us "to be regular even in our vices."

As we began in a light, we close in a more sober vein, apologists for tobacco, rather than strongly advocating either

side. On one point we are sure that we shall agree with the ladies, and that is in a sincere denunciation of the habit of smoking at a tender age. And although, in accordance with the tendency of the times, the school-boy whom we caught attached to a "long-nine" would consistently reply, "*Civis Americanus sum!*" we shall persist in claiming the censorship of age over those on whose chins the callosities of adolescence is yet ungrown.

SHAKSPEARE DONE INTO FRENCH.

IN the first place, it really was an immense success, and Shylock, or Sheeloque, as they dubbed him, was called before the curtain seven times, and in most appropriate humility nearly laid his nose on his insteps as he bowed, and quite showed his spine.

It certainly was like Shakspeare in this, that it had five acts; but when I have made that concession, and admitted that Sheeloque was *Le Juif de Venise*, I think I have named all the cardinal points of similarity in the "Merchant of Venice" and "Le Juif" of that same unwholesome place. To be sure, there is a suspicion of *le devin Williams*, as they will call him, continually cropping out; but a conscientious man would not swear to one line of it, and I do not think Shakspeare would be justified in suing the French author for compensation under the National Copyright-Act. I speak of Shakspeare as existing, because it is my belief he does, in a manner so to speak.

I have intimated that "Le Juif" has five acts; but I have not yet committed myself to the assertion that he was in seven *tableaux*, and possessed a prologue.

It is now my pleasing duty to force you through the five acts, and the one prologue, and the seven *tableaux*,—every one of them.

This prologue is divided as to the theatre into two parts: to left, Sheeloque's domestic interior,—to right, a practicable canal. In the very first line out crops Shylock's love of good bargains; and I give the reader my word, the little Frenchmen saw that this was characteristic, and applauded vehemently. "*Bon,*" said I,— "if they applaud the first line, what will they do with the last act?"

It need not be said that Shylock dabbles in those bills which Venetian swells of the fifteenth century, in common with those of a later age and more western land, will manipulate, in spite of all the political economy from Confucius down to Mr. Mill; and in this particular instance and prologue the names of the improvidents are Leone and Ubaldo, neither of which, if my memory serve me, is Shakspearian. These gentlemen considerably shake my traditional respect for sixteenth-century Venetian *Aristos*, for they insult that Jew till I wonder where a count and a duke have learnt such language: but they serve a purpose; they trot Shylock out, so to speak, and give our author an opportunity of doing his best with A 1. Shylock's great speech. Here is the apostrophe:—

"But yesterday—no later past than yesterday—thou didst bid thy mistress

call at me from her balcony; thy servants by thy will did cast mud on me, and thy hounds sped snapping after me,'—whereby we may infer they went hunting in Venice, in the fifteenth century. It must have been rather dangerous running. Nor could the Venetian nobles of that good old time have been very proper; for Leone and Ubaldo justify themselves by saying they were drunk.

It is after this pretty excuse that Shylock has a soliloquy as long as his beard,—and I hear really loud opposition to this didacticism in the pit; but, however, this slow work soon meets compensation in violent action. Shylock won't renew, and the nobles get indignant; so they propose to pay Shylock with more kicks than halfpence. Here the action begins; for Shylock protests he will bite a bit out of them; and though one of these long-sleeved swells warns him that all threats by Jews against Christians are an imprisonment matter, Shylock rashly prepares for a defence. Away fly the lords after Shylock, over go the chairs, down goes the table, and I suppose Shylock *does* hit "one of them"; for the two lords go off quite triumphantly, with the intimation that he will be in prison in one hour from that.

Then the Jew calls for—Sarah; and this same comes in on tiptoe, for fear of waking the baby. This Shylock *fil*s Sarah proceeds to describe as equally beautiful with Abel and Moses, which seems to give Shylock *père* great comfort,—though I am bound to admit the lowly whispered doubt on the part of a pit-neighbor of mine as to Sarah's capability of judging in the matter.

Shylock is preparing for prison, it seems, and one little necessity is a prayer for said son. Sarah coming in with a response, Shylock leaves off praying "immediate," to tell Sarah she is no vulgar servant, which assurance is received in the tearful manner. And here it is comes a little faint whiff of the real play. In leaving home, Shylock's French plagiarizes the Jew's speech to Jessica, even

down to the doubt the Jew has about leaving his house at all.

There has been no necessity for stating that Sarah supposes herself the widow of a libel on his sex, a man unspeakable; and the moment I hear he is, or was, a man of crime unspeakable, I know he will turn up. Shylock having gone away,—I do not know where,—up comes a gondola to the front-door, and, of course, in walks Sarah's husband. "Good evening, Ma'am," says he. "God of Israel!" says she. And then such an explanation as this infamous husband gives! He puts in, that he is a pirate; that his captain, whom he describes as a *Vénus en corsaire*, has lost a son, and wants another; hence speaker, name Arnheim, wants that little Israelite who is so much like Abel and Moses at one and the same moment: though how Arnheim should know of that little creation, or how he should know him to be also like the lost infantile pirate as well as Abel and Moses, does not sufficiently appear,—as, indeed, my neighbor, who is suggestive of a Greek Chorus in a blue blouse, discovers in half a dozen disparaging syllables.

Of course, when the supposed widow hears this, her cries ought to wake up all hearing Venice, but not one Venetian comes to her aid; and though she uses her two hands enough for twenty, she has not got her way when thoroughly breathed.

"Sarah," says that energetic woman's husband, "Sarah, don't be a fool!"

Then I know the baby is coming: there never yet was a French prologue without a baby,—it seems a French unity; sometimes there are two babies, who always get mixed up. But to our business.

Out comes the baby, (they never scream,) and—alas that for effect he should thus commit himself!—Arnheim rips Sarah up, and down she goes as dead as the Queen of Sheba.

Then comes a really fine scene. Shylock enters, learns all; in come soldiers for Shylock, and, of course, accuse him of the murder; whereupon Shylock shows

on the blade a cross. "Doth a Jew wear a knife with a cross on it?" says he. "Go to!—'tis a Christian murder."

To this the soldier-head has nothing to say; so he hurries Shylock off to prison, and down comes the curtain.

"Hum!" says the Greek Chorus,— "it might be worse."

ACT I.

IT is clear there must be lady characters, or I am quite sure the Greek Chorus would find fault wofully,—and the only one we have had, Sarah, to wit, can't decently appear again, except in the spiritual form. Well, there is the original Portia,—alas for that clever, virtuous, and noble lady!—how is she fallen in the French!—she is noble-looking and clever,—but the third quality, oh, dear me! This disreputable is named Imperia, and the real Bassanio becomes one Honorius, who is, as he should be, the bosom friend of one Andronic, which is Antonio, I would have you know. I have thought over it two minutes, and have come to the conclusion that the less I say about Imperia the better, and I know the Anglo-Saxon would not agree with Imperia,—but, as the Frenchman does, I offer you one, or part of one of Imperia's songs, as bought by me for two disgraceful *sous*.

"Déjà l'aube rayonne et luit,
 La nuit
 Finit;
 Maîtresse,
 L'heure enchanteresse
 Passe et fuit...
 A ton arrêt je dois me rendre.
 Sort jaloux! (*bis.*)
 Hâtons-nous,
 Il faut descendre
 Sans réveiller son vieil époux!..."

Well,—what do you think of it? Now I will not mention her again,—I will refer to her, when I shall have vexatious occasion, as "that woman." And, indeed, "that woman" and Honorius set us up in comprehension of matters progressing. It seems that quite twenty years have passed since Sarah's soul slid through a knife-

gash; that Honorius and Andronic, who have come from Smyrna, (why?) are almost brothers; that Honorius is good in this fact only, that he knows he is really bad; and that Andronic is the richest and most moral man in Venice,—though why, under those circumstances, he should be friendly with such a rip as Honorius, Honorius does not inform us.

I shall pass over the next scenes, and come to that in which all the creditors of all the lords are brought on to the stage in a state which calls for the interference of the Doge: they are all drunk,—except Shylock. This scene really is a startler. Shylock, now dashed with gray, and nearly double, comes up to "that woman" and calls her sister; whereupon she demanding that explanation which I and the Greek Chorus simultaneously want, Shylock states that *he* is Usury and *she* Luxury, "and they have one father."

"Queer old man!!!" says "that woman."

Here follow dice, in which the Jew is requested to join, all of which naturally brings about a discussion on the rate of usage, which that dog Andronic is bringing down, and a further statement that *that* imprisonment lasted two years. Then comes a *coup d'théâtre*: Shylock reminds everybody that a just Doge reigns now, (nor can I help pointing out the Frenchman's ingenuity here: in the *play*, the Doge must be just, or where would the pound of flesh be?—while, if the Doge of the *prologue* were just, Shylock would not have been committed for two years,—*ergo*, kill No. 1. Doge, install No. 2.)—Shylock reminds everybody that a just Doge reigns. Shylock has it all his own way, and Honorius is arrested before the very eyes of "that woman." Then comes the necessary *Deus ex machinâ* in the shape of Andronic, who pays everybody everything, saves his friend, and play proceeds. Andronic reproaches Jew touching his greed, whereon the Jew offers this not profound remark,— "I am—what I am,"—and goes on counting his money.

Oh, if you only knew the secret!

This cash payment winds up the act.

ACT II.

DECIDEDLY, the beginning of Act Second proves Andronic is no fool, for he advises Honorius to flee that creature, — and what better advice in those matters is there than that of retreating? Decidedly, too, the virtuous Doge is worth having, — really a Middle-Age electric telegraph, — for he gives all about him such a dose of news as in this day would sell every penny-paper printed: and such bad news! — Venice down everywhere, and a loan wanted. Here comes a fine scene for Andronic, (for, after all, the lords have “hitched out” of the proposed loan, whereby I take it they are not such fools as people take them to be,) — Andronic declares, that, if he were rich enough, the Doge should not ask for money, but ships are but frail and his have gone to pieces. Here, you see, comes another faint whiff of the real original play.

Then, clearly, the Doge can only apply to the Jews. Enter Shylock *à propos*. The next scene is so awful to the Greek Chorus, who may be of a business turn, that I am charitable enough not to reproduce it here; but the percentage the Jew wants for the loan seems to be quite a multiplication-table of tangible securities, and I only wonder the Doge does not order him into the Adriatic. Amongst other demands, the Jew procures all the Dogic jewels, — and then he wants all the jewels of the Doge’s daughter; indeed, Shylock becomes a most unreasonable party.

No sooner does he speak of the daughter, Ginevra by name, than in she comes, jewel-casket in hand, — which leads the cynical Greek Chorus to suppose that Mademoiselle is either *clairvoyante* or prefers going about with a box. The way in which that best of her sex offers up the jewels on the patriotic shrine is really worthy of the applause bestowed on the act; but when that pig of a Jew is not satisfied, when he insists upon the diamond necklace Ginevra wears, as another preliminary to the loan, people in the theatre quite shake with indignation.

Now the jewel has been the pattern young lady’s mother’s; and here comes an opening for that appeal to the filial love of Frenchmen which is never touched in vain. It is really a great and noble trait in the French character, that filial love, not too questionable to be demonstrative, — tis a sure dramatist’s French card, that appeal to the love of mothers and fathers by their children.

Having procured the weight of this chain, which has caused Shylock the loss of many friends in the house who have been inclined to like him consequent upon the loss of that Abel-Moses-photograph, — Shylock departs with this information, that he will bring the money tomorrow: which assertion proves Shylock to be a strong man, if a hundred thousand marks are as heavy as I take them to be.

Upon what little things do dramas, in common with lives, turn! That necklace is the brilliant groundwork of the rest of the plot. Why — why — why — WHY didn’t Shakspeare think of the necklace?

And as I always *must* tell love-affairs as soon as I hear of them, — for, as a rule, I live in country towns, — I may at once state that Ginevra loved Andronic, and latter loved former, and they would not tell each other, and the Doge knew nothing about it.

Yes, decidedly, the necklace is the first character in “Le Juif de Venise.” You see, Ginevra loved the necklace, and Andronic loved Ginevra; so he is forced to procure that charming necklace for her, *coûte qui coûte*, and so he goes to Shylock for it. And here you will see its value: Shylock will sell it only for a large sum. Andronic, seeing his losses, hasn’t the money, — but will have; — glorious opening for the clause about the pound of flesh! Signed, sealed, and delivered. How superior is Andronic to Antonio, the old —! This latter pawns his breast for a friend only: the great Andronic risks the flesh about *his* heart for sacred love. Io Venus!

Yet, nevertheless, notwithstanding, it

is the opinion of the Greek Chorus that Andronic is a *joli* fool,—which choral remark I hear with pain, as reflecting upon unhesitating love, and especially as the remarker has been eminently touched at the abduction.

ACT IV.

As for the Fourth Act,—it is very tender and terrible.

I need not say that the tenderness arises through the necklace,—and indeed, for that matter, so also does the terror. Touching the first, of course it is the discovery by Ginevra of the return of those maternal diamonds,—which are handed to her by a *femme-de-chambre*, who has had them from Andronic's *valet-de-chambre*, who is in love with the *femme-de-chambre*, who reciprocates, etc., etc., etc.

But touching the terrible,—“that woman” hears of the necklace, and sends Honorius for it to Shylock. Bad job!—gone! Well, then, Honorius falls out with his old friend Andronic because latter will not yield up the necklace. Honorius demands to know who has it. Andronic will not name Ginevra's name before “that woman” and all the lofty lords, and then there's a grand scene.

In the first place, it seems that in Shylock's Venetian time, the Venetian lords, when obliging Venice with a riot, called upon Venetians to put out their lights, and this the lords now do, (we are on the piazza,) and out go all the lights as though turned off at one main.

Then there is such a scrimmage! Honorius lunges at Andronic; this latter disarms former; then latter comes to his senses, flies over to his old friend, and all the Venetian brawlers are put to flight.

Then Honorius says,—and pray, pray, mark what Honorius says, or you will never comprehend Act V.,—then Honorius says, taking Andronic's previous advice about flying, “I will go away; and fight the Adriatic pirates.” Now, pray, don't forget that. I quite distress myself in praying you not to forget that,—to

wit,—“Honorius goes away to fight the Adriatic pirates.”

Oh, if you only knew the big secret!

ACT V.

THIS, of course, is the knifing act.

Seated is Shylock before an hour-glass, and trying to count the grains of sand as they glide through.

Oh, if you only knew the big secret!

You remember that in that original play Antonio's ships are lost merely. Bah! we manage better in this matter: the ships come home, but they are empty,—emptied by the pirates; though why those Adriaticians did not confiscate the ships is even beyond the Greek Chorus, who says, “They were very polite.”

At last all the sand is at rest.

Crack,—as punctual as a postman comes Andronic; and as the Venetians are revolting against the flesh business, about which they seem to know every particular, Andronic brings a guard of the just Doge's soldiers to keep the populace quiet while the business goes on;—all of which behavior on the merchant's part my friend the Chorus pronounces to be stupid and suicidal.

Then comes such a scene!—Andronic calling for Ginevra, and the Jew calling for his own.

Breast bared.

Then thus the Jew:—

“Feeble strength of my old body, be centred in this eye and this arm! Thou, my son, receive this sacrifice, and tremble with joy in thy unknown tomb!”

Knife raised.

Oh, if you only knew the big secret!

And I *do* hope you have not forgotten that Honorius went away to fight the Adriatic pirates.

For, if you have forgotten that fact, you will not comprehend Honorius's rushing in at this moment from the Adriatic pirates.

Yes,—but why did he go amongst them?

The big secret, in fact. If Honorius had not gone, why, I suppose Shylock would have had his pound of man.

As it is, Honorius and his paper — which latter has also come from the pirates — do the business.

Why, the whole thing turns on the paper. How lucky it was Honorius went amongst the pirates!

Honorius has vanquished the chief of the pirates, — who was named Arnheim, — and that disreputable widower, just before his last breath, gave Honorius the said paper, — though why, it is not clear. And — and this paper shows that **ANDRONIC IS THAT SON STOLEN AWAY FROM SARAH, DECEASED, AND SHYLOCK, — THAT SON, NOT ONLY THE IMAGE OF ABEL, BUT OF MOSES, TOO.**

Great thunderbolts!

Then, very naturally, (in a play,) in come all the characters, and follows, I am constrained to say, a very well-conceived scene, — 'tis another appeal to filial love. The Jew would own his son, but he remembers that it would injure the son, and so he keeps silent. I declare, there is something eminently beautiful in

the idea of making the Jew yield his wealth up to Andronic, and saying he will wander from Venice, — his staff his only wealth. And when, as he stoops to kiss his son's hand, Ginevra (who of course has come on with the rest) makes a gesture as though she feared treachery, the few words put into the Jew's mouth are full of pathos and poetry.

And so down comes the curtain, — the piece meeting with the full approval of Chorus, who applauded till I thought he would snap his hands off at the wrists.

“A very moral play,” said a stout gentleman behind me, — who had done little else all night but break into the fiercest of apples and pears, — “a very moral play,” — meaning thereby, probably, that it was very moral that a Jew's child should remain a Christian.

Now there were some good points in that play; but, oh, thou M. Ferdinand Dugué, thou, — why didst thou challenge comparison with a man who wrote for all theatres for all times?

THE POETS' SINGING.

IN heat and in cold, in sunshine and rain,
 Bewailing its loss and boasting its gain,
 Blessing its pleasure and cursing its pain,
 The hurrying world goes up and down :
 Every avenue and street
 Of city and town
 Are veins that throb with the restless beat
 Of the eager multitude's trampling feet.
 Men wrangle together to get and hold
 A sceptre of power or a crock of gold ;
 Blaspheming God's name with the breath He gave,
 And plotting revenge on the brink of the grave !
 And Fashion's followers, flitting after,
 O'ertake and pass the funeral train,
 Thoughtlessly scattering jests and laughter,
 Like sharp, quick showers of hail and rain,
 To beat on the hearts that are bleeding with pain !
 And many who stare at the close-shut hearse
 Envy the dead within, — or, worse,

Turn away with a keener zest
 To grapple and revel and sin with the rest!
 While far apart in a bower of green,
 Unheeded, unseen,
 A warbling bird on the topmost bough
 Merrily pipes to the Poet below,
 Asking an answer as gay, I trow!
 But he hears the surging waves without, —
 The heartless jeer, and the wild, wild shout:
 The ceaseless clamor, the cruel strife
 Make the Poet weary of life;
 And tears of pity and tears of pain
 Ebb and flow in every strain,
 As he soothes his heart with singing.

The tide of humanity rolleth on;
 And 'mid faces miserly, haggard, and wan,
 Between the hypocrite's and the knave's,
 The hapless idiot's and the slave's,
 Sweet children smile in their nurses' arms,
 And clap their hands in innocent glee;
 While, unrebuked by the heavenly charms
 That beam in the eyes of infancy,
 Oaths still blacken the lips of men,
 And startle the ears of womanhood!
 On either hand
 The churches stand,
 Forgotten by those who yesterday
 Went thronging thither to praise and pray,
 And take of the Holy Body and Blood!
 Their week-day creed is the law of Might;
 Self is their idol, and Gain their right:
 Though, now and then,
 God sees some faithful disciples still
 Breasting the current to do His will.
 The little bird on the topmost bough
 Merrily pipes to the Poet below,
 Asking an answer as gay, I trow!
 But he hears the surging waves without, —
 The atheist's scoff and the infidel's doubt,
 The Pharisee's cant and the sweet saint's prayer,
 And the piercing cry for rest from care;
 And tears of pity and tears of pain
 Ebb and flow in every strain,
 As he praises God with singing.

A JOURNEY IN SICILY.

CHAPTER I.

PALERMO.

IN the latter part of April, 1856, four travellers, one of whom was the present writer, left the Vittoria Hotel at Naples, and at two, P. M., embarked on board the Calabrese steamer, pledged to leave for Palermo precisely at that hour. As, however, our faith in the company's protestations was by no means so implicit as had been our obedience to their orders, it was with no feeling of surprise that we discovered by many infallible signs that the hour of departure was yet far off. True, the funnel sent up its thick cloud; the steward in dirty shirt-sleeves stood firm in the gangway, energetically demanding from the baggage-laden traveller the company's voucher for the fare, without which he may vainly hope to leave the gangway ladder; the decks were crowded in every part with lumber, live and dead. But all these symptoms had to be increased many fold in their intensity before we could hope to get under way; and a single glance at the listless countenances of the bare-legged, bare-armed, red-capped crowd who adhered like polypi to the rough foundation-stones of the mole sufficed to show that the performance they had come to witness would not soon commence. Our berths once visited, we cast about for some quiet position wherein to while away the intervening time. The top of the deck-house offered as pleasant a prospect as could be hoped for, and thither we mounted.

The whole available portion of the deck, poop included, was in possession of a crowd of youngsters, many mere boys, from the Abruzzi, destined to exchange their rags and emptiness for the gay uniform and good rations of King Ferdinand's soldiery. In point of physical comfort, their gain must be immense; and very bad must be that gov-

ernment which, despite of these advantages, has forced upon the soldier's mind discontent and disaffection. No doubt, the spectacle of the Swiss regiments doubly paid, and (on Sundays at least) trebly intoxicated, has something to do with this ill feeling. The raggedness of this troop could be paralleled only by that of the immortal regiment with whom their leader declined to march through Coventry, and was probably even more quaint and fantastic in its character. Chief in singularity were their hats, if hat be the proper designation of the volcanic-looking gray cone which adhered to the head by some inscrutable dynamic law, and seemed rather fitted for carrying out the stratagem of shoving a troop of horse with felt than for protecting a human skull. A triple row of scalloped black velvet not unfrequently bore testimony to the indomitable love of the nation for ornament; and the same decoration might be found on their garments, whose complicated patchwork reminded us of the humble original from which has sprung our brilliant Harlequin. Shortly our attention was solicited by a pantomimic Roscius, some ten or twelve years old, who, having climbed over the taffrail and cleared a stage of some four feet square, dramatized all practicable scenes, and many apparently impracticable, for he made nothing of presenting two or three personages in rapid interchange. Words were needless, and would have been useless, as the unloading of railway bars by a brawny Northumbrian and his crew drowned all articulate sounds.

Notwithstanding these varied amusements, we were not sorry to see arrive, first, a gray general, obviously the Triton of our minnows, and close behind him the health and police officers of the government, to whose paternal solicitude for our mental and bodily health was to be ascribed our long delay in port. These beneficent influences, incarnated in the form of

two portly gentlemen in velvet waistcoats, — an Italian wears a velvet waistcoat, if he can get one, far into the hot months, — began their work of summoning by name each individual from the private to the general, then the passengers, then the crew, and finally, much to our relief, re-embarked in the boat, and left us free to pursue our voyage.

We soon left behind the ominous cone of Vesuvius, reported by the best judges to be at present in so unsound a state that nothing can prevent its early fall; sunset left us near the grand precipices of Anacapri, and morning found us with Ustica on our beam, and the semicircle of mountains which enchase the gem of Palermo gradually unfolding their beauties. By ten, A. M., we were in harbor and pulling shorewards to subject ourselves to the scrutiny of custom-house and police. Our passports duly conned over, the functionary, with a sour glance at our valanced faces, inquired if we had letters for any one in the island. Never before had such a question been asked me, nor ever before could I have given other than an humble negative. But the kindness of a friend had luckily provided me with a formidable shield, and a reply, given with well-assumed ease, that I had letters from the English Ambassador for the Viceroy, smoothed the grim feature, and released us from the dread tribunal. The custom-house gave no trouble, and we reëmbarked to cross about half a mile of water which separated us from the city gate. Here, however, we were destined to experience the influence of the sunny clime: our two stout boatmen persisted in setting their sail, under the utterly false pretence that there was some wind blowing, and fully half an hour elapsed ere we set foot ashore.

This gave me ample time to recall the different aspect of Palermo when first I saw it, in 1849. I had accompanied the noble squadron, English and French, which carried to the Sicilian government the *ultimatum* of the King of Naples. The scenes of that troubled time passed vividly before me: the mutual salutes of the

Admirals; the honors paid by each separately to the flag of Sicily, that flag which we had come to strike, — for such we all knew must be the effect of our withdrawal. I recollected the manly courtesy with which the Sicilians received us, their earnest assurances that they did not confound our involuntary errand with our personal feelings; and how, when a wild Greek mountaineer from the Piano de' Greci, unable to comprehend the intricacies of politics, and stupidly imagining that those who were not for him were against him, had insulted one of our officers, the bystanders had interposed so honorably and so swiftly that even the hot blood of our fiery Cymrian had neither time nor excuse to rise to the boiling-point. I recalled the scene in the Parliament House, when the replies to the King's message, which had been sent by each chief town, were read by the Speaker: the grave indignation of some, — the somewhat bombastic protestations of others, — the question put of submission or war, — the shout of "*Guerra! guerra!*" ringing too loud, methought, to be good metal; the "*Suoni la tromba*" at that night's theatre, — the digging at the fortifications, — women carrying huge stones, — men more willing to shout for them than to do their own share, — Capuchin friars digging with the best, — finally, the wild dance of men, women, cowed and bearded monks, all together, brandishing their spades and shovels in cadence to the military band. With this came to me the mild smile and doubtful shake of the head of the good Admiral Baudin, and his prophetic remark, — "I have seen much fighting in various parts of the world; and if these men mean to fight, I cannot comprehend them."

While this mental diorama was unrolling, even Sicilian laziness had time to reach the shore; and passing by a rough mass of rocks, where our second cutter had once run too close for comfort, and the Friedland's launch had upset and lost two men, we at length landed close to the city gate. A custom-house officer pounced on us for a fee, notwithstanding

our examination on first landing, and (“*uno avulso, non deficit aureus alter,*”) at the city gate, not thirty yards distant, a third repeated the demand, equivalent to “Your money or your keys.” A capital breakfast at the Trinacria hotel was the fitting conclusion to these oft-recorded troubles, and the gratifying news that the Viceroy had just left the island for Naples obviated the necessity of a formal visit, and left us free to enjoy the notabilities of Palermo.

The plan of this beautiful city is very simple, being a tolerably accurate square, surrounded by walls, of which the northern face skirts the sea, and the southern faces the head of the lovely valley in which the city stands,—the Golden Shell. Two perfectly straight streets, intersecting in a small, but highly ornamented *piazza*, traverse the city. The Toledo, or Via Cassaro,—for it bears both these designations,—runs from the sea to the Monreale gate, close to which is the Royal Palace, and the Cathedral square opens from this street. The Via Macqueda contains few buildings of interest except the University. Between the wall and the sea runs the magnificent Marina, a more beautiful promenade than even the Villa Reale of Naples, having on the right the low but picturesque headland of Bagaria, while on the left rise the all but perpendicular rocks of Monte Pellegrino, once the impregnable mountain-throne of Hamilear Barcas, and later the spot where in a rude cavern, now sheeted with marble and jasper, “from all the youth of Sicily, Saint Rosalie retired to God.” The handicraftsmen of Palermo still occupy almost exclusively the streets named after their trades,—an indication of immobility rarely to be met with nowadays, though Rome displays it in a minor degree.

We first visited the University Museum. Numerous pictures, far beyond the ordinary degree of badness, occupy the upper rooms, where the only object of interest is a very fine and well-preserved bronze of Hercules and the Pompeian Fawn, half life-size. But far beyond all else in artistic importance are

the *metopes* from Selinuntium, which, though much damaged, show marks of high excellence. They are of clearly different dates, though all very archaic. The oldest represent Perseus cutting off the Gorgon’s head, and Hercules killing two thieves. Perseus has the calm, sleepy look of a Hindoo god,—while Gorgon’s head, with goggle eyes and protruding tongue, resembles a Mexican idol. Hercules and the thieves have more of an Egyptian character. The material of these bas-reliefs is coarse limestone; and in the *metopes* on the opposite wall, which are clearly of later date, recourse has been had to a curious method of obtaining delicacy in the female forms: the faces, hands, and feet, which alone are visible from among the drapery, are formed of fine marble. An Actæon torn by his dogs is much corroded by sea air, but displays great nobleness of attitude. The vigor in the left arm, which has throttled one of the dogs, can hardly be surpassed. A portion of the *cella* of one of the temples has been removed hither, and its brilliant polychromy is sufficient to decide the argument as to the existence of the practice, if, indeed, that point be yet in doubt. But it seems that the non-colorists have relinquished the parallel of architecture, which, be it observed, they formerly defended obstinately, and have now intrenched themselves in the citadel of sculpture, intending to hold it against all evidence. The only other object of much interest was a Pompeian fresco, representing two actors, whose attitudes and masks are so strikingly adapted to express the first scene of the “*Heautontimorumenos*,” between Menalcas and Chremes, that it seems scarcely doubtful that this is actually the subject of the painting.

Near the upper end of the Toledo the Cathedral is situated, not very favorably for effect, as only the eastern side is sufficiently free from buildings. It is a noble pile: Northern power and piety expressed by the agency of Southern and Arabic workmen, and somewhat affected by the nationality of the artificer.

The stones are fretted and carved more elaborately than those of any French or English cathedral, but entirely in arabesques and diapering of low relief, so that the spectator misses with regret the solemn rows of saints and patriarchs that enrich the portals of our Gothic minsters. These, however, are reflections of a subsequent date, and did not interfere to mar the pleasure with which we sat in front of the southern door, beneath the two lofty arches, which, springing from the entrance tower, span the street high above our heads. For some time we sat, unwilling to change and it might be impair our sensations by passing inwards. Our reluctance was but too well founded: the whole interior has been modernized in detestable Renaissance style, and in place of highest honor, above the central doorway, sits in tight-buttoned uniform a fitting idol for so ugly a shrine, the double-chinned effigy of the reigning monarch. We turned for comfort to a chapel on the right, where in four sarcophagi of porphyry are deposited the remains of the Northern sovereigns. The bones of Roger repose in a plain oblong chest with a steep ridged roof, and the other three coffins, though somewhat more elaborate, are yet simple and massive, as befits their destined use. The inscription on that of Constantia is touching, as it tells that she was "the last of the great race of Northmen,"—the good old bad Latin "Northmannorum" giving the proper title, which we have injudiciously softened into Norman.

In a small *piazza* near the intersection of the main streets is a Dominican church, whose black and white inlaid marbles are amazing in their elaborateness, astounding in their preposterously bad taste. They transcend description, and can be faintly imagined only by such as know a huge marble nightmare of waves and clouds in the south aisle of Westminster Abbey. This church contains one good painting of a triumphant experiment conducted by some Dominican friars in the presence of sundry Ulemas and Muftis: a Koran and Bible have been thrown in-

to a blazing fire, and the result is as satisfactory as that of Hercules's death-grapple with the Nemean lion. To be sure, lions and Turks are not painters. The Martorana church is rich in gold-grounded mosaics, resembling Saint Mark's at Venice. One represents the coronation of Roger Guiscard by the Saviour: very curious, as showing at how early a date the invaders laid claim to the Right Divine. The inscription is also noteworthy: *Rogierius Rex*, in the Latin tongue, but the Greek characters, thus: ΡΟΓΕΠΙΟΣ ΡΗΧ.* The Renaissance has invaded this church too, and flowery inlaid marbles with gilded scroll balconies (it is a nuns' church) mingle with the bold discs and oblong panels of porphyry and green serpentine. In the nave of the small church sat in comfortable arm-chairs two monks, one black, one white, leaning their ears to gilded grates and receiving the confessions of the sisterhood. The paschal candlestick stood in front of the high altar,—Ascension-Day not being past; but here, as in other Sicilian churches, it assumes the form of a seven-branched tree, generally of bronze bedecked with gold. These same nuns' balconies are not confined to the interior of churches, but form a distinct and picturesque feature in the long line of the Toledo. Projecting in a bold curve whose under-surface is gaily painted in arabesque, their thick bars and narrow openings nevertheless leave a gloomy impression on the mind, while they add to the Oriental character of the city. A somewhat unsuccessful effort to identify the church whose bell gave signal for the Sicilian Vespers closed our day's labor. The spot is clearly defined and easily recognizable, and a small church, now shut up, occupies the site. So far, so good; but the cloister which is distinctly mentioned cannot now be found, nor is it easy to perceive where it could have stood. Perhaps

* The *e* in *Rex* is here rendered by the Greek *eta*,—a proof that the pronunciation of that letter was similar to that of our long *a*, and not like our double *ee*; although the modern Greeks support the latter pronunciation.

some change in the neighboring harbor may have swept it away.

23d April. To those who take interest in the efforts of that age when Christianity, devoid at once of artistic knowledge and of mechanical, strove from among the material and moral wreck of Paganism to create for herself a school of Art which should, despite of all short-comings, be the exponent of those high feelings which inspired her mind, the Royal Chapel of Palermo offers a delightful object of study. Less massive than the gloomily grand basilicas of Rome and Ravenna, surpassed in single features by other churches, as, for instance, the Cathedral of Salerno, it contains, nevertheless, such perfect specimens of Christian Art in its various phases, that this one small building seems a hand-book in itself. The floor and walls are covered with excellently preserved and highly polished Alexandrine mosaic, flowing in varied convolutions of green and gold and red round the broad crimson and gray shields, whose circular forms recall the mighty monolith columns of porphyry and granite which yielded such noble spoils. The honey-combed pendentines of the ceiling must be due to Arab workmen; their like may yet be found in Cairo or the Alhambra; while below the narrow windows, and extending downwards to the marble panelling, runs a grand series of gold-grounded mosaics, their subjects taken from the Old and New Testaments. But far older than even these are the colossal grim circles of saints and apostles who cling to the roof of the choir, and yield in size only to the awful figures of the Saviour, the Virgin, and Saint Paul, enthroned in the *apsides* of the nave and aisles. The *ambones*, though not so large as those of Salerno, are very gorgeous; and the paschal candlestick, here at all events in its usual shape, is of deeply carved marble, and displays an incongruous assemblage of youths, maidens, beasts, birds, and bishops, hanging each from other like a curtain of swarming bees.

Service, which had been going on in the choir when we arrived, had now ceased;

but from the crypt below arose a chant so harsh, vibratory, and void of solemnity, that we were irresistibly reminded of the subterranean chorus of demons in "Robert le Diable." Two of us ventured below and discovered the chapter, all robed in purple, sitting round a pall with a presumable coffin underneath. Little of reverence did they show,—it is true, the death was not recent, the service being merely commemorative, as we afterwards learned,—and as the procession shortly afterwards emerged and proceeded down the chapel, the unwashed, unshaven, and sensual countenances of some of highest rank among them gave small reason to believe that they could feel much reverence on any subject whatever.

The Palace itself is as tedious as any other palace: the Pompeian room follows the Louis Quinze, and is in turn followed by the Chinese, till, for our comfort, we emerged into one large square hall, whose stiff mosaics of archers killing stags, peacocks feeding at the foot of willow-pattern trees, date from the time of Roger. Another wearisome series of rooms succeeded, which we were bound to traverse in search of a bronze ram of old Greek workmanship, brought from Syracuse. The work is very good and well-preserved; in fact, no part is injured, save the tail and a hind leg, whose loss the *custode* ascribed to the villains of the late revolution. He even charged them with the destruction of another similar statue melted into bullets, if we may believe his incredible tale. A pavilion over the Monreale gate commands a view right down the Toledo to the sea.

The drive to Monreale is a continued ascent along the skirts of a limestone rock, whose precipices are thickly planted at every foothold with olive, Indian fig, and aloe. The valley, as it spread below our gaze, appeared one huge carpet of heavy-fruited orange-trees, save where at times a rent in the web left visible the bluish blades of wheat, or the intense green of a flax-plantation.

Monreale is a mere country-town, containing no object of interest, save the Ca-

thedral. This is a noble basilica, grandly proportioned, the nave and aisles of which are separated by monolith pillars, mostly of gray granite, and some few of cipollino and other marbles, the spoils, no doubt, of the ancient Panormus. Above the cornice the walls are entirely sheeted with golden mosaics, representing, as usual, Scripture history. The series which begins, like the speech of the Intendant in "Les Plaideurs," "*Avant la création du monde,*" complies with the wish of (the judge?) by going on to the Deluge, in a train of singularly meagre figures, most haggard of whom is Cain, here represented (as in the Campo Santo of Pisa) receiving his death accidentally from the hand of Lamech. In the passage of the beasts to the Ark, Noah coaxes the lion on board, and in the next compartment the patriarch shoves the king of beasts down the plank in a most ludicrous fashion. The mosaics of the New Testament are less archaic, though still very old, too old to be infected by the tricks of later Romanism,—such, for instance, as introducing the Virgin among the receivers of the mysterious gift of tongues. Saint Paul, both here and at the Royal Chapel, appears under the earlier type adopted whether by fancy or tradition to represent that saint,—that is, a short, strong figure, with the head large, and almost devoid of hair, except at the sides, and one dark lock in the centre of the massive forehead. Over the western door-way is a mosaic of the Virgin with the following leonine and loyal distich beneath it:—

"Sponsa suæ prolis, O Stella puerpera Solis,
Pro cunctis ora, sed plus pro rege labora!"

There is an ample square cloister, with twenty-seven pairs of columns on each side, once richly decorated in mosaics like those of San Giovanni Laterano and San Paolo at Rome, but even more dilapidated than either of these latter. Indeed, so entirely non-existent is the mosaic, the twisted and channelled columns showing nothing but places "where the paste is not," that the more probable solution may be that want of funds or of devotion has

left the work unfinished. On the capital of one column may be seen the figure of William the Good, who founded the Cathedral in 1170. He bears in his arms a model of the building, which here appears with circular-headed windows instead of the lanceolated Gothic now existing.

In, perhaps, the very loveliest of the many lovely sites around Palermo stands the small Moorish building of La Ziza. Moorish it may be called; for the main feature of the edifice, a hall with a fountain trickling along a channel in the pavements, is clearly due to the Saracens. These, however, had availed themselves of Roman columns to support their fretted ceilings, once gorgeous in color, but now desecrated with whitewash. The Norman invaders have added their never-failing gold mosaic,—while the Spaniard, after painting sundry scenes from Ovid's "*Metamorphoses*" in a dreadfully *barocco* style, calls upon the world, in those magniloquent phrases which somehow belong as of right to your mighty Don, to admire the exquisite commingling of modern art with antique beauty, to which his *fiat* has given birth.

Somewhat of Spain, perhaps, might also be traced in an incident, promisingly romantic, but coming to a most lame and impotent conclusion, which occurred this afternoon to one of our party. While busily sketching, in the Martorana church, the previously mentioned mosaic of Roger's coronation, a hand protruded from the gilded lattice above, and a small scroll was dropped, not precisely at the feet, but in the neighborhood of the amazed artist. Sharp eyes, however, must be at work; for, ere he could appropriate this mysterious waif on Love's manor, a side-door opened, and an attendant in the very unpoetical garb of a carpenter bore off the prize. It may be presumed that the next confessor who occupied an arm-chair in the church would have somewhat of novelty to enliven what some priests have stated to be the most wearisome of the work, namely, the hearing of confessions in a nunnery.

This evening was passed in the house of the British Consul, who, in amusing recognition of our nationalities, comprising, as they did, both branches of the Anglo-Saxon race, treated us to Lemann's captain's-biscuit and Boston crackers. Notwithstanding the interesting conversation of our host, who had not allowed a residence of many years in a mind-rusting city to impair his love of literature, a love dating from the time when Praed edited the "Etonian," and Metius Tarpa contributed to the "College Magazine," we were obliged to leave early. Our arrangements for a very early start next morning were completed, and a thirty miles' ride lay before us.

To save further allusion to them, it may be as well to describe these arrangements, which were made for us by Signor

Ragusa, landlord of the Trinacria hotel. A guide, Giuseppe Agnello by name, took upon himself the whole responsibility of our board, lodging, and travelling, at a fixed rate of forty-two (?) *carlini* a head,—which sum, including his *buonamano* and return voyage from Syracuse or Messina, amounted to about twenty francs each *per diem*. For this sum he furnished us with good mules; a hearty breakfast at daybreak, cold meat and hard eggs at noon, and a plentiful dinner or supper, call it which you choose, on arriving at our night's quarters. Agnello himself was cook, and proved a very tolerable one. This is essential; for Spanish custom prevails in the inns, whose host considers his duty accomplished when he has provided ample stabling for the mules and dubious bedding for his biped guests.

[To be continued.]

THE PROFESSOR'S STORY.

CHAPTER XV.

PHYSIOLOGICAL.

IF Master Bernard felt a natural gratitude to his young pupil for saving him from an imminent peril, he was in a state of infinite perplexity to know why he should have needed such aid. He, an active, muscular, courageous, adventurous young fellow, with a stick in his hand, ready to hold down the Old Serpent himself, if he had come in his way, to stand still, staring into those two eyes, until they came up close to him, and the strange, terrible sound seemed to freeze him stiff where he stood,— what was the meaning of it? Again, what was the influence this girl had exerted, under which the venomous creature had collapsed in such a sudden way? Whether he had been awake or dreaming he did not feel quite sure. He knew he had gone up The Mountain, at any rate; he knew he

had come down The Mountain with the girl walking just before him;— there was no forgetting her figure, as she walked on in silence, her braided locks falling a little, for want of the lost hair-pin, perhaps, and looking like a wreathing coil of — Shame on such fancies!— to wrong that supreme crowning gift of abounding Nature, a rush of shining black hair, that, shaken loose, would cloud her all round, like Godiva, from brow to instep! He was sure he had sat down before the fissure or cave. He was sure that he was led softly away from the place, and that it was Elsie who had led him. There was the hair-pin to show that so far it was not a dream. But between these recollections came a strange confusion; and the more the master thought, the more he was perplexed to know whether she had waked him, sleeping, as he sat on the stone, from some frightful dream, such as may come in a

very brief slumber, or whether she had bewitched him into a trance with those strange eyes of hers, or whether it was all true, and he must solve its problem as he best might.

There was another recollection connected with this mountain adventure. As they approached the mansion-house, they met a young man, whom Mr. Bernard remembered having seen once at least before, and whom he had heard of as a cousin of the young girl. As Cousin Richard Venner, the person in question, passed them, he took the measure, so to speak, of Mr. Bernard, with a look so piercing, so exhausting, so practised, so profoundly suspicious, that the young master felt in an instant that he had an enemy in this handsome youth,—an enemy, too, who was like to be subtle and dangerous.

Mr. Bernard had made up his mind, that, come what might, enemy or no enemy, live or die, he would solve the mystery of Elsie Venner, sooner or later. He was not a man to be frightened out of his resolution by a scowl, or a stiletto, or any unknown means of mischief, of which a whole armory was hinted at in that passing look Dick Venner had given him. Indeed, like most adventurous young persons, he found a kind of charm in feeling that there might be some dangers in the way of his investigations. Some rumors which had reached him about the supposed suitor of Elsie Venner, who was thought to be a desperate kind of fellow, and whom some believed to be an unscrupulous adventurer, added a curious, romantic kind of interest to the course of physiological and psychological inquiries he was about instituting.

The afternoon on The Mountain was still uppermost in his mind. Of course he knew the common stories about fascination. He had once been himself an eyewitness of the charming of a small bird by one of our common harmless serpents. Whether a human being could be reached by this subtle agency, he had been skeptical, notwithstanding the mysterious relation generally felt to exist be-

tween man and this creature, "cursed above all cattle and above every beast of the field,"—a relation which some interpret as the fruit of the curse, and others hold to be so instinctive that this animal has been for that reason adopted as the natural symbol of evil. There was another solution, however, supplied him by his professional reading. The curious work of Mr. Braid of Manchester had made him familiar with the phenomena of a state allied to that produced by animal magnetism, and called by that writer by the name of *hypnotism*. He found, by referring to his note-book, the statement was, that, by fixing the eyes on a *bright object* so placed as to produce a strain upon the eyes and eyelids, and to maintain a *steady fixed stare*, there comes on in a few seconds a very singular condition, characterized by *muscular rigidity* and *inability to move*, with a strange *exaltation of most of the senses*, and generally a closure of the eyelids,—this condition being followed by *torpor*.

Now this statement of Mr. Braid's, well known to the scientific world, and the truth of which had been confirmed by Mr. Bernard in certain experiments he had instituted, as it has been by many other experimenters, went far to explain the strange impressions, of which, waking or dreaming, he had certainly been the subject. His nervous system had been in a high state of exaltation at the time. He remembered how the little noises that made rings of sound in the silence of the woods, like pebbles dropped in still waters, had reached his inner consciousness. He remembered that singular sensation in the roots of the hair, when he came on the traces of the girl's presence, reminding him of a line in a certain poem which he had read lately with a new and peculiar interest. He even recalled a curious evidence of exalted sensibility and irritability, in the twitching of the minute muscles of the internal ear at every unexpected sound, producing an odd little snap in the middle of the head, that proved to him he was getting very nervous.

The next thing was to find out whether it were possible that the venomous creature's eyes should have served the purpose of Mr. Braid's "bright object" held very close to the person experimented on, or whether they had any special power which could be made the subject of exact observation.

For this purpose Mr. Bernard considered it necessary to get a live *crotalus* or two into his possession, if this were possible. On inquiry, he found that there was a certain family living far up the mountain-side, not a mile from the ledge, the members of which were said to have taken these creatures occasionally, and not to be in any danger, or at least in any fear, of being injured by them. He applied to these people, and offered a reward sufficient to set them at work to capture some of these animals, if such a thing were possible.

A few days after this, a dark, gypsy-looking woman presented herself at his door. She held up her apron as if it contained something precious in the bag she made with it.

"Y'wanted some rattlers," said the woman. "Here they be."

She opened her apron and showed a coil of rattlesnakes lying very peaceably in its fold. They lifted their heads up, as if they wanted to see what was going on, but showed no sign of anger.

"Are you crazy?" said Mr. Bernard. "You're dead in an hour, if one of those creatures strikes you!"

He drew back a little, as he spoke; it might be simple disgust; it might be fear; it might be what we call antipathy, which is different from either, and which will sometimes show itself in paleness, and even faintness, produced by objects perfectly harmless and not in themselves offensive to any sense.

"Lord bless you," said the woman, "rattlers never touches our folks. I'd jest 'z lieves handle them creaturs as so many striped snakes."

So saying, she put their heads down with her hand, and packed them together

in her apron as if they had been bits of cart-ropes.

Mr. Bernard had never heard of the power, or, at least, the belief in the possession of a power by certain persons, which enables them to handle these frightful reptiles with perfect impunity. The fact, however, is well known to others, and more especially to a very distinguished Professor in one of the leading institutions of the great city of the land, whose experiences in the neighborhood of Graylock, as he will doubtless inform the curious, were very much like those of the young master.

Mr. Bernard had a wired cage ready for his formidable captives, and studied their habits and expression with a strange sort of interest. What did the Creator mean to signify, when he made such shapes of horror, and, as if he had doubly cursed this envenomed wretch, had set a mark upon him and sent him forth, the Cain of the brotherhood of serpents? It was a very curious fact that the first train of thoughts Mr. Bernard's small menagerie suggested to him was the grave, though somewhat worn, subject of the origin of evil. There is now to be seen in a tall glass jar, in the Museum of Comparative Anatomy at Cantabridge in the territory of the Massachusetts, a huge *crotalus*, of a species which grows to more frightful dimensions than our own, under the hotter skies of South America. Look at it, ye who would know what is the tolerance, the freedom from prejudice, which can suffer such an incarnation of all that is devilish to lie unharmed in the cradle of Nature! Learn, too, that there are many things in this world which we are warned to shun, and are even suffered to slay, if need be, but which we must not hate, unless we would hate what God loves and cares for.

Whatever fascination the creature might exercise in his native haunts, Mr. Bernard found himself not in the least nervous or affected in any way while looking at his caged reptiles. When their cage was shaken, they would lift their heads and spring their rattles; but the

sound was by no means so formidable to listen to as when it reverberated among the chasms of the echoing rocks. The expression of the creatures was watchful, still, grave, passionless, fate-like, suggesting a cold malignity that seemed to be waiting for its opportunity. Their awful, deep-cut mouths were sternly closed over the long hollow fangs that rested their roots against the swollen poison-bag, where the venom had been hoarding up ever since the last stroke had emptied it. They never winked, for ophidians have no movable eyelids, but kept up that awful fixed stare which made the two *unwinking* gladiators the survivors of twenty pairs matched by one of the Roman Emperors, as Pliny tells us, in his "Natural History." But their eyes did not flash, as he had expected to see them. They were of a pale-golden or straw color, horrible to look into, with their stony calmness, their pitiless indifference, hardly enlivened by the almost imperceptible vertical slit of the pupil, through which Death seemed to be looking out like the archer behind the long narrow loop-hole in a blank turret-wall. Possibly their pupils might open wide enough in the dark hole of the rock to let the glare of the back part of the eye show, as we often see it in cats and other animals. On the whole, the caged reptiles, horrid as they were, were yet very different from his recollections of what he had seen or dreamed he saw at the cavern. These looked dangerous enough, but yet quiet. A treacherous stillness, however,—as the unfortunate New York physician found, when he put his foot out to wake up the torpid creature, and instantly the fang flashed through his boot, carrying the poison into his blood, and death with it.

Mr. Bernard kept these strange creatures, and watched all their habits with a natural curiosity. In any collection of animals the venomous beasts are looked at with the greatest interest, just as the greatest villains are most run after by the unknown public. Nobody troubles himself for a common striped snake or a petty thief, but a *cobra* or a wife-killer is

a centre of attraction to all eyes. These captives did very little to earn their living; but, on the other hand, their living was not expensive, their diet being nothing but air, *au naturel*. Months and months these creatures will live and seem to thrive well enough, as any showman who has them in his menagerie will testify, though they never touch anything to eat or drink.

In the mean time Mr. Bernard had become very curious about a class of subjects not treated of in any detail in those text-books accessible in most country-towns, to the exclusion of the more special treatises, and especially the rare and ancient works found on the shelves of the larger city-libraries. He was on a visit to old Dr. Kittredge one day, having been asked by him to call in for a few moments as soon as convenient. The Doctor smiled good-humoredly when he asked him if he had an extensive collection of medical works.

"Why, no," said the old Doctor, "I haven't got a great many printed books; and what I have I don't read quite as often as I might, I'm afraid. I read and studied in the time of it, when I was in the midst of the young men who were all at work with their books; but it's a mighty hard matter, when you go off alone into the country, to keep up with all that's going on in the Societies and the Colleges. I'll tell you, though, Mr. Langdon, when a man that's once started right lives among sick folks for five-and-thirty years, as I've done, if he hasn't got a library of five-and-thirty volumes bound up in his head at the end of that time, he'd better stop driving round and sell his horse and sulky. I know the better part of the families within a dozen miles' ride. I know the families that have a way of living through everything, and I know the other set that have the trick of dying without any kind of reason for it. I know the years when the fevers and dysenteries are in earnest, and when they're only making believe. I know the folks that think they're dying as soon as they're sick, and the folks that never find out

they're sick till they're dead. I don't want to undervalue your science, Mr. Langdon. There are things I never learned, because they came in after my day, and I am very glad to send my patients to those that do know them, when I am at fault; but I know these people about here, fathers and mothers, and children and grandchildren, so as all the science in the world can't know them, without it takes time about it, and sees them grow up and grow old, and how the wear and tear of life comes to them. You can't tell a horse by driving him once, Mr. Langdon, nor a patient by talking half an hour with him."

"Do you know much about the Venner family?" said Mr. Bernard, in a natural way enough, the Doctor's talk having suggested the question.

The Doctor lifted his head with his accustomed movement, so as to command the young man through his spectacles.

"I know all the families of this place and its neighborhood," he answered.

"We have the young lady studying with us at the Institute," said Mr. Bernard.

"I know it," the Doctor answered. "Is she a good scholar?"

All this time the Doctor's eyes were fixed steadily on Mr. Bernard, looking through the glasses.

"She is a good scholar enough, but I don't know what to make of her. Sometimes I think she is a little out of her head. Her father, I believe, is sensible enough;—what sort of a woman was her mother, Doctor?—I suppose, of course, you remember all about her?"

"Yes, I knew her mother. She was a very lovely young woman."—The Doctor put his hand to his forehead and drew a long breath.—"What is there you notice out of the way about Elsie Venner?"

"A good many things," the master answered. "She shuns all the other girls. She is getting a strange influence over my fellow-teacher, a young lady,—you know Miss Helen Darley, perhaps? I am afraid this girl will kill her. I never

saw or heard of anything like it, in prose at least;—do you remember much of Coleridge's Poems, Doctor?"

The good old Doctor had to plead a negative.

"Well, no matter. Elsie would have been burned for a witch in old times. I have seen the girl look at Miss Darley when she had not the least idea of it, and all at once I would see her grow pale and moist, and sigh, and move round uneasily, and turn towards Elsie, and perhaps get up and go to her, or else have slight spasmodic movements that looked like hysterics;—do you believe in the evil eye, Doctor?"

"Mr. Langdon," the Doctor said, solemnly, "there are strange things about Elsie Venner,—very strange things. This was what I wanted to speak to you about. Let me advise you all to be very patient with the girl, but also very careful. Her love is not to be desired, and"—he whispered softly—"her hate is to be dreaded. Do you think she has any special fancy for anybody else in the school besides Miss Darley?"

Mr. Bernard could not stand the old Doctor's spectacled eyes without betraying a little of the feeling natural to a young man to whom a home question involving a possible sentiment is put suddenly.

"I have suspected," he said,— "I have had a kind of feeling—that she— Well, come, Doctor,—I don't know that there's any use in disguising the matter,—I have thought Elsie Venner had rather a fancy for somebody else,—I mean myself."

There was something so becoming in the blush with which the young man made this confession, and so manly, too, in the tone with which he spoke, so remote from any shallow vanity, such as young men who are incapable of love are apt to feel, when some loose tendril of a woman's fancy which a chance wind has blown against them twines about them for the want of anything better, that the old Doctor looked at him admiringly, and could not help thinking that it was no

wonder any young girl should be pleased with him.

"You are a man of nerve, Mr. Langdon?" said the Doctor.

"I thought so till very lately," he replied. "I am not easily frightened, but I don't know but I might be bewitched or magnetized, or whatever it is when one is tied up and cannot move. I think I can find nerve enough, however, if there is any special use you want to put it to."

"Let me ask you one more question, Mr. Langdon. Do you find yourself disposed to take a special interest in Elsie,—to fall in love with her, in a word? Pardon me, for I do not ask from curiosity, but a much more serious motive."

"Elsie interests me," said the young man, "interests me strangely. She has a wild flavor in her character which is wholly different from that of any human creature I ever saw. She has marks of genius,—poetic or dramatic,—I hardly know which. She read a passage from Keats's "Lamia" the other day, in the school-room, in such a way that I declare to you I thought some of the girls would faint or go into fits. Miss Darley got up and left the room, trembling all over. Then I pity her, she is so lonely. The girls are afraid of her, and she seems to have either a dislike or a fear of them. They have all sorts of painful stories about her. They give her a name that no human creature ought to bear. They say she hides a mark on her neck by always wearing a necklace. She is very graceful, you know, and they will have it that she can twist herself into all sorts of shapes, or tie herself in a knot, if she wants to. There is not one of them that will look her in the eyes. I pity the poor girl; but, Doctor, I do not love her. I would risk my life for her, if it would do her any good, but it would be in cold blood. If her hand touches mine, it is not a thrill of passion I feel running through me, but a very different emotion. Oh, Doctor! there must be something in that creature's blood that has killed the humanity in her. God only knows the mystery that has blighted such a soul in

so beautiful a body! No, Doctor, I do not love the girl."

"Mr. Langdon," said the Doctor, "you are young, and I am old. Let me talk to you with an old man's privilege, as an adviser. You have come to this country-town without suspicion, and you are moving in the midst of perils. There is a mystery which I must not tell you now; but I may warn you. Keep your eyes open and your heart shut. If, through pitying that girl, you ever come to love her, you are lost. If you deal carelessly with her, beware! This is not all. There are other eyes on you beside Elsie Vener's.—Do you go armed?"

"I do!" said Mr. Bernard,—and he 'put his hands up' in the shape of fists, in such a way as to show that he was master of the natural weapons at any rate.

The Doctor could not help smiling. But his face fell in an instant.

"You may want something more than those tools to work with. Come with me into my sanctum."

The Doctor led Mr. Bernard into a small room opening out of the study. It was a place such as anybody but a medical man would shiver to enter. There was the usual tall box with its bleached rattling tenant; there were jars in rows where "interesting cases" outlived the grief of widows and heirs in alcoholic immortality,—for your "preparation-jar" is the true "*monumentum ære perennius*"; there were various semipossibilities of minute dimensions and unpromising developments; there were shining instruments of evil aspect, and grim plates on the walls, and on one shelf by itself, accursed and apart, coiled in a long cylinder of spirit, a huge *crotalus*, rough-scaled, flat-headed, variegated with dull bands, one of which partially encircled the neck like a collar,—an awful wretch to look upon, with murder written all over him in horrid hieroglyphics. Mr. Bernard's look was riveted on this creature,—not fascinated certainly, for its eyes looked like white beads, being clouded by the action of the spirits in which it had been long kept,—but fix-

ed by some indefinite sense of the renewal of a previous impression;—everybody knows the feeling, with its suggestion of some past state of existence. There was a scrap of paper on the jar with something written on it. He was reaching up to read it when the Doctor touched him lightly.

“Look here, Mr. Langdon!” he said, with a certain vivacity of manner, as if wishing to call away his attention,—“this is my armory.”

The Doctor threw open the door of a small cabinet, where were disposed in artistic patterns various weapons of offence and defence,—for he was a virtuoso in his way, and by the side of the implements of the art of healing had pleased himself with displaying a collection of those other instruments, the use of which renders them necessary.

“See which of these weapons you would like best to carry about you,” said the Doctor.

Mr. Bernard laughed, and looked at the Doctor as if he half doubted whether he was in earnest.

“This looks dangerous enough,” he said,—“for the man that carries it, at least.”

He took down one of the prohibited Spanish daggers or knives which a traveller may occasionally get hold of and smuggle out of the country. The blade was broad, trowel-like, but the point drawn out several inches, so as to look like a skewer.

“This must be a jealous bull-fighter's weapon,” he said, and put it back in its place.

Then he took down an ancient-looking broad-bladed dagger, with a complex aspect about it, as if it had some kind of mechanism connected with it.

“Take care!” said the Doctor; “there is a trick to that dagger.”

He took it and touched a spring. The dagger split suddenly into three blades, as when one separates the forefinger and the ring-finger from the middle one. The outside blades were sharp on their outer edge. The stab was to be made with the

dagger shut, then the spring touched and the split blades withdrawn.

Mr. Bernard replaced it, saying, that it would have served for side-arm to old Suwarrow, who told his men to work their bayonets back and forward when they pinned a Turk, but to wriggle them about in the wound when they stabbed a Frenchman.

“Here,” said the Doctor, “this is the thing you want.”

He took down a much more modern and familiar implement,—a small, beautifully finished revolver.

“I want you to carry this,” he said; “and more than that, I want you to practise with it often, as for amusement, but so that it may be seen and understood that you are apt to have a pistol about you. Pistol-shooting is pleasant sport enough, and there is no reason why you should not practise it like other young fellows. And now,” the Doctor said, “I have one other weapon to give you.”

He took a small piece of parchment and shook a white powder into it from one of his medicine-jars. The jar was marked with the name of a mineral salt, of a nature to have been serviceable in case of sudden illness in the time of the Borgias. The Doctor folded the parchment carefully and marked the Latin name of the powder upon it.

“Here,” he said, handing it to Mr. Bernard,—“you see what it is, and you know what service it can render. Keep these two protectors about your person day and night; they will not harm you, and you may want one or the other or both before you think of it.”

Mr. Bernard thought it was very odd, and not very old-gentlemanlike, to be fitting him out for treason, stratagem, and spoils, in this way. There was no harm, however, in carrying a doctor's powder in his pocket, or in amusing himself with shooting at a mark, as he had often done before. If the old gentleman had these fancies, it was as well to humor him. So he thanked old Doctor Kittredge, and shook his hand warmly as he left him.

“The fellow's hand did not tremble,

nor his color change," the Doctor said, as he watched him walking away. "He is one of the right sort."

CHAPTER XVI.

EPISTOLARY.

Mr. Langdon to the Professor.

MY DEAR PROFESSOR,—

YOU were kind enough to promise me that you would assist me in any professional or scientific investigations in which I might become engaged. I have of late become deeply interested in a class of subjects which present peculiar difficulty, and I must exercise the privilege of questioning you on some points upon which I desire information I cannot otherwise obtain. I would not trouble you, if I could find any person or books competent to enlighten me on some of these singular matters which have so excited me. The leading doctor here is a shrewd, sensible man, but not versed in the curiosities of medical literature.

I proceed, with your leave, to ask a considerable number of questions,—hoping to get answers to some of them, at least.

Is there any evidence that human beings can be infected or wrought upon by poisons, or otherwise, so that they shall manifest any of the peculiarities belonging to beings of a lower nature? Can such peculiarities be transmitted by inheritance? Is there anything to countenance the stories, long and widely current, about the "evil eye"? or is it a mere fancy that such a power belongs to any human being? Have you any personal experience as to the power of *fascination* said to be exercised by certain animals? What can you make of those circumstantial statements we have seen in the papers of children forming mysterious friendships with ophidians of different species, sharing their food with them, and seeming to be under some subtle influence exercised by those creatures? Have you read, critically, Coleridge's poem of "Christabel," and Keats's "Lamia"? If so, can you understand them,

or find any physiological foundation for the story of either?

There is another set of questions of a different nature I should like to ask, but it is hardly fair to put so many on a single sheet. There is one, however, you must answer. Do you think there may be predispositions, inherited or ingrafted, but at any rate constitutional, which shall take out certain apparently voluntary determinations from the control of the will, and leave them as free from moral responsibility as the instincts of the lower animals? Do you not think there may be a *crime* which is not a *sin*?

Pardon me, my dear Sir, for troubling you with such a list of notes of interrogation. There are some *very strange* things going on here in this place, country-town as it is. Country-life is apt to be dull; but when it once gets going, it beats the city hollow, because it gives its whole mind to what it is about. These rural sinners make terrible work with the middle of the Decalogue, when they get started. However, I hope I shall live through my year's school-keeping without catastrophes, though there are queer doings about me which puzzle me and might scare some people. If anything *should* happen, you will be one of the first to hear of it, no doubt. But I trust not to help out the editors of the "Rockland Weekly Universe" with an obituary of the late lamented, who signed himself in life

Your friend and pupil,

BERNARD C. LANGDON.

The Professor to Mr. Langdon.

MY DEAR MR. LANGDON,—

I DO not wonder that you find no answer from your country friends to the curious questions you put. They belong to that middle region between science and poetry which sensible men, as they are called, are very shy of meddling with. Some people think that truth and gold are always to be washed for; but the wiser sort are of opinion, that, unless there are so many grains to the peck of sand or nonsense respectively, it does not pay to

wash for either, as long as one can find anything else to do. I don't doubt there is some truth in the phenomena of animal magnetism, for instance; but when you ask me to cradle for it, I tell you that the hysteric girls cheat so, and the professionals are such a set of pickpockets, that I can do something better than hunt for the grains of truth among their tricks and lies. Do you remember what I used to say in my lectures?—or were you asleep just then, or cutting your initials on the rail? (You see I can ask questions, my young friend.) *Leverage* is everything,—was what I used to say;—don't begin to pry till you have got the long arm on your side.

To please you, and satisfy your doubts as far as possible, I have looked into the old books,—into Schenckius and Turner and Kenelm Digby and the rest, where I have found plenty of curious stories which you must take for what they are worth.

Your first question I can answer in the affirmative upon pretty good authority. Mizaldus tells, in his “*Memorabilia*,” the well-known story of the girl fed on poisons, who was sent by the king of the Indies to Alexander the Great. “When Aristotle saw her eyes *sparkling and snapping like those of serpents*, he said, ‘Look out for yourself, Alexander! this is a dangerous companion for you!’”—and sure enough, the young lady proved to be a very unsafe person to her friends. Cardanus gets a story from Avicenna, of a certain man bit by a serpent, who recovered of his bite, the snake dying therefrom. This man afterwards had a daughter whom no venomous serpent could harm, though *she had a fatal power over them*.

I suppose you may remember the statements of old authors about *lycanthropy*, the disease in which men took on the nature and aspect of wolves. Aëtius and Paulus, both men of authority, describe it. Altomaris gives a horrid case; and Fincelius mentions one occurring as late as 1541, the subject of which was captured, still *insisting that he was a wolf*,

only that the hair of his hide was turned in! *Versipelles*, it may be remembered, was the Latin name for these “werewolves.”

As for the cases where rabid persons have barked and bit like dogs, there are plenty of such on record.

More singular, or at least more rare, is the account given by Andreas Baccius, of a man who was struck in the hand by a cock, with his beak, and who died on the third day thereafter, looking for all the world *like a fighting-cock*, to the great horror of the spectators.

As to impressions transmitted *at a very early period of existence*, every one knows the story of King James's fear of a naked sword and the way it is accounted for. Sir Kenelm Digby says,—“I remember when he dubbed me Knight, in the ceremony of putting the point of a naked sword upon my shoulder, he could not endure to look upon it, but turned his face another way, insomuch, that, in lieu of touching my shoulder, he had almost thrust the point into my eyes, had not the Duke of Buckingham guided his hand aright.” It is he, too, who tells the story of the *mulberry mark* upon the neck of a certain lady of high condition, which “every year, in mulberry season, did swell, grow big, and itch.” And Gaffarel mentions the case of a girl born with the figure of a *fish* on one of her limbs, of which the wonder was, that, when the girl did eat fish, this mark put her to sensible pain. But there is no end to cases of this kind, and I could give some of recent date, if necessary, lending a certain plausibility at least to the doctrine of transmitted impressions.

I never saw a distinct case of *evil eye*, though I have seen eyes so bad that they might produce strange effects on very sensitive natures. But the belief in it under various names, fascination, *jettatura*, etc., is so permanent and universal, from Egypt to Italy, and from the days of Solomon to those of Ferdinand of Naples, that there must be some *peculiarity*, to say the least, on which the opinion is based. There is very strong evidence

that some such power is exercised by certain of the lower animals. Thus, it is stated on good authority that "almost every animal becomes panic-struck at the sight of the *rattlesnake*, and seems at once deprived of the power of motion, or the exercise of its usual instinct of self-preservation." Other serpents seem to share this power of fascination, as the *Cobra* and the *Bucephalus Capensis*. Some think that it is nothing but fright; others attribute it to the

"strange powers that lie
Within the magic circle of the eye,"—

as Churchill said, speaking of Garrick.

You ask me about those mysterious and frightful intimacies between children and serpents of which so many instances have been recorded. I am sure I cannot tell what to make of them. I have seen several such accounts in recent papers, but here is one published in the seventeenth century which is as striking as any of the more modern ones:—

"Mr. *Herbert Jones* of *Monmouth*, when he was a little Boy, was used to eat his Milk in a Garden in the Morning, and was no sooner there, but a large Snake always came, and eat out of the Dish with him, and did so for a considerable time, till one Morning, he striking the Snake on the Head, it hissed at him. Upon which he told his Mother that the Baby (for so he call'd it) cry'd *Hiss* at him. His Mother had it kill'd, which occasioned him a great *Fit of Sickness*, and 'twas thought would have dy'd, but did recover."

There was likewise one "*William Writtle*, condemned at *Maidston Assizes* for a double murder, told a Minister that was with him after he was condemned, that his mother told him, that when he was a Child, there crept always to him a Snake, wherever she laid him. Sometimes she would convey him up Stairs, and leave him never so little, she should be sure to find a Snake in the Cradle with him, but never perceived it did him any harm."

One of the most striking alleged facts

connected with the mysterious relation existing between the serpent and the human species is the influence which the poison of the *Crotalus*, taken internally, seemed to produce over the *moral faculties*, in the experiments instituted by Dr. Hering at Surinam. There is something frightful in the disposition of certain ophidians, as the whip-snake, which darts at the eyes of cattle without any apparent provocation or other motive. It is natural enough that the evil principle should have been represented in the form of a serpent, but it is strange to think of introducing it into a human being like cow-pox by vaccination.

You know all about the *Psylli*, or ancient serpent-tamers, I suppose. Savary gives an account of the modern serpent-tamers in his "*Letters on Egypt*." These modern jugglers are in the habit of making the venomous *Naja* counterfeit death, lying out straight and stiff, *changing it into a rod*, as the ancient magicians did with their serpents, (probably the same animal,) in the time of Moses.

I am afraid I cannot throw much light on "*Christabel*" or "*Lamia*" by any criticism I can offer. *Geraldine*, in the former, seems to be simply a malignant witch-woman, with the *evil eye*, but with no absolute ophidian relationship. *Lamia* is a serpent transformed by magic into a woman. The idea of both is mythological, and not in any sense physiological. Some women unquestionably suggest the image of serpents; men rarely or never. I have been struck, like many others, with the ophidian head and eye of the famous *Rachel*.

Your question about inherited predispositions, as limiting the sphere of the will, and, consequently, of moral accountability, opens a very wide range of speculation. I can give you only a brief abstract of my own opinions on this delicate and difficult subject. Crime and sin, being the *preserves* of two great organized interests, have been guarded against all reforming poachers with as great jealousy as the Royal Forests. It is so easy to hang a troublesome fellow!

It is so much simpler to consign a soul to perdition, or say masses, for money, to save it, than to take the blame on ourselves for letting it grow up in neglect and run to ruin for want of humanizing influences! They hung poor, crazy Bellingham for shooting Mr. Perceval. The ordinary of Newgate preached to women who were to swing at Tyburn for a petty theft as if they were worse than other people, — just as though he would not have been a pickpocket or shoplifter, himself, if he had been born in a den of thieves and bred up to steal or starve! The English law never began to get hold of the idea that a crime was not necessarily a sin, till Hadfield, who thought he was the Saviour of mankind, was tried for shooting at George the Third; — lucky for him that he did not hit his Majesty!

It is very singular that we recognize all the bodily defects that unfit a man for military service, and all the intellectual ones that limit his range of thought, but always talk at him as if all his moral powers were perfect. I suppose we must punish evil-doers as we extirpate vermin; but I don't know that we have any more right to judge them than we have to judge rats and mice, which are just as good as cats and weasels, though we think it necessary to treat them as criminals.

The limitations of human responsibility have never been properly studied, unless it be by the phrenologists. You know from my lectures that I consider phrenology, as taught, a pseudo-science, and not a branch of positive knowledge; but, for all that, we owe it an immense debt. It has melted the world's conscience in its crucible and cast it in a new mould, with features less like those of Moloch and more like those of humanity. If it has failed to demonstrate its system of special correspondences, it has proved that there are fixed relations between organization and mind and character. It has brought out that great doctrine of moral insanity, which has done more to make men charitable and soften legal and theological barbarism than any one doc-

trine that I can think of since the message of peace and good-will to men.

Automatic action in the moral world; the *reflex movement* which seems to be self-determination, and has been hanged and howled at as such (metaphorically) for nobody knows how many centuries: until somebody shall study this as Marshall Hall has studied reflex nervous action in the bodily system, I would not give much for men's judgments of each other's characters. Shut up the robber and the defaulter, we must. But what if your oldest boy had been stolen from his cradle and bred in a North-Street cellar? What if you are drinking a little too much wine and smoking a little too much tobacco, and your son takes after you, and so your poor grandson's brain being a little injured in physical texture, he loses the fine moral sense on which you pride yourself, and doesn't see the difference between signing another man's name to a draft and his own?

I suppose the study of automatic action in the moral world (you see what I mean through the apparent contradiction of terms) may be a dangerous one in the view of many people. It is liable to abuse, no doubt. People are always glad to get hold of anything which limits their responsibility. But remember that our moral estimates come down to us from ancestors who hanged children for stealing forty shillings' worth, and sent their souls to perdition for the sin of being born, — who punished the unfortunate families of suicides, and in their eagerness for justice executed one innocent person every three years, on the average, as Sir James Mackintosh tells us.

I do not know in what shape the practical question may present itself to you; but I will tell you my rule in life, and I think you will find it a good one. *Treat bad men exactly as if they were insane.* They are *in-sane*, out of health, morally. Reason, which is food to sound minds, is not tolerated, still less assimilated, unless administered with the greatest caution; perhaps, not at all. Avoid collision with them, as far as you honorably can; keep

your temper, if you can,— for one angry man is as good as another; restrain them from injury, promptly, completely, and with the least possible injury, just as in the case of maniacs,— and when you have got rid of them, or got them tied hand and foot so that they can do no mischief, sit down and contemplate them charitably, remembering that nine-tenths of their perversity comes from outside influences, drunken ancestors, abuse in childhood, bad company, from which you have happily been preserved, and for some of which you, as a member of society, may be fractionally responsible. I think also that there are *special influences* which *work in the blood like ferments*, and I have a suspicion that some of those curious old stories I cited may have more recent parallels. Have you ever met with any cases which admitted of a solution like that which I have mentioned?

Yours very truly,

Bernard Langdon to Philip Staples.

MY DEAR PHILIP,—

I HAVE been for some months established in this place, turning the main crank of the machinery for the manufactory of accomplishments superintended by, or rather worked to the profit of, a certain Mr. Silas Peckham. He is a poor wretch, with a little thin fishy blood in his body, lean and flat, long-armed and large-handed, thick-jointed and thin-muscled,— you know those unwholesome, weak-eyed, half-fed creatures, that look not fit to be round among live folks, and yet not quite dead enough to bury. If you ever hear of my being in court to answer to a charge of assault and battery, you may guess that I have been giving him a thrashing to settle off old scores; for he is a tyrant, and has come pretty near killing his principal lady-assistant with overworking her and keeping her out of all decent privileges.

Helen Darley is this lady's name,— twenty-two or -three years old, I should

think,— a very sweet, pale woman,— daughter of the usual country-clergyman,— thrown on her own resources from an early age, and the rest: a common story, but an uncommon person,— very. All conscience and sensibility, I should say,— a cruel worker,— no kind of regard for herself,— seems as fragile and supple as a young willow-shoot, but try her and you find she has the spring in her of a steel crossbow. I am glad I happened to come to this place, if it were only for her sake. I have saved that girl's life; I am as sure of it as if I had pulled her out of the fire or water.

Of course I'm in love with her, you say,— we always love those whom we have benefited: "saved her life,— her love was the reward of his devotion," etc., etc., as in a regular set novel. In love, Philip? Well, about that,— I love Helen Darley—very much: there is hardly anybody I love so well. What a noble creature she is! One of those that just go right on, do their own work and everybody else's, killing themselves inch by inch without ever thinking about it,— singing and dancing at their toil when they begin, worn and saddened after a while, but pressing steadily on, tottering by-and-by, and catching at the rail by the wayside to help them lift one foot before the other, and at last falling, face down, arms stretched forward—

Philip, my boy, do you know I am the sort of man that locks his door sometimes and cries his heart out of his eyes,— that can sob like a woman and not be ashamed of it? I come of fighting-blood on my mother's side, you know; I think I could be savage on occasion. But I am tender,— more and more tender as I come into my fulness of manhood. I don't like to strike a man, (laugh, if you like,— I know I hit hard when I do strike,)— but what I can't stand is the sight of these poor, patient, toiling women, that never find out in this life how good they are, and never know what it is to be told they are angels while they still wear the pleasing incumbrances of humanity. I don't know what to make of these cases. To

think that a woman is never to be a woman again, whatever she may come to as an unsexed angel,—and that she should die unloved! Why does not somebody come and carry off this noble woman, waiting here all ready to make a man happy? Philip, do you know the pathos there is in the eyes of unsought women, oppressed with the burden of an inner life unshared? I can see into them now as I could not in those earlier days. I sometimes think their pupils dilate on purpose to let my consciousness glide through them; indeed, I dread them, I come so close to the nerve of the soul itself in these momentary intimacies. You used to tell me I was a Turk,—that my heart was full of pigeon-holes, with accommodations inside for a whole flock of doves. I don't know but I am still as Youngish as ever in my ways,—Brigham-Youngish, I mean; at any rate, I always want to give a little love to all the poor things that cannot have a whole man to themselves. If they would only be contented with a little!

Here now are two girls in this school where I am teaching. One of them, Rosa M., is not more than sixteen years old, I think they say; but Nature has forced her into a tropical luxuriance of beauty, as if it were July with her, instead of May. I suppose it is all natural enough that this girl should like a young man's attention, even if he were a grave school-master; but the eloquence of this young thing's look is unmistakable,—and yet she does not know the language it is talking,—they none of them do; and there is where a good many poor creatures of our good-for-nothing sex are mistaken. There is no danger of my being rash, but I think this girl will cost somebody his life yet. She is one of those women men make a quarrel about and fight to the death for,—the old feral instinct, you know.

Pray, don't think I am lost in conceit, but there is another girl here that I begin to think looks with a certain kindness on me. Her name is Elsie V., and she is the only daughter and heiress of an old family in this place. She is a portentous and mysterious creature. If I should tell you all I know and half of what I fancy about her, you would tell me to get my life insured at once. Yet she is the most painfully interesting being,—so handsome! so lonely!—for she has no friends among the girls, and sits apart from them,—with black hair like the flow of a mountain-brook after a thaw, with a low-browed, scowling beauty of face, and such eyes as were never seen before, I really believe, in any human creature.

Philip, I don't know what to say about this Elsie. There is a mystery around her I have not fathomed. I have conjectures about her which I could not utter to any living soul. I dare not even hint the possibilities which have suggested themselves to me. This I will say,—that I do take the most intense interest in this young person, an interest much more like pity than love in its common sense. If what I guess at is true, of all the tragedies of existence I ever knew this is the saddest, and yet so full of meaning! Do not ask me any questions,—I have said more than I meant to already; but I am involved in strange doubts and perplexities,—in dangers too, very possibly,—and it is a relief just to speak ever so guardedly of them to an early and faithful friend.

Yours ever,

BERNARD.

P. S. I remember you had a copy of Fortunius Licetus "De Monstris" among your old books. Can't you lend it to me for a while? I am curious, and it will amuse me.

ANNO DOMINI, 1860.

MY youth is past! — this morn I stand,
With manhood's signet of command,
Firm-planted on life's middle-land!

Behind, the scene recedes afar,
Where cloudy mists and vapors mar
The lustre of my morning-star.

I mark the courses of my days,
Inwound through many a doubtful maze, —
To marvel at those devious ways!

They lead through hills and levels lone,
Green fields, and woodlands overgrown,
And where deep waters pulse and moan; —

By ruined tower, by darksome dell,
The home of night-birds fierce and fell,
Wherein strange shapes of Horror dwell; —

Out to the blessed sunshine free,
The breezy moors of liberty,
And skies outpouring harmony; —

By palace-wall, by haunted tomb,
Through bright and dark, through joy and gloom:
My life hath known both blight and bloom.

And now, as from some mountain-height,
Backward I strain my eager sight,
Till all the landscape melts in night; —

Then, whispering to my Heart, "Be bold!"
I turn from years whose "tale is told,"
To greet the Future's dawn of gold:

High hopes and nobler labors wait
Beyond that Future's opening gate, —
Brave deeds which hold the seeds of Fate.

Thy strength, O Lord, shall fire my blood,
Shall nerve my soul, make wise my mood,
And win me to the pure and good!

Or if, O Father, thou shouldst say,
"Dark Angel, close his mortal day!"
And smite me on my vanward way, —

Grant that in armor firm and strong,
 Whilst pealing still Life's battle-song,
 And struggling, manful, 'gainst the wrong,

Thy soldier, who would fight to win
 No crown of dross, no bays of sin,
 May fall amidst the foremost din

Of Truth's grand conflict, blest by Thee, —
 And even though Death should conquer, see
 How false, how brief his victory!

DARWIN ON THE ORIGIN OF SPECIES.

[Continued.]

"I CAN entertain no doubt, after the most deliberate study and dispassionate judgment of which I am capable, that the view which most naturalists entertain, and which I formerly entertained, — namely, that each species has been independently created, — is erroneous. I am fully convinced that species are not immutable; but that those belonging to what are called the same genera are lineal descendants of some other and generally extinct species, in the same manner as the acknowledged varieties of any one species are the descendants of that species. Furthermore, I am convinced that Natural Selection has been the main, but not exclusive means of modification."

This is the kernel of the new theory, the Darwinian creed, as recited at the close of the introduction to the remarkable book under consideration. The questions, "What will he do with it?" and "How far will he carry it?" the author answers at the close of the volume: "I cannot doubt that the theory of descent with modification embraces all the members of the same class." Furthermore, "I believe that all animals have descended from at most only four or five progenitors, and plants from an equal or lesser number." Seeing that analogy as

strongly suggests a further step in the same direction, while he protests that "analogy may be a deceitful guide," yet he follows its inexorable leading to the inference that "probably all the organic beings which have ever lived on this earth have descended from some one primordial form, into which life was first breathed."*

In the first extract we have the thin end of the wedge driven a little way; in the last, the wedge is driven home.

We have already (in the preceding number) sketched some of the reasons suggestive of such a theory of derivation of species, — reasons which give it plausibility, and even no small probability, as applied to our actual world and to changes occurring since the latest tertiary period. We are well pleased at this mo-

* P. 484, Engl. ed. In the new American edition, (*Vide* Supplement, pp. 431, 432,) the principal analogies which suggest the extreme view are referred to, and the remark is appended, — "But this inference is chiefly grounded on analogy, and it is immaterial whether or not it be accepted. The case is different with the members of each great class, as the Vertebrata or Articulata; for here we have in the laws of homology, embryology, etc., some distinct evidence that all have descended from a single primordial parent."

ment to find that the conclusions we were arriving at in this respect are sustained by the very high authority and impartial judgment of Pictet, the Swiss palæontologist. In his review of Darwin's book,* — much the fairest and most admirable opposing one that has yet appeared, — he freely accepts that *ensemble* of natural operations which Darwin impersonates under the now familiar name of Natural Selection, allows that the exposition throughout the first chapters seems “*à la fois prudent et fort*,” and is disposed to accept the whole argument in its foundations, that is, so far as it relates to what is now going on, or has taken place in the present geological period, — which period he carries back through the diluvial epoch to the borders of the tertiary.† Pictet accordingly admits that the theory will very well account for the origination by divergence of nearly related species, whether within the present period or in remoter geological times: a very natural view for him to take; since he appears to have reached and published, several years ago, the pregnant conclusion, that there most probably was some material connection between the closely related species of two successive faunas, and that the numerous close species, whose limits are so difficult to determine, were not all created distinct and independent. But while accepting, or ready to accept, the basis of Darwin's theory, and all its legitimate direct inferences, he rejects the ultimate conclusions, brings some weighty arguments to bear against them, and is evidently convinced that he can draw a clear line between the sound inferences, which he favors, and the unsound or unwarranted theoretical deductions, which he rejects. We hope he can.

This raises the question, Why does Darwin press his theory to these extreme conclusions? Why do all hypotheses of

* In *Bibliothèque Universelle de Genève*, Mars, 1860.

† This we learn from his very interesting article, *De la Question de l'Homme Fossile*, in the same (March) number of the *Bibliothèque Universelle*.

derivation converge so inevitably to one ultimate point? Having already considered some of the reasons which suggest or support the theory at its outset, — which may carry it as far as such sound and experienced naturalists as Pictet allow that it may be true, — perhaps as far as Darwin himself unfolds it in the introductory proposition cited at the beginning of this article, — we may now inquire after the motives which impel the theorist so much farther. Here proofs, in the proper sense of the word, are not to be had. We are beyond the region of demonstration, and have only probabilities to consider. What are these probabilities? What work will this hypothesis do to establish a claim to be adopted in its completeness? Why should a theory which may plausibly enough account for the *diversification* of the species of each special type or genus, be expanded into a general system for the *origination* or successive diversification of all species, and all special types or forms, from four or five remote primordial forms, or perhaps from one? We accept the theory of gravitation because it explains all the facts we know, and bears all the tests that we can put it to. We incline to accept the nebular hypothesis, for similar reasons; not because it is proved, — thus far it is wholly incapable of proof, — but because it is a natural theoretical deduction from accepted physical laws, is thoroughly congruous with the facts, and because its assumption serves to connect and harmonize these into one probable and consistent whole. Can the derivative hypothesis be maintained and carried out into a system on similar grounds? If so, however unproved, it would appear to be a tenable hypothesis, which is all that its author ought now to claim. Such hypotheses as from the conditions of the case can neither be proved nor disproved by direct evidence or experiment are to be tested only indirectly, and therefore imperfectly, by trying their power to harmonize the known facts, and to account for what is otherwise unaccountable. So the question comes to this

What will an hypothesis of the derivation of species explain which the opposing view leaves unexplained?

Questions these which ought to be entertained before we take up the arguments which have been advanced against this theory. We can only glance at some of the considerations which Darwin adduces, or will be sure to adduce in the future and fuller exposition which is promised. To display them in such wise as to indoctrinate the unscientific reader would require a volume. Merely to refer to them in the most general terms would suffice for those familiar with scientific matters, but would scarcely enlighten those who are not. Wherefore let these trust the impartial Pictet, who freely admits, that, "in the absence of sufficient direct proofs to justify the possibility of his hypothesis, Mr. Darwin relies upon indirect proofs, the bearing of which is real and incontestable"; who concedes that "his theory accords very well with the great facts of comparative anatomy and zoölogy,—comes in admirably to explain unity of composition of organisms, also to explain rudimentary and representative organs, and the natural series of genera and species,—equally corresponds with many palæontological data,—agrees well with the specific resemblances which exist between two successive faunas, with the parallelism which is sometimes observed between the series of palæontological succession and of embryonal development," etc.; and finally, although he does not accept the theory in these results, he allows that "it appears to offer the best means of explaining the manner in which organized beings were produced in epochs anterior to our own."

What more than this could be said for such an hypothesis? Here, probably, is its charm, and its strong hold upon the speculative mind. Unproven though it be, and cumbered *primâ facie* with cumulative improbabilities as it proceeds, yet it singularly accords with great classes of facts otherwise insulated and enigmatic, and explains many things which

are thus far utterly inexplicable upon any other scientific assumption.

We have said (p. 116) that Darwin's hypothesis is the natural complement to Lyell's uniformitarian theory in physical geology. It is for the organic world what that popular view is for the inorganic; and the accepters of the latter stand in a position from which to regard the former in the most favorable light. Wherefore the rumor that the cautious Lyell himself has adopted the Darwinian hypothesis need not surprise us. The two views are made for each other, and, like the two counterpart pictures for the stereoscope, when brought together, combine into one apparently solid whole.

If we allow, with Pictet, that Darwin's theory will very well serve for all that concerns the present epoch of the world's history,—an epoch which this renowned palæontologist regards as including the diluvial or quaternary period,—then Darwin's first and foremost need in his onward course is a practicable road from this into and through the tertiary period, the intervening region between the comparatively near and the far remote past. Here Lyell's doctrine paves the way, by showing that in the physical geology there is no general or absolute break between the two, probably no greater between the latest tertiary and the quaternary period than between the latter and the present time. So far, the Lyellian view is, we suppose, generally concurred in. Now as to the organic world, it is largely admitted that numerous tertiary species have continued down into the quaternary, and many of them to the present time. A goodly percentage of the earlier and nearly half of the later tertiary mollusca, according to Des Hayes, Lyell, and, if we mistake not, Bronn, still live. This identification, however, is now questioned by a naturalist of the very highest authority. But, in its bearings on the new theory, the point here turns not upon absolute identity so much as upon close resemblance. For those who, with Agassiz, doubt the specific identity in any

of these cases, and those who say, with Pictet, that "the later tertiary deposits contain in general the *débris* of species *very nearly related* to those which still exist, belonging to the same genera, but specifically different," may also agree with Pictet that the nearly related species of successive faunas must or may have had "a material connection." Now the only material connection that we have an idea of in such a case is a genealogical one. And the supposition of a genealogical connection is surely not unnatural in such cases,—is demonstrably the natural one as respects all those tertiary species which experienced naturalists have pronounced to be identical with existing ones, but which others now deem distinct. For to identify the two is the same thing as to conclude the one to be the ancestors of the other. No doubt there are differences between the tertiary and the present individuals, differences equally noted by both classes of naturalists, but differently estimated. By the one these are deemed quite compatible, by the other incompatible, with community of origin. But who can tell us what amount of difference is compatible with community of origin? This is the very question at issue, and one to be settled by observation alone. Who would have thought that the peach and the nectarine came from one stock? But, this being proved, is it now very improbable that both were derived from the almond, or from some common amygdaline progenitor? Who would have thought that the cabbage, cauliflower, broccoli, kale, and kohlrabi are derivatives of one species, and rape or colza, turnip, and probably rutabaga, of another species? And who that is convinced of this can long undoubtingly hold the original distinctness of turnips from cabbages as an article of faith? On scientific grounds may not a primordial cabbage or rape be assumed as the ancestor of all the cabbage races, on much the same ground that we assume a common ancestry for the diversified human races? If all our breeds of cattle came from one stock, why not this

stock from the auroch, which has had all the time between the diluvial and the historic periods in which to set off a variation perhaps no greater than the difference between some sorts of cattle?

That considerable differences are often discernible between tertiary individuals and their supposed descendants of the present day affords no argument against Darwin's theory, as has been rashly thought, but is decidedly in its favor. If the identification were so perfect that no more differences were observable between the tertiary and the recent shells than between various individuals of either, then Darwin's opponents, who argue the immutability of species from the ibises and cats preserved by the ancient Egyptians being just like those of the present day, could triumphantly add a few hundred thousand years more to the length of the experiment and to the force of their argument. As the facts stand, it appears, that, while some tertiary forms are essentially undistinguishable from existing ones, others are the same with a difference, which is judged not to be specific or aboriginal, and yet others show somewhat greater differences, such as are scientifically expressed by calling them marked varieties, or else doubtful species; while others, differing a little more, are confidently termed distinct, but nearly related species. Now is not all this a question of degree, of mere gradation of difference? Is it at all likely that these several gradations came to be established in two totally different ways,—some of them (though naturalists can't agree which) through natural variation, or other secondary cause, and some by original creation, without secondary cause? We have seen that the judicious Pictet answers such questions as Darwin would have him do, in affirming, that, in all probability, the nearly related species of two successive faunas were materially connected, and that contemporaneous species, similarly resembling each other, were not all created so, but have become so. This is equivalent to saying that species (using the term as all natu-

ralists do and must continue to employ the word) have only a relative, not an absolute fixity; that differences fully equivalent to what are held to be specific may arise in the course of time, so that one species may at length be naturally replaced by another species a good deal like it, or may be diversified through variation or otherwise into two, three, or more species, or forms as different as species. This concedes all that Darwin has a right to ask, all that he can directly infer from evidence. We must add that it affords a *locus standi*, more or less tenable, for inferring more.

Here another geological consideration comes in to help on this inference. The species of the later tertiary period for the most part not only resembled those of our days, many of them so closely as to suggest an absolute continuity, but also occupied in general the same regions that their relatives occupy now. The same may be said, though less specially, of the earlier tertiary and of the later secondary; but there is less and less localization of forms as we recede, yet some localization even in palæozoic times. While in the secondary period one is struck with the similarity of forms and the identity of many of the species which flourished apparently at the same time in all or in the most widely separated parts of the world, in the tertiary epoch, on the contrary, along with the increasing specialization of climates and their approximation to the present state, we find abundant evidence of increasing localization of orders, genera, and species; and this localization strikingly accords with the present geographical distribution of the same groups of species. Where the imputed forefathers lived, their relatives and supposed descendants now flourish. All the actual classes of the animal and vegetable kingdoms were represented in the tertiary faunas and floras, and in nearly the same proportions and the same diversities as at present. The faunas of what is now Europe, Asia, America, and Australia differed from each other much as they now differ: in fact,—according to

Adolphe Brongniart, whose statements we here condense,*—the inhabitants of these different regions appear for the most part to have acquired, before the close of the tertiary period, the characters which essentially distinguish their existing faunas. The eastern continent had then, as now, its great pachyderms, elephants, rhinoceros, and hippopotamus; South America its armadillos, sloths, and ant-eaters; Australia a crowd of marsupials; and the very strange birds of New Zealand had predecessors of similar strangeness. Everywhere the same geographical distribution as now, with a difference in the particular area, as respects the northern portion of the continents, answering to a warmer climate than than ours, such as allowed species of hippopotamus, rhinoceros, and elephant to range even to the regions now inhabited by the reindeer and the musk-ox, and with the serious disturbing intervention of the glacial period within a comparatively recent time. Let it be noted, also, that those tertiary species which have continued with little change down to our days are the marine animals of the lower grades, especially mollusca. Their low organization, moderate sensibility, and the simple conditions of an existence in a medium like the ocean, not subject to great variation and incapable of sudden change, may well account for their continuance; while, on the other hand, the more intense, however gradual, climatic vicissitudes on land, which have driven all tropical and subtropical forms out of the higher latitudes and assigned to them their actual limits, would be almost sure to extinguish such huge and unwieldy animals as mastodons, mammoths, and the like, whose power of enduring altered circumstances must have been small.

This general replacement of the tertiary species of a country by others so much like them is a noteworthy fact. The hypothesis of the independent creation of all species, irrespective of their antecedents, leaves this fact just as mys-

* In *Comptes Rendus, Acad. des Sciences*, Févr. 2, 1857.

terious as is creation itself; that of derivation undertakes to account for it. Whether it satisfactorily does so or not, it must be allowed that the facts well accord with that assumption.

The same may be said of another conclusion, namely, that the geological succession of animals and plants appears to correspond in a general way with their relative standing or rank in a natural system of classification. It seems clear, that, though no one of the *grand types* of the animal kingdom can be traced back farther than the rest, yet the lower *classes* long preceded the higher; that there has been on the whole a steady progression within each class and order; and that the highest plants and animals have appeared only in relatively modern times. It is only, however, in a broad sense that this generalization is now thought to hold good. It encounters many apparent exceptions and sundry real ones. So far as the rule holds, all is as it should be upon an hypothesis of derivation.

The rule has its exceptions. But, curiously enough, the most striking class of exceptions, if such they be, seems to us even more favorable to the doctrine of derivation than is the general rule of a pure and simple ascending gradation. We refer to what Agassiz calls prophetic and synthetic types; for which the former name may suffice, as the difference between the two is evanescent.

"It has been noticed," writes our great zoölogist, "that certain types, which are frequently prominent among the representatives of past ages, combine in their structure peculiarities which at later periods are only observed separately in different, distinct types. Sauroid fishes before reptiles, Pterodactyles before birds, Ichthyosauri before dolphins, etc. There are entire families, of nearly every class of animals, which in the state of their perfect development exemplify such prophetic relations. . . . The sauroid fishes of the past geological ages are an example of this kind. These fishes, which preceded the appearance of reptiles, pre-

sent a combination of ichthyic and reptilian characters not to be found in the true members of this class, which form its bulk at present. The Pterodactyles, which preceded the class of birds, and the Ichthyosauri, which preceded the Cetacea, are other examples of such prophetic types."*

Now these reptile-like fishes, of which gar-pikes are the living representatives, though of earlier appearance, are admittedly of higher rank than common fishes. They dominated until reptiles appeared, when they mostly gave place to — or, as the derivationists will insist, were resolved by divergent variation and natural selection into — common fishes, destitute of reptilian characters, and saurian reptiles, the intermediate grades, which, according to a familiar piscine saying, are "neither fish, flesh, nor good red-herring," being eliminated and extinguished by natural consequence of the struggle for existence which Darwin so aptly portrays. And so, perhaps, of the other prophetic types. Here type and antitype correspond. If these are true prophecies, we need not wonder that some who read them in Agassiz's book will read their fulfilment in Darwin's.

Note also, in this connection, that, along with a wonderful persistence of type, with change of species, genera, orders, etc., from formation to formation, no species and no higher group which has once unequivocally died out ever afterwards reappears. Why is this, but that the link of generation has been sundered? Why, on the hypothesis of independent originations, were not failing species re-created, either identically or with a difference, in regions eminently adapted to their well-being? To take a striking case. That no part of the world now offers more suitable conditions for wild horses and cattle than the Pampas and other plains of South America is shown by the facility with which they have there run

* Agassiz, *Contributions: Essay on Classification*, p. 117, where, we may be permitted to note, the word "Crustacea" is by a typographical error printed in place of *Cetacea*.

wild and enormously multiplied, since introduced from the Old World not long ago. There was no wild American stock. Yet in the times of the Mastodon and Megatherium, at the dawn of the present period, wild horses and cattle—the former certainly very much like the existing horse—roamed over those plains in abundance. On the principle of original and direct created adaptation of species to climate and other conditions, why were these types not reproduced, when, after the colder intervening era, those regions became again eminently adapted to such animals? Why, but because, by their complete extinction in South America, the line of descent was here utterly broken? Upon the ordinary hypothesis, there is no scientific explanation possible of this series of facts, and of many others like them. Upon the new hypothesis, “the succession of the same types of structure within the same areas during the later geological periods ceases to be mysterious, and is simply explained by inheritance.” Their cessation is failure of issue.

Along with these considerations the fact (alluded to on p. 114) should be remembered, that, as a general thing, related species of the present age are geographically associated. The larger part of the plants, and still more of the animals, of each separate country are peculiar to it; and, as most species now flourish over the graves of their by-gone relatives of former ages, so they now dwell among or accessibly near their kindred species.

Here also comes in that general “parallelism between the order of succession of animals and plants in geological times, and the gradation among their living representatives” from low to highly organized, from simple and general to complex and specialized forms; also “the parallelism between the order of succession of animals in geological times and the changes their living representatives undergo during their embryological growth,”—as if the world were one prolonged gestation. Modern science has much in-

sisted on this parallelism, and to a certain extent is allowed to have made it out. All these things, which conspire to prove that the ancient and the recent forms of life “are somehow intimately connected together in one grand system,” equally conspire to suggest that the connection is one similar or analogous to generation. Surely no naturalist can be blamed for entering somewhat confidently upon a field of speculative inquiry which here opens so invitingly; nor need former premature endeavors and failures utterly dishearten him.

All these things, it may naturally be said, go to explain the order, not the mode, of the incoming of species. But they all do tend to bring out the generalization expressed by Mr. Wallace in the formula, that “every species has come into existence coincident both in time and space with preëxisting closely allied species.” Not, however, that this is proved even of existing species as a matter of general fact. It is obviously impossible to *prove* anything of the kind. But we must concede that the known facts strongly suggest such an inference. And since species are only congeries of individuals, and every individual came into existence in consequence of preëxisting individuals of the same sort, so leading up to the individuals with which the species began, and since the only material sequence we know of among plants and animals is that from parent to progeny, the presumption becomes exceedingly strong that the connection of the incoming with the preëxisting species is a genealogical one.

Here, however, all depends upon the probability that Mr. Wallace’s inference is really true. Certainly it is not yet generally accepted; but a strong current is setting towards its acceptance.

So long as universal cataclysms were in vogue, and all life upon the earth was thought to have been suddenly destroyed and renewed many times in succession, such a view could not be thought of. So the equivalent view maintained by Agassiz, and formerly, we believe, by

D'Orbigny, that, irrespectively of general and sudden catastrophes, or any known adequate physical cause, there has been a total depopulation at the close of each geological period or formation, say forty or fifty times, or more, followed by as many independent great acts of creation, at which alone have species been originated, and at each of which a vegetable and an animal kingdom were produced entire and complete, full-fledged, as flourishing, as wide-spread and populous, as varied and mutually adapted from the beginning as ever afterwards,—such a view, of course, supersedes all material connection between successive species, and removes even the association and geographical range of species entirely out of the domain of physical causes and of natural science. This is the extreme opposite of Wallace's and Darwin's view, and is quite as hypothetical. The nearly universal opinion, if we rightly gather it, manifestly is, that the replacement of the species of successive formations was not complete and simultaneous, but partial and successive; and that along the course of each epoch some species probably were introduced, and some, doubtless, became extinct. If all since the tertiary belongs to our present epoch, this is certainly true of it: if to two or more epochs, then the hypothesis of a total change is not true of them.

Geology makes huge demands upon time; and we regret to find that it has exhausted ours,—that what we meant for the briefest and most general sketch of some geological considerations in favor of Darwin's hypothesis has so extended as to leave no room for considering "the great facts of comparative anatomy and zoölogy" with which Darwin's theory "very well accords," nor for indicating how "it admirably serves for explaining the unity of composition of all organisms, the existence of representative and rudimentary organs, and the natural series which genera and species compose." Suffice it to say that these are the real strongholds of the new system on its theoretical side; that it goes far towards explaining

both the physiological and the structural gradations and relations between the two kingdoms, and the arrangement of all their forms in groups subordinate to groups, all within a few great types; that it reads the riddle of abortive organs and of morphological conformity, of which no other theory has ever offered a scientific explanation, and supplies a ground for harmonizing the two fundamental ideas which naturalists and philosophers conceive to have ruled the organic world, though they could not reconcile them, namely: Adaptation to Purpose and the Conditions of Existence, and Unity of Type. To reconcile these two undeniable principles is a capital problem in the philosophy of natural history; and the hypothesis which consistently does so thereby secures a great advantage.

We all know that the arm and hand of a monkey, the foreleg and foot of a dog and of a horse, the wing of a bat, and the fin of a porpoise are fundamentally identical; that the long neck of the giraffe has the same and no more bones than the short one of the elephant; that the eggs of Surinam frogs hatch into tadpoles with as good tails for swimming as any of their kindred, although as tadpoles they never enter the water; that the Guinea-pig is furnished with incisor teeth which it never uses, as it sheds them before birth; that embryos of mammals and birds have branchial slits and arteries running in loops, in imitation or reminiscence of the arrangement which is permanent in fishes; and that thousands of animals and plants have rudimentary organs which, at least in numerous cases, are wholly useless to their possessors, etc., etc. Upon a derivative theory this morphological conformity is explained by community of descent; and it has not been explained in any other way.

Naturalists are constantly speaking of "related species," of the "affinity" of a genus or other group, and of "family resemblance,"—vaguely conscious that these terms of kinship are something more than mere metaphors, but unaware of the grounds of their aptness. Mr. Dar-

win assures them that they have been talking derivative doctrine all their lives without knowing it.

If it is difficult and in some cases practically impossible to fix the limits of species, it is still more so to fix those of genera; and those of tribes and families are still less susceptible of exact natural circumscription. Intermediate forms occur, connecting one group with another in a manner sadly perplexing to systematists, except to those who have ceased to expect absolute limitations in Nature. All this blending could hardly fail to suggest a former material connection among allied forms, such as that which an hypothesis of derivation demands.

Here it would not be amiss to consider the general principle of gradation throughout organic Nature,—a principle which answers in a general way to the law of continuity in the inorganic world, or rather is so analogous to it that both may fairly be expressed by the Leibnitzian axiom, *Natura non agit saltatim*. As an axiom or philosophical principle, used to test modal laws or hypotheses, this in strictness belongs only to physics. In the investigation of Nature at large, at least in the organic world, nobody would undertake to apply this principle as a test of the validity of any theory or supposed law. But naturalists of enlarged views will not fail to infer the principle from the phenomena they investigate,—to perceive that the rule holds, under due qualifications and altered forms, throughout the realm of Nature; although we do not suppose that Nature in the organic world makes no distinct steps, but only short and serial steps,—not infinitely fine gradations, but no long leaps, or few of them.

To glance at a few illustrations out of many that present themselves. It would be thought that the distinction between the two organic kingdoms was broad and absolute. Plants and animals belong to two very different categories, fulfil opposite offices, and, as to the mass of them, are so unlike that the difficulty of the ordinary observer would be to find points of

comparison. Without entering into details, which would fill an article, we may safely say that the difficulty with the naturalist is all the other way,—that all these broad differences vanish one by one as we approach the lower confines of the two kingdoms, and that no *absolute* distinction whatever is now known between them. It is quite possible that the same organism may be both vegetable and animal, or may be first the one and then the other. If some organisms may be said to be at first vegetables and then animals, others, like the spores and other reproductive bodies of many of the lower Algæ, may equally claim to have first a characteristically animal, and then an unequivocally vegetable existence. Nor is the gradation purely restricted to these simple organisms. It appears in general functions, as in that of reproduction, which is reducible to the same formula in both kingdoms, while it exhibits close approximations in the lower forms; also in a common or similar ground of sensibility in the lowest forms of both, a common faculty of effecting movements tending to a determinate end, traces of which pervade the vegetable kingdom,—while on the other hand, this indefinable principle, this vegetable *animula vagula, blandula*, graduates into the higher sensitiveness of the lower class of animals. Nor need we hesitate to recognize the fine gradations from simple sensitiveness and volition to the higher instinctive and other psychical manifestations of the higher brute animals. The gradation is undoubted, however we may explain it. Again, propagation is of one mode in the higher animals, of two in all plants; but vegetative propagation, by budding or offshoots, extends through the lower grades of animals. In both kingdoms there may be separation of the offshoots, or indifference in this respect, or continued and organic union with the parent stock; and this either with essential independence of the offshoots, or with a subordination of these to a common whole, or finally with such subordination and amalgamation, along with specialization.

of function, that the same parts, which in other cases can be regarded only as progeny, in these become only members of an individual.

This leads to the question of individuality, a subject quite too large and too recumbent for present discussion. The conclusion of the whole matter, however, is, that individuality — that very ground of *being* as distinguished from *thing* — is not attained in Nature at one leap. If anywhere truly exemplified in plants, it is only in the lowest and simplest, where the being is a structural unit, a single cell, memberless and organless, though organic, — the same thing as those cells of which all the more complex plants are built up, and with which every plant and (structurally) every animal began its development. In the ascending gradation of the vegetable kingdom individuality is, so to say, striven after, but never attained; in the lower animals it is striven after with greater, though incomplete success; it is realized only in animals of so high a rank that vegetative multiplication or offshoots are out of the question, where all parts are strictly members and nothing else, and all subordinated to a common nervous centre, — fully realized, perhaps, only in a conscious person.

So, also, the broad distinction between reproduction by seeds or ova and propagation by buds, though perfect in some of the lowest forms of life, becomes evanescent in others; and even the most absolute law we know in the physiology of genuine reproduction, that of sexual cooperation, has its exceptions in both kingdoms in parthenogenesis, to which in the vegetable kingdom a most curious series of gradations leads. In plants, likewise, a long and most finely graduated series of transitions leads from bisexual to unisexual blossoms; and so in various other respects. Everywhere we may perceive that Nature secures her ends, and makes her distinctions on the whole manifest and real, but everywhere without abrupt breaks. We need not wonder, therefore, that gradations between species and varieties should occur; the

more so, since genera, tribes, and other groups into which the naturalist collocates species are far from being always absolutely limited in Nature, though they are necessarily represented to be so in systems. From the necessity of the case, the classifications of the naturalist abruptly define where Nature more or less blends. Our systems are nothing, if not definite. They are intended to express differences, and perhaps some of the coarser gradations. But this evinces, not their perfection, but their imperfection. Even the best of them are to the system of Nature what consecutive patches of the seven colors are to the rainbow.

Now the principle of gradation throughout organic Nature may, of course, be interpreted upon other assumptions than those of Darwin's hypothesis, — certainly upon quite other than those of materialistic philosophy, with which we ourselves have no sympathy. Still we conceive it not only possible, but probable, that this gradation, as it has its natural ground, may yet have its scientific explanation. In any case, there is no need to deny that the general facts correspond well with an hypothesis like Darwin's, which is built upon fine gradations.

We have contemplated quite long enough the general presumptions in favor of an hypothesis of the derivation of species. We cannot forget, however, while for the moment we overlook, the formidable difficulties which all hypotheses of this class have to encounter, and the serious implications which they seem to involve. We feel, moreover, that Darwin's particular hypothesis is exposed to some special objections. It requires no small strength of nerve steadily to conceive not only of the variation, but of the formation of the organs of an animal through cumulative variation and natural selection. Think of such an organ as the eye, that most perfect of optical instruments, as so produced in the lower animals and perfected in the higher! A friend of ours, who accepts the new doctrine, confesses that for a long while a cold chill came over him whenever he

thought of the eye. He has at length got over that stage of the complaint, and is now in the fever of belief, perchance to be succeeded by the sweating stage, during which sundry peccant humors may be eliminated from the system.

For ourselves, we dread the chill, and have some misgiving about the consequences of the reaction. We find ourselves in the "singular position" acknowledged by Pictet, — that is, confronted with a theory which, although it can really explain much, seems inadequate to the heavy task it so boldly assumes, but which, nevertheless, appears better fitted than any other that has been broached to explain, if it be possible to explain, somewhat of the manner in which organized beings may have arisen and succeeded each other. In this dilemma we might take advantage of Mr. Darwin's

candid admission, that he by no means expects to convince old and experienced people, whose minds are stocked with a multitude of facts all viewed during a long course of years from the old point of view. This is nearly our case. So, owning no call to a larger faith than is expected of us, but not prepared to pronounce the whole hypothesis untenable, under such construction as we should put upon it, we naturally sought to attain a settled conviction through a perusal of several proffered refutations of the theory. At least, this course seemed to offer the readiest way of bringing to a head the various objections to which the theory is exposed. On several accounts some of these opposed reviews specially invite examination. We propose, accordingly, to conclude our task with an article upon "Darwin and his Reviewers."

REVIEWS AND LITERARY NOTICES.

Modern Painters. By J. RUSKIN. Vol. V.
Smith, Elder, & Co. London.

THE completion of a work of the importance of the "Modern Painters," which has occupied in its production the thought and a large portion of the labor of fourteen years, is an event of more interest than it often falls to the lot of a book to excite; but when, as in this case, the result shows the development of an individual taste and critical ability entirely without peer in the history of art-letters, the value of the whole work is immensely enhanced by the time which its publication covers.

The first volume of "Modern Painters" was, as everybody will remember, one of the sensation-books of the time, and fell upon the public opinion of the day like a thunderbolt from the clear sky. Denying, and in many instances overthrowing, the received canons of criticism, and defying all the accepted authorities in it, the author excited the liveliest astonishment and the

bitterest hostility of the professional critics in general, and at once divided the world of art, so far as his influence reached, into two parts: the one embracing most of the reverent and conservative minds, and by far the larger; the other, most of the enthusiastic, the radical, and earnest; but this, small in numbers at first, was increased, and still increases, by the force of those qualities of enthusiasm and earnestness, until now, in England, it embraces nearly all of the true and living art of our time. But that volume, professedly treating art with reference to its superficial attributes and for a special purpose, the redemption of a great and revered artist from unjust disparagement and undeserved neglect, touched in scarcely the least degree the vital questions of taste or art-production. It had no considerations of sentiment or discussion of principles to offer: it dealt with facts, and touched the simple truths of Nature with an enthusiastic fire and lucidness which were proof positive of the

knowledge and feeling of the author; and the public, either conversant with those facts or capable of being satisfied of them without much thought, abandoned itself to the fascination of his eloquence and acquiesced in his teachings, or arrayed itself in utter hostility to him and his new ideas.

The second volume was more abstruse and deeper in feeling, and comparatively few of Mr. Ruskin's followers through the first cared to get entangled in the metaphysical mazes of the second, and it is generally neglected, although containing some of the deepest and most satisfactory studies on the fundamental principles of art and taste which have ever been printed.

The third and fourth volumes, coming up again nearer the surface, made an application of the principles investigated to the material for art which Nature furnishes; and here again the author found in part his audience diminished among those who had at first been carried away by his enthusiasm or silenced and convinced by his unhesitating dogmatism. A partial reaction took place, owing not only to the change in the tone of the "Modern Painters," but to the springing up of a new school of painting, the consequence, mainly and legitimately, of the teachings of the work, — the pre-Raphaelite, — which, at once attacked virulently and immeasurably by the old school of critics, and defended as earnestly by Mr. Ruskin, became the subject of the war which was still waged between him and them. Turner in the meanwhile had passed away and was admitted to apotheosis, the malignant critics of yesterday becoming the ignorant adulators of to-day: *his* position was conceded, but the hostility to Ruskin was sustained with unabated bitterness on the new field. He was demolished anew, and proved, many useless times over and over, an ignorant pretender; the public in the meanwhile, even his opponents, taking up in turn his *protégés*, as he pointed them out to their notice. The effect of his criticisms in enhancing the value of the works they approved would be incredible, if one did not know how glad an English public is to be led. As a single instance, — a drawing which was sold from one of the water-color exhibitions at fifty guineas, sold again, after Ruskin's notice, at two hundred and fifty; and in the lists of pictures sold or to be sold at auction, one sees constantly,

"Noticed by Mr. Ruskin," "Approved by Mr. Ruskin," appended to the title.

The third volume, being devoted to the correction of the ideas of Style and the Ideal, to Finish, and a review of the Past Landscape-Painting, recurs to Turner in its closing chapter, "On his Teachers"; the fourth was given to *Mountain Beauty*, following the parallel of the first, which treated of the *Truth* of Mountains, and bearing as its burden of moral the expression of that Ideal by Turner; and the fifth now comes to conclude the investigations on the Ideal by chapters: first, on "Leaf Beauty," an exceedingly interesting investigation of the development of the forms of trees and plants as concerned with the laws of beauty; second, "Cloud Beauty"; and then of the "Ideas of Relation," in which the author comes finally to the demonstration of the right of Turner to his position amongst the thinking and poetic painters.

From the first division, "Leaf Beauty," we must make one extract. The author has been speaking of the influence of the Pine on Swiss character.

"But the point which I desire the reader to note is, that the character of the scene which, if any, appears to have been impressive to the inhabitant is not that which we ourselves feel when we enter the district. It was not from their lakes, nor their cliffs, nor their glaciers, though these were all peculiarly their possession, that the three venerable cantons or states received their name. They were not called the States of the Rock, nor the States of the Lake, but the States of the *Forest*. And the one of the three which contains the most touching record of the spiritual power of Swiss religion, in the name of the convent of the 'Hill of Angels,' has for its own none but the sweet, childish name of 'Under the Woods.'

"And, indeed, you may pass under them, if, leaving the most sacred spot in Swiss history, the Meadow of the Three Fountains, you bid the boatman row southward a little way by the Bay of Uri. Steepest there, on its western side, the walls of its rocks ascend to heaven. Far in the blue of evening, like a great cathedral-pavement, lies the lake in its darkness; and you may hear the whisper of innumerable falling waters return from the hollows of the cliff like the voices of a multitude praying under their breath. From time to time, the beat of a wave, slow lifted, where the rocks lean over the black depth, dies heavily as the last note of a requiem. Opposite,

green with steep grass and set with *châlet* villages, the Tron Alp rises in one solemn glow of pastoral light and peace; and above, against the clouds of twilight, ghostly on the gray precipice, stand, myriad by myriad, the shadowy armies of the Unterwalden pine.

"I have seen that it is possible for the stranger to pass through this great chapel, with its font of waters, and mountain pillars, and vaults of cloud, without being touched by one noble thought or stirred by any sacred passion; but for those who received from its waves the baptism of their youth, and learned beneath its rocks the fidelity of their manhood, and watched amidst its clouds the likeness of the dream of life, with the eyes of age, — for these I will not believe that the mountain-shrine was built or the calm of its forest-shadows guarded by their God in vain."

But perhaps that conclusion of Ruskin's, in the new volume, which will most interest his earnest readers, is that the Venetian school is *the only religious school that has ever existed*. So much has Ruskin's development seemed to contradict itself, that one is scarcely surprised at one conclusion being apparently opposed to the former one; but a change so great as this, from Giotto, Perugino, and Cima, to Tintoret, Titian, and Veronese, as the religious ideals, will, indeed, amaze all who read it. Yet this is but the logical consequence of his progression hitherto. If he commenced with a belief that asceticism was religion, he would recognize Perugino and Giotto as the true religious artists; but if, as seems to be the case, he has learned at last that religion is a thing of daily life, mingling in all that we do, caring for body as well as soul, sense as well as spirit, and that a complete man must be a man who *lives* in every sense of the word, then the Venetians, as the painters of the truth of life in *all* its joy and sorrow, are the true painters, and the only ones whose art was inhabited by a religion worth following.

It is interesting to follow what are called Ruskin's contradictions and see how perfectly they represent the whole system of artistic truth, as seen from the different points of a young artist's or student's growth up to mature and ripened judgment; so that there is no stage of artistic development which has not some form of truth particularly adapted to it, in the "Modern Painters." If it be urged that the book should have been written only from the point of final development, it can

only be said that no true book will ever be so written, for no man can ever be certain of his having attained final truth. "Modern Painters" has value in this very showing of the critical development, which to an intelligent student is greater than that a complete and infallible guide could have.

The chapter on Invention is full of the most delightful artistic truth, and shows completely, by copious illustrations, how well Turner deserved the rank Ruskin gives him amongst great composers. The analyses of the compositions of Turner are most curious and interesting, but, of course, depend on the accompanying plates. Some most valuable mental philosophy bearing on the production of art-works concludes Part VIII., which is devoted to "Invention Formal," of which we quote the concluding paragraphs: —

"Until the feelings can give strength enough to the will to enable it to conquer them, they are not strong enough. If you cannot leave your picture at any moment, cannot turn from it and go on with another while the color is drying, cannot work at any part of it you choose with equal contentment, you have not firm enough grasp of it.

"It follows, also, that no vain or selfish person can possibly paint, in the noble sense of the word. Vanity and selfishness are troublesome, eager, anxious, petulant: painting can only be done in calm of mind. Resolution is not enough to secure this; it must be secured by disposition as well. You may resolve to think of your picture only; but, if you have been fretted before beginning, no manly or clear grasp of it will be possible for you. No forced calm is calm enough: only honest calm, natural calm. You might as well try by external pressure to smooth a lake till it could reflect the sky, as by violence of effort to secure the peace through which only you can reach imagination. That peace must come in its own time, as the waters settle themselves into clearness as well as quietness: you can no more filter your mind into purity than you can compress it into calmness; you must keep it pure, if you would have it pure; and throw no stones into it, if you would have it quiet. Great courage and self-command may to a certain extent give power of painting without the true calmness underneath, but never of doing first-rate work. There is sufficient evidence of this in even what we know of great men, though of the greatest we nearly always know the least (and that necessarily; they being very silent, and not much given to setting themselves

forth to questioners,—apt to be contemptuously reserved no less than unselfishly). But in such writings and sayings as we possess of theirs we may trace a quite curious gentleness and serene courtesy. Rubens's letters are almost ludicrous in their unhurried politeness. Reynolds, swiftest of painters, was gentlest of companions; so also Velasquez, Titian, and Veronese.

“It is gratuitous to add that no shallow or petty person can paint. Mere cleverness or special gift never made an artist. It is only perfectness of mind, unity, depth, decision, the highest qualities, in fine, of the intellect, which will form the imagination.

“And, lastly, no false person can paint. A person false at heart may, when it suits his purposes, seize a stray truth here or there; but the relations of truth, its perfectness, that which makes it wholesome truth, he can never perceive. As wholeness and wholesomeness go together, so also sight with sincerity; it is only the constant desire of and submissiveness to truth, which can measure its strange angles and mark its infinite aspects, and fit them and knit them into sacred invention.

“Sacred I call it deliberately; for it is thus in the most accurate senses, humble as well as helpful,—meek in its receiving as magnificent in its disposing; the name it bears being rightly given even to invention formal, not because it forms, but because it finds. For you cannot find a lie; you must make it for yourself. False things may be imagined, and false things composed; but only truth can be invented.”

One of those cardinal doctrines by which we may learn the bearings of a writer's system of truth is that of Ruskin's of the intimate connection between landscape art and humanity.

“Fragrant tissue of flowers, golden circlet of clouds, are only fair when they meet the fondness of human thoughts and glorify human visions of heaven.

“It is the leaning on this truth which more than any other has been the distinctive character of all my own past work. And in closing a series of art-studies, prolonged during so many years, it may be perhaps permitted me to point out this specialty,—the rather that it has been, of all their characters, the one most denied. I constantly see that the same thing takes place in the estimation formed by the modern public of the work of almost any true person, living or dead. It is not needful to state here the causes of such error; but the fact is indeed so, that precisely the distinctive root and leading force of

any true man's work and way are the things denied him.

“And in these books of mine, their distinctive character, as essays on art, is their bringing everything to a root in human passion or human hope. Arising first not in any desire to explain the principles of art, but in the endeavor to defend an individual painter from injustice, they have been colored throughout, nay, continually altered in shape, and even warped and broken, by digressions respecting social questions, which had for me an interest tenfold greater than the work I had been forced into undertaking. Every principle of painting which I have stated is traced to some vital or spiritual fact; and in my works on architecture the preference accorded finally to one school over another is founded on a comparison of their influences on the life of the workman,—a question by all other writers on the subject of architecture wholly forgotten or despised.

“The essential connection of the power of landscape with human emotion is not less certain because in many impressive pictures the link is slight or local. That the connection should exist at a single point is all that we need. . . . That difference, and more, exists between the power of Nature through which humanity is seen, and her power in the desert. Desert,—whether of leaf or sand,—true desertness, is not in the want of leaves, but of life. Where humanity is not and was not, the best natural beauty is more than vain. It is even terrible; not as the dress cast aside from the body, but as an embroidered shroud hiding a skeleton.”

The volume, as a whole, will be found less dogmatic, calmer, more convincing, and more directly applicable to artistic judgment, than any of the others. There is the same love of mysticism and undermeanings, but freighted with deeper and more central truths: a charming conclusion to a fourteen-years' diary of such study of Art and Nature, so severe, so unremitting, as never critic gave before.

Syntax of the Moods and Tenses of the Greek Verb. By W. W. GOODWIN, Ph. D. Cambridge: Sever and Francis.

GRAMMARIANS had once a simple way of disposing of the subject on which Professor Goodwin has given us this elaborate treatise of three hundred pages.

In the Greek Grammar of the Messieurs de Port Royal, which Gibbon praises so

highly in his charming autobiography, and which has passed through several editions in England within the present century, we are taught, that, "though the moods [in Greek] are not to be rejected entirely, yet their signification is sometimes so very arbitrary, that they are put for one another through all tenses." Lancelot himself seems to have had a glimmering of the essential incredibility of this statement; for, though he attempts to substantiate it by citing from Greek authors a number of passages in which the Greek idiom happens to differ from the Latin, — passages, however, which Mr. Goodwin would have been glad to use, had they fallen in his way, to illustrate the regular constructions of the language, — he feels it necessary to appeal to the authority of the learned Budæus, the greatest of the early Greek scholars. Strange as it seems that really accomplished Greek scholars should have charged Plato and Demosthenes, speaking the most perfect of tongues, with arbitrary interchanges of moods and tenses, yet the same views continued to be presented in grammatical works down to the close of the last century. The transition to the new school of grammarians was made in 1792, by the publication of a Greek Grammar by Philip Buttmann, which, in the greatly improved form which it afterwards received from his hands, is familiar to all Greek scholars. In our frequent boasts of the great strides that knowledge has taken in the present century, we commonly have in mind the physical sciences; but we doubt whether in any department of physical science the manuals in use seventy-five years ago are so utterly inferior to those of the present day as are, for instance, the remarks of Viger, and his commentators before Hermann, on the syntax of the Greek verb, to the philosophical treatment of the same points by Professor Goodwin.

This work is entitled, we think, to rank with the best grammars of the Greek language that have appeared in German or English, in all the points that constitute grammatical excellence; while its monographic character justified and required an exhaustive treatment of its particular topic, not to be found even in the huge grammars of Matthiæ and Kühner. Indeed, not the least of its merits is this, that,

in addition to the excellent matter which is original with Professor Goodwin, it furnishes to the student, American or English, — for we hope to see its merits recognized on the other side of the Atlantic, — a digest, as it were, of all that is most valuable on the subject of the syntax of the Greek verb in the best German grammars, from Buttmann to Madvig, enhanced, too, in value by being recast and worked into a homogeneous system by an acute scholar and experienced teacher. One excellence of the book we would by no means pass over, an excellence which we are sure will be particularly appreciated by all who have used translations of German grammars, — the precision both of thought and expression by which it is characterized, which releases the student from the labor of constructing the meaning of a rule from the data of the appended examples. Not that Mr. Goodwin is chary of examples; on the contrary, one of the most attractive and not least profitable features of the book is the copiousness and freshness of the illustrative quotations from Greek authors. These are as welcome as the brightness of newly minted coin to the eye which, in consulting grammar after grammar, has been condemned to meet under corresponding rules always the same examples, till they begin to produce that effect upon the nerves which all have experienced at the mention of the deadly upas-tree, or the imminence of the dissolution of the Union.

We must not omit to speak of the typographical merit of the work, — and especially of what constitutes the first and the last merit of books of this class, the excellent table of contents, and the indexes, Greek and English, which leave nothing to be desired in the way of facility of reference, except, perhaps, an index to the quotations.

The Law of the Territories. Philadelphia: C. Sherman & Son.

THE author of the two able essays contained in this volume will be remembered by many of our readers under his assumed name of "Cecil." The second, as he himself tells us, on "Popular Sovereignty in the Territories," was published, as one of a series of essays on Southern politics, in the Philadelphia *North American and Unitea*

States Gazette. The first, we believe, has never been published before.

Our author, whom we may designate, without violating any confidence, as Mr. George Sidney Fisher, devotes an elaborate preface, which is itself a third essay, to discussing the invasion of Virginia by John Brown and the Southern threats of secession, drawing from the foray of Harper's Ferry a conclusion very different from that of the disunionists. In his own words,—

“Disunion is a word of fear. Is it not strange that it should have been as yet pronounced only by the South? The danger of insurrection and servile war belongs to the nature of slavery. It is, perhaps, not too much to assert that the safety and tranquillity of Southern society depend on the fact that the Northern people are close at hand to aid in case of need,—that the power of the General Government is ever ready for the same purpose. Four millions of barbarians, growing with tropical vigor, and soon to be eight millions, with tropical passions boiling in their blood, endowed with native courage, with sinews strong by toil, and stimulated by the hope of liberty and unbounded license, are not to be trifled with. Take away from them the idea of an irresistible power in the North, ready at any moment to be invoked by their masters, or let them expect in the North, not enemies, but friends and supporters, which even now they are told every day by these masters they may expect,—and how soon might a flame be lighted which no power in the South could extinguish!”

Mr. Fisher treats of the “Law of the Territories” in two essays,—the first considering more particularly “The Territories and the Constitution,” the second, “Popular Sovereignty in the Territories.” The first commences with a quotation so happy that it has all the effect of original wit:—

“The wily and witty Talleyrand was once asked the meaning of the word ‘non-intervention,’ so often used in European diplomacy. ‘It is a word,’ he replied, ‘metaphysical and political, not accurately defined, but which means—much the same thing as intervention!’ The same word has been frequently employed, of late years, in our politics, with the same difference between its professed and its practical signification. It was introduced for the first time in reference to the government of the Territories, when it became an object for the South to gain Kansas as a

Slave State. Two obstacles were to be overcome. One was the Missouri Compromise, which was a solemn compact between North and South to settle a disturbing and dangerous question; the other was a possible majority in Congress, that, it was feared, might prohibit slavery in the new Territory. Southern politicians had at the time control of the government; and they got rid of both difficulties by repealing the Missouri Compromise in the Kansas and Nebraska Bill. By necessary implication, arising from the relation of the Territories to the rest of the nation, by the language of the Constitution, and by the uniform construction of it and practice under it from the earliest period of our history, the Territories had been subjected to the absolute control of the General Government. By the Kansas and Nebraska Bill they were withdrawn from that control. The principle of Popular Sovereignty, it was said, applied to them as well as to the States; and this bill declared that the people of the Territories should be perfectly free to choose their own domestic institutions and regulate their own affairs in their own way.”

The means employed to carry out this plan and the ultimate failure of the plan itself are sketched with a boldness and vigor that our limits, much to our regret, forbid our reproducing. Mr. Fisher, however, fails to notice the wretched plea put forth by the Democratic managers, in favor of the recognition by Congress of the Lecompton Constitution,—that it had been officially authenticated. All might be wrong, but the official record pronounced it right; and behind that record Congress had no authority to go. And this plea was advanced in the face of overwhelming evidence tending to show that the officials, for whose record so inviolable a sanctity was claimed, were appointed for the express purpose of falsifying that record! If confirmation be wanted, we need go no farther than the fate of Robert J. Walker, who was eager to make Kansas a Slave State, but was so false to every principle of Democratic integrity as to confine himself to legitimate means to bring about that result,—a remissness for which he was promptly removed by President Buchanan! Mr. Fisher pertinently says,—

“Two great facts were plainly visible through the flimsy web of attorney logic and quibbling technicality, not very ingeniously woven to conceal them. One of these facts was, that the people of Kansas were heartily

and almost unanimously averse to slavery; the other was, that the Government was trying by every means in its power to impose slavery upon them."

After describing the contemptuous rejection by the people of Kansas of the pro-slavery constitution, Mr. Fisher proceeds with an analysis of the Kansas-Nebraska fraud, so clear and so masterly that we must again quote his own language, with an occasional condensation or omission.

"It was clear, therefore, that the principle of Popular Sovereignty, introduced by the Kansas and Nebraska Bill, a principle before unknown to the law and practice of our government, would not suit the South. It appeared too probable that not only the people to inhabit all the territory north of 36° 30', but also much territory south of it, would, like the people of Kansas, reject slavery, if left to regulate their domestic institutions in their own way. What, then, were Southern politicians to do? Invoke the ancient and long exercised, but now denied and derided power of Congress over the Territories? This might prove a dangerous weapon in the hands of possible future Northern majorities. It was obviously necessary to withdraw slavery alike from the control of Congress and of the people of a Territory. Some ingenuity was required for this. The doctrine that the Constitution extends to the Territories (a doctrine broached before by Mr. Calhoun, but always defeated on the ground that the Constitution, by its language and the practice under it, was made for States only, and that the Territories were subject to the supreme control of Congress, — a control frequently exercised, not only independently of the Constitution, but in a manner incompatible with it) was introduced, with other innovations, into the Kansas and Nebraska Bill. The Dred Scott decision of the Supreme Court followed, by which the Constitution recognizes slavery as a national institution. It recognizes slaves as mere property, differing in no respect from other merchandise. The Territories belong to the nation. Every citizen has equal rights to them and in them. Why, therefore, may not a Southern man, as well as a Northern man, go into them with his *property*? What right has Congress to place the South under an ignominious bar of restriction? The Constitution declares that slaves are property; that all the States and the people have equal rights. The Territories belong to all. Therefore, under the Constitution, they should be enjoyed by all.

"By this ingenious logic the Kansas and

Nebraska Bill is made to contradict itself. It first declares that the Constitution extends to the Territories; in other words, slavery exists there by force of the Constitution, without reference to the will of the people. It then says that the people of the Territories shall be 'perfectly free to form and regulate their domestic institutions in their own way.'

"The contradictions, duplicity, and absurdity of the law are obvious at once. The first sentence announces a change in the settled principles and policy of the Government; else why declare that the Constitution 'shall' extend to Nebraska, if it already extended there? Then comes the repeal of the Missouri Compromise. The reason given for this is, that it is inconsistent with the non-intervention by Congress with slavery, recognized in the Compromise of 1850. But that law declares positively that Congress does not intervene, *because it is 'inexpedient'* to do so; and gives the reason why it is 'inexpedient.' The *power* of Congress was asserted by Mr. Clay, who made the law, and the terms of it were chosen for the very purpose of preventing any inference being drawn from it against that power.

"It is remarkable, too, that the Bill, whilst declaring the *perfect* freedom of the Territories, should still have left them subject to the power of the President, who, as before, is permitted to appoint their Governor, Judges, and Marshals, officers who are his agents, and without whose sanction the acts of the Territorial Legislature can neither become laws, nor be construed and applied, nor executed. So that the will of the people may be defeated, should it happen to be opposed to the will of the President: as was seen in the case of Kansas.

"Why," Mr. Fisher asks, "is the anomalous monster of Popular Sovereignty to be introduced with reference to slavery? Is it because slaves are 'mere property'? Why, then, not subject all property, land included, to popular control? Is it because the subject of slavery is an exciting topic, a theme for dangerous agitation, to be checked only by placing the subject beyond the power of Congress? The answer is, that Congress cannot abdicate its power on the ground of expediency. If it may give up one power, it may give up all. Nor can Congress delegate its power for the same reason. Trust power, from its very nature, cannot be delegated. To break down great principles, to set aside ancient usage, to abandon legal authority, in order to appease the contests of parties, is too great a sacrifice. No true peace can come of it; only suppressed and adjourned war."

The natural inference from the extracts

we have given would be that Mr. Fisher was a member of the Republican party. But such is not the fact: Mr. Fisher rests his hope upon a party "yet to be organized." "The extreme Northern, or Free-soil, or Abolition party is only less guilty than the extreme Southern and Democratic party." Which? Does Mr. Fisher mean that "Northern," "Free-soil," and "Abolition" are synonymous terms? And does any or do all of them mean the Republican party? Or, finally, does Mr. Fisher shrink from the conclusions presented by his logic, and is his vaguely convenient linking together of different words intended to leave his position gracefully doubtful? And in that case, do the Baltimore nominations, with their innocent unconsciousness, supply his political needs? It is not easy to answer these questions. We begin now upon the views of a Pennsylvania Oppositionist; and quicksilver defied not more utterly the skill of Raymond Lullius than the doctrines of the Philadelphia school perplex the inquiries of sharply defined New England minds. The rudimentary state of Republican principles may nowhere else be so clearly seen as in Pennsylvania. Four years of the Democratic administration of her "favorite son" have done much to make her less favored sons into good Republicans; but the State needs another Democratic President. Mr. Fisher appears to much more advantage in pulling down than in building up. We have hitherto seen only the keen, fearless dissector of fraud and hypocrisy; we are now to contemplate a circumspect alarmist, who dreads to call things by their right names for fear of unpleasant consequences. He is such a master of English, so judicious in the use of middle terms,—so shrewd a fencer altogether,—that even his timidity cannot make him other than a formidable opponent.

Mr. Fisher, believing that slavery receives ample protection from a fair interpretation of the Constitution, holds that

"Congress has plenary power over the Territories, often exercised on this subject of slavery. It may be said that Congress has on various occasions prohibited slavery in the Territories. True; but with the consent and coöperation of the Southern States. The people of all the States have equal right in the Territories. To exclude the people of the Slave States, therefore, *without their consent,*

would be unequal and opposed to the spirit of the Constitution."

Certainly it would. Who proposes to do it? No living man, woman, or child. It is worth noticing, by the way, that the Republican party is not committed to the doctrine of carrying out the principle of the Wilmot Proviso. But supposing it were, Mr. Fisher's argument has no force or direction, unless he can establish his suppressed premise,—that the exclusion of slavery from the Territories is the exclusion of "the people of the Slave States" from the Territories. And to make that good, all Mr. Fisher's skill and ingenuity will be required. Why so many Northern politicians should have weakly surrendered this point is a mystery. Because the slaveholders (who are not, Mr. Fisher, "the people of the Slave States," by any means, but a small portion of them) are at home a privileged aristocracy, have they any claim to the same position abroad? If so, on what does it rest? The laws of the Southern States? They are now beyond their jurisdiction. The common law? To that wise and beneficent law slavery is a thing unknown. The Constitution? It is silent. There is no exclusion of the Southerners even proposed. Let them come: but when they claim to carry with them the right to hold a certain class of men as property because they are recognized as property by certain local regulations elsewhere prevailing, they must not complain, if such a claim be disallowed. The Southerner's complaint, that he is accustomed to the institution of slavery, is fairly met by the Northerner's retort, that he is accustomed to the institution of freedom.

Now, which voice shall prevail? Neither party has any more right than the other; and neither party has any right at all. The Territories are in a state of wardship; and Congress is to decide as it thinks best for their welfare, present and future; and if Congress thinks that a nation prospers with free institutions and droops under slavery, then let Congress admit the Territory as a Free State. True, there is some inconvenience to the slaveholder; but from so abnormal a relation as slavery some inconvenience must result. When admitted to be a necessary evil, it is barely tolerable; when boastingly proclaimed to be a sovereign

good, it is fairly intolerable. And it is both criminal and foolish to try to make good all the evils inseparable from slavery by systematic injustice to other interests.

"Slavery has changed. When Southern men consented to its prohibition, they hoped and believed that the time would come when it could be abolished altogether. They have as much right to these as to their former opinions, and to have them represented in the Government."

Here Mr. Fisher hints at, rather than fully states, the grand retort of the Southerners, — "Our fathers, you say, were opposed to slavery: very good; but we are not: why should we be bound by their opinions?" A mere misapprehension of the force of the argument. The Southerner of 1860 is *not* bound by the opinions of Madison and Jefferson; but the North may fairly adduce the opinions of those men, who were framers of the Constitution, not as binding upon their descendants, but as serving to explain the meaning of disputed provisions in that Constitution. The Constitution binds us all, North and South: then recurs the question, What is the meaning of its provisions? and *then* the contemporaneous opinions of its framers come legitimately into play as an argument.

Of the Missouri Compromise Mr. Fisher says, —

"It may be said that this law was a violation of the equal rights of the Southern people, by excluding them from a large portion of the national domain. The answer is, not merely that this was done with their consent, their representatives having approved the law, but that the law did recognize their rights, by dividing between them and the Northern people all the territory then possessed by the Government."

We are surprised that upon his own presentation of the case this simple question does not occur to Mr. Fisher: Supposing the South and the North to have had equal and conflicting rights in the national domain, and supposing that there was need of some arbiter, and remembering that Congress undertook the duties of arbiter and decided that the division under the Missouri Compromise gave each section its rightful share, — then, with what propriety can the South, after occupying its own share, call for a portion in the share allotted to the North?

The second essay, on "Popular Sovereignty in the Territories," presents comparatively few salient points. A very spirited and just history of the working of the Administration schemes in Kansas, a restating of some of the arguments against the Kansas-Nebraska Act set forth in the preceding essay, and a remonstrance against the headstrong course of Southern politicians are its most noticeable features.

"The Union, the Constitution, and the friendship of the North: these are the pillars on which rest the peace, the safety, the independence of the South. The extraordinary thing is, that for some years past the South has been, and now is, sedulously employed in undermining this triple foundation of its power and safety. Its extravagant pretensions, its excesses, its crimes, are rapidly cooling the friendship of the North, — converting it, indeed, into positive enmity. Its leading politicians are ever plotting and threatening disunion. The time may come when disunion will be proffered to them from the North, not as a vague and passionate threat, but as a positive and well-considered plan, backed by a force of public opinion which nothing can resist. Ere long, the South is likely to be left with no other defence than the Union it has weakened and the Constitution it has mutilated and defaced.

"The makers of the Kansas and Nebraska law were clumsy workmen. They forgot to provide for the case of an anti-slavery President. They will, perhaps, learn wisdom by experience.

'To wilful men

The injuries that they themselves procure
Must be their schoolmasters.'

Those who framed the Constitution and laid the foundation of this Union understood their business better. That Constitution was intended to protect the South, and has protected it. Southern politicians cannot improve it. For their own sakes they had better let it alone."

We have given enough to show that in discussing Mr. Fisher we are dealing with two different men. The field is now clear for the great political contest of 1860. Mr. Fisher may have allied himself before this with the Republicans, or may look to have his anticipations fulfilled by that third party who are as unconscious of wrong as powerless to rectify it, "the world-forgetting, by the world forgot." We wish him well through his troubles.

A Dictionary of English Etymology. By HENSLEIGH WEDGWOOD, M. A. Late Fellow of Chr. Coll. Cam. Vol. I. (A—D.) London: Trübner and Co., 60 Paternoster Row. 1859. pp. xxiv., 507.

THERE is nothing more dangerously fascinating than etymologies. To the uninitiated the victim seems to have eaten of "insane roots that take the reason prisoner"; while the illuminate too often looks upon the stems and flowers of language, the highest achievements of thought and poesy, as mere handles by which to pull up the grimy tubers that lie at the base of articulate expression, shapeless knobs of speech, sacred to him as the potato to the Irishman.

The sarcasms of Swift were not without justification; for crazier analogies than that between Andromache and Andrew Mackay have been gravely insisted on by persons who, like the author of "Amilec," believed that the true secret of philosophizing *est celui de rêver heureusement*. It is only within a few years that etymological investigations have been limited by anything like scientific precision, or that profound study, patient thought, and severity of method have asserted in this, as in other departments of knowledge, their superiority to point-blank guessing and the bewitching generalization conjured out of a couple or so of assumed facts, which, even if they turn out to be singly true, are no more nearly related than Hecate and green cheese.

We do not object to that milder form of philology of which the works of Dean Trench offer the readiest and most pleasing example, and which confines itself to the mere study of words, to the changes of form and meaning they have undergone and the forgotten moral that lurks in them. But the interest of Dr. Trench and others like him sticks fast in words, it is almost wholly an æsthetic interest, and does not pretend to concern itself with the deeper problems of language, its origin, its comparative anatomy, its bearing upon the prehistoric condition of mankind and the relations of races, and its claim to a place among the natural sciences as an essential element in any attempt to reconstruct the broken and scattered annals of our planet. It would not be just to find fault with Dr. Trench's books for lacking a scientific treatment to which they make no preten-

sion, but they may fairly be charged with smelling a little too much of the shop. There is a faint odor of the sermon-case about every page, and we learn to dread, sometimes to skip, the inevitable homily, as we do the moral at the end of an Æsopic fable. We enter our protest, not against Dr. Trench in particular, for his books have other and higher claims to our regard, but because we find that his example is catching, the more so as verbal morality is much cheaper than linguistic science. If there be anything which the study of words should teach, it is their value.

There are two theories as to the origin of language, which, for shortness, may be defined as the poetic and the matter-of-fact. The former (of which M. Ernest Renan is one of the most eloquent advocates) supposes a primitive race or races endowed with faculties of cognition and expression so perfect and so intimately responsive one to the other, that the name of a thing came into being coincidentally with the perception of it. Verbal inflections and other grammatical forms came into use gradually to meet the necessities of social commerce between man and man, and were at some later epoch reduced to logical system by constructive minds. If we understand him rightly, while not excluding the influence of *onomatopœia*, (or physical imitation,) he would attach a far greater importance to metaphysical causes. He says admirably well, "La liaison du sens et du mot n'est jamais nécessaire, jamais arbitraire; toujours elle est motivée." His theory amounts to this: that the fresh perfection of the senses and the mental faculties made the primitive man a poet.

The other theory seeks the origin of language in certain imitative radicals out of which it has analogically and metaphorically developed itself. This system has at least the merits of clearness and simplicity, and of being to a certain extent capable of demonstration. Its limitation in this last respect will depend upon that mental constitution which divides men naturally into Platonists and Aristotelians. It has never before received so thorough an exposition or been tested by so wide a range of application as in Mr. Wedgwood's volume, nor could it well be more fortunate in its advocate. Mr. Wedgwood is thorough, scrupulous, and fair-minded.

It will be observed that neither theory

brings any aid to the attempt of Professor Max Müller and others to demonstrate etymologically the original unity of the human race. Mr. Wedgwood leaves this question aside, as irrelevant to his purpose. M. Renan combats it at considerable length. The logical consequence of admitting either theory would be that the problem was simply indemonstrable.

At first sight, so imaginative a scheme as that of M. Renan is singularly alluring; for, even when qualified by the sentence we have quoted, we may attach such a meaning to the word *motivée* as to find in words the natural bodies of which the Platonic ideas are the soul and spirit. We find in it a correlative illustration of that notion not uncommon among primitive poets, and revived by the Cabalists, that whoever knew the Word of a thing was master of the thing itself, and an easy way of accounting for the innate fitness and necessity, the foreordination, which stamps the phrases of real poets. If, on the other hand, we accept Mr. Wedgwood's system, we must consider speech, as the theologians of the Middle Ages assumed of matter, to be only *potentiated* with life and soul, and shall find the phenomenon of poetry as wonderful, if less mysterious, when we regard the fineness of organization requisite to a perception of the remote analogies of sense and thought, and the power, as of Solomon's seal, which can compel the unwilling genius back into the leaden void which language becomes when used as most men use it.

There is a large class of words which everybody admits to be imitative of sounds, — such, for example, as *bang*, *splash*, *crack*, — and Mr. Wedgwood undertakes to show that their number and that of their derivative applications is much larger than is ordinarily supposed. He confines himself almost wholly to European languages, but not always to the particular class of etymologies which it is his main object to trace out. Some of his explanations of words, not based upon any real or assumed radical, but showing their gradual passage toward their present forms and meanings, are among the most valuable parts of the book. As striking proofs of this, we refer our readers to Mr. Wedgwood's treatment of the words *abide*, *abie*, *allow*, *danger*, and *denizen*. When he differs from other authorities, it is never inconsiderate-

ly or without examination. Now and then we think his derivations are far-fetched, when simpler ones were lying near his hand. He makes the Italian *balcone* come "from the Persian *bâla khaneh*, an upper chamber. An upper chamber over a gate in the Persian caravanserais is still called by that name, according to Rich." (p. 97.) Yet under the word *balk* we find, "A hay-loft is provincially termed *the balks*, (Halliwell,) because situated among the rafters. Hence also, probably, the Ital. *balco*, or *palco*, a scaffold; a loftlike erection supported upon beams." As a *balcone* is not an upper chamber, nor a chamber over a gate, but is precisely "a loftlike erection supported upon beams," it seems more reasonable to suppose it an augmentative formed in the usual way from *balco*. Mr. Wedgwood's derivation of *barbican* from *bâla khaneh* seems to us more happy. (Ducange refers the word to an Eastern source.) He would also derive the Fr. *ébaucher* from *balk*, though we have a correlative form, *sbozzare*, in Italian, (old Sp. *esbozar*, Port. *esboçar*, Diez,) with precisely the same meaning, and from a root *bozzo*, which is related to a very different class of words from *balk*. So bewitched is Mr. Wedgwood with this word *balk*, that he prefers to derive the Ital. *valicare*, *varcare*, from it rather than from the Latin *varicare*. We should think a deduction from the latter to the English *walk* altogether as probable. Mr. Wedgwood also inclines to seek the origin of *acquaint* in the Germ. *kund*, though we have all the intermediate steps between it and the Mid. Lat. *adcognitare*. Again, under *daunt* he says, "Probably not directly from Lat. *domare*, but from the Teutonic form *damp*, which is essentially the same word." It may be plain that the Fr. *dompter* (whence *daunt*) is not directly from *domare*, but not so plain, as it seems to us, that it is not directly from the frequentative form *domitare*. — "Decoy. Properly *duck-coy*, as pronounced by those who are familiar with the thing itself. 'Decoys, vulgarly *duck-coys*.' — Sketch of the Fens, in Gardener's Chron. 1849. Du. *koye*, *cavea*, septum, locus in quo greges stabulantur. — Kil. *Kooi*, *kouw*, *kevi*, a cage; *vogel-kooi*, a bird-cage, decoy, apparatus for entrapping waterfowl. Prov. E. *Coy*, a decoy for ducks, a coop for lobsters. — Forby. The name was probably imported with the thing itself from Holland to the

fens." (p. 447.) *Duck-coy*, we cannot help thinking, is an instance of a corruption like *bag o' nails* from *bacchanals*, for the sake of giving meaning to a word not understood. Decoys were and are used for other birds as well as ducks, and *vogel-kooi* in Dutch applies to all birds, (answering to our trap-cage,) the special apparatus for ducks being an *eende-kooi*. The French *coi* adverbialized by the prefix *de*, and meaning quietly, slyly, as a hunter who uses decoys must demean himself, would seem a more likely original. — *Andiron* Mr. Wedgwood derives from Flem. *wend-ijser*, turn-irons, because the spit rested upon them. But the original meaning seems to have no reference to the spit. The French *landier* is plainly a corruption of the Mid. Lat. *anderia*, by the absorption of the article (*l'andier*). This gives us an earlier form *andier*, and the augmentative *andieron* would be our word. — *Baggage*. We cannot think Mr. Wedgwood's derivation of this word from *bague* an improvement on that of Ducange from *baya*, arca. — *Coarse* Mr. Wedgwood considers identical with *course*, — that is, of course, ordinary. He finds a confirmation of this in the old spelling. Old spelling is seldom a safe guide, though we wonder that the archaic form *boor-ly* did not seem to him a sufficient authority for the common derivation of *burly*. If *coarse* be not another form of *gross*, (Fr. *gros*, *grosse*,) then there is no connection between *corn* and *granum*, or *horse* and *ross*. — *Cullion*. It. *Coglione*, a cullion, a fool, a scoundrel, properly a dupe. See Cully. It. *coglionare*, to deceive, to make a dupe of. . . . In the Venet. *coglionare* becomes *cogionare*, as *vogia* for *voglià*. . . . Hence E. to *cozen*, as It. *fregio*, frieze; *cugino*, cousin; *prigione*, prison." (p. 387.) Under *cully*, to which Mr. Wedgwood refers, he gives another etymology of *coglione*, and, we think, a wrong one. *Coglionare* is itself a derivative form from *coglione*, and the radical meaning is to be sought in *cogliere*, to gather; to take in, to pluck. Hence a *coglione* is a sharper, one who takes in, plucks. *Cully* and *gull* (one who is taken in) must be referred to the same source. Mr. Wedgwood's derivation of *cozen* is ingenious, and perhaps accounts for the doubtful Germ. *kosen*, unless that word itself be the original. — *To chaff*, in vulgar language to rally one, to chatter or talk lightly. From a representation of the in-

articulate sounds made by different kinds of animals uttering rapidly repeated cries. Du. *keffen*, to yap, to bark, also to prattle, chatter, tattle. Halma;" etc. We think it demonstrable that *chaff* is only a variety of *chafe*, from Fr. *échauffer*, retaining the broader sound of the *a* from the older form *chaufe*. So *gaby*, which Mr. Wedgwood (p. 84) would connect with *gäwisch*, (Fr. *gauche*,) is derived immediately from O. Fr. *gabé*, (a laughing-stock, a butt,) the participial form of *gaber*, to make fun of, which would lead us to a very different root. (See the *Fabliaux*, *passim*.) — *Cress*. "Perhaps," says Mr. Wedgwood, (p. 398,) "from the crunching sound of eating the crisp, green herb." This is one of the instances in which he is lured from the plain path by the Nixy *Onomatopœia*. The analogy between *cress* and *grass* flies in one's eyes; and, perhaps, the more probable derivation of the latter is from the root meaning to grow, rather than from that meaning to eat, unless, indeed, the two be originally identical. The A. S. forms *cærs* and *gærs* are almost identical. The Fr. *cresson*, from It. *crecione*, which Mr. Wedgwood cites, points in the direction of *crecere*; and the O. Fr. *cressonage*, implying a verb *cressoner*, means the right of *grazing*. — Under *dock* Mr. Wedgwood would seem (he does not make himself quite clear) to refer It. *doccia* to a root analogous with *dyke* and *ditch*. He cites Prov. *doga*, which he translates by *bank*. Raynouard has only "*dogua*, *douve*, *creux*, *cavité*," and refers to It. *doga*. The primary meaning seems rather the hollow than the bank, though this would matter little, as the same transference of meaning may have taken place as in *dyke* and *ditch*. But when Mr. Wedgwood gives *mill-dam* as the first meaning of the word *doccia*, his wish seems to have stood godfather. Diez establishes the derivation of *doccia* from *ductus*; and certainly the sense of a channel to lead (*ducere*) water in any desired direction is satisfactory. The derivative signification of *doccia* (a gouge, a tool to make channels with) coincides. Moreover, we have the masculine form *doccio*, answering exactly to the Sp. *ducho* in *aguaducho*, the *o* for *u*, as in *doge* for *duce*, from the same root *ducere*. Another instance of Mr. Wedgwood's preferring the bird in the bush is to be found in his refusing to consider *dout*, to extinguish, (*do out*,) as analogous to *don*, *doff*, and *dup*. He would rather connect it

with *tödten, tuer*. He cites as allied words Bohemian *dusyti*, to choke, to extinguish; Polish *dusic*, to choke, stifle, quell; and so arrives at the English slang phrase, "dowse the glim." As we find several other German words in thieves' English, we have little doubt that *dowse* is nothing more than *thu' aus*, do (thou) out, which would bring us back to our starting-point.

We have picked out a few instances in which we think Mr. Wedgwood demonstrably mistaken, because they show the temptation which is ever lying in wait to lead the theoretical etymologist astray. Mr. Wedgwood sometimes seems to reverse the natural order of things, and to reason backward from the simple to the more complex. He does not always respect the boundaries of legitimate deduction. On the other hand, his case becomes very strong where he finds relations of thought as well as of sound between whole classes of words in different languages. But it is very difficult to say how long ago instinctive imitation ceased and other elements are to be admitted as operative. We see words continually coming into vogue whose apparent etymologies, if all historical data of their origin were lost, would inevitably mislead. If we did not know, for example, the occasion which added the word *chouse* to the English language, we have little doubt that the twofold analogy of form and meaning would have led etymologists to the German *kosen*, (with the very common softening of the *k* to *ch*,) and that the derivation would have been perfectly satisfactory to most minds.—*Tantrums* would look like a word of popular coinage, and yet we find a respectable Old High German verb *tantarôn*, delirare, (Graff, V. 437,) which may perhaps help us to make out the etymology of *dander*, in our vulgar expression of "getting one's dander up," which is equivalent to flying into a passion.—*Jog*, in the sense of *going*, (to *jog* along,) has a vulgar look. Richardson derives it from the same root with the other *jog*, which means to *shake*, ("A. S. *sceac-an*, to *shake*, or *shock*, or *shog*.") *Shog* has nothing whatever to do with shaking, unless when Nym says to Pistol, "Will you *shog* off?" he may be said to have shaken him off. When the Tinker in Beaumont and Fletcher's "Coxcomb" says, "Come, prithee, let's *shog* off," what possible allusion to *shaking* is there, except, perhaps,

to "shaking stumps"? The first *jog* and *shog* are identical in meaning and derivation, and may be traced, by whosoever chooses, to the Gothic *tiuhan*, (Germ. *ziehen*,) and are therefore near of kin to our *tug*. *Togs* and *toggery* belong here also. (The connecting link may be seen in the preterite form *zog*.) The other *jog* probably comes to us immediately from the French *choquer*; and its frequentative *joggle* answers to the German *schaukeln*, It. *cioccolare*. Whether they are all remotely from the same radical is another question. We only cited it as a monosyllabic word, having the air of being formed by the imitative process, while its original *tiuhan* makes quite another impression.—Had the word *vamose* been a word of English slang-origin, (and it might easily have been imported, like so many more foreign phrases, by sailors,) we have as little doubt that a derivation of it from the Spanish *vamos* would have failed to convince the majority of etymologists. This word is a good example of the way in which the people (and it is always the people, never the scholars, who succeed in adding to the spoken language) proceed in naturalizing a foreign term. The accent has gone over to the last syllable, in accordance with English usage in verbs of two syllables; and though the sharp sound of the *s* has been thus far retained, it is doubtful how long it will maintain itself against a fancied analogy with the grave sound of the same letter in such words as *inclose* and *suppose*.—We should incline to think the slang verb *to mosey* a mere variety of form, and that its derivation from a certain absconding Mr. Moses (who broke the law of his great namesake through a blind admiration of his example in spoiling the Egyptians) was only a new instance of that tendency to mythologize which is as strong as ever among the uneducated. *Post, ergo propter*, is good people's-logic; and if an antecedent be wanting, it will not be long before one is invented.

If we once admit the principle of *onomatopœia*, the difficulty remains of drawing the line which shall define the territory within which those capable of judging would limit its operation. Its boundary would be a movable one, like that of our own Confederacy. Some students, from natural fineness of ear, would be quicker to recognize resemblances of sound; others would trace family likeness in spite of every disguise; oth-

ers, whose exquisiteness of perception was mental, would find the scent in faint analogies of meaning, where the ordinary brain would be wholly at fault. In the original genesis of language, also, we should infer the influence of the same idiosyncrasies. We were struck with this the other day in a story we heard of a little boy, who, during a violent thunder-storm, asked his father what that was out there, — all the while winking rapidly to explain his meaning. Had his vocabulary been more complete, he would have asked what that *winking* out there was. The impression made upon him by the lightning was not the ordinary one of brightness, (as in *blitz*, (?) *éclair*, *fulmen*, *flash*,) but of the rapid alternations of light and dark. Had he been obliged to make a language for himself, like the two unfortunate children on whom King Psammetichus made his linguistic experiment, he would have christened the phenomenon accordingly.

Mr. Wedgwood has by no means carried out his theory fully even in reference to the words contained in his first volume, nor does the volume itself nearly exhaust the vocabulary of the letters it includes (A to D). Sometimes, where we should have expected him to apply his system, he refrains, whether from caution or oversight it is not easy to discover. The word *cow*, which is commonly referred to an imitative radical, he is provokingly reserved about; and under *chew* he hints at no relation between the name of the action and that of the capital ruminant animal.* Even where he has derived a word from an imitative radical, he sometimes fails to carry the process on to some other where it would seem equally applicable, sometimes

* An etymology of this kind would have been particularly interesting in the hands of so learned and acute a man as Mr. Wedgwood. It would have afforded him a capital example of the fact that considerable differences in the form and sound of words meaning the same thing prove nothing against the onomatopœic theory, but merely that the same sound represents a different thing to different ears. L. *Boare*, *mugire*, E. *moo*; F. *beugler*, E. *bellow*; G. *leuen*, L. *lugere*, E. *low*, are all attempts at the same sound, or, which would not affect the question, variations of an original radical *gō* or *gu*. For a full discussion of the matter, admirable for its thorough learning, see Pictet, *Les Origines Indo-Européennes*, Vol. I. § 86.

pushes it too far. For instance, “*Crag*. 1. The neck, the throat. — Jam. Du. *kraeghe*, the throat; Pol. *kark*, the nape, crag, neck; Bohem. *krk*, the neck; Icel. *krage*, Dan. *krave*, the collar of a coat. The origin is an imitation of the noise made by clearing the throat. Bohem. *krkati*, to belch, *krcati*, to vomit; Pol. *krzakać*, to hem, to hawk. The same root gives rise to the Fr. *cracher*, to spit, and It. *recere*, to vomit; E. *reach*, to strain in vomiting; Icel. *hraki*, spittle; A. S. *hraca*, cough, phlegm, the throat, jaws; G. *rachen*, the jaws.” (As *crag* is not an English word, all this should have come under the head of *craw*.) “*Crag*. 2. A rock. Gael. *creag*, a rock; W. *careg*, a stone; *caregos*, pebbles.” We do not see why the rattling sound of stones should not give them a claim to the same pedigree, — the name being afterwards transferred to the larger mass, the reverse of which we see in the popular *rock* for *stone*. Nay, as Mr. Wedgwood (*sub voce draff*, p. 482) assumes *rac* (more properly *rk*) as the root, it would answer equally well for *rock* also. Indeed, as the chief occupation of crags, and their only amusement, in mountainous regions, is to pelt unwary passengers and hunters of scenery with their *débris*, we might have *creag*, *quasi caregos fuciens sive dejiciens, sicut rupes a rumpere*. Indeed, there is an analogous Sanscrit root, meaning *break*, *crack*. But though Mr. Wedgwood lets off this coughing, hawking, spitting, and otherwise unpleasant old patriarch *Rac* so easily in the case of the foundling *Crag*, he has by no means done with him. Stretched on the unfilial instrument of torture that bears his name, he is made to confess the paternity of *draff*, and *dregs*, and *dross*, and so many other uncleanly brats, that we feel as if he ought to be nailed by the ear to the other side of the same post on which Mr. Carlyle has pilloried August *der starke* forever. But we honestly believe the old fellow to be belied, and that he is as guiltless of them as of that weak-witted Hebrew *Raca* who looks so much like him in the face.

In the case of *crag*, Mr. Wedgwood argues from a sound whose frequency and marked character (and colds must have been frequent when the fig-tree was the only draper) gave a name to the organ producing it. We can easily imagine it. One of these early pagaus comes home of

an evening, heated from the chase, and squats himself on the damp clay floor of a country-seat imperfectly guarded against draughts. The next morning he says to his helpmeet, "Mrs. Barbar, I have a dreadful cold in my — *hrac! hrac!*" Here he is interrupted by a violent fit of coughing, and resorts to semeiology by pointing to his throat. Similar incidents carrying apprehension (as Lord Macaulay would say) to the breezy interiors of a thousand shanties on the same fatal morning, the domestic circle would know no name so expressive as *hrac* for that fatal tube through which man, ingenious in illegitimate perversion, daily compels the innocent breath to discharge a plumbeous hail of rhetoric.

But seriously, we think Mr. Wedgwood's derivation of *crag* (or rather, that which he adopts, for it has had other advocates) a very probable one, at least for more northern tribes. There is no reason why men should have escaped the same law of nomenclature which gave names to the *cuckoo* and the *pavo*.* But when he approaches *draff*, he gets upon thinner ice. Where a metaphorical appropriateness is plainly wanting to one etymology and another as plainly supplies it, other considerations being equal, probability may fairly turn the scale in favor of the latter. Mr. Wedgwood is here dealing with a sound translated to another meaning by an intellectual process of analogy; and no one knows better than he — for his book shows everywhere the fair-mindedness of a thorough scholar — the extreme difficulty of convincing other minds in such matters. He seems to have been unconsciously influenced in this case by a desire to give more support to a very ingenious etymology of the word *dream*. His process of reasoning may be briefly stated thus: *draff* and *dregs* are refuse, they are things thrown away, sometimes (as in German *dreck*, *sordes*) they are even disgusting; and as there is no expression of contempt and disgust so strong as spitting, the sound *rac* transferred itself by a natural association of ideas from the act to the object of it. He cites Du. *drabbe*, Dan. *drav*, Ger. *träbern*, Icel. *dregg*, Prov. *draco*, Ger., Du. *dreck*, O. F. *drache*, *drêche*, (and

* The German *pfau* retains the imitative sound which the English *pea-cock* has lost, and of which our system of pronunciation robs the Latin.

he might have added E. *trash*,) E. *dross*, all with nearly the same meaning. We have selected such as would show the different forms of the word. To the same radical Mr. Wedgwood refers G. *trügen*, *be-trügen*, and this would carry with it our English *trick* (Prov. *tric*, in Diez, Fr. *triche*). In our opinion he is wrong, doubly wrong, inasmuch as we think he has confounded two widely different roots. He has taken his O. Fr. forms from Roquefort (Gloss. Rom. I. 411,) but has omitted one of his definitions, *coque qui enveloppe le grain*, that is, the husk, or hull. Mr. Wedgwood might perhaps find an argument on this in support of our old friend *Rac* and his relation to huskiness; but it seems to us one of those trifles, the turned leaf, or broken twig, that put one on the right trail. We accept Mr. Wedgwood's derivative signification of *refuse*, *worthless*, *contemptible*, and ask if all these terms do not apply equally well to the chaff of the threshing-floor? It is more satisfactory to us, then, to attribute a part of the words given above to the Gothic *dragan*, (L. *trahere*, G. *tragen*,) to drag, to draw, and a part to Goth. *thriskan*, to thresh. The conjecture of Diez, (cited by Diefenbach,) that the Italian *trescare* (to stamp with the feet, to dance) should be referred to the same root, is confirmed by the ancient practice of threshing grain by treading it out with cattle. We might, indeed, refer all to one root, by deriving *dross* (a provincial form of which is *drass*) through the O. Fr. *drache*, (as in O. Fr. *treche*, Fr. *trasse*, E. *tress*,) but we have A. S. *dresten*, which is better accounted for by *therscan*. The other forms, such as *drabbe*, *dregg*, and *drav*, refer themselves more naturally to *dragan*, the *b* and *v* being analogous to E. *draggle*, *drabble*, *draught*, *draft*, all equally from *dragan*. We have a suspicion that *dragon* is to be referred to the same root. Mr. Wedgwood follows Richardson, who follows Vossius in a fanciful etymology from the Greek *δέρκομαι* = *βλέπειν*, to see. Sharpness of sight, it is true, was attributed to the mythologized reptile, but the primitive *draco* was nothing but a large serpent, supposed to be the boa. This sense must accordingly be comparatively modern. The eagle is the universal type of keenness of vision. The reptile's way of moving himself without legs is his most striking peculiarity; and if we derive *drag-*

on from the root meaning to drag, to draw, (because he draws himself along,) we find it analogous to *serpent, reptile, snake*.* The relation between *τρέχειν* and *dragan* may be seen in G. *ziehen*, meaning both to draw and to go. Mr. Wedgwood says that he finds it hard to conceive any relation between the notion of *treachery, betrayal, (trügen, betrogen,)* and that of drawing. It would seem that to *draw* into an ambush, the *drawing* of a fowler's net, and the more sublimated *drawing* a man on to his destruction, supplied analogies enough. The contempt we feel for treachery (for it is only in this metaphysical way that Mr. Wedgwood can connect the word with his radical *rac* †) is a purely subsidiary, derivative, and comparatively modern notion. Many, perhaps most, kinds of treachery were looked upon as praiseworthy in early times, and are still so regarded among savages. Does Mr. Wedgwood believe that Romulus lost caste by the way in which he made so many respectable Sabine fathers-in-law against their will, or that the wise Odysseus was a perfectly admirable gentleman in our sense of the word? Even in the sixteenth century, in the then most civilized country of the world, the grave irony with which Machiavelli commends the frightful treacheries of Cæsar Borgia would have had no point, if he had not taken it for granted that almost all who read his treatise would suppose him to be in earnest. In the same way *dregs* is explained simply as the sediment left after *drawing off* liquids. *Dredge* also is certainly, in one of its meanings, a derivative of *dragan*; so, too, *trick* in whist, and perhaps *trudge*. Indeed, all the words above-cited are more like each other than Fr. *toit* and E. *deck*, both from one root, or the Neapol. *sciù* and the Lat. *flos*, from which it is corrupted.

But the same subtilty of mind, which sometimes seduces Mr. Wedgwood into making distinctions without a difference and preferring an impalpable relation of

* And to *worm*, (another word for *dragon*,) if, as has been conjectured, there be any radical affinity between that and *schwärmen*, whose primitive sense of crawl or creep is seen in the *swarming* of bees, and *swarming* up a tree.

† That is, unless he takes the *rag* in *dragan* to be the same thing, which he might support with several plausible analogies, such as E. *rake*, It. *recare*, etc.

idea to a plain derivative affinity, is of great advantage to him when the problem is to construct an etymology by following the gossamer clews that lead from sensual images to the metaphorical and tropical adaptations of them to the demands of fancy and thought. The nice optics that see what is not to be seen have passed into a sarcastic proverb; yet those are precisely the eyes that are in the heads and brains of all who accomplish much, whether in science, poetry, or philosophy. With the kind of etymologies we are speaking of, it is practically useful to have the German gift of summoning a thing up from the depths of one's inward consciousness. It is when Mr. Wedgwood would reverse the order of Nature, and proceed from the tropical to the direct and simple; that we are at issue with him. For it is not philosophers who make language, though they often unmake it.

Mr. Wedgwood's most successful application of his system may be found, as we think, under the words, *dim, dumb, deaf, and death*. He might have confirmed the relation between dumbness and darkness from the acutest metaphysician among poets, in Dante's *ove il sol tace*. We have not left ourselves room enough to illustrate Mr. Wedgwood's handling of these etymologies by extracts; we must refer our readers to the book itself. Apart from its value as suggesting thought, or quickening our perception of shades of meaning, and so freshening our feeling of the intimate harmony of sense and spirit in language, and of the thousand ways in which the soul assumes the material world into her own heaven and transfigures it there, the volume will be found practically the most thorough contribution yet made to English etymology. We are glad to hear that we are to have an American edition of it under the able supervision of Mr. Marsh. Etymology becomes of practical importance, when, as the newspapers inform us, two members of a New York club have been fighting a duel because one of them doubted whether Garry Baldy were of Irish descent. Any student of language could have told them that Garibaldi is only the plural form (common in Italian family names) of Garibaldo, the Teutonic Heribald, whose meaning, appropriate enough in this case, would be nearly equivalent to Bold Leader.

RECENT AMERICAN PUBLICATIONS

RECEIVED BY THE EDITORS OF THE ATLANTIC MONTHLY.

The Physiology of Common Life. By George Henry Lewes, Author of "Seaside Studies," "Life of Goethe," etc. In Two Volumes. Vol. II. New York. Appleton & Co. 12mo. pp. 410. \$1.00.

Abridgment of the Debates of Congress, from 1789 to 1856. From Gales and Seaton's Annals of Congress; from their Register of Debates; and from the Official Reported Debates, by John C. Rives. By the Author of "The Thirty Years' View." Vol. XIV. New York. Appleton & Co. 8vo. pp. 747. \$3.00.

The Young Farmer's Manual: Detailing the Manipulations of the Farm in a Plain and Intelligible Manner. With Practical Directions for laying out a Farm, and erecting Buildings, Fences, and Farm Gates. Embracing also the Young Farmer's Workshop: giving full Directions for the Selection of Good Farm and Shop Tools, their Use and Manufacture, with Numerous Original Illustrations of Fences, Gates, Tools, etc., and for performing nearly Every Branch of Farming Operations. By S. Edwards Todd. New York. Saxton, Barker, & Co. 12mo. pp. 459. \$1.25.

Ritchie's Illustrated Catalogue of Philosophical Instruments. Boston. E. S. Ritchie. 8vo. pp. 84. 25 cts.

The Kellys and the O'Kellys. A Novel. By Anthony Trollope, Author of "Dr. Thorne," etc. From the Last London Edition. New York. Rudd & Carleton. 12mo. pp. 432. \$1.25.

A History of New York, from the Beginning of the World to the End of the Dutch Dynasty; containing, among Many Surprising and Curious Matters, the Unutterable Ponderings of Walter the Doubter, the Disastrous Projects of William the Testy, and the Chivalric Achievements of Peter the Headstrong, — the Three Dutch Governors of New Amsterdam: being the Only Authentic History of the Times that ever hath been or ever will be published. By Diedrich Knickerbocker. The Author's Revised Edition. Complete in One Volume. New York. Putnam. 12mo. pp. 472. \$1.50.

The Confessions of Augustine. Edited, with an Introduction, by William G. T. Shedd. Andover. Warren F. Draper. 12mo. pp. xxxvi., 417. \$1.25.

History of the United States, from the Discovery of the American Continent. By George Bancroft. Vol. VIII. Boston. Little, Brown, & Co. 8vo. pp. 475. \$2.25

Quaker Quiddities; or, Friends in Council. A Colloquy. Boston. Crosby, Nichols, Lee, & Co. 16mo. pp. 48. 25 cts.

History of Genghis Khan. By Jacob Abbott. With Engravings. New York. Harper & Brothers. 16mo. pp. 335. 60 cts.

Danesbury House. By Mrs. Henry Wood. New York. Harper & Brothers. 12mo. pp. 282. 75 cts.

The Little Beauty. By Mrs. Grey, Author of "Passion and Principle," "Old Dower House," etc. Philadelphia. Peterson & Brothers. 12mo. pp. 626. \$1.25.

Cicero on Oratory and Orators. Translated or edited by J. S. Watson. New York. Harper & Brothers. 16mo. pp. 379. 75 cts.

A Smaller History of Greece, from the Earliest Times to the Roman Conquest. By William Smith, LL. D. Illustrated by Engravings on Wood. New York. Harper & Brothers. 18mo. pp. xxiv., 248. 60 cts.

Class-Book of Botany. Being Outlines of the Structure, Physiology, and Classification of Plants. With a Flora of All Parts of the United States and Canada. By Alphonso Wood, A. M. New York. Barnes & Burr. 8vo. pp. 174. 75 cts.

Manual of Geology: Designed for the Use of Colleges and Academies. By Ebenezer Emmons, State Geologist of North Carolina, late State Geologist of New York, Professor of Natural History and Geology in Williams College, etc., etc. Illustrated with Numerous Engravings. Second Edition. New York. Barnes & Burr. 8vo. pp. 297. \$1.00.

Elements of English Composition, Grammatical, Rhetorical, Logical, and Practical. Prepared for Academies and Schools. By James R. Boyd, A. M., Author of "Annotated Editions of English Poets," of "Elements of Logic," of an Improved Edition of "Kames's Elements," etc. New York. Barnes & Burr. 12mo. pp. 406. 75 cts.

Elements of Analytical Geometry and of the Differential and Integral Calculus. By Charles Davies, LL. D., Professor of Higher Mathematics, Columbia College. New York. Barnes & Burr. 8vo. pp. 194. \$1.00.

Natural History. For the Use of Schools and Families. By Worthington Hooker, M. D., Professor of the Theory and Practice of Medicine in Yale College, Author of "Human Physiology," "Child's Book of Nature," etc. New York. Harper & Brothers. 12mo. pp. 382. \$1.00.

Introduction to the Study of International Law, Designed as an Aid in Teaching, and in Historical Studies. By Theodore D. Woolsey, President of Yale College. Boston. Munroe & Co. 12mo. pp. xx., 486. \$1.25.

Somnambulism and Cramp. By Baron Reichenbach. Translated from the German, by John S. Hittell. New York. Calvin Blanchard. 12mo. pp. xxvi., 253. \$1.00.

Right at Last, and Other Tales. By Mrs. Gaskell, Author of "Mary Barton," "Ruth," "Cranford," etc. New York. Harper & Brothers. 12mo. pp. 305. 75 cts.

The Three Clerks. A Novel. By Anthony Trollope, Author of "Dr. Thorne," "The West Indies and the Spanish Main," etc. New York. Harper & Brothers. 12mo. pp. 497. \$1.00.

Travels, Researches, and Missionary Labors, during an Eighteen Years' Residence in Eastern Africa; together with Journeys to Jagga, Usambara, Ukambani, Shoa, Abessinia, and Khartum; and a Coasting Voyage from Mombaz to Cape Delgado. By the Rev. Dr. J. Lewis Krapf, Secretary of the Chrishona Institute at Basel, and late Missionary in the Service of the Church Missionary Society in Eastern and Equatorial Africa, etc., etc. With an Appendix respecting the Snow-capped Mountains of Eastern Africa; the Sources of the Nile; the Languages and Literature of Abessinia and Eastern Africa, etc., etc. And a Concise Account of the Geographical Researches in Eastern Africa up to the Discovery of the Uyenyesi by Dr. Livingstone, in September last. By E. J. Ravenstein, F. R. G. S. Boston. Ticknor & Fields. 8vo. pp. xi., 464. \$1.25.

The Pathfinder; or, The Inland Sea. By J. Fenimore Cooper. Illustrated from Drawings by F. O. C. Darley. New York. Townsend & Co. 12mo. pp. x., 515. \$1.50.

The Union. Boston. Crocker & Brewster. 16mo. pp. 48. 50 cts.

The Hidden Gem. A Drama in Two Acts. Composed for the College Jubilee of St. Cuthbert's, Ushaw, 1858. By H. E. Cardinal Wiseman. Baltimore. Kelly, Hedian, & Piet. 16mo. pp. 176. 75 cts.

Autobiographical Recollections. By the late Charles Robert Leslie, R. A. Edited, with a Prefatory Essay on Leslie as an Artist, and Selections from his Correspondence, by Tom Taylor, Esq., Editor of the "Autobiography of Haydon." With Portrait. Boston. Ticknor & Fields. 12mo. pp. lx., 363. \$1.25.

The Confederate Chieftains: A Tale of the Irish Rebellion of 1641. By Mrs. J. Sadlier, Author of "New Lights," "Red Hand of Ulster," etc. New York. Sadlier & Co. 12mo. pp. 460. \$1.25.

The Mount Vernon Papers. By Edward Everett. New York. Appleton & Co. 12mo. pp. xxii., 491. \$1.25.

Leaves from a Bachelor's Book of Life. By Francis Copcutt. New York. Rollo. 12mo. pp. 250. \$1.00.

Chambers's Encyclopædia; a Dictionary of Universal Knowledge for the People. On the Basis of the Latest Edition of the German Conversations-Lexicon. Illustrated with Wood Engravings and Maps. Parts XIV. and XV. New York. Appleton & Co. 8vo. [each part] 64 pp. 15 cts.

The Sand-Hills of Jutland. By Hans Christian Andersen, Author of the "Improvisatore," etc. Boston. Ticknor & Fields. 16mo. pp. iv., 267. 75 cts.

Euripides. Ex Recensione Frederici A. Paley. Accessit Verborum et Nominum Index. Vol. I. New York. Harper & Brothers. 18mo. pp. 304. 40 cts.

Castle Richmond. A Novel. By Anthony Trollope, Author of "Doctor Thorne," "The Three Clerks," etc. New York. Harper & Brothers. 12mo. pp. 474. \$1.00.

Both Sides of the Grape Question. Together with a Classification of Species and Varieties of the Grape-Vine. Philadelphia. Lippincott & Co. 16mo. paper. pp. 96. 25 cts.

Lovel the Widower. A Novel. By W. M. Thackeray, Author of "Vanity Fair," "Pendennis," "The Newcomes," etc. With Illustrations. New York. Harper & Brothers. 8vo. paper. pp. 60. 25 cts.

The Avoidable Causes of Disease, Insanity, and Deformity. By John Ellis, M. D., Professor of the Principles and Practice of Medicine in the Western Medical College of Cleveland, Ohio; Author of "Marriage and its Violations." A Book for the People as well as for the Profession. New York. Mason Brothers. 16mo. pp. 348, 48. \$1.25.

Life in the Desert: or, Recollections of Travel in Asia and Africa. By Colonel L. Du Couret, (Hadji-Abd'el-Hamid-Bey,) Ex-Lieutenant of the Emirs of Mecca, Yémen, and Persia, Delegate of the French Government to Central Africa, Member of the Société Orientale, Académie Nationale, etc. Translated from the French. New York. Mason Brothers. 12mo. pp. 502. \$1.25.

Immanuel. An Examination of the Two Natures of Christ in their Relations to Physiology and Revelation. By P. W. Ellsworth, A. M., M. D. Hartford. D. B. Moseley, Printer. 8vo. paper. pp. 24. 15 cts.

The Barbarism of Slavery. Speech of Hon. Charles Sumner, on the Bill for the Admission of Kansas as a Free State, in the United States Senate, June 4, 1860. Boston. Thayer & Eldredge. 8vo. paper. pp. 118. 25 cts.

VOL. VI.—SEPTEMBER, 1860.—NO. XXXV.

AMONG THE TREES.

IN our studies of Trees, we cannot fail to be impressed with their importance not only to the beauty of landscape, but also in the economy of life; and we are convinced that in no other part of the vegetable creation has Nature done so much to provide at once for the comfort, the sustenance, and the protection of her creatures. They afford the wild animals their shelter and their abode, and yield them the greater part of their subsistence. They are, indeed, so evidently indispensable to the wants of man and brute, that it would be idle to enlarge upon the subject, except in those details which are apt to be overlooked. In a state of Nature man makes direct use of their branches for weaving his tent, and he thatches it with their leaves. In their recesses he hunts the animals whose flesh and furs supply him with food and clothing, and from their wood he obtains the implements for capturing and subduing them. Man's earliest farinaceous food was likewise the product of trees; for in his nomadic condition he makes his bread from the acorn and the chestnut: he must become a tiller of the soil, before he can obtain the products of the cereal herbs. The groves were likewise the earliest temples for his worship, and their fruits his first offerings upon the divine altar.

As man advances nearer to civilization, trees afford him the additional advantage which is derived from their timber. The first houses were constructed of wood, which enables him by its superior plastic nature, compared with stone, to progress more rapidly in his ideas of architecture. Wood facilitates his endeavors to instruct himself in art, by its adaptedness to a greater variety of purposes than any other substance. It is, therefore, one of the principal instruments of civilization which man has derived from the material world. Though the most remarkable works of the architect are constructed of stone, it was wood that afforded man that early practice and experience which initiated him into the laws of mechanics and the principles of art, and carried him along gradually to perfection.

But as man is nomadic before he is agricultural, and a maker of tents and wigwags before he builds houses and temples,—in like manner he is an architect and an idolater before he becomes a student of wisdom; he is a sacrificer in temples and a priest at their altars, before he is a teacher of philosophy or an interpreter of Nature. After the attainment of science, a higher state of mental culture succeeds, causing the mind to see all Nature invested with beauty and fraught

with imaginative charms, which add new wonders to our views of creation and new dignity to life. Man now learns to regard trees in other relations beside their capacity to supply his physical and mechanical wants. He looks upon them as the principal ornaments of the face of creation, and as forming the conservatories of Nature, in which she rears those minute wonders of her skill, the flowers and smaller plants that will flourish only under their protection, and those insect hosts that charm the student with their beauty and excite his wonder by their mysterious instincts. Science, too, has built an altar under the trees, and delivers thence new oracles of wisdom, teaching man how they are mysteriously wedded to the clouds, and are thus made the blessed instruments of their beneficence to the earth.

Not without reason did the ancients place the Naiad and her fountain in the shady arbor of trees, whose foliage gathers the waters of heaven into her fount and preserves them from dissipation. From their dripping shades she distributes the waters, which she has garnered from the skies, over the plain and the valley: and the husbandman, before he has learned the marvels of science, worships the beneficent Naiad, who draws the waters of her fountain from heaven, and from her sanctuary in the groves showers them upon the arid glebe and adds new verdure to the plain. After science has explained to us the law by which these supplies of moisture are furnished by the trees, we still worship the beneficent Naiad: we would not remove the drapery of foliage that protects her fountain, nor drive her into exile by the destruction of the trees, through whose leaves she holds mysterious commerce with the skies and saves our fields from drought.

It is in these relations, leaving their uses in economy and the arts untouched, that I would now speak of trees. I would consider them as they appear to the poet and the painter, as they are connected with scenery, and with the romance and mythology of Nature, and as serving the

purposes of religion and virtue, of freedom and happiness, of poetry and science, as well as those of mere taste and economy. I am persuaded that trees are closely connected with the fate of nations, that they are the props of industry and civilization, and that in all countries from which the forests have disappeared the people have sunk into indolence and servitude.

Though we may not be close observers of Nature, we cannot fail to have remarked that there is an infinite variety in the forms of trees, as well as in their habits. By those who have observed them as landscape ornaments, trees have been classified according to their shape and manner of growth. They are round-headed or hemispherical, like the Oak and the Plane; pyramidal, like the Pine and the Fir; obeliscal, like the Arbor-Vitæ and Lombardy Poplar; drooping, like the White Elm and the Weeping Willow; and umbrella-shaped, like the Palm. These are the natural or normal varieties in the forms of trees. There are others which may be considered accidental: such are the tall and irregularly shaped trees which have been cramped by growing in a dense forest that does not permit the extension of their lateral branches; such also are the pollards which have been repeatedly cut down or dwarfed by the axe of the woodman.

Of the round-headed trees, that extend their branches more or less at wide angles from their trunk, the Oak is the most conspicuous and the most celebrated. To the mind of an American, however, the Oak is far less familiar than the Elm, as a way-side tree; but in England, where many

“ a cottage-chimney smokes
From betwixt two aged Oaks,”

this tree, which formerly received divine honors in that country, is now hardly less sacred in the eyes of the inhabitants, on account of their familiarity with its shelter and its shade, and their ideas of its usefulness to the human family. The history of the British Isles is closely interwoven with circumstances connected with the

Oak, and the poetry of Great Britain has derived from it many a theme of inspiration.

The Oak is remarkable for the wide spread of its lower branches and its broad extent of shade,—for its suggestiveness of power; and consequent expression of grandeur. It is allied with the romance of early history; it is celebrated by its connection with the religion and religious rites of the Druids,—with the customs of the Romans, who formed of its green leaves the civic crown for their heroes, and who planted it to overshadow the temple of Jupiter; and many ancient superstitions give its name a peculiar significance to the poet and the antiquary. From its timber marine architecture has derived the most important aid, and it has thereby become associated with the grandeur of commerce and the exploits of a gallant navy, and is regarded as the emblem of naval prowess. The Oak, therefore, to the majority of the human race, is, beyond all other trees, fraught with romantic interest, and invested with classic and historical dignity.

The American continent contains a great many species of Oak in its indigenous forest. Of these the White Oak bears the most resemblance to the classical tree, in its general appearance, in the contorted growth of its branches, and in the edible quality of its fruit. But the Red Oak, the most northerly species, exceeds all others in size. No other attains so great a height, or spreads its branches so widely, or surpasses it in regularity of form. As we advance south, the White Oak is conspicuous until we arrive at North Carolina, where the forests and way-sides exhibit the beautiful Evergreen Oak, which, with its slender undivided leaves, the minute subdivisions of its branches, and its general comeliness of form, would be mistaken by a stranger for a Willow. A close inspection, however, would soon convince him that it has none of the fragility of the Willow. On the contrary, it is the most noted of all the genus for its hardness and durability, being the identical Live Oak which has

supplied our navy with the most valuable of timber. At the South the Evergreen Oak is a common way-side tree, mingling its hues with the lighter green of the Cypress and the sombre verdure of the Magnolia.

The Oak exceeds all other trees, not only in actual strength, but also in that outward appearance by which this quality is manifested. This expression is due to the general horizontal spread of its principal boughs, the peculiar angularity of the unions of its small branches, the want of flexibility in its spray, and its great size when compared with its height, all manifesting its power to resist the wind and the storm. Hence it is regarded as the monarch of trees, surpassing all in those qualities that indicate nobleness and capacity. It is the emblem of strength, dignity, and grandeur: the severest hurricane cannot overthrow it, and, by destroying some of its branches, leaves it only with more wonderful proofs of its resistance. Like the rock that rises in mid-ocean, it becomes in its old age a just symbol of fortitude, parting with its limbs one by one, as they are broken by the gale or withered by decay; but still retaining its many-centuried existence, when, like an old patriarch, it has seen all its early companions removed.

Standard Oaks are comparatively rare in the New England States, and not many adorn our way-sides and inclosures, which are mostly shaded by Elms, Limes, Maples, and Ash-trees. The scarcity of Oaks in these places is attributable in some degree to the peculiar structure of their roots, which extend downwards to a great depth in the soil, causing them to be difficult of transplantation. It is owing in still greater measure to the value of Oak-wood for ship-timber,—especially as those full-grown trees which have sprung up by the road-sides, and the noble pasture Oaks, contain the greatest number of those joints which are in special demand for ship-building. Year after year, therefore, has witnessed the gradual disappearance of these venerable trees, which the public should have protected from the profane

hands of the "timberer," by forcing him to procure his materials from the forest. The community needs to be taught that a standard tree of good size and well-developed proportions is of more value for its shade, and as an object in the landscape, than a whole acre of trees in the middle of a wood.

One of the most majestic trees in the American forest is the Chestnut, remarkable, like the Oak, for its broad extent of shade. In some parts of the country it is one of the most common standards in the field and pasture, having been left unmolested on account of the value of its fruit and the comparative inferiority of its timber. The foliage of this tree is dense and flowing, and peculiar in its arrangement. The leaves are clustered in stars of from five to seven, on short branches that grow from one of greater length. Hence, at a little distance, the whole mass of foliage seems to consist of tufts, each containing a tassel of long pointed leaves, drooping divergently from a common centre. The flowers come out from the centre of these leaves in the same manner, and by their silvery green lustre give a pleasing variety to the darker verdure of the whole mass. "This is the tree," says Gilpin, "which graces the landscapes of Salvator Rosa. In the mountains of Calabria, where Salvator painted, the Chestnut flourished. There he studied it in all its forms, breaking and disposing of it in a thousand beautiful shapes, as the exigencies of his composition required."

The Beech is one of the same class of trees, but does not equal the Chestnut in magnitude. It is distinguished by the beauty of its clean, smooth shaft, which is commonly ribbed or fluted in a perceptible degree; and in a wood, where there is an assemblage of these columns, rising without a branch to the height of thirty feet or more, they are singularly beautiful. A peculiarity often observed in the Beech is a sort of double head of foliage. This is produced by the habit of the tree of throwing out a whorl of imperfect branches just below the union of the main branches with the trunk. The

latter, taking more of an upward direction, cause an observable space a little below the middle of the height of the tree. This double tier of branches and foliage has been noticed by painters in the European Beech. I have observed it in several instances in the American tree.

Standard Beech-trees are not numerous in this part of the country; indeed, they are seldom seen except in a wood, or in clumps which have originated from the root of some tree that has perished. I think they appear to better advantage in groups and small assemblages than when single, as there is nothing greatly attractive in the form of a standard Beech; but there is a peculiar sweep of the lateral branches, when they are standing in a group, which the student of trees cannot fail to admire. They send out their branches more in right lines than most other trees, and, as their leaves and the extremities of their spray all have an upright tendency, they give a beautiful airy appearance to the edge of a wood. The foliage of other deciduous trees, even when the branches tend upward, is mostly of a drooping character. The Beech forms a pleasing exception to this habit, having leaves that point upward and outwardly, instead of hanging loosely. In most other trees the foliage is so heavy and flowing, that the courses of their branches are concealed under their drapery of leaves; but in the Beech all the lines produced by the branches and foliage are harmonious, and may be distinctly traced.

By taking note of these peculiarities in their arborescent growth, one greatly magnifies his capacity for enjoying the beauties of trees. Without this observation, their general appearance forms the chief object of his attention: he observes them only as a person of taste who cannot distinguish tunes would listen to music. He feels the agreeable sensation which their forms and aspects produce; but, like one who thinks without adequate language for his thoughts, his ideas are vague and indefinite. The Beech is particularly worthy of study, as in many points it dif-

fers characteristically from most other trees. I am acquainted with no tree in the forest that equals it, when disrobed of its foliage, in the gracefulness of its spray. There is an airiness about its whole appearance, at all seasons, that gives an expression of cheerfulness to the scene it graces, whether it skirt the banks of a stream or spread out its courteous arms over a sunny knoll or little sequestered nook.

There are some trees which are peculiarly American, being confined to the western continent, and unknown in other parts of the world. Among these is the Hickory, a well-known and very common tree, celebrated rather for its usefulness than its beauty. The different trees of this family make an important feature in our landscape: they are not abundant in the forest, but they are conspicuous objects in the open plain, hill, and pasture. Great numbers of them have become standards; we see them following the lines of old stone walls that skirt the bounds and avenues of the farm, in company with the Ash and the Maple. In these situations, where they would not "cumber the ground," they have been allowed to grow, without exciting the jealousy of the proprietor of the land. Accident, under these circumstances, has reared many a beautiful tree, which would in any other place have been cut down as a trespasser. Thus Nature is always striving to clothe with beauty those scenes which man has despoiled; and while the farmer is hoeing and grubbing, and thinking only of his physical wants, unseen hands are draping all his fences with luxuriant vinery, and bordering his fields with trees that shall gladden the eyes of those who can understand their beauties.

The Hickory is not a round-headed tree; it approaches a cylindrical form, somewhat flattened at the top, but seldom attaining any strict regularity of shape. It does not expand into a full and flowing head, but is often divided into distinct masses of foliage, separated by vacant spaces of considerable size, and presenting an appearance as if a portion of the

tree had been artificially removed. These gaps do not extend all round the tree; they are irregularly disposed, some trees having several of them, others none or only one; and they seem to have been caused, when the tree was young, by the dwindling of some principal branch. The Hickory throws out its branches at first very obliquely from the shaft; afterwards the lower ones bend down as the tree increases in size, and acquire an irregular and contorted shape; for, notwithstanding their toughness, they bend easily to the weight of their fruit and foliage.

This tree is celebrated in the United States for the toughness of its wood; and the term Hickory is used as emblematical of a sturdy and vigorous character. It possesses some of the ruggedness, without the breadth and majesty of the Oak, though it exceeds even this tree in braving the force of a tempest. It is one of our most common pasture-trees, and its deep-green foliage makes amends for the general want of comeliness in its outlines.

As we are journeying through the older settlements of New England, the melancholy forms of the ill-fated Plane-trees tower above the surrounding objects, and attract our attention not only by their magnitude, but also by the marks of decay which are stamped upon all. This appearance is chiefly remarkable in the early part of summer: for the trees are not dead; but their vitality is so far gone that they are tardy in putting out their leaves, and seldom before July are they fully clad in verdure. When they are not in leaf, we may observe an unnatural growth of slender twigs in tufts at the ends of their branches. This is caused by the failure of the tree in perfecting its wood before the growth of the branches is arrested by the autumnal frosts; and this accident has been repeated annually ever since the trees began to be affected with their malady. The Plane was formerly a very common way-side tree in New England, until the fatality occurred which has caused the greater number of them to perish. It is a fact worthy of

notice, that all the trees of this species below the latitude of Long Island have escaped the malady.

The Chenar-tree, or Oriental Plane, is celebrated in history, having had a place in all the public and private grounds of the Greeks and Romans, as well as of the Eastern nations. The American, or Western Plane, called in New England the Buttonwood, is not less remarkable for its size and grandeur. It is one of the loftiest trees, and its lateral branches, being of great length, give it extraordinary breadth. It also runs up to an unusual height, compared with other trees, before it forms a head, so that its lower branches are sometimes elevated above the roofs of the houses of common height. Hence it would be a valuable tree for road-sides, if it were healthy, as it would allow the largest vehicles to pass freely under its boughs.

A far more beautiful tree, gracing equally the forest and the way-side, is the Ash, charming our sight with the gracefulness of its proportions in winter, with its flowing drapery of verdure in summer, and its variety of glowing tints in autumn. The Ash has been styled in Europe "the painter's tree,"—a fact which is worthy of notice, inasmuch as those writers who have theorized concerning the nature of beauty have generally regarded trees of broken and irregular shapes, like the Hickory, as more picturesque than those of prim and symmetrical habit, like the Ash. The practice of the great masters in painting seems adverse to this idea, since they have introduced the Ash more frequently than other trees into their pictures; and it shows the futility of the attempt to draw a distinction between picturesque and beautiful trees. All trees, indeed, of every natural shape, may be considered picturesque, as, in one situation or another, every species may be introduced to heighten the character of a picture or a landscape.

The Ash never fails to attract attention by the peculiar beauty of its outlines, the regular subdivision of its branch-

es, its fair proportions and equal balance without any disagreeable formality. Nothing can exceed the gracefulness of its pinnate foliage, hanging loosely from its equally divergent spray, easy of motion, but not fluttering, and always harmonizing in its tints with the season of the year. Notwithstanding the different character, in regard to symmetry, of the Ash and the Hickory, the two trees are often mistaken for each other, and, when the latter is evenly formed, it is sometimes difficult at first sight to distinguish it. They differ, however, in all cases, in the opposite arrangement of the leaves and small branches of the Ash, and their alternate arrangement in the Hickory. One of these branches invariably becomes abortive, as the tree increases in size, so that their opposite character is apparent only in the spray.

In wet places which have never been subjected to the plough, in grounds partly inundated a great portion of the year, luxuriating in company with the Northern Cypress, over an undergrowth of Dutch Myrtles and Button-bushes, we find the singular Tupelo-tree. This tree is the opposite of the Ash in all its characteristics. There is no regularity in any part of its growth, and no tree in the forest sports in such a variety of grotesque and fantastic shapes. Sometimes it spreads out its branches horizontally, forming a perfectly flat top, as if it had grown under a platform; again it forms an irregular pyramid, most commonly leaning from an upright position. It has usually no definable shape, often sending out one or two branches greatly beyond the rest, some directed obliquely downwards, others twisted and horizontal. This tree, if it had no other merit, would be prized for its eccentricities; but it is not without beauty. It possesses a fine glossy foliage, unrivalled in its verdure, and every branch is fully clothed with it; and, whatever may be the age of the tree, it never shows the marks of decrepitude.

The pyramidal trees are included chiefly among the coniferous evergreens, embracing the Pine, the Fir, the Spruce,

and the Cypress. Though many of the deciduous trees assume more or less of this outline, it is the normal and characteristic form of the Pines and their kindred species. It is a peculiarity of the pyramidal trees, with a few exceptions, to remain always disfigured, after the loss of an important branch, having no power to fill the vacant space by a new growth. Other trees readily fill up a vacancy occasioned by the loss of a branch, and may suffer considerable mutilation without losing their beauty, because an invariable proportion is not necessary to render them pleasing objects of sight. On account of the symmetry of their forms, the pyramidal trees are made ugly by the loss of a limb, as the porch of a temple would be ruined by the removal of one of its pillars. Hence we may understand the charm of that irregularity that prevails in the forms of vegetation. If we remove a branch from an Elm or an Oak, or even from an Ash, we destroy no positive symmetry; it is like removing a stone from a loose stone wall; we do but slightly modify its disproportions.

The White Pine may be selected as the American representative of the pyramidal trees, being the most important as well as the most striking in its appearance. It is a Northern tree, not extending so far south as the region of the Cypress and Magnolia, and attaining perfection only on the northeastern part of the continent. In the New England States, it contributes more than any other species to the beauty of our landscapes, where it is commonly seen in scattered groups, but not often as a solitary standard. We see it in our journeys, projecting over eminences that are skirted by old roads, shading the traveller from the sun and protecting him from the wind. We have sat under its fragrant shade, in our pedestrian tours, when, weary with heat and exercise, we sought its gift of coolness, and blessed it as one of the benign deities of the forest. We are familiar with it in all pleasant and solitary places; and in our afternoon rambles we

have listened, underneath its boughs, to the plaintive note of the Green Warbler, who selects it for his abode, and who has caught a melancholy tone from the winds that from immemorial time have tuned to soft music its long sibilant leaves.

The White Pine is a tree that harmonizes with all situations, rude and cultivated, level and abrupt. On the side of the mountain it adds grandeur to the declivity, and gives a look of sweeter tranquillity to the green pastoral meadow. It yields a darker frown to the projecting cliff, and a more awful uncertainty to the mountain-pass or the hollow ravine. Amid desolate scenery it spreads a cheerfulness that detracts nothing from its power over the imagination, while it relieves it of its terrors by presenting a green bulwark to defend us from the elements. Nothing can be more cheerful in scenery than the occasional groups of Pines which have come up spontaneously on the bald hills near our coast, elsewhere a dreary waste of gray rocks, stunted shrubbery, and prostrate Juniper. In the forest the White Pine constitutes the very sanctuary of Nature, its tall pillars extending into the clouds, and its broad canopy of foliage mixing with the vapors that descend in the storm.

Such are its picturesque aspects: but in a figurative light it may be regarded as a true symbol of benevolence. Under its outspread roof, thousands of otherwise unprotected animals, nestling in the bed of dry leaves which it has spread upon the ground, find shelter and repose. The squirrel subsists upon the kernels obtained from its cones; the rabbit browses upon the Trefoil and the spicy foliage of the Hypericum which are protected in its conservatory of shade; and the fawn reposes on its brown couch of leaves, unmolested by the outer tempest. From its green arbors the quails may be roused in midwinter, when they resort thither to find the still sound berries of the *Mitchella* and the Wintergreen. Nature, indeed, seems to have designed this tree to protect the animal creation, both in summer and winter, and I am persuaded

that she has not conferred upon them a more beneficent gift.

As an object of sight, the White Pine is free from some of the defects of the Fir and Spruce, having none of their stiffness of foliage and inflexibility of spray, that cause them to resemble artificial objects. It has the symmetry of the Fir, joined with a certain flowing grace that assimilates it to the deciduous trees. With sufficient amplitude to conceal a look of primness that often arises from symmetry, we observe a certain negligent flowing of its leafy robes that adds to its dignity a grace which is apparent to all. It seems to wear its honors like one who feels no constraint under their burden; and when smitten by a tempest, it bids no defiance to the gale, bending to its wrath, but securely resisting its power.

Of the American coniferous trees, the Hemlock is of the next importance, being, perhaps, in its perfection, a more beautiful tree than the White Pine, or than any other known evergreen. It is far less formal in its shape than other trees of the same family. Its branches, being slender and flexible, do not project stiffly from the shaft; they bend slightly at their terminations, and are easily moved by the wind; and as they are very numerous, and covered with foliage, we behold in the tree a dense mass of glittering verdure, not to be seen in any other tree of the forest.

The Hemlock is unknown as a shade-tree; it is seldom seen by the road-side, except on the edge of a wood, and not often in cultivated grounds. The want of success usually attending the transplantation of it from the woods has prevented the general adoption of it as an ornamental tree. The Hemlock, when transplanted from the wood, is almost sure to perish; for Nature will not allow it to be desecrated by any association with Art. She reserves it for her own demesnes; and if you would possess one, you must go to its native spot and plant your garden around it, and take heed, lest, by disturbing its roots, you offend the deity

who protects it. Some noble Hemlocks are occasionally seen in rude situations, where the cultivator's art has not interrupted their spontaneous growth; and the poet and the naturalist are inspired with a more pleasing admiration of their beauty, because they have seen them only where the solitary birds sing their wild notes, and where the heart is unmolested by the crowding tumult of human settlements.

The Pitch Pine has neither grace nor elegance, and though it is allied botanically to the pyramidal trees, it approaches the shape of the round-headed trees. There is a singular ruggedness about it; and when bristling all over with the stiff foliage that sometimes covers it from the extremities of the branches down almost to the roots, it cannot fail to attract observation. Trees of this species, for the most part too rough and homely to please the eye, are not generally valued as objects in the landscape; but there is a variety in their shape that makes amends for their want of comeliness, and gives them a marked importance. We do not in general sufficiently appreciate the value of homely objects among the scenes of Nature, — which are, indeed, the groundwork of all charming scenery, and set off to advantage the beauty of more comely things. They prepare us, by increasing our susceptibility, to feel more keenly the force of beauty in other objects. They give rest and relief to the eye, after it has experienced the stimulating effects of beautiful forms and colors, which would soon pall upon the sense; and they are interesting to the imagination, by leaving it free to dress the scene with the wreaths of fancy.

It is from these reflections that I have been led to prize many a homely tree as possessing a high value, by exalting the impressions of beauty which we derive from other trees, and by relieving Nature of that monotony which would attend a scene of unexceptional beauty. This monotony is apparent in almost all dressed grounds of considerable extent. We soon become entirely weary of the ever-

flowing lines of grace and elegance, and the harmonious blending of forms and colors introduced by art. On the same principle we may explain the difficulty of reading with attention a whole volume on one subject, written in verse. We are soon weary of luxuries; and when we have been strolling in grounds laid out with gaudy flower-beds, the tired eye, when we go out into the fields, rests with serene delight upon rough pastures bounded by stone walls, and hills clothed with lichens and covered with boulders.

The homely Pitch Pine serves this important purpose of relief in the landscapes of Nature. Trees of this species are abundant in sandy levels, in company with the slender and graceful White Birch, "The Lady of the Woods," as the poet Coleridge called it. From these Pines proceed those delightful odors which are wafted to our windows by a mild south wind, not less perceptible in winter than in summer, and which are in a different manner as charming as a beautiful prospect.

The Juniper, or Red Cedar, known in some places as the Savin, is another homely tree that gives character to New England scenery. It is one of the most frequent accompaniments of the bald hills near certain parts of our coast, giving them a peculiar aspect of desolation. This tree acquires larger dimensions and a fuller and fairer shape in the Middle and Southern States. There the Junipers are beautiful trees, having a finer verdure than they ever acquire at the North. But the Juniper, with all its imperfections, its rugged form, and its inferior verdure, is not to be contemned; and it possesses certain qualities and features which ought to be prized hardly less than beauty. Its sombre ferruginous green adds variety to our wood-scenery at all times, and by contrast serves to make the foliage of other trees the more brilliant and conspicuous. In the latter part of summer, when the woods have acquired a general uniformity of verdure, the Junipers enliven the face of Nature by blending their duller tints with the fading

hues of the fully ripened foliage. Thus will an assemblage of brown and gray clouds soften and at the same time enliven the deep azure of the heavens.

In this sketch, I have omitted to describe many important trees, especially those which have but little individuality of character, leaving them to be the subject of another essay concerning Trees in Assemblages. I have likewise said nothing here of those species which are commonly distinguished as flowering trees. But I must not omit, while speaking of the pyramidal trees, to say a word concerning the Larch, which has some striking points of form and habit. Like the Southern Cypress, it differs in its deciduous character from other coniferous trees: hence both are distinguished by the brilliancy of their verdure in the early part of summer, when the other evergreens are particularly sombre; but they are leafless in the winter. The Larch is beautifully pyramidal in its shape when young. In the vigor of its years it tends to uniformity, and to variety when it is old. Indeed, an aged Larch is often as rugged and fantastic as an old Oak. The American and European Larches differ only in the longer flowing foliage and the larger cones of the latter. Among the minor beauties of both species may be mentioned the bright crimson cones that appear in June and resemble clusters of fruit. The Larch is a Northern tree, being in its perfection in the latitude of Maine. It seems to delight in the coldest situations, and, like the Southern Cypress, is found chiefly in low swamps.

There are not many trees that assume the shape of an obelisk, or a long spire; but Nature, who presents to our eyes an ever-charming variety of forms as well as hues, in the objects of her creation, has given us the figure of the obelisk in the Chinese Juniper, in the Balsam Fir, in the Arbor-Vitæ, and lastly in the Lombardy Poplar, which may be offered to exemplify this class of forms. The Lombardy Poplar is interesting to thousands who were familiar with it in their youth, as an ornament to road-sides and village

inclosures. It was formerly a favorite shade-tree, and still retains its privileges in many old-fashioned places. A century ago great numbers of Poplars were planted on the village way-sides, in front of dwelling-houses, on the borders of public grounds, and particularly on the sides of lanes and avenues leading to houses situated at a short distance from the high-road. Hence a row of these trees becomes suggestive at once of the approach to some old mansion or country-seat, which has now, perhaps, been converted into a farm-house, having exchanged its proud honors of wealth for the more simple and delightful appurtenances of rustic independence.

Some of these ancient rows of Poplars are occasionally seen in old fields, where almost all traces of the habitation which they were intended to grace are obliterated. There is a melancholy pleasure in surveying these humble ruins, whose history would illustrate the domestic habits of our ancestors. The cellar of the old house is now a part of the pasture-land, and its form can be traced by the simple swelling of the turf. Sumachs and Cornel-bushes have usurped the place of the exotic shrubbery in the old garden; and the only ancient companions of the Poplars, now remaining, are here and there a straggling Lilac or Currant-bush, a tuft of Houseleek, and perhaps, under the shelter of some dilapidated wall, the White Star of Bethlehem is seen meekly glowing in the rude society of the wild-flowers.

The Lombardy Poplar, which was formerly a favorite way-side ornament, a sort of idol of the public, and, like many another idol, exalted to honors that exceeded its merits, fell suddenly into unpopularity and disgrace. After having been admired and valued as if its leaves were all emeralds and its buds apples of gold, it was spurned and ridiculed and everywhere cut down as a cumberer of the ground. The faults attributed to it did not belong to the tree, but were the effects of the climate into which it had been removed. It was brought from the sunny vales of Italy, where it had been

delicately reared by the side of the Orange and the Myrtle, and transplanted into the cold climate of New England. The tender constitution of this tree could not endure our rude winters; and every spring witnessed the decay of a large portion of its small branches. Hence it became prematurely aged, and in its decline carried with it the marks of its infirmities.

But, with all these imperfections, the Lombardy Poplar was more worthy of the honors it received from our predecessors than of its present disrepute. It is one of the fairest of trees, in the vigor of its health and the greenness of its youth. But nearly all the old Poplars are extirpated, and but few young trees are coming up to supply their places. While I am now writing, I see from my window the graceful spire of one solitary tree, towering above the surrounding objects in the landscape, and yielding to the view something of an indescribable charm. There it stands, the symbol of decayed reputation, in its old age still retaining the primness of its youth; neither drooping in its infirmities under the weight of their burden, nor losing in its desertedness the fine lustre of its foliage; and in its disgrace still bearing itself proudly, as if conscious that its former honors were deserved, and not forgetting that dignity which becomes one who has fallen without dishonor.

There is no other tree that so pleasantly adorns the sides of narrow lanes and avenues, or so neatly accommodates itself to limited inclosures. Its foliage is dense and of the liveliest green, tremulous, and making delicate music to the light fingers of every breeze; its terebinthine odors scent the soft vernal wind that enters your open windows with the morning sunshine; its branches, always tending upward, closely gathered together, and slenderly formed, afford a harbor to the singing-birds, who revel among them as a favorite resort; and its long tapering spire, that points to heaven, gives an air of cheerfulness and religious tranquillity to village scenery.

Of the drooping trees, the Weeping

Willow is the most conspicuous example, unless we except the American Elm; but a remarkable difference may be observed in the drooping character of these two trees. In the Elm we perceive a general arching or curvature of all its branches, from their points of junction with the tree to their extremities; so that two rows of Elms, meeting over an avenue, would represent, more nearly than any other trees disposed in the same manner, the vault of a Gothic arch. A double row of Weeping Willows would make no such figure by the meeting of their branches. The Weeping Willow extends its long arms in lines more nearly straight, not originating, as in the Elm, for the most part, from one common centre of junction, but joining the shaft of the tree at different points;—hence the drooping character of this tree is observed only in its long, slender, and terminal spray.

The Weeping Willow is one of the most poetical of trees, being consecrated to the Muse by the part which has been assigned it in many a scene of romance, and by its connection with events recorded in Holy Writ. It is invested with a poetical interest by its symbolical representation of sorrow in the pendulous character of its spray, by its fanciful uses as a garland for disappointed lovers, and by the employment of it in burying-grounds, and in pictures as drooping over graves. We remember it in sacred history by its association with the rivers of Babylon, with the tears of the Children of Israel, and with the forsaken harps of their sorrowing minstrels, who hung them upon its branches. It is distinguished by the graceful beauty of its outlines, its light-green delicate foliage, its sorrowing attitude, and its gently waving spray, all in sweet accordance with its picturesque, poetic, and Scriptural associations.

Hence the Weeping Willow never fails to give pleasure to the sight even of the most insensible observer. There are not many whose minds are so obtuse as to be blind to its peculiarly graceful attitude and motions, and every one is fa-

miliar with its history, as recorded in poetry and romance, all the incidents of which have served to elevate it above any association with fashion or vulgarity. When we see it waving its long branches neatly over some private inclosure, overshadowing the gravelled walk and the flower-garden,—or watching pensively over the graves of the dead, where the light hues of its foliage help to soften the glowing fancies which are apt to arise from our meditations among the tombs,—or on some wide common, giving solace to the passing traveller, and inviting the playful children to its shade,—or trailing its sweeping spray, like the tresses of a Naiad, over some silvery pond or gently flowing stream,—it is in all cases a delightful object, always picturesque, always soothing, inspiring, and sacred to memory, and serving, by its alliance with what is hallowed in literature, to bind us more closely to Nature.

Above all the trees of the New World, the Elm deserves to be considered the sovereign tree of New England. It is abundant both in field and forest, and forms the most remarkable feature in our cleared and cultivated grounds. Though the Elm is found in almost all parts of the country, in no other is it so conspicuous as in the Northeastern States, where, from the earliest settlement of the country, it has been planted as a shade-tree, and has been valued as an ornament above the proudest importations from a foreign clime. It is the most remarkable of the drooping trees except the Willow, which it surpasses in stateliness and in the variety of its growth.

When I look upon a noble Elm,—though I feel no disposition to condemn the studies of those who examine its flowers and fruit with the scrutinizing eye of science, or the calculations of those who consider only its practical use—it is to me an object of pleasing veneration. I look upon it as the embodiment of some benign intention of Providence, who has adapted it in numerous ways to the wants of his creatures. While admiring its grace and its majesty, I think of the great amount

of human happiness and of comfort to the inferior animals of which it has been the blessed instrument. How many a happy assemblage of children and young persons has been, during the past century, repeatedly gathered under its shade, in the sultry noons of summer! How many a young May-queen has been crowned under its roof, when the greensward was just daisied with the early flowers of spring! And how many a weary traveler has rested from his journey in its benevolent shade, and from a state of weariness and vexation, when o'erspent by heat and length of way, has subsided into one of quiet thankfulness and content!

Though the Elm has never been consecrated by the Muse, or dignified by making a figure in the paintings of the old masters, the native inhabitant of New England associates its varied forms with all that is delightful in the scenery of his own land or memorable in its history. He has beheld many a noble avenue formed of Elms, when standing in rows in the village, or by the rustic road-side. He has seen them extending their broad and benevolent arms as a protection over many a spacious old farm-house and many an humble cottage, and equally harmonizing with all. They meet his sight in the public grounds of the city, with their ample shade and flowing spray, inviting him to linger under their pleasant umbrage in summer; and in winter he has beheld them among the rude hills and mountains, like spectral figures keeping sentry among their passes, and, on the waking of the year, suddenly transformed into towers of luxuriant verdure and beauty. Every year of his life has he seen the beautiful Hang-Bird weave his pensile habitation upon the long and flexible branches of the Elm, secure from the reach of every living creature. From its vast dome of interwoven branches and foliage he has listened to the songs of the earliest and the latest birds; and under its shelter he has witnessed many a merry-making assemblage of children, employed in the sportive games of summer.

To a native of New England, therefore, the Elm has a value more nearly approaching that of sacredness than any other tree. Setting aside the pleasure derived from it as an object of visual beauty, it is intimately associated with the familiar scenes of home and the events of his early life. In my own mind it is pleasingly allied with those old dwelling-houses which were built in the early part of the last century, and form one of the marked features of New England home architecture during that period. They are known by their broad and ample, but low-studded rooms, their numerous windows with small panes, their single chimney in the centre of the roof that sloped down to the lower story in the back part, and in their general unpretending appearance, reminding one vividly of that simplicity of life which characterized our people before the Revolution. Their very homeliness is delightful, by leaving the imagination free to dwell upon their pleasing suggestions. Not many of these charming old houses are now extant: but whenever we see one, we are almost sure to find it accompanied by its Elm, standing upon the green open space that slopes up to it in front, and waving its long branches in melancholy grandeur over the venerable habitation which it seems to have taken under its protection, while it droops with sorrow over the infirmities of its old companion of a century.

The Elm is remarkable for the variety of forms which it assumes in different situations. Often it has a drooping spray only when it has attained a large size; but it almost invariably becomes subdivided into several equal branches, diverging from a common centre, at a considerable elevation from the ground. One of these forms is that of a vase: the base being represented by the roots of the tree that project above the soil and join the trunk,—the middle by the lower part of the principal branches, as they swell out with a graceful curve, then gradually diverge, until they bend downward and form the lip of the vase, by their circle of terminal

branches. Another of its forms is that of a vast dome, as represented by those trees that send up a single shaft to the height of twenty feet or more, and then extend their branches at a wide divergence and to a great length. The Elms which are remarkable for their drooping character are usually of this shape. At other times the Elm assumes the shape of a plume, presenting a singularly fantastical appearance. It rises upwards, with an undivided shaft, to the height of fifty feet or more, without a limb, and bending over with a gradual curve from about the middle of its height to its summit, which is sometimes divided into two or three terminal branches. The whole is covered from its roots to its summit with a fringe of vine-like twigs, extremely slender, twisted and irregular, and resembling a parasitic growth. Sometimes it is subdivided at the usual height into three or four long branches, which are wreathed in the same manner, and form a compound plume.

These fantastic forms are very beautiful, and do not impress one with the idea of monstrosity, as we are affected by the sight of a Weeping Ash. Though the Elm has many defects of foliage, and is destitute of those fine autumnal tints which are so remarkable in some other trees, it is still almost without a rival in the American forest. It presents a variety in its forms not to be seen in any other tree,—possessing the dignity of the Oak without its ruggedness, and uniting the grace of the slender Birch with the lofty grandeur of the Palm and the majesty of the Cedar of Lebanon.

Of the parasol-trees the North furnishes no true examples, which are witnessed only in the Palms of the tropics. Not many of our inhabitants have seen these trees in their living beauty; but all have become so familiar with them, as they are represented in paintings and engravings, that they can easily appreciate their effect in the sunny landscapes of the South. There they may be seen bending over fields tapestried with Passion-Flowers and verdurous with Myrtles and Orange-trees,

and presenting their long shafts to the tendrils of the Trumpet Honeysuckle and the palmate foliage of the Climbing Fern. But the slender Palms, when solitary, afford but little shade. It is when they are standing in groups, their lofty tops meeting and forming a uniform umbrage, that they afford any important protection from the heat of the sun.

In pictures of tropical scenery we see these trees standing on the banks of a stream, or in the vicinity of the sea, near some rude hut constructed of Bamboo and thatched with the broad leaves of the Fan Palm. In some warm countries Nature affords the inhabitants an almost gratuitous subsistence from the fruit of the different Palms,—a plantation of Dates and Cocoa-nuts supplying the principal wants of the owner and his family, during the life of the trees. But the Palm is not suggestive of the arts, for the South is not the region of the highest civilization. Man's intelligence is greatest in those countries in which he is obliged to struggle with difficulties sufficient to require the constant exercise of the mind and body to overcome them. Science and Art have built their altars in the region of the Oak, and in valleys which are annually whitened with snow, where labor invigorates the frame, and where man's contention with the difficulties presented by the elements sharpens his ingenuity and strengthens all his faculties. Hence, while the Oak is the symbol of hospitality and of the arts to which it has given its aid, the Palm symbolizes the voluptuousness of a tropical clime and the indolence of its inhabitants.

I have said that the North produces no parasol-trees; but it should be remarked that all kinds of trees occasionally approximate to this shape, when they have grown compactly in a forest. The general shape which they assume under these conditions is what I have termed accidental, because that shape cannot be natural which a growing body is forced to take when cramped in an unnatural or constrained position. Trees when thus situated become greatly elongated; their

shafts are despoiled of the greater part of their lateral branches, and the tree has no expansion until it has made its way above the level of the wood. The trees that cannot reach this level will in a few years perish; and this is the fate of the greater number in the primitive forest. But after they have attained this level, they spread out suddenly into a head. Many such trees are seen in recent clearings; and when their termination is a regular hemisphere of branches and foliage, the tree exhibits a shape nearly approaching that of a parasol.

The Elm, under these circumstances, often acquires a very beautiful shape. Unlike other trees that send up a single undivided shaft, the Elm, when growing in the forest as well as in the open plain, becomes subdivided into several slightly divergent branches, running up almost perpendicularly until they reach the level of the wood, when they suddenly spread themselves out, and the tree exhibits the parasol shape more nearly even than the Palm. When one of these forest Elms is left by the woodman, and is seen standing alone in the clearing, it presents to our sight one of the most graceful and beautiful of all arborescent forms.

The rows of Willows, so frequent by the way-side where the road passes over a wet meadow, afford the most common examples of the pollard forms. Some of these willows, having escaped the periodical trimming of the woodcutter, have become noble standards, emulating the Oak in the sturdy grandeur of their giant arms extending over the road. Most of

them, however, from the repeated cropping which they have suffered, exhibit a round head of long, slender branches, growing out of the extremity of the be-headed trunk.

My remarks thus far relate to trees considered as individual objects; but I must not tire the patience of the reader by extending them farther, though there are many other relations in which they may be treated. In whatever light we regard them, they will be found to deserve attention as the fairest ornaments of Nature, and as objects that should be held sacred from their importance to our welfare and happiness. The more we study them, the more desirous are we of their preservation, and the more convinced of the necessity of using some active means to effect this purpose. He takes but a narrow view of their importance who considers only their value in the economy of animal and vegetable life. The painter has always made them a particular branch of his study; and the poet understands their advantage in increasing the effect of his descriptions, and believes them to be the blessed gifts of Providence to render the earth a beautiful abode and sanctify it to our affections. The heavenly bodies affect the soul with a deeper sense of creative power; but trees, like flowers, serve to draw us more closely to the bosom of Nature, by exemplifying the beauties of her handiwork, and the wonders of that Wisdom that operates unseen, and becomes, in our search for it, a source of perpetual delight.

VICTOR AND JACQUELINE.

[Concluded.]

VII.

THE three days passed away. And every hour's progress was marked as it passed over the citizens of Meaux. Leclerc, and the doctrines for which he suffered, filled the people's thought; he was their theme of speech. Wonder softened into pity; unbelief was goaded by his stripes to cruelty; faith became transfigured, while he, followed by the hooting crowd, endured the penalty of faith. Some men looked on with awe that would become adoring; some with surprise that would take refuge in study and conviction. There were tears as well as exultation, solemn joy as well as execration, in his train. The mother of Leclerc followed him with her undaunted testimony, "Blessed be Jesus Christ and His Witnesses!"

By day, in the field, Jacqueline Gabriele thought over the reports she heard through the harvesters, of the city's feeling, of its purpose, of its judgment; by night she prayed and hoped, with the mother of Leclerc; and wondrous was the growth her faith had in those days.

On the evening of the third day, Jacqueline and Elsie walked into Meaux together. This was not invariably their habit. Elsie had avoided too frequent conversation with her friend of late. She knew their paths were separate, and was never so persuaded of the fact as this night, when, of her own will, she sought to walk with Jacqueline. The sad face of her friend troubled her; it moved her conscience that she did not deeply share in her anxiety. When they came from Domrémy, she had relied on Jacqueline: there was safety in her counsel,—there was wisdom in it: but now, either?

"It made me scream outright, when I saw the play," said she; "but it is worse

to see your face nowadays,—it is more terrible, Jacqueline."

Jacqueline made no reply to this,—and Elsie regarded the silence as sufficient provocation.

"You seem to think I have no feeling," said she. "I am as sorry about the poor fellows as you can be. But I cannot look as if I thought the day of judgment close at hand, when I don't, Jacqueline."

"Very well, Elsie. I am not complaining of your looks."

"But you are,—or you might as well."

"Let not that trouble you, Elsie. Your face is smooth, at least; and your voice does not sound like the voice of one who is in grief. Rejoice,—for, as you say, you have a right to yourself, with which I am not to interfere. We are old friends,—we came away from Lorraine together. Do not forget that. I never will forget it."

"But you are done with me. You say nothing to me. I might as well be dead, for all you care."

"Let us not talk of such things in this manner," said Jacqueline, mildly. But the dignity of her rebuke was felt, for Elsie said,—

"But I seem to have lost you,—and now we are alone together, I may say it. Yes, I have lost you, Jacqueline!"

"This is not the first time we have been alone together in these dreadful three days."

"But now I cannot help speaking."

"You could help it before. Why, Elsie? You had not made up your mind. But now you have, or you would not speak, and insist on speaking. What have you to say, then?"

"Jacqueline! Are you Jacqueline?"

"Am I not?"

"You seem not to be."

"How is it, Elsie?"

"You are silent and stern, and I think you are very unhappy, Jacqueline."

"I do not know,—not unhappy, I think. Perhaps I am silent,—I have been so busy. But for all it is so dreadful—no! not unhappy, Elsie."

"Thinking of Leclerc all the while?"

"Of him? Oh, no! I have not been thinking of him,—not constantly. Jesus Christ will take care of him. His mother is quiet, thinking that. I, at least, can be as strong as she. I'm not thinking of the shame and cruelty,—but of what that can be worth which is so much to him, that he counts this punishment, as they call it, as nothing, as hardly pain, certainly not disgrace. The Truth, Elsie!—if I have not as much to say, it is because I have been trying to find the Truth."

"But if you have found it, then I hope I never shall,—if it is the Truth that makes you so gloomy. I thought it was this business in Meaux."

"Gloomy? when it may be I have found, or *shall* find"——

Here Jacqueline hesitated,—looked at Elsie. Grave enough was that look to expel every frivolous feeling from the heart of Elsie,—at least, so long as she remained under its influence. It was something to trust another as Jacqueline intended now to trust her friend. It was a touching sight to see her seeking her old confidence, and appearing to rely on it, while she knew how frail the reed was. But this girl, frivolous as was her spirit, this girl had come with her from the distant native village; their childhood's recollections were the same. And Jacqueline determined now to trust her. For in times of blasting heat the shadow even of the gourd is not to be despised.

"You know what I have looked for so long, Elsie," she said, "you ought to rejoice with me. I need work for that no longer."

"What is that, Jacqueline?"

Even this question, betraying no such apprehension as Jacqueline's words seemed to intimate, did not disturb the girl. She was in the mood when, notwithstanding her show of dependence, she was real-

ly in no such necessity. Never was she stronger than now when she put off all show of strength. Elsie stood before her in place of the opposing world. To Elsie's question she replied as readily as though she anticipated the word, and had no expectation of better recollection,—not to speak of better apprehension.

"To bring him out of suffering he has never been made to endure, as surely as God lives. As if the Almighty judged men, so! I shall send back no more money to Father La Croix. It is not his prayer, nor my earnings, that will have to do with the eternity of John Gabrie.—Do you hear me, Elsie?"

"I seem to, Jacqueline."

"Have I any cause for wretched looks, then? I am in sight of better fortune than I ever hoped for in this world."

"Then don't look so fearful. It is enough to scare one. You are not a girl to choose to be a fright,—unless this dreadful city has changed you altogether from what you were. You would frighten the Domrémy children with such a face as that; they used not to fear Jacqueline."

"I shall soon be sailing on a smoother sea. As it is, do not speak of my looks. That is too foolish."

"But, oh, I feel as if I must hold you,—hold you!—you are leaving me!"

"Come on, Elsie!" exclaimed Jacqueline, as though she almost hoped this of her dear companion.

"But where?" asked Elsie, not so tenderly.

"Where God leads. I cannot tell."

"I do not understand."

"You would not think the Truth worth buying at the price of your life?"

"My life?"

"Or such a price as he pays who—has been branded to-day?"

"It was not the truth to your mother,—or to mine. It was not the truth to any one we ever knew, till we came here to Meaux."

"It is true to my heart, Elsie. It is true to my conscience. I know that I can live for it. And it may be"——

“Hush!—do not! Oh, I wish that I could get you back to Domrémy! What is going to come of this? Jacqueline, let us go home. Come, let us start to-night. We shall have the moon all night to walk by. There is nothing in Meaux for us. Oh, if we had never come away! It would have been better for you to work there for what you wanted,—for what you came here to do.”

“No, let God’s Truth triumph! What am I? Less than that rush! But if His breath is upon me, I will be moved by it,—I am not a stone.”

Then they walked on in silence. Elsie had used her utmost of persuasion, but Jacqueline not her utmost of resistance. Her companion knew this, felt her weakness in such a contest, and was silent.

On to town they went together. They walked together through the streets, passing constantly knots of people who stood about the corners and among the shops, discussing what had taken place that day. They crossed the square where the noon-day sun had shone on crowds of people, men and women, gathered from the four quarters of the town and the neighboring country, assembled to witness the branding of a heretic. They entered their court-yard together,—ascended the stairway leading to their lodging. But they were two,—not one.

Elsie’s chief desire had been to get Jacqueline safely into the house ere she could find opportunity for expression of what was passing in her mind. Her fear was even greater than her curiosity. She had no desire to learn, under these present circumstances, the arguments and incidents which the knots of men and women were discussing with so much vehemence as they passed by. She could guess enough to satisfy her. So she had hurried along, betraying more eagerness than was common with her to get out of the street. Not often was she so overcome of weariness,—not often so annoyed by heat and dust. Jacqueline, without remonstrance, followed her. But they were two,—not one.

Once safe in their upper room, Elsie appeared to be, after all, not so devoid of interest in what was passing in the street as her hurried walk would seem to betoken. She had not quite yet lost her taste for excitement and display. For immediately she seated herself by the window, and was all eye and ear to what went on outside.

Jacqueline’s demonstrations also were quite other than might have been anticipated. Each step she took in her chamber gave an indication that she had a purpose,—and that she would perform it.

She removed from her dress the dust and stain of toil, arranged her hair, made herself clean and decent, to meet the sober gaze of others. Then she placed upon the table the remains of their breakfast,—but she ate nothing.

VIII.

It was nearly dark when Jacqueline said to Elsie,—

“I am now going to see John and his mother. I must see with my own eyes, and hear with my own ears. I may be able to help them,—and I know they will be able to help me. John’s word will be worth hearing,—and I want to hear it. He must have learned in these days more than we shall ever be able to learn for ourselves. Will you go with me?”

“No,” cried Elsie,—as though she feared she might against her will be taken into such company. Then, not for her own sake, but for Jacqueline’s, she added, almost as if she hoped that *she* might prove successful in persuasion, “I remember my father and mother. What they taught me I believe. And that I shall live by. I shall never be wiser than they were. And I know I never can be happier. They were good and honest. Jacqueline, we shall never be as happy again as we were in Domrémy, when the pastor blessed us, and we hunted flowers for the altar,—never!—never!” And Elsie Méril, overcome by

her recollections and her presentiments, burst into tears.

"It was the happiness of ignorance," said Jacqueline, after a solemn silence full of hurried thought. "No,—I, for one, shall never be *as* happy as I was then. But my joy will be full of peace and bliss. It will be full of satisfaction,—very different, but such as belongs to me, such as I must not do without. God led us from Domrémy, and with me shall He do as seemeth good to Him. We were children then, Elsie; but now may we be children no longer!"

"I will be faithful to my mother. Go, Jacqueline,—let me alone."

Elsie said this with so much spirit that Jacqueline answered quickly, and yet very kindly,—

"I did not mean to trouble you, dear,—but—no matter now."

No sooner had Jacqueline left the house than Elsie went down to a church near by, where she confessed herself to the priest, and received such goodly counsel as was calculated to fortify her against Jacqueline in the future.

Jacqueline went to the house of the wool-comber, as of late had been her nightly custom,—but not, as heretofore, to lighten the loneliness and anxiety of the mother of Leclerc. Already she had said to the old woman,—

"I need not work now for my father's redemption. Then I will work for you, if your son is disabled. Let us believe that God brought me here for this. I am strong. You can lean on me. Try it."

Now she went to make repetition of the promise to Leclerc, if, perchance, he had come back to his mother sick and sore and helpless. For this reason, when she entered the humble home of the martyr, his eyes fell on her, and he saw her as she had been an angel; how serene was her countenance; and her courage was manifestly such as no mortal fear, no human affliction, could dismay.

Already in that room faithful friends had gathered, to congratulate the living

man, and to refresh their strength from the abounding richness of his.

Martial Mazurier, the noted preacher, was there, and Victor Le Roy; besides these, others, unknown by name or presence to Jacqueline.

Among them was the wool-comber,—wounded with many stripes, branded, a heretic! But a man still, it appeared,—a living man,—brave as any hero, determined as a saint,—ready to proclaim now the love of God, and from the couch where he was lying to testify to Jesus and his Truth.

It was a goodly sight to see the tenderness of these men here gathered; how they were forgetful of all inequalities of station, such as worldlings live by,—meeting on a new ground, and greeting one another in a new spirit.

They had come to learn of John. A halo surrounded him; he was transfigured; and through that cloud of glory they would fain penetrate. Perchance his eyes, as Stephen's, had seen heaven open, when men had tried their torments. At least, they had witnessed, when they followed the crowd, that his face, in contrast with theirs who tormented, shone, as it had been the face of an angel. They had witnessed his testimony given in the heroic endurance of physical pain. There was more to be learned than the crowd were fit to hear or *could* hear. Broken strains of the Lord's song they heard him singing through the torture. Now they had come longing for the full burden of that divinest melody.

Jacqueline entered the room quietly, scarcely observed. She sat down by the door, and it chanced to be near the mother of Leclerc, near Victor Le Roy.

To their conversation she listened as one who listens for his life,—to the reading of the Scripture,—to the singing of the psalm,—that grand old version,—

"Out of the depths I cry to thee,
Lord God! Oh, hear my prayer!
Incline a gracious ear to me,
And bid me not despair.
If thou rememberest each misdeed,
If each should have its rightful meed,
Lord, who shall stand before thee?"

“Lord, through thy love alone we gain
 The pardon of our sin:
 The strictest life is but in vain,
 Our works can nothing win,
 That man should boast himself of aught,
 But own in fear thy grace hath wrought
 What in him seemeth righteous.

“Wherefore my hope is in the Lord,
 My works I count but dust;
 I build not there, but on his word,
 And in his goodness trust.
 Up to his care myself I yield;
 He is my tower, my rock, my shield,
 And for his help I tarry.”

To the praying of the broken voice of John Leclerc she listened. In his prayer she joined. To the eloquence of Mazurier, whose utterances she laid up in her heart,—to the fervor of Le Roy, which left her eyes not dry, her soul not calm, but strong in its commotion, grasping fast the eternal truths which he, too, would proclaim, she listened.

She was not only now among them, she was of them,—of them forevermore. Though she should never again look on those faces, nor listen to those voices, of them, of all they represented, was she forevermore. Their God was hers,—their faith was hers; their danger would she share,—their work would aid.

Their talk was of the Truth, and of the future of the Truth. Well they understood that the spirit roused among the people would not be quieted again,—that what of ferocity in the nature of the bigot and the powerful had been appeased had but for the moment been satisfied. There would be unremitting watch for victims; everywhere the net for the unwary and the fearless would be laid. Blood-thirstiness and lust and covetousness would make grand their disguises,—broad would their phylacteries be made,—shining with sacred gems, their breast-plates.

Of course it was of the great God's honor these men would be jealous. This heresy must needs be uprooted, or no knowing where would be the end of the wild growth. And, indeed, there was no disputing the fact that there was danger in open acceptance of such doctrines as

defied the authority of priestcraft,—ay, danger to falsehood, and death to falsehood!

Fanaticism, cowardice, cruelty, the spirit of persecution, the spirit of authority aroused, ignorance and vanity and foolishness would make themselves companions, no doubt. Should Truth succumb to these? Should Love retreat before the fierce onset of Hate? These brave men said not so. And they looked above them and all human aid for succor,—Jacqueline with them.

When Mazurier and Victor Le Roy went away, they left Jacqueline with the wool-comber's mother, but they did not pass by her without notice. Martial lingered for a moment, looking down on the young girl.

“She is one of us,” said the old woman.

Then the preacher laid his hand upon her head, and blessed her.

“Continue in prayer, and listen to the testimony of the Holy Ghost,” said he. “Then shall you surely come deep into the blessed knowledge and the dear love of Jesus Christ.”

When he had passed on, Victor paused in turn.

“It is good to be here, Jacqueline,” said he. “This is the house of God; this is the gate of heaven.”

And he also went forth, whither Mazurier had gone.

Then beside the bed of the poor wool-comber women like angels ministered, binding up his wounds, and soothing him with voices soft as ever spoke to man. And from the peasant whose toil was in harvest-fields and vineyards came offers of assistance which the poor can best give the poor.

But the wool-comber did not need the hard-earned pence of Jacqueline. When she said, “Let me serve you now, as a daughter and a sister, you two,”—he made no mistake in regard to her words and offer. But he had no need of just such service as she stood prepared to render. In his toil he had looked forward to the seasons of adversity,—had

provided for a dark day's disablement; and he was able now to smile upon his mother and on Jacqueline, and to say, —

“I will, indeed, be a brother to you, and my mother will love you as if you were her child. But we shall not take the bread from your mouth to prove it. Our daughter and our sister in the Lord, we thank you and love you, Jacqueline. I know what you have been doing since I went away. The Lord love you, Jacqueline! You will no longer be a stranger and friendless in Meaux, while John Leclerc and his mother are alive, — nay, as long as a true man or woman lives in Meaux. Fear not.”

“I will not fear,” said Jacqueline.

And she sat by the side of the mother of Leclerc, and thought of her own mother in the heavens, and was tranquil, and prepared, she said to herself, to walk, if indeed she must, through the valley of the shadow of death, and would still fear no evil.

IX.

STRENGTHENED and inspired by the scenes of the last three days, Martial Mazurier began to preach with an enthusiasm, bravery, and eloquence unknown before to his hearers. He threw himself into the work of preaching, the new revelation of the ancient eternal Truth, with an ardor that defied authority, that scorned danger, and with a recklessness that had its own reward.

Victor Le Roy was his ardent admirer, his constant follower, his loving friend, his servant. Day by day this youth was studying with indefatigable zeal the truths and doctrines adopted by his teacher. Enchanted by the wise man's eloquence, already a convert to the faith he magnified, he was prepared to follow wherever the preacher led. The fascination of danger he felt, and was allured by. Frowning faces had for him no terrors. He could defy evil.

Jacqueline and he might be called most friendly students. Often in the

cool of the day the young man walked out from Meaux along the country-roads, and his face was always toward the setting sun, whence towards the east Jacqueline at that hour would be coming. The girls were living in the region of the vineyards now, and among the vines they worked.

It began to be remarked by some of their companions how much Jacqueline Gabriele and the young student from the city walked together. But the subject of their discourse, as they rested under the trees that fringed the river, was not within the range of common speculation; far enough removed from the ordinary use to which the peasants put their thought was the thinking of Le Roy and Jacqueline.

Often Victor went, carefully and with a student's precision, over the grounds of Martial's arguments, for the satisfaction of Jacqueline. Much pride as well as joy had he in the service; for he revered his teacher, and feared nothing so much, in these repetitions, as that this listener, this animated, thinking, feeling Jacqueline, should lose anything by his transmission of the preacher's arguments and eloquence.

And sometimes, on those special occasions which were now constantly occurring, she walked with him to the town, and hearkened for herself in the assemblages of those who were now one in the faith.

Elsie looked on and wondered, but did not jest with Jacqueline, as girls are wont to jest with one another on such points as seemed involved in this friendship between youth and youth, between man and woman.

Towards the conclusion of the girls' appointed labor in the vineyard, a week passed in which Victor Le Roy had not once come out from Meaux in the direction of the setting sun. He knew the time when the peasants' labor in the vineyard would be done; Jacqueline had told him; and with wonder, and with trouble, she lived through the days that brought no word from him.

At work early and late, Jacqueline had no opportunity of discovering what was going on in Meaux. But it chanced, on the last day of the last week in the vineyard, tidings reached her: Martial Mazurier had been arrested, and would be tried, the rumor said, as John Leclerc had been tried; and sentence would be pronounced, doubtless, said conjecture, severe in proportion to the influence the man had acquired, to the position he held.

Hearing this, oppressed, troubled, yet not doubting, Jacqueline determined that she would go to Meaux that evening, and so ascertain the truth. She said nothing to Elsie of her purpose. She was careful in all things to avoid that which might involve her companion in peril in an unknown future; but at nightfall she had made herself ready to set out for Meaux, when her purpose was changed in the first steps by the appearing of Victor Le Roy.

He had come to Jacqueline, — had but one purpose in his coming; yet it was she who must say, —

“Is it true, Victor, that Martial Mazurier is in prison?”

His answer surprised her.

“No, it is not true.”

But his countenance did not answer the glad expression of her face with an equal smile. His gravity almost communicated itself to her. Yet this rebound from her recent dismay surely might demand an opportunity.

“I believe you,” said she. “But I was coming to see if it could be true. It was hard to believe, and yet it has cost me a great deal to persuade myself against belief, Victor.”

“It will cost you still more, Jacqueline. Martial Mazurier has recanted.”

“He has been in prison, then?”

“He has retracted, and is free again, — has denied himself. No more glorious words from him, Jacqueline, such as we have heard! He has sold himself to the Devil, you see.”

“Mazurier?”

“Mazurier has thought raiment better

than life. *He* has believed a man's life to consist in the abundance of the things he possesseth,” said the youth, bitterly. He continued, looking steadfastly at Jacqueline, — “Probably I must give up the Truth also. My uncle is dead: must I not secure my possessions? — for I am no longer a poor man; I cannot afford to let my life fall into the hands of those wolves.”

“Mazurier retracted? I cannot believe it, Victor Le Roy!”

“Believe, then, that yesterday the man was in prison, and to-day he is at large. Yes, he says that he can serve Jesus Christ more favorably, more successfully, by complying with the will of the bishop and the priests. You see the force of his argument. If he should be silenced, or imprisoned long, or his life should be cut off, he would then be able to preach no more at all in any way. He only does not believe that whosoever will save his life, in opposition to the law of the everlasting gospel, must lose it.”

“Oh, do you remember what he said to John, — what he prayed in that room? Oh, Victor, what does it mean?”

“It means what cannot be spoken, — what I dare not say or think.”

“Not that we are wrong, mistaken, Victor?”

“No, Jacqueline, never! it can never mean that! Whatever we may do with the Truth, we cannot make it false. We may act like cowards, unworthy, ungrateful, ignorant; but the Truth will remain, Jacqueline.”

“Victor, you could not desert it.”

“How can I tell, Jacqueline? The last time I saw Martial Mazurier, he would have said nobler and more loving words than I can command. But with my own eyes I saw him walking at liberty in streets where liberty for him to walk could be bought only at an infamous price.”

“Is there such danger for all men who believe with John Leclerc, and with — with you, Victor?”

“Yes, there is danger, such danger.”

“Then you must go away. You must

not stay in Meaux," she said, quickly, in a low, determined voice.

"Jacqueline, I must remain in Meaux," he answered, as quickly, with flushed face and flashing eyes. The dignity of conscious integrity, and the "fear of fear," a beholder who could discern the tokens might have perceived in him.

"Oh, then, who can tell? Did he not pray that he might not be led into temptation?"

"Yes," Victor replied, more troubled than scornful,— "yes, and allowed himself to be led at last."

"But if you should go away"——

"Would not that be flying from danger?" he asked, proudly.

"Nay, might it not be doing with your might what you found to do, that you might not be led into temptation?"

"And you are afraid, that, if I stay here, I shall yield to them."

"You say you are not certain, Victor. You repeat Mazurier's words."

"Yet shall I remain. No, I will never run away."

The pride of the young fellow, and the consternation occasioned by the recreancy of his superior, his belief in the doctrines he had confessed with Mazurier, and the timeserving of the latter, had evidently thrown asunder the guards of his peace, and produced a sad state of confusion.

"It were better to run away," said Jacqueline, not pausing to choose the word,— "far better than to stay and defy the Devil, and then find that you could not resist him, Victor. Oh, if we could go, as Elsie said, back to Domrémy,— anywhere away from this cruel Meaux!"

"Have you, then, gained nothing, Jacqueline?"

"Everything. But to lose it,— oh, I cannot afford that!"

"Let us stand together, then. Promise me, Jacqueline," he exclaimed, eagerly, as though he felt himself among defences here, with her.

"What shall I promise, Victor?" she asked, with the voice and the look of one who is ready for any deed of daring, for any work of love.

"I, too, have preached this word."

Her only comment was, "I know you preached it well."

"What has befallen others may befall me."

"Well."

So strongly, so confidently did she speak this word, that the young man went on, manifestly influenced by it, hesitating no more in his speech.

"May befall me," he repeated.

"'Whosoever believeth in me, though he were dead, yet shall he live,'" she answered, with lofty voice, repeating the divine word. "What is our life, that we should hold it at the expense of his Truth? Mazurier was wrong. He can never atone for the wrong he has done."

"I believe it!" exclaimed Victor, with a brightening countenance. The clouds of doubt rose from his face and floated away, as we see the mists ascending from the heights, when we are so happy as to live in the wild hill-country. "You prize Truth more than life. Stand with me in this, Jacqueline. Speak of this Truth as it has come to me. You are all that I have left. I have lost Mazurier. Jacqueline, you are a woman, but you never,— yes! yes! though I dare not say as much of myself, I dare say it of you,— you never could have bought your liberty at such a price as Martial has paid. I know not how, even with the opportunity, he will ever gain the courage to speak of these things again,— those great mysteries which are hidden from the eyes of the covetous and worldly and unbelieving. Promise, stand with me, Jacqueline, and I will rely on you. Forsake me not."

"Victor, has He not said, who can best say it, 'I will never leave you nor forsake you'?"

"But, Jacqueline, I love you."

Having said these words, the face of the young man emerged wholly from the eclipse of the former shadow.

"What is this?" said the brave peasant from Domrémy, manifestly doubting whether she had heard aright; and her clear pure eyes were gazing full on Vic-

tor Le Roy, actually looking for an explanation of his words.

“I love you, Jacqueline,” he repeated. “And I do not involve you in danger, oh, my friend! Only let me have it to believe that my life is dear to Jacqueline, and I shall not be afraid then to lose it, if that testimony be required of me. Shall we not stand side by side, soldiers of Christ, stronger in each other than in all the world beside? Shall it not be so, Jacqueline? True heart, answer me! And if you will not love me, at least say, say you are my friend, you trust me. I will hold your safety sacred.”

“I am your friend, Victor.”

“Say my wife, Jacqueline. I honored you, that you came from Domrémy. You are my very dream of Joan, — as brave and as true as beautiful. Jacqueline, it is not all for the Truth’s sake, but for my love’s sake. Is not our work one, moreover? Are we not one in heart and purpose, Jacqueline? You are alone; let me protect you.”

He needed no other answer than he had while his eyes constantly sought hers. Her calm look, the dignity and strength of her composure, assured him of all he longed to learn, — assured him that their hearts, even as their purposes and faith, were one.”

“But speak one word,” he urged.

The word she spoke was, “I can be true to you, Victor.”

Won hardly by a word: too easily, you think? She loved the youth, my friends, and she loved the Truth for which he dared not say that he could sacrifice himself.

“We are one, then,” said Victor Le Roy. “It concerned me above all things to prove that, Jacqueline. So you shall have no more to do with these harvest-fields and vineyards henceforth, except to eat of the fruits, if God will. You have borne all the burden and heat of labor you shall ever bear. I can say that, with God’s blessing. We shall sit under our own vine. Death in one direction has prepared for life in another. I inherit what my uncle can make use of no

longer. We shall look out on our own fields, our harvests; for I think this city will keep us no longer than may be needful. We will go away into Picardy, and I will show you where our Joan was a prisoner; and we will go back to Domrémy, and walk in the places she loved, and pray God to bless us by that fountain, and in the grave-yard where your father and mother sleep. Oh, Jacqueline, is it not all blessed and all fair?”

She could hardly comprehend all the brightness of this vision which Victor Le Roy would fain bring before her. The paths he pointed out to her were new and strange; but she could trust him, could believe that together they might walk without stumbling.

She had nothing to say of her unfitness, her unworthiness, to occupy the place to which he pointed. Not a doubt, not a fear, had she to express. He loved her, and that she knew; and she had no thought of depreciating his choice, its excellency or its wisdom. Whatever excess of wonder she may have felt was not communicated. How know I that *she* marvelled at her lover’s choice, though all the world might marvel?

Then remembering Mazurier, and thinking of her strength of faith, and her high-heartedness, he was eager that Jacqueline should appoint their marriage-day. And more than he, perhaps, supposed was betrayed by this haste. He made his words profoundly good. Strong woman that she was, he wanted her strength joined to his. He was secretly disquieted, secretly afraid to trust himself, since this defection of Martial Mazurier.

What did hinder them? They might be married on Sunday, if she would: they might go down together to the estate, which he must immediately visit.

Through the hurry of thought, and the agitation of heart, and the rush of seeming impossibilities, he brought out at length in triumph her consent.

She did consent. It should all be as he wished. And so they parted outside that town of Meaux on the fair summer

evening,—plighted lovers,—hopeful man and woman. For them the evening sky was lovely with the day's last light; for them the serene stars of night arose.

So they parted under the open sky: he going forward to the city, strengthened and refreshed in faith and holy courage; she, adorned with holy hopes which never until now had found place among her visions. Neither was she prepared for them, until he brought them to a heart which, indeed, could never be dismayed by the approach and claim of love.

Love was no strange guest. Fresh and fair as Zephyrus, he came from the forest depths, and she welcomed him,—no stranger,—though the breath that bore him was all heavenly, and his aspiration was remote from earthly sources. Yes, she so imagined.

She went back to the cottage where she and Elsie lodged now, to tell Elsie what had happened,—to thankfulness,—to gazing forward into a new world,—to aspiration, expectation, joy, humility,—to wonder, and to praise,—to all that my best reader will perceive must be true of Jacqueline on this great evening of her life.

X.

THAT same night Victor Le Roy was arrested on charge of heresy,—arrested and imprisoned. Watchmen were on the look-out when the lover walked forward with triumphant steps to Meaux.

“This fellow also was among the wool-comber's disciples,” said they; and their successful dealing with Mazurier encouraged the authorities to hope that soon all this evil would be overcome,—trampled in the dust: this impudent insurrection of thought should certainly be stifled; youth and age, high station, low, should be taught alike of Rome.

Tidings reached Martial Mazurier next day of what had befallen Victor Le Roy, and he went instantly to visit him in prison. It was an interview which the tender-hearted officials would have invited,

had he not forestalled them by inviting himself to the duty. Mazurier had something to do in the matter of reconciling his conscience to the part he had taken, in his recent opportunity to prove himself equally a hero with Leclerc. He had recanted, done evil, in short, that good might come; and was not content with having done this thing: how should he be? Now that his follower was in the same position, he had but one wish,—that he should follow his example. He did not, perhaps, entirely ascertain his motive in this; but it is hardly to be supposed that Mazurier was so persuaded of the justice of his course that he desired to have it imitated by another under the same circumstances.

No! he was forever disgraced in his own eyes, when he remembered the valiant John Leclerc; and it was not to be permitted that Victor Le Roy should follow the example of the wool-comber in preference to that he had given,—that politic, wise, blood-sparing, flesh-loving, truth-depreciating, God-defrauding example.

Accordingly he lost no time in seeking Victor in his cell. It was the very cell in which he himself had lately been imprisoned. Within those narrow walls he had meditated, prayed, and made his choice. There he had stood face to face with fate, with God, with Jesus, and had decided—not in favor of the flogging, and the branding, and the glorious infamy. There, in spite of eloquence and fervor and devotion, in spite of all his past vows and his hopes, he had decided to take the place and part of a timeserver;—for he feared disgrace and pain, and the hissing and scoff and persecution, more than he feared the blasting anger of insulted and forsaken Truth.

He found Victor within his cell, his bright face not overcast with gloom, his eyes not betraying doubts, neither disappointed, astonished, nor in deep dejection. The mood he deemed unfavorable for his special word,—poor, deceived, self-deceiving Mazurier!

He was not merely surprised at these

indications,— he was at a loss. A little trepidation, doubt, suspicion would have better suited him. Alas! and was *his* hour the extremity of another's weakness, not in the elevation of another's spiritual strength? Once when he preached the Truth as moved by the Holy Ghost, it was not to the prudence or the worldly wisdom of his hearers he appealed, but to the higher feelings and the noblest powers of men. Then he called on them to praise God by their faith in all that added to His glory and dominion. But now his eloquence was otherwise directed, — not full of the old fire and enthusiasm, — not trustful in God, but dependent on prudence, as though all help were in man. He had to draw from his own experience now, things new and old, — and was not, by confession of the result of such experience, humiliated!

“You are under a mistake,” was his argument. “You have not gone deep into these matters; you have made acquaintance only with the agitated surface of them.” And he proceeded to make good all this assertion, it was so readily proven! *He* also had been beguiled, — ah, had he not? He had been beguiled by the rude eloquence, the insensibility to pain, the pride of opposition, the pride of poverty, the pride of a rude nature, exhibited by John Leclerc.

He acknowledged freely, with a fatal candor, that, until he came to consider these things in their true light, when shut away from all outward influences, until compelled to quiet meditation beyond the reach and influence of mere enthusiasm, he had believed with Leclerc, even as Victor was believing now. He could have gone on, who might tell to what fanatical length? had it not been for that fortunate arrest which made a sane man of him!

Leclerc was not quite in the wrong, — not absolutely, — but neither was he, as Mazurier had once believed, gloriously in the right. It was clearly apparent to him, that Victor Le Roy, having now also like opportunity for calm reflection, would come to like conclusions.

With such confident prophecy, Mazurier left the young man. His visit was brief and hurried; — no duty that could be waived should call him away from his friend at such a time; but he would return; they would speak of this again; and he kissed Victor, and blessed him, and went out to bid the authorities delay yet before the lad was brought to trial, for he was confident, that, if left to reflection, he would come to his senses, and choose wisely — between God and Mammon? Mazurier expressed it in another way.

In the street, Elsie Ménil heard of Victor's arrest, and she brought the news to Jacqueline. They had returned to Meaux, to their old lodging, and a day had passed, during which, moment by moment, his arrival was anticipated. Elsie went out to buy a gift for Jacqueline, a bit of fine apparelling which she had coveted from the moment she knew Jacqueline should be a bride. She stole away on her errand without remark, and came back with the gift, — but also with that which made it valueless, unmentionable, though it was a costly offering, purchased with the wages of more than a week's labor in the fields.

It was almost dark when she returned to Jacqueline. Her friend was sitting by the window, — waiting, — not for her; and when she went in to her, it was silently, with no mention of her errand or her love-gift. Quietly she sat down, thankful that the night was falling, waiting for its darkness before she should speak words which would make the darkness to be felt.

“He does not come,” said Jacqueline, at length.

“Did you think it was he, when I came up the stairs?” inquired Elsie, tenderly.

“Oh, no! I can tell your step from all the rest.”

“His, too, I think.”

“Yes, and his, too. My best friends. Strange, if I could not!”

“Oh, I'm glad you said that, Jacqueline!”

“My best friends,” repeated Jacque-

line,—not merely to please Elsie. Love had opened wide her heart,—and Elsie, weak and foolish though she might be,—Elsie, her old companion, her playmate, her fellow-laborer,—Elsie, who should be to her a sister always, and share in her good-fortune,—Elsie had honorable place there.

“Could anything have happened, Jacqueline?” said Elsie, trembling: her tremulous voice betrayed it.

“Oh, I think not,” was the answer.

“But he is so fearless,—he might have fallen into—into trouble.”

“What have you heard, Elsie?”

This question was quietly asked, but it struck to the heart of the questioned girl. Jacqueline suspected!—and yet Jacqueline asked so calmly! Jacqueline could hear it,—and yet how could this be declared?

Her hesitation quickened what was hardly suspicion into a conviction.

“What have you heard?” Jacqueline again questioned,—not so calmly as before; and yet it was quite calmly, even to the alarmed ear of Elsie MÉRIL.

“They have arrested Victor, Jacqueline.”

“For heresy?”

“I heard it in the street.”

Jacqueline arose,—she crossed the chamber,—her hand was on the latch. Instantly Elsie stood beside her.

“What will you do? I must go with you, Jacqueline.”

“Where will you go?” said Jacqueline.

“With you. Wait,—what is it you will do? Or,—no matter, go on, I will follow you,—and take the danger with you.”

“Is there danger? For him there is! and there might be for you,—but none for me. Stay, Elsie. Where shall I go, in truth?”

Yet she opened the door, and began to descend the stairs even while she spoke; and Elsie followed her.

First to the house of the wool-comber. John was not at home,—and his mother could tell them nothing, had heard nothing of the arrest of Victor. Then to the

place which Victor had pointed out to her as the home of Mazurier. Mazurier likewise they failed to find. Where, then, was the prison of Le Roy’s captivity? That no man could tell them; so they came home to their lodging at length in the dark night, there to wait through endless-seeming hours for morning.

On the Sunday they had chosen for their wedding-day Mazurier brought word of Victor to Jacqueline,—was really a messenger, as he announced himself, when she opened for him the door of her room in the fourth story of the great lodging-house. He had come on that day with a message; but it was not in all things—in little beside the love it was meant to prove—the message Victor had desired to convey. In want of more faithful, more trustworthy messenger, Le Roy sent word by this man of his arrest,—and bade Jacqueline pray for him, and come to him, if that were possible. He desired, he said, to serve his Master,—and, of all things, sought the Truth.

To go to the prisoner, Mazurier assured Jacqueline, was impossible, but she might send a message; indeed, he was here to serve his dear friends. Ah, poor girl, did she trust the man by whom she sent into a prison words like these?—

“Hold fast to the faith that is in you, Victor. Let nothing persuade you that you have been mistaken. We asked for light,—it was given us,—let us walk in it; and no matter where it leads,—since the light is from heaven. Do not think of me,—nor of yourself,—but only of Jesus Christ, who said, ‘Whosoever would save his life shall lose it.’”

Mazurier took this message. What did he do with it? He tossed it to the winds.

A week after, Le Roy was brought to trial,—and recanted; and so recanting, was acquitted and set at liberty.

Mazurier supposed that he meant all kindly in the exertion he made to save his friend. He would never have ceased from self-reproach, had he conveyed the words of Jacqueline to Victor,—for the effect of those words he could clearly fore-

see. And so far from attempting to bring about an interview between the pair, he would have striven to prevent it, had he seen a probability that it would be allowed. He set little value on such words as Jacqueline spoke, when her conscience and her love rose up against each other. The words she had committed to him he could account for by no supposition acceptable and reasonable to him. There was something about the girl he did not understand; she was no fit guide for a man who had need of clear judgment, when such a decision was to be made as the court demanded of Le Roy.

Elsie MÉRIL, between hope and fear, was dumb in these days; but her presence and her tenderness, though not heroic in action nor wise in utterance, had a value of which neither she nor Jacqueline was fully aware.

When Jacqueline learned the issue of the trial, and that Victor had falsified his faith, her first impulse was to fly, that she might never see his face again. For, the instant she heard his choice, her heart told her what she had been hoping during these days of suspense. She had tried to see Martial Mazurier, but without success, since he conveyed, or promised to convey, her message to the prisoner. Of purpose he had avoided her. He guessed what strength she would by this time have attained, and he was determined to save both to each other, though it might be against their will.

XI.

VICTOR LE ROY'S first endeavor, on being liberated, was — of course to find Jacqueline? Not so. That was far from his first design. His impulse was to avoid the girl he had dared to love. Mazurier had, indeed, conveyed to his mind an impression that would have satisfied him, if anything of this character could do so. But this was impossible. The secret of his disquiet was far too profound for such easy removal.

He had not in himself the witness that he had fulfilled the will of God. He was disquieted, humiliated, wretched. He could not think of Leclerc, nor upon his protestations, except with shame and remorse, — remorse, already. In his heart, in spite of the impression Mazurier had contrived to convey, he believed not that Jacqueline would bless him to such work as he could henceforth perform, no longer a free man, — no longer possessed of liberty of speech and thought.

He had no sooner renounced his liberty than he became persuaded, by an overwhelming reasoning, as he had never been convinced before, of the pricelessness of that he had sacrificed. When he went from the court-room, from the presence of his judges, he was not a free man, though the dignitaries called him so. Martial Mazurier walked arm in arm with him, but the world was a den of horrors, a blackened and accursed world, to the young man who came from prison, free to use his freedom — as the priests directed!

He went home from the prison with Mazurier. The world had conquered. Love had conquered, — Love, that in the conquest felt itself disgraced. He had sold the divine, he had received the human: it was the old pottage speculation over again. This privilege of liberty from his dungeon had looked so fair! — but now it seemed so worthless! This prospect of life so priceless in contemplation of its loss, — oh, the beggar who crept past him was an enviable man, compared with young Victor Le Roy, the heir of love and riches, the heir of liberty and life!

Yes, — he went home with Mazurier. Where else should he go? Congratulations attended him. He was compelled to receive them with a countenance not too sombre, and a grace not all thankless, or — or — they would say it was of cowardice he had saved his precious body from the sentence of the judges, and given his precious LIFE up to the sentence of the JUDGE.

Yes, — Martial took him home. There they might talk at leisure of those things,

— and ask a blessing on the testimony of Jesus, made and kept by them!

Victor Le Roy was too proud to complain now. He assented to all the preacher's sophistry. He allowed himself to be cheered. But this was no such evening as had been spent in the room of the woolcomber, when Leclerc's voice, strong, even through his weakness, called on God, and blessed and praised Him, and the spirit conquered the flesh gloriously,—the old mother of Leclerc sharing his joy, as she had also shared his anguish. Here was no Jacqueline to say to Victor, "Thou hast done well! 'Glory be to Jesus Christ, and His witnesses!'"

Mazurier thanked God for the deliverance of His servant! He dedicated himself and Victor anew to the service of Truth, which they had shrunk from defending! And his eloquence and fervor seemed to stamp the words with sincerity. He seemed not in the least to suspect or fear himself.

With Victor Le Roy such self-deception, such sophistry, was simply impossible.

Not of purpose did he meet Jacqueline that night. She had heard that Le Roy was at liberty, and alone now she applied at the door of Martial Mazurier for admittance, but in vain. The master had signified that his evening was not to be interrupted. Therefore she returned, from waiting near his door, to the street where she and Elsie lived.

Should her woman's pride have led her to her lofty lodging, and kept her there without a sign, till Victor himself came seeking her? She knew nothing of such pride,—but much of love; and her love took her back to the post where she had waited many an hour since that disastrous arrest: she would wait there till morning, if she must,—at least, till one should enter, or come forth, who might tell her of Victor Le Roy.

The light in the preacher's study she could see from the door-step in a courtyard where she waited. Should Mazurier come with Victor, she would let them

pass; but if Victor came alone, she had a right to speak.

It was after midnight when the student came down from the preacher's study. She heard his voice when the door opened,—by the street-lamp saw his face. And she recognized also the voice of Mazurier, who, till the last moment of separation, seemed endeavoring to dissuade his friend from leaving him that night.

He heard footsteps following him, as he passed along the pavement,—observed that they gained on him. And could it be any other than Jacqueline who touched his arm, and whispered, "Victor"?

His fast-beating heart told him it was she. He took her hand, and drew it within his arm, and looked upon her face,—the face of his Jacqueline.

"Now where?" said he. "It is late. It is after midnight. Why are you alone in the street?"

"Waiting for you, Victor. I heard you were at liberty, and I supposed you were with him. I was safe."

"Yes,—for you fear nothing. That is the only reason. You knew I was with the preacher, Jacqueline. Why? Because — because I *am* with him, of course."

"Yes," she said. "I heard it was so, Victor."

"Strange! — strange! — is it not? A prison is a better place to learn the truth than the pure air of liberty, it seems," said he, bitterly.

"What is that?" she asked. She seemed not to understand his meaning.

"Nothing. I am acquitted of heresy, you know. It seems, what we talked so bravely meant—nothing. Oh, I am safe, now!"

"It was to preach none the less,—to hold the truth none the less. But if he lost his life, there was an end of all; or if he lost his liberty, it was as bad. But he would keep both, and serve God so," said Jacqueline.

"Yes," cried Victor, "precisely what he said. I have said the same, you think?"

"If you are quite clear that Leclerc

and the rest of us are all wrong, Victor."

"Jacqueline!"

"What is it, Victor?"

"The rest of us,' you say. What would you have done in my place?"

"God knows. I pretend not to know anything more."

"But 'the rest of us,' you said. You think that you at least are with Leclerc?"

"That was the truth you taught me, Victor. But—I have not yet been tried."

"That is safe to say. What makes you speak so prudently, Jacqueline? Why do you not declare, 'Though all men deny Thee, yet will I never deny Thee'? Ah, you have not been tried! You are not yet in danger of the judgment, Jacqueline!"

"Do not speak so; you frighten me; it is not like you. How can I tell? I do not know but in this retirement, in this thought you have been compelled to, you have obtained more light than any one can have until he comes to just such a place."

"Ah, Jacqueline, why not say to me what you are thinking? Have you lost your courage? Say, 'Thou hast not lied unto men, but unto God.'"

"No,—oh, no! How could I say it, my poor Victor? How do you know?"

"Surely you cannot know, as you say. But from where you stand, that is what you are thinking. Jacqueline, confess! If you should speak your mind, it would be, 'Thou hast not lied unto men, but unto God, poor coward!' Oh, Jacqueline, Mazurier may deceive himself! I speak not for him; but what will you do with your poor Victor, my poor Jacqueline?"

She did not linger in the answer,—she did not sob or tremble,—he was by her side.

"Love him to the end. As He, when He loved His own."

"Your own, poor girl? No, no!"

"You gave yourself to me," she answered straightway, with resolute firmness clinging to the all she had.

"I was a man then," he answered. "But I will never give a liar and a coward to Jacqueline Gabriele. Everything but myself, Jacqueline! Take the old words, and the old memory. But for this outcast, him you shall forget. My God! thou hast not brought this brave girl from Domrémy, and lighted her heart with a coal from Thine altar, that she should turn from Thee to me! If you love a liar and a coward, Jacqueline, you cannot help yourself,—he will make you one, too. And what I loved you for was your truth and purity and courage. I have given you a treasure which was greater than I could keep.—Where is it that you live now, Jacqueline? I am not yet such a poltroon that I am afraid to conduct you. I think that I should have the courage to protect you to-night, if you were in any immediate danger. Come, lead the way."

"No," said Jacqueline. "I am not going home. I could not sleep; and a roof over my head—any save God's heaven—would suffocate me, I believe."

"Go, then, as you will. But where?"

Jacqueline did not answer, but walked quietly on; and so they passed beyond the city-borders to the river-bank,—far away into the country, through the fields, under the light of stars and of the waning moon.

"If I had been true!" said Victor,— "if I had not listened to him! But him I will not blame. For why should I blame him? Am I an idiot? And his influence could not have prevailed, had I not so chosen, when I stood before my judges and they questioned me. No,—I acquit Mazurier. Perhaps what I have denied never appeared to him so glorious as it did once to me; and so he was guiltless at least of knowing what it was I did. But I knew. And I could not have been deceived for a moment. No,—I think it impossible that for a moment I should have been deceived. They would have made a notable example of me, Jacqueline. I am rich,—I am a student.—Oh, yes! Jesus Christ may die for me, and I

accept the benefit; but when it comes to suffering for His sake, — you could not have expected that of such a poltroon, Jacqueline! We may look for it in brave men like Leclerc, whose very living depends on their ability to earn their bread, — to earn it by daily sweat; but men who need not toil, who have leisure and education, — of course you would not expect such testimony to the truth of Jesus from them! Bishop Bricconnet recants, — and Martial Mazurier; and Victor Le Roy is no braver man, no truer man than these!”

With bitter shame and self-scorning he spoke.—Poor Jacqueline had not a word to say. She sat beside him. She would help him bear his cross. Heavy-laden as he, she awaited the future, saying, in the silence of her spirit’s dismal solitude, “Oh, teach us! Oh, help us!” But she called not on any name; her prayer went out in search of a God whom in that hour she knew not. The dark cloud and shadow of Satan that overshadowed him was also upon her.

“Mazurier is coming in the morning to take me with him, Jacqueline,” said Victor. “We are to make a journey.”

“What is it, Victor?” she asked, quietly.

There was nothing left for her but patience, — that she clearly saw, — nothing but patience, and quiet enduring of the will of God.

“He is afraid of me, — or of himself, — or of both, I believe. He thinks a change of scene would be good for both of us, poor lepers that we are.”

“I must go with you, Victor Le Roy,” said the resolute Jacqueline.

“Wherefore?” asked he.

“Because, when you were strong and happy, that was your desire, Victor; and now that you are sick and sorrowing, I will not give you to another: no! not to Mazurier, nor to any one that breathes, except myself, to whom you belong.”

“I must stay here in Meaux, then?”

“That depends upon yourself, Victor.”

“We were to have been married. We

were going to look after our estate, now that the hard summer and the hard years of work are ended.”

“Yes, Victor, it was so.”

“But I will not wrong you. You were to be the wife of Victor Le Roy. You are his widow, Jacqueline. For you do not think that he lives any longer?”

“He lives, and he is free! If he has sinned, like Peter even, he weeps bitterly.”

“Like Peter? Peter denied his Lord. But he did weep, as you say, — bitterly. Peter confessed again.”

“And none served the Master with truer heart or greater courage afterward. Victor, you remember.”

“Even so, — oh, Jacqueline!”

“Victor! Victor! it was only Judas who hanged himself.”

“Come, Jacqueline!”

She arose and went with him. At dawn they were married. Love did lead and save them.

I see two youthful students studying one page. I see two loving spirits walking through thick darkness. Along the horizon flicker the promises of day. They say, “O Holy Ghost, hast thou forsaken thine own temples?” Aloud they cry to God.

I see them wandering among Domrémy woods and meadows, — around the castle of Picardy, — talking of Joan. I see them resting by the graves they find in two ancient villages. I see them walk in sunny places; they are not called to toil; they may gather all the blossoms that delight their eyes. Their love grows beyond childhood, — does not die before it comes to love’s best estate. Happy bride and bridegroom! But I see them as through a cloud whose fair hues are transient.

From the meadow-lands and the vineyards and the dark forests of the mountains, from study and from rest, I see them move with solemn faces and calm steps. Brave lights are in their eyes, and flowers that are immortal they carry in

their hands. No distillation can exhaust the fragrance of those blooms.

What dost thou here, Victor? What dost thou here, Jacqueline?

This is the place of prisons. Here they light again, as they have often lighted, torch and fagot;—life must pay the cost! Angry crowds and hooting multitudes love this dreary square. Oh, Jacqueline and Victor, what is this I behold?

They come together from their prison, hand in hand. "The testimony of Jesus!" Stand back, Mazurier! Retire, Briconnet! Here is not your place,—this is not your hour! Yet here incendiaries fire the temples of the Holy Ghost!

The judges do not now congratulate. Jacqueline waits not now at midnight for the coming of Le Roy. Bride and bridegroom, there they stand; they face the world to give their testimony.

And a woman's voice, almost I deem the voice of Elsie Ménil, echoes the mother's cry that followed John Leclerc when he fought the beasts at Meaux,—

"Blessed be Jesus Christ, and His witnesses."

So of the Truth were they borne up that day in a blazing chariot to meet their Lord in the air, to be forever with their Lord.

ON A MAGNOLIA-FLOWER.

MEMORIAL of my former days,
Magnolia, as I scent thy breath,
And on thy pallid beauty gaze,
I feel not far from death!

So much hath happened! and so much
The tomb hath claimed of what was mine!
Thy fragrance moves me with a touch
As from a hand divine:

So many dead! so many wed!
Since first, by this Magnolia's tree,
I pressed a gentle hand and said,
A word no more for me!

Lady, who sendest from the South
This frail, pale token of the past,
I press the petals to my mouth,
And sigh — as 'twere my last.

Oh, love, we live, but many fell!
The world's a wreck, but we survive!—
Say, rather, still on earth we dwell,
But gray at thirty-five!

SOME NOTES ON SHAKSPEARE.

IN 1849, the discovery by Mr. Payne Collier of a copy of the Works of Shakspeare, known as the folio of 1632, with manuscript notes and emendations of the same or nearly the same date, created a great and general interest in the world of letters.

The marginal notes were said to be in a handwriting not much later than the period when the volume came from the press; and Shakspearian scholars and students of Shakspeare, and the far more numerous class, lovers of Shakspeare, learned and unlearned, received with respectful eagerness a version of his text claiming a date so near to the lifetime of the master that it was impossible to resist the impression that the alterations came to the world with only less weight of authority than if they had been undoubtedly his own.

The general satisfaction of the literary world in the treasure-trove was but little alloyed by the occasional cautiously expressed doubts of some caviller at the authenticity of the newly discovered "curiosity of literature"; the daily newspapers made room in their crowded columns for extracts from the volume; the weekly journals put forth more elaborate articles on its history and contents; and the monthly and quarterly reviews bestowed their longer and more careful criticism upon the new readings of that text, to elucidate which has been the devout industry of some of England's ripest scholars and profoundest thinkers; while the actors, not to be behindhand in a study especially concerning their vocation, adopted with more enthusiasm than discrimination some of the new readings, and showed a laudable acquaintance with the improved version, by exchanging undoubtedly the better for the worse, upon the authority of Mr. Collier's folio, soon after the publication of which I had the ill-fortune to hear a popular actress destroy the effect and

meaning of one of the most powerful passages in "Macbeth" by substituting the new for the old reading of the line,—

"What beast was it, then,

That made you break this enterprise to me?"

The cutting antithesis of "What *beast*," in retort to her husband's assertion, "I dare-do all that may become a *man*," was tamely rendered by the lady, in obedience to Mr. Collier's folio, "What *boast* was it, then,"—a change that any one possessed of poetical or dramatic perception would have submitted to upon nothing short of the positive demonstration of the author's having so written the passage.

Opinions were, indeed, divided as to the intrinsic merit of the emendations or alterations. Some of the new readings were undoubted improvements, some were unimportant, and others again were beyond all controversy inferior to the established text of the passages; and it seemed not a little difficult to reconcile the critical acumen and poetical insight of many of the corrections with the feebleness and prosaic triviality of others.

Again, it was observed by those conversant with the earlier editions, especially with the little read or valued Oxford edition, that a vast number of the passages given as emendations in Mr. Collier's folio were precisely the same in Hanmer's text. Indeed, it seems not a little remarkable that neither Mr. Collier nor his opponents have thought it worth their while to state that nearly half, and that undoubtedly the better half, of the so-called new readings are to be found in the finely printed, but little esteemed, text of the Oxford Shakspeare. If, indeed, these corrections now come to us with the authority of a critic but little removed from Shakspeare's own time, it is remarkable that Sir Thomas Hanmer's, or rather Mr. Theobald's, ingenuity should have forestalled the *fiat* of Mr.

Collier's folio in so many instances. On the other hand, it may have been judged by others besides a learned editor of Shakspeare from whom I once heard the remark, that the fact of the so-called new readings being many of them in Rowe and Hanmer, and therefore well known to the subsequent editors of Shakspeare, who nevertheless did not adopt them, proved that in their opinion they were of little value and less authority. But, says Mr. Collier, inasmuch as they are in the folio of 1632, which I now give to the world, they are of authority paramount to any other suggestion or correction that has hitherto been made on the text of Shakspeare.

Thus stood the question in 1853. How stands it in 1860? After a slow, but gradual process of growth and extension of doubt and questionings, more or less calculated to throw discredit on the authority of the marginal notes in the folio,—the volume being subjected to the careful and competent examination of certain officers of the library of the British Museum,—the result seems to threaten a considerable reduction in the supposed value of the authority which the public was called upon to esteem so highly.

The ink in which the annotations are made has been subjected to chemical analysis, and betrays, under the characters traced in it, others made in pencil, which are pronounced by some persons of a more modern date than the letters which have been traced over them.

Here at present the matter rests. Much angry debate has ensued between the various gentlemen interested in the controversy,—Mr. Collier not hesitating to suggest that pencil-marks in imitation of his handwriting had been inserted in the volume, and a fly-leaf abstracted from it, while in the custody of Messrs. Hamilton and Madden of the British Museum; while the replies of these gentlemen would go towards establishing that the corrections are forgeries, and insinuating that they are forgeries for which Mr. Collier is himself responsible.

While the question of the antiquity

and authority of these marginal notes remains thus undecided, it may not be amiss to apply to them the mere test of common sense in order to determine upon their intrinsic value, to the adequate estimate of which all thoughtful readers of Shakspeare must be to a certain degree competent.

The curious point, of whose they are, may test the science of decipherers of palimpsest manuscripts; the more weighty one, of what they are worth, remains, as it was from the first, a matter on which every student of Shakspeare may arrive at some conclusion for himself. And, indeed, to this ground of judgment Mr. Collier himself appeals, in his preface to the "Notes and Emendations," in no less emphatic terms than the following:—
"As Shakspeare was especially the poet of common life, so he was emphatically the poet of common sense; and to the verdict of common sense I am willing to submit all the more material alterations recommended on the authority before me."

I take "The Tempest," the first play in Mr. Collier's volume of "Notes and Emendations," and, while bestowing my principal attention on the inherent worth of the several new readings, shall point out where they tally exactly with the text of the Oxford edition, because that circumstance has excited little attention in the midst of the other various elements of interest in the controversy, and also because I have it in my power to give from a copy of that edition in my possession some passages corrected by John and Charles Kemble, who brought to the study of the text considerable knowledge of it and no inconsiderable ability for poetical and dramatic criticism.

In the first scene of the first act of "The Tempest" Mr. Collier gives the line,—

"Good Boatswain, have care,"—

adding, "It may be just worth remark, that the colloquial expression is *have a care*, and *a* is inserted in the margin of the corrected folio, 1632, to indicate,

probably, that the poet so wrote it, or, at all events, that the actor so delivered it.

In the copy of Hanmer in my possession the *a* is also inserted in the margin, upon the authority of one of the eminent actors above mentioned.

SCENE II.

“The sky, it seems, would pour down stinking pitch,
But that the sea, mounting to the welkin’s cheek,
Dashes the fire out.”

The manuscript corrector of the folio, 1632, has substituted *heat* for “cheek,” which appears to me an alteration of no value whatever. Shakspeare was more likely to have written *cheek* than *heat*; for elsewhere he uses the expression, “Heaven’s face,” “the welkin’s face,” and, though irregular, the expression is poetical.

At Miranda’s exclamation, —

“A brave vessel,
Who had no doubt some noble creature in her,
Dash’d all to pieces,” —

Mr. Collier does Theobald the justice to observe, that he, as well as the corrector of the folio, 1632, adds the necessary letter *s* to the word “creature,” making the plural substantive agree with her other exclamation of, “Poor souls, they perished!”

Where Mr. Collier, upon the authority of his folio, substitutes *prevision* for “*provision*” in the lines of Prospero, —

“The direful spectacle of the wreck

I have with such provision in mine art
So safely ordered,” etc., —

I do not agree to the value of the change. It is very true that *prevision* means the foresight that his art gave him, but *provision* implies the exercise of that foresight or *prevision*; it is therefore better, because more comprehensive.

Mr. Collier’s folio gives as an improvement upon Malone and Steevens’s reading of the passage, —

“And thy father
Was Duke of Milan; and his only heir
A princess; no worse issued,” —

the following: —

“And thy father
Was Duke of Milan, — thou his only heir
And princess no worse issued.”

Supposing the folio to be ingenious rather than authoritative, the passage, as it stands in Hanmer, is decidedly better, because clearer: —

“And thy father
Was Duke of Milan, — thou, his only heir
A princess — no worse issued.”

In the next passage, given as emended by the folio, we have what appears to me one bad and one decidedly good alteration from the usual reading, which, in all the editions given hitherto, has left the meaning barely perceptible through the confusion and obscurity of the expression.

“He being thus *lorded*,
Not only with what my revenue yielded,
But what my power might else exact, —
like one
Who having *unto truth* by telling of it
Made such a sinner of his memory
To credit his own lie, — he did believe
He was indeed the Duke.”

The folio says, —

“He being thus *loaded*.”

And to this change I object: the meaning was obvious before; “*lorded*” stands clearly enough here for made lord of or over, etc.; and though the expression is unusual, it is less prosaic than the proposed word *loaded*. But in the rest of the passage the critic of the folio does immense service to the text, in reading

“Like one
Who having *to untruth* by telling of it
Made such a sinner of his memory
To credit his own lie, — he did believe
He was indeed the Duke.”

This change carries its own authority in its manifest good sense.

Of the passage, —

“Whereon,
A treacherous army levied, one midnight
Fated to the purpose, did Antonio open
The gates of Milan, and in the dead of darkness
The ministers for the purpose hurried thence
Me and thy crying self,” —

Mr. Collier says that the iteration of the

word "purpose," in the fourth line, after its employment in the second, is a blemish, which his folio obviates by substituting the word *practice* in the first line. I think this a manifest improvement, though not an important one.

Mr. Collier gives Rowe the credit of having altered "butt" to *boat*, and "have quit it" to *had quit it*, in the lines, —

"Where they prepar'd
A rotten carcase of a *butt* not rigg'd,
Nor tackle, sail, nor mast, — the very rats
Instinctively *have quit it*."

Adding, that in both changes he is supported by the corrector of the folio, 1632. Hanmer gives the passage exactly as the latter, and as Rowe does.

We now come to the stage-directions in the folio, to which Mr. Collier gives, I think, a most exaggerated value. He says, that, where Prospero says, —

"Lend thy hand
And pluck my magic garment from me, — so
Lie there, my art," —

the words, "Lay it down," are written over against the passage. Now this really seems a very unnecessary direction, inasmuch as the text very clearly indicates that Prospero lays down as well as plucks off his "magic garment," — unless we are to suppose Miranda holding it over her arm till he resumes it. But still less do I agree with Mr. Collier in thinking the direction, "Put on robe again," at the passage beginning, "Now I arise," any extraordinary accession to the business, as it is technically called, of the scene: for I do not think that his resuming his magical robe was in any way necessary to account for the slumber which overcomes Miranda, "in spite of her interest in her father's story," and which Mr. Collier says the commentators have endeavored to account for in various ways; but putting "*because* of her interest in her father's story," instead of "*in spite of*," I feel none of the difficulty which beset the commentators, and which Mr. Collier conjures by the stage-direction which makes Prospero resume his magic robe at a certain moment in order to put his daughter to sleep. Worthy Dr. Johnson, who was not

among the puzzled commentators on this occasion, suggests, very agreeably to common sense, that "Experience proves that any violent agitation of the mind easily subsides in slumber." But Mr. Collier says, the Doctor gives this very reasonable explanation of Miranda's sleep only because he was not acquainted with the folio stage-direction about Prospero's coat, and knew no better. Now we are acquainted with this important addition to the text, and yet know no better than to agree with Doctor Johnson, that Miranda's slumbers were perfectly to be accounted for without the coat. Mr. Collier does not seem to know that a deeper and heavier desire to sleep follows upon the overstrained exercise of excited attention than on the weariness of a dull and uninteresting appeal to it.

But let us consider Shakspeare's text, rather than the corrector's additions, for a moment. Within reach of the wild wind and spray of the tempest, though sheltered from their fury, Miranda had watched the sinking ship struggling with the mad elements, and heard when "rose from sea to sky the wild farewell." Amazement and pity had thrown her into a paroxysm of grief, which is hardly allayed by her father's assurance, that "there's no harm done." After this terrible excitement follows the solemn exordium to her father's story, —

"The hour's now come;
The very minute bids thee ope thine ear.
Obey and be attentive."

The effort she calls upon her memory to make to recover the traces of her earliest impressions of life, — the strangeness of the events unfolded to her, — the duration of the recital itself, which is considerable, — and, above all, the poignant personal interest of its details, are quite sufficient to account for the sudden utter prostration of her overstrained faculties and feelings, and the profound sleep that falls on the young girl. Perhaps Shakspeare knew this, though his commentators, old and new, seem not to have done so; and without a professed faith, such as some of us moderns indulge in, in the mysteries of

magnetism, perhaps he believed enough in the magnetic force of the superior physical as well as mental power of Prospero's nature over the nervous, sensitive, irritable female organization of his child to account for the "I know thou canst not choose" with which he concludes his observation on her drowsiness, and his desire that she will not resist it. The magic gown may, indeed, have been powerful,—but hardly more so, we think, than the nervous exhaustion which, combined with the authoritative will and eyes of her lord and father, bowed down the child's drooping eyelids in profoundest sleep.

The strangest of all Mr. Collier's comments upon this passage, however, is that where he represents Miranda as, up to a certain point of her father's story, remaining "standing eagerly listening by his side." This is not only gratuitous, but absolutely contrary to Shakspeare's text,—a greater authority, I presume, than even that of the annotated folio. Prospero's words to his daughter, when first he begins the recital of their sea-sorrow, are,—

"Sit down!

For thou must now know further."

Does Mr. Collier's folio reject this reading of the first line? or does he suppose that Miranda remained standing, in spite of her father's command? Moreover, when he interrupts his story with the words, "Now I arise," he adds, to his daughter, "Sit still," which clearly indicates both that she was seated and that she was about to rise (naturally enough) when her father did. We say, "Sit down," to a person who is standing; and, "Sit still," to a person seated who is about to rise; and in all these minute particulars, the simple text of Shakspeare, if attentively followed, gives every necessary indication of his intention with regard to the attitudes and movements of the persons on the stage in this scene; and the highly commended stage-directions of the folio are here, therefore, perfectly superfluous.

The next alteration in the received text is a decided improvement. In

speaking of the royal fleet dispersed by the tempest, Ariel says,—

"They all have met again,
And *are* upon the Mediterranean *flote*
Bound sadly home for Naples";—

for which Mr. Collier's folio substitutes,—

"They all have met again,
And all upon the Mediterranean *float*,
Bound sadly back to Naples."

Mr. Collier notices, that the improvement of giving the lines,

"Abhorred slave,
Which any print of goodness will not take,"
to Prospero, instead of Miranda, dates as far back as Dryden and Davenant's alteration of "The Tempest," from which he says Theobald and others copied it.

The corrected folio gives its authority to the lines of the song,—

"Foot it featly here and there,
And, sweet sprites, the burden bear,"—

which stands so in Hanmer, and, indeed, is the usually received arrangement of the song.

This is the last corrected passage in the first act, in the course of which Mr. Collier gives us no fewer than sixteen, altered, emended, and commented upon in his folio. Many of the emendations are to be found *verbatim* in the Oxford and subsequent editions, and three only appear to us to be of any special value, tried by the standard of common sense, to which we agreed, on Mr. Collier's invitation, to refer them.

The line in Prospero's threat to Caliban,—

"I'll rack thee with old cramps,
Fill all thy bones with *aches*, make thee
roar,"—

occasioned one of Mr. John Kemble's characteristic differences with the public, who objected, perhaps not without reason, to hearing the word "aches" pronounced as a dissyllable, although the line imperatively demands it; and Shakspeare shows that the word was not unusually so pronounced, as he introduces it with the same quantity in the prose dialogue of "Much Ado about Nothing," and makes it the vehicle of a pun which certainly argues that it was familiar to the public

ear as *ache* and not *ake*. When Hero asks Beatrice, who complains that she is sick, what she is sick for,—a hawk, a hound, or a husband,—Beatrice replies, that she is sick for—or of—that which begins them all, an *ache*,—an *H*. Indeed, much later than Shakspeare's day the word was so pronounced; for Dean Swift, in the "City Shower," has the line,—

"Old *aches* throb, your hollow tooth will rage."

The opening of this play is connected with my earliest recollections. In looking down the "dark backward and abysm of time," to the period when I was but six years old, my memory conjures up a vision of a stately drawing-room on the ground-floor of a house, doubtless long since swept from the face of the earth by the encroaching tide of new houses and streets that has submerged every trace of suburban beauty, picturesqueness, or rural privacy in the neighborhood of London, converting it all by a hideous process of assimilation into more London, till London seems almost more than England can carry.

But in those years, "long enough ago," to which I refer,—somewhere between Lea and Blackheath, stood in the midst of well-kept grounds a goodly mansion, which held this pleasant room. It was always light and cheerful and warm, for the three windows down to the broad gravel-walk before it faced south; and though the lawn was darkened just in front of them by two magnificent yew-trees, the atmosphere of the room itself, in its silent, sunny loftiness, was at once gay and solemn to my small imagination and senses,—much as the interior of Saint Peter's of Rome has been since to them. Wonderful, large, tall jars of precious old china stood in each window, and my nose was just on a level with the wide necks, whence issued the mellowest smell of fragrant *pot-pourri*. Into this room, with its great crimson curtains and deep crimson carpet, in which my feet seemed to me buried, as in woodland moss, I used to be brought for recompense of having

been "very good," and there I used to find a lovely-looking lady, who was to me the fitting divinity of this shrine of pleasant awfulness. She bore a sweet Italian diminutive for her Christian name, added to one of the noblest old ducal names of Venice, which was that of her family.

I have since known that she was attached to the person of, and warmly personally attached to, the unfortunate Caroline of Brunswick, Princess of Wales,—then only unfortunate; so that I can now guess at the drift of much sad and passionate talk with indignant lips and tearful eyes, of which the meaning was then of course incomprehensible to me, but which I can now partly interpret by the subsequent history of that ill-used and ill-conducted lady.

The face of my friend with the great Venetian name was like one of Giorgione's pictures,—of that soft and mellow colorlessness that recalls the poet's line,—

"E smarrisce 'l bel volto in quel colore
Che non è pallidezza, ma candore,"—

or the Englishman's version of the same thought,—

"Her face, — oh, call it fair, not pale!"

It seemed to me, as I remember it, cream-colored; and her eyes, like clear water over brown rocks, where the sun is shining. But though the fair visage was like one of the great Venetian master's portraits, her voice was purely English, low, distinct, full, and soft,—and in this enchanting voice she used to tell me the story of the one large picture which adorned the room.

Over and over again, at my importunate beseeching, she told it,—sometimes standing before it, while I held her hand and listened with upturned face, and eyes rounding with big tears of wonder and pity, to a tale which shook my small soul with a sadness and strangeness far surpassing the interest of my beloved tragedy, "The Babes in the Wood,"—though at this period of my existence it has happened to me to interrupt with frantic cries of distress, and utterly refuse to hear, the end of that lamentable ballad.

But the picture.—In the midst of a stormy sea, on which night seemed fast settling down, a helmless, mastless, sailless bark lay weltering giddily, and in it sat a man in the full flower of vigorous manhood. His attitude was one of miserable dejection, and, oh, how I did long to remove the hand with which his eyes were covered, to see what manner of look in them answered to the bitter sorrow which the speechless lips expressed! His other hand rested on the fair curls of a girl-baby of three years old, who clung to his knee, and, with wide, wondering blue eyes and laughing lips, looked up into the half-hidden face of her father.—“And that,” said the sweet voice at my side, “was the good Duke of Milan, Prospero,—and that was his little child, Miranda.”

There was something about the face

and figure of the Prospero that suggested to me those of my father; and this, perhaps, added to the poignancy with which the representation of his distress affected my childish imagination. But the impression made by the picture, the story, and the place where I heard the one and saw the other, is among the most vivid that my memory retains. And never, even now, do I turn the magic page that holds that marvellous history, without again seeing the lovely lady, the picture full of sad dismay, and my own six-year-old self listening to that earliest Shakspearian lore that my mind and heart ever received. I suppose this is partly the secret of my love for this, above all other of the poet's plays;—it was my first possession in the kingdom of unbounded delight which he has since bestowed upon me.

THE GREAT ARM-CHAIR.

SHALL I not to-day, Estelle, give you the history of this great arm-chair, the only historical piece of furniture in our house? The heavy oak frame was carved by an imprisoned poet. They took away his pen, and in larger lines he carved this chair. Heavily moulded Sphinxes form its arms; the strong legs and feet of some wild beast its support; the crest, a winged figure with bandaged eyes,—a Fate or Fortune we might call it,—that mild look not to be resisted in its gentle strength. But blind Fortune could not so master him: his prison made for him only a secure room, in which to study, to work out, the mysteries.

The rich covering was wrought long years ago, in some ancient convent, by a saintly nun. Holy, pious tears dropped on it as she wrought. She pricked out brave bright flowers with her needle, though her own life was pale and sad. I cover

this sacred work with housewifely care; but it makes our rest there more hallowed.

This old chair we call our dreaming-chair,—to borrow a name, our Sleepy-Hollow. It is so simple and grand in workmanship, it should be the seat of honor in a king's palace; and yet it is in place in our small parlor. Perhaps some day I may tell you of the ancient dames and knights who once possessed it; but they have long since slept their last sleep,—no summer-afternoon's nap, but a sleep so long to last, now their long day's work is done.

Not quite finished is the old man's work who this afternoon sat in the chair and quietly dreamed back his youth. I saw the hardened, withered face soften, as the bright light of childhood played around it; the meagre, hard old man forgot for a little the sharp want that pinch-

ed him; when he waked, he still babbled of green fields.

“Did Robinson Crusoe ever come back to his father and mother?” he says to me. “Poor boy! poor boy! I went to sea when I was young. Father and mother didn’t like it. Came back after a four-years’ voyage, and off again, soon as the ship had unloaded, on another trip up the Channel: took all my money to fit out. Might have had the Custom-House, if there had been anybody to speak for me; would have done my work well, and maybe had kept it thirty or forty years. Should be glad to creep into a hay-mow and pay somebody to feed me. Wish old Uncle Jack was good for somethin’ besides work, work,—nothin’ but hard work! Wish he could talk and say somethin’.

“Now that was good, sensible poetry you were reading, wasn’t it? Good stuff? Couldn’t hear a word of it: poor old fellow can’t hear much now. Wish my father had lived longer; he would have told me things; he used to be different to me. I could have been a sight of comfort to him in mathematics.” (His father died when the son was fifty years old; the thirty years he had lived since seemed a long life to the old man.) “Mayn’t I look at the poetry?”

I found the place for him,—“New England.”

“Yes, the farmer takes lots of comfort, walking on the road, foddering cattle, cutting wood.”

Uncle Jack believes heartily in New England corn, and in the planting and hoeing of Indian corn he takes great delight: not to corn-laws, but to Indian corn, the talk always drifts.

“I hear you are going to plant a couple of acres of corn, Sir. Glad of it. This is an excellent dish of tea, Marm. This bread tastes like my mother’s bread; baked in a bake-kettle. These mangoes are nice,—such as we used to have.”

Turning to Aunt Sarah, he says,—

“Did you ever notice a difference in eggs, Marm?”

“Yes, Aunt thinks there is a difference between fresh and stale eggs.”

“But I mean, Marm, that some are thin-shelled, some rough, some round, some peaked: a hen lays ’em just so all her life. Ever see a difference?”

It is an open question.

Then turning to the maister of the house,—

“Do you like choc’late, Sir? Well, how you going to fix it when you haven’t got any milk? Well, you just beat up an egg, and pour on the choc’late, boiling hot, stirring all the time, and you won’t want any milk, Sir. That was what kept me alive aboard the Ranger.”

Now comes the story of the Ranger. He was getting in years, he said, and wanted a home for his old age; so he built him a boat. He put a little open stove in it, because an open fire felt kind o’ comfortable to his toes. He named it the Ranger; because when he was a little boy he took a long walk to the beach with his father, the little Iulus following with unequal steps, and they saw a shipwrecked vessel, named the Ranger, and he liked the name. He kept that name in his heart many years. When at last, by dint of much saving and scraping together, much hoeing of Indian corn, the old stocking-foot was at last filled, all the little odd bits, poured out and counted up, came to enough to speak to the ship-builder. Oh, the model! how the old man’s brain worked over that! Then the timber,—each was a chosen piece; oak, apple, cherry, pine, each tree sent a stick. The home was builded, was launched, was christened: The Ranger. Alas, it was an ill-omened name to him! Brave and young was he in heart, and loved right well his tossing, rolling home; and many a hard gale did he ride out in her alone, old as he was.

Too old was he to be trusted on the treacherous deep; and friends (?) advised and counselled, and the home of his old age was sold. (He never got the pay!) Now, with restless, wandering feet, he makes long tramps, trying to collect old debts. Kind-hearted old man that he is,

thinking always he is hard on 'em when he gets a promise to pay! A wife has been sick; perhaps he had better not ask for it now. His ox has died; maybe he had better wait. Fumbling over old papers in his pocket-book, muttering something about a pension: he was on the list, but was never called out, or somebody took his place.

Poor old Uncle Jack, with his dream of a pension, his dream of an office, his dream of a home in a boat! With him "many a dream has gone down the stream."

May some friendly hand at last close his eyes to that last long sleep, when his turn comes to heave down!

He is always finding Indian arrow-heads and hatchets and pestles. He picks full pails of the nicest-looking huckleberries. He is always dressed in clean, tidy clothes, a little scant and well patched. He pats me on the head and says, "Didn't know you were Evelyn's sister; thought it was a little three-year old." About to tell me a sad story he had read in the newspaper, he stops suddenly and says, "Believe I won't tell you, dear!" "Did you hear the newspipe has broke?" when the Atlantic Telegraph Cable parted. He had plans for shoving off the Leviathan when it stuck.

Shall I not tell you he brings me a little bunch of eels of his own spearing? that you must be careful at table he has enough to eat, he takes such small pieces? that he is altogether a sparse man? has rows of pins on his sleeve that he picks up?—an old-fashioned man, whose type is fast fading out from these "fast," "steep" times. He tells a story of a stream of black flies which came so thick and so fast pouring on, he looked as long as he darst to. Yet he can tell a good, big story yet, and when somebody was talking of turtles of good size, jumped up suddenly, "Did you ever see a ter-rapin, Sir?" and then walked round the long dining-table to tell how big he was and how high he stood on his feet. "When I was in the West Indies, Sir—Wish I could creep into a good Eng-

lish hay-mow and pay somebody to feed me!"

Do you remember, Estelle; the story we read together once, out of the "Casket" or "Gem," one of those old annuals, where a certain princess was sent to a desolate island, whose maids of honor were all old crones, once distinguished by their wonderful beauty? Her task was to discover each especial grace, long since buried by the rubbish which time and folly had heaped upon it; in each old, yellow, wrinkled hag to find the charm which had once adorned her: as she found the grace, it was transferred to her own youthful person. Slowly and patiently she unwound those wrapped-up mummies, and disclosed the gems hidden in those burial-clothes; and returned to her father's court enriched with all those long-buried graces, now revived to their former youthful beauty, and with the added charm which wisdom and patience give.

My task is not so difficult,—as I seek virtues, not perishable stuffs. We will learn the history of these thickly crossing wrinkles, that, checkering, map out the face like the streets of a busy city. We will read the story "that youth and observation copied there." Many sit in my chair with weather-beaten looks, but time and want and necessity have ploughed still deeper furrows.

It is not in vain, this brave encounter with the elements,—this battle to keep the wolf Want outside the door,—the patient, laborious building up of the small house, made almost a comfortable home by many years of toil,—the sufficient meal snatched from Nature by the line or the gun, or wrung from her by hard labor of the hands. Is the face too thin and hard, the lips compressed? Would you turn away from so much patient endurance of a hard lot? Turn again, and read the story the clear eye tells; listen to the words of a deep religious experience which the thin, cracked voice relates: how in visions of the night the Comforter has come to them, and henceforth the way of duty is clear, and the burden of life is

lightened. Will you go with me, dear, into those homely houses, sit with me by the firesides, and hear the simple story of New England's farmers and farmers' wives? We cannot call those poor who are so rich in all the manly virtues, and in the deep experiences of a faithful life.

Uncle Jack stops on his way, going up to get the oxen, and passes the night,—says, "Other people can't find enough to do; for his part, he should like to lie down in the hay-mow and rest,—all worn out, used up. Now Josiah, good, conversable man, knows about geography and the country round. Well, when you've got that, got the best of him,—likes variety too well,—goes off, leaves the homestead like a dismantled ship. Now, if a man only gets three good days down cellar, that's something. Don't believe 'Siah ever does it. So many notions in 's head bothers him." (Uncle Jack is quite right; 'tis not economical to have notions; besides, they are revolutionary,

they subvert the order of things.) "Got a cunning little heifer used to have some manners. Lost some of our lambs; read in a book, that, take what care you might, you would lose some lambs at times."—To-day he has gone driving the oxen round by Perkins's.

"Had the rheumatism this winter,—guess Jack Frost pinched him."—Ah! dear old man, an older than Jack Frost has got hold of your aged limbs! Harder pinches old Time gives than any mortal man!

"Used to get a little bird, Harris and me, and roast it, and mother would give us a little apple-sauce in a clam-shell, and we would go off back the island and eat it. Harris was sent to school up to Perkins's; couldn't stay; run away, and borrowed a boat, and came home again; afraid of his father, and hid in the barn. Dug a well in the hay, and they used to lower him down things to eat, and water to drink in scooped-out water-melon rinds."

THE SONG OF FATIMA.

OH, sad are they who know not love,
But, far from passion's tears and smiles,
Drift down a moonless sea, and pass
The silver coasts of fairy isles!

And sadder they whose longing lips
Kiss empty air, and never touch
The dear warm mouth of those they love,
Waiting, wasting, suffering much!

But clear as amber, sweet as musk,
Is life to those whose lives unite:
They walk in Allah's smile by day,
And nestle in his heart by night!

SOMETHING ABOUT HISTORY.

THERE is no kind of writing which is undertaken so much from will and so little from instinct as History. It seems the great resource of baffled ambition, of leisure, of minds disciplined rather than inspired, of men with pecuniary means and without professional obligations. Sympathy with or opposition to an author prompts those thus situated to write criticism; a dominant sentiment inspires poetical composition; and usually an impressive experience suggests adventure in the field of fiction: but we find educated men, in independent circumstances, not remarkable for sensibility to Nature, acute critical perception, or dramatic talent, whose literary aspirations are vague, and who desire to be occupied eligibly, turn to History as the most available vantage-ground, busy themselves with wars and councils that happened ages ago,—with kings and soldiers, institutions and adventures, politics and dynasties, so far removed from the associations and interests of the hour, that only a scholar's enthusiasm or ambition could sustain the research or keep alive the enterprise thus voluntarily assumed. It is this objective method and motive that chiefly accounts for the numberless inert and the few vital histories. Like any intellectual task assumed without special fitness therefor or motive thereto,—without a comprehensive grasp of mind that impels to historic exploration,—without a patriotic zeal that warms to national heroism,—without, especially, a love of some principle, a conviction of some truth, an admiration of some national development, irresistibly urging the cultivated and ardent mind to seek for the facts, to celebrate the persons, to evolve the truth involved in and manifest through public events,—the annals recorded are but dry chronology,—a monotonous, more or less authentic, perhaps quite respectable, but far from a very important or peculiarly interesting work. Thousands of such cum-

ber the shelves of libraries and fill the pages of catalogues,—dusted once a year, perhaps, to verify a date, to authenticate the details of a treaty, or fix the statistics of a war, but never read consecutively and with zest, because there was no genuine relation between the writer and his book. He undertook the latter in the spirit of a mechanical job; industry and learning may be embodied therein, but no moral life, no human charm; yet the work is cited with respect, the author enrolled with honor;—whereas, had he sought in poetry or philosophy, in a novel or a drama, thus to occupy and celebrate himself with literature, the failure would have been signal, the attempt ignominious. There is, indeed, no safer investment for middling literary abilities than History; for, if it fail to yield any large harvest of renown, it is comparatively secure from the assaults of ridicule, such as make pretension in other spheres of writing conspicuous.

Even in what are considered the successful exemplars in this department of literature, the errors incident to artificiality, the conventional forms of writing, are patent. Only in passages do we recognize that beauty or truth, that reality and genuineness, which so often wholly pervade a poem, a story, a memoir, or even a disquisition: at some point, the flow incident to wilful instead of soulful utterance becomes apparent;—ambition, pride of opinion, love of display somewhere manifest themselves. It has been said that the chief element of Hume's mental power was skepticism; and, singular as it may appear, his doubts about what are deemed the vital interests of humanity gave a charm to his record of her political vicissitudes; while he made capital of touching "situations," he displayed his own strength of intellect; but, with all this, did not write complete and authentic history. And when analyzed, what was the *animus* of Gibbon's elabo-

rate chronicle? He "spent his time, his life, his energy," says a severe, but just critic, "in putting a polished gloss on human tumult, a sneering gloss on human piety." And who has not felt, in following Macaulay's animated periods and thorough exposition and illustration of some event, trait, or economy, — in itself of little importance and limited value, — how much better it would have been to reserve his brilliant descriptive and keen analytical powers for the grand episodes, the prolific crises, and the leading characters of history, instead of indiscriminately devoting them to a consecutive account of national incidents and persons, both great and small, illustrious and insignificant?

A popular British author of our own day, in order to demonstrate the law of compensation, as regards the literary vocation, cites its inexpensiveness, — arguing, that, whereas the artist must invest capital, however small, in colors, marble, canvas, and studio-hire, and the professional man occupy a costly locality, the author needs but a quire of foolscap and a pen and ink to set up in trade. While there is literal truth in this comparison, the fact is not applicable to historical writing, except in a very limited degree. The preparation of the most successful works in this department, in modern times, has been attended with an outlay impossible to the poor scholar. It has involved the examination and reproduction of voluminous manuscript authorities, distant travel, the purchase of rare books and family papers, and sometimes years of busy reference, observation, and study, lucrative only in prospect. The same amount of culture and facile vigor of composition which less prosperous authors expend on a masterly review would suffice to make them famous historians, if blessed with the pecuniary means to seek foreign sources of information, or gather about them scattered and rare materials wherewith to weave a chronicle of the past. Hence, not only has History become the chosen field of writers with no special gift for more individually inspired kinds of literature, but of the

educated sons of fortune. Accordingly, it is curious to remark the contrast between the lives of historians and those of poets; and in the average circumstances of the former there is some justification for the title of an aristocratic guild in letters. Compare Cowper's humble home at Olney with Gibbon's elegant library at Lausanne, — the social environment of Hallam, Grote, or Macaulay with the rustic isolation of Wordsworth, the economies of Shelley, or the life-struggle of Jerrold. Of course, there can thence be inferred no general rule; and the very differences in temperament between inventive and reproductive writers suggest a consequent diversity of habits; but the very idea of historical composition, on an extensive scale and as a permanent occupation, implies the leisure which competency alone yields, the means indispensable for gradual literary achievement, and more or less of the luxury and social position which, when education obtains, usually attend upon these advantages.

It results from these considerations that there is no sphere of literature which is so often the refuge of wealthy scholars, idle men of taste, baffled politicians of independent means, ambitious and well-read but not specially gifted citizens who have inherited comfortable estates. It is so dignified an employment, that it gratifies pride, — so possible without trenchant opinions, that it does not alarm the conservative, — so thoroughly respectable, safe, and capable of being made illustrious, so comparatively easy to the fluent but unoriginal mind, and practicable to follow, when methodically carried out, in a stated, regular manner, that we can scarcely be astonished at the alacrity with which such voluntary tasks are undertaken or the steadiness with which they are followed; at the same time, it may be because so few are able to command the means and opportunity, that historical writing is so highly estimated. As a test of intellectual power, a gauge of individual sentiment, an evidence of original genius, it is immeasurably inferior to dramatic, philosophical, or any

of the more personal forms of literature, when inspired by deep convictions, original ideas, or creative imagination. It requires more knowledge than reflection, more patience than earnestness, more judgment than sentiment; and those who have raised it to a vital significance and profound beauty and interest have done so by virtue of endowments which, otherwise directed, would have placed them high and firm on the roll of genius: for it is possible to write history without this transcendent gift,—possible to write it respectably without the slightest grandeur or grace of mind,—by virtue of command of words, industry, care, and good sense. We cannot imagine Shakespeare tracing out his conception of Hamlet, or giving language to Lear or Miranda, without a soulful experience as far above mere intellectual assiduity as humanity is above mechanism; we cannot think of Milton elaborating his sublime epic, without, in fancy, taking in the studious years, the Italian nights of music, starlight, and high converse, the beautiful youth, the self-sacrificing prime, the blind old age, the religious patriotism, the pious loyalty, the learning and love, and the isolated meditation, cheered by grand symphonies and hoarded wisdom, through and by which, concentrated into melodious expression, the life of a noble mind thus majestically expressed itself: but we can easily fancy cold and cultured Gibbon returning from the Continent, full of classic lore, disgusted with his failure in public life, not sympathetic enough to enjoy heartily a career either of pleasure or of society, and so, in his dreams of scholarship, seizing upon the idea of a long, laborious, erudite, and elegant task; and we can also well imagine Hume, with his love of speculation, turning gratefully to the records of the past for subjects of reflection, analysis, and inference. In these and other notable instances, we feel it is more an accident than an inspiration, more from circumstances than from innate and absolute endowment and impulse, that the historic Muse is wooed.

Within a brief period the grave has closed over one of the most irreproachable and assiduous of American writers of History,—whose career signally illustrates the blessing of such a resource to unoccupied and cultivated leisure, and at the same time the fortuitous circumstances which often originate and prolong this kind of literary labor. In a letter to a friend abroad, written by Prescott soon after he found himself thus congenially occupied, the case is most frankly stated. “Ennui crept over me, when I found myself a perfectly idle man, with nothing to do, and, what made it worse, with eyes so debilitated that I had no power of doing anything with them. However, ‘necessity is the mother of invention,’ and I resolved to turn author in spite of my eyes; and it is a great satisfaction to me to think that the volumes I have put together for my own amusement should have afforded some to my countrymen, and, above all, to my friends.”*

This modest and candid estimate of his vocation indicates how much more a thing of volition and opportunity, and how much less a work of special endowment and intuitive recognition is the literature of History than that of Poetry, Psychology, or Philosophy, notwithstanding all these may be fused therein. “Whatever may be the use of this sort of composition in itself and abstractedly,” observes a judicious critic,† “it is certainly of great use relatively and to literary men. Consider the position of a man of that species. He sits beside a library-fire, with nice white paper, a good pen, a capital style, every means of saying everything, but nothing to say. What, again, if something would happen, and then one could describe it? Something has happened, and that something is History.” To feel fully the difference between a formal, mechanical annalist and the re-

* Letter of W. H. Prescott to Miss Preble, dated Boston, February 28, 1845. *Memoir of Harriet Preble*, by Professor R. H. LEE, p. 285-6.

† Bagehot.

vival of the past through poetic or artistic sympathy, it is only requisite to turn from some dry chronicle of political vicissitudes, duly registered by a dull, matter-of-fact, conscientious antiquary, to the fresh classical or colonial romance, of which such graceful and well-studied exemplars have been produced by Lockhart, Bulwer, D'Azeglio, Kingsley, Ware, Longfellow, and other bards and novelists. While the attempt, by intensity of description and brilliant generalities, to impart to veritable history the charm we accept in the historical romance, has caused many an old-school reader to place Macaulay's fascinating volumes, called "The History of England," on the same shelf with works of fiction,—Aytoun, Hugh Miller, and William Penn's champions have given special meaning to this principle or prejudice, whichever it may be, by challenging the delightful author to the test of fact.

In statesmen, or those who have excelled in political writing, the ambition to write history, the desire to illustrate and record national events, is not only a natural, but an auspicious feeling; and so it is in educated poets in whom the sentiment of patriotism or the narrative art gives scope and glow to such an enterprise. That Fox and Bacon, Milton and Swift, Mackintosh, Schiller, and Lamartine, should have partially adventured in this field seems but a legitimate result of their endowments and experience, however fragmentary or inadequate may have been some of the fruits of their historic studies.

When an enlightened and executive or speculative man is an obvious part of the history of his own times, his chronicle must have a certain significance and value. Raleigh, when he wrote the "History of the World" in prison, gave hints by which subsequent and less obsolete analysts have wisely profited. The scholar and the patriot coalesced in the mind of Camden, prompting him to rescue and conserve the materials of English history and note the fading traditions,—a purely antiquarian service, which only those

can appreciate who seek authentic data of the far past. Such as cavil at the legal tone and crude arrangement of Clarendon are none the less his debtors for specific memoirs, the personal element of history; and while Burnet has been vigorously repudiated by standard historians, he continues, and justly, to be a prolific authority. It is conceded by all candid explorers, that, as far as it goes, the account of England by Rapin is the best. Franklin's old friend Ralph was commended and quoted by Fox. As the enterprise of historical writers enlarged and their style became elaborate, these and such as these lost in popularity what they gained in usefulness. The charm of rhetorical elegance and broad generalizations gradually usurped the place of simple narrative and detailed statement. In the very design of Gibbon there is a certain poetical attraction; his work may aptly be described as panoramic, unrolling a vast picture or succession of pictures, too vague in outline and too monotonous in color for minute impressions, yet, on this account, the more remarkable for general effect. What Europe was in the Middle Ages we find more specifically in Hallam; the Moors in Spain have been more vividly painted by subsequent writers, whose aim was less comprehensive: but how the imperial sway of Rome subsided into the Christian era, how a republican episode gleamed athwart her waning power in the casual triumph of Rienzi, the later emperors, and what occurred in their reign in Jerusalem and Constantinople, pass emphatically before us in the stately pages which once charmed readers of English as the model of historic eloquence, and now excite the admiration of scholars as a monument of erudition and elaborate but artificial writing. There was a new attraction in the pleasing style of Robertson and the characterization of Hume; the winsome language of the one and the transparent diction of the other made historical reading not so much a task to cumber the memory as a pastime to entertain the mind; in the one chronicle we followed events gracefully

unfolded, and in the other discussed persons with acuteness; yet, when to either was subsequently applied the test of absolute accuracy and sound deduction, large allowances were demanded for inadequate research on the part of Robertson and partial inferences on that of Hume. The theories of the latter indicate why and how, with all his intellectual abilities, the sympathies of his readers were inevitably limited; in his view of humanity we find the true cause of all his deficiencies as an historian: "Human life," he somewhere remarks, "is more governed by fortune than by reason, is to be regarded more as a dull pastime than a serious occupation, and is more influenced by particular humor than by general principles." Yet, in a philosophical retrospect of English historians, we can trace a progressive development from the purely antiquarian researches of Camden to the personal memoirs of Clarendon and Burnet; thence to the comprehensive erudition and majestic narrative of Gibbon; onward to the reasoning, lucid record of Hume and the fascinating narrative of Robertson;—all of which qualities of industry, characterization, broad knowledge, taste, emphasis, and reflection blend, culminate, and intensify along the copious, rhetorical, and vivid page of Macaulay.

The Italian historians prolong, in style at least, the method of their classic predecessors: "*La Storia del Guicciardini è considerata come opera classica*,"—we are told by one of the critics of that nation; who adds, "His descriptions are always accurate, clear, and expressed with eloquence; the causes of events and their consequences are enumerated with rare acuteness; and his personages are delineated in their true characters, the historian descending into the deepest penetralia of their hearts: but the most eminent merit of this History consists in the moral and political considerations with which it abounds; it is like Tacitus." In like manner, Machiavelli is compared to Thucydides; while Varchi's long periods, adulation of the Medici, and municipal details are condemned by the same authority:

yet one familiar with modern literature in this department will, despite this general commendation of native critics, be apt to ascribe the conservative charm of the Italian historians to their style rather than their method or matter.

It is remarkable how late the French writers won laurels in the field of historical composition, and how long France, with all her national vanity, has lacked a complete and classical chronicle,—brilliant and invaluable fragments whereof abound. According to the most esteemed French critics, until this century the nation actually knew nothing of its own history; and it is characteristic of their speculative and methodical mind and taste, that History became popular and philosophical, a novelty and a reform, simultaneously. Guizot, Thierry, Sismondi, and others, created a new era in this branch of letters; Thiers and Michelet enlarged its sphere and increased its charms; and yet, while the graphic simplicity of Froissart, the critical insight and ingenious generalizations of Guizot, and the poetical glow and richness of Michelet have made the history of France both highly suggestive as regards the development of civilization, and picturesque and dramatic as a narrative, the greatest allowance for brilliant theorizing, political sympathies, and an errant fancy are indispensable in order to attain to a clear view of genuine facts and absolute principles. It has been said that "leading ideas" are fatal to accuracy of statement; and these dominate in the minds of French philosophical annalists; while the more sympathetic class are fond of rhetorical display and fanciful episodes. A recent critic, after bestowing merited encomiums on Michelet, gives the following instance of his absurd generalizations, which occur in the midst of grave historical statements and descriptions: "Wool and flesh are the primitive foundations of England and the English race; ere becoming the world's manufactory of hardware and tissues, England was a victualing-shop; before they became a commercial, they were a breeding and a pastoral

people, — a race fatted on beef and mutton; hence their freshness of tint, their beauty and strength: *their greatest man, Shakspeare, was originally a butcher.*”

Less prominent and more recent names on the roll of historic literature are as distinctly associated with special excellences and defects. Thus, Grote keeps attention more by the intelligence of his comments than by the flow of his narration; he is far more political than picturesque; and while he gives a masterly analysis of the Athenian system of government, so as to place it in a new light even to the scholar's apprehension, he discusses the arts and the literature so inspiring to most cultivated minds, when describing Greece, with comparative indifference. Those who would examine English annals unbiased by Protestant zeal, and realize how the events and characters look to a Roman Catholic vision, may gather from Lingard some views which may not disadvantageously modify their interpretation of familiar men and occurrences. Two English writers have hastily compiled her annals during certain epochs; but while they are equally chargeable with superficiality, the manner in which the work is done is by no means similar. Smollet's continuation of Hume was confessedly a bookseller's job: four octavo volumes in only ten times the number of months, even in our days of locomotive celerity, would be thought rather a suspicious piece of literary handiwork; and besides the indecent haste, so incompatible with thoroughness, the misrepresentations of Smollet are patent. Goldsmith, as unambitious in research as he was genial in expression, made so agreeable a story, that, with all its imperfection, his sketch still finds readers; while the rarely quoted work of Henry most conveniently enumerates, at the end of each reign, details economical and social which identify and illustrate both period and progress in Anglo-Saxon civilization. As a copious and consecutive record of the salient incidents in modern Continental history, — so needful now for reference, and the diverse phases of which are so

widely chronicled in the memoirs, the journals, the diplomatic correspondence, and what may be called the incidental history of the period, — the plan of Alison's work might have achieved a triumph of industry and skill, valuable as well as interesting to general readers and professional writers: but the political opinions, with the partial feelings they engender, continually distort the view and influence the estimate of this positive yet pleasant historian; while his almost wilful blunders, like the errors of Lord Mahon in regard to the American War, have been repeatedly demonstrated. Mackintosh philosophized about events, measures, and men, better than he described either. Sharon Turner nobly illustrates the value of intrepid research and patient collation. Mitford represents the aristocratic as Grote the democratic element in Grecian history. Tytler wrote of the past in the life of nations with the exclusive reliance on written proof that a conveyancer places upon title-deeds, and beside the glowing and harmonious pictures of later annalists such writing now appears obsolete. Napier describes battles scientifically, and Carlyle revolutions melodramatically, — each with original power, in their respective methods, — while Miss Strickland brings to the record of queenly sorrows and duties a woman's sympathetic prepossessions.

Since those quaintly simple and emphatic statements which, under the name of Froissart's Chronicles, seem to perpetuate the instinctive notion of History, as an honest and earnest, but unadorned and unelaborate narrative of military and political facts, — not only has there been a continual refinement of style and enlargement of scope and art, but a greater complexity and subdivision in the historian's labors. Abstract political ideas, purely intellectual phenomena, have found their annalists, as well as executive enterprise; events have been analyzed, as well as described, — characters discussed, as well as pictured, — the elements of society laid bare with as much zeal and scrutiny as its development has been traced

and delineated. European historical students read anew the records of the past by the light of philosophy; more subtle divisions than the geographer indicates organize the record; events are narrated with reference to a dominant idea; governments are chronicled through their ultimate results, and not exclusively with regard to their locality; rulers are considered in groups; a faith is made the nucleus of an historical development, instead of a nation. Thus, we have Ranke's "Popes" and D'Aubigné's "Reformation," Hallam's "Middle Ages" and "English Constitution"; De Quincey treats of "The Cæsars"; Vico demonstrates that History is a science with positive laws; Gervinus illustrates it as a development of certain inevitably progressive ideas; Niebuhr interprets it by fresh tests and ordeals; Dr. Arnold teaches it by an original method; Humboldt points out its naturalistic tendencies and origin; Herder and Hegel, De Tocqueville and Guizot, the eminent writers on Civilization, on Art, on Education, Political Economy, Literature, and Natural History, more and more exhibit the facts of humanity and of time under such new combinations, by so many parallel truths and principles, that it is difficult to conceive that History, as now understood by the educated and the reflective, is the same thing once crudely embodied in a ballad or mystically conserved by an inscription. To multiply relations is the destiny of our age, and to converge all that is discovered through the laws of Science upon the records and relics of the past is a process now habitual and pervasive.

And yet how little positive satisfaction does the lover of truth, the aspirant for what is authentic and significant, find in current and even popular histories! Certain general notions of the character of nations we, indeed, distinctly and correctly attain: that Chinese civilization is stationary, the French instinctively a military race, the Swiss mercenary, and adventurous in engineering and religious reform,—that modern German literature was as sudden as simultaneous in its de-

velopment,—that Holland redeemed her foundations from the sea,—that Italy owes to art, and England to manufactures, her growth and grandeur. These and such as these are problems which the history of the respective countries, however inadequately told, reveals with authenticity; but when we go beyond and below the patent facts of local civilization, to the analysis of character, and, through it, of destiny, few and far between are the satisfactory records whence we can draw legitimate materials for inference and conjecture. The most attractive method is apt to be that upon which least reliance can be placed. We seldom consult Sir Walter's essays at serious history, while the novels he created out of historic material are as familiar as they are endeared; but their imaginative charm is in the inverse ratio of their authenticity. With every new candidate for public favor in this sphere of literature, there arises a "mooted question" whereon the historian and his readers are irreconcilably divided. The character of Penn, of Marlborough, and of the facts of the Massacre at Glencoe are still vehemently discussed, whenever Macaulay's popular History is referred to. Froude advances a new and plausible theory of the character of Henry VIII.; few of Bancroft's American readers accept his estimate of John Jay, Sam Adams, or Dr. Johnson, or of the political character of the Virginia Colonists; and Palfrey and Arnold interpret quite diversely the influence and career of Roger Williams. Nor are such discrepancies surprising, when we remember how the history which transpires now and here fails of harmonious report. Every battle, diplomatic arrangement, political event, nay, each personal occurrence, which forms the staple of to-day's journalism and talk, is regarded from so many different points of view, and stated under so many modifying influences, that only judicial minds have a prospect of reaching the exact truth. Hence the true way to profit by History is eclectic. Let the erudition of the German, the ge-

nial animation of the French, the Saxon good sense, the Italian grace be enjoyed, and whatsoever of glamour or of inadequacy these charms hide be duly estimated; reflection and sympathy will often separate the gold of truth from the alloy of prejudice or fantasy. Above all, let this eclectic test be applied beyond nominal history,—to the geological data on the ancient rock,—the handwriting of the ages upon race, costume, language,—the incidental, but genuine history innate in all true literature, vivid elements whereof live in passages of Milton's controversial writings, in Petrarch's sonnets, De Foe's fictions, our Revolutionary correspondence, South's sermons, Swift's diaries, Burke's speeches, French memoirs, Walpole's letters, in the poems, plays, and epistles of the past, and every fact and person which society and life offer to our cognizance or sympathy.

“When we are much attached to our ideas, we endeavor to attach everything to them,” says Madame de Staël. “The secret of writing well,” observes a Scotch professor, “is to write from a full mind.” These two maxims seem to us to illustrate the whole subject of historical composition; an earnest votary thereof will instinctively find material in every interest and influence that sways events or moulds character, and from the assimilation of all these will educe a vital and harmonious picture and philosophy. There is an historical as well as a judicial or poetic type of mind; and to such there is no object too trifling, no fact too remote, not directly or indirectly to minister to the unwritten history which vaguely shapes itself to his intelligence. In his reading and travel it is by no means to the ostensible monuments and trophies of the past that his observation and inquiry are confined: the Letters of Madame de Sévigné give him authentic hints for the social tendencies of France and their influence upon politics, as the blood-stains at Holyrood identify the place of Rizzio's murder; the “Edinburgh Review” reveals the spirit of the Reform movement as clearly as the Parliamentary records

its letter; the South-Sea House and the Temple are as suggestive as Whitehall and the Abbey,—for trade and jurisprudence, in the retrospect, are as much a part of the by-gone life and present character of a nation, as the fate and the fame of her dead kings; and a Spanish ballad is as valuable an illustration as a Madrid state-paper; while the life of Harry Vane vindicates the Puritan nature as clearly as the letter of a Venetian ambassador exhibits the domestic life of a Pope.

The redeeming influence of strong personal sympathy and earnest conviction, both in the choice of a subject and the method of its treatment, has been signally illustrated by a countryman of our own. The interest of the general reader and the approbation of historical scholars were at once enlisted by Motley's “Rise and Fall of the Dutch Republic.” That work differs from and is superior to any American historical composition by virtue of a certain fluent animation, a certain decided and sustained tone, such as can be derived only from an absolute relation between the author's mind and heart and his subject. Accordingly his record not only seizes upon the attention, but wins the sympathy of the reader, who recognizes a vital and genuine spirit in the work, which gives it unity, completeness, and a living style, whereby its incidents, characters, and philosophy are unfolded, not only with art, but with nature, and so made real, attractive, and significant. That we are right in ascribing these merits to the affinity between the author and his work is amply evidenced by his own confession in a letter called forth by the death of Prescott, in which he says,—

“It seems to me but as yesterday, though it must be now twelve years ago, that I was talking with our ever-lamented friend Stackpole about my intention of writing a history upon a subject to which I have since that time been devoting myself. I had then made already some general studies in reference to it, without being in the least aware that Prescott had the intention of writing the history of Philip II. Stackpole had heard the fact, and that large preparations had already been made for

the work, although 'Peru' had not yet been published. I felt, naturally, much disappointed. I was conscious of the immense disadvantage to myself of making my appearance, probably at the same time, before the public, with a work not at all similar in plan to 'Philip II.,' but which must, of necessity, traverse a portion of the same ground. My first thought was, inevitably as it were, only of myself. It seemed to me that I had nothing to do but to abandon at once a cherished dream, and probably to renounce authorship. *For I had not first made up my mind to write a history, and then cast about to take up a subject. My subject had taken up me, drawn me on, and absorbed me into itself. It was necessary for me, it seemed, to write the book I had been thinking much of,—even if it were destined to fall dead from the press,—and I had no inclination or interest to write any other.*"

The same inspiration is partially obvious in those portions of every history which come home to the writer's experience: as, for instance, some of the military episodes in Colletta's "History of Naples," he having been a soldier,—and the descriptive phases of Parkman's "History of Pontiac," the author having been a Prairie traveller, and familiar with the woods and the bivouac. In like manner, it is the idiosyncrasy of historians which gives original value to their labors: Botta's knowledge of American localities and civilization was meagre, but his sympathy with the patriots of the Revolution was strong, and this gave warmth and effect to his "Guerra Americana"; Niebuhr was specially gifted to develop what has been called the law of investigation, and hence he penetrates the Roman life, and lays bare much of its unapparent meaning and spirit. So apt and patient are the Germans in research, that they have been justly said to "quarry" out the past; while so native are rhetoric, theorizing, and fancifulness to the French, that they make history, as they do life and government, theatrical and picturesque, rather than gravely real and practically suggestive.

A peculiar feature in the labors of modern historians is the research expended upon what the elder annalists regarded as purely incidental and extraneous.

The collation of archives, official correspondence, and state-papers is now but the rough basis of research; memoirs are equally consulted,—localities minutely examined,—the art and literature of a given era analyzed,—the geography, climate, and ethnology of the scene made to illustrate the life and polity,—social phases, educational facts estimated as not less valuable than statistics of armies and judicial enactments. Michelet has some charming rural pictures and female portraits in his History of France; Macaulay thinks no custom or economy of a reign insignificant in the great historical aggregate. Topography, botany, artistic knowledge are not less parts of the chronicler's equipment than philology, rhetoric, and philosophy; a newspaper is not beneath nor a traveller's gossip beyond his scope; architecture reveals somewhat which diplomacy conceals; an inscription is not more historical than the average temperature or the staple productions. Whatever affects national character and destiny, whatever accounts for national manners or confirms individual sway, is brought into the record. Diaries, like those of Pepys and Evelyn, the tithe-book of a county, the taste in portraiture, the costume and the play-bill yield authentic hints not less than the census, the parliamentary edicts, or the royal signatures; the popular poem, the social favorite, the *cause célèbre*, what pulpit, bar, peasant and beau, doctor and lady *à la mode* do, say, and are, then and there, must coalesce with the battle, the legislation, and the treaty,—or these last are but technical landmarks, instead of human interests.

Even our most generalized historical ideas are made emphatic only through association and observation. How the vague sense of Roman dominion is deepened as we trace the outline of a camp, the massive ranges of a theatre, or the mouldy effigy on a coin, in some region far distant from the Imperial centre,—as at Nismes or Chester! How complete becomes the idea of mediæval life, contemplated from the ramparts of a castle,

in the "dim, religious light" of an old monastic chapel, or amid the obsolete trappings and weapons of an armory! What a distinct and memorable revelation of ancient Greece is the Venus or Apollo, a Parthenon frieze or a fateful drama! The best political essays on the French Revolution are based on the economical and social facts recorded in the Travels of Arthur Young. The equivocal action of Massena, when he commanded Paris against the Allies, is explained in the recently published letter of Joseph Bonaparte, wherein we learn his deficiency of muskets. Humboldt accounted for the defects of Prescott's "Conquest of Mexico" by the fact that the historian had never visited that country. Napoleon gave a key to the misfortunes of Italy, when he said, "It is a peninsula too long for its breadth." And the significance of the Seven Years' War is expressed in a single phrase by Milton's last biographer, when he defines it as the "consummation politically and the attenuation spiritually of the movement begun in Europe by the Lutheran Reformation."

Indeed, so intimate is the connection between private life and public events, between political and social phenomena, that the historical mind finds material in all literature, and the very attempt to keep to a high strain and to bend facts to theory limits the authenticity of professed annalists. What Macaulay says of an eminent party-leader is modified to those who have studied the character through his memoirs or writings. The charming narrative of Robertson, the characterization of Hume, the stately periods of Gibbon, fail to win implicit confidence, when the scene, the age, or the personages described are known to the reader through original authorities. When Bancroft declares a treaty of Colonial governors against Indian ravages the germ of democratic government, we know that it is his attachment to a theory, and not the actual circumstances, which leads to such an inference; for the very authority he cites merely indicates

a defensive alliance among rulers, not a coalition of the ruled. And so when to an account of the Battle of Lexington he appends a rhetorical argument connecting that event, so meagre and simple in itself and so wonderful in its consequences, with the progress of truth and humanity in political science and reformed religion, we feel that the reasoning is forced and irrelevant,—more an experiment in fine writing than an evolution of absolute truth.

Thus continually is the independent reader of history taught eclecticism: he makes allowance for the want of careful research in this writer, for the love of effect in that,—for the skepticism of one, and the credulity of another,—for enthusiasm here, and fastidiousness there,—and especially for the greater or less attachment to certain opinions, and the absence or presence of strong convictions and genuine sympathies. Hence, to read history aright, we must read human nature as well; we must bring the light of philosophy and of faith, the calmness of judgment and the insight of love, to the record; collateral revelations drawn from our own experience, modified acceptance of both statement and inference, superiority to the blandishments of style, are as needful for the right interpretation of a chronicle as of a scientific problem. Thus history is perpetually rewritten; fresh knowledge opens new vistas in the past as well as the future; the discovery of to-day may rectify, in important respects, the statement which has been unchallenged for centuries; one new truth leavens a thousand old formulas; and nothing is more gradual than the elucidation of historical events and characters. Even our own brief annals suggest how large must be the historian's faith in time: only within a year or two has it been possible to demonstrate the justice of Washington's estimate of Lee, and how completely the sagacious provision of Schuyler secured the capture of Burgoyne. Since the American Revolution, one of these men has been as much overrated as the other has failed of just apprecia-

tion,—because the documentary wisdom requisite for an enlightened judgment has not until now been patent.*

With the imposing array of professed histories and historians in view, it is curious to revert to the actual sources of our own historic ideas,—those which are definite and pervasive. The vast number of intelligent readers, who have made no special study of this kind of literature, probably derive their most distinct and attractive impressions of the past from poetry, travel, and the choicest works of the novelist; local association and imaginative sympathy, rather than formal chronicles, have enlightened and inspired them in regard to Antiquity and the great events and characters of modern Europe. This fact alone suggests how inadequate for popular effect have been the average labors of historians; and so fixed is the opinion among scholars that it is impossible for the annalist to be profound and interesting, authentic and animated, at the same time, that a large class of the learned repudiate as spurious the renown of Macaulay,—although his research and his minuteness cannot be questioned, and only in a few instances has his accuracy been successfully impugned. They distrust him chiefly because he is agreeable, doubt his correctness for the reason that his style fascinates, and deem admiration for him inconsistent with their own self-respect, because he is such a favorite as no historian ever was before, and his account of a parliament, a coinage, or a feud as winsome as a portraiture of a woman. In one of his critical essays, Macaulay himself gives a partial explanation of this protest of the minority in his own case. “People,” he remarks, “are very loath to admit that the same man can unite very different kinds of excellence. It is soothing to envy to believe that what is splendid cannot be solid and what is clear cannot be profound.” And it has been most justly said of his own method of writing history, “He

* See Lossing's *Life and Correspondence of General Schuyler*, and Professor Moore's paper on Charles Lee.

must make *everything* clear and bright; and bring it into the range of his analysis; his exaggeration chiefly applies to individual characters, not to general facts”; and the reason given for the decided preference manifested for his vivid record is not less true than philosophical,—“We learn so much from him *enjoyably*.” It is precisely the lack of this pleasurable trait which makes the greater part of the annals of the past a dead letter to the world, and wins to romance, ballad, epic, fiction, relic, and poetry the keen attention which facts coldly “set in a note-book” never enlisted. How many of us unconsciously have adopted the portraits of the early English kings as Shakspeare drew them! To what a host of living souls is the history of Scotland what the author of “Waverley” makes it! Charles I. haunts the fancy, not as drawn by Hume, but as painted by Vandyck. The institutions of the Middle Ages are realized to every reflective tourist through the architecture of Florence more than by the municipal details of Hallam. Pyramids, obelisks, mummies have brought home Egyptian civilization; the “old masters,” that of Europe in the fifteenth century; the ruins of the Colosseum, Roman art and barbarism, as they never were by Livy or Gibbon. Lady Russell's letters tell us of the Civil War in England,—Saint Mark's, at Venice, of Byzantine taste and Oriental commerce,—the Escorial and the Alhambra; Versailles, a castle on the Rhine, and a “modest mansion on the banks of the Potomac,” of their respective eras and their characteristics, social, political, religious,—more than the most elaborate register, muster-roll, or judicial calendar. For around and within these memorials lingers the life of Humanity; they speak to the eye as well as to memory;—to the heart as well as the intelligence; they draw us by human associations to the otherwise but technical statement; they lure us to repeople solitudes and reanimate shadows; and having become intimate with the scenes, the effigies, the monuments of the Past, we have, as it

were, a vantage-ground of actual experience, an impulse from personal observation, and, perhaps, a sympathy born of local inspiration, whereby the phantoms

of departed ages are once more clothed with flesh, and their sorrows and triumphs are renewed in the soul of enlightened contemplation.

MY NEIGHBOR, THE PROPHET.

THE point of commencement for a story is altogether arbitrary. Some writers stick to Nature and go back to the Creation; others take a few dozen of the grandfatherly old centuries for granted; others seize Time by the forelock and bounce into the middle of a narrative; but, as I said before, the beginning is a mere matter of taste and convenience. I choose to open my tale with the day on which I took possession of my newly purchased country-house.

It was a pretty little cottage, wooden, old-fashioned, a story and a half high, with a long veranda, a shady door-yard, and a sunny garden. I bought it as it was, furniture included, of a gentleman who was about to remove southward on account of his wife's health, or, to speak more exactly, on account of her want of it. I laugh here to think how surprised you will be when you learn that these matters have no connection with my story. All the important events which I propose to relate might have happened, had this gentleman never sold nor I purchased; and, as a proof of it, I can adduce the fact that they actually did occur some years before we enjoyed the honor of each other's acquaintance. But I could not resist the temptation of the episode. I am as delighted at getting into my first house as was my little son when he poked his chubby legs into his first trousers.

"Who is my nearest neighbor?" I asked of the former proprietor, when he made his parting call.

"What, the occupant of the new house just below you? I can tell you very little of him. I haven't made his acquaint-

ance, and don't know his name. We call him the Mormon."

"Mercy on us! You don't mean to hint at anything in the way of polygamy, I hope. He doesn't keep an omnibus with seats for twenty, does he?"

"No, not so bad as that. In fact, I don't know much about him. I thought you were aware of his — his style of living," stammered my friend. "Oh, I dare say he is respectable enough. But then we noticed three or four women about the house, and only one man; and so we clapped the title of Mormon on him. Nicknaming is funny work, you know, — a short and easy way to be witty. I believe, however, that he does pretend to be a prophet."

"The Pilgrim Fathers protect us! Why, he may attempt to proselytize us by force. He may declare a religious war against us. It would be no joke, if he should invade us with the sword in one hand, and the Koran, or whatever he may call his revelation, in the other."

"Oh, don't be alarmed. He is quite harmless, and even unobtrusive. A sad-faced, pale, feeble-looking, white-bearded old man. He won't attack you, or probably even speak to you. I will tell you all I know of him. The house was built under his direction about six months ago. I understand that the women own it, and that they are not relatives according to the flesh, but simply sisters in faith. They have some queer sort of religion which I am shamefully ignorant of. At all events, they believe this old gentleman to be a prophet, and consider it a duty or a pleasure to support him. That is the extent

of my knowledge. I hope it doesn't disgust you with your neighborhood?"

"By no means. May you find as pleasant a one, wherever you settle!"

"Thank you. Well, it is nearly train-time, and I suppose I must leave you and my old place. I wish you every happiness in it."

And so the old proprietor sighingly departed, leaving the new one smiling on the doorstep. I was just thinking how nicely the world is arranged, so that one man's trouble may turn out another man's blessing, (the illness in this gentleman's family, for instance, being the cause of my getting a neat country-house cheap,) when my attention was arrested by the appearance of a thin, feeble-looking, white-bearded old man, who passed down the street with head bent and hands joined behind him. I stared at him till he got by; then I ran down to the gate and looked after him earnestly; and at last I darted forward, hatless, in eager pursuit. He heard my approaching steps, and put his snowy beard against his right shoulder in the act of taking a glance rearward. I now recognized the profile positively, and began conversation.

"Is it possible? My dear Doctor Potter, how are you? Don't you know me? Your old friend Elderkin."

"Sir? Elderkin? Oh!—ah!—yes! How do you do, Mr. Elderkin?" he stammered, seeming very awkward, and hardly responding at all to my vigorous handshaking.

"I am delighted to see you again," I continued. "I have had no news of you these five years. Do you live in this neighborhood?"

"I—I reside in the next house, Sir," he replied, not looking me in the face, but glancing around uneasily, as if he wanted to run away.

"What! are you the prophet?" I blurted out before I could stop myself.

"I am, Mr. Elderkin," he said, blushing until I thought his white hair would turn crimson.

We stared at each other in silence for

ten seconds, each wishing himself or his interlocutor at the antipodes.

"I congratulate you on your gift," I remarked, as soon as I could speak. "I will see you again soon, and have a talk on the subject. We have discussed similar matters before. Good day, Doctor."

"Good day, Mr. Elderkin," he replied, drawing himself up with a poor pretence at self-respect.

He was greatly changed. Heterodoxy had not been so fattening to him as Orthodoxy. When I knew him, six years before, as pastor of a flourishing church, Doctor of Divinity, and staunch Calvinist, he had a plump and rosy face, a portly form, and vigorous carriage. He was a great favorite with the ladies, as clergymen are apt to be, and consequently never lacked for delicate and appetizing sustenance. He was esteemed, self-respectful, and happy; and all these things tend to good health and good looks. I propose to make myself famous as the Gibbon of the decline and fall of this reverend gentleman, once so honorably established on the everlasting hills of Orthodoxy, and now so overthrown and trampled under foot by the Alaric of Spiritualism. I do not expect, indeed, that anybody will take warning by my friend's sad history; nor do I insist that people in general would find it advantageous to learn much wisdom from the experience of others; for it is very clear, that, if we attempted only what our neighbors or our fathers had succeeded in doing, we should kill all chance of variety or improvement. It would be a stupidly wise world; there would be no sins, and, very possibly, no virtues; instead of "Everything happens," it would be "Nothing happens." Believing and hoping, therefore, that Dr. Potter's calamities will not be the smallest check upon any person who shall feel disposed to follow in his footsteps, I present the story to the public, not at all as a lesson, but merely as an item of curious information.

Oddly enough, it was on that day of delusions, the first of April, that I stumbled into the Doctor's revival of the age

of miracles. I had been engaged for three months on a geological survey in a Western Territory, during which time I had received very brief and vague news from the little city which was then my place of abode, and had not even had a hint of the signs and wonders which there awaited my astonished observation. Reaching home, I made it my first business to call on my reverend friend; for the Doctor, it must be known, was one of my most valued intimates, had baptized me, had counselled me, had travelled with me in foreign lands; we had many interests, many sympathies in common, and no differences except with regard to the extent of the Flood, the date of the Creation, and other matters of small personal importance. I found him in his study, surrounded by those seven hundred and odd volumes, the learning and excellent spirit of which gave to his sermons such a body of venerable divinity, such a bouquet of savory eloquence. He was walking to and fro rapidly, studying a slip of manuscript with an air of serious ecstasy. He did not look up until I had seized his hand, and even then he stared at me as a man might be supposed to stare who had been passing a fortnight with angels or other spiritual existences and unexpectedly found himself among natural and reasonable beings again.

"Ah, my dear Elderkin," he said at last, "I am glad to see you. How are you, and how have you been? Excuse me for not recognizing you at once. I had just lost myself in the consideration of a mystery which I believe to be of the sublimest importance. Oh, my dear friend, I hope you will be brought to attend to these things! They are above and beyond all your geologies; they preceded and will outlive them."

"Indeed!" I replied. "Nothing in the way of chaos, I hope?"

"Look here at this sheet of foolscap," he exclaimed, waving it excitedly. "Do you remember the belief which I have often expressed to you, — the belief that the dispensation of miracles has never yet ceased from earth, — that we have still a

right to expect signs, wonders, instantaneous healings, and unknown tongues, — and that, but for our wretched incredulity, these things would constantly happen among us? You have disputed it and ridiculed it, but here I hold a proof of its truth. A month ago this blessing was vouchsafed to me. It was at one of our Wednesday-evening exercises. I had just been speaking of supernatural gifts, and of the duty which we lie under of expecting and demanding them. The moment I sat down, a stranger (a gentleman whom I had previously noticed at church) rose up with a strangely beaming look and broke out in a discourse of sounds that were wholly unintelligible. You need not smile. It was a true language, I am confident; it flowed forth with a moving warmth and fluency; and the gestures which accompanied it were earnest and most expressive."

"That was fortunate," said I; "otherwise you must have been very little edified. But isn't it rather odd that the man should use earthly gestures with an unearthly language?"

The Doctor shook his head reprov-ingly, and continued, —

"Deacon Jones, the editor of the 'Patriot,' is a phonographer. He took down the close of the stranger's address, and next day brought it to me written out in the ordinary alphabet. Let me read it to you. As you are acquainted with several modern languages, perhaps you can give me a key to an interpretation."

"I don't profess to know the modern languages of the other world," said I. "However, let us hear it."

"Isse ta sapon otatirem isais ka raba-tar itos ma deok," began the Doctor, with a gravity which almost made me think him stark mad. "De noton irbila orgonos ban orgonos amartalannen fi dunial maran ta calderak isais deluden homox berbussen carantar. Falla esoro anglas emoden ebuntar ta diliglas martix yehudas sathan val caraman mendelsonnen lamata yendos nix poliglor opos discobul

vanitarok ken laros ma dasta finomallo in salubren to mallomas. Isse on esto opos fi sathan."

And so he read on through more than a page and a half of closely written manuscript, his eyes flashing brighter at each line, and his right hand gesturing as impressively as if he understood every syllable.

"Bless you, it's nothing new," said I. "There's an institution at Hartford where they cure people of talking that identical language."

"Just what I expected you to say," he replied, flushing up. "I know you, — you scientific men, — you materialists. When you can't explain a phenomenon, you call it nonsense, instead of throwing yourselves with childlike faith into the arms of the supernatural. That is the sum and finality of your so-called science. But, come, be rational now. Don't you catch a single glimpse or suspicion of meaning in these remarkable words?"

"I am thankful to say that I don't," declared I. "If ever I go mad, I may change my mind."

"Well now, I *do*," he asseverated loudly. "There are words here that I believe I understand, and I am not ashamed to own it. Why, look at it, yourself," he added, pleadingly. "That word *sathan*, twice repeated, can it be anything else than *Satan*? *Yehudas*, what is that but *Jews*? And then *homox*, how very near to the Latin *homo*! I think, too, that I have even got a notion of some of the grammatical forms of the language. That termination of *en*, as in *deluden*, *salubren*, seems to me the sign of the present tense of the plural form of the verb. That other termination of *tar*, as in *ebuntar*, *carantar*, I suppose to be the sign of the infinitive. Depend upon it that this language is one of absolute regularity, undeformed by the results of human folly and sorrow, and as perfect as a crystal."

"But not as clear," I observed, — "at least, not to our apprehension. Well, how was this extraordinary revelation received by the audience?"

"In dumb silence," said the Doctor.

"Faith was at too low an ebb among us to reach and encircle the amazing fact. I had to call out the astonished brethren by name; and even then they responded briefly and falteringly. But the heaven worked. I went round the next day and talked to all my leading men. I found faith sprouting like a grain of mustard-seed. I found my people waking up to the great idea of a continuous, deathless, present miracle-demonstration. And these dim suspicions, these far-off longings and fearful hopes, were, indeed, precursors of such a movement of spirits, such a shower of supernatural mercies, as the world has not perhaps seen for centuries. Yes, there have been wonders wrought among us, and there are, I am persuaded, greater wonders still to come. What do you think must be my feelings when I see my worthiest parishioners rise in public and break out with unknown tongues?"

"I should suppose you would rather see them break out with the small-pox," I answered.

"Ah, Professor! wait, wait, and soon you will not laugh," said the Doctor, solemnly.

"Perhaps not. I am a sincere friend of yours, and a tolerably good-hearted sort of man, I hope. I shall probably feel more like crying. But the world may laugh long and loud, Doctor. All who hate the true revelation may laugh to see it mocked and caricatured by those who profess and mean to honor it. Just consider, while it is yet time to mend matters, how imprudent you are. Why, what do you know of the man who has been your Columbus in this sea of wonders? Are you sure that he is not a sharper, or an impostor, or a lunatic?"

"Impossible! He brought letters to three of our most respectable families. His name is Riley, John M. Riley, of New York; and he is son of the wealthy old merchant, James M. Riley, who has been such a generous donor to all good works. As for his being a lunatic, you shall hear his conversation."

"I should be a very poor judge of it,

if he always speaks in his unknown tongues."

"English! English! he talks English as good as your own. A more gentlemanly person, a more intelligent mind, a meeker and more believing spirit, I have not met this many a day. He is still here, and he is my right hand in the work. I shall soon have the pleasure of making you acquainted with him."

"Thank you; I shall be delighted," said I. "Only be good enough to hint to him that I like to understand what is said to me. If he comes at me with unknown tongues, I shall wish him in unknown parts. I can't stand mysteries. I am a geologist, and believe that there are rocks all the way down, and that we had much better stand on them than wriggle in mere chaotic space. Good morning, Doctor. I shall come again soon; I shall keep a lookout on you."

"Good morning," he replied, kindly. "I hope to see you in a better frame before many days."

I hurried back to my hotel, and questioned the landlord about this revival of the age of miracles. He gave me a long account of the affair, and then every neighbor who strolled in gave me another, until by dinner-time I had heard wonders and absurdities enough to make a new "Book of Mormon." The lunacies of this Riley had entered into Dr. Potter and his parishioners, like the legion of devils into the herd of swine, and driven them headlong into a sea of folly. There had been more tongues spoken during the past month in this little Yankee city than would have sufficed for our whole stellar system. Blockheads who were not troubled with an idea once a fortnight, and who could neither write nor speak their mother English decently, had undertaken to expound things which never happened in dialects which nobody understood. People who hitherto had been chiefly remarkable for their ignorance of the past and the slowness of their comprehension of the present fell to foretelling the future, with a glibness which made Isaiah and Ezekiel appear like minor

prophets, and a destructiveness which nothing would satisfy but the immediate advent of the final conflagration. Gouty brothers whose own toes were a burden to them, and dropsical sisters with swelled legs, hobbled from street to street, laying would-be miraculous hands on each other, on teething children, on the dumb and blind, on foundered horses, and mangy dogs, even, or whatsoever other sickly creature happened to get under their silly noses. The doctors lost half their practice in consequence of the reliance of the people on these spiritual methods of physicking. Children were taken out of school in order that they might attend the prophesyings and get all knowledge by supernatural intuition. Logic and other worldly methods of arriving at truth were superseded by dreams, discernings of spirits, and similar irrational processes. The public madness was immense, tempestuous, and unequalled by anything of the kind since the "jerks" which appeared in the early part of this century under the thundering ministrations of Peter Cartwright. That nothing might be lacking to make the movement a fact in history, it had acquired a name. As its disciples used the word "dispensation" freely, the public called them Dispensationists, and their faith Dispensationism, while their meetings received the whimsical title of Dispensaries.

Amid this clamor of daft delusion, Dr. Potter congratulated his people on the resurrection of the age of miracles, and preached in furtherance of the work with a fervid sincerity and eloquence rarely surpassed by men who support the claims of true religion and right reason. Had he brought the same zeal to bear against mathematics, it seems to me he might have shaken the popular faith in the multiplication-table. The wonders transacting in his church being noised abroad, the town was soon crowded with curious strangers, mostly laymen, but several clergymen, some anxious to believe, others ready to sneer, but all resolute to see. As might have been expected, the nature

of the excitement alarmed the wiser pastors of the vicinity for the cause of Orthodoxy. They saw that several of the asserted miracles were simply hoaxes or delusions; they suspected that the unknown tongues might be nothing but the senseless bubbling of overheated brain-pans; they perceived that the Doctor in his enthusiastic flights was soaring clear into the murky clouds of Spiritualism; and they dreaded lest the scoffing world should make a weapon out of these absurdities for an attack upon the Christian faith. They began to preach against the fanaticism; and, of course, my friend denounced them as infidels. High war ensued among the principalities and powers of theology in all that portion of Yankee-*dom*.

The reaction roused by the unbelieving clergymen reached the Doctor's congregation, and emboldened all the sensible members to combine into an anti-miracle party. At a meeting of these persons a committee was appointed to wait upon the pastor and respectfully request him to dismiss Riley, to cease his efforts after the supernatural, and to return to his former profitable manner of ministration. Dr. Potter was amazed and indignant; he replied, that he should preach the truth as it was revealed to himself; he scouted the dictation of the committee, and fell back upon the solemn duty of his office; he ended by informing the gentlemen that they were unbelievers and materialists. Naturally the dissenters grew all the more fractious for this currying, and held another meeting, in which the reaction kicked up higher than ever. Being resolved now to proceed to extremities, and, if necessary, to form a new congregation, they drew up the following recantation and sent it to Dr. Potter,—not with any hope that he would put his name to it, but for the purpose of ridiculing his infatuation and driving him to resign his pulpit.

"I, the undersigned, pastor of the First Church in Troubleton, having been led far from the truth by the absurdities of modern miracleism and spiritualism, and

having seen the error of my ways, do penitently subscribe to the accompanying articles.

"1st. I promise to cease all intercourse with a blasphemous blockhead named John M. Riley, who has been the human cause of my downfall.

"2d. I promise to avoid in future all rhapsodies, ecstasies, frenzies, and whimses which throw ridicule on true religion by caricaturing its influences.

"3d. I promise to regard with the profoundest contempt and indifference both my own dreams or somnambulisms and those of other people.

"4th. I promise not to unveil the secret things of Infinity, nor to encourage others to unveil them, but to mind my own finite business, and to rest satisfied with the revelations that are contained in the Bible.

"5th. I promise not to speak unknown tongues as long as I can speak English, and not to listen to other people who commit the like absurdity, unless I know them to be Frenchmen or Dutchmen or other foreigners of some human species.

"6th. I promise not to heal the sick by any unnatural and miraculous means, but rather to call in for their aid properly educated physicians, giving the preference to those of the allopathic persuasion.

"7th. I promise not to work signs in heaven nor wonders on earth, but to let all things take the course allotted to them by a good and wise Providence."

Of course Dr. Potter looked upon this production as the height of irreverence and irreligion, and proposed to excommunicate the authors of it. Hence the dissenters declared themselves seceders, and took immediate steps to form a new society.

It was at this stage of the excitement that I returned to Troubleton and made my call upon the Doctor. I felt anxious to save my old friend and worthy pastor. I saw, that, if he continued in his present courses, he would strip himself, one after the other, of his influence, his position, his religion, and his reason. That

very evening, after the usual conference-meeting was over, I called again on him, and found him in a truly lyrical frame of spirit.

"Ah, my dear friend, there is no end to it!" exclaimed he. "The doors are opening, one beyond another. Wonder shows forth after wonder, miracle after miracle. Behind the veil! behind the veil!"

"Indeed!" said I, rather vexed. "You'll find yourself behind a grate some day."

"There is now no question of the physical value as well as the spiritual sublimity of these revelations," he continued, without observing my sneer. "Life and death, the sparing of precious blood, the prevention of crime, the punishment of the guilty, — you can appreciate these things, I presume."

"When I am in my senses," returned I. "But what is the row? if I may use that worldly expression. Has Mr. John M. Riley been brought to confess any state-prison offences?"

"Ah, Elderkin!" sighed the Doctor, letting go my hand with a look of sad reproach. "But no: you cannot remain forever in this skepticism; you will be brought over to us before long. Let me tell you what has happened. But, remember, you must keep the secret until to-morrow, as you value precious lives. Mr. Riley has just left me. He has made me a revelation, a prophecy, which will be proof to all men of the origin of our present experiences. He has had a vision, thrice repeated. It foretold that this very night a robbery and murder would be attempted in the city of New Haven. The evil drama will open between two and three o'clock. There will be three burglars. The house threatened is situated in the suburbs, to the east of the city, and about a mile from the colleges."

"Is it? And what are you going to do about it? — telegraph?"

"No. We will be there in person. We will ourselves prevent the crime and seize the criminals. I shall have a word in season for that family, Sir. I wish to

improve the occasion for its conversion to a full belief in these sublime mysteries. Mr. Riley, with three of my people, will meet me at the station. We shall be in New Haven by eleven, stay an hour or two in some hotel, and at half past one go to the house."

"My dear Sir, I remonstrate," exclaimed I. "You will get laughed at. You will get shot at. You will get into disgrace. You will get into jail. For pity's sake, give up this quixotic expedition, and grant me an absolution before the fact for kicking Riley out of doors."

The Doctor turned his face away from me and walked to a window. His air of profound, yet uncomplaining grief, struck me with compunction, and, following him, I held out my hand.

"Come, excuse me," said I. "Look here, — if this comes true, I'll quit geology and go to working miracles to-morrow. I'll come over to your faith, if I have to wade through my reason."

"Will you?" he responded, joyfully. "You will never repent it. There, shake hands. I am not angry. Your unbelief is natural, though saddening. To-morrow night, then, come and see me again and I will tell you the whole adventure. I must be off to the train now. Excuse me for leaving you. Would you like to sit here awhile and look at Humby's 'Modern Miracles'?"

"No, thank you. Prefer to look at your miracles. I am going with you."

"Going with me? Are you? I'm delighted!" he cried, not in the least startled or embarrassed by the proposition. "Now you shall see with your own eyes."

"Yes, if it isn't too dark, I will, — word of a geologist. Well, shall we start?"

"But won't you have a weapon? We go armed, of course, inasmuch as the scoundrels may show fight when we come to arrest them."

"I don't want it," said I, gently pushing away a pocket-pistol, about as dangerous as a squirt. "All the burglars

you see to-night may shoot at me, and welcome."

We walked to the station, and found our party waiting for the Boston train. The Doctor introduced me, with much affectionate effusion and many particulars concerning my family and early history, to the man of unearthly lingo. He was a tall, lean, flat-chested, cadaverous being, of about forty, his sandy hair nicely sleeked, thin yellow whiskers spattered on his hollow cheeks, his nose short and snub, his face small, wilted, and so freckled that it could hardly be said to have a complexion. In short, by its littleness, by its yellowness, by its appearance of dusty dryness, this singular physiognomy reminded me so strongly of a pinch of snuff, that I almost sneezed at sight of it. His diminutive green eyes were fringed with ragged flaxen lashes, and seemed to be very loose in their reddened lids, as if he could cry them out at the shortest notice. I observed that he never looked his interlocutors in the face, but stared chiefly at their feet, as if surmising whether they would kick, or gazed into remote distance, as if trying to see round the world and get a view of his own back. His dress was a full suit of black, fine in texture, but bagging about him in a way that made you wonder whether he had not lost a hundred-weight or so in training for his spiritual battles. His manners were quiet, and would not have been disagreeable, but for an air of uncomfortably stiff solemnity, which draped him from head to foot like a robe of moral oilcloth, and might almost be said to rustle audibly. Whether he was a practical joker, a swindler, a fanatic, or a madman, my spiritual vision was not keen enough to discover at first sight. Beside him and ourselves the party consisted of a butcher, a baker, and a candlestick-maker, all members of the Doctor's church and indefatigable workers of miracles, — plain men and foolish, but respectable in standing and sincere in their folly. Mr. Riley was so commonplace as to address me in English, probably because he wanted an answer.

"Do you accompany us, Sir, on this blessed crusade against crime and unbelief?" he asked.

"My friend, Dr. Potter, has granted me that inestimable privilege," responded I.

"I hope — in fact, I firmly believe — that Providence will aid us," he continued.

"I hope so, too," said I. "But wouldn't it be advisable to have a policeman, too?"

"By no means! Certainly not!" he returned, with considerable excitement. "All we want is a band of saints, of justified souls, of men fitted for the martyr's crown."

"Oh, that's all, is it, Sir? Well, shall we get into the cars? There they are."

The train was full, and our party had to scatter, but Mr. Riley and I got seats together.

"I have not seen you at our meetings, Sir," he continued. "Allow me to ask, are you a believer in Dispensationalism?"

"Not so strong as I might be. However, I have been absent from Troubleton for three months, and only returned yesterday."

"Ah! you have lost precious opportunities. You must lose no more. Life is short."

"And uncertain," I added. "Especially in railroad travelling."

"My dear Sir, I hope this road is prudently conducted," he said, with a look of some little anxiety.

"Not many accidents," I answered. "And then, you know, we are always in the hands of Providence. No fear of slipping through the fingers unnoticed."

"No, Sir, certainly not," he remarked, wrapping his moral oilcloth about him again. "Have you felt any extraordinary spiritual impressions since you returned?"

"Nothing lasting, I think. Nothing that a night's sleep wouldn't take off the edge of."

"No desire to lay hands on some sin-

stricken wretch and cure him of the evil that is in him?"

Now I did feel a strong desire to lay hands on this very Riley and pull out his snub nose for him; but I forbore to say so, and simply shook my head despondently.

"I know, that, if you would come to our Dispensaries and join in our exercises, you would be sensible of a softening," he observed.

"Yes, in the brain," thought I; but I still remained silent.

"You should meditate upon the value of manifestations, unknown tongues, the laying on of hands, visions, ecstasies, and such like matters," he continued.

"So I have," said I.

"And with no result?"

"Nothing that particularly astonishes me. I think that I hate humbug more than I did."

"That's a good sign," he replied, after a brief, sharp glance of inquiry at me. "This vain world is a humbug, as you phrase it. Dead Orthodoxy is a humbug. Human reason is a humbug. We are all humbugs, unless we are made true by Dispensation. This age will be a humbug, unless it can be wrought into an age of miracles. If you could be brought to hate earnestly all these things, it would be a hopeful sign."

I was on the point of disputing the hypothesis, but prudently checked myself. Suddenly he removed my hat and put his broad, hard palm upon my organs with an impudent dexterity which made me doubt whether he had not been a pickpocket or a phrenological lecturer.

"I lay my hand upon your head and desire you to note the effect," said he. "Can no life come into these dry bones? Shall they not live? Yea, they shall live! Do you feel no irrepressible emotion, Sir, — no shaking?"

"Not a shake," replied I, — "unless it be from the bad grading."

"Evil is mighty, but the good must eventually prevail," he observed, impatiently cocking his snub nose toward heaven.

"I believe you are quite right in both propositions," I admitted. "Cardinal points of mine. But excuse me, Sir, if you could spare my hat, I should like to put it on my head."

I had lost patience with the man, partly because it irks me to have strangers take liberties with my person, and also because I had reached the conclusion that he was simply a shallow dissembler and rascal. In a minute more I had cause to reconsider my charge of hypocrisy, and to question whether he might not lay claim to the nobler distinction of lunacy. The conductor came down the car, picking out Troubletonians with his undeceivable eye, and leaned toward us with outstretched fingers. Mr. Riley rose to his whole gaunt height at a jerk, and laid his hand on the official's arm with a fierce, bony gripe, which seemed to startle him as if it were the clutch of a skeleton.

"There is my ticket," said he. "Where is yours? Have you one for the Holy City? None? Then you are lost, lost, lost!"

The last words rose to a high, clear shriek, which pierced the heavy rumble of the train and rang throughout the car. The conductor, in spite of the coolness which becomes second nature to men of his profession, turned slightly pale and shrank back before this wild apostrophe, with a thrill of spiritual horror at the solemn meaning of the words, (I thought,) and not because he considered the man a maniac. The fanaticism of Troubleton had already flown far and cast a vague shadow of dread over a large community.

Turning abruptly from the conductor, my companion flung out his long arms toward the staring passengers, and continued in his strident, startling tenor: — "I have warned him. I call you all to witness that I have warned this man of his fearful peril. His blood be on his own head! The blood of your souls will be upon your heads, unless you turn to Dispensationism. I have said it. Amen!"

Before he had sat down again I was

in the alley on my way to another car, not anxious to become known as the intimate of this extraordinary apostle. I found an empty seat by the Doctor, dropped into it, and told my story.

"My dear friend, give the fellow up," I concluded. "He's as mad as he can possibly be."

"So Festus thought of Paul," returned my poor comrade, with hopeless fatuity.

"Festus be d——d!" said I, losing my temper, and swearing for the first time since I graduated.

"I fear he was so," remarked the Doctor, severely. "Let me urge you to take warning from his fate."

"I beg your pardon, and that of Festus," I apologized. "But when I see you losing your reason, I can't keep my patience, and don't wish to."

"You will wonder at these feelings before many hours," he responded gently. "To-morrow you will be a believer."

"That makes no difference with me now," said I. "I am just as skeptical as if I hadn't a chance of conversion. Why, Doctor, — well, come now, — I'll argue the case with you. In the first place, all Church history is against you. There isn't a respectable author who upholds the doctrine of modern miracles."

"Mistake!" he exclaimed. "I wish I had you in my library. I could face you with writer on writer, fact on fact, all supporting my views. I can prove that miracles have not ceased for eighteen centuries; that they appeared abundantly in the days of the venerable Catholic fathers; that a stream of prophecies and healings and tongues ran clear through the Dark Ages down to the Reformation; that the superhuman influence flamed in the dreams of Huss, the ecstasies of Xavier, and the marvels of Fox and Usher. Look at the French Prophets, or Tremblers of the Cevennes, who had prophesyings and healings and discoverings of spirits and tongues and interpretations. Look at the ecstatic Jansenists, or Convulsionists of St. Médard, who were bless-

ed with the same holy gifts. Look at the Quakers, from Fox downward, who have held it as a constant principle to expect powers, revelations, discernings of spirits, and instantaneous healings of diseases. Why, here we are in our own days; here we are with our chain of miracles still unbroken; here we are in the midst of this geological and unbelieving nineteenth century."

"Yes, here we are," said I; "and we must make the best of it. It's a bad affair, of course, to live in scientific times; and it's a great pity that we were not born in the Dark Ages; but it is too late to try to help it."

"Ah! you answer with a sneer; you are materialistic and infidel."

"Stop, Doctor! Let me make a bargain with you. If you won't call me names, I won't call you names. You are not in the pulpit now, and you have no right to domineer over me."

"But what do you say to all these signs and wonders which I have mentioned?"

"What do you say to the Rochester knockings and the Stratford mysteries and the Mormon miracles?"

"All deceptions, or works of the Devil," affirmed the Doctor, without a moment's hesitation.

"Excuse me for smiling," I replied. "It is pleasant to observe what a quick spirit you have for discerning the true wonders from the false."

"You will see, you will see," he answered, and relapsed into a grave silence.

We reached New Haven and took rooms at the New Haven Hotel. I had anticipated a little nap before going out on our expedition; but I had not made allowance for the proselyting zeal of Dispensationists. My poor bewildered friend Potter uttered something which he sincerely meant to be a prayer, but which sounded to me painfully like blasphemy. Next they sang a queer hymn of theirs in discordant chorus. After that, Mr. Riley rolled up his sleeves and his eyes, flung his arms about, wept and shrieked

unknown tongues for twenty minutes. Then the butcher, the baker, and candlestick-maker had a combined convulsion on the floor, rolling over each other and upsetting furniture. By this time the hotel was roused and the landlord made us a call.

"What the Old Harry are you about?" he demanded, angrily. "Don't you know it's after midnight?"

"We are holding a Dispensary," said Mr. Riley, solemnly.

"Well, I'll dispense with your company, if you don't stop it," returned mine host. "There's a nervous lady in the next room, and you've worried her into fits."

"Let me see her," cried the Doctor, eagerly. "It may be that the power of our faith is upon her. Which is her door?"

"You're drunk, Sir," returned the landlord, severely. "Keep quiet now, or I'll have you put to bed by the porters."

So saying, he shut the door and went muttering down-stairs. This untoward incident put an end to our exercises. A whispered palaver on Dispensationism followed, during which I tilted my chair back against the wall and stole a pleasant little nap.

It was about half past one when the Doctor shook me up and said, "It is time." We slipped down-stairs in our stockinged feet, got the front-door open without awakening the porter, shut it carefully after us, and put on our boots outside. Mr. Riley immediately started up College Street, which, as all the world is aware, runs northerly to the Canal Railroad, where it changes to Prospect Street and goes off in a half-wild state up country. At the end of College Street we left the city behind us, struck the rail-track, forsook that presently for a desert sort of road known as Canal Street, and kept on in a northwesterly direction for half a mile farther. It was a dark, cool, and blustering night, such as the New Englanders are very apt to have on the second of April. The wind blew violently down the open country, shaking the scattered trees as if it meant to wake

them instantly out of their winter's slumber, and screeching in the murky distances like a tomcat of the housetops, or rather like a continent of tomcats. The Doctor lost his hat, chased it a few rods, and then gave it up, lest he should miss his burglars. Once I halted and watched, thinking that I saw two or three dark shapes dogging us not far behind, but concluded that I had been deceived by the black-art of magical Night, and hastened on after my crazy comrades. Presently Riley stopped, pointed to a dark mass on our right which seemed about large enough to be a story-and-a-half cottage, and whispered, "Here we are, brethren."

"No doubt about that," said I. "But what the mischief is to come of it?"

"Oh! let's go back and call the police," urged the baker, in a tremulous gurgle.

"Too late!" returned Riley. "It is given to me to see the burglars. They are inside. They are taking the silver out of the closet. There will be murder in five minutes."

"If there must be murder, why, of course we ought to have a hand in it," I suggested. "Our motives at least will be good."

"Right!" said Riley. "Come on, brethren! We must prove our faith by our works."

But the baker hung back in a most dough-faced fashion, while the butcher and the candlestick-maker encouraged him in his cowardice. At last it was agreed that this unheroic trio should wait in the yard as a reserve, while Riley, the Doctor, and I went in to worry the burglars. Leaving the weaker brethren in a clump of evergreen shrubbery, we, the forlorn-hope, stole around the house to get at a back-door which Prophet Riley had plainly seen in his dream, and which he foretold us we should find unlocked. I was not much amazed to discover a back-door, inasmuch as most houses have one, but I really was surprised to learn that it was unfastened. My astonishment at this circumstance, however, was over-

balanced by my alarm at finding that the Doctor still persisted in his intention of entering; for I had hoped that at the last moment his faith would give way, and let him slide down from the elevation of his ridiculous and reckless purpose.

"But you are not really going in?" I whispered, jerking at his coat-tails.

"Certainly," he replied. "The robbers are surely there. The door was unlocked."

"Mere carelessness of the servants. Stop! Come back! Nonsense! Madness! You'll get into a scrape. Respectable family. Good gracious, what a pack of fools!"

While I was rapidly muttering these observations, he was pulling away from me and stealing into the house after his prophet. Finding that there was no stopping him, I followed, in obedience, perhaps, to that great and no doubt beneficent, but as yet unexplained, instinct which causes sheep to leap after their bellwether. We were in a basement, or semi-subterranean story. I felt the walls of a narrow passage on either side of me, and can swear to a kitchen near by, for I smelt its cooking-range. I walked on the foremost end of my toes, and would have paid five dollars for a pair of list slippers. Rather than take another such little promenade as I had in that passage, I would submit to be placed on the middle sleeper of a railroad-bridge, with an express-train coming at me without a cowcatcher. Presently I overtook the Doctor's coat-tails again, and found that they were ascending a staircase. At the top of the stairs was a door, and on the other side of the door was a room, the uses of which I won't undertake to swear to, for I never saw it, although I was in it longer than I wanted to be. All I know is that it seemed to be as full of chairs, and tables, and sofas, and sideboards, and stoves, and crickets, as if it had been a shop for second-hand furniture. I was just rubbing my shins after an encounter with a remarkably solid object, nature uncertain, when somebody near me fell over something with a crash and a groan.

Immediately somebody else seized me by the cravat and began to throttle me. Whoever it was, I floored him with a right-hander, and sent him across the other person, as I judged by the combined grunt, and the desperate, though dumb struggle which followed. Now there were two of them down, and how many standing I could not guess. An instant afterward, a muffled voice, like that of a man only half awake, shouted from a room behind me, "Who's there? Get out! I'm a-coming!" This seemed to encourage the individuals who were having a rough-and-tumble on the carpet, for they commenced roaring simultaneously, "Help! murder! thieves! fire!" without, however, relaxing hostilities for a moment.

The next pleasant incident was a pistol-shot, the ball of which whizzed so near my head that it made me dodge, although I have not the least notion who fired it or whom it was aimed at. Female screams and masculine shouts now sounded from various directions. Thinking that I had done all the good in my power, I concluded to get out of this confusion; but either the doorway by which we entered had suddenly walled itself up, or else I had lost my reckoning; for, stumble where I would, feel about as I would, I could not find it. I did, indeed, come to an opening in the wall, but there was no staircase the other side of it, and it simply introduced me to another invisible apartment. I had no chance to reflect upon the matter and decide of my own free will whether I would go in or not. A sudden rush of fighting, howling persons swept me along, jammed me against a pillar, pushed me over a table, and forced me to engage in a furious struggle, exceedingly awkward by reason of the darkness and the extraordinary amount of furniture. A tremendous punch in the side of the head upset me and made me lose my temper. Rising in a rage, I grappled some man, tripped up his heels, got on his chest, and never left off belaboring him until I felt pretty sure that he would keep quiet during the rest of the

soirée. I hope sincerely that this suffering individual was Mr. John M. Riley; but, from the rotundity of stomach which I bestrode, I very much fear that it was the Doctor.

All this while the house resounded with outcries of, "Who's there?" "What's the matter?" "Father!" "Henry!" "Jenny!" "Maria!" "Thieves!" "Murder!" "Police!" and so forth. Of course I did not feel disposed to tell who was there; and in actual fact I could not have explained what was the matter. Accordingly I left all these inquisitive people unsatisfied, and busied myself solely with my fallen antagonist. Quitting him at last in a state of quiescence, I knocked over a person who had been attacking me in the rear, and then blundered into a passage, which I suppose to have been the front-hall, just as a light glimmered up in the rooms behind me. It gives one a very odd sensation to tread on a prostrate body, not knowing whether it is dead or alive, whether it is a man or a woman. I had that sensation in ascending a stairway which seemed to be the only egress from the aforesaid passage. The individual made no movement, and I did not stop to count his or her pulses. Without feeling at all disposed to take my oath on the matter, I rather suspect that a negro servant-girl had fainted away there in the act of trying to run off in her nightgown. Upstairs I tumbled, resolved to get upon the roof and slide down the lightning-rod, or else jump from a window. Pushing open a door, which I fell against, I found myself in a pretty little bedroom lighted by a single candle, articles of female costume hanging across chairs and scattered over dressing-tables, while on the floor, just as she had swooned in her terror, lay a blonde girl of nineteen or twenty, pale as marble, but beautiful. Right through my alarm jarred a throb of mingled self-reproach and pity and admiration. I tossed a pile of bedclothes over her, kissed the long light-brown hair which rippled on the straw matting, daguerreotypied the face on my memory with a glance,

blew out the light, opened a window, and slipped out of it. It is unpleasant to drop through darkness, not knowing how far you will fall, nor whether you will not alight on iron pickets. Fortunately, I came down in a fresh flower-bed, with no unpleasant result, except a sensation of having nearly bitten my tongue off. I had scarcely steadied myself on my feet, when a tall figure made a rush from some near ambush and seized me by the collar. Supposing him to be one of our reserve force, I quietly suffered him to lead me forward, and was on the point of whispering my name, when my eye caught a glimmer of metal, and I knew that I was in the hands of a policeman.

"Come in and help," said I. "The house is full of rascals."

Thinking me one of the family, he loosed his hold on my broadcloth and hurried away to the back-door. Whoever reads this story has already taken it for granted that I did not follow him, but that I did, on the contrary, make for the city and never cease travelling until I had reached the hotel. Let no man reproach me with forsaking my friend, the Doctor, in his extremity. I was brought up to reverence the law and to entertain a virtuous terror of policemen; and, besides, what could I have effected in that horrible labyrinth of dark rooms and multitudinous furniture? I rang up the porter, went to bed, and lay awake all the rest of the night, listening for the return of my companions. No one came: no Doctor, no Riley, no butcher, no baker, no candlestick-maker. I was apparently the sole survivor of our little army. In the morning I walked over to the police-station, peeped cautiously through the grated door of a long room where the night's gatherings are lodged, and discovered my five friends, tattered and bruised, but holding a lively Dispensary in one corner. From that moment I despaired of the Doctor and resolved to let him manage his own monomania. I was still peeping when two of the police and a sly-looking man in citizen's dress came up and stared boldly at the prisoners.

"Well, Old Cock, do you see your game?" asked one of the "force."

"Thaht's him," returned the Old Cock, speaking with the soft drawl of the New York cockney. "Tall fellah thah with thah black eye, thaht's a-goin' it now. Thundah, what a roarah!"

"Well, what is he?" inquired the second of the New-Haveners.

"Joseph Hull, 'ligious lunatic," said the Old Cock. "Was in thah Bloomingdale Asylum. Cut off one night about foah months ago and stole a suit o' clothes that belonged to John M. Riley, with a lot o' money and papahs and lettahs in thah pockets. How'd you get hold of him?"

"Broke into a house eout here last night," related the first New-Havener. "He and them other fellers, and one more that we ha'n't found. I was on my beat 'bout one o'clock, and see 'em puttin' up College Street full chisel. I thought they looked kinder dangerous. So I called Doolittle here, and Jarvis, and Jacobs, and we after 'em. Chased 'em 'bout a mild and treed 'em at Square Russell's, way up Canal, eout in the country. Three was in the yard and gin right up without doublin' a fist, though they had their pockets chuck full o' little pistols. We locked 'em into the cellar, and then went upstairs, where there was a devil of a yellin' and fightin'. Hanged if I know what they come there for. They'd been pitchin' into one another and knockin' one another's heads off, besides smashin' furnichy and chimbly crockery, but hadn't stole a thing. The fat one and the long one—them two with white chokers—was lyin' on the floor pootty much used up. There was another that got up-stairs and jumped out a winder. Jarvis was outside and collared him, but thought he was Russell's son-in-law,—ho, ho, ho!—and let him off,—ho, ho, ho! Tell ye, Jarvis feels thunderin' small 'bout it. Ha'n't been reound this mornin'."

"Well, I'll leave my warrant with your big-wigs, and come after my man when they've got through with him," said the New York detective, turning away.

Fearing the return of the enlightened Jarvis, I now left, and, taking the first train to Troubleton, informed some of the leading Dispensationists concerning their pastor's calamity. By dint of heavy bail and strong representations they saved him, together with the butcher and baker and candlestick-maker, from the disgrace of prison and the lunatic asylum. But the adventure was the ruin of Dispensationism. Mr. Joseph Hull had to give up Mr. John M. Riley's valuables, and return to his seclusion at Bloomingdale. Deprived of the apostle who had set them on fire, and overwhelmed by public ridicule, the Dispensationists lost their faith, got ashamed of their minister, and turned him adrift. He disappeared in the great whirl of men and other circumstances which fills this wonderful country. From time to time, during five years, I had made inquiries concerning him of mineralogists, botanists, and other vagrant characters, without getting the smallest hint as to his whereabouts. At last he had turned up as the private prophet of three middle-aged widows.

"Jenny," said I to my wife, "do you remember the night I frightened you so and kissed you as you lay in a fainting-fit?"

"You always say you kissed me, but I don't believe it," returned that dear woman whom I love, honor, and cherish. "Yes, I remember the night well enough."

"Well, that poor Doctor Potter, who was my Mahomet on that occasion, and led me to victory in your parlor, and was the indirect means of my getting my houri,—I have heard from him. He is our next neighbor."

"Mercy on us, Frederic! I hope not! What mischief won't he do to people who are so handy?"

"Don't be worried, my dear," said I. "I sha'n't go over to his religion again,—unless, indeed, you should insist upon it. But here he is, and still a supernaturalist. I am anxious to know just how mad he is. I shall call on him in a day or two."

So I did. One of the three widows

met me with a tearful countenance and told me that Doctor Potter had disappeared. So he had. I think that he was ashamed to meet me again, and therefore ran away. The widows thought not. They came to the conclusion, that, like Enoch and Elijah before him, he had been translated. They cried for him a good deal more than he was worth, quarrelled scandalously among themselves, sold their house at a loss, and dispersed. I know nothing more of them. Neither do I know anything further of my neighbor, the prophet.

THE PILOT'S STORY.

I.

It was a story the pilot told, with his back to his hearers,—
 Keeping his hand on the wheel and his eye on the globe of the jack-staff,
 Holding the boat to the shore and out of the sweep of the current,
 Lightly turning aside for the heavy logs of the drift-wood,
 Widely shunning the snags that made us sardonic obeisance.

II.

All the soft, damp air was full of delicate perfume
 From the young willows in bloom on either bank of the river,—
 Faint, delicious fragrance, trancing the indolent senses
 In a luxurious dream of the river and land of the lotus.
 Not yet out of the west the roses of sunset were withered;
 In the deep blue above light clouds of gold and of crimson
 Floated in slumber serene, and the restless river beneath them
 Rushed away to the sea with a vision of rest in its bosom.
 Far on the eastern shore lay dimly the swamps of the cypress;
 Dimly before us the islands grew from the river's expanses,—
 Beautiful, wood-grown isles,— with the gleam of the swart inundation
 Seen through the swaying boughs and slender trunks of their willows;
 And on the shore beside us the cotton-trees rose in the evening,
 Phantom-like, yearningly, wearily, with the inscrutable sadness
 Of the mute races of trees. While hoarsely the steam from her 'scape-pipes
 Shouted, then whispered a moment, then shouted again to the silence,
 Trembling through all her frame with the mighty pulse of her engines,
 Slowly the boat ascended the swollen and broad Mississippi,
 Bank-full, sweeping on, with nearing masses of drift-wood,
 Daintily breathed about with hazes of silvery vapor,
 Where in his arrowy flight the twittering swallow alighted,
 And the belated blackbird paused on the way to its nestlings.

III.

It was the pilot's story: — "They both came aboard there, at Cairo,
 From a New Orleans boat, and took passage with us for Saint Louis.
 She was a beautiful woman, with just enough blood from her mother,
 Darkening her eyes and her hair, to make her race known to a trader:

You would have thought she was white. The man that was with her,— you see such,—

Weakly good-natured and kind, and weakly good-natured and vicious,
Slender of body and soul, fit neither for loving nor hating.

I was a youngster then, and only learning the river,—

Not over-fond of the wheel. I used to watch them at *monte*,

Down in the cabin at night, and learned to know all of the gamblers.

So when I saw this weak one staking his money against them,

Betting upon the turn of the cards, I knew what was coming :

They never left their pigeons a single feather to fly with.

Next day I saw them together,— the stranger and one of the gamblers :

Picturesque rascal he was, with long black hair and moustaches,

Black slouch hat drawn down to his eyes from his villanous forehead :

On together they moved, still earnestly talking in whispers,

On toward the fore-castle, where sat the woman alone by the gangway.

Roused by the fall of feet, she turned, and, beholding her master,

Greeted him with a smile that was more like a wife's than another's,

Rose to meet him fondly, and then, with the dread apprehension

Always haunting the slave, fell her eye on the face of the gambler,

Dark and lustful and fierce and full of merciless cunning.

Something was spoken so low that I could not hear what the words were ;

Only the woman started, and looked from one to the other,

With imploring eyes, bewildered hands, and a tremor

All through her frame: I saw her from where I was standing, she shook so.

'Say! is it so?' she cried. On the weak, white lips of her master

Died a sickly smile, and he said,— 'Louise, I have sold you.'

God is my judge! May I never see such a look of despairing,

Desolate anguish, as that which the woman cast on her master,

Gripping her breast with her little hands, as if he had stabbed her,

Standing in silence a space, as fixed as the Indian woman,

Carved out of wood, on the pilot-house of the old Pocahontas!

Then, with a gurgling moan, like the sound in the throat of the dying,

Came back her voice, that, rising, fluttered, through wild incoherence,

Into a terrible shriek that stopped my heart while she answered:—

'Sold me? sold me? sold — And you promised to give me my freedom!—

Promised me, for the sake of our little boy in Saint Louis!

What will you say to our boy, when he cries for me there in Saint Louis?

What will you say to our God?— Ah, you have been joking! I see it!—

No? God! God! He shall hear it,—and all of the angels in heaven,—

Even the devils in hell!—and none will believe when they hear it!

Sold me!'— Fell her voice with a thrilling wail, and in silence

Down she sank on the deck, and covered her face with her fingers."

IV.

In his story a moment the pilot paused, while we listened

To the salute of a boat, that, rounding the point of an island,

Flamed toward us with fires that seemed to burn from the waters,—

Stately and vast and swift, and borne on the heart of the current.

Then, with the mighty voice of a giant challenged to battle,

Rose the responsive whistle, and all the echoes of island,

Swamp-land, glade, and brake replied with a myriad clamor,

Like wild birds that are suddenly startled from slumber at midnight;

Then were at peace once more, and we heard the harsh cries of the peacocks
 Perched on a tree by a cabin-door, where the white-headed settler's
 White-headed children stood to look at the boat as it passed them,
 Passed them so near that we heard their happy talk and their laughter.
 Softly the sunset had faded, and now on the eastern horizon
 Hung, like a tear in the sky, the beautiful star of the evening.

V.

Still with his back to us standing, the pilot went on with his story :—
 “Instantly, all the people, with looks of reproach and compassion,
 Flocked round the prostrate woman. The children cried, and their mothers
 Hugged them tight to their breasts; but the gambler said to the captain,—
 ‘Put me off there at the town that lies round the bend of the river.
 Here, you! rise at once, and be ready now to go with me.’
 Roughly he seized the woman's arm and strove to uplift her.
 She — she seemed not to heed him, but rose like one that is dreaming,
 Slid from his grasp, and fleetly mounted the steps of the gangway,
 Up to the hurricane-deck, in silence, without lamentation.
 Straight to the stern of the boat, where the wheel was, she ran, and the people
 Followed her fast till she turned and stood at bay for a moment,
 Looking them in the face, and in the face of the gambler.
 Not one to save her, — not one of all the compassionate people!
 Not one to save her, of all the pitying angels in heaven!
 Not one bolt of God to strike him dead there before her!
 Wildly she waved him back, we waiting in silence and horror.
 Over the swarthy face of the gambler a pallor of passion
 Passed, like a gleam of lightning over the west in the night-time.
 White, she stood, and mute, till he put forth his hand to secure her;
 Then she turned and leaped, — in mid air fluttered a moment, —
 Down, there, whirling, fell, like a broken-winged bird from a tree-top,
 Down on the cruel wheel, that caught her, and hurled her, and crushed her,
 And in the foaming water plunged her, and hid her forever.”

VI.

Still with his back to us all the pilot stood, but we heard him
 Swallowing hard, as he pulled the bell-rope to stop her. Then, turning, —
 “This is the place where it happened,” brokenly whispered the pilot.
 “Somehow, I never like to go by here alone in the night-time.”
 Darkly the Mississippi flowed by the town that lay in the starlight,
 Cheerful with lamps. Below we could hear them reversing the engines,
 And the great boat glided up to the shore like a giant exhausted.
 Heavily sighed her pipes. Broad over the swamps to the eastward
 Shone the full moon, and turned our far-trembling wake into silver.
 All was serene and calm, but the odorous breath of the willows
 Smote like the subtile breath of an infinite sorrow upon us.

A DAY WITH THE DEAD.

“GOOD morning!” said the old custodian, as he stood in the door of the lodge, brushing out with his knuckles the cobwebs of sleep entangled in his eyelashes, and ventilating the apartments of his fleshly tabernacle with prolonged oscillations. “You are on hand early *this* time, a’n’t you? You’re the first live man I’ve seen since I got up.”

So saying, he vanished, and reappearing in a moment with a huge brass key, entered the arch, unlocked the gate which closed the aperture fronting the east like the cover of a port-hole, and sent it with a heavy push wide open.

Wading through the flood of sunlight which poured into the passage-way — But stop! I was about, — who knows? — in imitation of divers admired models, to tell the reader in choicest poetic diction how the City of the Dead, with its magnificent streets, shining palaces, and lofty monuments, burst upon my dazzled vision, — how I walked for half a mile along a spacious avenue, beneath an arcade of giant elms hung with wreaths of mist and vocal with singing, feathery fruit, — past marble tombs whose yards were filled with bright and fragrant flowers, — among waving grassy knolls spread with the silver nets of spiders and sparkling dew, — through vales of cool twilight and ravines of sombre dusk, — and so on for more than a page, until finally, step by step, through laboriously elegant sentences, I worked my way up to the top of a lofty hill, the view from which to be graphically described as a picture and a poem dissolved together into mingled glory and mirage, and inundating with a billowy sea of beauty the landscape below; — and then further depicting to the delighted fancy of the reader, how on one side was a most remarkable river, — such as was never heard of before, probably, — in fact, a web of water framed between the hills, its rushing warp-currents, as it rolled along, woven by smok-

ing steam-shuttles with a woof of foam, — how, at the entrance of a bay, flocks of snowy sails, with black, shining beaks, and sleek, unruffled plumage, were swimming out to sea, — how another river, not quite so unique as the last, was also in sight, coiling among emerald steeps and crags and precipices and forest, — while beyond, green woodlands, checkered fields, groves, orchards, villages, hills, farms, and villas, all glowed in an exceedingly charming manner in the morning sun; — and then, still further, to say something as brilliant as possible about a certain city, designated as the Great Metropolis, — how it resembled, perhaps, a Cyclopean type-form, with blocks of buildings for letters, domes, turrets, and towers for punctuation-points, church-spires for interrogation and exclamation marks, and squares and avenues for division-spaces between the paragraphs, set up and leaded with streets into a vast editorial page of original matter on Commerce and Manufactures, rolled every morning with the ink of toil, and printing before night an edition of results circulated to the remotest quarters of the globe. And the tall chimneys yonder were to be called — let me see — oh, the smoking cathedral-towers of the Holy Catholic Church of Labor, islanding the air with clouds of incense more grateful to the Deity than the fume of priest-swung censers. All this, and much more of a similar nature, including an eloquent address to the ocean hard by, it is possible I was about to say. But, unwilling to smother the reader beneath a mountain of rhetorical flowers, — which accident might happen, should I resolve to be “equal to the occasion,” — I shall contain myself, and state, in the way of a curt preface, in plain prose, and directly to the point, that I entered a remarkably large and populous cemetery, no matter where, very early one morning, — in fact, you have the gate-keeper’s word for it

that I was the first person there,— that I climbed to the summit of a high hill and enjoyed the view of a beautiful landscape, just after sunrise; and with this finally said and done, let us proceed.

As I stood listening to the music of the sea-breeze in the pine-forests below, and watching the ships sinking into the ocean from view or dropping through the sky into sight at the rim of the horizon, and the clouds changing their picturesque sunrise-dress for a uniform of sober white, forming into rank and file, marching and countermarching, sending off scouts into the far distance and foraging-parties to scour the yellow fields of air, pitching their tents and placing sentinels on guard around the camp,— amusing myself with fashioning quaint, arabesque fancies,— a sort of intellectual whittling-habit I have when idle,— I was roused from my reverie by the creaking of an iron gate.

Descending a few steps into a cluster of trees, I saw through their leafy lattice-work, in an inclosure ornamented with rose-bushes and other flowering shrubs, a young woman, richly dressed in black, kneeling by the side of a new-made grave. The mound, evidently covering a full-grown person, was nicely laid at the top with carefully cut sods, the dark edges of which projected a little over the lighter-colored gravel that sloped gradually down to the greensward. I was not long in becoming satisfied that the person I saw was a young widow at the grave of her husband, now three or four weeks dead, hither on her accustomed morning visit to display her love and affection for his memory.

Bowing her head, for a few moments she gave way to sobs and weeping, and then, removing the cover from a little willow basket, which stood by her side, she took from it handfuls of bright flowers, and began to adorn the table of sods upon the top of the mound.

As I regard her thus employed, weaving the tokens of her affection into garlands, chaplets, and fanciful devices, arranging their symbolic characters into interpretable monograms and hieroglyphs,

matching their colors and blending their hues and shades with the skill of an artist, she becomes more and more absorbed in her work, the tears disappear from her eyes, and the morning light flushes her pale and beautiful face. Is she thinking now, I wonder, of the dead husband, or of something else? What has she found among the flowers so consoling? Do they suggest pleasant fancies, or recall the memories of happy days? Have they, perhaps, a double meaning,— souvenirs of felicity as well as symbols of sorrow? Are they opiates obliterating actual suffering, or prophets uttering hopeful predictions? Or is it none of these things, and does she find her work pleasant only because duty makes its performance cheerful labor? I cannot say *what* it is, but *something* has assuaged her grief; for I see her smiling now, as she holds a rosebud in her fingers, and gazes at it abstractedly; and her thoughts and feelings, whatever they may be, are indubitably not of a mournful character;— in fact, I am sure that she never was happier in her life than she is at this moment.

“Happy, do you say?”

Yes, I say happy.

The nature of woman, it is conceded by all men, is a curious, interesting, and perplexing, if not, in respect of positive practical results, a most unsatisfactory study. But nothing puzzles us so much to comprehend as the fact just alluded to. The tenderest female constitution will sustain a burden of grief which would crush a robust and iron-nerved man, and drive him to despair and suicide. A woman rarely succumbs to a calamity; however sudden and overwhelming the initial shock may be, she revives and grows cheerful and happy under it in a way and to a degree marvellous to behold. What singular secret is there among the psychological mysteries of her nature which is able to account for this phenomenon?— A gentle, timid girl of sixteen, whom the sight of a spider or a live snake would have frightened into hysterics, I had once an opportunity, on a tour through Italy,

to observe, while she took little or no notice of other works of art, would gaze, as if fascinated, at the writhings of Laocoön and his sons in the folds and fangs of the serpents, at the sculptured death of the Gladiator, and even at the ghastly, repulsive pictures of martyrdoms and barbaric mutilations and tortures,—the hideous monstrosities of a diseased and degraded imagination found in the churches and convents of Rome, which made others turn their backs with a shivering of the bones and a creeping of the flesh. On expressing surprise at such a singular exhibition of taste, I received this innocent, unpremeditated reply:—“Why, I don’t like them; the sight of them almost freezes my blood; but—somehow I do like to look at them, *for I always feel better after it!*” Now is there not involved in this artless answer a possible explanation of the above-mentioned fact? Has not woman, hidden somewhere among her other (of course angelic) affections, a positive *love* of sickness, death, sorrow, and suffering, which man does not possess? Is not the pain they cause, in her case, qualified by actual pleasure? Do they not act as a stimulus upon her sensitive nervous system, and produce, somehow, a *delightfully intoxicated state of the feelings?* Would not this explain her otherwise unaccountable fondness for witnessing the execution of murderers, for the horrible in novels and the deaths and catastrophes in the newspapers, that she has a constitutional relish for such horrid things, and that she enjoys them, not because they are *in se* productive of pleasure, but just, as is the case with her “crying,” *because she feels better after it?* And I think it would be found, if an investigation of the subject were instituted, that a foreknowledge of this inevitable result, derived from intuition or experience, is the agent which breaks up the clouds of her sorrow: so that, while the grief of a man stricken down by misfortune is an equinoctial storm, dark and dismal, which lasts for weeks and months, the grief of woman is a succession of refreshing April showers, each of brief du-

ration, and the spaces between them filled with sunshine and rainbows.

But the sweets of that widow’s present sorrow will be soon extracted. How many weeks will she find it a pleasure to make morning visits here and plait pretty flowers on the grave of her husband?—The grave in the next inclosure furnishes an answer to the question. A few months ago, it, too, was tended at sunrise by just such a tearful woman; but now the wreaths of evergreen are yellow, and the weeds are springing up among the withered garlands. The living partner has visited already the “mitigated grief” department of the mourning store, and the severed cords of her affections have been spliced and made almost as good as new. Not that I would not have it so; not that I believe the grief of woman to be less real and sincere than man’s, though it *be* enjoyed; not that I would have her thrum a long mournful threnody on the harpstrings of her heart, and waste on the dead, who need them not, affections which, Heaven knows, the living need too much.

Retracing my steps, and descending the opposite slope of the hill, I entered a beautiful vale covered with stately tombs and containing a little lake, in the middle of which a fountain was springing high into the air. In a spot so much frequented at a later hour of the day only a single human being was in sight,—a young man, perhaps five-and-twenty years of age, jauntily dressed, and his upper lip adorned with a long moustache, who was leaning lazily upon a marble balustrade, and staring, with a stupid, vacant look, at the massive monument it surrounded. As nothing appeared at the moment more attractive to my eyes, I fixed them upon him. No great skill in deciphering human character is required to tell his past or foretell his future history, or even to read the few poor spent thoughts that flicker in his brain. His father—some city merchant—died last year, and left him a man of leisure, with a fortune on his hands to spend in idleness and dissipation. This is the first anniversary of

the old gentleman's decease and departure to another and better world, and the hopeful heir of his bank-stock and buildings has, as a matter of etiquette, come out here from the city this morning to pass an hour of solemn meditation—as he calls the sixty minutes in which he does not smoke or swear—by the old man's grave. I observe him every moment forming a firm resolution to fix his feeble thoughts upon sober things and his latter end, and breaking it the second afterwards: the effort is too much for the exhausted condition of his mind, and results in a total failure. He is evidently well pleased that any attention is directed towards him, and fancies that I regard him as a very dutiful son, and his appearance here, so early in the morning and long before breakfast, a remarkable example of posthumous filial affection. To intensify, if possible, this sentiment in my breast, he has just now pulled out a white cambric handkerchief and pretends to be wiping tears from his eyes. Poor fellow! you have no natural talent for the solemn parts in acting, or you would know that the expression which your face now wears is not that of sorrow, solemnity, meekness, gentleness, humility, or any other sober Christian grace or virtue. But I leave you, for I see something more attractive now. Stand thy hour out, young man! we shall meet again.

“In the other world?”

No: to-morrow evening, as I am taking my accustomed walk into the country, I shall be wellnigh run over by a swiftly driven team; I shall spring suddenly aside, when thou wilt pass, O bogus son of Jehu, with thy dog-cart and two-forty span of bays, dashing down the road, thy thoughts fixed on horse-flesh instead of eternity, and thy soul bounded, north by thy cigar, east and west by the wheels of thy vehicle, and south by the dumb beasts that drag thee along.

But, not to introduce the reader to more solemn scenes of affliction and sorrow which are witnessed here during the first vigil of the day, we pass to a later hour. The mourners who come hither in

the early morning to decorate the graves of the recent dead, and to weep over them undisturbed by visitors, have now departed. The sun is already high, the dew has disappeared from the trees and the shrubs, and the paths and walks and avenues begin to be thronged with loungers and sight-seers from the city.

I had stopped at the forks of a lane and was hesitating which branch to take and what to do with myself, when a tall and beautiful Willow, standing upon a knoll a few rods distant, with thick drooping boughs sweeping the ground on every side, beckoned to me. On approaching him, he extended a branch, shook me cordially by the hand, and invited me to accept the shelter and hospitality of his roof. The proposal so generously made was at once accepted with profuse thanks, and, parting the boughs, I entered the tent and threw myself upon the soft grass.

Do you ever talk with trees? It is a custom of mine, and I usually find their conversation much more entertaining and profitable than that of most men I know. “Good morning!” I say to an acquaintance. “Fine day,” he replies; “how's business?” And so on for an hour, over themes of every nature, the current of conversation rippled with trite truisms and whirling in the surface-eddies of Tupper's “Proverbial Philosophy.” But the tree takes the whole of the Tupperian philosophy for granted at the start, and takes *you* for granted likewise,—supposing neither half of your eyeballs blind, and that you have a soul as well as a body,—and enters at once into conversation upon the high table-land of science, reason, and poetry. The entire talk of a fashionable tea-party, strained from its lees of scandal, filtered through a sober reflection of the following morning, is not equal in value to the quivering of a single leaf. A tree will discourse with you upon botany, physiology, music, painting, philosophy, and a dozen arts and sciences besides, none of which it simply chats about, but all of which it *is*: and if you do not understand its language and comprehend

what it tells you about them, so much the worse for you; it is not the fault of the tree.

I say, I talk with trees for this reason,—because their wisdom is so much greater than that of my ordinary acquaintances,—and further, (to put the major after the minor premise,) because they are virtually living beings, endowed with instinct, feeling, reason, and display every essential attribute of sentient creatures,—in fact, because they have souls as well as men, only they are clothed in vegetable flesh.

“That is transcendental moonshine, and you don’t believe a word of it!”

Well, my friend, allow me, then, to tell you, in all charity and with bowels of compassion, that you hold dangerous and fatal views respecting one of the cardinal doctrines of mythology,—yes, to be plain, you are a Joveless infidel, and in fearful danger of being locked out of Elysium; and I shall offer up a smoking sacrifice, the next time I get a sirloin, and pour out a solemn libation, in the presence of my whole family seated around the domestic altar early in the morning, for your speedy conversion.

Know, then, O obtuse, faithless, and perverse skeptic, that these things are so: that ocular and auricular evidence, indubitable and overwhelming, exists, that the arboreal and human natures are in substance one. Know that once on a time, as Daphne, the lovely daughter of Peneus, was amusing herself with a bow and arrows in a forest of Thessaly, she was surprised by a rude musician named Phœbus. Timid and bashful, as most young ladies are, she turned and fled as fast as her *σκέλη* could carry her. After running, closely pursued by the eager Delphian, for several miles, and becoming very much fatigued, she felt inclined to yield: but wishing to faint in a reputable manner, she lifted up her hands and asked the gods to help her. Her call was heard in a jiffy, and quicker than you could say, “Presto: change!” she was a Laurel-tree, which Phœbus married on the spot. This was the Eve of the Laurel family, so that all these trees

you meet in the world at present must be rational beings, since they are the descendants of the beautiful Greek maiden Daphne. And to satisfy you that this is no foolish legend, but, on the contrary, a well-authenticated fact, clinched and riveted in the boiler-head of historical truth, permit me to assure you,—for I have seen it myself,—that in the Villa Borghese, near Rome in Italy, is an exact representation of the wonderful incident, cut in Carrara marble,—the bark of the Laurel growing over the vanishing girl, and her hands and fingers sprouting into branches and leaves,—supposed to have been copied from a photograph taken on the spot,—for there is a photograph in existence exactly like the marble statue.

We know positively—for we have an equally minute account of the transaction—that the Cypress originated in a similar way. And is it not reasonable to infer, therefore, though we may not find the facts stated in *every* case, that all trees were created out of men and women, their bodies being miraculously clothed in woody tissue? In the time of Virgil this was certainly the established orthodox belief; for he relates an anecdote, expressing no doubt whatever of its truth, of a party of travellers who commenced one day in a forest the indiscriminate destruction of some young trees, when their roots forthwith began to bleed, and voices proceeded from them, begging to be spared from laceration. And, in fact, hundreds of instances, similarly weighty as evidence, from equally veracious and trustworthy classic authors, might be cited to the point, did time and space permit. But we hasten to the other proof of their essential humanity, which I set out with assuming as an undoubted fact, and which is already foreshadowed in the adventure of the Trojan wanderers just related,—namely, that they possess the faculty of speech.

Tasso, the author of a well-known metrical history, states distinctly, as you shall see in half a moment, that a tree upon one occasion discoursed with Major General Tancred,—

“ Pur tragge alfin la spada e con gran forza
 Percuote l'alta pianta. Oh, meraviglia!
 — quasi di tomba, uscir ne sente
 Un indistinto gemito dolente,
 Che poi *distinto in voci.*”

And then it goes on to tell the General how it once rejoiced in extensive hoops, wore a coal-scuttle on its head, and rubbed its face with prepared chalk, — (w-w-w-hy! what *was* I saying? such a mistake! I should say) — was a woman by the name of Clorinda, and is still animated and sentient both in trunk and limbs, and that he will presently be guilty of murder, if he continues to hack her with his sword.

The celebrated explorer, Sir John Mandeville, relates in the history of his discoveries that he heard whole groves of trees talking *to one another*. And when we come down to the present day, R. W. Emerson, of Concord, asseverates that trees have conversed with him, — that they speak Italian, English, German, Basque, Castilian, and several other languages perfectly, —

“ Mountain speech to Highlanders,
 Ocean tongues to islanders,” —

and that he himself was on one occasion transformed into a Pine (*Pinus rigida*) and talked quite a large volume of philosophy while in that condition. Walter Whitman, Esq., author of “Leaves of Grass,” relates similar personal experience. Tennyson, (Alfred,) now the Laureate of England, and upon whom the University of Oxford, a few years ago, conferred the title of Doctor of Laws, gives us a long conversation he once held with an Oak, reporting the exact words it said to him: they are excellent English, and corroborate what I said above respecting the wisdom of trees.

If all this evidence, and I might add much more equally conclusive, did I think it necessary, does not, O skeptic, convince you of the humanity of trees, why, let me say that you hold for true a hundred things not based upon half so good testimony as this, — that I have seen juries persuaded of facts, and bring in verdicts in accordance with them, not nearly so

well authenticated as these, — and that I have heard clergymen preach sermons two hours long, constructed out of arguments which they positively persisted you should regard as decisive, that were, to say the least, no *better* than those here advanced. And now, if these things be so, in the words of the great Grecian, John P., *what are you going to do about it?*

Trees, like animals, are righteously sacrificed only when required to supply our wants. A man does not go out into the fields and mutilate or destroy his horses and oxen: let him treat the oaks and the elms with the same humanity. I would that enough of the old mythology to which I have alluded, and which our fathers called *religion*, still lived among us to awaken a virtuous indignation in our breasts when we witnessed the wanton destruction of trees. I once remonstrated with a cruel wretch whom I saw engaged in taking the life of some beautiful elms inhabiting a piece of pasture-land. He replied, that in the hot days of summer the cattle did nothing but lie under them and chew their cud, when they should be at work feeding on the grass, — that his oxen did not get fat fast enough, nor his cows give as much milk as they should give, — “and so,” said he, “I’m goin’ to fix ’em,” — and down came every one of the hospitable old trees. We are not half so humane in our conduct towards the inferior races and tribes as the old Romans whom we calumniate with the epithet of Pagans. The Roman Senate degraded one of its members for putting to death a bird that had taken refuge in his bosom: would not the Senate of the United States “look pretty,” undertaking such a thing? A complete Christian believes not only in the dogmas of the Bible, but *also* in the mythology, or religion of Nature, which teaches us, no less than it taught our fathers, to regard wanton cruelty towards any vegetable or animal creature which lives in the breath and smile of the Creator, as a sin against Heaven.

Having in the above paragraph got into the parson’s private preserve, as I

shall be liable anyhow to an action for trespass, I am tempted to commit the additional transgression of poaching, and to give you a few extracts from a *sermon* a friend of mine once delivered. [It was addressed to a small congregation of Monothelites in a village "out West," just after the annual spring freshet, when half the inhabitants of the place were down with the chills and fever. It was his maiden effort,—he having just left the Seminary,—and did not "take" at all, as he learned the next day, when Deacon Jenners (the pious philanthropist of the place) called to tell him that his style of preaching "would never do," that his thoughts were altogether of too worldly a nature, and his language decidedly unfit for the sacred "desk." Besides,—though he would not assume the responsibility of deciding that point before he had consulted with the Standing Committee,—he did not think his sentiments exactly orthodox. My friend was disgusted on the spot, and, being seized with a chill shortly afterwards, concluded not to accept the "call," and, packing his trunk, started in quest of a healthier locality and a more enlightened congregation.]

"And here permit me to add a word or two for the purpose of correcting a very prevalent error.

"Most men, I find, suppose that this earth belongs to them,—to the *human* race alone. It does not,—no more than the United States belong to Rhode Island. Human life is not a ten-thousand-millionth of the life on the planet, nor the race of men more than an infinitesimal fraction of the creatures which it nourishes. A swarm of summer flies on a field of clover, or the grasshoppers in a patch of stubble, outnumber the men that have lived since Adam. And yet we assume the dignity of lords and masters of the globe! Is not this a flagrant delusion of self-conceit? Let a pack of hungry wolves surround you here in the forest, and who is master? Let a cloud of locusts descend upon a hundred square miles of this territory, and what means do you possess to arrest their ravages?

"As a matter of *fact*, then, we do not own the world. And now let me say, that, as a matter of *right*, we ought not: man was the last created of creatures. When our race appeared on the earth, it had been for millions of years in quiet, exclusive, undisputed possession of the birds, beasts, fishes, and insects: it was *their* world then, and we were intruders and trespassers upon their domain.

"If, then, the other races have a right to exist on the planet as much as we, what follows? Surely, that they have a right to their share and proportion of the ground and its fruits, and the blessings of Heaven by which life here is sustained: man has no right to expect a monopoly of them. If we get a week of sunshine which supplies our wants, we have no reason to complain of the succeeding week of rain which supplies the wants of other races. If we raise a crop of wheat, and the insect foragers take tithes of it, we have no right to find fault: a share of it *belongs* to them. If you plant a field with corn, and the weeds spring up also along with it, why do you complain? Have not the weeds as much right there as the corn? If you encamp in one of the numberless swamps which surround this settlement, and get assailed by countless millions of robust mosquitoes, why do you rave and swear (as I know most of you would do under such circumstances) and want to know "what in the ——— mosquitoes were made for"? Why, to puncture the skin of blockheads and blasphemers like you, and suck the last drop of blood from their veins. Why, let me ask you, did you go out there? That place belonged to the mosquitoes, not to you; and you knew you were trespassing upon their land. The mosquitoes exist for themselves, and were created for the enjoyment of their own mosquito-life. Why was *man* created? The Bible does not answer the question directly; the divines in the Catechism say, "To glorify God." Now I should like to know if a Westminster Catechism of the mosquitoes would't make as good an answer for them?

“And here I am just in the act of annihilating with a logical stroke a multitude of grumblers and croakers. If this world does not belong exclusively to man, and the other races have as much right here as he, and, consequently, a claim to their proportion of land, water, and sky, and their share of food for the sustenance of life, what follows?

“A great many men, taking northeast storms, bleak winds, thunder-showers, flies, mosquitoes, Canada thistles, hot sunshine, cold snows, weeds, briars, thorns, wild beasts, snakes, alligators, and such like things, which they don't happen to like, and putting them all together, attempt to persuade you that this green earth is a complete failure, a wreck and blasted ruin. Don't you believe that, for it's wicked infidelity. I tell you the world is not *all* so bad as Indiana, and especially that part of the State which you, unfortunately, inhabit. I have seen, my friends, a large portion of the planet, and if there is another spot anywhere quite so infernal as Wabashville, why, I solemnly assure you I never found it.—And now for the point which shall prick your conscience and penetrate your understanding. Do the bears and wolves, the coons and foxes, the owls and wild-geese, find this region unhealthy, and get the chills and fever, and go around grumbling and cursing? Don't they find this climate especially salubrious and suited exactly to their constitutions? Well, then, that's because they belong here, *and you don't*. This region was never intended for the habitation of man: it belongs exclusively to the wild beasts and the fowls of the air, and you have no business here. [Manifest signs of disapprobation on part of Deacon Taylor, an extensive owner of town-lots.] And if you persist in remaining here, what moral right have you to complain of God?

“Remember, then, in conclusion, that, for millions of years before our race existed, mosquitoes, weeds, briars, thorns, thistles, snow-storms, and northeast winds prevailed upon this planet, and that during all this time it was pronounced by the

Deity himself to be ‘*very good*.’ If, then, the earth appears to be evil, is it not because ‘*thine eye is evil*’? We share this world, my friends, with other races, whose wants are different from ours; and we are all of equal importance in the eyes of our Maker, who distributes to each its share of blessings—man and monster both alike—with impartial favor. Is not thus the fallacy of the corruption of Nature exposed, and the lie against our Creator's wisdom, love, and goodness dragged into noonday light?”

But it is time to recommence our rambles through the City of the Dead.

Right here I come across on a tombstone,—“All our children. Emma, aged 1 mo. 25 days. John, 3 years 5 days. Anna, aged 1 year 1 mo.” As a physiologist, I might make some very instructive comments upon this; but I forbear.

And here, upon another, a few rods farther on, is an epitaph in verse:—

(FIRST VERSE.)

“Calm be her slumbers near kindred are
sighing,
A husband deplores in deep anguish of
heart,
Beneath the cold earth *unconsciously lying*,
No murmur can reach her, no tempest
can start.”

(SECOND VERSE.)

“Calm be her sleep as the silence of even
When hearts unto deep invocation give
birth.
With a prayer she has *knelt at the portal of
heaven*
*And found the admission she hoped for on
earth.*”

Not to speak of the “poetry” just here, how charmingly consistent with each other are the ideas contained in the passages I have Italicized! In the first verse, you observe, the inmate is sleeping unconscious beneath the ground: in the second verse, she has ascended to heaven and found admittance to mansions in the skies!—A similar confusion and contradiction of ideas occur in most of the epitaphs I see. Does our theology furnish us with no clear conception of the state of the soul after death? The Catholic

Church teaches that the spirit at death descends into the interior of the earth to a place called Hades, where it is detained until the day of judgment, when it is reunited with the dust of the body, and ascends to a heaven in the sky. This doctrine has the merit of being positive, clear, and comprehensible, and, consequently, whenever expressed, it always means something exact and well-defined. Has the Protestant Church equally definite notions on the subject, or, in fact, any fixed opinions respecting it whatever? If not, why, as a matter of good taste, if for no weightier reason, in records almost imperishable like these, leave the matter alone! Silence is better than nonsense. Suppose a few thousand years hence our civilization to have become extinct, and that some antiquary from the antipodes should visit this desolate hill to excavate, like Layard at Nineveh, for relics of the old Americans. Suppose, having collected a ship-load of broken tombstones, he should forward them to the Polynesian Museum, and set the *savans* of the age at work deciphering their inscriptions, what sense would be made out of these epitaphs? How would they interpret our notions of a future state? Taking our own monuments, cut with our own hands, inscribed with our own signs-manual, what would they infer our system of religion to have been? If the Egyptians were as vague and careless as we in this matter, our archæologists must have made some amusing blunders.

Here are two epitaphs which suggest something else:—

No. I.

“I loved him in his beauty,
A *mother* boy while here,
I knew he was an angel bright
Formed for another sphere.”

No. II.

“Farewell my wife and children dear
God calls you home to rest.
Still! Angels *wisper* in my ear
We'll meet in heavenly bliss.”

I want to make two annotations upon these. In No. 1 you will notice that a possessive 's is wanting, and in No. 2

that the *h* is omitted from *wisper*. A marble-cutter told me once, that a Pennsylvania Dutchman came to him one day to have an inscription cut upon a gravestone for his daughter, whose name was Fanny. The father, upon learning that the price of the inscription would be ten cents a letter, insisted that Fanny should be spelt with one *n*, as he should thereby save a dime! The marble-cutter, unable to overcome the obstinacy of the frugal Teuton, and unwilling to set up such a monument of his ignorance of spelling, compromised the matter by conforming to the current orthography, and inserted the superfluous consonant for nothing. And my second annotation shall consist of an inquiry: What is there in corrupt and diseased human nature which makes persons prefer such execrable rhyme as that quoted above, and that which I find upon two-thirds of the tombstones here, to decent English prose, which one would suppose might have been produced at a much less expenditure of intellectual effort? But since it is an unquestionable fact that we are thus totally depraved in taste and feeling, why don't some of our bards, to whom the Muse has not been propitious in other departments of metrical composition, and who, to be blunt, are good for nothing else, such as —, or —, and many others you know, come out here among the marble-cutters and open an *epitaph-shop*? Mournful stanzas might then be procured of every size and pattern, composed with decent reverence for the rules of grammar, respect for the feet and limbs of the linear members, and possibly some regard for consistency in the ideas they might chance occasionally to express. Genin the hatter, and Cockroach Lyon, each keeps a poet. Why cannot the marble-cutters procure some of the Heliconian fraternity as partners? Bards would thus serve the cause of education, benefit future antiquaries, and earn more hard dimes ten times over than they do in writing lines for the blank corners of newspapers and the waste spaces between articles in magazines. I throw this hint out of the win-

dow of the "Atlantic," in the fervent hope that it will be seen, picked up, and pocketed by some reformer who is now out of business; and I would earnestly urge such individual to agitate the question with all his might, and wake up the community to the vital importance, by making use of "poetic fire" and "inspired frenzy" now going to waste, or some other instrumentality, of a reformation in epitaphic necrology.

Seriously, modern epitaphs are a burlesque upon religion, a caricature of all things holy, divine, and beautiful, and an outrage upon the common sense and culture of the community. A collection of comic churchyard poetry might be made in this place which would eclipse the productions of Mr. K. N. Pepper, and cause a greater "army of readers to explode" than his "Noad to a Whealbarrer" or the "Grek Slaiv" has done.

During our rambles among the tombstones the sun has long since passed the meridian, and the streets and avenues of the cemetery are crowded with carriages and thronged with pedestrians, the tramping of horses' feet, the rumbling of wheels, and the voices of men fill the air, and the place which was so silent and deserted this morning is now as noisy and bustling as the metropolis yonder. And soon begin to arrive thick and fast the funeral trains. Many of the black-plumed hearses are followed by only a single hired coach or omnibus, others by long trails of splendid equipages. Upon the broad slope of a hill, whither the greater number of the processions move, entirely destitute of trees and flooded with sunshine, many thousand graves, mostly unmarked by headstones, lie close together, resembling in appearance a corn-field which has been permitted to run to grass unploughed. Standing upon an elevated point near the summit, and looking down those acres of hillocks to where the busy laborers are engaged in putting bodies into the ground, covering them with earth, and rounding the soil over them, one is perhaps struck for the first time with the

full force, meaning, and beauty of the language of Paul in his first letter to the Corinthians: — "That which thou sowest is not that body which shall be, but bare grain. It [the human body] is sown in corruption, is sown in dishonor, is sown in weakness. It is sown a natural body; it is raised [or springs up, to complete the figure] a spiritual body. Flesh and blood cannot inherit the kingdom of heaven." — I once heard a distinguished botanist dispute the accuracy of this simile, inasmuch, he said, as the seed, when it is sown in the ground, does not *die*, but in fact then first begins to *live* and to display the vital force which was previously asleep in it; while the human body decays and is resolved into its primitive gaseous, mineral, and vegetable elements, the particles of which, disseminated everywhere, and transferred through chemical affinities into other and new organisms, lose all traces of their former connection. — In answer to such a finical criticism as this, intended to invalidate the authority of the great Apostolic Theologian, I replied, that Paul was not an inspired *botanist*, — in fact, that he probably knew nothing whatever about botany as a science, — but an inspired religious teacher, who employed the language of his people and the measure of knowledge to which his age had attained, to expound to his contemporaries the principles of his Master's religion. I am not familiar with the nicer points of strict theological orthodoxy, but, from modern sermons and commentaries, I should infer that few doctors of even the most straitest school of divinity hold to the doctrine of verbal inspiration. That the Prophets and Apostles were acquainted with botany, chemistry, geology, or any other modern science, is a notion as unfounded in truth as it is hostile and foreign to the object and purpose of Revelation, which is strictly confined to religion and ethics. Those persons, therefore, (and they are a numerous class,) who resort to the Bible, assuming that it professes to be an inspired manual of universal knowledge, and then, because they find in its figurative Oriental phraseology, or in its

metaphors and illustrations, some inaccuracies of expression or misstatements of scientific facts, would throw discredit upon the essential religious dogmas and doctrines which it is its object to state and unfold, are, to say the least, extremely disingenuous, if not deficient in understanding.

But a much more prolific source of injury to the character of the Bible than that just mentioned is the injudicious and impertinent labors of many who volunteer in its defence. "Oh, save me from my friends!" might the Prophets and Apostles, each and all, too often exclaim of their supporters. — It is said that all men are insane upon some point: so are classes and communities. The popular monomania which at present prevails among a class of persons whose zeal surpasses their prudence and knowledge is a foolish fear and trembling lest the tendencies of science should result in the overthrow of the Bible. They seem, somehow, to be fully persuaded that the inspired word of God has no inherent power to stand alone, — that it has fallen among thieves and robbers, — is being pelted with fossil coprolites, suffocated with fire-mist and primitive gases, or beaten over the head with the shank-bones of Silurian monsters, and is bawling aloud for assistance. Therefore, not stopping to dress, they dash out into the public notice without hat or coat, in such unclad intellectual condition as they happen to be in, — in their shirt, or stark naked often, — and rush frantically to its aid.

The most melancholy case of this intellectual *delirium tremens* that probably ever came under the notice of any reader is found in a professed apology for the Scriptures, recently published, under the pompous and bombastic title of "COSMOGONY, OR THE MYSTERIES OF CREATION." — A volume of such puerile trash, such rubbish, twaddle, balderdash, and crazy drivelling* as this, was never be-

fore vomited from the press of any land, and beside it the "REVELATIONS" of Andrew Jackson Davis, the "Poughkeepsie Seer," rises to the lofty grandeur of the "Novum Organon," — a sight that makes one who really respects the Bible hang his head for shame.

The belligerent pundit who has flung in the face of peaceful geologists this octavo *camouflet* of his scientific lucubrations professes to have scoured the surface and ravaged the bottom (in a suit of patent sub-marine Scriptural armor) of a no less abysmal subject than the cryptology of Genesis, — to have undermined with his sapping intellect and blown up with his explosive wisdom the walled secrets of time and eternity, carrying away with him in the shape of plun-

the commencement of a chapter entitled, "Naturalists. — Their Classification of Man and Beasts." — "We look upon the animal in no different light from that of a vegetable, a plant, or a rock-crystal, which forms under the Creative hand, performs its part for the use of man, dissolves and reproduces by its parts another comfort for him. The animal bears *no resemblance* to man, not even in his brain." — "One tree may bear apples, and another acorns, but they are not to be compared, the one as bearing a relation to the other, because they have each a body and limbs. They are distinct trees, and one will always produce apples and the other acorns, as long as they produce anything." (Indeed!) — "The usual classification of animals, is that of Vertebrata, Articulata, Mollusca, and Radiata. This is not only offensive to man, — *but is impiety towards God.*" (Why?) — "We are told by these naturalists that man belongs to the class called 'Vertebrata.' So does the snake, the monkey, the lizard and crocodile, and many other low and mean animals. — Have these creatures the reasoning faculties of man? Do they walk erect like man? Have they feet, hands, legs, arms, *hair upon their heads, or beards upon their faces?* Do they speak languages and *congregate and worship at the altar?*" (!!) — "Those who are ambitious of such relations, may plant their heraldic coat-of-arms in the serpent, the lizard, the crocodile, or the monkey, but we disclaim such relationship — we do not think it *good taste or good morals* to place the fair daughters of Eye on a level with horrid and hideous animals, simply from some apparent similarity, which we are certain never existed."

* As the reader may never have seen this unique volume, and will be amused by a specimen of its grammar, rhetoric, wisdom, and learning, let him take a *morceau* or two from

der a whole cargo of the plans and purposes of the Omnipotent in the Creation. I have not the least doubt, if he were respectfully approached and interrogated upon the subject, he would answer with the greatest ease and accuracy the famous question with which Dean Swift posed the theological tailor. The man who can tell us all about the institution of the law of gravity, how the inspired prophet thought and felt while writing his history, and who knows everything respecting "affinity and attraction when they were in Creation's womb," could not hesitate a moment to measure an arch-angel for a pair of breeches.—But I was talking of *funerals*.

A friend once assured me that the heartiest laugh of which he was ever guilty on a solemn occasion occurred at a funeral. A trusty Irish servant, who had lived with him for many years, and for whom he had great affection, died suddenly at his house. As he was attending the funeral in the Catholic burial-place, and stood with his wife and children listening to the service which the priest was reading, his heart filled with grief and his eyes moist with tears, the inscription on a gravestone just before him happened to attract his attention. It was this:—"*Gloria in Excelsis Deo!* Patrick Donahoe died July 12. 18—." Now the exclamation-point after "*Deo*" and the statement of the fact of Mr. D.'s demise following immediately thereafter made the epitaph to read, "Glory to God in the highest! Patrick is dead." This, which at another time would perhaps have caused no more than a smile, struck him as irresistibly funny, and drove in a moment every trace of sadness from his face and sorrow from his heart,—to give place to violent emotions of another nature, which his utmost exertions could not conceal.

["I beg your pardon! I've been afloat," was the graceful parenthetical apology which a distinguished naval officer used to make, when by mistake he let drop one of "those big words which lie at the bottom of the best man's vocabulary," in con-

versation with sensitive persons whose ears he feared it might offend. I ought possibly, at the end of the following anecdote, to make some such excuse to the scrupulous reader, whose notions of propriety it will perhaps slightly infringe: "I beg your pardon! I couldn't help telling it."]

An eminent divine once described to me a scene he witnessed at a funeral, which he said nearly caused him to expire with—well, you shall see. An intimate acquaintance of his, who belonged to a neighboring parish, having died, he was naturally induced to assist at the burial-service. The rector of this parish was a man who, though sensitive in the extreme to the absurdities of others,—being, in fact, a regular son of Momus,—was entirely unconscious of his own amusing eccentricities. Among these, numerous and singular, he had the habit of suddenly stopping in the middle of a sentence, while preaching, and calling out to the sexton, across the church, "Dooke, turn on more gas!" or "Dooke, shut that window!" or "Dooke, do"—something else which was pretty sure to be wanting itself done during the delivery of his discourse. Nearly every Sunday, strangers not acquainted with his ways were startled out of their propriety by some such unexpected behavior.

On the occasion referred to, the funeral procession having entered the churchyard, and my informant and the officiating clergyman having taken their places at the head of the grave, the undertaker and his assistants having removed the coffin from the hearse, and the mourners, of whom there was a large crowd, having gathered into a circular audience, the Reverend Doctor—began the service. "'Man that is born of a woman'—Oh, stop those carriages! don't you see where they are going to?" (he suddenly broke out, rushing from the place where he stood, frantically, among the bystanders; and then returning to his former position, continued,)—"hath but a short time to live, and is full of misery. He cometh up"—Oh, don't let that coffin down yet! wait till I tell you to," (addressed to the under-

taker, who was anticipating the proper place in the service,)—"and is cut down like a flower; he fleeth as it were a shadow,"—Please to hold the umbrella a little further over my head," (*sotto voce* to the man who was endeavoring to protect his head from the sun,)—"and never continueth in one stay."—Hold the umbrella a little higher, will you?" (*sotto voce* again to the man holding the umbrella.)—"In the midst of life we are in death."—Stand down from there, boys, and be quiet!" (addressed to some urchins who were crowding and pushing one another about the grave, in their efforts to look at the coffin.) At length he had proceeded without further interruptions as far as the sentence, "We therefore commit his body to the ground; earth to earth, ashes to ashes, dust to dust,"—when Dooke, the sexton,—a queer, impetuous fellow,—who was vainly endeavoring to keep the boys away from the edge of the grave, seized suddenly the rope with which the coffin had just been lowered down, and, stooping forward, laid it like a whip-lash, "cut!" across the shins of a dozen youngsters, making them leap with "Oh! oh! oh!" a foot from the ground, and scatter in short order,—"'looking for the'"—(turning to my friend, as he witnessed the successful exploit of his favorite sexton, and whispering in his ear,) "*Dooke made 'em hop that time, didn't he!*—'general resurrection in the last day, and the life of the world to come.'"

Dooke's mode of dispersing the boys, and the officiating clergyman's comment upon it, parenthesized into the middle of the most solemn sentence of the burial-service, were too much for the usual stern gravity of my clerical friend, and, under pretence of shedding tears, he buried his face in his handkerchief and his handkerchief in his hat and shook with laughter.

Speaking of funerals reminds me of a congenial subject.—Nothing in New York astonishes visitors from the country so much as the magnificent coffin-shops, rivalling, in the ostentatious and tempting display of their wares, the most elegant stores on Broadway. Model coffins, of the

latest style and pattern, are set up on end in long rows and protected by splendid show-cases, with the lids removed to exhibit their rich satin lining. Fancy coffins, decorated with glittering ornaments, are placed seductively in bright plate-glass windows, and put out for baiting advertisements upon the side-walks: as much as to say, "Walk in, walk in, ladies and gentlemen! Now's your chance! here's your fine, nice coffins!"—while in ornamental letters upon extensive placards hung about the doors, "IRON COFFINS," "ROSEWOOD COFFINS," "AIR-TIGHT COFFINS," "MAHOGANY COFFINS," "PATENT SARCOPHAGI," address the eyes and appeal to the purses of the passers-by. And I saw in one of these places, the other day, painted on glass and inclosed in an elegant gilt frame, "ICE COFFINS," which struck me as queer enough. As though it were not sufficiently cool to be dead!

It seems to me, that, in this matter, the undertakers, digging a little too deep below the surface of the present age, have thrown out some of the mystical and grotesque remains of a very antique religious faith, which look as singular just now to the eyes of common people as would an Egyptian temple with its sacred Apis in Broadway, or a Sphinx on Boston Common. To the eyes of an old Egyptian, no object could be more grateful than the sarcophagus in which he was to repose at death. He purchased it as early in life as he could raise the means, and displayed it in his parlor as an attractive and costly ornament. Indeed, I do not know but it was useful as well, and the children kept their playthings in it, or the young ladies their knitting-work and embroidery.

Are we not, in this class of our tastes and feelings, becoming rapidly Egyptianized? Why, I expect in a year or two to see coffins introduced into the parlors of the Fifth Avenue; and to find them, when their owners fail or absquatulate, advertised for sale at auction, with the rest of the household furniture, at a great sacrifice on the original cost.

“ ONE SUPERB COFFIN OF ELEGANT PATTERN AND SUPERIOR WORKMANSHIP, AS GOOD AS NEW. TWO DITTO, SLIGHTLY DAMAGED.”

And then the fashion will become popular with the less aristocratic portion of the community, and you will see crowds of servant-girls and street-loungers around the windows of our magnificent coffin-bazaars, and hear from them such exclamations as these: “Oh! do look here, Matilda! Wouldn't you like to have such a nice coffin as that?” or, “What a dear, sweet sarcophagus that one is there!” or, “Faith, I should like to own that air-tight!”

But the day is now far advanced. The funeral processions have ceased to arrive, and the husbandmen, having sown the immortal seed furnished by the metropolis, with shovels and empty dinner-pails, are on their way, whistling and talking in groups, homeward. The number of loungers and sight-seers is rapidly diminishing as the light in the more thickly shaded walks becomes dim, and the clock at the gateway indicates the near approach of the hour when the portals will be closed.

— Alone with the dead! Alone in the night among tombs and graves! How many readers do not at the sight of these words feel an involuntary *souçon* of a shudder? Would not the cause of this indefinable secret dread of the darkness which covers a graveyard be a curious matter of inquiry? Let one ever so cultivated and skeptical, familiar as a physician or a soldier with the spectacle of death, ever so full of mental and physical courage, passing alone late at night through a graveyard, hear the least sound among the graves, or see a moving object of any kind, especially a white one, and he will instantly feel an *alloverishness* foreign to ordinary experience, and I will not answer for him that his hair does not stand on end and his flesh grow rough as a nutmeg-grater. A company of three or four persons would feel far less disturbed. This proves the emotion to

be genuine *fear*. And with this recognized as a fact, ask the question, Of what are you afraid? What makes your feet stick to the ground so fast, or inspires you to take to your legs and run for your life? “A ridiculous, foolish superstition,” reason answers.

I do not intend by this to intimate that you, reader, bold and courageous person that I know you to be, would not dare to go through a graveyard at night. By no means. I only predicate the existence within you of this ridiculous, foolish superstition, and maintain that you would do so under *all* circumstances with peculiar feelings which you did not possess before you entered it and which you will not possess as soon as you have left it, and under *certain* circumstances with a trembling of the nerves and a palpitation of the heart, and that the occasion *might* occur when you would be still *more* strongly and strangely affected. To illustrate the latter case I have an anecdote *à-propos*.

A college class-mate, (Poor B——! the shadows of the Pyramids now fall upon his early grave!) a young man easily agitated, to be sure, and possibly timid, on his way home, late one autumn night, from the house of a relative in the country, was hurrying past a dismal old burying-yard in the midst of a gloomy wood, when he was suddenly startled by a strange noise a short distance from the road. Turning his head, alarmed, in the direction whence it proceeded, he was horror-struck at seeing through the darkness a white object on the ground, struggling as if in the grasp of some terrible monster. Instantly the blood froze in his veins; he stood petrified,—the howlings of the wind, clanking of chains, and groans of agony, filling his ears,—with his eyes fixed in terror upon the white shape rolling and plunging and writhing among the tombs. Attempting to run, his feet refused to move, and he swooned and fell senseless in the road. A party of travelers, happening shortly to pass, stumbled over his body. Raising him upon his feet, they succeeded by vigorous shakes in restoring him to a state of consciousness.

While explaining to them the cause of his fright, the noise was renewed. The men, although somewhat alarmed, clubbed their individual courage, climbed the wall, and found—nearly in the centre of the graveyard—an *old white horse* thrown down by his fetters and struggling violently to regain his feet.

B—— assured me, the explanation of the spectacle instinctively occurring to his mind at the moment as indubitable was that some reprobate had just been buried there, and that the Devil, coming for his body, was engaged in binding his unwilling limbs, preparatory to carrying him away!

The reader may smile at the weakness and folly displayed in this case, but the assertion may nevertheless be safely ventured, that there is not one person in a hundred who would not under the same circumstances have been greatly disturbed, or would have invented a much less frightfully absurd solution of the phenomenon than poor B——'s.

I think the singular feelings associated with graveyard darkness, which the wisest and bravest of men find slumbering beneath all their courage and philosophy, would be found upon investigation to proceed principally from two sources,—a constitutional inclination to religious superstition, and an acquired educational belief in the reality of the dreams and fancies of poets, mingled, of course, with some natural cowardice.

The driest and hardest men have more poetry in them than they or we begin to suspect. Indeed, if we could take our individual or collective culture to pieces and award to each separate influence its due and just share of results, I should not be surprised at finding that the poet had done more in the way of fashioning our education than the scientist or any other teacher. Milton, to give but a single example, with his speculations concerning the Fall,—its effects upon humanity, the brute creation, and physical nature,—and his imaginary conflicts between the hostile armies of heaven, and his celestial and Satanic personifications,

has had so much influence in Anglo-Saxon culture, that nine-tenths of the people believe, without knowing it, as firmly in "Paradise Lost" as in the text of the Bible. The Governor of Texas, citing in his proclamation a familiar passage in Shakspeare as emanating from the inspired pen of the Psalmist, is not to so great extent an example of ignorance as an illustration of the lofty peerage instinctively assigned the great dramatist in the ordinary associations of our thoughts.

This faith in the visionary world of poets is instilled into us (and it is for this reason that Rousseau, in his masterly work on education, the "*Émile*," reprobrates the custom as promotive of superstition) in early infancy by our parents and nurses with their stories of nymphs, fairies, elves, dwarfs, giants, witches, hobgoblins, and the like fabulous beings, and, as soon as we are able to read, by the tales of genii, sorcerers, demons, ghouls, enchanted caves and castles, and monsters and monstrosities of every name. The exceedingly impressible and poetical nature of children (for all children are poets and talk poetry as soon as they can lisp) appropriates and absorbs with intense relish these fanciful myths, and for years they believe more firmly in their truth than in the realities of the actual world. And I more than suspect that this child-credulity rather slumbers in the grown man, smothered beneath superimposed skepticisms and cognitions, than is ever eradicated from his mind, and thus, upon the shock of an emergency disturbing him suddenly to the foundation, is ready to burst up through the crevices of his shattered practical experience and appear on the surface of his judgment and understanding.

In addition, then, to an instinctive tendency to religious superstition, (of which I shall here say nothing,) to the fairy mythology of the nursery, and the phantom machinery invented by poets to clothe with the semblance of reality their dreams and fancies, can be traced in a great measure the existence in the mind of the *credulity* which renders the *fear* in ques-

tion possible, opening an introduction for it into the heart excited by inexplicable phenomena or circumstanced where such phenomena might, according to our superstitious beliefs, easily occur.

Without entering into an analysis of the *fear* itself, beyond the remark that *any* extraordinary sight or sound not immediately explicable by the eye or ear to the understanding (as a steamboat to the Indians or a comet to our ancestors) is a legitimate cause of the emotion, as well as the *possibility* of the occurrence of such sights and sounds, for believing which we have seen man prepared, first by natural superstitious inclination, and secondly by a peculiar education,—I will only further add, for the purpose of a brief introduction to an anecdote I wish to relate, that there is another fountain of knowledge, from which we drink at a later period than childhood, as well as then, whose waters are strongly impregnated with this superstitious, fear-provoking credulity: I mean the stories of *ghosts* which have been seen and heard in all ages and countries, revealing important secrets, pointing out the places where murder has been committed or treasure concealed, foretelling deaths and calamities, and forewarning men of impending dangers. Hundreds of books familiar to all have been written upon this subject and form an extensive department of our literature, especially of our older literature.

The philosopher attempts to account for such phenomena by referring them to optical illusions or a disordered condition of the brain, making them *subjective* semblances instead of *objective* realities. But one is continually being puzzled and perplexed with evidence contradicting this hypothesis, which, upon any other subject *a priori* credible to the reason and judgment, would be received as satisfactory and decisive without a moment's hesitation. In truth, with all the light which science is able to shed upon it, and all the resolute shutting of the eyes at points which no elucidating theory is available to explain, there are facts in

this department of supernaturalism which stagger the unbelief of the stoutest skeptic.

It is constantly urged, among other objections to the credibility of supernatural apparitions, that the names of the witnesses have singularly and suspiciously disappeared,—that you find them, upon investigation, substantiated thus: A very worthy gentleman told another very worthy gentleman, who told a very intelligent lady, who told somebody else, who told the individual who finally communicated the incident to the world. There are, however, as just intimated, instances in which such ambiguity is altogether wanting. Among these is one so well authenticated by well-known witnesses of undoubted veracity, that, having never before been published, I venture to relate it here.

My informant was Professor Tholuck, of Halle University, the most eminent living theologian in Germany, and the principal ecclesiarch of the Prussian Church. He prefaced the account by assuring me that it was received from the lips of De Wette himself, immediately after the occurrence,—that De Wette was an intimate personal friend, a plain, practical man, of remarkably clear and vigorous intellect, with no more poetry and imagination in his nature than just sufficient to keep him alive,—in a word, that he would rely upon his coolness of judgment and accuracy of observation, under any possible combination of circumstances, as confidently as upon those of any man in the world.

Dr. De Wette, the famous German Biblical critic, returning home one evening between nine and ten o'clock, was surprised, upon arriving opposite the house in which he resided, to see a bright light burning in his study. In fact, he was rather more than surprised; for he distinctly remembered to have extinguished the candles when he went out, an hour or two previously, locked the door, and put the key in his pocket, which, upon feeling for it, was still there. Pausing a moment to wonder by what means and for what purpose any one could have

entered the room, he perceived the shadow of a person apparently occupied about something in a remote corner. Supposing it to be a burglar employed in rifling his trunk, he was upon the point of alarming the police, when the man advanced to the window, into full view, as if for the purpose of looking out into the street. *It was De Wette himself!* — the scholar, author, professor, — his height, size, figure, stoop, — his head, his face, his features, eyes, mouth, nose, chin, every one, — skull-cap, study-gown, neck-tie, all, everything: there was no mistaking him, no deception whatever: there stood Dr. De Wette in his own library, and he out in the street: — why, he must be *somebody else!* The Doctor instinctively grasped his body with his hands, and tried himself with the psychological tests of self-consciousness and identity, doubtful, if he could believe his senses and black were not white, that he longer existed his former self, and stood, perplexed, bewildered, and confounded, gazing at his other likeness looking out of the window. Upon the person's retiring from the window, which occurred in a few moments, De Wette resolved not to dispute the possession of his study with the other Doctor before morning, and ringing at the door of a house opposite, where an acquaintance resided, he asked permission to remain over night.

The chamber occupied by him commanded a full view of the interior of his library, and from the window he could see his other self engaged in study and meditation, now walking up and down the room, immersed in thought, now sitting down at the desk to write, now rising to search for a volume among the book-shelves, and imitating in all respects the peculiar habits of the great Doctor engaged at work and busy with cogitations. At length, when the cathedral clock had finished striking through first four and then eleven strokes, as German clocks are wont to do an hour before twelve, De Wette Number Two manifested signs of retiring to rest, — took out his watch, the identical large gold one the other Doctor in the other chamber felt sure was at that

moment safe in his waistcoat-pocket, and wound it up, removed a portion of his clothing, came to the window, closed the curtains, and in a few moments the light disappeared. De Wette Number One, waiting a little time until convinced that Number Two had disposed himself to sleep, retired also his-self to bed, wondering very much what all this could mean.

Rising the next morning, he crossed the street, and passed up-stairs to his library. The door was fastened; he applied the key, opened it, and entered. No one was there; everything appeared in precisely the same condition in which he had left it the evening before, — his pen lying upon the paper as he had dropped it on going out, the candles on the table and the mantel-piece evidently not having been lighted, the window-curtains drawn aside as he had left them; in fine, there was not a single trace of any person's having been in the room. "Had he been insane the night before? He must have been. He was growing old; something was the matter with his eyes or brain; anyhow, he had been deceived, and it was very foolish of him to have remained away all night." Endeavoring to satisfy his mind with some such reflections as these, he remembered he had not yet examined his bed-room. Almost ashamed to make the search, now convinced it was all an hallucination of the senses, he crossed the narrow passageway and opened the door. He was thunderstruck. The ceiling, a lofty, massive brick arch, had fallen during the night, filling the room with rubbish and crushing his bed into atoms. De Wette the Apparition had saved the life of the great German scholar.

Tholuck, who was walking with me in the fields near Halle when relating the anecdote, added, upon concluding, "I do not pretend to account for the phenomenon; no knowledge, scientific or metaphysical, in my possession, is adequate to explain it; but I have no more doubt it actually, positively, literally did occur, than I have of the existence of the sun *im Himmel da.*"

CULTURE.

THE word of ambition at the present day is Culture. Whilst all the world is in pursuit of power, and of wealth as a means of power, culture corrects the theory of success. A man is the prisoner of his power. A topical memory makes him an almanac; a talent for debate, a disputant; skill to get money makes him a miser, that is, a beggar. Culture reduces these inflammations by invoking the aid of other powers against the dominant talent, and by appealing to the rank of powers. It watches success. For performance Nature has no mercy, and sacrifices the performer to get it done,—makes a dropsy or a tympany of him. If she wants a thumb, she makes one at the cost of arms and legs, and any excess of power in one part is usually paid for at once by some defect in a contiguous part.

Our efficiency depends so much on our concentration, that Nature usually, in the instances where a marked man is sent into the world, overloads him with bias, sacrificing his symmetry to his working power. It is said, no man can write but one book; and if a man have a defect, it is apt to leave its impression on all his performances. If she create a policeman like Fouché, he is made up of suspicions and of plots to circumvent them. "The air," said Fouché, "is full of poniards." The physician Sanctorius spent his life in a pair of scales, weighing his food. Lord Coke valued Chaucer highly, because the Canon Yeman's Tale illustrates the Statute *Hen. V. Chap. 4*, against Alchemy. I saw a man who believed the principal mischiefs in the English state were derived from the devotion to musical concerts. A freemason, not long since, set out to explain to this country, that the principal cause of the success of General Washington was the aid he derived from the freemasons.

But, worse than the harping on one string, Nature has secured individualism

by giving the private person a high conceit of his weight in the system. The pest of society is egotists. There are dull and bright, sacred and profane, coarse and fine egotists. 'Tis a disease that, like influenza, falls on all constitutions. In the distemper known to physicians as *chorea*, the patient sometimes turns round and continues to spin slowly on one spot. Is egotism a metaphysical varioloid of this malady? The man runs round a ring formed by his own talent, falls into an admiration of it, and loses relation to the world. It is a tendency in all minds. One of its annoying forms is a craving for sympathy. The sufferers parade their miseries, tear the lint from their bruises, reveal their indictable crimes, that you may pity them. They like sickness, because physical pain will extort some show of interest from the bystanders; as we have seen children, who, finding themselves of no account when grown people come in, will cough till they choke, to draw attention.

This distemper is the scourge of talent,—of artists, inventors, and philosophers. Eminent spiritualists shall have an incapacity of putting their act or word aloof from them, and seeing it bravely for the nothing it is. Beware of the man who says, "I am on the eve of a revelation!" It is speedily punished, inasmuch as this habit invites men to humor it, and, by treating the patient tenderly, to shut him up in a narrower selfism, and exclude him from the great world of God's cheerful fallible men and women. Let us rather be insulted, whilst we are insultable. Religious literature has eminent examples; and if we run over our private list of poets, critics, philanthropists, and philosophers, we shall find them infected with this dropsy and elephantiasis, which we ought to have tapped.

This goitre of egotism is so frequent among notable persons, that we must infer some strong necessity in Nature which

it subserves,— such as we see in the sexual attraction. The preservation of the species was a point of such necessity, that Nature has secured it at all hazards by immensely overloading the passion, at the risk of perpetual crime and disorder. So egotism has its root in the cardinal necessity by which each individual persists to be what he is.

This individuality is not only not inconsistent with culture, but is the basis of it. Every valuable nature is there in its own right; and the student we speak to must have a mother-wit invincible by his culture, which uses all books, arts, facilities, and elegancies of intercourse, but is never subdued and lost in them. He only is a well-made man who has a good determination. And the end of culture is, not to destroy this,—God forbid!—but to train away all impediment and mixture, and leave nothing but pure power. Our student must have a style and determination, and be a master in his own speciality. But, having this, he must put it behind him. He must have a catholicity, a power to see with a free and disengaged look every object. Yet is this private interest and self so overcharged, that, if a man seeks a companion who can look at objects for their own sake, and without affection or self-reference, he will find the fewest who will give him that satisfaction; whilst most men are afflicted with a coldness, an incuriosity, as soon as any object does not connect with their self-love. Though they talk of the object before them, they are thinking of themselves, and their vanity is laying little traps for your admiration.

But after a man has discovered that there are limits to the interest which his private history has for mankind, he still converses with his family, or a few companions, — perhaps with half a dozen personalities that are famous in his neighborhood. In Boston, the question of life is the names of some eight or ten men. Have you seen Mr. Allston, Doctor Channing, Mr. Adams, Mr. Webster, Mr. Greenough? Have you heard Everett, Garrison, Father Taylor, Theodore

Parker? Have you talked with Messieurs Turbinewheel, Summitlevel, and Lacofrupees? Then you may as well die. In New York, the question is of some other eight, or ten, or twenty. Have you seen a few lawyers, merchants, and brokers, — two or three scholars, two or three capitalists, two or three editors of newspapers? New York is a sucked orange. All conversation is at an end, when we have discharged ourselves of a dozen personalities, domestic or imported, which make up our American existence. Nor do we expect anybody to be other than a faint copy of these heroes.

Life is very narrow. Bring any club or company of intelligent men together again after ten years, and if the presence of some penetrating and calming genius could dispose them to frankness, what a confession of insanities would come up! The “causes” to which we have sacrificed, Tariff or Democracy, Whiggism or Abolition, Temperance or Socialism, would show like roots of bitterness and dragons of wrath: and our talents are as mischievous as if each had been seized upon by some bird of prey, which had whisked him away from fortune, from truth, from the dear society of the poets, some zeal, some bias, and only when he was now gray and nerveless was it relaxing its claws, and he awaking to sober perceptions.

Culture is the suggestion from certain best thoughts, that a man has a range of affinities, through which he can modulate the violence of any master-tones that have a droning preponderance in his scale, and succor him against himself. Culture redresses his balance, puts him among his equals and superiors, revives the delicious sense of sympathy, and warns him of the dangers of solitude and repulsion.

'Tis not a compliment, but a disparagement, to consult a man only on horses, or on steam, or on theatres, or on eating, or on books, and, whenever he appears, considerately to turn the conversation to the bantling he is known to fondle. In the Norse heaven of our forefathers,

Thor's house had five hundred and forty floors: and Man's house has five hundred and forty floors. His excellence is facility of adaptation, and of transition through many related points to wide contrasts and extremes. Culture kills his exaggeration, his conceit of his village or his city. We must leave our pets at home when we go into the street, and meet men on broad grounds of good meaning and good sense. No performance is worth loss of geniality. 'Tis a cruel price we pay for certain fancy goods called fine arts and philosophy. In the Norse legend, Allfadir did not get a drink of Mimir's spring, (the fountain of wisdom,) until he left his eye in pledge. And here is a pedant that cannot unfold his wrinkles, nor conceal his wrath at interruption by the best, if their conversation do not fit his impertinency,—here is he to afflict us with his personalities. 'Tis incident to scholars, that each of them fancies he is pointedly odious in his community. Draw him out of this limbo of irritability. Cleanse with healthy blood his parchment skin. You restore to him his eyes which he left in pledge at Mimir's spring. If you are the victim of your doing, who cares what you do? We can spare your opera, your gazetteer, your chemic analysis, your history, your syllogisms. Your man of genius pays dear for his distinction. His head runs up into a spire, and, instead of a healthy man, merry and wise, he is some mad dominie. Nature is reckless of the individual. When she has points to carry, she carries them. To wade in marshes and sea-margins is the destiny of certain birds; and they are so accurately made for this, that they are imprisoned in those places. Each animal out of its *habitat* would starve. To the physician, each man, each woman, is an amplification of one organ. A soldier, a locksmith, a bank-clerk, and a dancer could not exchange functions. And thus we are victims of adaptation.

The antidotes against this organic egotism are—the range and variety of attractions, as gained by acquaintance with the

world, with men of merit, with classes of society, with travel, with eminent persons, and with the high resources of philosophy, art, and religion: books, travel, society, solitude.

The hardiest skeptic, who has seen a horse broken, a pointer trained, or who has visited a menagerie, or the exhibition of the Industrious Fleas, will not deny the validity of education. "A boy," says Plato, "is the most vicious of all wild beasts"; and, in the same spirit, the old English poet Gascoigne says, "A boy is better unborn than untaught." The city breeds one kind of speech and manners; the back-country a different style; the sea another; the army a fourth. We know that an army which can be confided in may be formed by discipline,—that by systematic discipline all men may be made heroes. Marshal Lannes said to a French officer, "Know, Colonel, that none but a poltroon will boast that he never was afraid." A great part of courage is the courage of having done the thing before. And, in all human action, those faculties will be strong which are used. Robert Owen said, "Give me a tiger, and I will educate him." 'Tis inhuman to want faith in the power of education, since to meliorate is the law of Nature; and men are valued precisely as they exert onward or meliorating force. On the other hand, poltroonery is the acknowledging an inferiority to be incurable.

Incapacity of melioration is the only mortal distemper. There are people who can never understand a trope, or any second or expanded sense given to your words, or any humor,—but remain literalists, after hearing the music and poetry and rhetoric and wit of seventy or eighty years. They are past the help of surgeon or clergy. But even these can understand pitchforks and the cry of "Fire!"—and I have noticed in some of this class a marked dislike of earthquakes.

Let us make our education brave and preventive. Politics is an after-work, a poor patching. We are always a little late. The evil is done, the law is passed, and we begin the up-hill agitation for re-

peal of that of which we ought to have prevented the enacting. We shall one day learn to supersede politics by education. What we call our root-and-branch reforms of slavery, war, gambling, intemperance, is only medicating the symptoms. We must begin higher up,—namely, in Education.

Our arts and tools give to him who can handle them much the same advantage over the novice as if you extended his life ten, fifty, or a hundred years. And I think it the part of good sense to provide every fine soul with such culture, that it shall not, at thirty or forty years, have to say, “This which I might do is made hopeless through my want of weapons.”

But it is conceded that much of our training fails of effect,—that all success is hazardous and rare,—that a large part of our cost and pains is thrown away. Nature takes the matter into her own hands, and, though we must not omit any jot of our system, we can seldom be sure that it has availed much, or that as much good would not have accrued from a different system.

Books, as containing the finest records of human wit, must always enter into our notion of culture. The best heads that ever existed, Pericles, Plato, Julius Cæsar, Shakspeare, Goethe, Milton, were well-read, universally educated men, and quite too wise to undervalue letters. Their opinion has weight, because they had means of knowing the opposite opinion. We look that a great man should be a good reader, or in proportion to the spontaneous power should be the assimilating power. Good criticism is very rare, and always precious. I am always happy to meet persons who perceive the transcendent superiority of Shakspeare over all other writers. I like people who like Plato. Because this love does not consist with self-conceit.

But books are good only as far as a boy is ready for them. He sometimes gets ready very slowly. You send your child to the schoolmaster; but 'tis the schoolboys who educate him. You send

him to the Latin class; but much of his tuition comes on his way to school, from the shop-windows. You like the strict rules and the long terms; and he finds his best leading in a by-way of his own, and refuses any companions but of his choosing. He hates the grammar and *Gradus*, and loves guns, fishing-rods, horses, and boats. Well, the boy is right; and you are not fit to direct his bringing-up, if your theory leaves out his gymnastic training. Archery, cricket, gun and fishing-rod, horse and boat, are all educators, liberalizers; and so are dancing, dress, and the street-talk; and—provided only the boy has resources, and is of a noble and ingenuous strain—these will not serve him less than the books. He learns chess, whist, dancing, and theatricals. The father observes that another boy has learned algebra and geometry in the same time. But the first boy has acquired much more than these poor games along with them. He is infatuated for weeks with whist and chess; but presently will find out, as you did, that, when he rises from the game too long played, he is vacant and forlorn, and despises himself. Thenceforward it takes place with other things, and has its due weight in his experience. These minor skills and accomplishments—for example, dancing—are tickets of admission to the dress-circle of mankind, and the being master of them enables the youth to judge intelligently of much on which otherwise he would give a pedantic squint. Landor said, “I have suffered more from my bad dancing than from all the misfortunes and miseries of my life put together.” Provided always the boy is teachable, (for we are not proposing to make a statue out of punk,) football, cricket, archery, swimming, skating, climbing, fencing, riding, are lessons in the art of power, which it is his main business to learn,—riding specially, of which Lord Herbert of Cherbury said, “A good rider on a good horse is as much above himself and others as the world can make him.” Besides, the gun, fishing-rod, boat, and horse constitute, among all who use them, secret freemasonries.

They are as if they belonged to one club.

There is also a negative value in these arts. Their chief use to the youth is, not amusement, but to be known for what they are, and not to remain to him occasions of heartburn. We are full of superstitions. Each class fixes its eyes on the advantages it has not: the refined, on rude strength; the democrat, on birth and breeding. One of the benefits of a college-education is, to show the boy its little avail. I knew a leading man in a leading city, who, having set his heart on an education at the university and missed it, could never quite feel himself the equal of his own brothers who had gone thither. His easy superiority to multitudes of professional men could never quite countervail to him this imaginary defect. Balls, riding, wine-parties, and billiards pass to a poor boy for something fine and romantic, which they are not; and a free admission to them on an equal footing, if it were possible, only once or twice, would be worth ten times its cost, by undeceiving him.

I am not much an advocate for travelling, and I observe that men run away to other countries because they are not good in their own, and run back to their own because they pass for nothing in the new places. For the most part, only the light characters travel. Who are you that have no task to keep you at home? I have been quoted as saying captious things about travel; but I mean to do justice. I think there is a restlessness in our people which argues want of character. All educated Americans, first or last, go to Europe,—perhaps because it is their mental home, as the invalid habits of this country might suggest. An eminent teacher of girls said, “The idea of a girl’s education is whatever qualifies them for going to Europe.” Can we never extract this tape-worm of Europe from the brain of our countrymen? One sees very well what their fate must be. He that does not fill a place at home cannot abroad. He only goes there to hide his insignificance in a larger crowd.

You do not think you will find anything there which you have not seen at home? The stuff of all countries is just the same. Do you suppose there is any country where they do not scald milkpans, and swaddle the infants, and burn the brushwood, and broil the fish? What is true anywhere is true everywhere. And let him go where he will, he can find only so much beauty or worth as he carries.

Of course, for some men travel may be useful. Naturalists, discoverers, and sailors are born. Some men are made for couriers, exchangers, envoys, missionaries, bearers of despatches, as others are for farmers and working-men. And if the man is of a light and social turn, and Nature has aimed to make a legged and winged creature, framed for locomotion, we must follow her hint, and furnish him with that breeding which gives currency as sedulously as with that which gives worth. But let us not be pedantic, but allow to travel its full effect. The boy grown up on the farm which he has never left is said in the country to have had *no chance*, and boys and men of that condition look upon work on a railroad or drudgery in a city as opportunity. Poor country-boys of Vermont and Connecticut formerly owed what knowledge they had to their peddling-trips to the Southern States. California and the Pacific Coast are now the university of this class, as Virginia was in old times. “To have *some chance*” is their word. And the phrase, “to know the world,” or to travel, is synonymous with all men’s ideas of advantage and superiority. No doubt, to a man of sense travel offers advantages. As many languages as he has, as many friends, as many arts and trades, so many times is he a man. A foreign country is a point of comparison wherefrom to judge his own. One use of travel is, to recommend the books and works of home; (we go to Europe to be Americanized;) and another, to find men. For as Nature has put fruits apart in latitudes, a new fruit in every degree, so knowledge and fine moral quality she lodges in distant men. And thus, of the six or seven

teachers whom each man wants among his contemporaries, it often happens that one or two of them live on the other side of the world.

Moreover, there is in every constitution a certain solstice, when the stars stand still in our inward firmament, and when there is required some foreign force, some diversion or alterative, to prevent stagnation. And, as a medical remedy, travel seems one of the best. Just as a man witnessing the admirable effect of ether to lull pain, and, meditating on the contingencies of wounds, cancers, lock-jaws, rejoices in Dr. Jackson's benign discovery, so a man who looks at Paris, at Naples, or at London, says, "If I should be driven from my own home, here, at least, my thoughts can be consoled by the most prodigal amusement and occupation which the human race in ages could contrive and accumulate."

Akin to the benefit of foreign travel, the æsthetic value of railroads is to unite the advantages of town and country life, neither of which we can spare. A man should live in or near a large town, because, let his own genius be what it may, it will repel quite as much of agreeable and valuable talent as it draws, and, in a city, the total attraction of all the citizens is sure to conquer, first or last, every repulsion, and drag the most improbable hermit within its walls some day in the year. In town he can find the swimming-school, the gymnasium, the dancing-master, the shooting-gallery, opera, theatre, and panorama,—the chemist's shop, the museum of natural history, the gallery of fine arts, the national orators in their turn, foreign travellers, the libraries, and his club. In the country he can find solitude and reading, manly labor, cheap living, and his old shoes,—moors for game, hills for geology, and groves for devotion. Aubrey writes, "I have heard Thomas Hobbes say, that, in the Earl of Devon's house, in Derbyshire, there was a good library and books enough for him, and his Lordship stored the library with what books he thought fit to be bought. But the want of good conversation was a very

great inconvenience, and, though he conceived he could order his thinking as well as another, yet he found a great defect. In the country, in long time, for want of good conversation, one's understanding and invention contract a moss on them, like an old paling in an orchard."

Cities give us collision. 'Tis said, London and New York take the nonsense out of a man. A great part of our education is sympathetic and social. Boys and girls who have been brought up with well-informed and superior people show in their manners an inestimable grace. Fuller says, that "William, Earl of Nassau, won a subject from the King of Spain every time he put off his hat." You cannot have one well-bred man without a whole society of such. They keep each other up to any high point. Especially women: it requires a great many cultivated women,—saloons of bright, elegant, reading women, accustomed to ease and refinement, to spectacles, pictures, sculpture, poetry, and to elegant society,—in order that you should have one Madame de Staël. The head of a commercial house, or a leading lawyer or politician, is brought into daily contact with troops of men from all parts of the country,—and those, too, the driving-wheels, the business-men of each section,—and one can hardly suggest for an apprehensive man a more searching culture. Besides, we must remember the high social possibilities of a million of men. The best bribe which London offers to-day to the imagination is, that, in such a vast variety of people and conditions, one can believe there is room for persons of romantic character to exist, and that the poet, the mystic, and the hero may hope to confront their counterparts.

I wish cities could teach their best lesson,—of quiet manners. It is the foible especially of American youth,—pretension. The mark of the man of the world is absence of pretension. He does not make a speech; he takes a low business-tone, avoids all brag, is nobody, dresses plainly, promises not at all, performs much, speaks in monosyllables, hugs his

fact. He calls his employment by its lowest name, and so takes from evil tongues their sharpest weapon. His conversation clings to the weather and the news, yet he allows himself to be surprised into thought, and the unlocking of his learning and philosophy. How the imagination is piqued by anecdotes of some great man passing incognito, as a king in gray clothes!—of Napoleon affecting a plain suit at his glittering levee!—of Burns, or Scott, or Beethoven, or Wellington, or Goethe, or any container of transcendent power, passing for nobody!—of Epaminondas, “who never says anything, but will listen eternally!”—of Goethe, who preferred trifling subjects and common expressions in intercourse with strangers, worse rather than better clothes, and to appear a little more capricious than he was! There are advantages in the old hat and box-coat. I have heard, that, throughout this country, a certain respect is paid to good broadcloth: but dress makes a little restraint; men will not commit themselves. But the box-coat is like wine; it unlocks the tongue, and men say what they think. An old poet says,—

“Go far and go sparing;
For you’ll find it certain,
The poorer and the baser you appear,
The more you’ll look through still.”*

Not much otherwise Milnes writes, in the “Lay of the Humble”:—

“To me men are for what they are,
They wear no masks with me.”

’Tis odd that our people should have—not water on the brain,—but a little gas there. A shrewd foreigner said of the Americans, that “whatever they say has a little the air of a speech.” Yet one of the traits down in the books, as distinguishing the Anglo-Saxon, is a trick of self-disparagement. To be sure, in old, dense countries, among a million of good coats, a fine coat comes to be no distinction, and you find humorists. In an English party, a man with no marked man-

* Beaumont and Fletcher: *The Tamer Tamed*.

ners or features, with a face like red dough, unexpectedly discloses wit, learning, a wide range of topics, and personal familiarity with good men in all parts of the world, until you think you have fallen upon some illustrious personage. Can it be that the American forest has refreshed some weeds of old Pictish barbarism just ready to die out,—the love of the scarlet feather, of beads, and tinsel? The Italians are fond of red clothes, peacock-plumes, and embroidery; and I remember, one rainy morning in the city of Palermo, the street was in a blaze with scarlet umbrellas. The English have a plain taste. The equipages of the grandes are plain. A gorgeous livery indicates new and awkward city-wealth. Mr. Pitt, like Mr. Pym, thought the title of *Mister* good against any king in Europe. They have piqued themselves on governing the whole world in the poor, plain, dark committee-room which the House of Commons sat in before the fire.

Whilst we want cities as the centres where the best things are found, cities degrade us by magnifying trifles. The countryman finds the town a chop-house, a barber’s shop. He has lost the lines of grandeur of the horizon, hills and plains, and, with them, sobriety and elevation. He has come among a supple, glib-tongued tribe, who live for show, servile to public opinion. Life is dragged down to a fracas of pitiful cares and disasters. You say the gods ought to respect a life whose objects are their own; but in cities they have betrayed you to a cloud of insignificant annoyances:—

“Mirmidons, race féconde,
Mirmidons,
Enfin nous commandons;
Jupiter livre le monde
Aux mirmidons, aux mirmidons.”*

’Tis heavy odds
Against the gods,
When they will match with myrmidons.
We spawning, spawning myrmidons,
Our turn to-day; we take command:
Jove gives the globe into the hand
Of myrmidons, of myrmidons.

* Béranger.

What is odious but noise, and people who scream and bewail?—people whose vane points always east, who live to dine, who send for the doctor, who coddle themselves, who toast their feet on the register, who intrigue to secure a padded chair and a corner out of the draught? Suffer them once to begin the enumeration of their infirmities, and the sun will go down on the unfinished tale. Let these triflers put us out of conceit with petty comforts. To a man at work, the frost is but a color; the rain, the wind, he forgot them when he came in. Let us learn to live coarsely, dress plainly, and lie hard. The least habit of dominion over the palate has certain good effects not easily estimated. Neither will we be driven into a quiddling abstemiousness. 'Tis a superstition to insist on a special diet. All is made at last of the same chemical atoms.

A man in pursuit of greatness feels no little wants. How can you mind diet, bed, dress, or salutes or compliments, or the figure you make in company, or wealth, or even the bringing things to pass, when you think how paltry are the machinery and the workers? Wordsworth was praised to me, in Westmoreland, for having afforded to his country neighbors an example of a modest household, where comfort and culture were secured without display. And a tender boy who wears his rusty cap and outgrown coat, that he may secure the coveted place in college and the right in the library, is educated to some purpose. There is a great deal of self-denial and manliness in poor and middle-class houses, in town and country, that has not got into literature, and never will, but that keeps the earth sweet,—that saves on superfluities, and spends on essentials,—that goes rusty, and educates the boy,—that sells the horse, but builds the school,—works early and late, takes two looms in the factory, three looms, six looms, but pays off the mortgage on the paternal farm, and then goes back cheerfully to work again.

We can ill spare the commanding social benefits of cities; they must be used,

—yet cautiously, and haughtily,—and will yield their best values to him who best can do without them. Keep the town for occasions, but the habits should be formed to retirement. Solitude, the safeguard of mediocrity, is to genius the stern friend, the cold, obscure shelter where moult the wings which will bear it farther than suns and stars. He who should inspire and lead his race must be defended from travelling with the souls of other men,—from living, breathing, reading, and writing in the daily, time-worn yoke of their opinions. “In the morning, solitude,” said Pythagoras,—that Nature may speak to the imagination, as she does never in company, and that her favorite may make acquaintance with those divine strengths which disclose themselves to serious and abstracted thought. 'Tis very certain that Plato, Plotinus, Archimedes, Hermes, Newton, Milton, Wordsworth did not live in a crowd, but descended into it from time to time as benefactors: and the wise instructor will press this point of securing to the young soul, in the disposition of time and the arrangements of living, periods and habits of solitude. The high advantage of university-life is often the mere mechanical one, I may call it, of a separate chamber and fire,—which parents will allow the boy without hesitation at Cambridge, but do not think needful at home. We say solitude, to mark the character of the tone of thought; but if it can be shared between two, or more than two, it is happier, and not less noble. “We four,” wrote Neander to his sacred friends, “will enjoy at Halle the inward blessedness of a *civitas Dei*, whose foundations are forever friendship. The more I know you, the more I dissatisfy and must dissatisfy all my wonted companions. Their very presence stupefies me. The common understanding withdraws itself from the one centre of all existence.”

Solitude takes off the pressure of present importunities, that more catholic and humane relations may appear. The saint and poet seek privacy to ends the most public and universal: and it is the

secret of culture; to interest the man more in his public than in his private quality. Here is a new poem, which elicits a good many comments in the journals and in conversation. From these it is easy, at last, to eliminate the verdict which readers passed upon it; and that is, in the main, unfavorable. The poet, as a craftsman, is interested only in the praise accorded to him, and not in the censure, though it be just; and the poor little poet hearkens only to that, and rejects the censure, as proving incapacity in the critic. But the poet, *cultivated*, becomes a stockholder in both companies, — say Mr. Curfew, — in the Curfew stock, and in the *humanity* stock; and, in the last, exults as much in the demonstration of the unsoundness of Curfew as his interest in the former gives him pleasure in the currency of Curfew. For the depreciation of his Curfew stock only shows the immense values of the humanity stock. As soon as he sides with his critic against himself, with joy, he is a cultivated man.

We must have an intellectual quality in all property and in all action, or they are nought. I must have children, I must have events, I must have a social state and history, or my thinking and speaking want body or basis. But to give these accessories any value, I must know them as contingent and rather showy possessions, which pass for more to the people than to me. We see this abstraction in scholars, as a matter of course: but what a charm it adds when observed in practical men! Bonaparte, like Cæsar, was intellectual, and could look at every object for itself, without affection. Though an egotist *à l'outrance*, he could criticize a play, a building, a character, on universal grounds, and give a just opinion. A man known to us only as a celebrity in politics or in trade gains largely in our esteem, if we discover that he has some intellectual taste or skill: as when we learn of Lord Fairfax, the Long Parliament's general, his passion for antiquarian studies; or of the French regicide Carnot, his sublime ge-

nius in mathematics; or of a living banker, his success in poetry; or of a partisan journalist, his devotion to ornithology. So, if, in travelling in the dreary wildernesses of Arkansas or Texas, we should observe on the next seat a man reading Horace, or Martial, or Calderon, we should wish to hug him. In callings that require roughest energy, soldiers, sea-captains, and civil engineers sometimes betray a fine insight, if only through a certain gentleness when off duty: a good-natured admission that there are illusions, and who shall say that he is not their sport? We only vary the phrase, not the doctrine, when we say that culture opens the sense of beauty. A man is a beggar who only lives to the useful, and, however he may serve as a pin or rivet in the social machine, cannot be said to have arrived at self-possession. I suffer, every day, from the want of perception of beauty in people. They do not know the charm with which all moments and objects can be embellished, — the charm of manners, of self-command, of benevolence. Repose and cheerfulness are the badge of the gentleman, — repose in energy. The Greek battle-pieces are calm; the heroes, in whatever violent actions engaged, retain a serene aspect: as we say of Niagara, that it falls without speed. A cheerful, intelligent face is the end of culture, and success enough; for it indicates the purpose of Nature and wisdom attained.

When our higher faculties are in activity, we are domesticated, and awkwardness and discomfort give place to natural and agreeable movements. It is noticed that the consideration of the great periods and spaces of astronomy induces a dignity of mind and an indifference to death. The influence of fine scenery, the presence of mountains, appeases our irritations and elevates our friendships. Even a high dome, and the expansive interior of a cathedral, have a sensible effect on manners. I have heard that stiff people lose something of their awkwardness under high ceilings and in spacious halls. I think sculpture and

painting have an effect to teach us manners and abolish hurry.

But, over all, culture must reinforce from higher influx the empirical skills of eloquence, or of politics, or of trade and the useful arts. There is a certain loftiness of thought and power to marshal and adjust particulars, which can come only from an insight of their whole connection. The orator who has once seen things in their divine order will never quite lose sight of this, and will come to affairs as from a higher ground, and, though he will say nothing of philosophy, he will have a certain mastery in dealing with them, and an incapableness of being dazzled or frightened, which will distinguish his handling from that of attorneys and factors. A man who stands on a good footing with the heads of parties at Washington reads the rumors of the newspapers and the guesses of provincial politicians with a key to the right and wrong in each statement, and sees well enough where all this will end. Archimedes will look through your Connecticut machine at a glance, and judge of its fitness. And much more, a wise man who knows not only what Plato, but what Saint John can show him, can easily raise the affair he deals with to a certain majesty. Plato says, Pericles owed this elevation to the lessons of Anaxagoras. Burke descended from a higher sphere when he would influence human affairs. Franklin, Adams, Jefferson, Washington, stood on a fine humanity, before which the brawls of modern senates are but pot-house politics.

But there are higher secrets of culture, which are not for the apprentices, but for proficients. These are lessons only for the brave. We must know our friends under ugly masks. The calamities are our friends. Ben Jonson specifies in his address to the Muse:—

“Get him the time’s long grudge, the court’s
ill-will,
And, reconciled, keep him suspected still,
Make him lose all his friends, and, what is
worse,
Almost all ways to any better course;

With me thou leav’st a better Muse than
thee,
And which thou brought’st me, blessed
Poverty.”

We wish to learn philosophy by rote, and play at heroism. But the wiser God says, Take the shame, the poverty, and the penal solitude that belong to truth-speaking. Try the rough water as well as the smooth. Rough water can teach lessons worth knowing. When the state is unquiet, personal qualities are more than ever decisive. Fear not a revolution which will constrain you to live five years in one. Don’t be so tender at making an enemy now and then. Be willing to go to Coventry sometimes, and let the populace bestow on you their coldest contempts. The finished man of the world must eat of every apple once. He must hold his hatreds also at arm’s length, and not remember spite. He has neither friends nor enemies, but values men only as channels of power.

He who aims high must dread an easy home and popular manners. Heaven sometimes hedges a rare character about with ungainliness and odium, as the burr that protects the fruit. If there is any great and good thing in store for you, it will not come at the first or the second call, nor in the shape of fashion, ease, and city drawing-rooms. Popularity is for dolls. “Steep and craggy,” said Porphyry, “is the path of the gods.” Open your Marcus Antoninus. In the opinion of the ancients, he was the great man who scorned to shine, and who contested the frowns of Fortune. They preferred the noble vessel too late for the tide, contending with winds and waves, dismantled and unrigged, to her companion borne into harbor with colors flying and guns firing. There is none of the social goods that may not be purchased too dear, and mere amiableness must not take rank with high aims and self-subsistency.

Bettine replies to Goethe’s mother, who chides her disregard of dress,—“If I cannot do as I have a mind, in our poor Frankfort, I shall not carry things far.” And the youth must rate at its true mark

the inconceivable levity of local opinion. The longer we live, the more we must endure the elementary existence of men and women : and every brave heart must treat society as a child, and never allow it to dictate.

“ All that class of the severe and restrictive virtues,” said Burke, “ are almost too costly for humanity.” Who wishes to be severe? Who wishes to resist the eminent and polite, in behalf of the poor and low and impolite? and who that dares do it can keep his temper sweet, his frolic spirits? The high virtues are not debonair, but have their redress in being illustrious at last. What forests of laurel we bring, and the tears of mankind, to those who stood firm against the opinion of their contemporaries! The measure of a master is his success in bringing all men round to his opinion twenty years later.

Let me say here, that culture cannot begin too early. In talking with scholars, I observe that they lost on ruder companions those years of boyhood which alone could give imaginative literature a religious and infinite quality in their esteem. I find, too, that the chance for appreciation is much increased by being the son of an appreciator, and that these boys who now grow up are caught not only years too late, but two or three births too late, to make the best scholars of. And I think it a presentable motive to a scholar, that, as, in an old community, a well-born proprietor is usually found, after the first heats of youth, to be a careful husband, and to feel an habitual desire that the estate shall suffer no harm by his administration, but shall be delivered down to the next heir in as good condition as he received it,—so, a considerate man will reckon himself a subject of that secular melioration by which mankind is mollified, cured, and refined, and will

shun every expenditure of his forces on pleasure or gain, which will jeopardize this social and secular accumulation.

The fossil strata show us that Nature began with rudimental forms, and rose to the more complex as fast as the earth was fit for their dwelling-place,—and that the lower perish, as the higher appear. Very few of our race can be said to be yet finished men. We still carry sticking to us some remains of the preceding inferior quadruped organization. We call these millions men; but they are not yet men. Half-engaged in the soil, pawing to get free, man needs all the music that can be brought to disengage him. If Love, red Love, with tears and joy,—if Want with his scourge,—if War with his cannonade,—if Christianity with its charity,—if Trade with its money,—if Art with its portfolios,—if Science with her telegraphs through the deeps of space and time, can set his dull nerves throbbing, and by loud taps on the tough chrysalis can break its walls and let the new creature emerge erect and free,—make way, and sing pæan! The age of the quadruped is to go out,—the age of the brain and of the heart is to come in. The time will come when the evil forms we have known can no more be organized. Man’s culture can spare nothing, wants all the material. He is to convert all impediments into instruments, all enemies into power. The formidable mischief will only make the more useful slave. And if one shall read the future of the race hinted in the organic effort of Nature to mount and meliorate, and the corresponding impulse to the Better in the human being, we shall dare affirm that there is nothing he will not overcome and convert, until at last culture shall absorb the chaos and gehenna. He will convert the Furies into Muses, and the hells into benefit.

THE CHILDREN'S HOUR.

BETWEEN the dark and the daylight,
When the night is beginning to lower,
Comes a pause in the day's occupations
That is known as the Children's Hour.

I hear in the chamber above me
The patter of little feet,
The sound of a door that is opened,
And voices soft and sweet.

From my study I see in the lamplight,
Descending the broad hall-stair,
Grave Alice, and laughing Allegra,
And Edith with golden hair.

A whisper, and then a silence :
Yet I know by their merry eyes
They are plotting and planning together
To take me by surprise.

A sudden rush from the stairway,
A sudden raid from the hall !
By three doors left unguarded
They enter my castle wall !

They climb up into my turret
O'er the arms and back of my chair ;
If I try to escape, they surround me ;
They seem to be everywhere.

They almost devour me with kisses,
Their arms about me entwine,
Till I think of the Bishop of Bingen
In his Mouse-Tower on the Rhine !

Do you think, O blue-eyed banditti,
Because you have scaled the wall,
Such an old moustache as I am
Is not a match for you all ?

I have you fast in my fortress,
And will not let you depart,
But put you down into the dungeons
In the round-tower of my heart.

And there will I keep you forever,
Yes, forever and a day,
Till the walls shall crumble to ruin,
And moulder in dust away !

THREE-MILE CROSS.

It seems but yesterday, although more than thirteen years have gone by, since I first opened the little garden-gate and walked up the path leading to Mary Russell Mitford's cottage at Three-Mile Cross. A friend in London had given me his card to the writer of "Our Village," and I had promised to call on my way to Oxford, and have a half-hour's chat over her geraniums with the charming person whose sketches I had read with so much interest in my own country. Her cheerful voice at the head of the stairs, telling her little maid to show me the way to her sitting-room, sounded very musically, and I often observed in later interviews how like a melody her tones always appeared in conversation. Once when she read a lyrical poem, not her own, to a group of friends assembled at her later residence, in Swallowfield, of which number it was my good-fortune to be one, the verses came from her lips like an exquisite chant. Her laugh had a ringing sweetness in it, rippling out sometimes like a beautiful chime of silver bells; and when she told a comic story, which she often did with infinite tact and grace, she joined in with the jollity at the end, her eyes twinkling with delight at the pleasure her narrative was always sure to bring. Her enjoyment of a joke was something delicious, and when she heard a good thing for the first time her exultant mirth was unbounded. As she sat in her easy-chair, listening to a Yankee story which interested her, her "Dear me! dear me! dear me!" (three times repeated always)

"Rang like a golden jewel down a golden stair."

The sunny summer-day was falling full on her honeysuckles, lilies, and roses, when I first saw her face in the snug cottage at Three-Mile Cross. As we sat together at the open casement, looking down on the flowers that sent up their perfumes to her latticed window like fragrant tributes

from a fountain of distilled sweet waters, she pointed out, among the neighboring farm-houses and villas, the residences of her friends, in all of whom she seemed to have the most affectionate interest. I noticed, as the village children went by her window, they all stopped to bow and curtsy. One curly-headed urchin made bold to take off his well-worn cap and wait to be recognized as "little Johnny,"—"no great scholar," said the kind-hearted old lady to me, "but a sad rogue among our flock of geese. Only yesterday, the young marauder was detected by my maid with a plump gosling stuffed half-way into his pocket!" While she was thus discoursing of Johnny's peccadilloes, the little fellow looked up with a knowing expression, and very soon caught in his cap a gingerbread dog, which the old lady threw to him from the window. "I wish he loved his book as well as he relishes sweet cake," sighed she, as the boy kicked up his heels and disappeared down the lane.

Full of anecdote, her conversation that afternoon ran on in a perpetual flow of good-humor, until it was time for me to be on my way toward the University City. From that time till she died, our friendship continued, and, during other visits to England, I saw her frequently, driving about the country with her in her pony-chaise, and spending many happy hours under her cottage-roof. She was always the same cheerful spirit, enlivening our intercourse with shrewd and pertinent observations and reminiscences, some of which it may not be out of place to reproduce here. Country life, its scenery and manners, she was never tired of depicting; but not infrequently she loved to talk of those celebrities in literature and art whom she had known intimately, with a vivacity and sweetness of temper never-failing and delightful. I well remember, one autumn evening, when half a dozen friends were sitting in

her library after dinner, talking with her of Tom Taylor's *Life of Haydon*, then lately published, how graphically she described to us the eccentric painter, whose genius she was among the foremost to recognize. The flavor of her discourse I cannot reproduce; but I was too much interested in what she was saying to forget the main incidents she drew for our edification, during those pleasant hours now far away in the past.

"I am a terrible forgetter of dates," she used to say, when any one asked her of the *time when*; but for the *manner how* she was never at a loss. "Poor Haydon!" she began. "He was an old friend of mine, and I am indebted to Sir William Elford, one of my dear father's correspondents during my girlhood, for a suggestion which sent me to look at a picture then on exhibition in London, and thus was brought about my knowledge of the painter's existence. He, Sir William, had taken a fancy to me, and I became his child-correspondent. Few things contribute more to that indirect after-education, which is worth all the formal lessons of the school-room a thousand times told, than such good-humored condescension from a clever man of the world to a girl almost young enough to be his granddaughter. I owe much to that correspondence, and, amongst other debts, the acquaintance of Haydon. Sir William's own letters were most charming,—full of old-fashioned courtesy, of quaint humor, and of pleasant and genial criticism on literature and on art. An amateur-painter himself, painting interested him particularly, and he often spoke much and warmly of the young man from Plymouth, whose picture of the 'Judgment of Solomon' was then on exhibition in London. 'You must see it,' said he, 'even if you come to town on purpose.'"—The reader of Haydon's *Life* will remember that Sir William Elford, in conjunction with a Plymouth banker named Tingecombe, ultimately purchased the picture. The poor artist was overwhelmed with astonishment and

joy when he walked into the exhibition-room and read the label, "Sold," which had been attached to his picture that morning before he arrived. "My first impulse," he says in his *Autobiography*, "was gratitude to God."

"It so happened," continued Miss Mitford, "that I merely passed through London that season, and, being detained by some of the thousand and one nothings which are so apt to detain women in the great city, I arrived at the exhibition, in company with a still younger friend, so near the period of closing, that more punctual visitors were moving out, and the doorkeeper actually turned us and our money back. I persisted, however, assuring him that I only wished to look at one picture, and promising not to detain him long. Whether my entreaties would have carried the point or not, I cannot tell; but half a crown did; so we stood admiringly before the 'Judgment of Solomon.' I am no great judge of painting; but that picture impressed me then, as it does now, as excellent in composition, in color, and in that great quality of telling a story which appeals at once to every mind. Our delight was sincerely felt, and most enthusiastically expressed, as we kept gazing at the picture, and seemed, unaccountably to us at first, to give much pleasure to the only gentleman who had remained in the room,—a young and very distinguished-looking person, who had watched with evident amusement our negotiation with the doorkeeper. Beyond indicating the best position to look at the picture, he had no conversation with us; but I soon surmised that we were seeing the painter, as well as his painting; and when, two or three years afterwards, a friend took me by appointment to view the 'Entry into Jerusalem,' Haydon's next great picture, then near its completion, I found I had not been mistaken.

"Haydon was, at that period, a remarkable person to look at and listen to. Perhaps your American word *bright* expresses better than any other his appearance

and manner. His figure, short, slight, elastic, and vigorous, looked still more light and youthful from the little sailor's-jacket and snowy trousers which formed his painting costume. His complexion was clear and healthful. His forehead, broad and high, out of all proportion to the lower part of his face, gave an unmistakable character of intellect to the finely placed head. Indeed, he liked to observe that the gods of the Greek sculptors owed much of their elevation to being similarly out of drawing! The lower features were terse, succinct, and powerful,—from the bold, decided jaw, to the large, firm, ugly, good-humored mouth. His very spectacles aided the general expression; they had a look of the man. But how shall I attempt to tell you of his brilliant conversation, of his rapid, energetic manner, of his quick turns of thought, as he flew on from topic to topic, dashing his brush here and there upon the canvas? Slow and quiet persons were a good deal startled by this suddenness and mobility. He left such people far behind, mentally and bodily. But his talk was so rich and varied, so earnest and glowing, his anecdotes so racy, his perception of character so shrewd, and the whole tone so spontaneous and natural, that the want of repose was rather recalled afterwards than felt at the time. The alloy to this charm was a slight coarseness of voice and accent, which contrasted somewhat strangely with his constant courtesy and high breeding. Perhaps this was characteristic. A defect of some sort pervades his pictures. Their great want is equality and congruity,—that perfect union of qualities which we call *taste*. His apartment, especially at that period when he lived in his painting-room, was in itself a study of the most picturesque kind. Besides the great picture itself, for which there seemed hardly space between the walls, it was crowded with casts, lay figures, arms, tripods, vases, draperies, and costumes of all ages, weapons of all nations, books in all tongues. These cumbered the floor; whilst around hung smaller pictures, sketches, and drawings,

replete with originality and force. With chalk he could do what he chose. I remember he once drew for me a head of hair with nine of his sweeping, vigorous strokes! Among the studies I remarked that day in his apartment was one of a mother who had just lost her only child,—a most masterly rendering of an unspeakable grief. A sonnet, which I could not help writing on this sketch, gave rise to our long correspondence, and to a friendship which never flagged. Everybody feels that his life, as told by Mr. Taylor, with its terrible catastrophe, is a stern lesson to young artists, an awful warning that cannot be set aside. Let us not forget that amongst his many faults are qualities which hold out a bright example. His devotion to his noble art, his conscientious pursuit of every study connected with it, his unwearied industry, his love of beauty and of excellence, his warm family affection, his patriotism, his courage, and his piety, will not easily be surpassed. Thinking of them, let us speak tenderly of the ardent spirit whose violence would have been softened by better fortune, and who, if more successful, would have been more gentle and more humble."

And so with her vigilant and appreciative eye she saw, and thus in her own charming way she talked of the man, whose name, says Taylor, as a popularizer of art, stands without a rival among his brethren.

Her passion for the Drama continued through life, and to see a friend's play would take her up to London when nothing else would tempt her to leave her cottage. It was delightful to hear her talk of the old actors, many of whom she had known. She loved to describe John Kemble, Mrs. Siddons, Miss O'Neill, and Edmund Kean, as they were wont to electrify the town. Elliston was a great favorite, and she had as many good things to tell of him as Elia ever had. One autumn afternoon she related all the circumstances attending the "first play" she ever saw,—which, by the way, was a

tragedy enacted in a barn somewhere in the little town of Alresford, where she was born. The winking candles dividing the stage from the audience, she used to say, were winking now in her memory, although fifty years had elapsed since her father took her, a child of four years, to see "Othello." Her talent at mimicry made her always most interesting, when she spoke of Munden and his pleasant absurdities on the stage. For Bannister, Johnstone, Fawcett, and Emery she had a most exquisite relish, and she said they had made comedy to her a living art full of laughter and tears. Her passion for the stage, and overclouded prospects for the future, led her in early youth to write a play. She had already written a considerable number of verses which had been printed, and were honored by being severely castigated by Gifford in the "Quarterly."

"I didn't mind the great reviewer's blows at all," she used to say. "My poems had been republished in America; and Coleridge had prophesied that I should one day write a tragedy."

Talfourd was then, though a young man, a most excellent critic, and lent a helping hand to the young authoress. Her anxieties attending the first representation of her play at Covent Garden she was always fond of relating, and in such a manner that we who listened fell into such boisterous merriment with her, that I have known carriages stop in front of her window, and their inmates put out anxiously inquiring heads, to learn, if possible, what it all meant inside the cottage.

She never forgot "the warm grasp of Mrs. Charles Kemble's hand, when she saw her, all life and heartiness, at her house in Soho Square,—or the excellent acting of Young and Kemble and Macready, who did everything actors could do to secure success for her."

"These are the things," she once wrote, "one thinks of, when sitting calm and old by the light of a country fire."

The comic and the grotesque that were mingled up with her first experiences of

the stage as a dramatic author were inimitably rendered by herself, whenever she sat down to relate the story of that visit to London for the purpose of bringing out her tragedy. The rehearsals, where "the only grave person present was Mr. Liston!—the tragic heroines sauntering languidly through their parts in bonnets and thick shawls,—the untidy ballet-girls" (there was a dance in "Foscari") "walking through their quadrille to the sound of a solitary fiddle,"—she was never weary of calling up for the amusement of her listeners.

The old dramatists she had grown up to worship,—Shakspeare first, as in all loyalty bound, and after him Fletcher. "Affluent, eloquent, royally grand," she used to call both Beaumont and Fletcher; and whole scenes from favorite plays she knew by heart. Dr. Valpy was her neighbor, he being in the days of her youth headmaster of Reading School. A family intimacy of long standing had existed between her father's household and that of the learned and excellent scholar, so that his well-known taste for the English dramatists had no small influence on Doctor Mitford's studious daughter. "He helped me also," she said, "to enter into the spirit of those mighty masters who dealt forth the stern Tragedies of Destiny."

One of the dearest friends of her youth was Miss Porden, (afterwards married, as his first wife, to Sir John Franklin,) and at her suggestion Miss Mitford wrote "Rienzi." I have heard her say, that, going up to London to bring out that play, she saw her old friend, then Mrs. Franklin, working a flag for the captain's ship, then about to sail on one of his early adventurous voyages. The agitation of parting with her husband was too great for her delicate temperament, and before the expedition was out of the Channel Mrs. Franklin was dead.

Often and often, when the English lanes were white with blossoms, I have sat by her side while her faithful servant guided her low-wheeled pony-chaise among the pleasant roads about Reading and Swal-

lowfield. Once we went to a cricket-ground together, and as we sat under the trees, looking on as the game proceeded, she, who fell in love with Nature when a child, and had studied the landscape till she knew familiarly every flower and leaf that grows on English soil, assembled all that was best in poesy from her memory to illustrate the beautiful scene before us, and to prove how much better and more truly the great end of existence is answered in a rural life than in the vexatious cares of city occupation. As we sat looking at the vast lawn, magnificent in its green apparel, she quoted Irving as one who had understood English country-life perhaps more deeply and fully than any other foreign author who had ever written.

Speaking, one day, of the slowness of poetical fame, she said, —

“It always takes ten years to make a poetical reputation in England; but America is wiser and bolder, and dares say at once, ‘*This is fine!*’”

She rejoiced greatly in several of the American poets, and was never weary of quoting certain ringing couplets which she has celebrated in her “Notes of a Literary Life.” “Is there anything under the sun,” she exclaims, “that Dr. Holmes cannot paint?”

During the last six years of her life she became a great invalid and moved about only with severe pain. “It is not age,” she said, “that has thus prostrated me, but the hard work and increasing anxieties of thirty years of authorship, during which my poor labors were all that my dear father and mother had to look to; besides which, for the greater part of that time I was constantly called upon to attend the sick bed, first of one parent, and then of the other. I have only to be intensely thankful that the power of exertion did not fail until the necessity for such exertion was removed.”

“I love poetry and people as well at sixty as I did at sixteen,” she said one day, when I gave her a new volume by an American friend, “and can never be sufficiently grateful to God for having

permitted me to retain the two joy-giving faculties of admiration and sympathy.” The “Ballad of Cassandra Southwick” she esteemed as one of the finest things of our time; and of “Astrea” she said, — “Nobody in England can write the glorious resonant metre of Dryden like that strain, nowadays.”

Pope was a great favorite with her, and she took me one morning to an old house where he was a frequent guest, and where Arabella Fermor, the heroine of the “Rape of the Lock,” passed her married life. On the way she often quoted the poet, whose works she seemed to know by heart. Returning at sunset, she was very anxious that I should hear my first nightingale among the woody lanes of her pretty country; but we were both disappointed. We listened long, but, although the air was full of bird-songs that evening, the sweet-voiced warbler was not of the choir. She talked much, as we rode along, of Kingsley and Ruskin, both of whom she loved as friends as well as authors. “John Ruskin,” she said, “is good and kind, and charming beyond the common lot of mortals, and there are pages of his prose, to my thinking, more eloquent than any thing out of Jeremy Taylor.”

Speaking of Humor, she said, — “Between ourselves, I always have a little doubt of genius, when there is none of that quality: certainly, in the very highest poetry, the two go together.”

She greatly admired Béranger, and often spoke of him as the beautiful old man, the truest and best type of perfect independence. Hazlitt she ranked highly as an essayist, and she mentioned that she had heard both Charles Lamb and Talfourd praise him as not only the most brilliant, but the soundest of critics.

Among modern romances, those by the author of “The Scarlet Letter” seemed to impress her almost more than any others; and when “The House of the Seven Gables” was translated into Russian, she was filled with delight. Indeed, she was always among the first to cry, “Bra-

vo!" over any good words for American literature.

"Do coax Mr. Hawthorne and Dr. Holmes," she said one day, "into visiting England. I want them to be welcomed as they deserve, and as they are sure to be."

Her interest in the French Emperor's career amounted to enthusiasm, and one day she told us a very pretty story about him which she knew to be true. She said, when he was in England after Strasbourg and before Boulogne, he spent a twelvemonth at Leanington, living in the quietest manner. One of the principal persons in that town, Mr. H., a very liberal and accomplished man, made a point of showing every attention in his power to the Prince; and they very soon became intimate. There was in the town an old officer of the Emperor's Polish Legion, who, compelled to leave France after Waterloo, had taken refuge in England, and, having a natural talent for languages, maintained himself by teaching French, Italian, and German in different families. The old exile and the young one found each other out, and the language-master was soon an habitual guest at the Prince's table, where he was treated with the most affectionate attention. At last Louis Napoleon was obliged to repair to London, but before he went he called on his friend Mr. H. to take leave. After warm thanks to him for all the pleasure he had experienced in his society, the Prince said,—

"I am about to prove to you my entire reliance upon your unfailing kindness by leaving you a legacy. I wish to ask that you would transfer to my poor old friend the goodness you have lavished on me. His health is failing,—his means are small; pray, call upon him sometimes, and see that the lodging-house people do not neglect him. Draw upon me for what may be wanting for his needs or for his comforts."

Mr. H. promised, and faithfully replaced the Prince in his kind attentions to his old friend. The poor old man grew ill at last, and died, Mr. H. defray-

ing all the charges of his illness and of his funeral. "I would willingly have paid them myself," said he, "but I knew that would have offended and grieved the Prince. I found that provision had been made at his banker's to answer my drafts to a much larger amount than the actual debt."

Miss Mitford used to say that she kept this anecdote for non-admirers of the Emperor.

One day she came limping into the room, with her dog Fanchon following in the same lame plight,—she laughing heartily at their similarity of gait, and holding up a letter just in from the post.

"Here," said she, "is an epistle from my dear old friend, Lady M.," (Gibbon's correspondent,) "who at the age of eighty-three is caught by new books, and is as enthusiastic as a girl. She commissions me to inquire of you all about your new authoress, the writer of 'Uncle Tom's Cabin,' who she is, and all you know of her. So let me hear what you have to say about the lady."

During a brief visit to her cottage not long before she died, the chase was started one evening to find, if possible, the origin of the line quoted by Byron,—

"A fellow-feeling makes one wondrous kind."

In vain we searched among the poets, and at last all the party gave up in despair. I went up to London soon after, thinking no more of the lost line. In a few days, however, came a brief note, as follows:—

—"Hurrah, dear friend! I have found the line without any other person's aid or suggestion! Last night it occurred to me that it was in some prologue or epilogue; and my little book-room being very rich in the drama, I have looked through many hundreds of those bits of rhyme, and at last made a discovery, which, if it have no other good effect, will at least have 'emptied my head of Corsica,' as Johnson said to Boswell; for never was the great biographer more haunted by the thought of Paoli than I by that line.

It occurs in an epilogue by Garrick, on quitting the stage, June, 1776, when the performance was for the benefit of sick and aged actors.

“Not finding it quoted in Johnson convinced me that it would probably have been written after the publication of the Dictionary, and ultimately guided me to the right place. It is singular that epilogues were just dismissed at the first representation of one of my plays, ‘Foscari,’ and prologues at another, ‘Rienzi.’

“Ever most affectionately yours,
“M. R. MITFORD.

“P. S. I am still a close prisoner in my room. But when fine weather comes, I will get down in some way or other, and trust myself to that which never hurts anybody, the honest open air. Spring, and even the approach of spring, sets me dreaming. I see leafy hedges in my sleep, and flowery banks, and then I long to make the vision a reality. I remember that my dog Flush, Fanchon’s father, who was a famous sporting-dog, used, at the approach of the covering season, to hunt in his sleep, doubtless by the same instinct that works in me. So, as soon as the sun tells the same story with the primroses, I shall make a descent after some fashion, and, no doubt, aided by Sam’s stalwart arm, successfully.”

After leaving Three-Mile Cross for Swallowfield, her health, never of late years robust, seemed failing. In one of her letters to me she gives this pleasant picture of her home:—

“Ill as I am, my spirits are as good as ever; and just at this moment I am most comfortably seated under the acacia-tree at the corner of the house,—the beautiful acacia literally loaded with its snowy chains. The flowering-trees this summer, the lilacs, laburnums, and rhododendrons, have been one mass of blossoms, but none

are so graceful as this waving acacia. On one side is a syringa, smelling and looking like an orange-tree,—a jar of roses on the table before me,—fresh gathered roses,—the pride of my gardener’s heart. Little Fanchon is at my feet, too idle to eat the biscuits with which I am trying to tempt her,—biscuits from Boston, sent to me by kind Mrs. S., and which Fanchon ought to like; but you know her laziness of old, and she improves in it every day.”

It was about this period that Walter Savage Landor sent to her these exquisite lines:—

“The hay is carried; and the Hours
Snatch, as they pass, the linden-flowers;
And children leap to pluck a spray
Bent earthward, and then run away.
Park-keeper! catch me those grave thieves,
About whose frocks the fragrant leaves,
Sticking and fluttering here and there,
No false nor faltering witness bear.

“I never view such scenes as these
In grassy meadow girt with trees,
But comes a thought of her who now
Sits with serenely patient brow
Amid deep sufferings: none hath told;
More pleasant tales to young and old.
Fondest was she of Father Thames,
But rambled to Hellenic streams;
Nor even there could any tell
The country’s purer charms so well
As Mary Mitford.

“Verse! go forth
And breathe o’er gentle hearts her worth.
Needless the task: but should she see
One hearty wish from you and me,
A moment’s pain it may assuage,—
A rose-leaf on the couch of Age.”

In the early days of the year 1855 she sent, in her own handwriting, kind greetings to her old friends only a few hours before she died. Sweetness of temper and brightness of mind, her never-failing characteristics, accompanied her to the last; and she passed on in her usual cheerful and affectionate mood, her sympathies uncontracted by age, narrow fortune, and pain.

THE PROFESSOR'S STORY.

CHAPTER XVII.

OLD SOPHY CALLS ON THE REVEREND DOCTOR.

THE two meeting-houses which faced each other like a pair of fighting-cocks had not flapped their wings or crowed at each other for a considerable time. The Reverend Mr. Fairweather had been dyspeptic and low-spirited of late, and was too languid for controversy. The Reverend Doctor Honeywood had been very busy with his benevolent associations, and had discoursed chiefly on practical matters, to the neglect of special doctrinal subjects. His senior deacon ventured to say to him that some of his people required to be reminded of the great fundamental doctrine of the worthlessness of all human efforts and motives. Some of them were altogether too much pleased with the success of the Temperance Society and the Association for the Relief of the Poor. There was a pestilent heresy about, concerning the satisfaction to be derived from a good conscience, — as if anybody ever did anything which was not to be hated, loathed, despised, and condemned.

The old minister listened gravely, with an inward smile, and told his deacon that he would attend to his suggestion. After the deacon had gone, he tumbled over his manuscripts, until at length he came upon his first-rate old sermon on "Human Nature." He had read a great deal of hard theology, and had at last reached that curious state which is so common in good ministers, — that, namely, in which they contrive to switch off their logical faculties on the narrow side-track of their technical dogmas, while the great freight-train of their substantial human qualities keeps in the main highway of common-sense, in which kindly souls are always found by all who approach them by their human side.

The Doctor read his sermon with a pleasant, paternal interest: it was well

argued from his premises. Here and there he dashed his pen through a harsh expression. Now and then he added an explanation or qualified a broad statement. But his mind was on the logical side-track, and he followed the chain of reasoning without fairly perceiving where it would lead him, if he carried it into real life.

He was just touching up the final proposition, when his granddaughter, Letty, once before referred to, came into the room with her smiling face and lively movement. Miss Letty or Letitia Forrester was a city-bred girl of some fifteen or sixteen years old, who was passing the summer with her grandfather for the sake of country air and quiet. It was a sensible arrangement; for, having the promise of figuring as a belle by-and-by, and being a little given to dancing, and having a voice which drew a pretty dense circle around the piano when she sat down to play and sing, it was hard to keep her from being carried into society before her time, by the mere force of mutual attraction. Fortunately, she had some quiet as well as some social tastes, and was willing enough to pass two or three of the summer months in the country, where she was much better bestowed than she would have been at one of those watering-places where so many half-formed girls get prematurely hardened in the vice of self-consciousness.

Miss Letty was altogether too wholesome, hearty, and high-strung a young girl to be a model, according to the flat-chested and cachectic pattern which is the classical type of certain excellent young females, often the subjects of biographical memoirs. But the old minister was proud of his granddaughter for all that. She was so full of life, so graceful, so generous, so vivacious, so ready always to do all she could for him and for everybody, so perfectly frank in her avowed delight in the pleasures which this miser-

able world offered her in the shape of natural beauty, of poetry, of music, of companionship, of books, of cheerful cooperation in the tasks of those about her, that the Reverend Doctor could not find it in his heart to condemn her because she was deficient in those particular graces and that signal other-worldliness he had sometimes noticed in feeble young persons suffering from various chronic diseases which impaired their vivacity and removed them from the range of temptation.

When Letty, therefore, came bounding into the old minister's study, he glanced up from his manuscript, and, as his eye fell upon her, it flashed across him that there was nothing so very monstrous and unnatural about the specimen of congenital perversion he was looking at, with his features opening into their pleasantest sunshine. Technically, according to the fifth proposition of the sermon on Human Nature, very bad, no doubt. Practically, according to the fact before him, a very pretty piece of the Creator's handiwork, body and soul. Was it not a conceivable thing that the divine grace might show itself in different forms in a fresh young girl like Letitia, and in that poor thing he had visited yesterday, half-grown, half-colored, in bed for the last year with hip-disease? Was it to be supposed that this healthy young girl, with life throbbing all over her, *could*, without a miracle, be good according to the invalid pattern and formula?

And yet there were mysteries in human nature which pointed to some tremendous perversion of its tendencies,—to some profound, radical vice of moral constitution, native or transmitted, as you will have it, but positive, at any rate, as the leprosy, breaking out in the blood of races, guard them ever so carefully. Did he not know the case of a young lady in Rockland, daughter of one of the first families in the place, a very beautiful and noble creature to look at, for whose bringing-up nothing had been spared,—a girl who had had governesses to teach her at the house, who had been indulged al-

most too kindly,—a girl whose father had given himself up to her, he being himself a pure and high-souled man?—and yet this girl was accused in whispers of having been on the very verge of committing a fatal crime; she was an object of fear to all who knew the dark hints which had been let fall about her, and there were some that believed— Why, what was this but an instance of the total obliquity and degeneration of the moral principle? and to what could it be owing, but to an innate organic tendency?

“Busy, grandpapa?” said Letty, and without waiting for an answer kissed his cheek with a pair of lips made on purpose for that little function,—fine, but richly turned out, the corners tucked in with a finish of pretty dimples, the rosebud lips of girlhood's June.

The old gentleman looked at his granddaughter. Nature swelled up from his heart in a wave that sent a glow to his cheek and a sparkle to his eye. But it is very hard to be interrupted just as we are winding up a string of propositions with the grand conclusion which is the statement in brief of all that has gone before: our own starting-point, into which we have been trying to back our reader or listener as one backs a horse into the shafts.

“*Video meliora, proboque*, — I see the better, and approve it; *deteriora sequor*, — I follow after the worse: 'tis that natural dislike to what is good, pure, holy, and true, that inrooted selfishness, totally insensible to the claims of” —

Here the worthy man was interrupted by Miss Letty.

“Do come, if you can, grandpapa,” said the young girl; “here is a poor old black woman wants to see you so much!”

The good minister was as kind-hearted as if he had never groped in the dust and ashes of those cruel old abstractions which have killed out so much of the world's life and happiness. “With the heart man believeth unto righteousness”; a man's love is the measure of his fitness for good or bad company here or elsewhere. Men are tattooed with their special beliefs like so many South-Sea Islanders; but a real

human heart, with Divine love in it, beats with the same glow under all the patterns of all earth's thousand tribes!

The Doctor sighed, and folded the sermon, and laid the Quarto Cruden on it. He rose from his desk, and, looking once more at the young girl's face, forgot his logical conclusions, and said to himself that she was a little angel,—which was in violent contradiction to the leading doctrine of his sermon on Human Nature. And so he followed her out of the study into the wide entry of the old-fashioned country-house.

An old black woman sat on the plain oaken settle which humble visitors waiting to see the minister were wont to occupy. She was old, but how old it would be very hard to guess. She might be seventy. She might be ninety. One could not swear she was not a hundred. Black women remain at a stationary age (to the eyes of *white* people, at least) for thirty years. They do not appear to change during this period any more than so many Trenton trilobites. Bent up, wrinkled, yellow-eyed, with long upper-lip, projecting jaws, retreating chin, still meek features, long arms, large flat hands with uncolored palms and slightly webbed fingers, it was impossible not to see in this old creature a hint of the gradations by which life climbs up through the lower natures to the highest human developments. We cannot tell such old women's ages because we do not understand the physiognomy of a race so unlike our own. No doubt they see a great deal in each other's faces that we cannot,—changes of color and expression as real as our own, blushes and sudden betrayals of feeling,—just as these two canaries know what their single notes and short sentences and full song with this or that variation mean, though it is a mystery to us unplumed mortals.

This particular old black woman was a striking specimen of her class. Old as she looked, her eye was bright and knowing. She wore a red-and-yellow turban, which set off her complexion well, and hoops of gold in her ears, and beads of

gold about her neck, and an old funeral ring upon her finger. She had that touching stillness about her which belongs to animals that wait to be spoken to and then look up with a kind of sad humility.

"Why, Sophy!" said the good minister, "is this you?"

She looked up with the still expression on her face. "It's old Sophy," she said.

"Why," said the Doctor, "I did not believe you could walk so far as this to save the Union. Bring Sophy a glass of wine, Letty. Wine's good for old folks like Sophy and me, after walking a good way, or preaching a good while."

The young girl stepped into the back-parlor, where she found the great pewter flagon in which the wine that was left after each communion-service was brought to the minister's house. With much toil she managed to tip it so as to get a couple of glasses filled. The minister tasted his, and made old Sophy finish hers.

"I wan' to see you 'n' talk wi' you all alone," she said presently.

The minister got up and led the way towards his study. "To be sure," he said; he had only waited for her to rest a moment before he asked her into the library. The young girl took her gently by the arm, and helped her feeble steps along the passage. When they reached the study, she smoothed the cushion of a rocking-chair, and made the old woman sit down in it. Then she tripped lightly away, and left her alone with the minister.

Old Sophy was a member of the Reverend Doctor Honeywood's church. She had been put through the necessary confessions in a tolerably satisfactory manner. To be sure, as her grandfather had been a cannibal chief, according to the common story, and, at any rate, a terrible wild savage, and as her mother retained to the last some of the prejudices of her early education, there was a heathen flavor in her Christianity, which had often scandalized the elder of the minister's two deacons. But the good minister had smoothed matters over: had explained

that allowances were to be made for those who had been long sitting without the gate of Zion, — that, no doubt, a part of the curse which descended to the children of Ham consisted in “having the understanding darkened,” as well as the skin, — and so had brought his suspicious senior deacon to tolerate old Sophy as one of the communion of fellow-sinners.

— Poor things! How little we know the simple notions with which these rudiments of souls are nourished by the Divine Goodness! Did not Mrs. Professor come home this very blessed morning with a story of one of her old black women?

“And how do you feel to-day, Mrs. Robinson?”

“Oh, my dear, I have this singing in my head all the time.” (What doctors call *tinnitus aurium*.)

“She’s got a cold in the head,” said old Mrs. Rider.

“Oh, no, my dear! Whatever I’m thinking about, it’s all this singing, this music. When I’m thinking of the dear Redeemer, it all turns into this singing and music. When the clerk came to see me, I asked him if he couldn’t cure me, and he said, No,—it was the Holy Spirit in me, singing to me; and all the time I hear this beautiful music, and it’s the Holy Spirit a-singing to me.”—

The good man waited for Sophy to speak; but she did not open her lips as yet.

“I hope you are not troubled in mind or body,” he said to her at length, finding she did not speak.

The poor old woman took out a white handkerchief, and lifted it to her black face. She could not say a word for her tears and sobs.

The minister would have consoled her; he was used to tears, and could in most cases withstand their contagion manfully; but something choked his voice suddenly, and when he called upon it, he got no answer, but a tremulous movement of the muscles, which was worse than silence.

At last she spoke.

“Oh, no, no, no! It’s my poor girl, my darling, my beauty, my baby, that’s grown up to be a woman; she will come to a bad end; she will do something that will make them kill her or shut her up all her life. Oh, Doctor, Doctor, save her, pray for her! It a’n’t her fault. It a’n’t her fault. If they knew all that I know, they wouldn’t blame that poor child. I must tell you, Doctor: if I should die, perhaps nobody else would tell you. Massa Venner can’t talk about it. Doctor Kittredge won’t talk about it. Nobody but old Sophy to tell you, Doctor; and old Sophy can’t die without telling you.”

The kind minister soothed the poor old soul with those gentle, quieting tones which had carried peace and comfort to so many chambers of sickness and sorrow, to so many hearts overburdened by the trials laid upon them.

Old Sophy became quiet in a few minutes, and proceeded to tell her story. She told it in the low half-whisper which is the natural voice of lips oppressed with grief and fears; with quick glances around the apartment from time to time, as if she dreaded lest the dim portraits on the walls and the dark folios on the shelves might overhear her words.

It was not one of those conversations which a third person can report minutely, unless by that miracle of clairvoyance known to the readers of stories made out of authors’ brains. Yet its main character can be imparted in a much briefer space than the old black woman took to give all its details.

She went far back to the time when Dudley Venner was born,—she being then a middle-aged woman. The heir and hope of a family which had been narrowing down as if doomed to extinction, he had been surrounded with every care and trained by the best education he could have in New England. He had left college, and was studying the profession which gentlemen of leisure most affect, when he fell in love with a young girl left in the world almost alone, as he was. The old woman told the story of

his young love and his joyous bridal with a tenderness which had something more, even, than her family sympathies to account for it. Had she not hanging over her bed a small paper-cutting of a profile—jet black, but not blacker than the face it represented—of one who would have been her own husband in the small years of this century, if the vessel in which he went to sea, like Jamie in the ballad, had not sailed away and never come back to land? Had she not her bits of furniture stowed away which had been got ready for her own wedding,—two rocking-chairs, one worn with long use, one kept for him so long that it had grown a superstition with her never to sit in it,—and might he not come back yet, after all? Had she not her chest of linen ready for her humble house-keeping, with store of serviceable huckaback and piles of neatly folded kerchiefs, wherefrom this one that showed so white against her black face was taken, for that she knew her eyes would betray her in “the presence”?

All the first part of the story the old woman told tenderly, and yet dwelling upon every incident with a loving pleasure. How happy this young couple had been, what plans and projects of improvement they had formed, how they lived in each other, always together, so young and fresh and beautiful as she remembered them in that one early summer when they walked arm in arm through the wilderness of roses that ran riot in the garden,—she told of this as loath to leave it and come to the woe that lay beneath.

She told the whole story;—shall I repeat it? Not now. If, in the course of relating the incidents I have undertaken to report, *it tells itself*, perhaps this will be better than to run the risk of producing a painful impression on some of those susceptible readers whom it would be ill-advised to disturb or excite, when they rather require to be amused and soothed. In our pictures of life, we must show the flowering-out of terrible growths which have their roots deep, deep underground.

Just how far we shall lay bare the unseemly roots themselves is a matter of discretion and taste, in which none of us are infallible.

The old woman told the whole story of Elsie, of her birth, of her peculiarities of person and disposition, of the passionate fears and hopes with which her father had watched the course of her development. She recounted all her strange ways, from the hour when she first tried to crawl across the carpet, and her father shrank from her with an involuntary shudder as she worked her way towards him. With the memory of Juliet's nurse she told the story of her teething, and how, the woman to whose breast she had clung dying suddenly about that time, they had to struggle hard with the child before she would learn the accomplishment of feeding with a spoon. And so of her fierce plays and fiercer disputes with that boy who had been her companion, and the whole scene of the quarrel when she struck him with those sharp white teeth, frightening her, old Sophy, almost to death; for, as she said, the boy would have died, if it hadn't been for the old Doctor's galloping over as fast as he could gallop and burning the places right out of his arm. Then came the story of that other incident, sufficiently alluded to already, which had produced such an ecstasy of fright and left such a nightmare of apprehension in the household. And so the old woman came down to this present time. That boy she never loved nor trusted was grown to a dark, dangerous-looking man, and he was under their roof. He wanted to marry our poor Elsie, and Elsie hated him, and sometimes she would look at him over her shoulder just as she used to look at that woman she hated; and she, old Sophy, couldn't sleep for thinking she should hear a scream from the white chamber some night and find him in spasms such as that woman came so near dying with. And then there was something about Elsie she did not know what to make of: she would sit and hang her head sometimes, and look as if she were

dreaming; and she brought home books they said a young gentleman up at the great school lent her; and once she heard her whisper in her sleep, and she talked as young girls do to themselves when they're thinking about somebody they have a liking for and think nobody knows it.

She finished her long story at last. The minister had listened to it in perfect silence. He sat still even when she had done speaking,—still, and lost in thought. It was a very awkward matter for him to have a hand in. Old Sophy was his parishioner, but the Venners had a pew in the Reverend Mr. Fairweather's meeting-house. It would seem that he, Mr. Fairweather, was the natural adviser of the parties most interested. Had he sense and spirit enough to deal with such people? Was there enough capital of humanity in his somewhat limited nature to furnish sympathy and unshrinking service for his friends in an emergency? or was he too busy with his own attacks of spiritual neuralgia, and too much occupied with taking account of stock of his own thin-blooded offences, to forget himself and his personal interests on the small scale and the large, and run a risk of his life, if need were, at any rate give himself up without reserve to the dangerous task of guiding and counselling these distressed and imperilled fellow-creatures?

The good minister thought the best thing to do would be to call and talk over some of these matters with Brother Fairweather,—for so he would call him at times, especially if his senior deacon were not within earshot. Having settled this point, he comforted Sophy with a few words of counsel and a promise of coming to see her very soon. He then called his man to put the old white horse into the chaise and drive Sophy back to the mansion-house.

When the Doctor sat down to his sermon again, it looked very differently from the way it had looked at the moment he left it. When he came to think of it, he did not feel quite so sure *practi-*

cally about that matter of the utter natural selfishness of everybody. There was Letty, now, seemed to take a very unselfish interest in that old black woman, and indeed in poor people generally; perhaps it would not be too much to say that she was always thinking of other people. He thought he had seen other young persons naturally unselfish, thoughtful for others; it seemed to be a family trait in some he had known.

But most of all he was exercised about this poor girl whose story Sophy had been telling. If what the old woman believed was true,—and it had too much semblance of probability,—what became of his theory of ingrained moral obliquity applied to such a case? If by the visitation of God a person receives any injury which impairs the intellect or the moral perceptions, is it not monstrous to judge such a person by our common working standards of right and wrong? Certainly, everybody will answer, in cases where there is a palpable organic change brought about, as when a blow on the head produces insanity. Fools! How long will it be before we shall learn that for every wound which betrays itself to the sight by a scar, there are a thousand unseen mutilations that cripple, each of them, some one or more of our highest faculties? If what Sophy told and believed was the real truth, what prayers could be agonizing enough, what tenderness could be deep enough, for this poor, lost, blighted, hapless, blameless child of misfortune, struck by such a doom as perhaps no living creature in all the sisterhood of humanity shared with her?

The minister thought these matters over until his mind was bewildered with doubts and tossed to and fro on that stormy deep of thought heaving forever beneath the conflict of windy dogmas. He laid by his old sermon. He put back a pile of old commentators with their eyes and mouths and hearts full of the dust of the schools. Then he opened the book of Genesis at the eighteenth

chapter and read that remarkable argument of Abraham's with his Maker, in which he boldly appeals to first principles. He took as his text, "Shall not the Judge of all the earth do right?" and began to write his sermon, afterwards so famous, — "On the Obligations of an Infinite Creator to a Finite Creature."

It astonished the good people, who had been accustomed so long to repeat mechanically their Oriental hyperboles of self-abasement, to hear their worthy minister maintaining that the dignified attitude of the old Patriarch, insisting on what was reasonable and fair with reference to his fellow-creatures, was really much more respectful to his Maker, and a great deal manlier and more to his credit, than if he had yielded the whole matter, and pretended that men had not rights as well as duties. The same logic which had carried him to certain conclusions with reference to human nature, this same irresistible logic carried him straight on from his text until he arrived at those other results, which not only astonished his people, as was said, but surprised himself. He went so far in defence of the rights of man, that he put his foot into several heresies, for which men had been burned so often, it was time, if ever it could be, to acknowledge the demonstration of the *argumentum ad ignem*. He did not believe in the responsibility of idiots. He did not believe a new-born infant was morally answerable for other people's acts. He thought a man with a crooked spine would never be called to account for not walking erect. He thought, if the crook was in his brain, instead of his back, he could not fairly be blamed for any consequence of this natural defect, whatever lawyers or divines might call it. He argued, that, if a person inherited a perfect mind, body, and disposition, and had perfect teaching from infancy, that person could do nothing more than keep the moral law perfectly. But supposing that the Creator allows a person to be born with an hereditary or ingrafted organic ten-

dency, and then puts this person into the hands of teachers incompetent or positively bad, is not what is called *sin* or transgression of the law necessarily involved in the premises? Is not a Creator bound to guard his children against the ruin which inherited ignorance might entail on them? Would it be fair for a parent to put into a child's hands the title-deeds to all its future possessions, and a bunch of matches? And are not men children, nay, babes, in the eye of Omniscience? — The minister grew bold in his questions. Had not he as good right to ask questions as Abraham?

This was the dangerous vein of speculation in which the Reverend Doctor Honeywood found himself involved, as a consequence of the suggestions forced upon him by old Sophy's communication. The truth was, the good man had got so humanized by mixing up with other people in various benevolent schemes, that, the very moment he could escape from his old scholastic abstractions, he took the side of humanity instinctively, just as the Father of the Faithful did, — all honor be to the noble old Patriarch for insisting on the worth of an honest man, and making the best terms he could for a very ill-conditioned metropolis, which might possibly, however, have contained ten righteous people, for whose sake it should be spared!

The consequence of all this was, that he was in a singular and seemingly self-contradictory state of mind when he took his hat and cane and went forth to call on his heretical brother. The old minister took it for granted that the Reverend Mr. Fairweather knew the private history of his parishioner's family. He did not reflect that there are griefs men *never* put into words, — that there are fears which must not be spoken, — intimate matters of consciousness which must be carried, as bullets that have been driven deep into the living tissues are sometimes carried, for a whole life-time, — *encysted* griefs, if we may borrow the surgeon's term, never to be reached, never to be seen, never to be thrown out, but to go into the

dust with the frame that bore them about with it, during long years of anguish, known only to the sufferer and his Maker. Dudley Venner had talked with his minister about this child of his. But he had talked cautiously, feeling his way for sympathy, looking out for those indications of tact and judgment which would warrant him in some partial communication, at least, of the origin of his doubts and fears, and never finding them.

There was something about the Reverend Mr. Fairweather which repressed all attempts at confidential intercourse. What this something was, Dudley Venner could hardly say; but he felt it distinctly, and it sealed his lips. He never got beyond certain generalities connected with education and religious instruction. The minister could not help discovering, however, that there were difficulties connected with this girl's management, and he heard enough outside of the family to convince him that she had manifested tendencies, from an early age, at variance with the theoretical opinions he was in the habit of preaching, and in a dim way of holding for truth, as to the natural dispositions of the human being.

About this terrible fact of congenital obliquity his new beliefs began to cluster as a centre, and to take form as a crystal around its nucleus. Still, he might perhaps have struggled against them, had it not been for the little Roman Catholic chapel he passed every Sunday, on his way to the meeting-house. Such a crowd of worshippers, swarming into the pews like bees, filling all the aisles, running over at the door like berries heaped too full in the measure, — some kneeling on the steps, some standing on the side-walk, hats off, heads down, lips moving, some looking on devoutly from the other side of the street! Oh, could he have followed his own Bridget, maid of all work, into the heart of that steaming throng, and bowed his head while the priests intoned their Latin prayers! could he have snuffed up the cloud of frankincense, and felt that he was in the great ark which holds the better half of the Christian world, while

all around it are wretched creatures, some struggling against the waves in leaky boats, and some on ill-connected rafts, and some with their heads just above water, thinking to ride out the flood which is to sweep the earth clean of sinners, upon their own private, individual life-preservers!

Such was the present state of mind of the Reverend Chauncy Fairweather, when his clerical brother called upon him to talk over the questions to which old Sophy had called his attention.

CHAPTER XVIII.

THE REVEREND DOCTOR CALLS ON BROTHER FAIRWEATHER.

FOR the last few months, while all these various matters were going on in Rockland, the Reverend Chauncy Fairweather had been busy with the records of ancient councils and the writings of the early fathers. The more he read, the more discontented he became with the platform upon which he and his people were standing. They and he were clearly in a minority, and his deep inward longing to be with the majority was growing into an engrossing passion. He yearned especially towards the good old unquestioning, authoritative Mother Church, with her articles of faith which took away the necessity for private judgment, with her traditional forms and ceremonies, and her whole apparatus of stimulants and anodynes.

About this time he procured a breviary and kept it in his desk under the loose papers. He sent to a Catholic bookstore and obtained a small crucifix suspended from a string of beads. He ordered his new coat to be cut very narrow in the collar and to be made single-breasted. He began an informal series of religious conversations with Miss O'Brien, the young person of Irish extraction already referred to as Bridget, maid of all work. These not proving very satisfactory, he managed to fall in with Father McShane, the Catholic priest of the Rock-

land church. Father McShane encouraged his nibble very scientifically. It would be such a fine thing to bring over one of those Protestant heretics, and a "liberal" one too!—not that there was any real difference between them, but it sounded better to say that one of these rationalizing free-and-equal religionists had been made a convert than any of those half-way Protestants who were the slaves of catechisms instead of councils and of commentators instead of popes. The subtle priest played his disciple with his finest tackle. It was hardly necessary: when anything or anybody wishes to be caught, a bare hook and a coarse line are all that is needed.

If a man has a genuine, sincere, hearty wish to get rid of his liberty, if he is really bent upon becoming a slave, nothing can stop him. And the temptation is to some natures a very great one. Liberty is often a heavy burden on a man. It involves that necessity for perpetual choice which is the kind of labor men have always dreaded. In common life we shirk it by forming *habits*, which take the place of self-determination. In politics party-organization saves us the pains of much thinking before deciding how to cast our vote. In religious matters there are great multitudes watching us perpetually, each propagandist ready with his bundle of finalities, which having accepted we may be at peace. The more absolute the submission demanded, the stronger the temptation becomes to those who have been long tossed among doubts and conflicts.

So it is that in all the quiet bays which indent the shores of the great ocean of thought, at every sinking wharf, we see moored the hulks and the razees of enslaved or half-enslaved intelligences. They rock peacefully as children in their cradles on the subdued swell that comes feebly in over the bar at the harbor's mouth, slowly crusting with barnacles, pulling at their iron cables as if they really wanted to be free, but better contented to remain bound as they are. For these no more the round unwall'd hori-

zon of the open sea, the joyous breeze aloft, the furrow, the foam, the sparkle that track the rushing keel! They have escaped the dangers of the wave, and lie still henceforth, evermore. Happiest of souls, if lethargy is bliss, and palsy the chief beatitude!

America owes its political freedom to religious Protestantism. But political freedom is reacting on religious prescription with still mightier force. We wonder, therefore, when we find a soul which was born to a full sense of individual liberty, an unchallenged right of self-determination on every new alleged truth offered to its intelligence, voluntarily surrendering any portion of its liberty to a spiritual dictatorship which always proves to rest, in the last analysis, on a *majority vote*, nothing more nor less, commonly an old one, passed in those barbarous times when men cursed and murdered each other for differences of opinion, and of course were not in a condition to settle the beliefs of a comparatively civilized community.

In our disgust, we are liable to be intolerant. We forget that weakness is not in itself a sin. We forget that even cowardice may call for our most lenient judgment, if it spring from innate infirmity. Who of us does not look with great tenderness on the young chieftain in the "Fair Maid of Perth," when he confesses his want of courage? All of us love companionship and sympathy; some of us may love them too much. All of us are more or less imaginative in our theology. Some of us may find the aid of material symbols a comfort, if not a necessity. The boldest thinker may have his moments of languor and discouragement, when he feels as if he could willingly exchange faiths with the old beldame crossing herself at the cathedral-door,—nay, that, if he could drop all coherent thought, and lie in the flowery meadow with the brown-eyed solemnly unthinking cattle, looking up to the sky, and all their simple consciousness staining itself blue, then down to the grass, and life turning to a mere greenness, blended with confused scents of herbs,—no individual mind-

movement such as men are teased with, but the great calm cattle-sense of all time and all places that know the milky smell of herds, — if he could be like these, he would be content to be driven home by the cow-boy, and share the grassy banquet of the king of ancient Babylon. Let us be very generous, then, in our judgment of those who leave the front ranks of thought for the company of the meek non-combatants who follow with the baggage and provisions. Age, illness, too much wear and tear, a half-formed paralysis, may bring any of us to this pass. But while we can think and maintain the rights of our own individuality against every human combination, let us not forget to caution all who are disposed to waver that there is a cowardice which is criminal, and a longing for rest which it is baseness to indulge. God help him over whose dead soul in his living body must be uttered the sad supplication, *Requiescat in pace!*

A knock at the Reverend Mr. Fairweather's study-door called his eyes from the book on which they were intent. He looked up, as if expecting a welcome guest.

The Reverend Pierrepont Honeywood, D. D., entered the study of the Reverend Chauncy Fairweather. He was not the expected guest. Mr. Fairweather slipped the book he was reading into a half-open drawer, and pushed in the drawer. He slid something which rattled under a paper lying on the table. He rose with a slight change of color, and welcomed, a little awkwardly, his unusual visitor.

"Good evening, Brother Fairweather!" said the Reverend Doctor, in a very cordial, good-humored way. "I hope I am not spoiling one of those eloquent sermons I never have a chance to hear."

"Not at all, not at all," the younger clergyman answered, in a languid tone, with a kind of habitual half-querulousness which belonged to it, — the vocal expression which we meet with now and then, and which says as plainly as so many words could say it, "I am a suf-

fering individual. I am persistently undervalued, wronged, and imposed upon by mankind and the powers of the universe generally. But I endure all. I endure *you*. Speak. I listen. It is a burden to me, but I even approve. I sacrifice myself. Behold this movement of my lips! It is a smile."

The Reverend Doctor knew this forlorn way of Mr. Fairweather's, and was not troubled by it. He proceeded to relate the circumstances of his visit from the old black woman, and the fear she was in about the young girl, who being a parishioner of Mr. Fairweather's, he had thought it best to come over and speak to him about old Sophy's fears and fancies.

In telling the old woman's story, he alluded only vaguely to those peculiar circumstances to which she had attributed so much importance, taking it for granted that the other minister must be familiar with the whole series of incidents she had related. The old minister was mistaken, as we have before seen. Mr. Fairweather had been settled in the place only about ten years, and, if he had heard a strange hint now and then about Elsie, had never considered it as anything more than idle and ignorant, if not malicious, village-gossip. All that he fully understood was that this had been a perverse and unmanageable child, and that the extraordinary care which had been bestowed on her had been so far thrown away that she was a dangerous, self-willed girl, whom all feared and almost all shunned, as if she carried with her some malignant influence.

He replied, therefore, after hearing the story, that Elsie had always given trouble. There seemed to be a kind of natural obliquity about her. Perfectly unaccountable. A very dark case. Never amenable to good influences. Had sent her good books from the Sunday-school library. Remembered that she tore out the frontispiece of one of them, and kept it, and flung the book out of the window. It was a picture of Eve's temptation; and he recollected her saying that Eve

was a good woman,—and she'd have done just so, if she'd been there. A very sad child,—very sad; bad from infancy.—He had talked himself bold, and said all at once,—

“Doctor, do you know I am almost ready to accept your doctrine of the congenital sinfulness of human nature? I am afraid that is the only thing which goes to the bottom of the difficulty.”

The old minister's face did not open as approvingly as Mr. Fairweather had expected.

“Why, yes,—well,—many find comfort in it,—I believe;—there is much to be said,—there are many bad people,—and bad children,—I can't be so sure about bad babies,—though they cry very malignantly at times,—especially if they have the stomach-ache. But I really don't know how to condemn this poor Elsie; she may have impulses that act in her like instincts in the lower animals, and so not come under the bearing of our ordinary rules of judgment.”

“But this depraved tendency, Doctor,—this unaccountable perverseness. My dear Sir, I am afraid your school is in the right about human nature. Oh, those words of the Psalmist, ‘shapen in iniquity,’ and the rest! What are we to do with them,—we who teach that the soul of a child is an unstained white tablet?”

“King David was very subject to fits of humility, and much given to self-reproaches,” said the Doctor, in a rather dry way. “We owe you and your friends a good deal for calling attention to the natural graces, which, after all, may, perhaps, be considered as another form of manifestation of the divine influence. Some of our writers have pressed rather too hard on the tendencies of the human soul toward evil as such. It may be questioned whether these views have not interfered with the sound training of certain young persons, sons of clergymen and others. I am nearer of your mind about the possibility of educating children so that they shall become good Christians without any violent transition. That is

what I should hope for from bringing them up ‘in the nurture and admonition of the Lord.’”

The younger minister looked puzzled, but presently answered,—

“Possibly we may have called attention to some neglected truths; but, after all, I fear we must go to the old school, if we want to get at the root of the matter. I know there is an outward amiability about many young persons, some young girls especially, that seems like genuine goodness; but I have been disposed of late to lean toward your view, that these human affections, as we see them in our children,—ours, I say, though I have not the fearful responsibility of training any of my own,—are only a kind of disguised and sinful selfishness.”

The old minister groaned in spirit. His heart had been softened by the sweet influences of children and grandchildren. He thought of a half-sized grave in the burial-ground, and the fine, brave, noble-hearted boy he laid in it thirty years before,—the sweet, cheerful child who had made his home all sunshine until the day when he was brought home, his long curls dripping, his fresh lips purpled in death,—foolish dear little blessed creature to throw himself into the deep water to save the drowning boy, who clung about him and carried him under! Disguised selfishness! And his granddaughter too, whose disguised selfishness was the light of his household!

“Don't call it my view!” he said. “Abstractly, perhaps, all Nature may be considered vitiated; but practically, as I see it in life, the divine grace keeps pace with the perverted instincts from infancy in many natures. Besides, this perversion itself may often be disease, bad habits transmitted, like drunkenness, or some hereditary misfortune, as with this Elsie we were talking about.”

The younger minister was completely mystified. At every step he made towards the Doctor's recognized theological position, the Doctor took just one step towards his. They would cross each other soon at this rate, and might as well ex-

change pulpits,—as Colonel Sprowle once wished they would, it may be remembered.

The Doctor, though a much clearer-headed man, was almost equally puzzled. He turned the conversation again upon Elsie, and endeavored to make her minister feel the importance of bringing every friendly influence to bear upon her at this critical period of her life. His sympathies did not seem so lively as the Doctor could have wished. Perhaps he had vastly more important objects of solicitude in his own spiritual interests.

A knock at the door interrupted them. The Reverend Mr. Fairweather rose and went towards it. As he passed the table, his coat caught something, which came rattling to the floor. It was a crucifix with a string of beads attached. As he opened the door, the Milesian features of Father McShane presented themselves, and from their centre proceeded the clerical benediction in Irish-sounding Latin, *Pax vobiscum!*

The Reverend Doctor Honeywood rose and left the priest and his disciple together.

REVIEWS AND LITERARY NOTICES.

Autobiographical Recollections. By the late CHARLES ROBERT LESLIE, R. A. Edited, with a Prefatory Essay on Leslie as an Artist, and Selections from his Correspondence, by TOM TAYLOR, Esq., Editor of the "Autobiography of Haydon." With Portrait. Boston: Ticknor & Fields. 1860. pp. lviii., 363.

THOSE who remember the excellent judgment with which Mr. Taylor selected his material for the Autobiography of Haydon from the papers left by that artist need not be told that this work is executed with spirit and discrimination. It is a delicate task to publish just so much of the letters and reminiscences of a man lately dead as shall consist with good taste and gentlemanly feeling, to discriminate between legitimate anecdote and what at second-hand becomes tale-bearing gossip, and not to break faith with the dead by indiscreet confidences about the living. If the dead have any privilege, it ought to be that of holding their tongues; yet an unseemly fashion has prevailed lately of making them gabble for years in Diaries, Remains, Correspondences, and Recollections, perpetuating in a solid telltale record all they may have said and written thoughtlessly or in a momentary pet, giving to a fleeting whim the printed perma-

nence of a settled opinion, and robbing the grave of what is sometimes its only consoling attribute, the dignity of reserve. We know of no more unsavory calling than this, unless it be that of the Egyptian dealers in mummy, peddling out their grandfathers to be ground into pigment. Obsequious to the last moment, the jackal makes haste to fill his belly from the ribs of his late lion almost before he is cold.

Mr. Taylor is too manly and well-bred to be guilty of any indiscretions, much more of any indecencies. He let Haydon tell his own story, nor assumed the function of a judge. And wisely, as we think; for, commonly, when men take it upon themselves uncalled, their inability to conceive the special weakness that is not theirs, (and which, perhaps, was but the negative of a strength equally alien to them.) their humanly narrow and often professionally back-attic view of character and circumstance, their easy after-dinner superiority to what was perhaps a loathing compromise with famine and the jail, fit them rather for the office of *advocatus diaboli* than of the justice which must be all-seeing that it may be charitable. It is so hard to see that a sin is sometimes but a thwarted and misdirected virtue! When Burns sighed that "the light that led astray was light from Heaven," he was but unconsciously repeating

what a poet who of all men least needed the apology had said centuries before.

We do not admit, that, because a man has published a volume or a picture, he has published himself, excommunicated his soul from the sanctuary of privacy, and made his life as common as a tavern-threshold to every blockhead in the parish,—or that any Pharisee who kept carefully to windward of his virtues, out of the way of infection, has thereby earned the right to mismoralize his failings after he is dumbly defenceless. The moral compasses that are too short for the aberration may be, must be, unequal to the orbit. We would not deny that Burns was a chamberer and a drunkard because he was a great poet; but we would not admit that whiskey and wenches made him any the less the most richly endowed genius of his century, with just title to the love and admiration of men. It is not for us to decide whether he, who, by doubling the suggestive and associative power of any thought, fancy, feeling, or natural object, has so far added permanently to the sum of human happiness, is not as sure of a welcome and a well-done from the Infinite Fatherliness as he that has turned an honest penny by printing a catechism; but we are sure that it is a shallow cant which holds up the errors of men of genius as if they were especial warnings, and proofs of how little the rarest gifts avail. Is it intended to put men on their guard against being geniuses? That is scarcely called for till those who yield to the temptation become more numerous. Do they mean, We, too, might have been geniuses, but we chose rather to be good and dull? Self-denial is always praiseworthy, and we reconcile ourselves to the Ovid lost in consideration of the Deacon gained. But if it be meant that the danger was in the genius, we deny it altogether. Burns's genius was the one good thing he had, and it was always, as it always must be, good, and only good, the leaven of uncontaminate heaven in him that would not let him sink contentedly into the sty of oblivion with the million other tipplers and loose-livers of his century. It was his weakness of character, and not his strength or pride of intellect, that betrayed him; and to call his faults errors of genius is a mischievous fallacy. If they were, then they were no lesson for the rest of us; if they were not, to call them so is to encour-

age certain gin-and-water philosophers who would fain extenuate their unpleasant vices by the plea that they are the necessary complement of unusual powers,—as if the path to immortality were through the kennel, and fine verses were to be written only at the painful sacrifice of bilking your washerwoman.

We are over-fond of drawing monitory morals from the lives of gifted persons, tacking together our little ten-by-twelve pinfolds to impound breachy human nature in, but it is only because we know more than we have any business to know of the private concerns of such persons that we have the opportunity. We are thankful that the character of Shakspeare is wrapped safely away from us in un-Boswellable night. Samuel Taylor Coleridge the man stood forever in the way of Samuel Taylor Coleridge the poet and metaphysician, and the fault of the poppy-juice in his nature is laid at the door of the laudanum he bought of the apothecary. Yet all the drowsy juices of Circe's garden could not hinder De Quincey from writing his twenty-five volumes. To us nothing is more painful, and nothing seems more cruelly useless, than the parading of mortal weaknesses, especially of those to whom we are indebted for delight and teaching. For an inherent weakness has no lesson of avoidance in it, being helpless from the first, and by the doom of its own nature growing more and more helpless to the last, not more so in the example than in him who is to profit by it, and who is more likely to have his appetite flattered by good company than his fear aroused by the evil consequence. Because the swans have a vile habit of over-eating themselves, shall we nail them to the barn-door as a moral lesson to the crows?

There is, doubtless, a great deal to be taught by biography; but it is by the mistakes of men that we learn, and not by their weaknesses. To see clearly an error of judgment and its consequences may be of positive service to us in the conduct of life, while a vice of temperament concerns us not at all in private men, and only so far in statesmen and rulers as it may have been influential in history as a modifier of action, or is essential to an understanding of it as an explainer of motive.

The Autobiography of Leslie seems to us in some sort the complement of Hay-

don's, and throws the defiant struggle of that remarkable self-portraiture into stronger relief by the contrast of its equable good-fortune and fireside tranquillity. The causes of the wide difference in the course and the result of these two lives are on the surface and are instructive. Comparing the two men at the outset, we should have said that all the chances were on Haydon's side. If he had not genius, he had at least the temperament and external characteristics that go along with it. He had what is sometimes wanting to it in its more purely æsthetic manifestation, the ambition that spurs and the unflagging energy that seemed a guerdon of unlimited achievement. Yet the ambition fermented into love of notoriety and soured into a fraudulent self-assertion, that grew boastful as it grew distrustful of its claims and could bring less proof in support of them; the energy degenerated into impudence, evading the shame of spendthrift bankruptcy to-day by shifts that were sure to bring a more degrading exposure to-morrow; and the whole ended at last in a suicide whose tragic pang is deadened to us by the feeling that so much of the mixed motive that drove him to it as was not cowardice was a hankering after melodramatic effect, the last throb of a passion for making his name the theme of public talk, and his fate the centre of a London day's sensation. Chatterton makes us lenient to a life of fraud by the dogged and cynical uncomplainingness of the despair that drove him to cut it short; but Haydon continues his self-autopsy to the last moment, and in pulling the trigger seems to be only firing the train for an explosion that shall give him a week longer of posthumous notoriety. The egotism of Pepys was but a suppressed garrulity, which habitual caution, fostered by a period of political confusion and the mystery of office, drove inward to a kind of soliloquy in cipher; that of Montaigne was metaphysical,—in studying his own nature and noting his observations he was studying man, and that with a singular *insouciance* of public opinion; but Haydon appears to have written his journals with a deliberate intention of their some day advertising himself, and his most private aspirations are uttered with an eye to the world. Yet it was a genuine instinct that led him to the pen, and his lifelong succession of half-

successes that are worse than defeats was due to the initial error of mistaking a passion for a power. A fine critic, a vivid sketcher of character, and a writer of singular clearness, point, and eloquence was spoiled to make an artist, sometimes noble in conception, but without sense of color, and utterly inadequate to any but the most confused expression of himself by the pencil. His very sense of the power which he was conscious of somewhere in himself harassed and hampered him, as time after time he refused to see that his failure was due, not to injustice or insensibility on the part of the world, but to his having chosen the wrong means of making his ability felt and acknowledged. His true place would have been that of Professor and Lecturer in the Royal Academy. The world is not insensible or unjust, but it knows what it wants, and will not long be put off with less. There is always a public for success; there never is, and never ought to be, for inadequacy. Haydon was in some respects a first-rate man, but the result of his anxious, restless, and laborious life was almost zero, as far as concerned its definite aims. It does not convey the moral of neglected genius, or of loose notions of money-obligations, ending in suicide, but simply of a mischosen vocation, leading sooner or later to utter and undeniable failure. *Pas même académicien!* Plenty of neglected geniuses have found it good to be neglected, plenty of Jeremy Diddlers (in letters and statesmanship as often as in money-matters) have lived to a serene old age, but the man who in any of the unuseful arts insists on doing what Nature never asked him to do has no place in the world.

Leslie, a second-rate man in all respects, but with a genuine talent rightly directed, an obscure American, with few friends, no influential patrons, and a modesty that would never let him obtrude his claims, worked steadily forward to competence, to reputation, and the Council of the Academy. The only blunder of his life was his accepting the Professorship of Drawing at West Point, a place for which he was unsuited. But this blunder he had the good sense and courage to correct by the frank acknowledgment of resignation. Altogether his is a career as pleasant as Haydon's is painful to contemplate, the more so as we feel that his success was fairly won by honest effort directed by a contented con-

sciousness of the conditions and limitations of his faculty.

Nothing can be more agreeable than the career of a successful artist. His employment does not force upon him the solitude of an author; it is eminently companionable; from its first design, through all the processes that bring his work to perfection, he is not shut out from the encouragement of sympathy; his success is definite and immediate; he can see it in the crowd around his work at the exhibition; and his very calling brings him into pleasant contact with beauty, taste, and (if a portrait-painter) with eminence in every department of human activity.

Leslie's passage through the world was of that equal temper which is happiest for the man and unhappiest for the biographer. With no dramatic surprises of fortune, and no great sorrows, his life had scarce any other alternation than that it went round with the earth through night and day, and would have been tame but for his necessary labor in an art which he loved wisely and with the untumultuous sentiment of an after-honey-moon constancy. We should say that his leading characteristic was Taste, an external quality, it is true, but one which is often the indication of more valuable ones lying deeper. In the conduct of life it insures tact, and in Art a certain gentlemanlike equipoise, incapable of what is deepest and highest, but secure also from the vulgar, the grotesque, and the extravagant. Leslie, we think, was more at home with Addison than with Cervantes.

His autobiographical reminiscences are very entertaining, especially that part of them which describes a voyage home to America, varied by a winter in Portugal, during the early part of his life. The Scotch captain, who, with his scanty merchant-crew, beats off a Bordeaux privateer, and then, crippled and half-sinking, clears for action with what he supposes to be a French frigate, but which turns out to be English, is a personage whose acquaintance it is pleasant to make. The sketches of life in Lisbon, too, are very lively, and the picture of the decayed Portuguese nobleman's family, for whose pride of birth an imaginary dinner-table was set every day in the parlor with the remains of the hereditary napery and plate, the numerous covers hiding nothing but the naked truth,

while their common humanity, squatting on the floor in the kitchen, fished its scanty meal from an earthen pot with pewter spoons, is pathetically humorous and would have delighted Caleb Balderstone. In after-life, Leslie's profession made him acquainted with some of the best London life of his time, and the volume is full of agreeable anecdotes of Scott, Irving, Turner, Rogers, Wilkie, and many more. It contains also several letters of Irving, of no special interest, and some from a sort of Lesmahago of a room-mate of Leslie's, named Peter Powell, so queer, individual, and shrewd, that we are sorry not to have more of them and their writer. Altogether the book is one of the pleasantest we have lately met with.

The Old Battle-Ground. By J. T. TROWBRIDGE, Author of "Father Bright-hopes," "Neighbor Jackwood," etc. New York: Sheldon & Company. 1860. pp. 276.

MR. TROWBRIDGE'S previous works have made him known to a large circle of appreciating readers as a writer of originality and promise. His "Father Bright-hopes" we have never read, but we have heard it spoken of as one of the most wholesome children's books ever published in America, and our knowledge of the author makes us ready to believe the favorable opinion a just one. Parts of "Neighbor Jackwood" we read with sincere relish and admiration; they showed so true an eye for Nature and so thorough an appreciation of the truly humorous elements of New England character, as distinguished from the vulgar and laughable ones. The domestic interior of the Jackwood family was drawn with remarkable truth and spirit, and all the working characters of the book on a certain average level of well-to-do rusticity were made to think and talk naturally, and were as full of honest human nature as those of the conventional modern novel are empty of it. An author who puts us in the way to form some just notion of the style of thought proper to so large a class as our New England country-people, and of the motives likely to influence their social and political conduct, does us a greater service than we are apt to admit. And the

power to conceive the leading qualities that make up an average representative and to keep them always clearly in view, so as to swerve neither toward tameness nor exaggeration, is by no means common. This power, it seems to us, Mr. Trowbridge possesses in an unusual degree. The late Mr. Judd, in his remarkable romance of "Margaret," gave such a picture as has never been equalled for truth of color and poetry of conception, of certain phases of life among a half-gypsy family in the outskirts of a remote village, and growing up in the cold penumbra of our civilization and material prosperity. But his scene and characters were exceptional, or, if typical, only so of a very limited class, and his book, full of fine imagination as it is, is truly a romance, an ideal and artistic representation, rather a poem than a story of manners general and familiar enough to be called real.

Mr. Trowbridge, we think, fails in those elements of (we had almost said creative) power in which Mr. Judd was specially rich. If the latter had possessed the shaping spirit as fully as he certainly did the essential properties of imagination, he would have done for the actual, prosaic life of New England what Mr. Hawthorne has done for the ideal essence that lies behind and beneath it. But, with all his marvellous fidelity of dialect, costume, and landscape, and his firm clutch of certain individual instincts and emotions, his characters are wanting in any dramatic unity of relation to each other, and seem to be "moving about in worlds not realized," each a vivid reality in itself, but a very shadow in respect of any prevailing intention of the story. With the innate sentiments of a kind of aboriginal human nature Mr. Judd was at home; with the practical working of every-day motives he seemed strangely unfamiliar. It is just here that Mr. Trowbridge's strength and originality lie; but, with that not uncommon tendency to over-value qualities that we do not possess, and to attempt their display, to the neglect, and sometimes at the cost, of others quite as valuable, but which seem cheap, because their exercise is easy and habitual,—and therefore, we may be sure, natural and pleasing,—he insists on being a little metaphysical and over-fine. What he means for his more elevated characters are tiresome with something of that melodramatic

sentimentality with which Mr. Dickens has infected so much of the lighter literature of the day. Here and there the style suffers from that overmuchness of unessential detail and that exaggeration of particulars which Mr. Dickens brought into fashion and seems bent on wearing out of it,—a style which is called graphic and poetical by those only who do not see that it is the cheap substitute, in all respects equal to real plate, (till you try to pawn it for lasting fame,) introduced by writers against time, or who forget that to be graphic is to tell most with fewest pen-strokes, and to be poetical is to suggest the particular in the universal. We earnestly hope, that, instead of trying to do what no one can do well, Mr. Trowbridge will wisely stick close to what he has shown that no one can do better.

"The Old Battle-Ground," whose name bears but an accidental relation to the story, is an interesting and well-constructed tale, in which Mr. Trowbridge has introduced what we believe is a new element in American fiction, the French Canadian. The plot is simple and not too improbable, and the characters well individualized. Here, also, Mr. Trowbridge is most successful in his treatment of the less ambitiously designed figures. The relation between the dwarf Hercules fiddler and the heroine Marie seems to be a suggestion from Victor Hugo's Quasimodo and Esmeralda, though the treatment is original and touching. Indeed, there is a good deal of pathos in the book, marred here and there with the sentimental extract of Dickens-flowers, unpleasant as *patchouli*. Generally, however, it has the merit of unobtrusiveness,—a rare piece of self-denial nowadays, when authors have found out, and the public has not, how very easy it is to make the public cry, and how much the simple creature likes it, as if it had not sorrows enough of its own. But it is in his more ordinary characters that Mr. Trowbridge fairly shows himself as an original and delightful author. His boys are always masterly. Nothing could be truer to Nature, more nicely distinguished as to idiosyncrasy, while alike in expression and in limited range of ideas, or more truly comic, than the two that figure in this story. Nick Whickson, too, the good natured ne'er-do-well, who is in his own and everybody's way till he finds his nat

ural vocation as an aid to a dealer in horses, is a capital sketch. The hypochondriac Squire Plumworthy is very good, also, in his way, though he verges once or twice on the "heavy father," with a genius for the damp handkerchief and long-lost relative line.

We are safe in assigning to Mr. Trowbridge a rank quite above that of our legion of washy novelists; he seems to have

a definite purpose and an ambition for literary as well as popular success, and we hope that by study and observation he will be true to a very decided and peculiar talent. We violate no confidence in saying that the graceful poem, "At Sea," which first appeared in the "Atlantic," and which, under the name of now one, now another author, has been deservedly popular, was written by Mr. Trowbridge.

JULY REVIEWED BY SEPTEMBER.

THE Editors of the "Atlantic," of course, have universal knowledge (with few exceptions) at their fingers' ends,—that is, they possess an Encyclopædia, gapped here and there by friends fond of portable information and familiar with that hydrostatic paradox in which the motion of solids up a spout is balanced by a very slender column of the liquidating medium. The once goodly row of quartos looks now like a set of mineral teeth that have essayed too closely to simulate Nature by assaulting a Boston cracker; and the intervals of vacuity among the books, as among the incisors, deprive the owner of his accustomed glibness in pronouncing himself on certain topics. Among the missing volumes is one of those in M, and accordingly our miss-information* on all subjects from Mabinogion to Mustard is not to be entirely relied upon. Under these painful circumstances, and with the chance of still further abstractions from our common stock of potential learning, we have engaged a staff of consulting engineers, who contract, for certain considerations, to know every useless thing from A to Z, and every obsolete one from Omega to Alpha. In these gentlemen we repose unlimited confidence in proportion to their salaries; for a considerable experience of mankind has taught us that omniscience is a much commoner and easier thing than science, especially in this favored country and under

* MISS-INFORMATION. A higgledy-piggledy want of intelligence acquired by young misses at boarding-schools. — *Supplement to Johnson's Dictionary.*

democratic institutions, which give to every man the inestimable right of knowing as much as he pleases. Everything was going on well when our Man of Science unaccountably disappeared, and our Æsthetic Editor experienced in all its terrors the Scriptural doom of being left to himself. This latter gentleman is tolerably *shady* in scientific matters, nay, to say sooth, light-proof, or only so far penetrable as to make darkness visible. Between science and nescience the difference seems to his mind little, if *n e*, and he would accept as perfectly satisfactory a statement that "the ponderability of air in a vitreous table-tipping medium (the abnormal variation being assumed as $\sqrt{x-b}$.0000001) is exactly proportioned to the squares of the circumambient distances, provided the perihelia are equal, and the evolution of nitretted carbogen in the boomerang be carefully avoided during evaporation; the power of the parallax being represented, of course, according to the well-known theorem of Rabelais, by H.U.M. Hemsterhuysius seems to have been familiar with this pretty experiment." The above sentence being shown to the Æsthetic Editor aforesaid, he acknowledges that he sees nothing more absurd than common in it, and that the theory seems to him as worthy of trial as Hedgecock's quadrant, which he took with him once on a journey to New York, arriving safely with a single observation of the height of the steamer's funnel.

This premised, it naturally follows that the Æsthetic Editor (the July number

falling to his turn) must take advantage of the absence of his Guardian Man of Science to publish an article on Meteorology. A condition of things in which the *omne scibile* was left entirely at his disposal, to be knocked about as he pleased, appeared to him no small omen of a near millennium; and what subject could be more suitable to begin with than the weather, a topic of general interest, (since we have no choice of weather or no,) in which exact knowledge is comfortably impossible, and in which he felt himself at home from his repeated experiments in raising the wind in order to lower the due-point? (See *The Weathercock, an Essay on Rotation in Office, by Sir Airy Vane.*)

Meanwhile, after the mischief was all done and a Provisional Government of Chaos Redux comfortably established in Physics, the Man of Science turns up suddenly in the following communication. [A council was called on the spot, the Autocrat in the chair, and it was decided, with only one dissenting voice, that the communication should be printed as a lesson to the peccant Editor, who, for the future, was laid under a strict interdict in respect of all and singular the onomies and ologies, and directed to consider the weather a matter altogether unpropheta-ble, except to almanac-makers, — the said Editor to superintend such publication, and to be kept on a diet of corn-cob for the body and Sylvanus Cobb (or his own works, at his option) for the mind, till it be done. The chairman added, that for a second offence he should do penance, according to ancient usage, in a blank sheet of the Magazine, (a contribution of his own being to that end suppressed,) — a form of punishment likely to be as irksome to himself as grateful to the readers of that incomparable miscellany.]

*“Abercwmddwllwm Mine,
28th July, 1860.*

“WELL-MEANING, BUT MISGUIDED, FRIEND!

“AN unexpected opportunity of personally investigating a highly nauseous kind of mephitic vapor drew me and Jones suddenly hither without time to say farewell or make explanations. I made the journey in — 10' by electric telegraph, and am delighted that I came, for anything more unpleasant never met my nostrils, and I am almost sure of adding a new element to the enjoyment of the scientific world.

I have already secured several bottles-full, and shall exhibit it at the next meeting of the Association: of course you shall have a sniff in advance. I should have returned before this, but unhappily the chain by which we descended gave way a few days ago near the top, in hoisting out the first series of my observations, and as yet there has been no opportunity of replacing it. Communication with the upper world is kept up by means of a small cord, however, and in this way we are supplied with food for body and mind. As good luck would have it, our butter came down wrapped in a half-sheet of your last volume of poems, containing my old favorites, “Modern Greece,” and the “Ode to a Deserted Churn.” These I read aloud several times to the miners, and their longing to return sooner to a world where they could get the rest of the volume became so strong, that, as I was about to begin my fifth reading, they consented to an expedient of escape which I had already proposed once or twice in vain. This was to blow us out by means of the fire-damp. The result of the experiment I cannot yet fully report, as some confusion ensued. Jones has disappeared, having been, as I hope and believe, discharged upward, and I have found the remains of only one miner, so that it seems to have been a tolerable success, though I myself was blown inward, owing to the premature explosion of the train. In one respect the result was highly satisfactory to me personally. Jones had all along insisted that the vapor was antiphlogistic. Whichever way he went, I think (fair-minded as he is) he must be by this time convinced of his error, and I shall accordingly enter him in my Report as discharged cured. I may add, as an interesting scientific fact, that his ascent was accompanied by such a sudden and violent fall of the barometer (which he had in his lap) that the instrument was broken. This would seem to prove a considerable decrease in the weight of the atmosphere at the moment of explosion. The darkness was oppressive at first; but a happy thought occurred to me. You know Jones’s poodle, and how obese he is? Well, he was shot into my lap, where he lay to all appearance dead. I had some matches in my pocket and at once kindled the end of his tail, which makes a very good candle, quite as good as average dips,

tales, quales. By the light of this I proceed to note down my first series of comments as a tail-piece to your meteorological article in the July "Atlantic," of which we received a copy in due course, as the magazine has a large circulation among our friars miner down here.

"METEOROLOGY 'MADE EASY.'

"In glancing at the article on 'Meteorology' in the July number of the 'Atlantic Monthly,' I was so struck by the dashing style in which the writer presents what he calls the 'leading principles' of the science, that, in spite of portentous errors, I was tempted to follow his diversified flight to its very close. Reading pencil in hand, I gathered up a long list of mistakes in fact and in philosophy, of which the following specimens, although but the first fruits of a not very critical examination, may serve to illustrate the carelessness — shall I not say ignorance? — of the writer on the topics in regard to which he proposes to enlighten the general reader.

"1. According to our essayist, the weight of the atmosphere is about $\frac{4}{1000}$ ths that of the globe, — in other words, $\frac{1}{250}$ d part. Now a simple calculation, or a reference to one of the standard works on Physics, should have taught him that the weight of the entire air is less than one-millionth part of that of the earth, — that is, *fifty thousand times less than he states it to be.*"

[We are quite sure that our (tor-)Mentor is mistaken in assuming a uniform weight for the atmosphere. It differs in different places. During our lecturing-tours, we have frequently observed an involuntary depression of the eyelids (producing *almost* an appearance of sleep) in a part of the audience, which we were at a loss to attribute to anything but the weight of the atmosphere. Water varies in the same way. It is hardly necessary to say that Lake Wetter derives its name from the superior quality of its dampness.]

"2. Of the specific gravity of the air he seems to be amusingly uncertain, — making it first 833 times and afterwards 770 times less than that of water; and in the same connection he says, in chosen phrase, that 'density, or *closeness*, is another quality of the atmosphere,' — as if it were its characteristic, and not common to all ponderable matter."

[A very neat way of arriving at specific

gravity in its densest form is to distil the "funny column" of a weekly newspaper. To arrive at the desired result in the speediest way, let the operation be performed in what is known among bucolic journalists as a "humorous retort." Density and closeness should not be spoken of as equivalent terms. The former is a common quality of the human skull, rendering it imperious; whereas a man may be very close and yet capable of being stuck, — with bad paper, for example.]

"3. In mentioning the *constituents of the atmosphere*, he adopts without explanation the loose statement of some of the books, placing carburetted hydrogen on the same footing as to constancy and amount with carbonic acid, and making no allusion to nitric acid. Yet chemistry has shown, that, except in special localities, carburetted hydrogen occurs only as a slight trace, the existence of which in most cases is rather inferred than actually demonstrated, and that it has no important office to perform, — while nitric acid shares with ammonia in the grand function of the nourishment of plants. In a later paragraph the error is aggravated by the assertion, that 'no chemical combination of oxygen and nitrogen has ever been detected in the atmosphere, and it is presumed none will be,' — as if every flash of lightning did not produce a notable quantity of this compound, which, washed down by the rain, may be detected in almost every specimen of rain-water we meet. What would Johnstone, Boussingault, Liebig, and the other agricultural chemists say to this?"

[For complete proof on this head, be struck by lightning. For ourselves, we are convinced, and would rather have some other head taken for an experiment by way of illustration. But any of our readers who is unsatisfied has only to place himself in front of a lightning-express-train with an ordinary conductor. To insure being struck, let the experimenter provide himself amply with patent safety-rods. At least, this result is pretty sure in houses, and is worth trying out of doors.]

"In the same connection he characterizes nitrogen as a substance 'not condensable under fifty atmospheres,' leaving the reader to infer that the preceding ingredient on the list, oxygen, *is* condensable (liquefiable) within that limit of pressure, and that nitrogen becomes liquid at or above it;

whereas neither oxygen nor nitrogen has ever yet been compressed into a liquid, although a force of more than *fifty times fifty* atmospheres has been brought to act upon them."

[We consider an experiment requiring twenty-five hundred atmospheres, when the thermometer marks 93° in the shade, indictable at common law. To desire more than one, under such circumstances, is unreasonable, and even wicked.]

"4. In referring to the Thermo-barometer as a means of measuring heights, the writer confounds the late Professor Edward Forbes with Professor James D. Forbes, recently of Edinburgh, but now Provost of the University of St. Andrews. The former was a great Zoölogist and Botanist, and did not occupy himself with investigations in Physics; the latter is an eminent Physicist, the author of the viscous theory of Glaciers; and it is he who made the observations here ascribed to the 'Professor Forbes, whose untimely death the friends of science have had so much reason to deplore.' The author adds the further mistake of supposing that the numerical constant, 549 feet for each degree, determined by James Forbes for Scotland, is equally correct for all latitudes."

[This hardly needed confutation. No university requires any numerical constant of height as qualification for a degree; and if they did, 549 feet would be excessive, unless, perhaps, at Warsaw, where everybody is tall enough to end in *ski*.]

"5. Our essayist discloses but an imperfect inkling of knowledge on the subject of capillarity in barometers, when he speaks of this complex action as equivalent to *the attraction between the mercury and the glass tube*; and he commits a yet graver mistake, practically speaking, in reiterating the long exploded error, that 'the weight of the atmosphere at the level of the sea is the same all over the world.' No fact in Meteorology is better established than that the mean pressure at the sea-level is different for different latitudes. In the vicinity of Cape Horn the barometer is three-fourths of an inch lower than at the Equator, and according to Schouw the pressure increases from the Equator up to a certain latitude (38°) in both hemispheres, and diminishes thence towards the Poles."

[The connection between capillarity and the fat of the common bear is well known to all manufacturers of trycoverus compounds, and they are probably right in advertising that grease of this description restores tone to the hair, — of course a fine beary tone. As the weight of the bear depends on his fat, the inference to a bearometer is obvious. It is a familiar fact that the bear supports life during hibernation by sucking his paws; but it may not be so generally known that the waste thus induced in the anterior extremities is restored by the moral consciousness of the animal that the fat he is so carefully hoarding is to confer a posthumous blessing on mankind. This is a touching example of the adaptation of means to end, and Shakspeare, the great natural philosopher, has made use of it for one of his most striking metaphors, where he says, "that the thought of something after death must give us paws."]

"6. Discoursing on the elasticity of the air, the writer styles it 'the most compressible of bodies,'—as if it had any advantage in this respect over the numerous other species of gaseous matter. As to the illustration which he gives, namely, that 'a glass vessel full of air, placed under a receiver and then exhausted by the air-pump, will burst into atoms,' we can only say, what every schoolboy knows, that the *bursting* would be *inwards*, unless, indeed, our meteorologist means that the external receiver was to be exhausted, and in that case he should so have expressed himself."

[The theory of exhausted receivers is, in our opinion, worthy only of the childhood of science, when chemistry and astronomy were alchemy and astrology, and people would believe anything. In this enlightened age of the universal subscription-paper, exhausted givers are familiar objects, but a receiver who finds the labors of his calling excessive is as non-existent as the harpy, his mythological prototype.]

"7. In regard to the extent to which the compression of air has been actually carried, he tells us that 'Brockhaus says that air has as yet been compressed only into *one-eighth of its original bulk*.' Is it possible that a writer on Meteorology is unacquainted with the well-known experiments of Dulong and Arago, and the more re-

cent ones of Regnault, in which the compression was three times the amount here stated, or that he requires to be referred to those of Natterer, who, by a powerful condensing apparatus, has lately compressed *seven hundred and twenty-six volumes of air into a single volume?*”

[Any man who has succeeded in condensing seven hundred and twenty-six volumes into one deserves the applause of the reading public. We trust M. Natterer will extend his benevolent labors to all the great libraries. With the most perfect apparatus of compression, however, we doubt if contemporary literature will yield anything like so high an average as 1 in 726.]

“8. In the paragraphs devoted to the optical relations of the atmosphere, our author has shown a happy faculty for making his subject obscure. After suggesting that the refraction of the rays in the atmosphere may be due to what he calls its ‘lenticular outline,’ he defines refraction to be ‘the bending of a ray passing obliquely from a rarer into a denser medium,’—a good enough popular definition, but for its sad *defectiveness*. Is he not aware that the light is also bent in penetrating obliquely from a denser into a rarer medium, as in passing from the surface of a low plain to the eye of a spectator on a neighboring mountain, and that the bending is just as great in this direction of its motion as in the other? And does he not know that it changes its course whenever it passes from a vacuum into any ponderable medium or in the opposite direction? In future attempts to make science easy, let him remember that these are all equally instances of refraction, and should be included in its definition.

“Under the same head, we are led to infer that it is only in ‘the warm and moist nights of summer,’ that ‘the moon, as she rises above the horizon, appears much larger than when at the zenith’; and we are taught, in connection with the origin of the mirage and the spectre of the Brocken, that ‘rainbows are due to this condition of the atmosphere.’ If, instead of rainbows, we may be allowed to read *halos*, we can understand the writer, who, instead of thinking of summer showers, appears to have had *a haze* in his mind while penning this and other paragraphs.”

[The *dictum* of our correspondent in re-

gard to light passing from a ponderable medium into a vacuum requires some qualification. An exception should be made of “Spiritual Mediums,” who, being flesh and blood, are of course ponderable. Now, if we represent the Medium by A, and the head of any one consulting her by B, there can be no doubt that the latter is an absolute vacuum; but it is demonstrable that nothing like light ever passed from the former to the latter. There is a closer analogy between refracted light and a Brocken spectre than our scientific friend seems willing to admit. For what follows we refer our readers to the remarkable essay of Alderman Moon, “On the Identity of Halocination and Lunacy.”]

“9. As our author advances in this branch of his subject, he grows far too profound for our scientific apprehension. Giving him all credit for *wishing to be clear*, we confess to a sad mystification as to what he calls the ‘Polarity of Light,’ where a beam is described as ‘revolving around poles peculiar to itself’ and as producing ‘beautiful *spectres*,’ and we want new illumination from him as to his theory of colors. We agree to the statement that ‘each object has a particular reflecting surface of its own,’ as we cannot see how *its* particular surface could be the property of another,—but why this should make the surface ‘throw back light at its own angle’ we do not exactly fathom, and we are puzzled to know *which is the owner of the said angle*, the light or the surface. No one doubts that ‘the modest blush which crimson the cheek of beauty,’ to use the author’s words, is caused by a rush of blood to the skin; but how this produces ‘a corresponding change in its angle of reflection,’ and what such a change has to do with the result, are problems too transcendental for the *exact sciences*.”

[On all questions relating to the Poles we reserve our opinion till the return of Dr. Hayes’s expedition. But we think they have little to hope from any future attempt at revolution, especially with such insufficient weapons as their axes, which, though they keep up a constant stir about them, have been long superseded by the improvements of modern military science. We think our correspondent hasty in admitting that “each object has a particular reflecting surface of its own.” A little inquiry among his neighbors

would have satisfied him that the human brain seldom possesses anything of the kind.]

"But these specimens must suffice as indications of the general character of this attempt at *popularizing science*. To do this without misleading and confounding the general reader is a task which claims the largest and most exact knowledge, and the greatest perspicuity of statement, no less than a flowing style and felicitous illustration. It is a task in which true success,

though apparently frequent, is in reality extremely rare."

"P. S. I had written thus far, when the fire suddenly penetrating, I suppose, to the nervous system of the poodle, he ran off, leaving me in total darkness and with no hope that his tail (like too many in the 'Atlantic') would be continued. By the brief candle of a match I manage to add this, and to subscribe myself

"Yours ever."

VOL. VI.—OCTOBER, 1860.—NO. XXXVI.

SOME OF THE HAUNTS OF BURNS.

BY A TOURIST WITHOUT IMAGINATION OR ENTHUSIASM.

WE left Carlisle at a little past eleven, and within the half-hour were at Gretna Green. Thence we rushed onward into Scotland through a flat and dreary tract of country, consisting mainly of desert and bog, where probably the moss-troopers were accustomed to take refuge after their raids into England. Anon, however, the hills hove themselves up to view, occasionally attaining a height which might almost be called mountainous. In about two hours we reached Dumfries, and alighted at the station there.

Chill as the Scottish summer is reputed to be, we found it an awfully hot day, not a whit less so than the day before; but we sturdily adventured through the burning sunshine up into the town, inquiring our way to the residence of Burns. The street leading from the station is called Shakspeare Street; and at its farther extremity we read "Burns Street" on a corner house,—the avenue thus designated having been formerly known as "Mill-Hole Brae." It is a vile lane, paved with small, hard stones from side to side, and bordered by cottages or mean houses of white-washed stone, joining one to another along the whole length of the

street. With not a tree, of course, or a blade of grass between the paving-stones, the narrow lane was as hot as Tophet, and reeked with a genuine Scotch odor, being infested with unwashed children, and altogether in a state of chronic filth; although some women seemed to be hopelessly scrubbing the thresholds of their wretched dwellings. I never saw an outskirt of a town less fit for a poet's residence, or in which it would be more miserable for any man of cleanly predilections to spend his days.

We asked for Burns's dwelling; and a woman pointed across the street to a two-story house, built of stone, and white-washed, like its neighbors, but perhaps of a little more respectable aspect than most of them, though I hesitate in saying so. It was not a separate structure, but under the same continuous roof with the next. There was an inscription on the door, bearing no reference to Burns, but indicating that the house was now occupied by a ragged or industrial school. On knocking, we were instantly admitted by a servant-girl, who smiled intelligently when we told our errand, and showed us into a low and very plain parlor, not more than twelve or fifteen feet square.

A young woman, who seemed to be a teacher in the school, soon appeared, and told us that this had been Burns's usual sitting-room, and that he had written many of his songs here.

She then led us up a narrow staircase into a little bed-chamber over the parlor. Connecting with it, there is a very small room, or windowed closet, which Burns used as a study; and the bed-chamber itself was the one where he slept in his latter life-time, and in which he died at last. Altogether, it is an exceedingly unsuitable place for a pastoral and rural poet to live or die in, — even more unsatisfactory than Shakespeare's house, which has a certain homely picturesqueness that contrasts favorably with the suburban sordidness of the abode before us. The narrow lane, the paving-stones, and the contiguity of wretched hovels are depressing to remember; and the steam of them (such is our human weakness) might almost make the poet's memory less fragrant.

As already observed, it was an intolerably hot day. After leaving the house, we found our way into the principal street of the town, which, it may be fair to say, is of very different aspect from the wretched outskirts above described. Entering a hotel, (in which, as a Dumfries guide-book assured us, Prince Charles Edward had once spent a night,) we rested and refreshed ourselves, and then set forth in quest of the mausoleum of Burns.

Coming to St. Michael's Church, we saw a man digging a grave; and, scrambling out of the hole, he let us into the churchyard, which was crowded full of monuments. Their general shape and construction are peculiar to Scotland, being a perpendicular tablet of marble or other stone, within a frame-work of the same material, somewhat resembling the frame of a looking-glass; and, all over the churchyard, these sepulchral memorials rise to the height of ten, fifteen, or twenty feet, forming quite an imposing collection of monuments, but inscribed with names of small general significance. It was

easy, indeed, to ascertain the rank of those who slept below; for in Scotland it is the custom to put the occupation of the buried personage (as "Skinner," "Shoemaker," "Flesher") on his tombstone. As another peculiarity, wives are buried under their maiden names, instead of those of their husbands; thus giving a disagreeable impression that the married pair have bidden each other an eternal farewell on the edge of the grave.

There was a footpath through this crowded churchyard, sufficiently well-worn to guide us to the grave of Burns; but a woman followed behind us, who, it appeared, kept the key of the mausoleum, and was privileged to show it to strangers. The monument is a sort of Grecian temple, with pilasters and a dome, covering a space of about twenty feet square. It was formerly open to all the inclemencies of the Scotch atmosphere, but is now protected and shut in by large squares of rough glass, each pane being of the size of one whole side of the structure. The woman unlocked the door, and admitted us into the interior. Inlaid into the floor of the mausoleum is the gravestone of Burns, — the very same that was laid over his grave by Jean Armour, before this monument was built. Stuck against the surrounding wall is a marble statue of Burns at the plough, with the Genius of Caledonia summoning the ploughman to turn poet. Methought it was not a very successful piece of work; for the plough was better sculptured than the man, and the man, though heavy and cloddish, was more effective than the goddess. Our guide informed us that an old man of ninety, who knew Burns, certifies this statue to be very like the original.

The bones of the poet, and of Jean Armour, and of some of their children, lie in the vault over which we stood. Our guide (who was intelligent, in her own plain way, and very agreeable to talk withal) said that the vault was opened about three weeks ago, on occasion of the burial of the eldest son of Burns. The poet's bones were dis-

turbed, and the dry skull, once so brimming over with powerful thought and bright and tender fantasies, was taken away, and kept for several days by a Dumfries doctor. It has since been deposited in a new leaden coffin, and restored to the vault. We learned that there is a surviving daughter of Burns's eldest son, and daughters likewise of the two younger sons,—and, besides these, an illegitimate posterity by the eldest son, who appears to have been of disreputable life in his younger days. He inherited his father's failings, with some faint shadow, I have also understood, of the great qualities which have made the world tender of his father's vices and weaknesses.

We listened readily enough to this paltry gossip, but found that it robbed the poet's memory of some of the reverence that was its due. Indeed, this talk over his grave had very much the same tendency and effect as the home-scene of his life, which we had been visiting just previously. Beholding his poor, mean dwelling and its surroundings, and picturing his outward life and earthly manifestations from these, one does not so much wonder that the people of that day should have failed to recognize all that was admirable and immortal in a disreputable, drunken, shabbily clothed, and shabbily housed man, consorting with associates of damaged character, and, as his only ostensible occupation, gauging the whiskey which he too often tasted. Siding with Burns, as we needs must, in his plea against the world, let us try to do the world a little justice too. It is far easier to know and honor a poet when his fame has taken shape in the spotlessness of marble than when the actual man comes staggering before you, besmeared with the sordid stains of his daily life. For my part, I chiefly wonder that his recognition dawned so brightly while he was still living. There must have been something very grand in his immediate presence, some strangely impressive characteristic in his natural behavior, to have caused him to seem like a demigod so soon.

As we went back through the church-yard, we saw a spot where nearly four hundred inhabitants of Dumfries were buried during the cholera year; and also some curious old monuments, with raised letters, the inscriptions on which were not sufficiently legible to induce us to puzzle them out; but, I believe, they mark the resting-places of old Covenanters, some of whom were killed by Claverhouse and his fellow-ruffians.

St. Michael's Church is of red freestone, and was built about a hundred years ago, on an old Catholic foundation. Our guide admitted us into it, and showed us, in the porch, a very pretty little marble figure of a child asleep, with a drapery over the lower part, from beneath which appeared its two baby feet. It was truly a sweet little statue; and the woman told us that it represented a child of the sculptor, and that the baby (here still in its marble infancy) had died more than twenty-six years ago. "Many ladies," she said, "especially such as had ever lost a child, had shed tears over it." It was very pleasant to think of the sculptor bestowing the best of his genius and art to re-create his tender child in stone, and to make the representation as soft and sweet as the original; but the conclusion of the story has something that jars with our awakened sensibilities. A gentleman from London had seen the statue, and was so much delighted with it that he bought it of the father-artist, after it had lain above a quarter of a century in the church-porch. So this was not the real, tender image that came out of the father's heart; he had sold that truest one for a hundred guineas, and sculptured this mere copy to replace it. The first figure was entirely naked in its earthly and spiritual innocence. The copy, as I have said above, has a drapery over the lower limbs. But, after all, if we come to the truth of the matter, the sleeping baby may be as fitly repositied in the drawing-room of a connoisseur as in a cold and dreary church-porch.

We went into the church, and found it very plain and naked, without altar-

decorations, and having its floor quite covered with unsightly wooden pews. The woman led us to a pew cornering on one of the side-aisles, and, telling us that it used to be Burns's family-pew, showed us his seat, which is in the corner by the aisle. It is so situated, that a sturdy pillar hid him from the pulpit, and from the minister's eye; "for Robin was no great friends with the ministers," said she. This touch—his seat behind the pillar, and Burns himself nodding in sermon-time, or keenly observant of profane things—brought him before us to the life. In the corner seat of the next pew, right before Burns, and not more than two feet off, sat the young lady on whom the poet saw that unmentionable parasite which he has immortalized in song. We were ungenerous enough to ask the lady's name, but the good woman could not tell it. This was the last thing which we saw in Dumfries worthy of record; and it ought to be noted that our guide refused some money which my companion offered her, because I had already paid her what she deemed sufficient.

At the railway-station we spent more than a weary hour, waiting for the train, which at last came up, and took us to Mauchline. We got into an omnibus, the only conveyance to be had, and drove about a mile to the village, where we established ourselves at the Loudoun Hotel, one of the veriest country-inns which we have found in Great Britain. The town of Mauchline, a place more redolent of Burns than almost any other, consists of a street or two of contiguous cottages, mostly white-washed, and with thatched roofs. It has nothing sylvan or rural in the immediate village, and is as ugly a place as mortal man could contrive to make, or to render uglier through a succession of untidy generations. The fashion of paving the village-street, and patching one shabby house on the gable-end of another, quite shuts out all verdure and pleasantness; but, I presume, we are not likely to see a more genuine old Scotch village, such as they

used to be in Burns's time, and long before, than this of Mauchline. The church stands about midway up the street, and is built of red freestone, very simple in its architecture, with a square tower and pinnacles. In this sacred edifice, and its churchyard, was the scene of one of Burns's most characteristic productions,—"The Holy Fair."

Almost directly opposite its gate, across the village-street, stands Posie Nansie's inn, where the "Jolly Beggars" congregated. The latter is a two-story, red-stone, thatched house, looking old, but by no means venerable, like a drunken patriarch. It has small, old-fashioned windows, and may well have stood for centuries,—though, seventy or eighty years ago, when Burns was conversant with it, I should fancy it might have been something better than a beggars' alehouse. The whole town of Mauchline looks rusty and time-worn,—even the newer houses, of which there are several, being shadowed and darkened by the general aspect of the place. When we arrived, all the wretched little dwellings seemed to have belched forth their inhabitants into the warm summer evening; everybody was chatting with everybody, on the most familiar terms; the bare-legged children gambolled or quarrelled uproariously, and came freely, moreover, and looked into the window of our parlor. When we ventured out, we were followed by the gaze of the whole town: people standing in their door-ways, old women popping their heads from the chamber-windows, and stalwart men—idle on Saturday at e'en, after their week's hard labor—clustering at the street-corners, merely to stare at our unpretending selves. Except in some remote little town of Italy, (where, besides, the inhabitants had the intelligible stimulus of beggary,) I have never been honored with nearly such an amount of public notice.

The next forenoon my companion put me to shame by attending church, after vainly exhorting me to do the like; and, it being Sacrament Sunday, and my poor

friend being wedged into the farther end of a closely filled pew, he was forced to stay through the preaching of four several sermons, and came back perfectly exhausted and desperate. He was somewhat consoled, however, on finding that he had witnessed a spectacle of Scotch manners identical with that of Burns's "Holy Fair," on the very spot where the poet located that immortal description. By way of further conformance to the customs of the country, we ordered a sheep's head and the broth, and did penance accordingly; and at five o'clock we took a fly, and set out for Burns's farm of Moss Giel.

Moss Giel is not more than a mile from Mauchline, and the road extends over a high ridge of land, with a view of far hills and green slopes on either side. Just before we reached the farm, the driver stopped to point out a hawthorn, growing by the way-side, which he said was Burns's "Lousie Thorn"; and I devoutly plucked a branch, although I have really forgotten where or how this illustrious shrub has been celebrated. We then turned into a rude gateway, and almost immediately came to the farm-house of Moss Giel, standing some fifty yards removed from the high-road, behind a tall hedge of hawthorn, and considerably overshadowed by trees. The house is a white-washed stone cottage, like thousands of others in England and Scotland, with a thatched roof, on which grass and weeds have intruded a picturesque, though alien growth. There is a door and one window in front, besides another little window that peeps out among the thatch. Close by the cottage, and extending back at right angles from it, so as to inclose the farm-yard, are two other buildings of the same size, shape, and general appearance as the house: any one of the three looks just as fit for a human habitation as the two others, and all three look still more suitable for donkey-stables and pig-sties. As we drove into the farm-yard, bounded on three sides by these three hovels, a large dog began to bark at us; and some women and children made

their appearance, but seemed to demur about admitting us, because the master and mistress were very religious people, and had not yet come back from the Sacrament at Mauchline.

However, it would not do to be turned back from the very threshold of Robert Burns; and as the women seemed to be merely straggling visitors, and nobody, at all events, had a right to send us away, we went into the back-door, and, turning to the right, entered a kitchen. It showed a deplorable lack of housewifely neatness, and in it there were three or four children, one of whom, a girl eight or nine years old, held a baby in her arms. She proved to be the daughter of the people of the house, and gave us what leave she could to look about us. Thence we stepped across the narrow mid-passage of the cottage into the only other apartment below-stairs, a sitting-room, where we found a young man eating bread and cheese. He informed us that he did not live there, and had only called in to refresh himself on his way home from church. This room, like the kitchen, was a noticeably poor one, and, besides being all that the cottage had to show for a parlor, it was a sleeping-apartment, having two beds, which might be curtained off, on occasion. The young man allowed us liberty (so far as in him lay) to go upstairs. Up we crept, accordingly; and a few steps brought us to the top of the staircase, over the kitchen, where we found the wretchedest little sleeping-chamber in the world, with a sloping roof under the thatch, and two beds spread upon the bare floor. This, most probably, was Burns's chamber; or, perhaps, it may have been that of his mother's servant-maid; and, in either case, this rude floor, at one time or another, must have creaked beneath the poet's midnight tread. On the opposite side of the passage was the door of another attic-chamber, opening which, I saw a considerable number of cheeses on the floor.

The whole house was pervaded with a frowzy smell, and also a dunghill-odor, and it is not easy to understand how the

atmosphere of such a dwelling can be any more agreeable or salubrious morally than it appeared to be physically. No virgin, surely, could keep a holy awe about her while stowed higgledy-piggledy with coarse-natured rustics into this narrowness and filth. Such a habitation is calculated to make beasts of men and women; and it indicates a degree of barbarism which I did not imagine to exist in Scotland, that a tiller of broad fields, like the farmer of Mauchline, should have his abode in a pig-sty. It is sad to think of anybody — not to say a poet, but any human being — sleeping, eating, thinking, praying, and spending all his home-life in this miserable hovel; but, methinks, I never in the least knew how to estimate the miracle of Burns's genius, nor his heroic merit for being no worse man, until I thus learned the squalid hindrances amid which he developed himself. Space, a free atmosphere, and cleanliness have a vast deal to do with the possibilities of human virtue.

The biographers talk of the farm of Moss Giel as being damp and unwholesome; but I do not see why, outside of the cottage-walls, it should possess so evil a reputation. It occupies a high, broad ridge, enjoying, surely, whatever benefit can come of a breezy site, and sloping far downward before any marshy soil is reached. The high hedge, and the trees that stand beside the cottage, give it a pleasant aspect enough to one who does not know the grimy secrets of the interior; and the summer afternoon was now so bright that I shall remember the scene with a great deal of sunshine over it.

Leaving the cottage, we drove through a field, which the driver told us was that in which Burns turned up the mouse's nest. It is the inclosure nearest to the cottage, and seems now to be a pasture, and a rather remarkably unfertile one. A little farther on, the ground was whitened with an immense number of daisies, — daisies, daisies, everywhere; and in answer to my inquiry, the driver said that this was the field where Burns ran his ploughshare over the daisy. If so,

the soil seems to have been consecrated to daisies by the song which he bestowed on that first immortal one. I alighted, and plucked a whole handful of these "wee, modest, crimson-tipped flowers," which will be precious to many friends in our own country as coming from Burns's farm, and being of the same race and lineage as that daisy which he turned into an amaranthine flower while seeming to destroy it.

From Moss Giel we drove through a variety of pleasant scenes, some of which were familiar to us by their connection with Burns. We skirted, too, along a portion of the estate of Auchinleck, which still belongs to the Boswell family, — the present possessor being Sir James Boswell,* a grandson of Johnson's friend, and son of the Sir Alexander who was killed in a duel. Our driver spoke of Sir James as a kind, free-hearted man, but addicted to horse-races and similar pastimes, and a little too familiar with the wine-cup; so that poor Bozzy's booziness would appear to have become hereditary in his ancient line. There is no male heir to the estate of Auchinleck. The portion of the lands which we saw is covered with wood and much undermined with rabbit-warrens; nor, though the territory extends over a large number of acres, is the income very considerable.

By-and-by we came to the spot where Burns saw Miss Alexander, the Lass of Ballochmyle. It was on a bridge, which (or, more probably, a bridge that has succeeded to the old one, and is made of iron) crosses from bank to bank, high in air, over a deep gorge of the road; so that the young lady may have appeared to Burns like a creature between earth and sky, and compounded chiefly of celestial elements. But, in honest truth, the great charm of a woman, in Burns's eyes, was always her womanhood, and not the angelic mixture which other poets find in her.

Our driver pointed out the course tak-

* Sir James Boswell is now dead.

en by the Lass of Ballochmyle, through the shrubbery, to a rock on the banks of the Lugar, where it seems to be the tradition that Burns accosted her. The song implies no such interview. Lovers, of whatever condition, high or low, could desire no lovelier scene in which to breathe their vows: the river flowing over its pebbly bed, sometimes gleaming into the sunshine, sometimes hidden deep in verdure, and here and there eddying at the foot of high and precipitous cliffs. This beautiful estate of Ballochmyle is still held by the family of Alexanders, to whom Burns's song has given renown on cheaper terms than any other set of people ever attained it. How slight the tenure seems! A young lady happened to walk out, one summer afternoon, and crossed the path of a neighboring farmer, who celebrated the little incident in four or five warm, rude,—at least, not refined, though rather ambitious,—and somewhat ploughman-like verses. Burns has written hundreds of better things; but henceforth, for centuries, that maiden has free admittance into the dream-land of Beautiful Women, and she and all her race are famous! I should like to know the present head of the family, and ascertain what value, if any, they put upon the celebrity thus won.

We passed through Catrine, known hereabouts as "the clean village of Scotland." Certainly, as regards the point indicated, it has greatly the advantage of Mauchline, whither we now returned without seeing anything else worth writing about.

There was a rain-storm during the night, and, in the morning, the rusty, old, sloping street of Mauchline was glistening with wet, while frequent showers came spattering down. The intense heat of many days past was exchanged for a chilly atmosphere, much more suitable to a stranger's idea of what Scotch temperature ought to be. We found, after breakfast, that the first train northward had already gone by, and that we must wait till nearly two o'clock for the next. I merely ventured out once, during the

forenoon, and took a brief walk through the village, in which I have left little to describe. Its chief business appears to be the manufacture of snuff-boxes. There are perhaps five or six shops, or more, including those licensed to sell only tea and tobacco; the best of them have the characteristics of village-stores in the United States, dealing in a small way with an extensive variety of articles. I peeped into the open gateway of the churchyard, and saw that the ground was absolutely stuffed with dead people, and the surface crowded with grave-stones, both perpendicular and horizontal. All Burns's old Mauchline acquaintances are doubtless there, and the Armours among them, except Bonny Jean, who sleeps by her poet's side. The family is now extinct in Mauchline.

Arriving at the railway-station, we found a tall, elderly, comely gentleman walking to and fro and waiting for the train. He proved to be a Mr. Alexander,—it may fairly be presumed the Alexander of Ballochmyle, a blood-relation of the lovely lass. Wonderful efficacy of a poet's verse, that could shed a glory from Long Ago on this old gentleman's white hair! These Alexanders, by-the-by, are not an old family on the Ballochmyle estate; the father of the lass having made a fortune in trade, and established himself as the first landed proprietor of his name in these parts. The original family was named Whitefoord.

Our ride to Ayr presented nothing very remarkable; and, indeed, a cloudy and rainy day takes the varnish off the scenery, and causes a woful diminution in the beauty and impressiveness of everything we see. Much of our way lay along a flat, sandy level, in a southerly direction. We reached Ayr in the midst of hopeless rain, and drove to the King's Arms Hotel. In the intervals of showers I took peeps at the town, which appeared to have many modern or modern-fronted edifices; although there are likewise tall, gray, gabled, and quaint-looking houses in the by-streets, here and there,

betokening an ancient place. The town lies on both sides of the Ayr, which is here broad and stately, and bordered with dwellings that look from their windows directly down into the passing tide.

I crossed the river by a modern and handsome stone bridge, and recrossed it, at no great distance, by a venerable structure of four gray arches, which must have bestridden the stream ever since the early days of Scottish history. These are the "Two Briggs of Ayr," whose midnight conversation was overheard by Burns, while other auditors were aware only of the rush and rumble of the wintry stream among the arches. The ancient bridge is steep and narrow, and paved like a street, and defended by a parapet of red freestone, except at the two ends, where some mean old shops allow scanty room for the pathway to creep between. Nothing else impressed me hereabouts, unless I mention, that, during the rain, the women and girls went about the streets of Ayr barefooted to save their shoes.

The next morning wore a lowering aspect, as if it felt itself destined to be one of many consecutive days of storm. After a good Scotch breakfast, however, of fresh herrings and eggs, we took a fly, and started at a little past ten for the banks of the Doon. On our way, at about two miles from Ayr, we drew up at a road-side cottage, on which was an inscription to the effect that Robert Burns was born within its walls. It is now a public-house; and, of course, we alighted and entered its little sitting-room, which, as we at present see it, is a neat apartment, with the modern improvement of a ceiling. The walls are much overscribbled with names of visitors, and the wooden door of a cupboard in the wainscot, as well as all the other wood-work of the room, is cut and carved with initial letters. So, likewise, are two tables, which, having received a coat of varnish over the inscriptions, form really curious and interesting articles of furniture. I have never (though I do not personally

adopt this mode of illustrating my humble name) felt inclined to ridicule the natural impulse of most people thus to record themselves at the shrines of poets and heroes.

On a panel, let into the wall in a corner of the room, is a portrait of Burns, copied from the original picture by Nasmyth. The floor of this apartment is of boards, which are probably a recent substitute for the ordinary flag-stones of a peasant's cottage. There is but one other room pertaining to the genuine birthplace of Robert Burns: it is the kitchen, into which we now went. It has a floor of flag-stones, even ruder than those of Shakspeare's house,—though, perhaps, not so strangely cracked and broken as the latter, over which the hoof of Satan himself might seem to have been trampling. A new window has been opened through the wall, towards the road; but on the opposite side is the little original window, of only four small panes, through which came the first daylight that shone upon the Scottish poet. At the side of the room, opposite the fireplace, is a recess, containing a bed, which can be hidden by curtains. In that humble nook, of all places in the world, Providence was pleased to deposit the germ of the richest human life which mankind then had within its circumference.

These two rooms, as I have said, make up the whole sum and substance of Burns's birthplace: for there were no chambers, nor even attics; and the thatched roof formed the only ceiling of kitchen and sitting-room, the height of which was that of the whole house. The cottage, however, is attached to another edifice of the same size and description, as these little habitations often are; and, moreover, a splendid addition has been made to it, since the poet's renown began to draw visitors to the way-side ale-house. The old woman of the house led us through an entry, and showed a vaulted hall, of no vast dimensions, to be sure, but marvellously large and splendid as compared with what might be anticipated from the outward aspect of the cot-

tage. It contained a bust of Burns, and was hung round with pictures and engravings, principally illustrative of his life and poems. In this part of the house, too, there is a parlor, fragrant with tobacco-smoke; and, no doubt, many a noggin of whiskey is here quaffed to the memory of the bard, who professed to draw so much of his inspiration from that potent liquor.

We bought some engravings of Kirk Alloway, the Bridge of Doon, and the Monument, and gave the old woman a fee besides, and took our leave. A very short drive farther brought us within sight of the monument, and to the hotel, situated close by the entrance of the ornamental grounds within which the former is inclosed. We rang the bell at the gate of the inclosure, but were forced to wait a considerable time; because the old man, the regular superintendent of the spot, had gone to assist at the laying of the corner-stone of a new kirk. He appeared anon, and admitted us, but immediately hurried away to be present at the concluding ceremonies, leaving us locked up with Burns.

The inclosure around the monument is beautifully laid out as an ornamental garden, and abundantly provided with rare flowers and shrubbery, all tended with loving care. The monument stands on an elevated site, and consists of a massive basement-story, three-sided, above which rises a light and elegant Grecian temple,—a mere dome, supported on Corinthian pillars, and open to all the winds. The edifice is beautiful in itself; though I know not what peculiar appropriateness it may have, as the memorial of a Scottish rural poet.

The door of the basement-story stood open; and, entering, we saw a bust of Burns in a niche, looking keener, more refined, but not so warm and whole-souled as his pictures usually do. I think the likeness cannot be good. In the centre of the room stood a glass case, in which were repositied the two volumes of the little Pocket-Bible that Burns gave to Highland Mary, when they pledged their

troth to one another. It is poorly printed, on coarse paper. A verse of Scripture, referring to the solemnity and awfulness of vows, is written within the cover of each volume, in the poet's own hand; and fastened to one of the covers is a lock of Highland Mary's golden hair. This Bible had been carried to America by one of her relatives, but was sent back to be fitly treasured here.

There is a staircase within the monument, by which we ascended to the top, and had a view of both Briggs of Doon; the scene of Tam O' Shanter's misadventure being close at hand. Descending, we wandered through the inclosed garden, and came to a little building in a corner, on entering which, we found the two statues of Tam and Sutor Wat,—ponderous stone-work enough, yet permeated in a remarkable degree with living warmth and jovial hilarity. From this part of the garden, too, we again beheld the old Brigg of Doon, over which Tam galloped in such imminent and awful peril. It is a beautiful object in the landscape, with one high, graceful arch, ivy-grown, and shadowed all over and around with foliage.

When we had waited a good while, the old gardener came, telling us that he had heard an excellent prayer at laying the corner-stone of the new kirk. He now gave us some roses and sweetbrier, and let us out from his pleasant garden. We immediately hastened to Kirk Alloway, which is within two or three minutes' walk of the monument. A few steps ascend from the road-side, through a gate, into the old graveyard, in the midst of which stands the kirk. The edifice is wholly roofless, but the side-walls and gable-ends are quite entire, though portions of them are evidently modern restorations. Never was there a plainer little church, or one with smaller architectural pretension; no New England meeting-house has more simplicity in its very self, though poetry and fun have clambered and clustered so wildly over Kirk Alloway that it is difficult to see it as it actually exists. By-the-by, I do not understand why Satan and an assembly of witches should hold their

revels within a consecrated precinct; but the weird scene has so established itself in the world's imaginative faith that it must be accepted as an authentic incident, in spite of rule and reason to the contrary. Possibly, some carnal minister, some priest of pious aspect and hidden infidelity, had dispelled the consecration of the holy edifice by his pretence of prayer, and thus made it the resort of unhappy ghosts and sorcerers and devils.

The interior of the kirk, even now, is applied to quite as impertinent a purpose as when Satan and the witches used it as a dancing-hall; for it is divided in the midst by a wall of stone-masonry, and each compartment has been converted into a family burial-place. The name on one of the monuments is *Crawfurd*; the other bore no inscription. It is impossible not to feel that these good people, whoever they may be, had no business to thrust their prosaic bones into a spot that belongs to the world, and where their presence jars with the emotions, be they sad or gay, which the pilgrim brings thither. They shut us out from our own precincts, too,—from that inalienable possession which Burns bestowed in free gift upon mankind, by taking it from the actual earth and annexing it to the domain of imagination. And here these wretched squatters have lain down to their long sleep, after barring each of the two doorways of the kirk with an iron grate! May their rest be troubled, till they rise and let us in!

Kirk Alloway is inconceivably small, considering how large a space it fills in our imagination before we see it. I paced its length, outside of the wall, and found it only seventeen of my paces, and not more than ten of them in breadth. There seem to have been but very few windows, all of which, if I rightly remember, are now blocked up with mason-work of stone. One mullioned window, tall and narrow, in the eastern gable, might have been seen by Tam O' Shanter, blazing with devilish light, as he approached along the road from Ayr; and there is a small and

square one, on the side nearest the road, into which he might have peered, as he sat on horseback. Indeed, I could easily have looked through it, standing on the ground, had not the opening been walled up. There is an odd kind of belfry at the peak of one of the gables, with the small bell still hanging in it. And this is all that I remember of Kirk Alloway, except that the stones of its material are gray and irregular.

The road from Ayr passes Alloway Kirk, and crosses the Doon by a modern bridge, without swerving much from a straight line. To reach the old bridge, it appears to have made a bend, shortly after passing the kirk, and then to have turned sharply towards the river. The new bridge is within a minute's walk of the monument; and we went thither, and leaned over its parapet to admire the beautiful Doon, flowing wildly and sweetly between its deep and wooded banks. I never saw a lovelier scene; although this might have been even lovelier, if a kindly sun had shone upon it. The ivy-grown, ancient bridge, with its high arch, through which we had a picture of the river and the green banks beyond, was absolutely the most picturesque object, in a quiet and gentle way, that ever blessed my eyes. Bonny Doon, with its wooded banks, and the boughs dipping into the water! The memory of them, at this moment, affects me like the song of birds, and Burns crooning some verses, simple and wild, in accordance with their native melody.

It was impossible to depart without crossing the very bridge of Tam's adventure; so we went thither, over a now disused portion of the road, and, standing on the centre of the arch, gathered some ivy-leaves from that sacred spot. This done, we returned as speedily as might be to Ayr, whence, taking the rail, we soon beheld Ailsa Craig rising like a pyramid out of the sea. Drawing nearer to Glasgow, Ben Lomond hove in sight, with a dome-like summit, supported by a shoulder on each side. But a man is better than a mountain; and we had been hold-

ing intercourse, if not with the reality, at least with the stalwart ghost of one, amid the scenes where he lived and sung. We shall appreciate him better as a poet, hereafter; for there is no writer whose life, as a man, has so much to do with his fame, and throws such a necessary light

upon whatever he has produced. Henceforth, there will be a personal warmth for us in everything that he wrote; and, like his countrymen, we shall know him in a kind of personal way, as if we had shaken hands with him, and felt the thrill of his actual voice.

PASQUIN AND PASQUINADES.

AT an angle of the palace which Pius VI., (Braschi,) with paternal liberality, built for the residence of his family, before the French Revolution put an end to such beneficence, stands the famous statue of Pasquin, giving its name to the square upon which it looks. It is little more now than a mere trunk of marble, bearing the marks of blows and long hard usage. But even in this mutilated condition it shows traces of excellent workmanship and of pristine beauty. The connoisseurs in sculpture praise it,* and the antiquaries have embittered their ignorance in regard to it by discussions as to whether it was a statue of Hercules, of Alexander the Great, or of Menelaus bearing the body of Patroclus. Disabled and maimed as it is, it is thus only the more fitting type of the Roman people, of which it has been so long the acknowledged mouthpiece; and the epigrams and satires which have made its name famous have gained an additional point and a sharper sting from the patent resemblance in the condition of their professed author to that of those for whom he spoke.

It is said to have been about the be-

* Bernini, being asked what was the most beautiful statue in Rome, replied, "That of Pasquin." This reply the sensible Milizia taxes with affectation,—saying, that, although an artist may discover in the work some marks of good design, it is now too maimed to pass for a beautiful statue. Possibly Bernini was thinking of his own works in comparison with it.

ginning of the sixteenth century that the statue was discovered and dug up near the place where it now stands, and the earliest account of it seems to be that given by Castelvetro, in 1553, in his discourse upon a *canzone* by Annibal Caro. He says, that Antonio Tibaldeo of Ferrara, a venerable and lettered man, relates concerning this statue, that there used to be in Rome a tailor, very skilful in his trade, by the name of Pasquin, who had a shop which was much frequented by prelates, courtiers, and other people, so that he employed a great number of workmen, who, like worthless fellows, spent their time in speaking ill of one person or another, sparing no one, and finding opportunity for jests in observing those who came to the shop. This custom became so notorious that the very persons who were hit by these sharp speeches joined in the laugh at them, and felt no resentment; so that, if any one wished to say a hard thing of another, he did it under cover of the person of Master Pasquin, pretending that he had heard it said at his shop,—at which pretence every one laughed, and no one bore a grudge. But, Master Pasquin dying, it happened, that, in improving the street, this broken statue, which lay half imbedded in the ground, serving as a stepping-stone for passengers, was taken up and set at the side of the shop. Making use of this good chance, satirical people began to say that Master Pasquin had come back. The custom soon arose

of attaching to the statue bits of writing; and as it had been allowed to the tailor to say everything, so by means of the statue any one might publish what he would not have ventured to speak.*

Thus did Hercules or Alexander change his name for that of Pasquin, and soon became almost as well known throughout Europe under his new designation as under his old. If the statue were not dug up, as is said, until the sixteenth century, its fame spread rapidly; for, before Luther had made himself feared at Rome, Pasquin was already well known as the satirist of the vices of Pope and Cardinals, and as a bold enemy of the abuses of the Church.

But the history of Pasquin is not a mere story of Roman jests, nor is its interest such alone as may arise from an amusing, though neglected series of literary anecdotes. In the dearth of material for the popular history of modern Rome, it is of value as affording indications of the turn of feeling and the opinions of the Romans, and of the regard in which they held their rulers. The free speech, which was prohibited and dangerous to the living subjects of the temporal power of the Popes, was a privilege which, in spite of prohibition, Pasquin insisted upon exercising. Whatever precautions might be taken, whatever penalties imposed, means were always found, when occasion arose, to affix to the battered marble papers bearing stinging epigrams or satirical verses, which, once read, fastened themselves in the memory, and spread quickly by repetition. He could not be silenced. "Great sums," said he one day, in an epigram addressed to Paul III., who was Pope from 1534 to 1549, "great sums were formerly given to poets for singing: how much will you give me, O Paul, to be silent?"

* Andreas Schott, who published an Itinerary of Italy about the beginning of the seventeenth century, copies this account, and adds,—"At present this custom is prohibited under the heaviest penalties."

"Ut canerent data multa olim sunt vatibus
æra:
Ut taceam, quantum tu mihi, Paule, da-
bis?"

In his life of Adrian VI., the successor of Leo X., Paulus Jovius, not indeed the most trustworthy of authorities, tells a story which, if not true, might well be so. He says, that the Pope, being vexed at the free speech of Pasquin, proposed to have him thrown into the Tiber, thinking thus to stop his tongue; but the Spanish legate dissuaded him, by suggesting, with grave Spanish wisdom, that all the frogs of the river, becoming infected with his spirit, would adopt his style of speech and croak only pasquinades. The contemptibleness of the assailant made him the more dreaded. Did not the very reeds tell the fatal secret about King Midas?

Pasquin was by no means the only figure in Rome who gave expression to thoughts and feelings which it would have been dangerous to the living subjects of the ecclesiastical rule to utter aloud. His most distinguished companion was Marforio, a colossal statue of an ocean or river god, which was discovered in the sixteenth century near the forum of Mars, from which he derived his name. Toward the end of the same century, he was placed in the lower court of the Palazzo de' Conservatori, on the Capitol, and here he has since remained. Dialogues were often carried on between him and his friend Pasquin, and a share in their conversation was sometimes taken by the Facchino, or so called Porter of the Palazzo Piombino. In his "Roma Nova," published in 1660, Sprenger says that Pasquin was assigned to the nobles, Marforio to the citizens, and the Facchino to the common people. But besides these there were the Abate Luigi of the Palazzo Valle,—Madama Lucrezia, who still sits behind the Venetian palace near the Church of St. Mark,—the Baboon, from which the Via Babbuino takes its name,—and the marble portrait of Scanderbeg, the great enemy of the Turks, on the *façade* of the house which he at one

time occupied in Rome. Each of these personages now and then issued an epigram or took part in the satirical talk of his companions. Such a number of cold and secure censors is not surprising in a city like Rome, where the checks upon open speech are so many, and where priests and spies exercise so close a scrutiny over the thoughts and words of men. Oppression begets hypocrisy, and a tyrant adds to the faults of his subjects the vices of cowardice and secrecy. Cautic Forsyth, speaking of the Romans, begins with the bitter remark, that "the national character is the most ruined thing at Rome"; and in the same section he adds, "Their humor is naturally caustic; but they lampoon, as they stab, only in the dark. The danger attending open attacks forces them to confine their satire within epigram; and thus pasquinade is but the offspring of hypocrisy, the only resource of wits who are obliged to be grave on so many absurdities in religion and respectful to so many upstarts in purple." Thus if the Romans lampoon only in the dark, the fault is to be charged against their rulers rather than themselves. The talent for sarcastic epigram is hereditary with the people. The pointed style of Martial was handed down through successive generations. The epigram in his hands was no longer a mere inscription, an idyl, or an elegy; it had lost its ancient grace, but it took on a new energy, and it set the model, which the later Romans knew well how to copy, of satire condensed into wit, in lines each of whose words had a sting.

The first true Pasquinades — that is, the first of the epigrams which were affixed to Pasquin, and hence derived their name — are perhaps those which belong to the reign of Leo X. We at least have found no earlier ones of undoubted genuineness; but satires similar to those of Pasquin, and possibly originating with him, as they now go under the general name of Pasquinades, were published against the Popes who preceded Leo. The infamous Alexander VI., the Pope who has made his name synonymous with

the worst infamies that disgrace mankind, was not spared the attacks of the subjects whom he and his children, not unworthy of such a father, degraded and abused. Two lines could say much: —

"Sextus Tarquinius, Sextus Nero, Sextus et iste:

Semper sub Sextis perdita Roma fuit."

"Sextus Tarquinius, Sextus Nero, this also a Sextus" (Alexander Sextus, that is, Alexander the Sixth): "always under the Sextuses has Rome been ruined."

And as if this were not enough, another distich struck with more directness at the vices of the Pope: —

"Vendit Alexander claves, altaria, Christum:

Emerat ille prius, vendere jure potest."

"Alexander sells the keys, the altars, Christ. He bought them first, and has good right to sell."*

Alexander had gained his election by bribes which he did not pay, and promises which he did not keep; and Guicciardini tells in a few words what use he made of his holy office, declaring, that, "with his immoderate ambition and poisoned infidelity, together with all the horrible examples of cruelty, luxury and monstrous covetousness, selling without distinction both holy things and profane things, he infected the whole world."†

* Mrs. Piozzi, in her amusing *Journey through Italy*, ii. 113, quotes these verses and gives a translation of them which shows that she quite mistook their point. In spite of her quoting Latin, Greek, and even on occasion Hebrew, her scholarship was not very accurate or deep.

† *The Historie of Guicciardin*, reduced into English by Geffray Fenton. 1579. p. 308. Another epigram of barbarous bitterness against Alexander refers, if we understand it aright, to one of the gloomiest events of his pontificate, the murder of his son Giovanni, Duca di Gandia, by his other son, Cæsar Borgia. Giovanni was killed at night, and his body was thrown into the Tiber, from which it was recovered the next morning.

"Piscatorem hominum ne te non, Sexte, putemus,
Piscaris natum retibus ecce tuum."

"Lest we should not fancy you, O Sextus, a fisher of men, you fish for your own son with nets."

In 1503, after a pontificate of eleven years, Alexander died. Rome rejoiced. Peace, which for a long time had been banished from her borders, returned, and she enjoyed for a few days unwonted freedom from alarm and trouble. Her happiness found expression in verse:—

“Dic unde, Alecto, pax hæc effulsit, et unde
Tam subito reticent proelia? Sextus
obit.”

“Say whence, Alecto, has this peace shone forth? wherefore so suddenly has the noise of battle ceased? Alexander is dead.”

The rule of Borgia's successor, Pius III., lasting only twenty-seven days, afforded little opportunity to the play of indignant wit; but the nine years' reign of Julius II., which followed, was a period whose troubled history is recorded in the numerous epigrams and satires to which it gave birth. The impulsive and passionate vigor of the character of Julius, the various fortunes of his rash enterprises, the troubles which his stormy and rapacious career brought to the Papal city, are all more or less minutely told. The Pope began his reign with warlike enterprises, and as soon as he could gather sufficient force he set out to recover from the Venetians territory of which they had possession, and which he claimed as the property of the Papal state. It was said, that, in leading his troops out of Rome, he threw into the Tiber, with characteristic impetuosity, the keys of Peter, and, drawing his sword from its sheath, declared that henceforth he would trust to the sword of Paul. The story was too good to be lost, and it gave point to many epigrams, of which, perhaps, the one preserved by Bayle is the best:—

“Cum Petri nihil efficiant ad proelia claves,
Auxilio Pauli forsitan ensis erit.”

“Since the keys of Peter profit not for battle, perchance, with the aid of Paul, the sword will answer.”*

* Vasari relates, that Michel Angelo, when he was making the bronze statue of Julius, at Bologna, having asked the Pope if he should put a book in his left hand,—“No,” replied the fiery old man, “put a sword in it, for I

Julius was the first of the Popes of recent times to allow his beard to grow, and Raphael's noble portrait of him shows what dignity it gave to his strongly marked face. The beard was also regarded traditionally as having belonged to Saint Paul. “For me,” the Pope was represented as saying, “for me the beard of Paul, the sword of Paul, all things of Paul: that key-bearer, Peter, is no way to my liking.”

“Huc barbam Pauli, gladium Pauli, omnia
Pauli:

Claviger ille nihil ad mea vota Petrus.”

But the most savage epigram against Julius was one that recalled the name of the great Roman, which the Pope was supposed to have adopted in emulation of that of Alexander, borne by his predecessor:—

“Julius est Romæ. Quid abest? Date, numina, Brutum.

Nam quoties Romæ est Julius, illa perit.”

“Julius is at Rome. What is wanting? Ye gods, give us a Brutus! For when Julius is at Rome, the city is lost.”

Pasquin became a recognized institution, as we have said, under Leo X., and was taken under the protection of the Roman people.* His popularity was such as to lead to consequences of which he himself complained. He was made the vehicle of the effusions of worthless versifiers, and he was forced to cry out, “Woe is me! even the copyist fixes his verses upon me, and every one bestows on me his silly trifles.”

know not letters”: “*Mettivi una spada, che io non so lettere.*”

* At the beginning of his pontificate, upon occasion of Leo's taking possession of the Lateran with a solemn procession, an arch of triumph was erected at the bridge of Sant' Angelo, which bore an inscription worthy of the tailor's successor:—

“Olim habuit Cypria sua tempora, tempora Mavors
Olim habuit, sua nunc tempora Pallas habet.”

“Venus once had her time, Mars also has had his, but now Minerva rules.”

The application of these verses was alike appropriate to the life of the Pope, or to the reigns of Alexander VI., Julius II., and the one just beginning.

“Me miserum! Copista etiam mihi carmina
figit;
Et tribuit nugas jam mihi quisque suas.”

He seems to have been successful in putting a stop to this injurious treatment; for not long after he declared, with a sarcasm directed against the prominent qualities of his fellow-citizens, “There is no better man at Rome than I. I seek nothing from any one. I am not wordy. I sit here and am silent.”

“Non homo me melior Romæ est. Ego nil
peto ab ullo.

Non sum verbosus. Hic sedeo et taceo.”

It had become the custom, upon occasions of public festivity, to adorn Pasquin with suits of garments, and with paint, forcing him to assume from time to time different characters according to the fancy of his protectors. Sometimes he appeared as Neptune, sometimes as Chance or Fate, as Apollo or Bacchus. Thus, in the year 1515, he became Orpheus, and, while adorned with the *plectrum* and the lyre of the poet, Marforio addressed a distich to him in his new character, which hints at the popular appreciation of the Pope. The year 1515 was that of the descent of Francis I. into Italy, and of the bloody battle of Marignano. “In the midst of war and slaughter and the sound of trumpets,” said Marforio, “you sing and strike your lyre: this is to understand the temper of your Lord.”

“Inter bella, tubas, cædes, canis ipse, lyram-
que

Percutis. Hoc sapere est ingenium Dom-
ini.*

But the character of most of those pasquinades which belong to the pontificate

* In Murray's *Handbook for Rome*, a book for the most part of great accuracy, there is a curious blunder in the account of Pasquin. It is said, that, “on the election of Pope Leo X., in 1440, the following satirical acrostic appeared, to mark the date MCCCXL:—‘*Multi cæci cardinales creaverunt cæcum decimum (x) Leonem*’: ‘Many blind cardinals have created a tenth blind Lion.’” Now in 1440 Leo was not born, and no Pope was chosen in that year. Leo was not made Pope till 1513, and the acrostic has apparently nothing to do with the date of his accession to the pontificate.

of Leo is so coarse as to render them unfit for reproduction. A general licentiousness pervaded Rome, and the vices of the Pope and the higher clergy, veiled, but not hidden, under the displays of sensual magnificence and the pretended refinements of degraded art, were readily imitated by a people taught to follow and obey the teachings of their ecclesiastical rulers. Corruption of every sort was common. Virtue and vice, profane and sacred things, were alike for sale. The Pope made money by the sale of cardinalates and traffic in indulgences. “Give me gifts, ye spectators,” begged Pasquin; “bring me not verses: divine Money alone rules the ethereal gods.”

“Dona date, astantes; versus ne reddite: sola
Imperat æthereis alma Moneta deis.”

Leo's fondness for buffoons, with whom he mercilessly amused himself by tormenting them and exciting them to make themselves ridiculous, is recorded in a question put to Pasquin on one of his changes of figure. “Why have you not asked, O Pasquil, to be made a buffoon? for at Rome everything is now permitted to the buffoons.”

“Cur non te fingi scurram, Pasquille, rogâsti?
Cum Romæ scurris omnia jam liceant.”

Leo died in 1521. His death was sudden, and not without suspicion of poison. It was said that the last offices of the Church were not performed for the dying man, and an epigram sharply embodied the report. “Do you ask why at his last hour Leo could not take the sacred things? He had sold them.”

“Sacra sub extremâ, si forte requiritis, horâ
Cur Leo non potuit sumere: Vendiderat.”

The spirit of Luther had penetrated through the walls of Rome; and though all tongues but those of statues might be silenced, eyes were not blinded, nor could ears be made deaf. Nowhere was the need of reform so felt as at Rome, but nowhere was there so little hope for it; for the people stood in equal need of it with the Church, whose ministers had corrupted them, and whose rulers tyrannized

over them. "Farewell, Rome!" said Pasquin.

"Roma, vale! Satis est vidisse. Revertar
Quum leno, meretrix, scurra, cinædus-
ero."

When Leo's short-lived successor, the gloomy Fleming, Adrian VI., who was the author of the proposal to destroy Pasquin, despatched his nuncio to the diet of Nuremberg to oppose the progress of Luther, he told him in his instructions to "avow frankly that God has permitted this schism and this persecution on account of the sins of men, and, above all, of those of the priests and the prelates of the Church." Pasquin could not have improved on these words. And when, twenty months after his elevation to the papacy, this hard old man died, the inscription which he ordered to be put upon his tomb was in words fit to disarm the satirist:—"Here lies Adrian VI., who esteemed nothing in his life more unhappy than that he had been called to rule": "*Adrianus VI. hinc situs est, qui nil sibi infelicius in vitâ quam quod imperaret duxit.*"

During the pontificate of Clement VII., Rome suffered under calamities too terrible and too depressing to admit of the frequent display of the humor or the satire of Pasquin. The siege and sack of the city by the army of the Constable de Bourbon wrought too much misery to be set in verse or to be sharpened in epigram. One shrewd jest of this time has, indeed, been preserved. Clement was for months a prisoner in the Castle of Sant' Angelo, unable to stir abroad. "*Papa non potest errare,*" said Pasquin, or one of his friends, with a play on the double meaning of the last word, and a scoff at Papal pretension: "The Pope cannot err": he is too well guarded to stray. But when the Pope died in 1534, Pasquin did not spare his memory. He had lately changed his physician, and taken one named Matteo Curtius; and when his death took place, not without suspicion of malpractice, the satisfaction of the people was expressed by the appearance of a portrait of this new doctor, with the inscription, in

words borrowed from the Vulgate, "*Eccè agnus Dei, ecce qui tollit peccata mundi!*" "Curtius has killed Clement," said Pasquin. "Curtius, who has secured the public health, should be rewarded."

"Curtius occidit Clementem. Curtius auro
Donandus, per quem publica parta salus."

Nor was this all. Pasquin declared, that, on occasion of Clement's death, a bitter strife arose between Pluto and Saint Peter as to which should receive the Pope:—

"Noluit hunc cælum, noluit hunc barathrum."

The Saint has no place for him, and the ruler of the lower regions fears the disturbance that he will make in hell. The quarrel is cut short by the arrival of Clement himself upon the spot, who, finding no entrance into heaven, declares that he will force himself into hell:—

"Tartara tentemus, facilis descensus Averni."

The fifteen years of the pontificate of Clement's successor, Paul III.,—years, for the most part, of quiet and prosperity at Rome,—afforded ample opportunities for the display of Pasquin's spirit. The personal character of the Pope, the exactions which he laid upon the Romans for the profit of his favorites and his family, and his unblushing nepotism were the subjects of frequent satire. The Farnese palace, built in great part with stone taken from the Colosseum, is a standing monument of the justice of Pasquin's rebukes, the sharpness of which is concentrated in a single telling epigram. "Let us pray for Pope Paul," said Pasquin, "for zeal for his house is consuming him":—

"Oremus pro Papâ Paulo, quia zelus
Domus suæ comedit illum."

At another time Marforio addressed a letter to Pasquin, in which he tells him of the Pope's reply to an angel who had been sent to him with the message, "Feed my sheep" "Charity begins at home," had been the answer of the Pope. And when the Roman people had prayed Paul to have pity on his people, Paul had replied, "It is not right to take the children's bread and give it to dogs."

But Pasquin was now to be brought into greater notoriety than ever. In spite of the efforts of the successors of Adrian, the Reformation had rapidly advanced, and the Reformers, scorning no weapons that might serve their cause, determined to turn the wit of Pasquin to their account. In the year 1544, a little, but thick, volume appeared, with the title, "Pasquillorum Tomi duo." It bore no name of editor or printer, and professed to be published at Eleutheropolis, the City of Freedom, or, as it might be rendered in a free translation, the City of *Luther*. Its 637 pages were filled with satire; it was not merely a collection of Pasquin's sayings, but it contained epigrams and dialogues derived from other sources as well. The book was of a kind to be popular, as well as to excite the bitterest aversion of the adherents of the Roman Church. It long since became a volume of excessive rarity, most of the copies having been destroyed by zealous Romanists. The famous scholar, Daniel Heinsius, within a century after its publication, believed that a copy which he purchased, at a cost of a hundred ducats, was the only one remaining in the world, and he inscribed the following lines upon one of its blank pages:—

"Roma meos fratres igni dedit. Unica Phoenix
Vivo, aureis venio centum Heinsio."

"Rome gave my brothers to the fire.
A solitary Phoenix, I survive, and at cost
of a hundred gold pieces I come to Heinsius."

But Heinsius was mistaken in supposing his copy to be unique; and bibliographers of later date, while marking the rarity of the book, have recorded its existence in various libraries. At this moment two copies are lying before us, probably the only copies in America.*

* One of these copies was formerly in the Royal Library at Munich, and sold as a duplicate. The other has the bookplate of the Baron de Warengien. Colonel Stanley's copy sold for £11 11s. The book was printed at Basle, by Jean Oporin. See Clément, *Bibl. Cur. Hist. et Crit.*, vii. 371. See also, for an account of it, Sallengre, *Mém. de Litt.*, ii. 6, 203; and Schelhorn, *Amæn. Lit.*, iii. 151.

The editor of this publication was the Piedmontese scholar and Reformèr, Cælius Secundus Curio. His early life had been eventful, and he had experienced the tender mercies of the Roman Church. He had been persecuted, his property had been seized, he himself compelled to fly, on account of his liberal views. He had been in the prisons of the Inquisition, from which he had escaped only by a successful and ingenious stratagem. At length, wearied with contention, he took up his abode in Protestant Switzerland, where he passed in quiet the latter years of his useful and honored life.* It was while here that he compiled this book, and sent it as a missile into the camp of his opponents, the enemies of freedom of thought and of the right of private judgment. From this time Pasquin's fame became universal. The words *pasquil* or *pasquinade* were adopted into almost every European tongue, and soon embraced in their widening signification all sorts of satiric epigrams. A great part of the volume published by Curio is made up, indeed, of attacks on the Roman Church which have no connection with Pasquin as their author. The style and the subject of many of them betray a German origin; and some of the longer pieces so closely resemble, in point, in humor, and in expression, the celebrated "Epistolæ Obscurorum Virorum," that there can be little doubt that Ulrich von Hutten, or some one of his coadjutors in that clever satire on the monks and clergy, had a hand in their composition.†

But, leaving the pasquinades of other people, let us come back to the sayings of Pasquin himself. No one has surpassed him in his own way, and his store of epigrams, illustrating life and manners at Rome, is abundant. The pontificate

* An entertaining and curious account of Curio and his family is to be found in a commemorative oration delivered in 1570 before the Academy of Basle by Stupanus, and printed by Schelhorn in *Amæn. Lit.*, Tom. xiv.

† In two or three of the dialogues Hutten is introduced as one of the speakers; and several of the poetic epigrams are ascribed to him by name.

of Sixtus V., from 1585 to 1590, was full of material for his wit. The only man in Rome who did not tremble under the rod with which this hard old monk ruled his people and the Church was the free-spoken marble jester. The very morning after the election of Sixtus, Pasquin appeared with a plate of toothpicks, and to the question of Marforio, what he was doing with them, he replied, "I am taking them to Alexandrino, Medicis, and Rusticucci," the three cardinals who had been most active in securing the Papacy for the new Pope. The point of the joke was plain to the Romans: it meant that his adherents, instead of gaining anything by their efforts, had been deceived, and would have nothing to do now but to pick their teeth at leisure.

Leti, in his entertaining and gossiping life of this most merciless of Popes, tells a story of another pasquinade, which exhibits the temper of Sixtus. One morning Pasquin appeared clothed in a very dirty shirt, and, upon being asked by Marforio, why he wore such foul linen, replied, he could get no other, for the Pope had made his washerwoman a princess,—meaning thereby the Pope's sister, Donna Camilla, who had formerly been a laundress, but was now established with a fortune and a palace. "This stinging piece of raillery was carried directly to his Holiness, who ordered a strict search to be made for the author, but to no purpose. Upon which he stuck up printed papers in all the public places of the city, promising, upon the word of a Pope, to give the author of the pasquinade a thousand pistoles and his life, provided he would discover himself, but threatened to hang him, if he was found out by any one else, and offered the thousand pistoles to the informer." Upon this the author was simple enough to make confession and to demand the money. Sixtus paid him the sum, and then, saying that he had indeed promised him his life, but not freedom from punishment, ordered his hands to be cut off, and his tongue to be bored, "to prevent him from being so witty for the future." This act, says Leti, "filled

every one with terror and amazement." And well might such a piece of Oriental barbarity excite the horror of the Romans.* Pasquin, however, was not alarmed, and a few days afterward he appeared holding a wet shirt to dry in the sun. It was a Sunday morning, and Marforio, naturally surprised at such a violation of the day, asked him why he could not wait till Monday before drying it. Pasquin answered, that there was no time to lose; for, if he waited till to-morrow to dry his shirt, he might have to pay for the sunshine;—hinting at the heavy taxes which Sixtus had laid upon the necessaries of life, and from which the sunshine itself might not long be exempt.

It was near about this time that a caricature was circulated in Rome, representing Sixtus as King Stork and the Romans as frogs vainly attempting to escape from his devouring beak. *Merito hæc patimur*, "We suffer deservedly," was the legend of the picture, and the moral it conveyed was a true one. Rome was in such a state as to require the harshest applications, and the despotic severity of Sixtus did much to restore decency and security to life. He left the Romans in a far better condition than he found them; and it would have been well for Rome, if among his successors there had been more to follow his example in repressing vice and violence,—in a word, had there been more King Storks and fewer King Logs.

The most poetic of pasquinades, and one in which wit rises into imagination, belongs to the pontificate of Urban VIII. (1623–1644.) This Pope issued a bull excommunicating all persons who took snuff in the churches of Seville; whereupon Pasquin quoted the following verse from Job (xiii. 25):—"*Contra folium*

* In Luther's *Table-Talk*, he says, "Whoso in Rome is heard to speak one word against the Pope receiveth either a Strappecorde or is punished with death, for his name is *Noli me tangere*." Pasquin himself has hardly said a shrewder saying than this. *Noli me tangere* is the name under which Pius IX. pleads against the diminution of his temporal power, while he threatens his opponents with the Strappecorde.

quod vento rapitur ostendis potentiam tuam? et stipulam siccam persequeris?"

This is a very model of satire in its kind, and of a higher kind than the pasquil, which Coleridge quotes as an example of wit, upon the Pope who had employed a committee to rip up the errors of his predecessors.

"Some one placed a pair of spurs on the statue of St. Peter, and a label from the opposite statue of St. Paul.

"*St. Paul.* Whither, then, are you bound?

"*St. Peter.* I apprehend danger here; — they'll soon call me in question for denying my Master.

"*St. Paul.* Nay, then, I had better be off, too; for they'll question me for having persecuted the Christians before my conversion."*

In his distinction between the wit of thoughts, of words, and of images, Coleridge asserts that the first belongs eminently to the Italians. Such broad assertions are always open to exceptions, and Pasquin shows that the Romans at least are not less clever in the wit of words than in that of thoughts. Take, for example, the jest on Innocent X. which Howel reports in one of his entertaining letters. This Pope, who, says the candid historian, Mosheim, "to a profound ignorance of all those things which it was necessary for a Christian bishop to know, joined the most shameless indolence and the most notorious profligacy," abandoned his person, his dignity, and his government to the disposal of Donna Olympia Maldachini, the widow of his brother. The portrait of the Pope may be seen in the Doria Gallery at Rome; for it is still esteemed an honor by the noble family to which the gallery belongs to be able to trace a relationship to a Pope, even though so vile a one as Innocent. "*Magis amat papa Olympiam quam Olympum,*" said Pasquin; and the pun still clings to the memory of him whom his authorized biographer calls "*religiosissimo nelle cose divine e prudentissimo nelle*

* *Lectures upon Shakespeare and other Dramatists*, ii. 90.

umane." But superlatives often have a value in inverse ratio to their intention. There is a curious story told by the Catholic historian, Novaes, that, after the death of Innocent, which took place in 1655, no one could be found willing to assume the charge of burying him. Word was sent to Donna Olympia that she should provide a coffin for the corpse; but she replied that she was only a poor widow. Of the cardinals he had made, of the relations he had enriched, none was to be found who had charity enough to treat his remains with decency. His body was taken to a room where some masons were at work, and one of them out of compassion put a tallow candle at its head, while another, fearing lest the mice, of which there were many in the apartment, might disturb the corpse, secured a person to watch it through the night. At length one of the officers of the court procured a cheap coffin, and one of the canons of Saint Peter's gave five crowns to pay the expenses of the burial.* A moralist might comment on this story, and might compare it with another which is told in a life of Innocent, written during the reign of his successor, and published with approval at Rome. In this we are told that at the time of his death a marvellous prodigy was observed; for that, when his corpse was borne on a bier from Monte Cavallo to the Vatican, at the moment of a violent storm of wind and rain, not a drop of water fell upon it, but the bier remained perfectly dry, and the torches with which it was accompanied were none of them extinguished. What wonder, that, after this, it is added, "that his memory is venerated in many places at Rome"? † Of all the troublesome race of panegyrists, the Roman variety is the most ingenious and the least to be trusted.

When Bishop Burnet was travelling in Italy, in the year 1686, the doctrines of the Spanish priest Molinos, the found-

* Novaes, x. 56. Artaud de Montor, *Hist. des Pont. Rom.*, v. 523.

† *Vita d' Innocenzio X.*, dal Cav. Ant. Bagatta.

er of the famous sect of Quietists, had lately become the object of attack of the Jesuits and of suspicion at the Papal Court. His system of mystical divinity is still of interest from its connection with the lives of Fénelon and Madame Guyon, if not from its intrinsic character. Like most other mystical doctrines, his teachings seem to have been open to the charge, that, while professedly based on the highest spirituality, they had a direct tendency to encourage sensuality in its most dangerous form. Molinos was at first much favored at Rome and by the Pope himself; but at the time of Burnet's journey he was in the custody of the Holy Office, while his books were undergoing the examination which finally led to the formal condemnation of sixty-eight propositions contained in them, to the renunciation of these propositions by their author, and to his being sentenced to perpetual imprisonment. Burnet relates that it happened "in one week that one man had been condemned to the galleys for somewhat he had said, another had been hanged for somewhat he had writ, and Molinos was clapt in prison, whose doctrine consisted chiefly in this, that men ought to bring their minds to a state of inward quietness. The Pasquinade upon all this was, "*Si parliamo, in galere; si scrivemmo, impiccati; si stiamo in quiete, all' Sant' Uffizio. Eh! che bisogna fare?*" "If we speak, the galleys; if we write, the gallows; if we stay quiet, the Inquisition. Eh! what must we do, then?"

With the changes of times and the succession of Popes, new material was constantly afforded to Pasquin for the exercise of his peculiar talent. Each generation gave him fresh subject for laughter or for rebuke. Men quickly passed away, but folly and vice remained. "Do you wonder," said Pasquin, once, in his early days, referring to his changes of character, "do you wonder why Rome yearly changes me to a new figure? It is because of the shifting manners of the city, and the falling back of men. He who would be pious must depart from Rome."

"Præteriens, forsan miraris, turba, quotannis
Cur me Roma novam mutet in effigiem.
Hoc urbis mores varios, hominumque recessus
Indicat: ergo abeat qui cupit esse pius."

During the eighteenth century Italy did not abound in poets or wits, and Master Pasquin seems to have shared in the dulness of the times. Toward its end, however, when Pius VI. was building the palace under the corner of which the statue was to find shelter, the marble representative of the tailor watched his proceedings with sharp observation. Long ago he had rebuked the nepotism of the Popes, but Pius had forgotten his epigrams. "Cerberus," he had said, "had three mouths with which he barked; but you have three, or even four, which bark not, but devour."

"Tres habuit fauces, et terno Cerberus ore
Latratus intra Tartara nigra dabat.
Et tibi plena fame tria sunt vel quatuor
ora,
Quæ nulli latrant, quemque sed illa vorant."

Every one who has been in Rome remembers how often, on the repairs of ancient monuments, and on the pedestals of statues or busts, are to be seen the words, "*Munificentia Pii Sexti*," thrusting themselves into notice, and occupying the place which should be filled with some nobler inscription. The bad taste and impertinence of this epigraph are often enhanced by the slightness of the work or the gift which it commemorates. During a season of dearth at Rome, in the time of Pius, when the bakers had reduced the size of their loaves, Pasquin took the opportunity to satirize the selfishness and vanity of the Pope, by exhibiting one of these diminished loaves bearing the familiar words, "*Munificentia Pii VI.*"

The French Revolution, the Napoleonic occupation of Rome, the brilliant essays of liberalism of Pius IX., the Republic, the siege of Rome, the reactionary government of late years, have alike supplied matter for Master Pasquin, which he has shaped according to the fashion of the times. He still pursues

his ancient avocation. *Res acu tetigit.* But the point of the needle is not the means by which the rents in the garment of Rome are to be mended, — much less by which her wounds are to be cauterized and healed. The sharp satiric tongue may prick her moral sense into restless-

ness, but the Roman spirit is not thus to be roused to action. Still Pasquin deserves credit for his efforts; and while other liberty is denied, the Romans may be glad that there is a single voice that cannot be silenced, and a single censor who is not to be corrupted.

THE SUMMONS.

My ear is full of summer sounds,
 With summer sights my languid eye;
 Beyond the dusty village bounds
 I loiter in my daily rounds,
 And in the noon-time shadows lie.

The wild bee winds his drowsy horn,
 The bird swings on the ripened wheat,
 The long, green lances of the corn
 Are tilting in the winds of morn,
 The locust shrills his song of heat.

Another sound my spirit hears,
 A deeper sound that drowns them all,—
 A voice of pleading choked with tears,
 The call of human hopes and fears,
 The Macedonian cry to Paul!

The storm-bell rings, the trumpet blows;
 I know the word and countersign;
 Wherever Freedom's vanguard goes,
 Where stand or fall her friends or foes,
 I know the place that should be mine.

Shamed be the hands that idly fold,
 And lips that woo the reed's accord,
 When laggard Time the hour has tolled
 For true with false and new with old
 To fight the battles of the Lord!

O brothers! blest by partial Fate
 With power to match the will and deed,
 To him your summons comes too late,
 Who sinks beneath his armor's weight,
 And has no answer but God-speed!

DARWIN AND HIS REVIEWERS.

THE origin of species, like all origination, like the institution of any other natural state or order, is beyond our immediate ken. We see or may learn how things go on; we can only frame hypotheses as to how they began.

Two hypotheses divide the scientific world, very unequally, upon the origin of the existing diversity of the plants and animals which surround us. One assumes that the actual kinds are primordial; the other, that they are derivative. One, that all kinds originated supernaturally and directly as such, and have continued unchanged in the order of Nature; the other, that the present kinds appeared in some sort of genealogical connection with other and earlier kinds, that they became what they now are in the course of time and in the order of Nature.

Or, bringing in the word *species*, which is well defined as "the perennial succession of individuals," commonly of very like individuals, — as a close corporation of individuals perpetuated by generation, instead of election, — and reducing the question to mathematical simplicity of statement: species are lines of individuals coming down from the past and running on to the future, — lines receding, therefore, from our view in either direction. Within our limited view they appear to be parallel lines, as a general thing neither approaching to nor diverging from each other. The first hypothesis assumes that they were parallel from the unknown beginning and will be to the unknown end. The second hypothesis assumes that the apparent parallelism is not real and complete, at least aboriginally, but approximate or temporary; that we should find the lines convergent in the past, if we could trace them far enough; that some of them, if produced back, would fall into certain fragments of lines, which have left traces in the past, lying not exactly in the same direction, and these farther back into others to which they are equally

unparallel. It will also claim that the present lines, whether on the whole really or only approximately parallel, sometimes fork or send off branches on one side or the other, producing new lines, (varieties,) which run for a while, and for aught we know indefinitely, when not interfered with, near and approximately parallel to the parent line. This claim it can establish; and it may also show that these close subsidiary lines may branch or vary again, and that those branches or varieties which are best adapted to the existing conditions may be continued, while others stop or die out. And so we may have the basis of a real *theory* of the *diversification* of species; and here, indeed, there is a real, though a narrow, established ground to build upon. But, as systems of organic Nature, both are equally *hypotheses*, are suppositions of what there is no proof of from experience, assumed in order to account for the observed phenomena, and supported by such indirect evidence as can be had. Even when the upholders of the former and more popular system mix up revelation with scientific discussion, — which we decline to do, — they by no means thereby render their view other than hypothetical. Agreeing that plants and animals were produced by Omnipotent fiat does not exclude the idea of natural order and what we call secondary causes. The record of the fiat — "Let the earth bring forth grass, the herb yielding seed," etc., "and it was so"; "let the earth bring forth the living creature after his kind, cattle and creeping thing and beast of the earth after his kind, and it was so" — seems even to imply them. Agreeing that they were formed of "the dust of the ground" and of thin air only leads to the conclusion that the pristine individuals were corporeally constituted like existing individuals, produced through natural agencies. To agree that they were created "after their kinds" deter-

mines nothing as to what were the original kinds, nor in what mode, during what time, and in what connections it pleased the Almighty to introduce the first individuals of each sort upon the earth. Scientifically considered, the two opposing doctrines are equally hypothetical.

The two views very unequally divide the scientific world; so that believers in "the divine right of majorities" need not hesitate which side to take, at least for the present. Up to a time within the memory of a generation still on the stage, two hypotheses about the nature of light very unequally divided the scientific world. But the small minority has already prevailed: the emission theory has gone out; the undulatory or wave theory, after some fluctuation, has reached high tide, and is now the pervading, the fully established system. There was an intervening time during which most physicists held their opinions in suspense.

The adoption of the undulatory theory of light called for the extension of the same theory to heat, electricity, and magnetism, and this promptly suggested the hypothesis of a correlation, material connection, and transmutability of heat, light, electricity, magnetism, etc.; which hypothesis the physicists held in absolute suspense until very lately, but are now generally adopting. If not already established as a system, it promises soon to become so. At least, it is generally received as a tenable and probably true hypothesis.

Parallel to this, however less cogent the reasons, Darwin and others, having shown it likely that some varieties of plants or animals have diverged in time into cognate species, or into forms as different as species, are led to infer that all species of a genus may have thus diverged from a common stock, and thence to suppose a higher community of origin in ages still farther back, and so on. Following the safe example of the physicists, and acknowledging the fact of the diversification of a once homogeneous species into varieties, we may receive the theory of the evolution of these into species,

even while for the present we hold the hypothesis of a further evolution in cool suspense or in grave suspicion. In respect to very many questions a wise man's mind rests long in a state neither of belief nor of unbelief. But your intellectually short-sighted people are apt to be preternaturally clear-sighted, and to find their way very plain to positive conclusions upon one side or the other of every mooted question.

In fact, most people, and some philosophers, refuse to hold questions in abeyance, however incompetent they may be to decide them. And, curiously enough, the more difficult, recondite, and perplexing the questions or hypotheses are, such, for instance, as those about organic Nature, the more impatient they are of suspense. Sometimes, and evidently in the present case, this impatience grows out of a fear that a new hypothesis may endanger cherished and most important beliefs. Impatience under such circumstances is not unnatural, though perhaps needless, and, if so, unwise.

To us the present revival of the derivative hypothesis, in a more winning shape than it ever before had, was not unexpected. We wonder that any thoughtful observer of the course of investigation and of speculation in science should not have foreseen it, and have learned at length to take its inevitable coming patiently; the more so as in Darwin's treatise it comes in a purely scientific form, addressed only to scientific men. The notoriety and wide popular perusal of this treatise appear to have astonished the author even more than the book itself has astonished the reading world. Coming, as the new presentation does, from a naturalist of acknowledged character and ability, and marked by a conscientiousness and candor which have not always been reciprocated, we have thought it simply right to set forth the doctrine as fairly and as favorably as we could. There are plenty to decry it, and the whole theory is widely exposed to attack. For the arguments on the other side we may look to the numerous adverse publications which Darwin's volume

has already called out, and especially to those reviews which propose directly to refute it. Taking various lines and reflecting very diverse modes of thought, these hostile critics may be expected to concentrate and enforce the principal objections which can be brought to bear against the derivative hypothesis in general, and Darwin's new exposition of it in particular.

Upon the opposing side of the question we have read with attention, 1. an article in the "North American Review" for April last; 2. one in the "Christian Examiner," Boston, for May; 3. M. Pictet's article in the "Bibliothèque Universelle," which we have already made considerable use of, which seems throughout most able and correct, and which in tone and fairness is admirably in contrast with, 4. the article in the "Edinburgh Review" for May, attributed — although against a large amount of internal presumptive evidence — to the most distinguished British comparative anatomist; 5. an article in the "North British Review" for May; 6. finally, Professor Agassiz has afforded an early opportunity to peruse the criticisms he makes in the forthcoming third volume of his great work by a publication of them in advance in the "American Journal of Science" for July.

In our survey of the lively discussion which has been raised, it matters little how our own particular opinions may incline. But we may confess to an impression, thus far, that the doctrine of the permanent and complete immutability of species has not been established, and may fairly be doubted. We believe that species vary, and that "Natural Selection" works; but we suspect that its operation, like every analogous natural operation, may be limited by something else. Just as every species by its natural rate of reproduction would soon fill any country it could live in, but does not, being checked by some other species or some other condition, — so it may be surmised that Variation and Natural Selection have their Struggle and consequent Check, or

are limited by something inherent in the constitution of organic beings. We are disposed to rank the derivative hypothesis in its fulness with the nebular hypothesis, and to regard both as allowable, as not unlikely to prove tenable in spite of some strong objections, but as not therefore demonstrably true. Those, if any there be, who regard the derivative hypothesis as satisfactorily proved must have loose notions as to what proof is. Those who imagine it can be easily refuted and cast aside must, we think, have imperfect or very prejudiced conceptions of the facts concerned and of the questions at issue.

We are not disposed nor prepared to take sides for or against the new hypothesis, and so, perhaps, occupy a good position from which to watch the discussion, and criticize those objections which are seemingly inconclusive. On surveying the arguments urged by those who have undertaken to demolish the theory, we have been most impressed with a sense of their great inequality. Some strike us as excellent and perhaps unanswerable; some, as incongruous with other views of the same writers; others, when carried out, as incompatible with general experience or general beliefs, and therefore as proving too much; still others, as proving nothing at all: so that, on the whole, the effect is rather confusing and disappointing. We certainly expected a stronger adverse case than any which the thorough-going opposers of Darwin appear to have made out. Wherefore, if it be found that the new hypothesis has grown upon our favor as we proceeded, this must be attributed not so much to the force of the arguments of the book itself as to the want of force of several of those by which it has been assailed. Darwin's arguments we might resist or adjourn; but some of the refutations of it give us more concern than the book itself did.

These remarks apply mainly to the philosophical and theological objections which have been elaborately urged, almost exclusively by the American review-

ers. The "North British" reviewer, indeed, roundly denounces the book as atheistical, but evidently deems the case too clear for argument. The Edinburgh reviewer, on the contrary, scouts all such objections,—as well he may, since he records his belief in "a continuous creative operation," "a constantly operating secondary creational law," through which species are successively produced; and he emits faint, but not indistinct, glimmerings of a transmutation theory of his own;* so that he is equally exposed to all the philosophical objections advanced by Agassiz, and to most of those urged by the other American critics, against Darwin himself.

Proposing now to criticize the critics, so far as to see what their most general and comprehensive objections amount to, we must needs begin with the American reviewers, and with their arguments adduced to prove that a derivative hypothesis *ought not to be true*, or is not possible, philosophical, or theistic.

It must not be forgotten that on former occasions very confident judgments have been pronounced by very competent persons, which have not been finally ratified. Of the two great minds of the seventeenth century, Newton and Leibnitz, both profoundly religious as well as philosophical, one produced the theory of gravitation, the other objected to that theory that it was subversive of natural religion. The nebular hypothesis—a natural consequence of the theory of gravitation and of the subsequent progress of physical

* Whatever it may be, it is not "the homœopathic form of the transmutative hypothesis," as Darwin's is said to be, (p. 252, Amer. reprint,) so happily that the prescription is repeated in the second (p. 259) and third (p. 271) dilutions, no doubt, on Hahnemann's famous principle, with an increase of potency at each dilution. Probably the supposed transmutation is *per saltus*. "Homœopathic doses of transmutation," indeed! Well, if we really must swallow transmutation in some form or other, as this reviewer intimates, we might prefer the mild homœopathic doses of Darwin's formula to the allopathic bolus which the Edinburgh general practitioner appears to be compounding.

and astronomical discovery—has been denounced as atheistical even down to our own day. But it is now largely adopted by the most theistical natural philosophers as a tenable and perhaps sufficient hypothesis, and where not accepted is no longer objected to, so far as we know, on philosophical or religious grounds.

The gist of the philosophical objections urged by the two Boston reviewers against an hypothesis of the derivation of species—or at least against Darwin's particular hypothesis—is, that it is incompatible with the idea of any manifestation of design in the universe, that it denies final causes. A serious objection this, and one that demands very serious attention.

The proposition, that things and events in Nature were not designed to be so, if logically carried out, is doubtless tantamount to atheism. Yet most people believe that some were designed and others were not, although they fall into a hopeless maze whenever they undertake to define their position. So we should not like to stigmatize as atheistically disposed a person who regards certain things and events as being what they are through designed laws, (whatever that expression means,) but as not themselves specially ordained, or who, in another connection, believes in general, but not in particular Providence. We could sadly puzzle him with questions; but in return he might equally puzzle us. Then, to deny that anything was specially designed to be what it is is one proposition; while to deny that the Designer supernaturally or immediately made it so is another: though the reviewers appear not to recognize the distinction.

Also, "scornfully to repudiate" or to "sneer at the idea of any manifestation of design in the material universe"* is one thing; while to consider, and perhaps to exaggerate, the difficulties which attend the practical application of the doctrine of final causes to certain instances is

* Vide *North American Review*, for April, 1860, p. 475, and *Christian Examiner*, for May, p. 457.

quite another thing: yet the Boston reviewers, we regret to say, have not been duly regardful of the difference. Whatever be thought of Darwin's doctrine, we are surprised that he should be charged with *scorning* or *sneering* at the opinions of others, upon such a subject. Perhaps Darwin's view is incompatible with final causes;—we will consider that question presently;—but as to the "Examiner's" charge, that he "sneers at the idea of any manifestation of design in the material universe," though we are confident that no misrepresentation was intended, we are equally confident that it is not at all warranted by the two passages cited in support of it. Here are the passages:—

"If green woodpeckers alone had existed, or we did not know that there were many black and pied kinds, I dare say that we should have thought that the green color was a beautiful adaptation to hide this tree-frequenting bird from its enemies."

"If our reason leads us to admire with enthusiasm a multitude of inimitable contrivances in Nature, this same reason tells us, though we may easily err on both sides, that some contrivances are less perfect. Can we consider the sting of the wasp or of the bee as perfect, which, when used against many attacking animals, cannot be withdrawn, owing to the backward serratures, and so inevitably causes the death of the insect by tearing out its viscera?"

If the sneer here escapes ordinary vision in the detached extracts, (one of them wanting the end of the sentence,) it is, if possible, more imperceptible when read with the context. Moreover, this perusal inclines us to think that the "Examiner" has misapprehended the particular argument or object, as well as the spirit, of the author in these passages. The whole reads more naturally as a caution against the inconsiderate use of final causes in science, and an illustration of some of the manifold errors and absurdities which their hasty assumption is apt to involve,—considerations probably analogous to those which induced Lord Bacon rather

disrespectfully to style final causes "sterile virgins." So, if any one, it is here Bacon that "sitteth in the seat of the scornful." As to Darwin, in the section from which the extracts were made, he is considering a subsidiary question, and trying to obviate a particular difficulty, but, we suppose, wholly unconscious of denying "any manifestation of design in the material universe." He concludes the first sentence:—

—"and consequently that it was a character of importance, and might have been acquired through natural selection; as it is, I have no doubt that the color is due to some quite distinct cause, probably to sexual selection."

After an illustration from the vegetable creation, Darwin adds:—

"The naked skin on the head of a vulture is generally looked at as a *direct* adaptation for wallowing in putridity; *and so it may be*, or it may possibly be due to the direct action of putrid matter; but we should be very cautious in drawing any such inference, when we see that the skin on the head of the clean-feeding male turkey is likewise naked. The sutures in the skulls of young mammals have been advanced as a beautiful adaptation for aiding parturition, and no doubt they facilitate or may be indispensable for this act; but as sutures occur in the skulls of young birds and reptiles, which have only to escape from a broken egg, we may infer that this structure has arisen from the laws of growth, and has been taken advantage of in the parturition of the higher animals."

All this, simply taken, is beyond cavil, unless the attempt to explain scientifically how any designed result is accomplished savors of impropriety.

In the other place, Darwin is contemplating the patent fact, that "perfection here below" is relative, not absolute,—and illustrating this by the circumstance, that European animals, and especially plants, are now proving to be better adapted for New Zealand than many of the indigenous ones,—that "the correction for the aberration of light is said, on high author-

ity, not to be quite perfect even in that most perfect organ, the eye." And then follows the second extract of the reviewer. But what is the position of the reviewer upon his own interpretation of these passages? If he insists that green woodpeckers were specifically created so in order that they might be less liable to capture, must he not equally hold that the black and pied ones were specifically made of these colors in order that they might be more liable to be caught? And would an explanation of the mode in which those woodpeckers came to be green, however complete, convince him that the color was undesigned?

As to the other illustration, is the reviewer so complete an optimist as to insist that the arrangement and the weapon are wholly perfect (*quoad* the insect) the normal use of which often causes the animal fatally to injure or to disembowel itself? Either way it seems to us that the argument here, as well as the insect, performs *hari-kari*.

The "Examiner" adds:—"We should in like manner object to the word *favorable*, as implying that some species are placed by the Creator under *unfavorable* circumstances, at least under such as might be advantageously modified." But are not many individuals and some races of men placed by the Creator "under unfavorable circumstances, at least under such as might be advantageously modified"? Surely these reviewers must be living in an ideal world, surrounded by "the faultless monsters which *our* world ne'er saw," in some elysium where imperfection and distress were never heard of! Such arguments resemble some which we often hear against the Bible, holding that book responsible as if it originated certain facts on the shady side of human nature or the apparently darker lines of Providential dealing, though the facts are facts of common observation and have to be confronted upon any theory.

The "North American" reviewer also has a world of his own,—just such a one as an idealizing philosopher would be apt to devise,—that is, full of sharp and ab-

solute distinctions: such, for instance, as the "absolute invariableness of instinct"; an absolute want of intelligence in any brute animal; and a complete monopoly of instinct by the brute animals, so that this "instinct is a great matter" for them only, since it sharply and perfectly distinguishes this portion of organic Nature from the vegetable kingdom on the one hand and from man on the other: most convenient views for argumentative purposes, but we suppose not borne out in fact.

In their scientific objections the two reviewers take somewhat different lines; but their philosophical and theological arguments strikingly coincide. They agree in emphatically asserting that Darwin's hypothesis of the origination of species through variation and natural selection "repudiates the whole doctrine of final causes," and "all indication of design or purpose in the organic world,"—"is neither more nor less than a formal denial of any agency beyond that of a blind chance in the developing or perfecting of the organs or instincts of created beings." "It is in vain that the apologists of this hypothesis might say that it merely attributes a different mode and time to the Divine agency,—that all the qualities subsequently appearing in their descendants must have been implanted, and remained latent in the original pair." Such a view, the Examiner declares, "is nowhere stated in this book, and would be, we are sure, disclaimed by the author." We should like to be informed of the grounds of this sureness. The marked rejection of spontaneous generation,—the statement of a belief that all animals have descended from four or five progenitors, and plants from an equal or lesser number, or, perhaps, if constrained to it by analogy, "from some one primordial form into which life was first breathed,"—coupled with the expression, "To my mind it accords better with what we know of the laws impressed on matter by the Creator, that the production and extinction of the past and present inhabitants of the world should have been due

to secondary causes," than "that each species has been independently created,"—these and similar expressions lead us to suppose that the author probably does accept the kind of view which the "Examiner" is sure he would disclaim. At least, we see nothing in his scientific theory to hinder his adoption of Lord Bacon's Confession of Faith in this regard,—“that, notwithstanding God hath rested and ceased from creating, [in the sense of supernatural origination,] yet, nevertheless, He doth accomplish and fulfil His divine will in all things, great and small, singular and general, as fully and exactly by providence as He could by miracle and new creation, though His working be not immediate and direct, but by compass; not violating Nature, which is His own law upon the creature.”

However that may be, it is undeniable that Mr. Darwin has purposely been silent upon the philosophical and theological applications of his theory. This reticence, under the circumstances, argues design, and raises inquiry as to the final cause or reason why. Here, as in higher instances, confident as we are that there is a final cause, we must not be overconfident that we can infer the particular or true one. Perhaps the author is more familiar with natural-historical than with philosophical inquiries, and, not having decided which particular theory about efficient cause is best founded, he meanwhile argues the scientific questions concerned—all that relates to secondary causes—upon purely scientific grounds, as he must do in any case. Perhaps, confident, as he evidently is, that his view will finally be adopted, he may enjoy a sort of satisfaction in hearing it denounced as sheer atheism by the inconsiderate, and afterwards, when it takes its place with the nebular hypothesis and the like, see this judgment reversed, as we suppose it would be in such event.

Whatever Mr. Darwin's philosophy may be, or whether he has any, is a matter of no consequence at all, compared with the important questions, whether a theory to account for the origination

and diversification of animal and vegetable forms through the operation of secondary causes does or does not exclude design; and whether the establishment by adequate evidence of Darwin's particular theory of diversification through variation and natural selection would essentially alter the present scientific and philosophical grounds for theistic views of Nature. The unqualified affirmative judgment rendered by the two Boston reviewers—evidently able and practised reasoners—"must give us pause." We hesitate to advance our conclusions in opposition to theirs. But, after full and serious consideration, we are constrained to say, that, in our opinion, the adoption of a derivative hypothesis, and of Darwin's particular hypothesis, if we understand it, would leave the doctrines of final causes, utility, and special design just where they were before. We do not pretend that the subject is not environed with difficulties. Every view is so environed; and every shifting of the view is likely, if it removes some difficulties, to bring others into prominence. But we cannot perceive that Darwin's theory brings in any new kind of scientific difficulty, that is, any with which philosophical naturalists were not already familiar.

Since natural science deals only with secondary or natural causes, the scientific terms of a theory of derivation of species—no less than of a theory of dynamics—must needs be the same to the theist as to the atheist. The difference appears only when the inquiry is carried up to the question of primary cause,—a question which belongs to philosophy. Wherefore, Darwin's reticence about efficient cause does not disturb us. He considers only the scientific questions. As already stated, we think that a theistic view of Nature is implied in his book, and we must charitably refrain from suggesting the contrary until the contrary is logically deduced from his positions. If, however, he anywhere maintains that the natural causes through which species are diversified operate without an ordaining and directing intelligence, and that

the orderly arrangements and admirable adaptations we see all around us are fortuitous or blind, undesigned results,—that the eye, though it came to see, was not designed for seeing, nor the hand for handling,—then, we suppose, he is justly chargeable with denying, and very needlessly denying, all design in organic Nature; otherwise we suppose not. Why, if Darwin's well-known passage about the eye * — equivocal or unfortunate though some of the language be — does not imply ordaining and directing intelligence, then he refutes his own theory as effectually as any of his opponents are likely to do. He asks, —

“May we not believe that” — under variation proceeding long enough, generation multiplying the better variations times enough, and natural selection securing the improvements — “a living optical instrument might be thus formed as superior to one of glass as the works of the Creator are to those of man?”

This must mean one of two things: either that the living instrument was made and perfected under (which is the same thing as by) an intelligent First Cause, or that it was not. If it was, then theism is asserted; and as to the mode of operation, how do we know, and why must we believe, that, fitting precedent forms being in existence, a living instrument (so different from a lifeless manufacture) would be originated and perfected in any other way, or that this is not the fitting way? If it means that it was not, if he so misuses words that by the Creator he intends an unintelligent power, undirected force, or necessity, then he has put his case so as to invite disbelief in it. For then blind forces have produced not only manifest adaptations of means to specific ends, — which is absurd enough, — but better adjusted and more perfect instruments or machines than intellect (that is, human intellect) can contrive and human skill execute, — which no sane person will believe.

On the other hand, if Darwin even admits — we will not say adopts — the

* Page 188, English ed.

theistic view, he may save himself much needless trouble in the endeavor to account for the absence of every sort of intermediate form. Those in the line between one species and another supposed to be derived from it he may be bound to provide; but as to “an infinite number of other varieties not intermediate, gross, rude, and purposeless, the unmeaning creations of an unconscious cause,” born only to perish, which a relentless reviewer has imposed upon his theory, — rightly enough upon the atheistic alternative, — the theistic view rids him at once of this “scum of creation.” For, as species do not now vary at all times and places and in all directions, nor produce crude, vague, imperfect, and useless forms, there is no reason for supposing that they ever did. Good-for-nothing monstrosities, failures of purpose rather than purposeless, indeed sometimes occur; but these are just as anomalous and unlikely upon Darwin's theory as upon any other. For his particular theory is based, and even over-strictly insists, upon the most universal of physiological laws, namely, that successive generations shall differ only slightly, if at all, from their parents; and this effectively excludes crude and impotent forms. Wherefore, if we believe that the species were designed, and that natural propagation was designed, how can we say that the actual varieties of the species were not equally designed? Have we not similar grounds for inferring design in the supposed varieties of a species, that we have in the case of the supposed species of a genus? When a naturalist comes to regard as three closely-related species what he before took to be so many varieties of one species, how has he thereby strengthened our conviction that the three forms were designed to have the differences which they actually exhibit? Wherefore, so long as gradated, orderly, and adapted forms in Nature argue design, and at least while the physical cause of variation is utterly unknown and mysterious, we should advise Mr. Darwin to assume, in the philosophy of his

hypothesis, that variation has been led along certain beneficial lines. Streams flowing over a sloping plain by gravitation (here the counterpart of natural selection) may have worn their actual channels as they flowed; yet their particular courses may have been assigned; and where we see them forming definite and useful lines of irrigation, after a manner unaccountable on the laws of gravitation and dynamics, we should believe that the distribution was designed.

To insist, therefore, that the new hypothesis of the derivative origin of the actual species is incompatible with final causes and design is to take a position which we must consider philosophically untenable. We must also regard it as unwise or dangerous, in the present state and present prospects of physical and physiological science. We should expect the philosophical atheist or skeptic to take this ground; also, until better informed, the unlearned and unphilosophical believer; but we should think that the thoughtful theistic philosopher would take the other side. Not to do so seems to concede that only supernatural events can be shown to be designed, which no theist can admit,—seems also to misconceive the scope and meaning of all ordinary arguments for design in Nature. This misconception is shared both by the reviewers and the reviewed. At least, Mr. Darwin uses expressions which seem to imply that the natural forms which surround us, because they have a history or natural sequence, could have been only generally, but not particularly designed,—a view at once superficial and contradictory; whereas his true line should be, that his hypothesis concerns the order and not the cause, the *how* and not the *why* of the phenomena, and so leaves the question of design just where it was before.

To illustrate this first from the theist's point of view. Transfer the question for a moment from the origination of species to the origination of individuals, which occurs, as we say, naturally. Because natural, that is, "stated, fixed, or settled," is it any the less designed on that account?

We acknowledge that God is our maker,—not merely the originator of the race, but *our* maker as individuals,—and none the less so because it pleased Him to make us in the way of ordinary generation. If any of us were born unlike our parents and grandparents, in a slight degree, or in whatever degree, would the case be altered in this regard? The whole argument in natural theology proceeds upon the ground that the inference for a final cause of the structure of the hand and of the valves in the veins is just as valid now, in individuals produced through natural generation, as it would have been in the case of the first man, supernaturally created. Why not, then, just as good even on the supposition of the descent of men from Chimpanzees and Gorillas, since those animals possess these same contrivances? Or, to take a more supposable case: If the argument from structure to design is convincing when drawn from a particular animal, say a Newfoundland dog, and is not weakened by the knowledge that this dog came from similar parents, would it be at all weakened, if, in tracing his genealogy, it were ascertained that he was a remote descendant of the mastiff or some other breed, or that both these and other breeds came (as is suspected) from some wolf? If not, how is the argument for design in the structure of our particular dog affected by the supposition that his wolfish progenitor came from a post-tertiary wolf, perhaps less unlike an existing one than the dog in question is from some other of the numerous existing races of dogs, and that this post-tertiary came from an equally or more different tertiary wolf? And if the argument from structure to design is not invalidated by our present knowledge that our individual dog was developed from a single organic cell, how is it invalidated by the supposition of an analogous natural descent, through a long line of connected forms, from such a cell, or from some simple animal, existing ages before there were any dogs? Again, suppose we have two well-known and very decidedly different animals or plants, A and D, both presenting, in their structure

and in their adaptations to the conditions of existence, as valid and clear evidence of design as any animal or plant ever presented: suppose we have now discovered two intermediate species, B and C, which make up a series with equable differences from A to D. Is the proof of design or final cause in A and D, whatever it amounted to, at all weakened by the discovered intermediate forms? Rather does not the proof extend to the intermediate species, and go to show that all four were equally designed? Suppose, now, the number of intermediate forms to be much increased, and therefore the gradations to be closer yet, as close as those between the various sorts of dogs, or races of men, or of horned cattle: would the evidence of design, as shown in the structure of any of the members of the series, be any weaker than it was in the case of A and D? Whoever contends that it would be should likewise maintain that the origination of individuals by generation is incompatible with design, and so take a consistent atheistical view of Nature. Perhaps we might all have confidently thought so, antecedently to experience of the fact of reproduction. Let our experience teach us wisdom.

These illustrations make it clear that the evidence of design from structure and adaptation is furnished complete by the individual animal or plant itself, and that our knowledge or our ignorance of the history of its formation or mode of production adds nothing to it and takes nothing away. We infer design from certain arrangements and results; and we have no other way of ascertaining it. Testimony, unless infallible, cannot prove it, and is out of the question here. Testimony is not the appropriate proof of design: adaptation to purpose is. Some arrangements in Nature appear to be contrivances, but may leave us in doubt. Many others, of which the eye and the hand are notable examples, compel belief with a force not appreciably short of demonstration. Clearly to settle that these must have been designed goes far towards proving that other organs and

other seemingly less explicit adaptations in Nature must also have been designed, and clinches our belief, from manifold considerations, that all Nature is a preconcerted arrangement, a manifested design. A strange contradiction would it be to insist that the shape and markings of certain rude pieces of flint, lately found in drift deposits, prove design, but that nicer and thousand-fold more complex adaptations to use in animals and vegetables do not *a fortiori* argue design.

We could not affirm that the arguments for design in Nature are conclusive to all minds. But we may insist, upon grounds already intimated, that whatever they were good for before Darwin's book appeared, they are good for now. To our minds the argument from design always appeared conclusive of the being and continued operation of an intelligent First Cause, the Ordainer of Nature; and we do not see that the grounds of such belief would be disturbed or shifted by the adoption of Darwin's hypothesis. We are not blind to the philosophical difficulties which the thorough-going implication of design in Nature has to encounter, nor is it our vocation to obviate them. It suffices us to know that they are not new nor peculiar difficulties,—that, as Darwin's theory and our reasonings upon it did not raise these perturbing spirits, they are not bound to lay them. Meanwhile, that the doctrine of design encounters the very same difficulties in the material that it does in the moral world is just what ought to be expected.

So the issue between the skeptic and the theist is only the old one, long ago argued out,—namely, whether organic Nature is a result of design or of chance. Variation and natural selection open no third alternative; they concern only the question, How the results, whether fortuitous or designed, may have been brought about. Organic Nature abounds with unmistakable and irresistible indications of design, and, being a connected and consistent system, this evidence carries the implication of design throughout the whole. On the other hand, chance carries no

probabilities with it, can never be developed into a consistent system; but, when applied to the explanation of orderly or beneficial results, heaps up improbabilities at every step beyond all computation. To us, a fortuitous Cosmos is simply inconceivable. The alternative is a designed Cosmos.

It is very easy to assume, that, because events in Nature are in one sense accidental, and the operative forces which bring them to pass are themselves blind and unintelligent, (all forces are,) therefore they are undirected, or that he who describes these events as the results of such forces thereby assumes that they are undirected. This is the assumption of the Boston reviewers, and of Mr. Agassiz, who insists that the only alternative to the doctrine, that all organized beings were supernaturally created as they are, is, that they have arisen *spontaneously* through the *omnipotence of matter*.*

As to all this, nothing is easier than to bring out in the conclusion what you introduce in the premises. If you import atheism into your conception of variation and natural selection, you can readily exhibit it in the result. If you do not put it in, perhaps there need be none to come out. While the mechanic is considering a steamboat or locomotive engine as a material organism, and contemplating the fuel, water, and steam, the source of the mechanical forces and how they operate, he may not have occasion to mention the engineer. But, the orderly and special results accomplished, the *why* the movement is in this or that particular direction, etc., are inexplicable without him. If Mr. Darwin believes that the events which he supposes to have occurred and the results we behold were undirected and undesignated, or if the physicist believes that the natural forces to which he refers phenomena are uncaused and undirected, no argument is needed to show that such belief is atheism. But the admission of the phenomena and of these natural processes and

* In *American Journal of Science*, July, 1860, pp. 148, 149.

forces does not necessitate any such belief, nor even render it one whit less improbable than before.

Surely, too, the accidental element may play its part in Nature without negating design in the theist's view. He believes that the earth's surface has been very gradually prepared for man and the existing animal races, that vegetable matter has through a long series of generations imparted fertility to the soil in order that it may support its present occupants, that even beds of coal have been stored up for man's benefit. Yet what is more accidental, and more simply the consequence of physical agencies, than the accumulation of vegetable matter in a peat-bog, and its transformation into coal? No scientific person at this day doubts that our solar system is a progressive development, whether in his conception he begins with molten masses, or æri-form or nebulous masses, or with a fluid revolving mass of vast extent, from which the specific existing worlds have been developed one by one. What theist doubts that the actual results of the development in the inorganic worlds are not merely compatible with design, but are in the truest sense designed results? Not Mr. Agassiz, certainly, who adopts a remarkable illustration of design directly founded on the nebular hypothesis, drawing from the position and times of revolution of the worlds so originated "direct evidence that the physical world has been ordained in conformity with laws which obtain also among living beings." But the reader of the interesting exposition* will notice that the designed result has been brought to pass through what, speaking after the manner of men, might be called a chapter of accidents. A natural corollary of this demonstration would seem to be, that a material connection between a series of created things — such as the development of one of them from another, or of all from a common stock — is highly compatible with their intellectual connection, namely, with their be-

* In *Contributions to the Nat. Hist. of U. S.*, Vol. i. pp. 128, 129.

ing designed and directed by one mind. Yet, upon some ground, which is not explained, and which we are unable to conjecture, Mr. Agassiz concludes to the contrary in the organic kingdoms, and insists, that, because the members of such a series have an intellectual connection, "they cannot be the result of a material differentiation of the objects themselves,"* that is, they cannot have had a genealogical connection. But is there not as much intellectual connection between successive generations of any species as there is between the several species of a genus or the several genera of an order? As the intellectual connection here is realized through the material connection, why may it not be so in the case of species and genera? On all sides, therefore, the implication seems to be quite the other way.

Returning to the accidental element, it is evident that the strongest point against the compatibility of Darwin's hypothesis with design in Nature is made when natural selection is referred to as picking out those variations which are improvements from a vast number which are not improvements, but perhaps the contrary, and therefore useless or purposeless, and born to perish. But even here the difficulty is not peculiar; for Nature abounds with analogous instances. Some of our race are useless, or worse, as regards the improvement of mankind; yet the race may be designed to improve, and may be actually improving. The whole animate life of a country depends absolutely upon the vegetation; the vegetation upon the rain. The moisture is furnished by the ocean, is raised by the sun's heat from the ocean's surface, and is wafted inland by the winds. But what multitudes of rain-drops fall back into the ocean, are as much without a final cause as the incipient varieties which come to nothing! Does it, therefore, follow that the rains which are bestowed upon the soil with such rule and average regularity were not designed to

support vegetable and animal life? Consider, likewise, the vast proportion of seeds and pollen, of ova and young,—a thousand or more to one,—which come to nothing, and are therefore purposeless in the same sense, and only in the same sense, as are Darwin's unimproved and unused slight variations. The world is full of such cases; and these must answer the argument,—for we cannot, except by thus showing that it proves too much.

Finally, it is worth noticing, that, though natural selection is scientifically explicable, variation is not. Thus far the cause of variation, or the reason why the offspring is sometimes unlike the parents, is just as mysterious as the reason why it is generally like the parents. It is now as inexplicable as any other origination; and if ever explained, the explanation will only carry up the sequence of secondary causes one step farther, and bring us in face of a somewhat different problem, which will have the same element of mystery that the problem of variation has now. Circumstances may preserve or may destroy the variations; man may use or direct them; but selection, whether artificial or natural, no more originates them than man originates the power which turns a wheel, when he dams a stream and lets the water fall upon it. The origination of this power is a question about efficient cause. The tendency of science in respect to this obviously is not towards the omnipotence of matter, as some suppose, but towards the omnipotence of spirit.

So the real question we come to is as to the way in which we are to conceive intelligent and efficient cause to be exerted, and upon what exerted. Are we bound to suppose efficient cause in all cases exerted upon nothing to evoke something into existence,—and this thousands of times repeated, when a slight change in the details would make all the difference between successive species? Why may not the new species, or some of them, be designed diversifications of the old?

* *Contr. Nat. Hist. U. S.*, Vol. i. p. 130; and *Amer. Journal of Science*, July, 1860, p. 143.

There are, perhaps, only three views of efficient cause which may claim to be both philosophical and theistic.

1. The view of its exertion at the beginning of time, endowing matter and created things with forces which do the work and produce the phenomena.

2. This same view, with the theory of insulated interpositions, or occasional direct action, engrafted upon it, — the view that events and operations in general go on in virtue simply of forces communicated at the first, but that now and then, and only now and then, the Deity puts his hand directly to the work.

3. The theory of the immediate, orderly, and constant, however infinitely diversified, action of the intelligent efficient Cause.

It must be allowed, that, while the third is preëminently the Christian view, all three are philosophically compatible with design in Nature. The second is probably the popular conception. Perhaps most thoughtful people oscillate from the middle view towards the first or the third, — adopting the first on some occasions, the third on others. Those philosophers who like and expect to settle all mooted questions will take one or the other extreme. The "Examiner" inclines towards, the "North American" reviewer fully adopts, the third view, to the logical extent of maintaining that "*the origin of an individual, as well as the origin of a species or a genus, can be explained only by the direct action of an intelligent creative cause.*" This is the line for Mr. Darwin to take; for it at once and completely relieves his scientific theory from every theological objection which his reviewers have urged against it.

At present we suspect that our author prefers the first conception, though he might contend that his hypothesis is compatible with either of the three. That it is also compatible with an atheistic or pantheistic conception of the universe is an objection which, being shared by all physical science, and some ethical or moral, cannot specially be urged against Darwin's system. As he rejects spontaneous

generation, and admits of intervention at the beginning of organic life, and probably in more than one instance, he is not wholly excluded from adopting the middle view, although the interventions he would allow are few and far back. Yet one interposition admits the principle as well as more. Interposition presupposes particular necessity or reason for it, and raises the question, When and how often it may have been necessary. It would be the natural supposition, if we had only one set of species to account for, or if the successive inhabitants of the earth had no other connections or resemblances than those which adaptation to similar conditions might explain. But if this explanation of organic Nature requires one to "believe, that, at innumerable periods in the earth's history, certain elemental atoms have been commanded suddenly to flash into living tissues," and when the results are seen to be all orderly, according to a few types, we cannot wonder that such interventions should at length be considered, not as interpositions or interferences, but rather as "exertions so frequent and beneficent that we come to regard them as the ordinary action of Him who laid the foundations of the earth, and without whom not a sparrow falleth to the ground."*

What does the difference between Mr. Darwin and his reviewer now amount to? If we say that according to one view the origination of species is *natural*, according to the other *miraculous*, Mr. Darwin agrees that "what is natural as much requires and presupposes an intelligent mind to render it so, — that is, to effect it continually or at stated times, — as what is supernatural does to effect it for once."† He merely inquires into the form of the miracle, may remind us that all recorded miracles (except the primal creation of matter) were transformations or actions in and upon natural things, and will ask how many times and how

* *North American Review*, for April, 1860, p. 506.

† *Vide* mottoes to the second edition of Darwin's work.

frequently may the origination of successive species be repeated before the supernatural merges in the natural.

In short, Darwin maintains that the origination of a species, no less than that of an individual, is natural. The reviewer, that the natural origination of an individual, no less than the origination of a species, requires and presupposes Divine power. *A fortiori*, then, the origination of a variety requires and presupposes Divine power. And so between the scientific hypothesis of the one and the philosophical conception of the other no contrariety remains. "A proper view of the nature of causation . . . places the vital doctrine of the being and the providence of a God on ground that can never be shaken."* A true and worthy conclusion, and a sufficient answer to the denunciations and arguments of the rest of the article, so far as philosophy and natural theology are concerned. If a writer must needs use his own favorite dogma as a weapon with which to give *coup de grace* to a pernicious theory, he should be careful to seize it by the handle, and not by the blade.

We can barely glance at a subsidiary philosophical objection of the "North American" reviewer, which the "Examiner" also raises, though less explicitly. Like all geologists, Mr. Darwin draws upon time in the most unlimited manner. He is not peculiar in this regard. Mr. Agassiz tells us that the conviction is "now universal among well-informed naturalists, that this globe has been in existence for innumerable ages, and that the length of time elapsed since it first became inhabited cannot be counted in years." Pictet, that the imagination refuses to calculate the immense number of years and of ages during which the faunas of thirty or more epochs have succeeded one another, and developed their long succession of generations. Now the reviewer declares that such indefinite succession of ages is "virtually infinite," "lacks no characteristic of eternity except its name,"—at least, that "the difference between such a concep-

* *North American Review*, l. c. p. 504.

tion and that of the strictly infinite, if any, is not appreciable." But infinity belongs to metaphysics. Therefore, he concludes, Darwin supports his theory, not by scientific, but by metaphysical evidence; his theory is "essentially and completely metaphysical in character, resting altogether upon that idea of 'the infinite' which the human mind can neither put aside nor comprehend."* And so a theory which will be generally objected to as much too physical is transposed by a single syllogism to metaphysics.

Well, physical geology must go with it: for, even on the soberest view, it demands an indefinitely long time antecedent to the introduction of organic life upon our earth. *A fortiori* is physical astronomy a branch of metaphysics, demanding, as it does, still larger "instalments of infinity," as the reviewer calls them, both as to time and number. Moreover, far the greater part of physical inquiries now relate to molecular actions, which, a distinguished natural philosopher informs us, "we have to regard as the results of an infinite number of infinitely small material particles, acting on each other at infinitely small distances,"—a triad of infinites,—and so *physics* becomes the most *metaphysical* of sciences.

Verily, on this view,

"Thinking is but an idle waste of thought,
And nought is everything, and everything is
nought."

The leading objection of Mr. Agassiz is likewise of a philosophical character. It is, that species exist only "as categories of thought,"—that, having no material existence, they can have had no material variation, and no material community of origin. Here the predication is of species in the subjective sense, while the inference is applied to them in the objective sense. Reduced to plain terms, the argument seems to be: Species are ideas; therefore the objects from which the idea is derived cannot vary or blend, cannot have had a genealogical connection.

The common view of species is, that,

* *North American Review*, l. c. p. 487, *et passim*.

although they are generalizations, yet they have a direct objective ground in Nature, which genera, orders, etc., have not. According to the succinct definition of Jussieu,—and that of Linnæus is identical in meaning,—a species is the perennial succession of similar individuals in continued generations. The species is the chain of which the individuals are the links. The sum of the genealogically connected similar individuals constitutes the species, which thus has an actuality and ground of distinction not shared by genera and other groups which were not supposed to be genealogically connected. How a derivative hypothesis would modify this view, in assigning to species only a temporary fixity, is obvious. Yet, if naturalists adopt this hypothesis, they will still retain Jussieu's definition, which leaves untouched the question as to how and when the "perennial successions" were established. The practical question will only be, How much difference between two sets of individuals entitles them to rank under distinct species; and that is the practical question now, on whatever theory. The theoretical question is—as stated at the beginning of this long article—whether these specific lines were always as distinct as now.

Mr. Agassiz has "lost no opportunity of urging the idea, that, while species have no material existence, they yet exist as categories of thought in the same way [and only in the same way] as genera, families, orders, classes," etc. He "has taken the ground, that all the natural divisions in the animal kingdom are primarily distinct, founded upon different categories of characters, and that all exist in the same way, that is, as categories of thought, embodied in individual living forms. I have attempted to show that branches in the animal kingdom are founded upon different plans of structure, and for that very reason have embraced from the beginning representatives between which there could be no community of origin; that classes are founded upon different modes of execution of these plans, and therefore they also embrace repre-

sentatives which could have no community of origin; that orders represent the different degrees of complication in the mode of execution of each class, and therefore embrace representatives which could not have a community of origin any more than the members of different classes or branches; that families are founded upon different patterns of form, and embrace representatives equally independent in their origin; that genera are founded upon ultimate peculiarities of structure, embracing representatives which, from the very nature of their peculiarities, could have no community of origin; and that, finally, species are based upon relations and proportions that exclude, as much as all the preceding distinctions, the idea of a common descent.

"As the community of characters among the beings belonging to these different categories arises from the intellectual connection which shows them to be categories of thought, they cannot be the result of a gradual material differentiation of the objects themselves. The argument on which these views are founded may be summed up in the following few words: Species, genera, families, etc., exist as thoughts, individuals as facts."*

An ingenious dilemma caps the argument:—

"It seems to me that there is much confusion of ideas in the general statement of the variability of species so often repeated lately. If species do not exist at all, as the supporters of the transmutation theory maintain, how can they vary? and if individuals alone exist, how can the differences which may be observed among them prove the variability of species?"

Now we imagine that Mr. Darwin need not be dangerously gored by either horn of this curious dilemma. Although we ourselves cherish old-fashioned prejudices in favor of the probable permanence, and therefore of a more stable objective ground of species, yet we agree—and Mr. Darwin will agree fully with Mr. Agassiz—

* In *American Journal of Science*, July, 1860, p. 143.

that species, and he will add varieties, "exist as categories of thought," that is, as cognizable distinctions,— which is all that we can make of the phrase here, whatever it may mean in the Aristotelian metaphysics. Admitting that species are only categories of thought, and not facts or things, how does this prevent the individuals, which are material things, from having varied in the course of time, so as to exemplify the present almost innumerable categories of thought, or embodiments of Divine thoughts in material forms, or — viewed on the human side — in forms marked with such orderly and graduated resemblances and differences as to suggest to our minds the idea of species, genera, orders, etc., and to our reason the inference of a Divine original? We have no clear idea how Mr. Agassiz intends to answer this question, in saying that branches are founded upon different plans of structure, classes upon different modes of execution of these plans, orders on different degrees of complication in the mode of execution, families upon different patterns of form, genera upon ultimate peculiarities of structure, and species upon relations and proportions. That is, we do not perceive how these several "categories of thought" exclude the possibility or the probability that the individuals which manifest or suggest the thoughts had an ultimate community of origin. Moreover, Mr. Darwin would insinuate that the particular philosophy of classification upon which this whole argument reposes is as purely hypothetical and as little accepted as his own doctrine. If both are pure hypotheses, it is hardly fair or satisfactory to extinguish the one by the other. If there is no real contradiction between them, there is no use in making the attempt.

As to the dilemma propounded, suppose we try it upon that category of thought which we call *chair*. This is a genus, comprising the common chair, (*Sella vulgaris*,) the arm or easy chair, (*S. cathedra*,) the rocking chair, (*S. oscillans*,) widely distributed in the United States, and some others, — each of which

has *sported*, as the gardeners say, into many varieties. But now, as the *genus* and the *species* have no material existence, how can they vary? If individuals alone exist, how can the differences which may be observed among them prove the variability of the species? To which we reply by asking, Which does the question refer to, the category of thought, or the individual embodiment? If the former, then we would remark that our categories of thought vary from time to time in the readiest manner. And, although the Divine thoughts are eternal, yet they are manifested in time and succession, and by their manifestation only can we know them, how imperfectly! Allowing that what has no material existence can have had no material connection and no material variation, we should yet infer that what had intellectual existence and connection might have intellectual variation; and, turning to the individuals which represent the species, we do not see how all this shows that they may not vary. Observation shows us that they do. Wherefore, taught by fact that successive individuals do vary, we safely infer that the idea or intention must have varied, and that this variation of the individual representatives proves the variability of the species, whether subjectively or objectively regarded.

Each species or sort of chair, as we have said, has its varieties, and one species shades off by gradations into another. And — note it well — these numerous and successively slight variations and gradations, far from suggesting an accidental origin to chairs and to their forms, are very proofs of design.

Again, *edifice* is a generic category of thought. Egyptian, Grecian, Byzantine, and Gothic buildings are well-marked species, of which each individual building of the sort is a material embodiment. Now the question is, whether these categories of thought may not have been evolved, one from another, in succession, or from some primal, less specialized, edificial category. What better evidence for such hypothesis could we have than

the variations and grades which connect one of these species with another? We might extend the parallel, and get some good illustrations of natural selection from the history of architecture; the probable origin of the different styles, and their adaptation to different climates and conditions. Two qualifying considerations are noticeable. One, that houses do not propagate, so as to produce continuing lines of each sort and variety; but this is of small moment on Agassiz's view, he holding that genealogical connection is not of the essence of species at all. The other, that the formation and development of the ideas upon which human works proceed is gradual; or, as the same great naturalist well states it, "while human thought is consecutive, Divine thought is simultaneous." But we have no right to affirm this of Divine action.

We must close here. We meant to review some of the more general scientific objections which we thought not altogether tenable. But, after all, we are not so anxious just now to know whether the new theory is well founded on facts as whether it would be harmless, if it were. Besides, we feel quite unable to answer some of these objections, and it is pleasanter to take up those which one thinks he can.

Among the unanswerable, perhaps the weightiest of the objections, is that of the absence, in geological deposits, of vestiges of the intermediate forms which the theory requires to have existed. Here all that Mr. Darwin can do is to insist upon the extreme imperfection of the geological record and the uncertainty of negative evidence. But, withal, he allows the force of the objection almost as much as his opponents urge it, — so much so, indeed, that two of his English critics turn the concession unfairly upon him, and charge him with actually basing his hypothesis upon these and similar difficulties, — as if he held it because of the difficulties, and not in spite of them; — a handsome return for his candor!

As to this imperfection of the geologi-

cal record, perhaps we should get a fair and intelligible illustration of it by imagining the existing animals and plants of New England, with all their remains and products since the arrival of the *Mayflower*, to be annihilated; and that, in the coming time, the geologists of a new colony, dropped by the New Zealand fleet on its way to explore the ruins of London, undertake, after fifty years of examination, to reconstruct in a catalogue the flora and fauna of our day, that is, from the close of the glacial period to the present time. With all the advantages of a surface exploration, what a beggarly account it must be! How many of the land animals and plants which are enumerated in the Massachusetts official reports would it be likely to contain?

Another unanswerable question asked by the Boston reviewers is, Why, when structure and instinct or habit vary, — as they must have varied, on Darwin's hypothesis, — they vary together and harmoniously, instead of vaguely. We cannot tell, because we cannot tell why either should vary at all. Yet, as they both do vary in successive generations, — as is seen under domestication, — and are correlated, we can only adduce the fact. Darwin may be precluded from this answer, but we may say that they vary together because designed to do so. A reviewer says that the chance of their varying together is inconceivably small; yet, if they do not, the variant individuals must perish. Then it is well that it is not left to chance. As to the fact: before we were born, nourishment and the equivalent to respiration took place in a certain way. But the moment we were ushered into this breathing world, our actions promptly conformed, both as to respiration and nourishment, to the before unused structure and to the new surroundings.

"Now," says the "Examiner," "suppose, for instance, the gills of an aquatic animal converted into lungs, while instinct still compelled a continuance under water, would not drowning ensue?" No doubt. But — simply contemplating the facts, in-

stead of theorizing—we notice that young frogs do not keep their heads under water after ceasing to be tadpoles. The instinct promptly changes with the structure, without supernatural interposition,—just as Darwin would have it, if the development of a variety or incipient species, though rare, were as natural as a metamorphosis.

“Or if a quadruped, not yet furnished with wings, were suddenly inspired with the instinct of a bird, and precipitated itself from a cliff, would not the descent be hazardously rapid?” Doubtless the animal would be no better supported than the objection. Darwin makes very little indeed of voluntary efforts as a cause of change, and even poor Lamarck need not be caricatured. He never supposed that an elephant would take such a notion into his wise head, or that a squirrel would begin with other than short and easy leaps; but might not the length of the leap be increased by practice?

The “North American” reviewer’s position, that the higher brute animals have comparatively little instinct and no intelligence, is a heavy blow and great discouragement to dogs, horses, elephants, and monkeys. Stripped of their all, and left to shift for themselves as they can in this hard world, their pursuit and seeming attainment of knowledge under such peculiar difficulties is interesting to contemplate. However, we are not so sure as is the critic that instinct regularly increases downward and decreases upward in the scale of being. Now that the case of the bee is reduced to moderate proportions,* we know of nothing in instinct surpassing that of an animal so high as a bird, the Talegal, the male of which plumes himself upon making a hot-bed in which to hatch his partner’s eggs,—which he tends and regulates the heat of about as carefully and skilfully as the unplumed biped does an eccaleobion.† As to the real intelligence of the higher brutes, it has been ably defended by a

far more competent observer, Mr. Agassiz, to whose conclusions we yield a general assent, although we cannot quite place the best of dogs “in that respect upon a level with a considerable portion of poor humanity,” nor indulge the hope, or, indeed, the desire, of a renewed acquaintance with the whole animal kingdom in a future life.*

The assertion, that acquired habitudes or instincts, and acquired structures, are not heritable, any breeder or good observer can refute.

That “the human mind has become what it is out of a developed instinct” † is a statement which Mr. Darwin nowhere makes, and, we presume, would not accept. As to his having us believe that individual animals acquire their instincts gradually, ‡ this statement must have been penned in inadvertence both of the very definition of instinct, and of everything we know of in Mr. Darwin’s book.

It has been attempted to destroy the very foundation of Darwin’s hypothesis by denying that there are any wild varieties, to speak of, for natural selection to operate upon. We cannot gravely sit down to prove that wild varieties abound. We should think it just as necessary to prove that snow falls in winter. That variation among plants cannot be largely due to hybridism, and that their variation in Nature is not essentially different from much that occurs in domestication, we could show, if our space permitted.

As to the sterility of hybrids, that can no longer be insisted upon as absolutely true, nor be practically used as a test between species and varieties, unless we allow that hares and rabbits are of one species. That it subserves a purpose in keeping species apart, and was so designed, we do not doubt. But the critics fail to perceive that this sterility proves nothing against the derivative origin of the actual species; for it may as well have been intended to keep separate those

forms which have reached a certain amount of divergence as those which were always thus distinct.

The argument for the permanence of species, drawn from the identity with those now living of cats, birds, and other animals, preserved in Egyptian catacombs, was good enough as used by Cuvier against St. Hilaire, that is, against the supposition that time brings about a gradual alteration of whole species; but it goes for little against Darwin, unless it be proved that species never vary, or that the perpetuation of a variety necessitates the extinction of the parent breed. For Darwin clearly maintains—what the facts warrant—that the mass of a species remains fixed so long as it exists at all, though it may set off a variety now and then. The variety may finally supersede the parent form, but it may coexist with it; yet it does not in the least hinder the unvaried stock from continuing true to the breed, unless it crosses with it. The common law of inheritance may be expected to keep both the original and the variety mainly true as long as they last, and none the less so because they have given rise to occasional varieties. The tailless Manx cats, like the fox in the fable, have not induced the normal breeds to dispense with their tails, nor have the Dorkings (apparently known to Pliny) affected the permanence of the common sort of fowl.

As to the objection, that the lower forms of life ought, on Darwin's theory, to have been long ago improved out of existence, replaced by higher forms, the objectors forget what a vacuum that would leave below, and what a vast field there is to which a simple organization is best adapted, and where an advance would be no improvement, but the contrary. To accumulate the greatest amount of being upon a given space, and to provide as much enjoyment of life as can be under the conditions, seems to be aimed at, and this is effected by diversification.

Finally, we advise nobody to accept Darwin's, or any other derivative theory,

as true. The time has not come for that, and perhaps never will. We also advise against a similar credulity on the other side, in a blind faith that species—that the manifold sorts and forms of existing animals and vegetables—"have no secondary cause." The contrary is already not unlikely, and we suppose will hereafter become more and more probable. But we are confident, that, if a derivative hypothesis ever is established, it will be so on a solid theistic ground:

Meanwhile an inevitable and legitimate hypothesis is on trial,—an hypothesis thus far not untenable,—a trial just now very useful to science, and, we conclude, not harmful to religion, unless injudicious assailants temporarily make it so.

One good effect is already manifest: its enabling the advocates of the hypothesis of a multiplicity of human species to perceive the double insecurity of their ground. When the races of men are admitted to be of one *species*, the corollary, that they are of one *origin*, may be expected to follow. Those who allow them to be of one species must admit an actual diversification into strongly marked and persistent varieties, and so admit the basis of fact upon which the Darwinian hypothesis is built; while those, on the other hand, who recognize a diversity of human species, will hardly be able to maintain that such species were primordial and supernatural in the common sense of the word.

The English mind is prone to positivism and kindred forms of materialistic philosophy, and we must expect the derivative theory to be taken up in that interest. We have no predilection for that school, but the contrary. If we had, we might have looked complacently upon a line of criticism which would indirectly, but effectively, play into the hands of positivists and materialistic atheists generally. The wiser and stronger ground to take is, that the derivative hypothesis leaves the argument for design, and therefore for a Designer, as valid as it ever was;—that to do any work by an instrument must require, and therefore presup-

pose, the exertion rather of more than of less power than to do it directly;—that whoever would be a consistent theist should believe that Design in the natural world is coextensive with Providence, and hold fully to the one as he does to the other, in spite of the wholly similar and apparently insuperable diffi-

culties which the mind encounters whenever it endeavors to develop the idea into a complete system, either in the material and organic, or in the moral world. It is enough, in the way of obviating objections, to show that the philosophical difficulties of the one are the same, and only the same, as of the other.

A MODERN CINDERELLA :

OR, THE LITTLE OLD SHOE.

HOW IT WAS LOST.

AMONG green New England hills stood an ancient house, many-gabled, mossy-roofed, and quaintly built, but picturesque and pleasant to the eye; for a brook ran babbling through the orchard that encompassed it about, a garden-plot stretched upward to the whispering birches on the slope, and patriarchal elms stood sentinel upon the lawn, as they had stood almost a century ago, when the Revolution rolled that way and found them young.

One summer morning, when the air was full of country sounds, of mowers in the meadow, blackbirds by the brook, and the low of kine upon the hill-side, the old house wore its cheeriest aspect, and a certain humble history began.

“Nan!”

“Yes, Di.”

And a head, brown-locked, blue-eyed, soft-featured, looked in at the open door in answer to the call.

“Just bring me the third volume of ‘Wilhelm Meister,’—there’s a dear. It’s hardly worth while to rouse such a restless ghost as I, when I’m once fairly laid.”

As she spoke, Di pushed up her black braids, thumped the pillow of the couch where she was lying, and with eager eyes went down the last page of her book.

“Nan!”

“Yes, Laura,” replied the girl, coming back with the third volume for the literary cormorant, who took it with a nod, still too intent upon the “Confessions of a Fair Saint” to remember the failings of a certain plain sinner.

“Don’t forget the Italian cream for dinner. I depend upon it; for it’s the only thing fit for me this hot weather.”

And Laura, the cool blonde, disposed the folds of her white gown more gracefully about her, and touched up the eyebrow of the Minerva she was drawing.

“Little daughter!”

“Yes, father.”

“Let me have plenty of clean collars in my bag, for I must go at three; and some of you bring me a glass of cider in about an hour;—I shall be in the lower garden.”

The old man went away into his imaginary paradise, and Nan into that domestic purgatory on a summer day,—the kitchen. There were vines about the windows, sunshine on the floor, and order everywhere; but it was haunted by a cooking-stove, that family altar whence such varied incense rises to appease the appetite of household gods, before which such dire incantations are pronounced to ease the wrath and woe of the priestess of the fire, and about which often linger saddest memories of wasted temper, time, and toil.

Nan was tired, having risen with the birds,—hurried, having many cares those happy little housewives never know,—and disappointed in a hope that hourly “dwindled, peaked, and pined.” She was too young to make the anxious lines upon her forehead seem at home there, too patient to be burdened with the labor others should have shared, too light of heart to be pent up when earth and sky were keeping a blithe holiday. But she was one of that meek sisterhood who, thinking humbly of themselves, believe they are honored by being spent in the service of less conscientious souls, whose careless thanks seem quite reward enough.

To and fro she went, silent and diligent, giving the grace of willingness to every humble or distasteful task the day had brought her; but some malignant sprite seemed to have taken possession of her kingdom, for rebellion broke out everywhere. The kettles would boil over most obstreperously,—the mutton refused to cook with the meek alacrity to be expected from the nature of a sheep,—the stove, with unnecessary warmth of temper, would glow like a fiery furnace,—the irons would scorch,—the linens would dry,—and spirits would fail, though patience never.

Nan tugged on, growing hotter and wearier, more hurried and more hopeless, till at last the crisis came; for in one fell moment she tore her gown, burnt her hand, and smutched the collar she was preparing to finish in the most unexceptionable style. Then, if she had been a nervous woman, she would have scolded; being a gentle girl, she only “lifted up her voice and wept.”

“Behold, she watereth her linen with salt tears, and bewaileth herself because of much tribulation. But, lo! help cometh from afar: a strong man bringeth lettuce wherewith to stay her, plucketh berries to comfort her withal, and clasheth cymbals that she may dance for joy.”

The voice came from the porch, and, with her hope fulfilled, Nan looked up to greet John Lord, the house-friend, who

stood there with a basket on his arm; and as she saw his honest eyes, kind lips, and helpful hands, the girl thought this plain young man the comeliest, most welcome sight she had beheld that day.

“How good of you, to come through all this heat, and not to laugh at my despair!” she said, looking up like a grateful child, as she led him in.

“I only obeyed orders, Nan; for a certain dear old lady had a motherly presentiment that you had got into a domestic whirlpool, and sent me as a sort of life-preserver. So I took the basket of consolation, and came to fold my feet upon the carpet of contentment in the tent of friendship.”

As he spoke, John gave his own gift in his mother’s name, and bestowed himself in the wide window-seat, where morning-glories nodded at him, and the old butternut sent pleasant shadows dancing to and fro.

His advent, like that of Orpheus in Hades, seemed to soothe all unpropitious powers with a sudden spell. The fire began to slacken, the kettles began to lull, the meat began to cook, the irons began to cool, the clothes began to behave, the spirits began to rise, and the collar was finished off with most triumphant success. John watched the change, and, though a lord of creation, abased himself to take compassion on the weaker vessel, and was seized with a great desire to lighten the homely tasks that tried her strength of body and soul. He took a comprehensive glance about the room; then, extracting a dish from the closet, proceeded to imbrue his hands in the strawberries’ blood.

“Oh, John, you needn’t do that; I shall have time when I’ve turned the meat, made the pudding, and done these things. See, I’m getting on finely now;—you’re a judge of such matters; isn’t that nice?”

As she spoke, Nan offered the polished absurdity for inspection with innocent pride.

“Oh that I were a collar, to sit upon that hand!” sighed John,—adding, ar-

gumentatively, "As to the berry question, I might answer it with a gem from Dr. Watts, relative to 'Satan' and 'idle hands,' but will merely say, that, as a matter of public safety, you'd better leave me alone; for such is the destructiveness of my nature, that I shall certainly eat something hurtful, break something valuable, or sit upon something crushable, unless you let me concentrate my energies by knocking off these young fellows' hats, and preparing them for their doom."

Looking at the matter in a charitable light, Nan consented, and went cheerfully on with her work, wondering how she could have thought ironing an infliction, and been so ungrateful for the blessings of her lot.

"Where's Sally?" asked John, looking vainly for the energetic functionary who usually pervaded that region like a domestic police-woman, a terror to cats, dogs, and men.

"She has gone to her cousin's funeral, and won't be back till Monday. There seems to be a great fatality among her relations; for one dies, or comes to grief in some way, about once a month. But I don't blame poor Sally for wanting to get away from this place now and then. I think I could find it in my heart to murder an imaginary friend or two, if I had to stay here long."

And Nan laughed so blithely, it was a pleasure to hear her.

"Where's Di?" asked John, seized with a most unmasculine curiosity all at once.

"She is in Germany with 'Wilhelm Meister'; but, though 'lost to sight, to memory dear'; for I was just thinking, as I did her things, how clever she is to like all kinds of books that I don't understand at all, and to write things that make me cry with pride and delight. Yes, she's a talented dear, though she hardly knows a needle from a crowbar, and will make herself one great blot some of these days, when the 'divine afflatus' descends upon her, I'm afraid."

And Nan rubbed away with sisterly

zeal at Di's forlorn hose and inky pocket-handkerchiefs.

"Where is Laura?" proceeded the inquisitor.

"Well, I might say that *she* was in Italy; for she is copying some fine thing of Raphael's, or Michel Angelo's, or some great creature's or other; and she looks so picturesque in her pretty gown, sitting before her easel, that it's really a sight to behold, and I've peeped two or three times to see how she gets on."

And Nan bestirred herself to prepare the dish wherewith her picturesque sister desired to prolong her artistic existence.

"Where is your father?" John asked again, checking off each answer with a nod and a little frown.

"He is down in the garden, deep in some plan about melons, the beginning of which seems to consist in stamping the first proposition in Euclid all over the bed, and then poking a few seeds into the middle of each. Why, bless the dear man! I forgot it was time for the cider. Wouldn't you like to take it to him, John? He'd love to consult you; and the lane is so cool, it does one's heart good to look at it."

John glanced from the steamy kitchen to the shadowy path, and answered with a sudden assumption of immense industry,—

"I couldn't possibly go, Nan,— I've so much on my hands. You'll have to do it yourself. 'Mr. Robert of Lincoln' has something for your private ear; and the lane is so cool, it will do one's heart good to see you in it. Give my regards to your father, and, in the words of 'Little Mabel's' mother, with slight variations,—

'Tell the dear old body
This day I cannot run,
For the pots are boiling over
And the mutton isn't done.'"

"I will; but please, John, go in to the girls and be comfortable; for I don't like to leave you here," said Nan.

"You insinuate that I should pick at the pudding or invade the cream, do you? Ungrateful girl, leave me!" And, with melodramatic sternness, John extin-

guished her in his broad-brimmed hat, and offered the glass like a poisoned goblet.

Nan took it, and went smiling away. But the lane might have been the Desert of Sahara, for all she knew of it; and she would have passed her father as unconcerned as if he had been an apple-tree, had he not called out,—

“Stand and deliver, little woman!”

She obeyed the venerable highwayman, and followed him to and fro, listening to his plans and directions with a mute attention that quite won his heart.

“That hop-pole is really an ornament now, Nan; this sage-bed needs weeding,—that’s good work for you girls; and, now I think of it, you’d better water the lettuce in the cool of the evening, after I’m gone.”

To all of which remarks Nan gave her assent; though the hop-pole took the likeness of a tall figure she had seen in the porch, the sage-bed, curiously enough, suggested a strawberry ditto, the lettuce vividly reminded her of certain vegetable productions a basket had brought, and the bob-o-link only sung in his cheeriest voice, “Go home, go home! he is there!”

She found John—he having made a freemason of himself, by assuming her little apron—meditating over the partially spread table, lost in amaze at its desolate appearance; one half its proper paraphernalia having been forgotten, and the other half put on awry. Nan laughed till the tears ran over her cheeks, and John was gratified at the efficacy of his treatment; for her face had brought a whole harvest of sunshine from the garden, and all her cares seemed to have been lost in the windings of the lane.

“Nan, are you in hysterics?” cried Di, appearing, book in hand. “John, you absurd man, what are you doing?”

“I’m helpin’ the maid of all work, please marm.” And John dropped a curtsy with his limited apron.

Di looked ruffled, for the merry words were a covert reproach; and with her usual energy of manner and freedom of

speech she tossed “Wilhelm” out of the window, exclaiming, irefully,—

“That’s always the way; I’m never where I ought to be, and never think of anything till it’s too late; but it’s all Goethe’s fault. What does he write books full of smart ‘Phillinas’ and interesting ‘Meisters’ for? How can I be expected to remember that Sally’s away, and people must eat, when I’m hearing the ‘Harper’ and little ‘Mignon’? John, how dare you come here and do my work, instead of shaking me and telling me to do it myself? Take that toasted child away, and fan her like a Chinese mandarin, while I dish up this dreadful dinner.”

John and Nan fled like chaff before the wind, while Di, full of remorseful zeal, charged at the kettles, and wrench-ed off the potatoes’ jackets, as if she were revengefully pulling her own hair. Laura had a vague intention of going to assist; but, getting lost among the lights and shadows of Minerva’s helmet, forgot to appear till dinner had been evoked from chaos and peace was restored.

At three o’clock, Di performed the coronation-ceremony with her father’s best hat; Laura re-tied his old-fashioned neck-cloth, and arranged his white locks with an eye to saintly effect; Nan appeared with a beautifully written sermon, and suspicious ink-stains on the fingers that slipped it into his pocket; John attached himself to the bag; and the patriarch was escorted to the door of his tent with the triumphal procession which usually attended his out-goings and in-comings. Having kissed the female portion of his tribe, he ascended the venerable chariot, which received him with audible lamentation, as its rheumatic joints swayed to and fro.

“Good-bye, my dears! I shall be back early on Monday morning; so take care of yourselves, and be sure you all go and hear Mr. Emerboy preach to-morrow. My regards to your mother, John. Come, Solon!”

But Solon merely cocked one ear, and remained a fixed fact; for long experi-

ence had induced the philosophic beast to take for his motto the Yankee maxim, "Be sure you're right, then go ahead!" He knew things were not right; therefore he did not go ahead.

"Oh, by-the-way, girls, don't forget to pay Tommy Mullein for bringing up the cow: he expects it to-night. And, Di, don't sit up till daylight, nor let Laura stay out in the dew. Now, I believe, I'm off. Come, Solon!"

But Solon only cocked the other ear, gently agitated his mortified tail, as premonitory symptoms of departure, and never stirred a hoof, being well aware that it always took three "comes" to make a "go."

"Bless me! I've forgotten my spectacles. They are probably shut up in that volume of Herbert on my table. Very awkward to find myself without them ten miles away. Thank you, John. Don't neglect to water the lettuce, Nan, and don't overwork yourself, my little 'Martha.' Come" —

At this juncture, Solon suddenly went off, like "Mrs. Gamp," in a sort of walking swoon, apparently deaf and blind to all mundane matters, except the refreshments awaiting him ten miles away; and the benign old pastor disappeared, humming "Hebron" to the creaking accompaniment of the bulgy chaise.

Laura retired to take her *siesta*; Nan made a small *carbonaro* of herself by sharpening her sister's crayons, and Di, as a sort of penance for past sins, tried her patience over a piece of knitting, in which she soon originated a somewhat remarkable pattern, by dropping every third stitch, and seaming *ad libitum*. If John had been a gentlemanly creature, with refined tastes, he would have elevated his feet and made a nuisance of himself by indulging in a "weed"; but being only an uncultivated youth, with a rustic regard for pure air and woman-kind in general, he kept his head uppermost, and talked like a man, instead of smoking like a chimney.

"It will probably be six months before I sit here again, tangling your threads

and maltreating your needles, Nan. How glad you must feel to hear it!" he said, looking up from a thoughtful examination of the hard-working little citizens of the Industrial Community settled in Nan's work-basket.

"No, I'm very sorry; for I like to see you coming and going as you used to, years ago, and I miss you very much when you are gone, John," answered truthful Nan, whittling away in a sadly wasteful manner, as her thoughts flew back to the happy times when a little lad rode a little lass in the big wheelbarrow, and never spilt his load, — when two brown heads bobbed daily side by side to school, and the favorite play was "Babes in the Wood," with Di for a somewhat peckish robin to cover the small martyrs with any vegetable substance that lay at hand. Nan sighed, as she thought of these things, and John regarded the battered thimble on his fingertip with increased benignity of aspect as he heard the sound.

"When are you going to make your fortune, John, and get out of that disagreeable hardware concern?" demanded Di, pausing after an exciting "round," and looking almost as much exhausted as if it had been a veritable pugilistic encounter.

"I intend to make it by plunging still deeper into 'that disagreeable hardware concern'; for, next year, if the world keeps rolling, and John Lord is alive, he will become a partner, and then — and then" —

The color sprang up into the young man's cheek, his eyes looked out with a sudden shine, and his hand seemed involuntarily to close, as if he saw and seized some invisible delight.

"What will happen then, John?" asked Nan, with a wondering glance.

"I'll tell you in a year, Nan, — wait till then." And John's strong hand unclosed, as if the desired good were not to be his yet.

Di looked at him, with a knitting-needle stuck into her hair, saying, like a sarcastic unicorn, —

"I really thought you had a soul above pots and kettles, but I see you haven't; and I beg your pardon for the injustice I have done you."

Not a whit disturbed, John smiled, as if at some mighty pleasant fancy of his own, as he replied, —

"Thank you, Di; and as a further proof of the utter depravity of my nature, let me tell you that I have the greatest possible respect for those articles of ironmongery. Some of the happiest hours of my life have been spent in their society; some of my pleasantest associations are connected with them; some of my best lessons have come to me from among them; and when my fortune is made, I intend to show my gratitude by taking three flat-irons rampant for my coat of arms."

Nan laughed merrily, as she looked at the burns on her hand; but Di elevated the most prominent feature of her brown countenance, and sighed despondingly, —

"Dear, dear, what a disappointing world this is! I no sooner build a nice castle in Spain, and settle a smart young knight therein, than down it comes about my ears; and the ungrateful youth, who might fight dragons, if he chose, insists on quenching his energies in a saucepan, and making a Saint Lawrence of himself by wasting his life on a series of gridirons. Ah, if I were only a man, I would do something better than that, and prove that heroes are not all dead yet. But, instead of that, I'm only a woman, and must sit rasping my temper with absurdities like this." And Di wrestled with her knitting as if it were Fate, and she were paying off the grudge she owed it.

John leaned toward her, saying, with a look that made his plain face handsome, —

"Di, my father began the world as I begin it, and left it the richer for the useful years he spent here, — as I hope I may leave it some half-century hence. His memory makes that dingy shop a pleasant place to me; for there he made an honest name, led an honest life, and bequeathed to me his reverence for honest work.

That is a sort of hardware, Di, that no rust can corrupt, and which will always prove a better fortune than any your knights can achieve with sword and shield. I think I am not quite a clod, or quite without some aspirations above money-getting; for I sincerely desire that courage which makes daily life heroic by self-denial and cheerfulness of heart; I am eager to conquer my own rebellious nature, and earn the confidence of innocent and upright souls; I have a great ambition to become as good a man and leave as green a memory behind me as old John Lord."

Di winked violently, and seamed five times in perfect silence; but quiet Nan had the gift of knowing when to speak, and by a timely word saved her sister from a thunder-shower and her stocking from destruction.

"John, have you seen Philip since you wrote about your last meeting with him?"

The question was for John, but the soothing tone was for Di, who gratefully accepted it, and perked up again with speed.

"Yes; and I meant to have told you about it," answered John, plunging into the subject at once. "I saw him a few days before I came home, and found him more disconsolate than ever; — 'just ready to go to the Devil,' as he forcibly expressed himself. I consoled the poor lad as well as I could, telling him his wisest plan was to defer his proposed expedition, and go on as steadily as he had begun, — thereby proving the injustice of your father's prediction concerning his want of perseverance, and the sincerity of his affection. I told him the change in Laura's health and spirits was silently working in his favor, and that a few more months of persistent endeavor would conquer your father's prejudice against him, and make him a stronger man for the trial and the pain. I read him bits about Laura from your own and Di's letters, and he went away at last as patient as Jacob, ready to serve another 'seven years' for his beloved Rachel."

"God bless you for it, John!" cried a

fervent voice; and, looking up, they saw the cold, listless Laura transformed into a tender girl, all aglow with love and longing, as she dropped her mask, and showed a living countenance eloquent with the first passion and softened by the first grief of her life.

John rose involuntarily in the presence of an innocent nature whose sorrow needed no interpreter to him. The girl read sympathy in his brotherly regard, and found comfort in the friendly voice that asked, half playfully, half seriously,—

“Shall I tell him that he is not forgotten, even for an Apollo? that Laura the artist has not conquered Laura the woman? and predict that the good daughter will yet prove the happy wife?”

With a gesture full of energy, Laura tore her Minerva from top to bottom, while two great tears rolled down the cheeks grown wan with hope deferred.

“Tell him I believe all things, hope all things, and that I never can forget.”

Nan went to her and held her fast, leaving the prints of two loving, but grimy hands upon her shoulders; Di looked on approvingly, for, though rather stony-hearted regarding the cause, she fully appreciated the effect; and John, turning to the window, received the commendations of a robin swaying on an elm-bough with sunshine on its ruddy breast.

The clock struck five, and John declared that he must go; for, being an old-fashioned soul, he fancied that his mother had a better right to his last hour than any younger woman in the land,—always remembering that “she was a widow, and he her only son.”

Nan ran away to wash her hands, and came back with the appearance of one who had washed her face also: and so she had; but there was a difference in the water.

“Play I’m your father, girls, and remember it will be six months before ‘that John’ will trouble you again.”

With which preface the young man kissed his former playfellows as heartily as the boy had been wont to do, when stern parents banished him to distant schools, and

three little maids bemoaned his fate. But times were changed now; for Di grew alarmingly rigid during the ceremony; Laura received the salute like a grateful queen; and Nan returned it with heart and eyes and tender lips, making such an improvement on the childish fashion of the thing, that John was moved to support his paternal character by softly echoing her father’s words,—“Take care of yourself, my little ‘Martha.’”

Then they all streamed after him along the garden-path, with the endless messages and warnings girls are so prone to give; and the young man, with a great softness at his heart, went away, as many another John has gone, feeling better for the companionship of innocent maidenhood, and stronger to wrestle with temptation, to wait and hope and work.

“Let’s throw a shoe after him for luck, as dear old ‘Mrs. Gummage’ did after ‘David’ and the ‘willin’ Barkis!’ Quick, Nan! you always have old shoes on; toss one, and shout, ‘Good luck!’” cried Di, with one of her eccentric inspirations.

Nan tore off her shoe, and threw it far along the dusty road, with a sudden longing to become that auspicious article of apparel, that the omen might not fail.

Looking backward from the hill-top, John answered the meek shout cheerily, and took in the group with a lingering glance: Laura in the shadow of the elms, Di perched on the fence, and Nan leaning far over the gate with her hand above her eyes and the sunshine touching her brown hair with gold. He waved his hat and turned away; but the music seemed to die out of the blackbird’s song, and in all the summer landscape his eye saw nothing but the little figure at the gate.

“Bless and save us! here’s a flock of people coming; my hair is in a toss, and Nan’s without her shoe; run! fly, girls! or the Philistines will be upon us!” cried Di, tumbling off her perch in sudden alarm.

Three agitated young ladies, with flying draperies and countenances of mingled mirth and dismay, might have been seen precipitating themselves into a re-

spectable mansion with unbecoming haste; but the squirrels were the only witnesses of this "vision of sudden flight," and, being used to ground-and-lofty tumbling, didn't mind it.

When the pedestrians passed, the door was decorously closed, and no one visible but a young man, who snatched something out of the road, and marched away again, whistling with more vigor of tone than accuracy of tune, "Only that, and nothing more."

HOW IT WAS FOUND.

SUMMER ripened into autumn, and something fairer than

"Sweet-peas and mignonette
In Annie's garden grew."

Her nature was the counterpart of the hill-side grove, where as a child she had read her fairy tales, and now as a woman turned the first pages of a more wondrous legend still. Lifted above the many-gabled roof, yet not cut off from the echo of human speech, the little grove seemed a green sanctuary, fringed about with violets, and full of summer melody and bloom. Gentle creatures haunted it, and there was none to make afraid; wood-pigeons cooed and crickets chirped their shrill roundelays, anemones and lady-ferns looked up from the moss that kissed the wanderer's feet. Warm airs were all afloat, full of vernal odors for the grateful sense, silvery birches shimmered like spirits of the wood, larches gave their green tassels to the wind, and pines made airy music sweet and solemn, as they stood looking heavenward through veils of summer sunshine or shrouds of wintry snow.

Nan never felt alone now in this charmed wood; for when she came into its precincts, once so full of solitude, all things seemed to wear one shape, familiar eyes looked at her from the violets in the grass, familiar words sounded in the whisper of the leaves, and she grew conscious that an unseen influence filled the air with new delights, and touched earth and sky

with a beauty never seen before. Slowly these May-flowers budded in her maiden heart, rosily they bloomed, and silently they waited till some lover of such lowly herbs should catch their fresh aroma, should brush away the fallen leaves, and lift them to the sun.

Though the eldest of the three, she had long been overtopped by the more aspiring maids. But though she meekly yielded the reins of government, whenever they chose to drive, they were soon restored to her again; for Di fell into literature, and Laura into love. Thus engrossed, these two forgot many duties which even blue-stockings and *innamoras* are expected to perform, and slowly all the homely humdrum cares that housewives know became Nan's daily life, and she accepted it without a thought of discontent. Noiseless and cheerful as the sunshine, she went to and fro, doing the tasks that mothers do, but without a mother's sweet reward, holding fast the numberless slight threads that bind a household tenderly together, and making each day a beautiful success.

Di, being tired of running, riding, climbing, and boating, decided at last to let her body rest and put her equally active mind through what classical collegians term "a course of sprouts." Having undertaken to read and know *everything*, she devoted herself to the task with great energy, going from Sue to Swedenborg with perfect impartiality, and having different authors as children have sundry distempers, being fractious while they lasted, but all the better for them when once over. Carlyle appeared like scarlet-fever, and raged violently for a time; for, being anything but a "passive bucket," Di became prophetic with Mahomet, belligerent with Cromwell, and made the French Revolution a veritable Reign of Terror to her family. Goethe and Schiller alternated like fever and ague; Mephistopheles became her hero, Joan of Arc her model, and she turned her black eyes red over Egmont and Wallenstein. A mild attack of Emerson followed, during which she

was lost in a fog, and her sisters rejoiced inwardly when she emerged informing them that

“The Sphinx was drowsy,
Her wings were furled.”

Poor Di was floundering slowly to her proper place; but she splashed up a good deal of foam by getting out of her depth, and rather exhausted herself by trying to drink the ocean dry.

Laura, after the “midsummer night’s dream” that often comes to girls of seventeen, woke up to find that youth and love were no match for age and common sense. Philip had been flying about the world like a thistle-down for five-and-twenty years, generous-hearted, frank, and kind, but with never an idea of the serious side of life in his handsome head. Great, therefore, were the wrath and dismay of the enamored thistle-down, when the father of his love mildly objected to seeing her begin the world in a balloon with a very tender but very inexperienced aeronaut for a guide.

“Laura is too young to ‘play house’ yet, and you are too unstable to assume the part of lord and master, Philip. Go and prove that you have prudence, patience, energy, and enterprise, and I will give you my girl,—but not before. I must seem cruel, that I may be truly kind; believe this, and let a little pain lead you to great happiness, or show you where you would have made a bitter blunder.”

The lovers listened, owned the truth of the old man’s words, bewailed their fate, and—yielded,—Laura for love of her father, Philip for love of her. He went away to build a firm foundation for his castle in the air, and Laura retired into an invisible convent, where she cast off the world, and regarded her sympathizing sisters through a grate of superior knowledge and unsharable grief. Like a devout nun, she worshipped “St. Philip,” and firmly believed in his miraculous powers. She fancied that her woes set her apart from common cares, and slowly fell into a dreamy state, professing no inter-

est in any mundane matter, but the art that first attracted Philip. Crayons, bread-crusts, and gray paper became glorified in Laura’s eyes; and her one pleasure was to sit pale and still before her easel, day after day, filling her portfolios with the faces he had once admired. Her sisters observed that every Bacchus, Piping Faun, or Dying Gladiator bore some likeness to a comely countenance that heathen god or hero never owned; and seeing this, they privately rejoiced that she had found such solace for her grief.

Mrs. Lord’s keen eye had read a certain newly written page in her son’s heart,—his first chapter of that romance, begun in Paradise, whose interest never flags, whose beauty never fades, whose end can never come till Love lies dead. With womanly skill she divined the secret, with motherly discretion she counselled patience, and her son accepted her advice, feeling, that, like many a healthful herb, its worth lay in its bitterness.

“Love like a man, John, not like a boy, and learn to know yourself before you take a woman’s happiness into your keeping. You and Nan have known each other all your lives; yet, till this last visit, you never thought you loved her more than any other childish friend. It is too soon to say the words so often spoken hastily,—so hard to be recalled. Go back to your work, dear, for another year; think of Nan in the light of this new hope; compare her with comelier, gayer girls; and by absence prove the truth of your belief. Then, if distance only makes her dearer, if time only strengthens your affection, and no doubt of your own worthiness disturbs you, come back and offer her what any woman should be glad to take,—my boy’s true heart.”

John smiled at the motherly pride of her words, but answered with a wistful look.

“It seems very long to wait, mother. If I could just ask her for a word of hope, I could be very patient then.”

“Ah, my dear, better bear one year of

impatience now than a lifetime of regret hereafter. Nan is happy; why disturb her by a word which will bring the tender cares and troubles that come soon enough to such conscientious creatures as herself? If she loves you, time will prove it; therefore let the new affection spring and ripen as your early friendship has done, and it will be all the stronger for a summer's growth. Philip was rash, and has to bear his trial now, and Laura shares it with him. Be more generous, John; make *your* trial, bear *your* doubts alone, and give Nan the happiness without the pain. Promise me this, dear, — promise me to hope and wait."

The young man's eye kindled, and in his heart there rose a better chivalry, a truer valor, than any Di's knights had ever known.

"I'll try, mother," was all he said; but she was satisfied, for John seldom tried in vain.

"Oh, girls, how splendid you are! It does my heart good to see my handsome sisters in their best array," cried Nan, one mild October night, as she put the last touches to certain airy raiment fashioned by her own skilful hands, and then fell back to survey the grand effect.

Di and Laura were preparing to assist at an "event of the season," and Nan, with her own locks fallen on her shoulders, for want of sundry combs promoted to her sisters' heads, and her dress in unwonted disorder, for lack of the many pins extracted in exciting crises of the toilet, hovered like an affectionate bee about two very full-blown flowers.

"Laura looks like a cool Undine, with the ivy-wreaths in her shining hair; and Di has illuminated herself to such an extent with those scarlet leaves, that I don't know what great creature she resembles most," said Nan, beaming with sisterly admiration.

"Like Juno, Zenobia, and Cleopatra simmered into one, with a touch of Xantippe by way of spice. But, to my eye, the finest woman of the three is the dishevelled young person embracing the

bed-post; for she stays at home herself, and gives her time and taste to making homely people fine, — which is a waste of good material, and an imposition on the public."

As Di spoke, both the fashion-plates looked affectionately at the gray-gowned figure; but, being works of art, they were obliged to nip their feelings in the bud, and reserve their caresses till they returned to common life.

"Put on your bonnet, and we'll leave you at Mrs. Lord's on our way. It will do you good, Nan; and perhaps there may be news from John," added Di, as she bore down upon the door like a man-of-war under full sail.

"Or from Philip," sighed Laura, with a wistful look.

Whereupon Nan persuaded herself that her strong inclination to sit down was owing to want of exercise, and the heaviness of her eyelids a freak of imagination; so, speedily smoothing her ruffled plumage, she ran down to tell her father of the new arrangement.

"Go, my dear, by all means. I shall be writing; and you will be lonely, if you stay. But I must see my girls; for I caught glimpses of certain surprising phantoms flitting by the door."

Nan led the way, and the two pyramids revolved before him with the rigidity of lay-figures, much to the good man's edification; for with his fatherly pleasure there was mingled much mild wonderment at the amplitude of array.

"Yes, I see my geese are really swans, though there is such a cloud between us that I feel a long way off, and hardly know them. But this little daughter is always available, always my 'cricket on the hearth.'"

As he spoke, her father drew Nan closer, kissed her tranquil face, and smiled content.

"Well, if ever I see picters, I see 'em now, and I declare to goodness it's as interestin' as play-actin', every bit. Miss Di, with all them boughs in her head, looks like the Queen of Sheby, when she went a-visitin' What's-his-name; and

if Miss Laura a'n't as sweet as a lally-barster figger, I should like to know what is."

In her enthusiasm, Sally gambolled about the girls, flourishing her milk-pan like a modern Miriam about to sound her timbrel for excess of joy.

Laughing merrily, the two Mont Blancs bestowed themselves in the family ark, Nan hopped up beside Patrick, and Solon, roused from his lawful slumbers, morosely trundled them away. But, looking backward with a last "Good night!" Nan saw her father still standing at the door with smiling countenance, and the moonlight falling like a benediction on his silver hair.

"Betsey shall go up the hill with you, my dear, and here's a basket of eggs for your father. Give him my love, and be sure you let me know the next time he is poorly," Mrs. Lord said, when her guest rose to depart, after an hour of pleasant chat.

But Nan never got the gift; for, to her great dismay, her hostess dropped the basket with a crash, and flew across the room to meet a tall shape pausing in the shadow of the door. There was no need to ask who the new-comer was; for, even in his mother's arms, John looked over her shoulder with an eager nod to Nan, who stood among the ruins with never a sign of weariness in her face, nor the memory of a care at her heart,— for they all went out when John came in.

"Now tell us how and why and when you came. Take off your coat, my dear! And here are the old slippers. Why didn't you let us know you were coming so soon? How have you been? and what makes you so late to-night? Betsey, you needn't put on your bonnet. And—oh, my dear boy, *have* you been to supper yet?"

Mrs. Lord was a quiet soul, and her flood of questions was purred softly in her son's ear; for, being a woman, she *must* talk, and, being a mother, *must* pet the one delight of her life, and make a little festival when the lord of the manor

came home. A whole drove of fatted calves were metaphorically killed, and a banquet appeared with speed.

John was not one of those romantic heroes who can go through three volumes of hairbreadth escapes without the faintest hint of that blessed institution, dinner; therefore, like "Lady Leatherbridge," he "partook copiously of everything," while the two women beamed over each mouthful with an interest that enhanced its flavor, and urged upon him cold meat and cheese, pickles and pie, as if dyspepsia and nightmare were among the lost arts.

Then he opened his budget of news and fed *them*.

"I was coming next month, according to custom; but Philip fell upon and so tempted me, that I was driven to sacrifice myself to the cause of friendship, and up we came to-night. He would not let me come here till we had seen your father, Nan; for the poor lad was pining for Laura, and hoped his good behavior for the past year would satisfy his judge and secure his recall. We had a fine talk with your father; and, upon my life, Phil seemed to have received the gift of tongues, for he made a most eloquent plea, which I've stored away for future use, I assure you. The dear old gentleman was very kind, told Phil he was satisfied with the success of his probation, that he should see Laura when he liked, and, if all went well, should receive his reward in the spring. It must be a delightful sensation to know you have made a fellow-creature as happy as those words made Phil to-night."

John paused, and looked musingly at the matronly tea-pot, as if he saw a wondrous future in its shine.

Nan twinkled off the drops that rose at the thought of Laura's joy, and said, with grateful warmth,—

"You say nothing of your own share in the making of that happiness, John; but we know it, for Philip has told Laura in his letters all that you have been to him, and I am sure there was other eloquence beside his own before father grant-

ed all you say he has. Oh, John, I thank you very much for this!"

Mrs. Lord beamed a whole midsummer of delight upon her son, as she saw the pleasure these words gave him, though he answered simply, —

"I only tried to be a brother to him, Nan; for he has been most kind to me. Yes, I said my little say to-night, and gave my testimony in behalf of the prisoner at the bar, a most merciful judge pronounced his sentence, and he rushed straight to Mrs. Leigh's to tell Laura the blissful news. Just imagine the scene when he appears, and how Di will open her wicked eyes and enjoy the spectacle of the dishevelled lover, the bride-elect's tears, the stir, and the romance of the thing. She'll cry over it to-night, and caricature it to-morrow."

And John led the laugh at the picture he had conjured up, to turn the thoughts of Di's dangerous sister from himself.

At ten Nan retired into the depths of her old bonnet with a far different face from the one she brought out of it, and John, resuming his hat, mounted guard.

"Don't stay late, remember, John!" And in Mrs. Lord's voice there was a warning tone that her son interpreted aright.

"I'll not forget, mother."

And he kept his word; for though Philip's happiness floated temptingly before him, and the little figure at his side had never seemed so dear, he ignored the bland winds, the tender night, and set a seal upon his lips, thinking manfully within himself, "I see many signs of promise in her happy face; but I will wait and hope a little longer for her sake."

"Where is father, Sally?" asked Nan, as that functionary appeared, blinking owlishly, but utterly repudiating the idea of sleep.

"He went down the garding, miss, when the gentlemen cleared, bein' a little flustered by the goin's on. Shall I fetch him in?" asked Sally, as irreverently as if her master were a bag of meal.

"No, we will go ourselves." And slowly the two paced down the leaf-strewn walk.

Fields of yellow grain were waving on the hill-side, and sere corn-blades rustled in the wind, from the orchard came the scent of ripening fruit, and all the garden-plots lay ready to yield up their humble offerings to their master's hand. But in the silence of the night a greater Reaper had passed by, gathering in the harvest of a righteous life, and leaving only tender memories for the gleaners who had come so late.

The old man sat in the shadow of the tree his own hands planted; its fruitful boughs shone ruddily, and its leaves still whispered the low lullaby that hushed him to his rest.

"How fast he sleeps! Poor father! I should have come before and made it pleasant for him."

As she spoke, Nan lifted up the head bent down upon his breast, and kissed his pallid cheek.

"Oh, John, this is not sleep!"

"Yes, dear, the happiest he will ever know."

For a moment the shadows flickered over three white faces and the silence deepened solemnly. Then John reverently bore the pale shape in, and Nan dropped down beside it, saying, with a rain of grateful tears, —

"He kissed me when I went, and said a last 'good night!'"

For an hour steps went to and fro about her, many voices whispered near her, and skilful hands touched the beloved clay she held so fast; but one by one the busy feet passed out, one by one the voices died away, and human skill proved vain. Then Mrs. Lord drew the orphan to the shelter of her arms, soothing her with the mute solace of that motherly embrace.

"Nan, Nan! here's Philip! come and see!"

The happy call reëchoed through the house, and Nan sprang up as if her time for grief were past.

"I must tell them. Oh, my poor girls, how will they bear it?—they have known so little sorrow!"

But there was no need for her to speak;

other lips had spared her the hard task. For, as she stirred to meet them, a sharp cry rent the air, steps rang upon the stairs, and two wild-eyed creatures came into the hush of that familiar room, for the first time meeting with no welcome from their father's voice.

With one impulse, Di and Laura fled to Nan, and the sisters clung together in a silent embrace, far more eloquent than words. John took his mother by the hand, and led her from the room, closing the door upon the sacredness of grief.

"Yes, we are poorer than we thought; but when everything is settled, we shall get on very well. We can let a part of this great house, and live quietly together until spring; then Laura will be married, and Di can go on their travels with them, as Philip wishes her to do. We shall be cared for; so never fear for us, John."

Nan said this, as her friend parted from her a week later, after the saddest holiday he had ever known.

"And what becomes of you, Nan?" he asked, watching the patient eyes that smiled when others would have wept.

"I shall stay in the dear old house; for no other place would seem like home to me. I shall find some little child to love and care for, and be quite happy till the girls come back and want me."

John nodded wisely, as he listened, and went away prophesying within himself,—

"She shall find something more than a child to love; and, God willing, shall be very happy till the girls come home and — cannot have her."

Nan's plan was carried into effect. Slowly the divided waters closed again, and the three fell back into their old life. But the touch of sorrow drew them closer; and, though invisible, a beloved presence still moved among them, a familiar voice still spoke to them in the silence of their softened hearts. Thus the soil was made ready, and in the depth of winter the good seed was sown, was watered with many tears, and soon sprang up green with the promise of a harvest for their after years.

Di and Laura consoled themselves with their favorite employments, unconscious that Nan was growing paler, thinner, and more silent, as the weeks went by, till one day she dropped quietly before them, and it suddenly became manifest that she was utterly worn out with many cares and the secret suffering of a tender heart bereft of the paternal love which had been its strength and stay.

"I'm only tired, dear girls. Don't be troubled, for I shall be up to-morrow," she said cheerily, as she looked into the anxious faces bending over her.

But the weariness was of many months' growth, and it was weeks before that "to-morrow" came.

Laura installed herself as nurse, and her devotion was repaid four-fold; for, sitting at her sister's bedside, she learned a finer art than that she had left. Her eye grew clear to see the beauty of a self-denying life, and in the depths of Nan's meek nature she found the strong, sweet virtues that made her what she was.

Then remembering that these womanly attributes were a bride's best dowry, Laura gave herself to their attainment, that she might become to another household the blessing Nan had been to her own; and turning from the worship of the goddess Beauty, she gave her hand to that humbler and more human teacher, Duty,—learning her lessons with a willing heart, for Philip's sake.

Di corked her inkstand, locked her bookcase, and went at housework as if it were a five-barred gate; of course she missed the leap, but scrambled bravely through, and appeared much sobered by the exercise. Sally had departed to sit under a vine and fig-tree of her own, so Di had undisputed sway; but if dish-pans and dusters had tongues, direful would have been the history of that crusade against frost and fire, indolence and inexperience. But they were dumb, and Di scorned to complain, though her struggles were pathetic to behold, and her sisters went through a series of messes equal to a course of "Prince Benreddin's" pep-

perly tarts. Reality turned Romance out of doors; for, unlike her favorite heroines in satin and tears, or helmet and shield, Di met her fate in a big checked apron and dust-cap, wonderful to see; yet she wielded her broom as stoutly as "Moll Pitcher" shouldered her gun, and marched to her daily martyrdom in the kitchen with as heroic a heart as the "Maid of Orleans" took to her stake.

Mind won the victory over matter in the end, and Di was better all her days for the tribulations and the triumphs of that time; for she drowned her idle fancies in her wash-tub, made burnt-offerings of selfishness and pride, and learned the worth of self-denial, as she sang with happy voice among the pots and kettles of her conquered realm.

Nan thought of John, and in the stillness of her sleepless nights prayed Heaven to keep him safe, and make her worthy to receive and strong enough to bear the blessedness or pain of love.

Snow fell without, and keen winds howled among the leafless elms, but "herbs of grace" were blooming beautifully in the sunshine of sincere endeavor, and this dreariest season proved the most fruitful of the year; for love taught Laura, labor chastened Di, and patience fitted Nan for the blessing of her life.

Nature, that stillest, yet most diligent of housewives, began at last that "spring-cleaning" which she makes so pleasant that none find the heart to grumble as they do when other matrons set their premises a-dust. Her handmaids, wind and rain and sun, swept, washed, and garnished busily, green carpets were unrolled, apple-boughs were hung with draperies of bloom, and dandelions, pet nurslings of the year, came out to play upon the sward.

From the South returned that opera troupe whose manager is never in despair, whose tenor never sulks, whose prima donna never fails, and in the orchard *bonâ fide* matinées were held, to which buttercups and clovers crowded in their prettiest spring hats, and verdant young blades twinkled their dewy lor-

nettes, as they bowed and made way for the floral belles.

May was bidding June good-morrow, and the roses were just dreaming that it was almost time to wake, when John came again into the quiet room which now seemed the Eden that contained his Eve. Of course there was a jubilee; but something seemed to have befallen the whole group, for never had they all appeared in such odd frames of mind. John was restless, and wore an excited look, most unlike his usual serenity of aspect.

Nan the cheerful had fallen into a well of silence and was not to be extracted by any hydraulic power, though she smiled like the June sky over her head. Di's peculiarities were out in full force, and she looked as if she would go off like a torpedo at a touch; but through all her moods there was a half-triumphant, half-remorseful expression in the glance she fixed on John. And Laura, once so silent, now sang like a blackbird, as she flitted to and fro; but her fitful song was always, "Philip, my king."

John felt that there had come a change upon the three, and silently divined whose unconscious influence had wrought the miracle. The embargo was off his tongue, and he was in a fever to ask that question which brings a flutter to the stoutest heart; but though the "man" had come, the "hour" had not. So, by way of steadying his nerves, he paced the room, pausing often to take notes of his companions, and each pause seemed to increase his wonder and content.

He looked at Nan. She was in her usual place, the rigid little chair she loved, because it once was large enough to hold a curly-headed playmate and herself. The old work-basket was at her side, and the battered thimble busily at work; but her lips wore a smile they had never worn before, the color of the unblown roses touched her cheek, and her downcast eyes were full of light.

He looked at Di. The inevitable book was on her knee, but its leaves were uncut; the strong-minded knob of hair still asserted its supremacy aloft upon her

head, and the triangular jacket still adorned her shoulders in defiance of all fashions, past, present, or to come; but the expression of her brown countenance had grown softer, her tongue had found a curb, and in her hand lay a card with "Potts, Kettel, & Co." inscribed thereon, which she regarded with never a scornful word for the "Co."

He looked at Laura. She was before her easel, as of old; but the pale nun had given place to a blooming girl, who sang at her work, which was no prim Pallas, but a Clytie turning her human face to meet the sun.

"John, what are you thinking of?"

He stirred as if Di's voice had disturbed his fancy at some pleasant pastime, but answered with his usual sincerity, —

"I was thinking of a certain dear old fairy tale called 'Cinderella.'"

"Oh!" said Di; and her "Oh" was a most impressive monosyllable. "I see the meaning of your smile now; and though the application of the story is not very complimentary to all parties concerned, it is very just and very true."

She paused a moment, then went on with softened voice and earnest mien: —

"You think I am a blind and selfish creature. So I am, but not so blind and selfish as I have been; for many tears have cleared my eyes, and much sincere regret has made me humbler than I was. I have found a better book than any father's library can give me, and I have read it with a love and admiration that grew stronger as I turned the leaves. Henceforth I take it for my guide and gospel, and, looking back upon the selfish and neglectful past, can only say, Heaven bless your dear heart, Nan!"

Laura echoed Di's last words; for, with eyes as full of tenderness, she looked down upon the sister she had lately learned to know, saying, warnly, —

"Yes, 'Heaven bless your dear heart, Nan!' I never can forget all you have been to me; and when I am far away with Philip, there will always be one countenance more beautiful to me than any pictured face I may discover, there will be

one place more dear to me than Rome. The face will be yours, Nan, — always so patient, always so serene; and the dearer place will be this home of ours, which you have made so pleasant to me all these years by kindnesses as numberless and noiseless as the drops of dew."

"Dear girls, what have I ever done, that you should love me so?" cried Nan, with happy wonderment, as the tall heads, black and golden, bent to meet the lowly brown one, and her sisters' mute lips answered her.

Then Laura looked up, saying, playfully, —

"Here are the good and wicked sisters; — where shall we find the Prince?"

"There!" cried Di, pointing to John; and then her secret went off like a rocket; for, with her old impetuosity, she said, —

"I have found you out, John, and am ashamed to look you in the face, remembering the past. Girls, you know, when father died, John sent us money, which he said Mr. Owen had long owed us and had paid at last? It was a kind lie, John, and a generous thing to do; for we needed it, but never would have taken it as a gift. I know you meant that we should never find this out; but yesterday I met Mr. Owen returning from the West, and when I thanked him for a piece of justice we had not expected of him, he gruffly told me he had never paid the debt, never meant to pay it, for it was outlawed, and we could not claim a farthing. John, I have laughed at you, thought you stupid, treated you unkindly; but I know you now, and never shall forget the lesson you have taught me. I am proud as Lucifer, but I ask you to forgive me; and I seal my real repentance so — and so."

With tragic countenance, Di rushed across the room, threw both arms about the astonished young man's neck and dropped an energetic kiss upon his cheek. There was a momentary silence; for Di finely illustrated her strong-minded theories by crying like the weakest of her sex. Laura, with "the ruling passion

strong in death," still tried to draw, but broke her pet crayon, and endowed her Clytie with a supplementary orb, owing to the dimness of her own. And Nan sat with drooping eyes, that shone upon her work, thinking with tender pride; —

"They know him now, and love him for his generous heart."

Di spoke first, rallying to her colors, though a little daunted by her loss of self-control.

"Don't laugh, John, — I couldn't help it; and don't think I'm not sincere, for I am, — I am; and I will prove it by growing good enough to be your friend. That debt must all be paid, and I shall do it; for I'll turn my books and pen to some account, and write stories full of dear old souls like you and Nan; and some one, I know, will like and buy them, though they are not 'works of Shakspeare.' I've thought of this before, have felt I had the power in me; *now* I have the motive, and *now* I'll do it."

If Di had proposed to translate the Koran, or build a new Saint Paul's, there would have been many chances of success; for, once moved, her will, like a battering-ram, would knock down the obstacles her wits could not surmount. John believed in her most heartily, and showed it, as he answered, looking into her resolute face, —

"I know you will, and yet make us very proud of our 'Chaos,' Di. Let the money lie, and when you have made a fortune, I'll claim it with enormous interest; but, believe me, I feel already doubly repaid by the esteem so generously confessed, so cordially bestowed, and can only say, as we used to years ago, — 'Now let's forgive and so forget.'"

But proud Di would not let him add to her obligation, even by returning her impetuous salute; she slipped away, and, shaking off the last drops, answered with a curious mixture of old freedom and new respect, —

"No more sentiment, please, John. We know each other now; and when I find a friend, I never let him go. We have smoked the pipe of peace; so let us

go back to our wigwams and bury the feud. Where were we when I lost my head? and what were we talking about?"

"Cinderella and the Prince."

As he spoke, John's eye kindled, and, turning, he looked down at Nan, who sat diligently ornamenting with microscopic stitches a great patch going on, the wrong side out.

"Yes, — so we were; and now taking pussy for the godmother, the characters of the story are well personated, — all but the slipper," said Di, laughing, as she thought of the many times they had played it together years ago.

A sudden movement stirred John's frame, a sudden purpose shone in his countenance, and a sudden change befell his voice, as he said, producing from some hiding-place a little worn-out shoe, —

"I can supply the slipper; — who will try it first?"

Di's black eyes opened wide, as they fell on the familiar object; then her romance-loving nature saw the whole plot of that drama which needs but two to act it. A great delight flushed up into her face, as she promptly took her cue, saying, —

"No need for us to try it, Laura; for it wouldn't fit us, if our feet were as small as Chinese dolls'; — our parts are played out; therefore 'Exeunt wicked sisters to the music of the wedding-bells.'" And pouncing upon the dismayed artist, she swept her out and closed the door with a triumphant bang.

John went to Nan, and, dropping on his knee as reverently as the herald of the fairy tale, he asked, still smiling, but with lips grown tremulous, —

"Will Cinderella try the little shoe, and — if it fits — go with the Prince?"

But Nan only covered up her face, weeping happy tears, while all the weary work strayed down upon the floor, as if it knew her holiday had come.

John drew the hidden face still closer, and while she listened to his eager words, Nan heard the beating of the strong man's heart, and knew it spoke the truth.

"Nan, I promised mother to be silent

till I was sure I loved you wholly,—sure that the knowledge would give no pain when I should tell it, as I am trying to tell it now. This little shoe has been my comforter through this long year, and I have kept it as other lovers keep their fairer favors. It has been a talisman more eloquent to me than flower or ring; for, when I saw how worn it was, I always thought of the willing feet that came and went for others' comfort all day long; when I saw the little bow you tied, I always thought of the hands so diligent in serving any one who knew a want or felt a pain; and when I recalled

the gentle creature who had worn it last, I always saw her patient, tender, and devout,—and tried to grow more worthy of her, that I might one day dare to ask if she would walk beside me all my life and be my 'angel in the house.' Will you, dear? Believe me, you shall never know a weariness or grief I have the power to shield you from."

Then Nan, as simple in her love as in her life, laid her arms about his neck, her happy face against his own, and answered softly,—

"Oh, John, I never can be sad or tired any more!"

THE OLD DAYS AND THE NEW.

A POET came singing along the vale,—
 "Ah, well-a-day for the dear old days!
 They come no more as they did of yore
 By the flowing river of Aise."

He piped through the meadow, he piped through the grove,—
 "Ah, well-a-day for the good old days!
 They have all gone by, and I sit and sigh
 By the flowing river of Aise.

"Knights and ladies and shields and swords,—
 Ah, well-a-day for the grand old days!
 Castles and moats, and the bright steel coats,
 By the flowing river of Aise.

"The lances are shivered, the helmets rust,—
 Ah, well-a-day for the stern old days!
 And the clarion's blast has rung its last,
 By the flowing river of Aise.

"And the warriors that swept to glory and death,—
 Ah, well-a-day for the brave old days!
 They have fought and gone, and I sit here alone
 By the flowing river of Aise.

"The strength of limb and the mettle of heart,—
 Ah, well-a-day for the strong old days!
 They have withered away, mere butterflies' play,
 By the flowing river of Aise.

“The queens of beauty, whose smile was life, —
Ah, well-a-day for the rare old days!
With love and despair in their golden hair,
By the flowing river of Aise.

“They have fittid away from hall and bower, —
Ah, well-a-day for the rich old days!
Like the sun they shone, like the sun they have gone,
By the flowing river of Aise.

“And buried beneath the pall of the past, —
Ah, well-a-day for the proud old days!
Lie valor and worth and the beauty of earth,
By the flowing river of Aise.

“And I sit and sigh by the idle stream, —
Ah, well-a-day for the bright old days!
For nothing remains for the poet's strains
But the flowing river of Aise.”

Then a voice rang out from the oak overhead, —
“Why well-a-day for the old, old days?
The world is the same, if the bard has an aim,
By the flowing river of Aise.

“There's beauty and love and truth and power, —
Cease well-a-day for the old, old days!
The humblest home is worth Greece and Rome,
By the flowing river of Aise.

“There are themes enough for the poet's strains, —
Leave well-a-day for the quaint old days!
Take thine eyes from the ground, look up and around
From the flowing river of Aise.

“To-day is as grand as the centuries past, —
Leave well-a-day for the famed old days!
There are battles to fight, there are troths to plight,
By the flowing river of Aise.

“There are hearts as true to love, to strive, —
No well-a-day for the dark old days!
Go put into type the age that is ripe
By the flowing river of Aise.”

Then the merry Poet piped down the vale, —
“Farewell, farewell to the dead old days!
By day and by night there's music and light
By the flowing river of Aise.”

THE ICEBERG OF TORBAY.

TORBAY.

TORBAY, finely described in a recent novel by the Rev. R. T. S. Lowell, is an arm of the sea, a short strong arm with a slim hand and finger, reaching into the rocky land and touching the water-falls and rapids of a pretty brook. Here is a little village, with Romish and Protestant steeples, and the dwellings of fishermen, with the universal appendages of fishing-houses, boats, and "flakes." One seldom looks upon a hamlet so picturesque and wild. The rocks slope steeply down to the wonderfully clear water. Thousands of poles support half-acres of the spruce-bough shelf, beneath which is a dark, cool region, crossed with foot-paths, and not unfrequently sprinkled and washed by the surf,—a most kindly office on the part of the sea, you will allow, when once you have scented the fish-offal perpetually dropping from the evergreen fish-house above. These little buildings on the flakes are conspicuous features, and look as fresh and wild as if they had just wandered away from the woodlands.

There they stand, on the edge of the lofty pole-shelf, or upon the extreme end of that part of it which runs off frequently over the water like a wharf, an assemblage of huts and halls, bowers and arbors, a curious huddle made of poles and sweet-smelling branches and sheets of birch-bark. A kind of evening haunts these rooms of spruce at noonday, while at night a hanging lamp, like those we see in old pictures of crypts and dungeons, is to the stranger only a kind of buoy by which he is to steer his way through the darkness. To come off then without pitching headlong, and soiling your hands and coat, is the merest chance. Strange! one is continually allured into these piscatory bowers whenever he comes near them. In spite of the chilly, salt air, and the repulsive smells about the tables where they dress

the fish, I have a fancy for these queer structures. Their front door opens upon the sea, and their steps are a mammoth ladder, leading down to the swells and the boats. There is a charm also about fine fishes, fresh from the net and the hook,—the salmon, for example, whose pink and yellow flesh has given a name to one of the most delicate hues of Art or Nature.

THE CLIFFS.

BUT where was the iceberg? We were not a little disappointed when all Torbay was before us, and nothing but dark water to be seen. To our surprise, no one had ever seen or heard of it. It must lie off Flat Rock Harbor, a little bay below, to the north. We agreed with the supposition that the berg must lie below, and made speedy preparations to pursue, by securing the only boat to be had in the village,—a substantial fishing-*barge*, laden rather heavily in the stern with at least a cord of cod-seine, but manned by six stalwart men, a motive power, as it turned out, none too large for the occasion. We embarked at the foot of a fish-house ladder, being carefully handed down by the kind-hearted men, and took our seats forward on the little bow-deck. All ready, they pulled away at their long, ponderous oars with the skill and deliberation of lifelong practice, and we moved out upon the broad, glassy swells of the bay towards the open sea, not indeed with the rapidity of a Yankee club-boat, but with a most agreeable steadiness, and a speed happily fitted for a review of the shores, which, under the afternoon sun, were made brilliant with lights and shadows.

We were presently met by a breeze, which increased the swell, and made it easier to fall in close under the northern shore, a line of stupendous precipices, to which the ocean goes deep home. The

ride beneath these mighty cliffs was by far the finest boat-ride of my life. While they do not equal the rocks of the Saguenay, yet, with all their appendages of extent, structure, complexion, and adjacent sea, they are sufficiently lofty to produce an almost appalling sense of sublimity. The surges lave them at a great height, sliding from angle to angle, and fretting into foam as they slip obliquely along the face of the vast walls. They descend as deeply as two hundred feet, and rise perpendicularly two, three, and four hundred feet from the water. Their stratifications are up and down, and of different shades of light and dark, a ribbed and striped appearance that increases the effect of height, and gives variety and spirit to the surface. At one point, where the rocks advance from the main front, and form a kind of headland, the strata, six and eight feet thick, assume the form of a pyramid,—from a broad base of a hundred yards or more running up to meet in a point. The heart of this vast cone has partly fallen out, and left the resemblance of an enormous tent with cavernous recesses and halls, in which the shades of evening were already lurking, and the surf was sounding mournfully. Occasionally it was musical, pealing forth like the low tones of a great organ with awful solemnity. Now and then, the gloomy silence of a minute was broken by the crash of a billow far within, when the reverberations were like the slamming of great doors.

After passing this grand specimen of the architecture of the sea, there appeared long rocky reaches like Egyptian temples,—old, dead cliffs of yellowish gray, checked off by lines and seams into squares, and having the resemblance, where they have fallen out into the ocean, of doors and windows opening in upon the fresher stone. Presently we came to a break, where there were grassy slopes and crags intermingled, and a flock of goats skipping about, or ruminating in the warm sunshine. A knot of kids—the reckless little creatures—were sporting along the edge of a precipice in a

manner almost painful to witness. The pleasure of leaping from point to point, where a single misstep would have dropped them hundreds of feet, seemed to be in proportion to the danger. The sight of some women, who were after the goats, reminded the boatmen of an accident which occurred here only a few days before: a lad playing about the steep fell into the sea, and was drowned.

We were now close upon the point just behind which we expected to behold the iceberg. The surf was sweeping the black reef that flanked the small cape, in the finest style,—a beautiful dance of breakers of dazzling white and green. As every stroke of the oars shot us forward, and enlarged our view of the field in which the ice was reposing, our hearts fairly throbbed with an excitement of expectation. “There it is!” one exclaimed. An instant revealed the mistake. It was only the next headland in a fog, which unwelcome mist was now coming down upon us from the broad waters, and covering the very tract where the berg was expected to be seen. Farther and farther out the long, strong sweep of the great oars carried us, until the depth of the bay between us and the next headland was in full view. It may appear almost too trifling a matter over which to have had any feeling worth mentioning or remembering, but I shall not soon forget the disappointment, when from the deck of our barge, as it rose and sank on the large swells, we stood up and looked around and saw, that, if the iceberg, over which our very hearts had been beating with delight for twenty-four hours, was anywhere, it was somewhere in the depths of that untoward fog. It might as well have been in the depths of the ocean.

While the pale cloud slept there, there was nothing left for us but to wait patiently where we were, or retreat. We chose the latter. C. gave the word to pull for the settlement at the head of the little bay just mentioned, and so they rounded the breakers on the reef, and we turned away for the second time, when the game was fairly ours. Even the hardy

fishermen, no lovers of "islands-of-ice," as they call them, felt for us, as they read in our looks the disappointment, not to say a little vexation. While on our passage in, we filled a half-hour with questions and discussions about that iceberg.

"We certainly saw it yesterday evening; and a soldier of Signal Hill told us that it had been close in at Torbay for several days. And you, my man there, say that you had a glimpse of it last evening. How happens it to be away just now? Where do you think it is?"

"Indeed, Sir, he must be out in the fog, a mile or over. De'il a bit can a man look after a thing in a fog, more nor into a snow-bank. Maybe, Sir, he's foundered; or he might be gone off to sea, altogether, as they sometimes do."

"Well, this is rather remarkable. Huge as these bergs are, they escape very easily under their old cover. No sooner do we think we have them, than they are gone. No jackal was ever more faithful to his lion, no pilot-fish to his shark, than the fog to its berg. We will run in yonder and inquire about it. We may get the exact bearing, and reach it yet, even in the fog."

THE FISHERMAN'S.

THE wind and sea being in our favor, we soon reached a fishery-ladder, which we now knew very well how to climb, and wound our "dim and perilous way" through the evergreen labyrinth of fish bowers, emerging on the solid rock, and taking the path to the fisherman's house. Here lives and works and wears himself out William Waterland, a deep-voiced, broad-chested, round-shouldered man, dressed, not in cloth of gold, but of oil, with the foxy remnant of a last winter's fur cap clinging to his large, bony head, a little in the style of a piece of turf to a stone. You seldom look into a more kindly, patient face, or into an eye that more directly lets up the light out of a large, warm heart. His countenance is one sober shadow of honest brown, occasionally lighted by a true and guileless

smile. William Waterland has seen the "island-of-ice." "It lies off there, two miles or more, grounded on a bank, in forty fathoms water."

It was nearly six o'clock; and yet, as there were signs of the fog clearing away, we thought it prudent to wait. A dull, long hour passed by, and still the sun was high in the northwest. That heavy cod-seine, a hundred fathoms long, sank the stern of our barge rather deeply, and made it row heavily. For all that, there was time enough yet, if we could only use it. The fog still came in masses from the sea, sweeping across the promontory between us and Torbay, and fading into air nearly as soon as it was over the land. In the mean time, we sat upon the rocks, upon the wood-pile, stood around and talked, looked out into the endless mist, looked at the fishermen's houses, their children, their fowls and dogs. A couple of young women, that might have been teachers of the village school, had there been a school, belles of the place, rather neatly dressed, and with hair nicely combed, tripped shyly by, each with an arm about the other's waist, and very merry until abreast of us, when they were as silent and downcast as if they had been passing by their sovereign queen or the Great Mogul. Their curiosity and timidity combined were quite amusing. We speculated upon the astonishment that would have seized upon their simple, innocent hearts, had they beheld, instead of us, a bevy of our city fashionables in full bloom.

At length we accepted an invitation to walk into the house, and sat, not under the good man's roof, but under his chimney, a species of large funnel, into which nearly one end of the house resolved itself. Here we sat upon some box-like benches before a wood fire, and warmed ourselves, chatting with the family. While we were making ourselves comfortable and agreeable, we made the novel and rather funny discovery of a hen sitting on her nest just under the bench, with her red comb at our fingers' ends. A large griddle hung suspended

in the more smoky regions of the chimney, ready to be lowered for the baking of cakes or frying fish. Having tarred my hand, the fisherman's wife, kind woman, insisted upon washing it herself. After rubbing it with a little grease, she first scratched it with her finger-nail, and then finished with soap and water and a good wiping with a coarse towel. I begged that she would spare herself the trouble, and allow me to help myself. But it was no trouble at all for her, and the greatest pleasure. And what should I know about washing off tar? They were members of the Church of England, and seemed pleased when they found that I was a clergyman of the Episcopal Church. They had a pastor who visited them and others in the village occasionally, and held divine service on Sunday at Torbay, where they attended, going in boats in summer, and over the hills on snow-shoes in the winter. The woman told me, in an undertone, that the family relations were not all agreed in their religious faith, and that they could not stop there any longer, but had gone to "America," which they liked much better. It was a hard country, any way, no matter whether one were Protestant or Papist. Three months were all their summer, and nearly all their time for getting ready for the long, cold winter. To be sure, they had codfish and potatoes, flour and butter, tea and sugar; but then it took a deal of hard work to make ends meet. The winter was not as cold as we thought, perhaps; but then it was so long and snowy! The snow lay five, six, and seven feet deep. Wood was a great trouble. There was a plenty of it, but they could not keep cattle or horses to draw it home. Dogs were their only teams, and they could fetch but small loads at a time. In the mean while, a chubby little boy, with cheeks like a red apple, had ventured from behind his young mother, where he had kept dodging as she moved about the house, and edged himself up near enough to be patted on the head, and rewarded for his little liberties with a half-dime.

THE ICEBERG.

THE sunshine was now streaming in at a bit of a window, and I went out to see what prospect of success. C., who had left some little time before, was nowhere to be seen. The fog seemed to be in sufficient motion to disclose the berg down some of the avenues of clear air that were opened occasionally. They all ended, however, with fog instead of ice. I made it convenient to walk to the boat, and pocket a few cakes, brought along as a kind of scattering lunch. C. was descried, at length, climbing the broad, rocky ridge, the eastern point of which we had doubled on our passage from Torbay. Making haste up the crags by a short cut, I joined him on the verge of the promontory pretty well heated and out of breath. The effort was richly rewarded. The mist was dispersing in the sunny air around us; the ocean was clearing off; the surge was breaking with a pleasant sound below. At the foot of the precipice were four or five whales, from thirty to fifty feet in length, apparently. We could have tossed a pebble upon them. At times abreast, and then in single file, or disorderly, round and round they went, now rising with a puff followed by a wisp of vapor, then plunging into the deep again. There was something in their large movements very imposing, and yet very graceless. There seemed to be no muscular effort, no exertion of any force from within, and no more flexibility in their motions than if they had been built of timber. They appeared to move very much as a wooden whale might be supposed to move down a mighty rapid, rolling and plunging and borne along irresistibly by the current. As they rose, we could see their mouths occasionally, and the lighter colors of the skin below. As they went under, their huge, black tails, great winged things not unlike the screw-wheel of a propeller, tipped up above the waves. Now and then one would give the water a good round slap, the noise of which smote sharply upon the ear, like the crack of a pistol in an

alley. It was a novel sight to watch them in their play, or labor, rather; for they were feeding upon the caplin, pretty little fishes that swarm along these shores at this particular season. We could track them beneath the surface about as well as upon it. In the sunshine, and in contrast with the fog, the sea was a very dark blue or deep purple. Above the whales the water was green, a darker green as they descended, a lighter green as they came up. Large oval spots of changeable green water, moving silently and shadow-like along, in strong contrast with the surrounding dark, marked the places where the monsters were gliding below. When their broad, blackish backs were above the waves, there was frequently a ring or ruffle of snowy surf, formed by the breaking of the swell around the edges of the fish. The review of whales, the only review we had witnessed in Her Majesty's dominions, was, on the whole, an imposing spectacle. We turned from it to witness another of a more brilliant character.

To the north and east, the ocean, dark and sparkling, was, by the magic action of the wind, entirely clear of fog; and there, about two miles distant, stood revealed the iceberg in all its cold and solitary glory. It was of a greenish white, and of the Greek-temple form, seeming to be over a hundred feet high. We gazed some minutes with silent delight on the splendid and impressive object, and then hastened down to the boat, and pulled away with all speed to reach it, if possible, before the fog should cover it again, and in time for C. to paint it. The moderation of the oarsmen and the slowness of our progress were quite provoking. I watched the sun, the distant fog, the wind and waves, the increasing motion of the boat, and the seemingly retreating berg. A good half-hour's toil had carried us into broad waters, and yet, to all appearance, very little nearer. The wind was freshening from the south, the sea was rising, thin mists, a species of scout from the main body of the fog lying off in the east, were

scudding across our track. James Goss, our captain, threw out a hint of a little difficulty in getting back. But Yankee energy was indomitable. C. quietly arranged his painting-apparatus, and I, wrapped in my cloak more snugly, crept out forward on the little deck, a sort of look-out. To be honest, I began to wish ourselves on our way back, as the black, angry-looking swells chased us up, and flung the foam upon the bow and stern. All at once, whole squadrons of fog swept up, and swamped the whole of us, boat and berg, in their thin, white obscurity. For a moment we thought ourselves foiled again. But still the word was, "On!" And on they pulled, the hard-handed fishermen, now flushed and moist with rowing. Again the ice was visible, but dimly, in his misty drapery. There was no time to be lost. Now, or not at all. And so C. began. For half an hour, pausing occasionally for passing flocks of fog, he plied the brush with a rapidity not usual, and under disadvantages that would have mastered a less experienced hand. We were getting close down upon the berg, and in fearfully rough water. In their curiosity to catch glimpses of the advancing sketch, the men pulled with little regularity, and trimmed the boat very badly. We were rolling frightfully to a landsman. C. begged of them to keep their seats, and hold the barge just there as near as possible. To amuse them, I passed an opera-glass around among them, with which they examined the iceberg and the coast. They turned out to be excellent good fellows, and entered into the spirit of the thing in a way that pleased us. I am sure they would have held on willingly till dark, if C. had only said the word, so much interest did they feel in the attempt to paint the "island-of-ice." The hope was to linger about it until sunset, for its colors, lights, and shadows. That, however, was suddenly extinguished. Heavy fog came on, and we retreated, not with the satisfaction of a conquest, nor with the disappointment of a defeat, but cheered with the hope of complete success, perhaps the next day,

when C. thought that we could return upon our game in a little steamer, and so secure it beyond the possibility of escape. The seine was hauled from the stern to the centre of the barge, and the men pulled away for Torbay, a long six miles, rough and chilly. For my part, I was trembling with cold, and found it necessary to lend a hand at the oars, an exercise which soon made the weather feel several degrees warmer, and rendered me quite comfortable. After a little the wind lulled, the fog dispersed again, and the iceberg seemed to contemplate our slow departure with complacent serenity. We regretted that the hour forbade a return. It would have been pleasant to play around that Parthenon of the sea in the twilight. The best that was left us was to look back and watch the effects of light, which were wonderfully fine, and had the charm of entire novelty. The last view was the very finest. All the east front was a most tender blue; the fissures on the southern face, from which we were rowing directly away, were glittering green; the western front glowed in the yellow sunlight; around were the dark waters, and above one of the most beautiful of skies.

We fell under the land presently, and passed near the northern cape of Flat-Rock Bay, a grand headland of red sandstone, a vast and dome-like pile, fleeced at the summit with green turf and shrubs of fir. The sun, at last, was really setting. There was the old magnificence of the king of day, — airy deeps of ineffable blue and pearl, stained with scarlets and crimsons, and striped with living gold. A blaze of white light, deepening into the richest orange, crowned the distant ridge behind which the sun was vanishing. A vapory splendor, rose-color and purple, was dissolving in the atmosphere; and every wave of the ocean, a dark violet, nearly black, was “a flash of golden fire.” Bathed with this almost supernatural glory, the headland, in itself richly complexioned with red, brown, and green, was at once a spectacle of singular gran-

deur and solemnity. I have no remembrance of more brilliant effects of light and color. The view filled us with emotions of delight. We shot from beneath the great cliff into Flat-Rock Bay, rounding, at length, the breakers and the cape into the smoother waters of Torbay. As the oars dipped regularly into the polished swells, reflecting the heavens and the wonderful shores, all lapsed into silence. In the gloom of evening the rocks assumed an unusual height and sublimity. Gliding quietly below them, we were saluted every now and then by the billows thundering in some adjacent cavern. The song of the sea in its old halls rung out in a style quite unearthly. The slamming of the mighty doors seemed far off in the chambers of the cliff, and the echoes trembled themselves away, muffled into stillness by the stupendous masses.

Thus ended our first real hunting of an iceberg. When we landed, we were thoroughly chilled. Our man was waiting with his wagon, and so was a little supper in a house near by, which we enjoyed with an appetite that assumed several phases of keenness as we proceeded. There was a tower of cold roast beef, flanked by bread and butter and bowls of hot tea. The whole was carried silently, without remark, at the point of knife and fork. We were a forlorn hope of two, and fell to, winning the victory in the very breach. We drove back over the fine gravel road at a round trot, watching the last edge of day in the northwest and north, where it no sooner fades than it buds again to bloom into morning. We lived the new iceberg-experience all over again, and planned for the morrow. The stars gradually came out of the cool, clear heavens, until they filled them with their sparkling multitudes. For every star we seemed to have a lively and pleasurable thought, which came out and ran among our talk, a thread of light. When we looked at the hour, as we sat fresh and wakeful, warming at our English inn in St. John's, it was after midnight.

THEODORE PARKER.

“Sir Launcelot! ther thou lvest; thou were never matched of none earthly knights hands; thou were the truest freende to thy lover that ever bestrood horse; and thou were the kindest man that ever strooke with sword; and thou were the sternest knight to thy mortall foe that ever put spere in the rest.”

La Morte d'Arthur.

IN the year 1828 there was a young man of eighteen at work upon a farm in Lexington, performing bodily labor to the extent of twenty hours in a day sometimes, and that for several days together; and at other times studying intensely when work was less pressing. Thirty years after, that same man sat in the richest private library in Boston, working habitually from twelve to seventeen hours a day in severer toil. The interval was crowded with labors, with acquisitions, with reproaches, with victories, with honors; and he who experienced all this died exhausted at the end of it, less than fifty years old, but looking seventy. That man was Theodore Parker.

The time is far distant when out of a hundred different statements of contemporaries some calm biographer will extract sufficient materials for a true picture of the man; and meanwhile all that each can do is to give fearlessly his own honest impressions, and so tempt others to give theirs. Of the multitude of different photographers, each perchance may catch some one trait without which the whole portraiture would have remained incomplete; and the time to secure this is now, while his features are fresh in our minds. It is a daring effort, but it needs to be made.

Yet Theodore Parker was so strong and self-sufficing upon his own ground, he needed so little from any other, while giving so freely to all, that one would hardly venture to add anything to the autobiographies he has left, but for the high example he set of fearlessness in dealing with the dead. There may be some whose fame is so ill-established, that one shrinks from speaking of them precisely as one saw them; but this man's

place is secure, and that friend best praises him who paints him just as he seemed. To depict him as he *was* must be the work of many men, and no single observer, however intimate, need attempt it.

The first thing that strikes an observer, in listening to the words of public and private feeling elicited by his departure, is the predominance in them all of the sentiment of love. His services, his speculations, his contests, his copious eloquence, his many languages, these come in as secondary things, but the predominant testimony is emotional. Men mourn the friend even more than the warrior. No fragile and lovely girl, fading untimely into heaven, was ever more passionately beloved than this white-haired and world-weary man. As he sat in his library, during his lifetime, he was not only the awakener of a thousand intellects, but the centre of a thousand hearts; — he furnished the natural home for every foreign refugee, every hunted slave, every stray thinker, every vexed and sorrowing woman. And never was there one of these who went away un comforted, and from every part of this broad nation their scattered hands now fling roses upon his grave.

This immense debt of gratitude was not bought by any mere isolated acts of virtue; indeed, it never is so bought; love never is won but by a nobleness which pervades the life. In the midst of his greatest cares there never was a moment when he was not all too generous of his time, his wisdom, and his money. Borne down by the accumulation of labors, grudging, as a student grudges, the precious hour that once lost can never be won back, he yet was always holding himself at the call of some poor criminal

at the Police Office, or some sick girl in a suburban town, not of his recognized parish perhaps, but longing for the ministry of the only preacher who had touched her soul. Not a mere wholesale reformer, he wore out his life by retailing its great influences to the poorest comer. Not generous in money only, — though the readiness of his beneficence in that direction had few equals, — he always hastened past that minor bestowal to ask if there were not some other added gift possible, some personal service or correspondence, some life-blood, in short, to be lavished in some other form, to eke out the already liberal donation of dollars.

There is an impression that he was unforgiving. Unforgetting he certainly was; for he had no power of forgetfulness, whether for good or evil. He had none of that convenient oblivion which in softer natures covers sin and saintliness with one common, careless pall. So long as a man persisted in a wrong attitude before God or man, there was no day so laborious or exhausting, no night so long or drowsy, but Theodore Parker's unsleeping memory stood on guard full-armed, ready to do battle at a moment's warning. This is generally known; but what may not be known so widely is, that, the moment the adversary lowered his spear, were it for only an inch or an instant, that moment Theodore Parker's weapons were down and his arms open. Make but the slightest concession, give him but the least excuse to love you, and never was there seen such promptness in forgiving. His friends found it sometimes harder to justify his mildness than his severity. I confess that I, with others, have often felt inclined to criticize a certain caustic tone of his, in private talk, when the name of an offender was alluded to; but I have also felt almost indignant at his lenient good-nature to that very person, let him once show the smallest symptom of contrition, or seek, even in the clumsiest way; or for the most selfish purpose, to disarm his generous antagonist. His forgiveness in

such cases was more exuberant than his wrath had ever been.

It is inevitable, in describing him, to characterize his life first by its quantity. He belonged to the true race of the giants of learning; he took in knowledge at every pore, and his desires were insatiable. Not, perhaps, precocious in boyhood, — for it is not precocity to begin Latin at ten and Greek at eleven, to enter the Freshman class at twenty and the professional school at twenty-three, — he was equalled by few students in the tremendous rate at which he pursued every study, when once begun. With strong body and great constitutional industry, always acquiring and never forgetting, he was doubtless at the time of his death the most variously learned of living Americans, as well as one of the most prolific of orators and writers.

Why did Theodore Parker die? He died prematurely worn out through this enormous activity, — a warning, as well as an example. To all appeals for moderation, during the latter years of his life, he had but one answer, — that he had six generations of long-lived farmers behind him, and had their strength to draw upon. All his physical habits, except in this respect, were unexceptionable: he was abstemious in diet, but not ascetic, kept no unwholesome hours, tried no dangerous experiments, committed no excesses. But there is no man who can habitually study from twelve to seventeen hours a day (his friend Mr. Clarke contracts it to "from six to twelve," but I have Mr. Parker's own statement of the fact) without ultimate self-destruction. Nor was this the practice during his period of health alone, but it was pushed to the last moment: he continued in the pulpit long after a withdrawal was peremptorily prescribed for him; and when forbidden to leave home for lecturing, during the winter of 1858, he straightway prepared the most laborious literary works of his life, for delivery as lectures in the Fraternity Course at Boston.

He worked thus, not from ambition, nor altogether from principle, but from an

immense craving for mental labor, which had become second nature to him. His great omnivorous, hungry intellect must have constant food, — new languages, new statistics, new historical investigations, new scientific discoveries, new systems of Scriptural exegesis. He did not for a day in the year nor an hour in the day make rest a matter of principle, nor did he ever indulge in it as a pleasure, for he knew no enjoyment so great as labor. Wordsworth's "wise passiveness" was utterly foreign to his nature. Had he been a mere student, this had been less destructive. But to take the standard of study of a German Professor, and superadd to that the separate exhaustions of a Sunday-preacher, a lyceum-lecturer, a radical leader, and a practical philanthropist, was simply to apply half a dozen distinct suicides to the abbreviation of a single life. And, as his younger companions long since assured him, the tendency of his career was not only to kill himself, but them; for each assumed that he must at least attempt what Theodore Parker accomplished.

It is very certain that his career was much shortened by these enormous labors, and it is not certain that its value was increased in a sufficient ratio to compensate for that evil. He justified his incessant winter-lecturing by the fact that the whole country was his parish, though this was not an adequate excuse. But what right had he to deprive himself even of the accustomed summer respite of ordinary preachers, and waste the golden July hours in studying Slavonic dialects? No doubt his work in the world was greatly aided both by the fact and the fame of learning, and, as he himself somewhat disdainfully said, the knowledge of Greek and Hebrew was "a convenience" in theological discussions; but, after all, his popular power did not mainly depend on his mastery of twenty languages, but of one. Theodore Parker's learning was undoubtedly a valuable possession to the community, but it was not worth the price of Theodore Parker's life.

"Strive constantly to concentrate your-

self," said the laborious Goethe, "never dissipate your powers; incessant activity, of whatever kind, leads finally to bankruptcy." But Theodore Parker's whole endeavor was to multiply his channels, and he exhausted his life in the effort to do all men's work. He was a hard man to relieve, to help, or to coöperate with. Thus, the "Massachusetts Quarterly Review" began with quite a promising corps of contributors; but when it appeared that its editor, if left alone, would willingly undertake all the articles, — science, history, literature, everything, — of course the others yielded to inertia and dropped away. So, some years later, when some of us met at his room to consult on a cheap series of popular theological works, he himself was so rich in his own private plans that all the rest were impoverished; nothing could be named but he had been planning just that for years, and should by-and-by get leisure for it, and there really was not enough left to call out the energies of any one else. Not from any petty egotism, but simply from inordinate activity, he stood ready to take all the parts.

In the same way he distanced everybody; every companion-scholar found soon that it was impossible to keep pace with one who was always accumulating and losing nothing. Most students find it necessary to be constantly forgetting some things to make room for later arrivals; but the peculiarity of his memory was that he let nothing go. I have more than once heard him give a minute analysis of the contents of some dull book read twenty years before, and have afterwards found the statement correct and exhaustive. His great library, — the only private library I have ever seen which reminded one of the Astor, — although latterly collected more for public than personal uses, was one which no other man in the nation, probably, had sufficient bibliographical knowledge single-handed to select, and we have very few men capable of fully appreciating its scholarly value, as it stands. It seems as if its possessor, putting all his practical and

popular side into his eloquence and action, had indemnified himself by investing all his scholarship in a library of which less than a quarter of the books were in the English language.

All unusual learning, however, brings with it the suspicion of superficiality; and in this country, where, as Mr. Parker himself said, "every one gets a mouthful of education, but scarce one a full meal,"—where every one who makes a Latin quotation is styled "a ripe scholar,"—it is sometimes difficult to distinguish the true from the counterfeit. It is, however, possible to apply some tests. I remember, for instance, that one of the few undoubted classical scholars, in the old-fashioned sense, whom New England has seen,—the late John Glen King of Salem,—while speaking with very limited respect of the acquirements of Rufus Choate in this direction, and with utter contempt of those of Daniel Webster, always became enthusiastic on coming to Theodore Parker. "He is the only man," said Mr. King more than once to the writer, "with whom I can sit down and seriously discuss a disputed reading and find him familiar with all that has been written upon it." Yet Greek and Latin were only the preliminaries of Mr. Parker's scholarship.

I know, for one,—and there are many who will bear the same testimony,—that I never went to Mr. Parker to talk over a subject which I had just made a speciality, without finding that on that particular matter he happened to know, without any special investigation, more than I did. This extended beyond books, sometimes stretching into things where his questioner's opportunities of knowledge had seemed considerably greater,—as, for instance, in points connected with the habits of our native animals and the phenomena of out-door Nature. Such were his wonderful quickness and his infallible memory, that glimpses of these things did for him the work of years. But, of course, it was in the world of books that this wonderful superiority was chiefly seen, and the following example

may serve as one of the most striking among many.

It happened to me, some years since, in the course of some historical inquiries, to wish for fuller information in regard to the barbarous feudal codes of the Middle Ages,—as the Salic, Burgundian, and Ripuarian,—before the time of Charlemagne. The common historians, even Hallam, gave no very satisfactory information and referred to no very available books; and supposing it to be a matter of which every well-read lawyer would at least know something, I asked help of the most scholarly member of that profession within my reach. He regretted his inability to give me any aid, but referred me to a friend of his, who was soon to visit him, a young man, who was already eminent for legal learning. The friend soon arrived, but owned, with some regret, that he had paid no attention to that particular subject, and did not even know what books to refer to; but he would at least ascertain what they were, and let me know. (N. B. I have never heard from him since.) Stimulated by ill-success, I aimed higher, and struck at the Supreme Bench of a certain State, breaking in on the mighty repose of His Honor with the name of Charlemagne. "Charlemagne?" responded my lord judge, rubbing his burly brow,— "Charlemagne lived, I think, in the sixth century?" Dismayed, I retreated, with little further inquiry; and sure of one man, at least, to whom law meant also history and literature, I took refuge with Charles Sumner. That accomplished scholar, himself for once at fault, could only frankly advise me to do at last what I ought to have done at first,—to apply to Theodore Parker. I did so. "Go," replied he instantly, "to alcove twenty-four, shelf one hundred and thirteen, of the College Library at Cambridge, and you will find the information you need in a thick quarto, bound in vellum, and lettered 'Potgiesser de Statu Servorum.'" I straightway sent for Potgiesser, and found my fortune made. It was one of those patient old German treatises which cost the labor of

one man's life to compile and another's to exhaust, and I had no reason to suppose that any reader had disturbed its repose until that unwearied industry had explored the library.

Amid such multiplicity of details he must sometimes have made mistakes, and with his great quickness of apprehension he sometimes formed hasty conclusions. But no one has a right to say that his great acquirements were bought by any habitual sacrifice of thoroughness. To say that they sometimes impaired the quality of his thought would undoubtedly be more just; and this is a serious charge to bring. Learning is not accumulation, but assimilation; every man's real acquirements must pass into his own organization, and undue or hasty nutrition does no good. The most priceless knowledge is not worth the smallest impairing of the quality of the thinking. The scholar cannot afford, any more than the farmer, to lavish his strength in clearing more land than he can cultivate; and Theodore Parker was compelled by the natural limits of time and strength to let vast tracts lie fallow, and to miss something of the natural resources of the soil. One sometimes wished that he had studied less and dreamed more,—for less encyclopedic information, and more of his own rich brain.

But it was in popularizing thought and knowledge that his great and wonderful power lay. Not an original thinker, in the same sense with Emerson, he yet translated for tens of thousands that which Emerson spoke to hundreds only. No matter who had been heard on any subject, the great mass of intelligent, "progressive" New-England thinkers waited to hear the thing summed up by Theodore Parker. This popular interest went far beyond the circle of his avowed sympathizers; he might be a heretic, but nobody could deny that he was a marksman. No matter how well others seemed to have hit the target, his shot was the triumphant one, at last. Thinkers might find no new thought in the new discourse, leaders of action no new plan, yet, after

all that had been said and done, his was the statement that told upon the community. He knew this power of his, and had analyzed some of the methods by which he attained it, though, after all, the best part was an unconscious and magnetic faculty. But he early learned, so he once told me, that the New-England people dearly love two things,—a philosophical arrangement, and a plenty of statistics. To these, therefore, he treated them thoroughly; in some of his "Ten Sermons" the demand made upon the systematizing power of his audience was really formidable; and I have always remembered a certain lecture of his on the Anglo-Saxons as the most wonderful instance that ever came within my knowledge of the adaptation of solid learning to the popular intellect. Nearly two hours of almost unadorned fact,—for there was far less than usual of relief and illustration,—and yet the lyceum-audience listened to it as if an angel sang to them. So perfect was his sense of purpose and of power, so clear and lucid was his delivery, with such wonderful composure did he lay out, section by section, his historical chart, that he grasped his hearers as absolutely as he grasped his subject: one was compelled to believe that he might read the people the Sanscrit Lexicon, and they would listen with ever fresh delight. Without grace or beauty or melody, his mere elocution was sufficient to produce effects which melody and grace and beauty might have sighed for in vain. And I always felt that he well described his own eloquence while describing Luther's, in one of the most admirably moulded sentences he ever achieved,—“The homely force of Luther, who, in the language of the farm, the shop, the boat, the street, or the nursery, told the high truths that reason or religion taught, and took possession of his audience by a storm of speech, then poured upon them all the riches of his brave plebeian soul, baptizing every head anew,—a man who with the people seemed more mob than they, and with kings the most imperial man.”

Another key to his strong hold upon

the popular mind was to be found in his thorough Americanism of training and sympathy. Surcharged with European learning, he yet remained at heart the Lexington farmer's-boy, and his whole atmosphere was indigenous, not exotic. Not haunted by any of the distrust and over-criticism which are apt to effeminate the American scholar, he plunged deep into the current of hearty national life around him, loved it, trusted it, believed in it; and the combination of this vital faith with such tremendous criticism of public and private sins formed an irresistible power. He could condemn without crushing, — denounce mankind, yet save it from despair. Thus his pulpit became one of the great forces of the nation, like the New York "Tribune." His printed volumes had but a limited circulation, owing to a defective system of publication, which his friends tried in vain to correct; but the circulation of his pamphlet-discourses was very great; he issued them faster and faster, latterly often in pairs, and they instantly spread far and wide. Accordingly he found his listeners everywhere; he could not go so far West but his abundant fame had preceded him; his lecture-room in the remotest places was crowded, and his hotel-chamber also, until late at night. Probably there was no private man in the nation, except, perhaps, Beecher and Greeley, whom personal strangers were so eager to see; while from a transatlantic direction he was sought by visitors to whom the two other names were utterly unknown. Learned men from the continent of Europe always found their way, first or last, to Exeter Place; and it is said that Thackeray, on his voyage to this country, declared that the thing in America which he most desired was to hear Theodore Parker talk.

Indeed, his conversational power was so wonderful that no one could go away from a first interview without astonishment and delight. There are those among us, it may be, more brilliant in anecdote or repartee, more eloquent, more profoundly suggestive; but for the outpouring of

vast floods of various and delightful information, I believe that he could have had no Anglo-Saxon rival, except Macaulay. And in Mr. Parker's case, at least, there was no alloy of conversational arrogance or impatience of opposition. He monopolized, not because he was ever unwilling to hear others, but because they did not care to hear themselves when he was by. The subject made no difference; he could talk on anything. I was once with him in the society of an intelligent Quaker farmer, when the conversation fell on agriculture: the farmer held his own ably for a time; but long after he was drained dry, our wonderful companion still flowed on exhaustless, with accounts of Nova Scotia ploughing and Tennessee hoeing, and all things rural, ancient and modern, good and bad, till it seemed as if the one amusing and interesting theme in the universe were the farm. But it soon proved that this was only one among his thousand departments, and his hearers felt, as was said of old Fuller, as if he had served his time at every trade in town.

But it must now be owned that these astonishing results were bought by some intellectual sacrifices which his nearer friends do not all recognize, but which posterity will mourn. Such a rate of speed is incompatible with the finest literary execution. A delicate literary ear he might have had, perhaps, but he very seldom stopped to cultivate or even indulge it. This neglect was not produced by his frequent habit of extemporaneous speech alone; for it is a singular fact, that Wendell Phillips, who rarely writes a line, yet contrives to give to his hastiest efforts the air of elaborate preparation, while Theodore Parker's most scholarly performances were still stump-speeches. Vigorous, rich, brilliant, copious, they yet seldom afford a sentence which falls in perfect cadence upon the ear; under a show of regular method, they are loose and diffuse, and often have the qualities which he himself attributed to the style of John Quincy Adams,—“disorderly, ill-compacted, and homely to a fault.” He said of Dr. Channing,—“Diffuseness is

the old Adam of the pulpit. There are always two ways of hitting the mark,—one with a single bullet, the other with a shower of small shot: Dr. Channing chose the latter, as most of our pulpit orators have done.” Theodore Parker chose it also.

Perhaps Nature and necessity chose it for him. If not his temperament, at least the circumstances of his position, cut him off from all high literary finish. He created the congregation at the Music Hall, and that congregation, in turn, moulded his whole life. For that great stage his eloquence became inevitably a kind of brilliant scene-painting,—large, fresh, profuse, rapid, showy;—masses of light and shade, wonderful effects, but farewell forever to all finer touches and delicate gradations! No man can write for posterity, while hastily snatching a half-day from a week’s lecturing, during which to prepare a telling Sunday harangue for three thousand people. In the perpetual rush and hurry of his life, he had no time to select, to discriminate, to omit anything, or to mature anything. He had the opportunities, the provocatives, and the drawbacks which make the work and mar the fame of the professional journalist. His intellectual existence, after he left the quiet of West Roxbury, was from hand to mouth. Needing above all men to concentrate himself, he was compelled by his whole position to lead a profuse and miscellaneous life.

All popular orators must necessarily repeat themselves,—preachers chiefly among orators, and Theodore Parker chiefly among preachers. The mere frequency of production makes this inevitable,—a fact which always makes every finely organized intellect, first or last, grow weary of the pulpit. But in his case there were other compulsions. Every Sunday a quarter part of his vast congregation consisted of persons who had never, or scarcely ever, heard him before, and who might never hear him again. Not one of those visitors must go away, therefore, without hearing the great preacher define his position on ev-

ery point,—not theology alone, but all current events and permanent principles, the Presidential nomination or message, the laws of trade, the laws of Congress, woman’s rights, woman’s costume, Boston slave-kidnappers, and Dr. Banbaby,—he must put it all in. His ample discourse must be like an Oriental poem, which begins with the creation of the universe, and includes all subsequent facts incidentally. It is astonishing to look over his published sermons and addresses, and see under how many different names the same stirring speech has been reprinted;—new illustrations, new statistics, and all remoulded with such freshness that the hearer had no suspicions, nor the speaker either,—and yet the same essential thing. Sunday discourse, lyceum lecture, convention speech, it made no difference, he must cover all the points every time. No matter what theme might be announced, the people got the whole latitude and longitude of Theodore Parker, and that was precisely what they wanted. He, more than any other man among us, broke down the traditional non-commitalism of the lecture-room, and oxygenated all the lyceums of the land. He thus multiplied his audience very greatly, while perhaps losing to some degree the power of close logic and of addressing a specific statement to a special point. Yet it seemed as if he could easily leave the lancet to others, grant him only the hammer and the forge.

Ah, but the long centuries, where the reading of books is concerned, set aside all considerations of quantity, of popularity, of immediate influence, and sternly test by quality alone,—judge each author by his most golden sentence, and let all else go. The deeds make the man, but it is the style which makes or dooms the writer. History, which always sends great men in groups, gave us Emerson by whom to test the intellectual qualities of Parker. They coöperated in their work from the beginning, in much the same mutual relation as now; in looking back over the rich volumes of the “Dial,” the reader now passes by the contributions of Parker

to glean every sentence of Emerson's, but we have the latter's authority for the fact that it was the former's articles which originally sold the numbers. Intellectually, the two men form the complement to each other; it is Parker who reaches the mass of the people, but it is probable that all his writings put together have not had so profound an influence on the intellectual leaders of the nation as the single address of Emerson at Divinity Hall.

And it is difficult not to notice, in that essay in which Theodore Parker ventured on higher intellectual ground, perhaps, than anywhere else in his writings, — his critique on Emerson in the "Massachusetts Quarterly," — the indications of this mental disparity. It is in many respects a noble essay, full of fine moral appreciations, bravely generous, admirable in the loyalty of spirit shown towards a superior mind, and all warm with a personal friendship which could find no superior. But so far as literary execution is concerned, the beautiful sentences of Emerson stand out like fragments of carved marble from the rough plaster in which they are imbedded. Nor this alone; but, on drawing near the vestibule of the author's finest thoughts, the critic almost always stops, unable quite to enter their sphere. Subtile beauties puzzle him; the titles of the poems, for instance, giving by delicate allusion the key-note of each, — as "Astræa," "Mithridates," "Hamatreya," and "Étienne de la Boécce," — seem to him the work of "mere caprice"; he pronounces the poem of "Monadnoc" "poor and weak"; he condemns and satirizes the "Wood-notes," and thinks that a pine-tree which should talk like Mr. Emerson's ought to be cut down and cast into the sea.

The same want of fine discrimination was usually visible in his delineations of great men in public life. Immense in accumulation of details, terrible in the justice which held the balance, they yet left one with the feeling, that, after all, the delicate main-springs of character had been missed. Broad contrasts, heaps of

good and evil, almost exaggerated praises, pungent satire, catalogues of sins that seemed pages from some Recording Angel's book, — these were his mighty methods; but for the subtilest analysis, the deepest insight into the mysteries of character, one must look elsewhere. It was still scene-painting, not portraiture; and the same thing which overwhelmed with wonder, when heard in the Music Hall, produced a slight sense of insufficiency, when read in print. It was certainly very great in its way, but not in quite the highest way; it was preliminary work, not final; it was Parker's Webster, not Emerson's Swedenborg or Napoleon.

The same thing was often manifested in his criticisms on current events. The broad truths were stated without fear or favor, the finer points passed over, and the special trait of the particular phase sometimes missed. His sermons on the last revivals, for instance, had an enormous circulation, and told with great force upon those who had not been swept into the movement, and even upon some who had been. The difficulty was that they were just such discourses as he would have preached in the time of Edwards and the "Great Awakening"; and the point which many thought the one astonishing feature of the new excitement, its almost entire omission of the "terrors of the Lord," the far gentler and more winning type of religion which it displayed, and from which it confessedly drew much of its power, this was entirely ignored in Mr. Parker's sermons. He was too hard at work in combating the evangelical theology to recognize its altered phases. Forging lightning-rods against the tempest, he did not see that the height of the storm had passed by.

These are legitimate criticisms to make on Theodore Parker, for he was large enough to merit them. It is only the loftiest trees of which it occurs to us to remark that they do not touch the sky, and a man must comprise a great deal before we complain of him for not comprising everything. But though the closest scrutiny may sometimes find cases where he

failed to see the most subtle and precious truth, it will never discover one where, seeing, he failed to proclaim it, or, proclaiming, failed to give it force and power. He lived his life much as he walked the streets of Boston,— not quite gracefully, nor yet stately, but with quick, strong, solid step, with sagacious eyes wide open, and thrusting his broad shoulders a little forward, as if butting away the throng of evil deeds around him, and scattering whole atmospheres of unwholesome cloud. Wherever he went, there went a glance of sleepless vigilance, an unforgetting memory, a tongue that never faltered, and an arm that never quailed. Not primarily an administrative nor yet a military mind, he yet exerted a positive control over the whole community around him, by sheer mental and moral strength. He mowed down harvests of evil as in his youth he mowed the grass, and all his hours of study were but whetting the scythe.

And for this great work it was not essential that the blade should have a razor's edge. Grant that Parker was not also Emerson; no matter, he was Parker. If ever a man seemed sent into the world to find a certain position, and found

it, he was that man. Occupying a unique sphere of activity, he filled it with such a wealth of success, that there is now no one in the nation whom it would not seem an absurdity to nominate for his place. It takes many instruments to complete the orchestra, but the tones of this organ the Music Hall shall never hear again.

One feels, since he is gone, that he made his great qualities seem so natural and inevitable, we forgot that all did not share them. We forgot the scholar's proverbial reproach of timidity and selfishness, in watching him. While he lived, it seemed a matter of course that the greatest acquirements and the heartiest self-devotion should go together. Can we keep our strength, without the tonic of his example? How petty it now seems to ask for any fine-drawn subtleties of poet or seer in him who gave his life to the cause of the humblest! Life speaks the loudest. We do not ask what Luther said or wrote, but only what he did; and the name of Theodore Parker will not only long outlive his books, but will last far beyond the special occasions out of which he moulded his grand career.

ICARUS.

I.

Io triumphe! Lo, thy certain art,
 My crafty sire, releases us at length!
 False Minos now may knit his baffled brows,
 And in the labyrinth by thee devised
 His brutish horns in angry search may toss
 The Minotaur, — but thou and I are free!
 See where it lies, one dark spot on the breast
 Of plains far-shining in the long-lost day,
 Thy glory and our prison! Either hand
 Crete, with her hoary mountains, olive-clad
 In twinkling silver, 'twixt the vineyard rows,
 Divides the glimmering seas. On Ida's top
 The sun, discovering first an earthly throne,
 Sits down in splendor: lucent vapors rise

From folded glens among the awaking hills,
 Expand their hovering films, and touch, and spread
 In airy planes beneath us, hearths of air
 Whereon the morning burns her hundred fires.

II.

Take thou thy way between the cloud and wave,
 O Dædalus, my father, steering forth
 To friendly Samos, or the Carian shore !
 But me the spaces of the upper heaven
 Attract, the height, the freedom, and the joy.
 For now, from that dark treachery escaped,
 And tasting power which was the lust of youth,
 Whene'er the white blades of the sea-gull's wings
 Flashed round the headland, or the barbéd files
 Of cranes returning clanged across the sky,
 No half-way flight, no errand incomplete
 I purpose. Not, as once in dreams, with pain
 I mount, with fear and huge exertion hold
 Myself a moment, ere the sickening fall
 Breaks in the shock of waking. Launched, at last,
 Uplift on powerful wings, I veer and float
 Past sunlit isles of cloud, that dot with light
 The boundless archipelago of sky.
 I fan the airy silence till it starts
 In rustling whispers, swallowed up as soon ;
 I warm the chilly ether with my breath ;
 I with the beating of my heart make glad
 The desert blue. Have I not raised myself
 Unto this height, and shall I cease to soar ?
 The curious eagles wheel about my path :
 With sharp and questioning eyes they stare at me,
 With harsh, impatient screams they menace me,
 Who, with these vans of cunning workmanship
 Broad-spread, adventure on their high domain, —
 Now mine, as well. Henceforth, ye clamorous birds,
 I claim the azure empire of the air !
 Henceforth I breast the current of the morn,
 Between her crimson shores : a star, henceforth,
 Upon the crawling dwellers of the earth
 My forehead shines. The steam of sacred blood,
 The smoke of burning flesh on altars laid,
 Fumes of the temple-wine, and sprinkled myrrh,
 Shall reach my palate ere they reach the Gods.

III.

Nay, am not I a God ? What other wing,
 If not a God's, could in the rounded sky
 Hang thus in solitary poise ? What need,
 Ye proud Immortals, that my balanced plumes
 Should grow, like yonder eagle's, from the nest ?
 It may be, ere my crafty father's line

Sprang from Erectheus, some artificer,
 Who found you roaming wingless on the hills,
 Naked, asserting godship in the dearth
 Of loftier claimants, fashioned you the same.
 Thence did you seize Olympus; thence your pride
 Compelled the race of men, your slaves, to tear
 The temple from the mountain's marble womb,
 To carve you shapes more beautiful than they,
 To sate your idle nostrils with the reek
 Of gums and spices, heaped on jewelled gold.

IV.

Lo, where Hyperion, through the glowing air
 Approaching, drives! Fresh from his banquet-meats,
 Flushed with Olympian nectar, angrily
 He guides his fourfold span of furious steeds,
 Convoyed by that bold Hour whose ardent torch
 Burns up the dew, toward the narrow beach,
 This long, projecting spit of cloudy gold
 Whereon I wait to greet him when he comes.
 Think not I fear thine anger: this day, thou,
 Lord of the silver bow, shalt bring a guest
 To sit in presence of the equal Gods
 In your high hall: wheel but thy chariot near,
 That I may mount beside thee!

— What is this?

I hear the crackling hiss of singéd plumes!
 The stench of burning feathers stifles me!
 My loins are stung with drops of molten wax!—
 Ai! ai! my ruined vans!— I fall! I die!

Ere the blue noon o'erspanned the bluer strait
 Which parts Icaria from Samos, fell,
 Amid the silent wonder of the air,
 Fell with a shock that startled the still wave,
 A shrivelled wreck of crisp, entangled plumes,
 A head whence eagles' beaks had plucked the eyes,
 And clots of wax, black limbs by eagles torn
 In falling: and a circling eagle screamed
 Around that floating horror of the sea
 Derision, and above Hyperion shone.

WALKER.

I CONFESS to knowledge of a large book bearing the above title,—a title which is no less appropriate for this brief, disrupted biographical memorandum. That I have a right to act as I have done, in adopting it, will presently appear,—as well as that the honored name thus appropriated by me refers neither to the dictionary nor the *filibustero*, both of which articles appear to have been superseded by newer and better things.

At the first flush, Fur would seem to be rather a sultry subject to open either a store or a story with, in these glowing days of a justly incensed thermometer.

And yet there is a fine bracing mountain-air to be drawn from the material, as with a spigot, if you will only favor your mind with a digression from the tangible article to the wild-rose associations in which it is enveloped.

Think of the high, wind-swept ridges, among the clefts of which are the only homesteads of the hardy pioneers by whose agency alone one kind of luxury is kept up to the standard demand for it in the great cities. It might not be so likely a place to get fancy drinks in as Broome Street, certainly, we must admit, as we picture to ourselves some brushy ravine in which the trapper has his irons cunningly set out for the betrayal of the stone-marten and the glossy-backed "fisher-cat,"—but the breeze in it is quite as wholesome as a brandy-smash. The whirr of the sage-hen's wing, as she rises from the fragrant thicket, brings a flavor with it fresher far than that of the mint-julep. It is cheaper than the latter compound, too, and much more conducive to health.

Continuing to indulge our fancy in cool images connected with fur and its finders, we shall see what contrasts will arise. The blue shadow of a cottonwood-tree stretching over a mountain-spring. By the edge of the sparkling water sits, embroidering buckskin, a red-legged squaw, keeper of the wigwam to the ragged

mountain-man who set the traps that caught the martens which furnished the tails that mark so gracefully the number of skins of which the rich banker's wife's *fichu-russe* is composed. Here is a striking contrast, in which extremes meet,—not the martens' tails, but the two men's wives, the banker's and the trapper's, brought into antithetical relation by the simple circumstance of a *fichu-russe*, the material of which was worn in some ravine of the wilderness, mayhap not a twelvemonth since, by a creature faster even than a banker's wife. Great is the hereafter of the marten-cat, whose skin may be looked upon as the soul by which the animal is destined to attain a sort of modified immortality in the Elysian abodes of Wealth and Fashion,—the place where good martens go!

The men through whose intervention eventual felicity is thus secured to the fur-creature are as much a race in themselves as the Gypsies. No genuine type of them ever approaches nearer to the confines of civilization than a frontier settlement beckons him. Old Adams, the bear-tutor, might have been of this type once, but he is adulterated with sawdust and gas-light now, with city cookery and spurious groceries. Many men of French Canadian origin are to be found trading and trapping in the Far West; although, taken in the aggregate, there are no people less given to stirring enterprise than these colonial descendants of the Gaul. The only direction, almost, in which they exhibit any expansive tendency is in the border trade and general adventure business, in which figure the names of many of them conspicuously and with honor. The Chouteaus are of that stock; and of that stock came the late Major Aubry, renowned among the guides and trappers of the southwestern wilderness; and if J. C. Fremont is not a French Canadian by birth, the strong efforts made about the time of the last Presidential election

to establish him as one had at least the effect of determining his Canadian descent.

Pierre La Marche was a Franco-Canadian of the spread-eagle kind referred to. Departing widely from the conservative prejudices of his race, his wandering propensities took him away, at an early age, from the primitive colonial village in which he first saw the light of day. He was but fourteen years old when he left his peaceful and thoroughly whitewashed home on the banks of the St. François, in company with a knot of Canadian *voyageurs*, whose principles tended towards the Red River of the North. Leaving this convoy at Fond-du-Lac, he pushed his way on to the Mississippi, alone and friendless, and, falling in with a party of trappers at St. Louis, accompanied them when they returned to the mountain "gulches" in which their business lay.

After six years of trapper and trader life, but little trace of the simple young Canadian *habitant* was left in Pierre La Marche. He spoke mountain English and French *patois* with equal fluency. There was a decision of character about him that commanded the respect of his comrades. When the other trappers went to St. Louis, they used to drink and gamble away their hard-won dollars, few of these men caring for anything beyond the indulgence of immediate fancies. But Pierre was ambitious, and thought that money might be made subservient to his aspirations in a better way than speculating with it upon "bluff" or squandering it upon deteriorating drinks.

About this time of his life, Pierre began to think that the fact of his being "only a French Canadian" was likely to be a bar to his advancement. He despised himself greatly for one thing, indeed, — that his name was La Marche, and not Walker, — which patronymic he made out to be the nearest Anglo-Saxon equivalent for his French one. He adopted it, — calling himself Peter Walker, — and had an adventure out of it, to begin with.

While trading furs at St. Louis, on one

occasion, he offered a remnant of his stock to a dealer with whom he was not acquainted. They had an argument as to prices. The dealer, a man of hasty temper, asked him his name.

"Walker," was the reply.

When La Marche arose from the distant corner into which he was projected in company with the bundle of furs levelled at his head, revenge was his natural sentiment. Drawing his heavy knife from its sheath, he flung it away: the temptation to use it might have been too much for him. Small in stature, but remarkable for muscular strength, and for inventive resource in the "rough-and-tumble" fight, La Marche clenched with the burly store-keeper, who was getting the worst of it, when some of his *employés* interfered. This led to a general engagement. Several of La Marche's companions now rushed in, and in five minutes their opponents gave out, succumbent to superior wind and sinew.

Next morning, when the trappers took their way out of St. Louis, La Marche was a leader among them for life. But the reason of the store-keeper's rage was for many years a mystery to him. He knew not the enormity of "Walker," as an exponent of disparagement; he simply thought it a nicer name than La Marche, while it fully embodied the sentiment of that name. He adopted it, then, as I said before, and went on towards posterity as Peter Walker.

I heard many strange anecdotes of Peter Walker at the residence of a retired *voyageur*, who used to sing him Homerically to his chosen friends. These *voyageurs* are professional canoe-men; adventurers extending, sparsely, from the waters of French Canada to those of Oregon, — and sometimes back. Honest old Quatreux! I mentioned his "residence" just now, and the term is truly grandiloquent in its application. The residence of old Quatreux was a log *cabane*, about twenty feet square. Planks, laid loosely upon the cross-ties of the rafters, formed the up-stairs of the building: up-ladder would be a term more in accordance with

facts; for it was by an appliance of that kind that the younger and more active of the sixteen members composing the old *voyageur's* family removed themselves from view when they retired for the night. A partition, extending half-way across the ground-floor, screened off the state or principal bed from outside gaze; at least, it was exposed to view only from points rendered rather inaccessible by tubs, with which these Canadian families are generally provided to excess. This apartment was strictly assigned to me, as a visitor; and although I firmly declined the honor, — chiefly with reference to certain large and very hard fleas I knew of in its dormitory arrangements, — it was kept religiously vacant, in case my heart should relent towards it, and the family in general slept huddled together on the outer floor, without manifest classification: the two old people; son and wife; daughter and husband; children; the extraordinary little hunch-backed and one-eyed girl, whom nobody would marry, but everybody liked; dogs. I used to stretch myself on a buffalo-robe before the wood-fire, in company with a faithful spaniel, who was as wakeful on these occasions as if he suspected that the low-bred curs of the establishment might pick his pockets.

Quatreau's *cabane* was situated on the edge of an extensive tract of marsh, — lagoon would be a more descriptive word for it, perhaps, — a splashy, ditch-divided district, extending along the borders of a lake for miles. Snipe-shooting was my motive there; and dull work it was in those dark, Novembry, October days, with "the low rain falling" half the time, and the yellow leaves all the time, and no snipe. But whether we poled our log canoe up to some stunted old willow-tree that sat low down in the horizontal marsh, and took shelter under it to smoke our pipes, or whether we mollified the privation of snipe in the *cabane* at night with mellow rum and tobacco brought by me, still was Walker the old *voyageur's* favorite theme.

Old Quatreau spoke English perfectly

well, although his conservatism as a Canadian induced him to prefer his mother tongue as a vehicle for general conversation. But I remarked that his anecdotes of Walker were always related in English, and on these occasions, therefore, for my benefit alone: for but little of the Anglo-Saxon tongue appeared to be known to, or at least used by, any member of his numerous family. Indeed, I can recall but two words of that language which I could positively aver to have heard in colloquial use among them, — *poodare* and *schotte*. And why should the old *voyageur* have thus reserved his experiences from those who were near and dear to him? Simply because most of his adventures with Walker were not of the strictly mild character becoming a family-man. But it was all the same to these good people; and when I laughed, they all took up the idea and laughed their best, — the little hunch-backed girl generally going off into a kind of epilepsy by herself, over in the darkest corner of the room, among the tubs.

When divested of the strange Western expletives and imprecations with which the old man used to spice his reminiscences, some of them are presentable enough. I remember one, telling how Peter Walker "raised the wind" on a particular occasion, when he got short of money on his way to some distant trading-post, in a district strange to him. It is before me, in short-hand, on the pages of an old, old pocket-book, and I will tell it with some slight improvements on the narrator's style, such as suppressing his unnecessary combinations of the curse.

Mounted on a two-hundred-dollar buffalo-horse, for which he would not have taken double that amount, Peter Walker found himself, one afternoon, near the end of a long day's ride. He had but little baggage with him, that little consisting entirely of a bowie-knife and holster-pistols, — for the revolver was a scarce piece of furniture then and there. Of money he was entirely destitute, having expended his last dollar upon the purchase of his noble steed, and of the fes-

tive suit of clothes with which he calculated upon astonishing people who resided outside the limits of civilization. The pantaloons division of that suit was particularly superb, consisting principally of a stripe by which the outer seam of each leg was made conducive to harmony of outline. He was about three days' journey from the trading-post to which he was bound. The country was a frontier one, sparsely provided with inns.

The sun was framed in a low notch of the horizon, as he approached a border-hostelry, on the gable of which "Cat's Bluff Hotel" was painted in letters quite disproportioned in size to the city of Cat's Bluff, which consisted of the house in question, neither more nor less. In that house Peter Walker decided upon sojourning luxuriously for that night, at least, if he had to draw a check upon his holsters for it.

Having stabled his horse, then, and seen him supplied with such provender as the place afforded, he looked about the hotel, which he found to be an institution of very considerable pretensions. It seemed to have a good deal of its own way, in fact, being the only house of entertainment for many miles upon a great southwestern thoroughfare, from which branched off the trail to be taken by him tomorrow,—a trail which led only to the trading-post or fort already mentioned.

The deportment of the landlord was gracious, as he went about whistling "Wait for the wagon," and jingling with gold chains and heavy jewelry. Still more exhilarating was the prosperous confidence of the bar-keeper, who took in, while Walker was determining a drink, not less than a dozen quarter-dollars, from blue-shirted, bearded, thirsty men with rifles, who came along in a large covered wagon of western tendency, in which they immediately departed with haste, late as it was, as if bound to drive into the sun before he went down behind the far-off edge. Walker used to say, jocularly, that he supposed this must have been the wagon for which the landlord whistled, and which came to his call.

Everything denoted that there was abundance of money in that favored place. Even small boys who came in and called for cigars and drinks made a reckless display of coin as they paid for them, and then drove off in their wagons,—for they all had wagons, and were all intent upon driving rapidly in them toward the west.

But, as night fell, travel went down with the declining day; and Walker felt himself alone in the world,—a man without a dollar. Nevertheless, he called for good cheer, which was placed before him on a liberal scale: for landlords thereabouts were accustomed to provide for appetites acquired on the plains, and their supply was obliged to be both large and ready for the chance comers who were always dropping in, and upon whom their custom depended. So he ate and drank; and having appeased hunger and thirst, he went into the bar, and opened conversation with the landlord by offering him one of his own cigars, a bunch of which he got from the bar-keeper, whom he particularly requested not to forget to include them in his bill, when the time for his departure brought with it the disagreeable necessity of being served with that document.

Western landlords, in general, are not remarkable for the reserve with which they treat their guests. This particular landlord was less so than most others. He was especially inquisitive with regard to Walker's exquisite pantaloons, the like of which had never been seen in that part of the country before. His happiness was evidently incomplete in the privation of a similar pair.

"Them pants all wool, now?" asked he, as he viewed them with various inclinations of head, like a connoisseur examining a picture.

"All except the stripes," replied Walker;—"stripes is wool and cotton mixed; gives 'em a finer grain, you see, and catches the eye."

The landlord respected Walker at once. Perhaps he might be an Eastern dry-goods merchant, come along for the

purpose of making arrangements to inundate the border-territory with stuffs for exquisite pantaloons. He proceeded with his interrogatories. He laid himself out to extract from Walker all manner of information as to his origin, occupation, and prospects, which gave the latter an excellent opportunity of glorifying himself inferentially, while he affected mystery and reticence with regard to his mission "out West." At last the landlord set him down for an agent come on to open the sluices for a great tide of foreign emigration into the territory, — an event to which he himself had been looking for a long time, and the prospect of which had guided him to the spot where he had established his hotel, which he now looked upon as the centre from which a great city was destined immediately to radiate. And the landlord retired to his bed to meditate upon immense speculations in town-lots, and, when sleep came upon him, to dream that he had successfully arranged them through the medium of an angel with a speaking-trumpet, whose manifest wardrobe consisted of a pair of fancy pantaloons with stripes on the seams and side-pockets, exactly like Walker's.

Walker, too, retired to rest, but not to sleep, for his mind was occupied in turning over means whereby to obtain some of the real capital with which people here seemed to be superabundantly provided. He had speculations to carry out, and money was the indispensable element. Had he only been able to read the landlord's thoughts, he might have turned quietly over and slept; for so held was that person's mind by the idea that his ultimate success was to be achieved through the medium of his unknown guest, that he would without hesitation have lent him double the sum necessary for his financial arrangements.

There was a disturbance some time about the middle of the night. People came along in wagons, as usual, waking up the bar-keeper, whose dreams perpetually ran upon that kind of trouble. Walker, who was wide awake, gathered from the conversation below that the

travellers had only halted for drinks, and would immediately resume their way westward with all speed. He arose and looked out at the open window, which was about fifteen feet from the ground. Something white loomed up through the darkness: it was the awning of one of the wagons, which stood just under the window, to the sill of which it reached within a few feet. Walker, brought up in the rough-and-ready school, had lain down to rest with his trousers on. A sudden inspiration now seized him: he slipped them rapidly off, and dropped them silently on to the roof of the wagon, which soon after moved on with the others, and disappeared into the night. This done, he opened softly the door of the room, and, leaving it ajar, returned to bed and slept.

Morning was well advanced when Walker arose, and began operations by moving the furniture about in an excited manner, to attract the attention of those in the bar below, and convey an idea of search. Presently he went to the door of the room, and, uttering an Indian howl, by way of securing immediate attendance, cried out, —

"Hullo, below! where's my pants? — bar-keeper, fetch along my pants! — landlord, I don't want to be troublesome, but just take off them pants, if you happen to have mistook 'em for your own, and oblige the right owner with a look at 'em, will you?"

Puzzled at this address, which was couched in much stronger language — according to old Quatreau's version of it — than I should like to commit to paper, the landlord and bar-keeper at once proceeded to Walker's room, where they found him sitting, expectantly, on the side of the bed, with his horse-pistols gathered together beside him. Of course, they denied all knowledge of his pantaloons, — didn't steal nobody's pants in that house, nor nothin'.

Walker looked sternly at them, and, playing with one of his pistols, exclaimed, with the usual redundants, —

"You lie! — you've stole my pants be-

tween you; you've found out what they were worth by this time, I guess; but I'll have 'em back, and that in a hurry, or else my name a'n't Walker,—Peter Walker."

He added his Christian name, because a reminiscence of the mystery belonging to his patronymic by itself flashed upon him.

Now the name of Pete Walker was potent along the frontier, because of his influence with the wild mountain-men, who did reckless deeds on his account, unknown to him and otherwise. Another vision than that of last night overcame the landlord,—a vision of Lynch and ashes.

"So you're Pete Walker, be you?" asked he, in a tone of mingled respect and admiration, slightly tremulous with fear. "How do you do, Mr. Walker?—how do you find yourself this morning, Sir?"

"I didn't come here to find myself," retorted Walker, fiercely. "I found my door open, though, when I woke up,—but I couldn't find my pants. You must get 'em, or pay for 'em, and that right away."

"Them cusses that passed through here last night!" exclaimed the landlord. "I guess the pants is gone on the sundown trail, stripes and all."

Walker thought it was quite probable that they had; but they were stolen from that house, and the house must pay for them.

Lynch and ashes again blazed before the landlord's eyes.

"How much might the pants be worth, now, at cost price?" asked he. "All wool, you say, only the stripes; but, as they was nearly all stripes, you needn't holler much about the wool, I reckon. How much, now?"

"Two hundred and ten dollars," replied Walker, with impressive exactness.

"Thunder!" exclaimed the landlord. "I thought they might be fancy-priced, surely, but that's awful!"

"Ten dollars, cash price, for the pants," proceeded Walker, "and two hundred

for that exact amount in gold stitched up in the waistband of 'em."

"The Devil has got 'em, anyhow!" said the landlord,— "for I saw a queer critter, in my sleep, flying about with 'em on. Wings looks kinder awful along o' pants with stripes. There'll be no luck round till they're paid for, I guess. Couldn't you take my best checkers for 'em, now, with fifty dollars quilted into the waistband,—s-a-ay?"

"My name's Walker,—Peter Walker," was the reply.

The landlord was no match for that name, so disagreeably redolent of Lynch and ashes. Thorough search was made upon the premises, and to some distance around, in the wild hope that the missing trousers might have walked off spontaneously, and lain down somewhere to sleep; but, of course, nothing came of the investigation, although Walker assisted at it with his usual energy. All compromise was rejected by him, and it was not yet noon when he rode proudly away from the lone hostelry, in the landlord's best checkers, for which he kindly allowed him five dollars, receiving from him the balance, two hundred and five dollars, in gold.

I forget now what Walker did with that money, although Quatreau knew exactly, and told me all about it. Suffice it to say that he made a grand *coup* with it, in the purchase of a mill-privilege, or claim, or something of the kind. Less than a year after the events narrated, he again rode up to the lone hostelry, which was not so lonely now, however; for houses were growing up around it, and it took boarders and rang a dinner-bell, and maintained a landlady as well as a landlord, besides. The landlord was astonished when Walker counted out to him two hundred and five dollars in gold,—surprised when to that was added a round sum for interest,—ecstatic, on being presented with a brand-new pair of pantaloons, of the same pattern as the expensive ones formerly so admired by him. But his features collapsed, and for some time wore an expression of imbecility,

when he learned the details of the adventure, and found out that "some things" — landlords, for example — "can be done as well as others."

It was with little reminiscences like the one just narrated that old Quatreux used to wile away the time, as we threaded the intricate ditches of the marsh in his canoe, so hedged in by the tall reeds that our horizon was within paddle's length of us. With that presumptive *clairvoyance* which appears to be an essential property of the French *raconteur*, he did not confine himself to external fact in his narratives, but always professed to report minutely the thoughts that flashed through the mind of such and such a person, on the particular occasion referred to. He was a master of dialects, — Yankee, Pennsylvanian Dutch, and Irish.

"Where did you get your English, old man?" I asked him, as we scudded across the lake in our canoe, with a small sail up, one red October evening.

"In Pennsylvania," replied he. "I went there on my own hook, when I was about twelve year old, and worked in an oil-mill for four year."

"In an oil-mill? Perhaps that accounts for the glibness with which language slips off your tongue."

"'Guess it do," said the old *voyageur*, with ready assent.

We nearly got foul of a raft coming down the lake, manned with a rugged set of half-breeds, who had a cask of whiskey on board, and were very drunk and boisterous.

"Ugly customers to deal with, those *brûlés*," remarked I, when we had got clear away from them.

"Some on 'em is," replied the old *voyageur*. "Did you notice the one with the queer eye, — him in the Scotch cap and *shupac* moccasons?"

I had noticed him, and an ill-looking thief he was. One of his eyes, either from natural deformity or the effect of hostile operation, was dragged down from its proper parallel, and planted in a re-

mote socket near the corner of his mouth, whence it glared and winked with supernatural ferocity.

"That's Rupe Falardeau," continued my companion. "His father, old Rupe, got his eye taken down in a deck-fight with a Mississippi boatman; and this boy was born with the same mark, — only the eye's lower down still. If that's to go on in the family, I guess there'll be a Falardeau with his eye in his knee, some time."

In the deck-fight in which old Rupe got his ugly mark Pete Walker had a hand; and the part he took in it, as related to me by old Quatreux, who was also present, affords a good example of the tact and coolness which gave him such mastery over the wild spirits among whom he worked out his destiny.

Walker was coming down a lumbering-river — I forget the name of it — on board a small tug-steamboat, in which he had an interest. He had gone into other speculations beside furs, by this time, and had contracts in two or three places for supplying remote stations with salt pork, tea, and other staple provisions of the lumbering-craft.

Stopping to wood at the mouth of a creek, a gang of raftsmen came on board, — half-breed Canadians of fierce and demoralized aspect, — men of great muscular strength, and armed heavily with axes and butcher-knives. The gang was led by Rupe Falardeau, a dangerous man, whether drunk or sober, and one whose antecedents were recorded in blood. These men had been drinking, and were very noisy and intrusive, and presently a row arose between them and some of the boat-hands. Fisticuffs and kicks were first exchanged, but without any great loss of blood. Knives were then drawn and flourished, and matters were beginning to assume a serious aspect, when Walker made his appearance forward of the paddle-box, pointing a heavy pistol right at the head of the ringleader.

"Rupe!" shouted he, in a voice that attracted immediate attention, "drop that knife, or else I shoot!"

The crowd parted for a moment, and Rupe, standing alone near the bows, wheeled round with a yell, and glared fiercely at the speaker.

“Drop that knife!” repeated Walker. — “One, two, *three!* — I’ll give you a last chance, and when I say *three* again, I shoot, by thunder!”

The last word had not rolled away, when the gleaming knife flashed from the hand of Rupe, glanced close by Walker’s ear, and sped quivering into the paddle-box, just behind his head.

“Good for you, Rupe!” exclaimed Walker, lowering his pistol, with a pleasant smile, — “good for you! — but, *sacré baptême!* how dead I’d have shot you, if you hadn’t dropped that knife!”

The forbearance of Walker put an end to the row. Rupe, disarmed at once by the loss of his knife and the coolness of Walker, was seized by a couple of the deck-hands, and might have been secured without injury to his beauty, had not a Mississippi boatman, who owed him an old grudge, struck him on the face with a heavy iron hook, lacerating and disfiguring him hideously for life.

“But why didn’t Walker shoot Falardeau, old man?” asked I of the *voyageur*, wishing to learn something of the etiquette of life and death among these peculiar people, who appear to be so reckless of the former and fearless of the latter.

“Ah!” replied he, “Rupe was too valuable to be shot down for missing a man with a knife. Such a canoe-steersman as Rupe never was known before or since: he knew every rock in every rapid from the Ottawa to the Columbia.”

Some time after this I again fell in with young Rupe, under circumstances indicating that his life was not considered quite so valuable as that of the old gentleman from whom he inherited his frightful aspect.

In company with a friend, one day, I was beating about for wild-fowl in a marshy river, down which small rafts or “cribs” of timber were worked by half-breeds and Canadians.

About dark we came to a small, flat island in the marsh, where we found an Iroquois camp, in which we proposed to pass the night, as we had no camping-equipage in our skiff. The men were absent, hunting, and there was nobody in charge of the wigwam but an ugly, undersized squaw, with her two ugly, undersized children.

We were much fatigued, and agreed to sleep by watches, knowing the sort of people we had to deal with. It was my watch, when voices were heard as of men landing and pulling up a canoe or boat. Presently three men came into the wigwam, rafting-men, dressed in gray Canada homespun and heavy Scotch bonnets. The light of the fire outside flashed on their faces, as they stooped to enter the elm-bark tent, and in the foremost I recognized the hideous Rupe Falardeau, Junior. This man carried in his hand a small tin pail full of whiskey. He was very drunk and dangerous, and greatly disgusted at the absence of the Iroquois men, with whom he had evidently laid himself out for a roaring debauch.

I woke up my companion, and a judicious display of our double-barrelled guns kept the three scoundrels in check. They insisted on our tasting some of their barbarous liquor, however, and horrible stuff it was, — distiller’s “high-wines,” strongly dashed with vitriol or something worse. No wonder that men become fiends incarnate on such “fire-water” as that!

By-and-by they slept, — two of them outside, by the fire, — Falardeau inside the wigwam, the repose of which was broken by the hollow rattle of his drunken breath.

In the dead of the night something clutched me by the arm. It was the ugly squaw, who forced a greasy butcher-knife into my hand, pointing towards where the raftsmen lay, and whispering to me in English, — “Stick heem! stick heem! — nobody never know. He kill my brother long time ago with this old knife. Kill heem! kill heem now!”

I did not avail myself of the opportunity thus afforded me for the improve-

ment of river society: nay, worse, I connived at the further career of the redoubtable Rupert Falardeau, Junior; for, on leaving in the morning, I roused him with repeated kicks, thus saving him for that time, probably, from the Damoclesian blade of the *vengeresse*.

L'été de Saint Martin! — how blue and yellow it is in the marshes in those days! It is the name given by the French Canadians to the Indian Summer, — the Summer of St. Martin, whose anniversary-day falls upon the eleventh of November; though the brief latter-day tranquillity called after him arrives, generally, some two or three weeks earlier. Looking lake-ward from the sedgy nook in which we are waiting for the coming of the wood-ducks, the low line of water, blue and calm, is broken at intervals by the rise of the distant *masquallongé*, as he plays for a moment on the surface. But the channels that separate the flat, alluvial islets are yellow, their sluggish waters being bedded heavily down with the broad leaves of the wintering basswood-trees, which, in some places, touch branch-tips across the narrow straits. The muskrat's hut is thatched with the wet, dead leaves, — no thanks to *him*; and there is a mat of them before his door, — a heavy, yellow mat, on which are scattered the azure shells of the fresh-water clams to be found so often upon the premises of this builder. Does he sup on them, or are they only the cups and saucers of his *vegeto-aquarian ménage*? Blue and yellow all, — the sky and the sedge-rows, the calm lake and the canoe, the splashing basswood-leaves and the oval, azure shells.

Also Marance, the *voyageur's* buxom young daughter, who came with us, to-day, commissioned to cull herbs of wondrous properties among the vine-tangled thickets of the islands. Blue and yellow. Eyes blue as the azure shells; hair flashing out golden gleams, like that of Pyrrha, when she braided hers so feately for the coming of some ambrosial boy.

"I must marry you, Marance," said I,

jocularly, to the damsel, as I jumped her out of the canoe, — "I shall marry you when we get back."

It is good to live in a marsh. No fast boarding-house women there, lurking for the unwary; no breaches of promise; "no nothing" in the old-man-trap line. Abjure fast boarding-houses, you silly old bachelors, and go to grass in a marsh!

Marance laughed merrily, as she tripped away; then, turning, she said, —

"But what if I never get back? I may lose myself in these lonely places, and never be heard of again."

"Oh, in that case," replied I, hard driven for a compliment, "in that case, I must wait until Gilette" — a younger sister — "grows up. She will be exactly like you: I must only wait for Gilette."

"You remind me of Pete Walker," said the old man, as we shot away up the channel, our canoe ripping up the matted surface like the cue of a novice, when he runs a fatal reef along the sere and yellow cloth of some billiard-table erewhile in verdure clad. "You are as bad as Pete Walker, who thought one sister must be as good as another, because they looked so much alike."

And then, as we loitered about in the bays, the old man told me the story of Walker's honeymoon, which was a sad and a short one. This is the story.

Near that wild rapid of the Columbia River known as the "Dalles," there was, years ago, a Jesuit mission, established in a small fort, built, like that at Nez-Percés, of mud. The labors of the holy men composing the mission involved no inconsiderable amount of danger, devoted as they were to the hopeless task of reforming such sinners as the Sioux, the Blackfeet, the Gros-Ventres, the Flat-Heads, the Assiniboines, the Nez-Percés, and a few other such.

Some of these missionaries had sojourned for a long time with a branch of the Blackfoot tribe, among whom they found two young white girls, remarkable for their exact resemblance to each other, and therefore supposed to be twins. I

say *supposed*, because of their origin there was no trace. All that was known about them was, that they were the sole survivors of a train of emigrants, attacked and murdered by the Nez-Percés, who, actuated by one of those whims characteristic of the red men, spared the lives of the two children, and adopted them into the tribe. Subsequently, in a skirmish with the Blackfeet, they fell into the hands of the latter, among whom they had lived for some time, when they were ransomed by the missionaries, at the price of certain trading-privileges negotiated by the latter for the tribe.

When adopted by the Jesuits, the children had lost all remembrance of their parentage; nor had they any names except the Indian ones bestowed upon them by their captors. The good fathers christened them, however, arranging them alphabetically, by the names of *Alixé* and *Bloyse*, and confiding them to the especial charge of the wife of a trader connected with the station, who had no family of her own. They were fair-haired children, probably of German or Norwegian origin, and had grown up to be robust young women of seventeen, when Walker saw them for the first time, as he stopped at the Dalles on his way from Fort Nez-Percés, about one hundred and twenty-five miles higher up the Columbia.

Walker, whose business detained him for some time at the mission, decided upon marrying one of the fair-haired sisters,—he did not much care which, they were so singularly alike. *Alixé* happened to be the one, however, to whom he tendered a share in his fortunes, which she accepted in the random manner of one to whom it was of but little consequence whether she said “Yes” or “No.” *Bloyse* would have followed him, and him only, to the end of all; but he never knew it at the right time, though the women of the fort could have told him.

It was late one afternoon when he was married to *Alixé*, in the chapel of the mission. That was the night of the massacre. Two hours after the wedding, the

Blackfeet, combined with some allied tribe, came down like wolves upon the fort. There was treachery, somewhere, and they got in. In the thick of the fight, and when all seemed hopeless, Walker shot down a tall Indian who was dragging his bride away to where the horses of the tribe were picketed. In a second he had leaped upon a horse, and, holding the young girl before him, galloped away in the direction of a stream running into the Columbia,—a stream of fierce torrents, navigable only at one place, and that by flat-bottomed boats or scows, in which passengers warped themselves across by a grass rope stretched from bank to bank. Once over this river, he could easily reach a friendly camp, where he and his bride would have been in safety.

The moon had risen when he reached the ferry. Turning the horse adrift, he lifted the young woman into the scow, and began to warp rapidly across by the rope with one hand, while he supported his fainting companion close to him with the other. Suddenly, a sharp click sounded from the opposite bank: the rope gave way, and Walker and his companion were precipitated violently into the water, the boat shooting far away from beneath their feet. It ran a strong current there, culminating in a furious rapid not two hundred yards lower down. Retaining his grasp of the young woman, Walker fought bravely against the stream, down which he felt they were sweeping, faster and faster, until a violent concussion deprived him, for a moment, of consciousness. When he came to himself, he was still swimming, but his companion was gone. The current had driven them forcibly against a rock, throwing her from his grasp. The wild rapid was just below them. She was never heard of again; but Walker managed to reach the shore, where he must have lain long in an exhausted condition, for it was daylight when he awoke to any recollection of what had happened.

The ferry-rope had been cut, as he afterwards discovered, by an Indian, in

whose brother's removal by hanging he had been instrumental, and who had been watching him, day and night, for the purpose of wreaking a bitter vengeance.

Returning to reconnoitre, with some of his friends, Walker found the mission a heap of ruins,—blackened walls, charred rafters, and unrecognizable human remains.

Long afterwards, he learned that his bride was again living among the Blackfeet;—for it was Bloyse, and not Alixe, with whom he had galloped away to the fatal ferry, in the confusion of that terrible night. It was poor Bloyse who went away from his arms down those crushing rapids. It was Alixe, his bride, who shot back the bolts for the entrance of the Blackfeet. She was secretly betrothed in the tribe, and it was her betrothed

whom Walker shot down as he was rushing away in triumph with his supposed *fiancée* of the pale-faces. She married another Indian of the tribe, however; for she was a savage woman at heart, and could live among savages only.

“Sisters may be as like as two walnuts, to look at,” said the old *voyageur*, when he had finished his narration. “Take any two walnuts from a heap, at random, though, and, like as not, you'll find one on 'em all heart and the other all hollow.”

“True,” replied I; “but these be wild adventures for one whose boyhood was passed in a peaceful and thoroughly whitewashed home on the banks of the St. François.”

“'Guess they be,” said the old *voyageur*.

THE NATIONAL INTELLIGENCER AND ITS EDITORS.

THE families of Gales and Seaton are, in their origin, the one Scotch, the other English. The Seatons are of that historic race, a daughter of which (the fair and faithful Catherine) is the heroine of one of Sir Walter Scott's romances. It was to be supposed that they whose lineage looked to such an instance of devoted personal affection for the ancient line would not slacken in their loyalty when fresh calamities fell upon the Stuarts and again upset their throne. Accordingly, the Seatons appear to have clung to the cause of their exiled king with fidelity. Henry Seaton seems to have made himself especially obnoxious to the new monarch, by taking part in those Jacobite schemes of rebellion which were so long kept on foot by the lieges and gentlemen of Scotland; so that, when, towards the close of the seventeenth century, the cause he loved grew desperate, and Scotland itself anything but safe for a large body of her most

gallant men, he was forced, like all others that scorned to submit, to fly beyond the seas. Doing so, it was natural that he should choose to take refuge in a Britain beyond the ocean, where a brotherly welcome among his kindred awaited the political proscrip. It is probable, however, that a special sympathy towards that region which, by its former fidelity to the Stuarts, had earned from them the royal quartering of its arms and the title of “The Ancient Dominion,” directed his final choice. At any rate, it was to Virginia that he came,—settling there, as a planter, first in the county of Gloucester, and afterwards in that of King William. From one of his descendants in a right line sprang (by intermarriage with a lady of English family, the Winstons) William Winston Seaton, the editor, whose mother connected him with a second Scotch family, the Henrys,—the mother of Patrick Henry being a Winston. These last had come, some three

generations before, from the old seat of that family in its knightly times, Winston Hall, in Yorkshire, and had settled in the county of Hanover, where good estates gave them rank among the gentry; while commanding stature, the gift of an equally remarkable personal beauty, a very winning address, good parts, high character, and the frequent possession among them of a fine natural eloquence, gave them as a race an equal influence over the body of the people. In William (popularly called Langaloo) and his sister Sarah, the mother of Patrick Henry, these hereditary qualities seem to have been particularly striking; so that, in their day, it seemed a sort of received opinion that it was from the maternal side that the great orator derived his extraordinary powers.

The Galeses are of much more recent naturalization amongst us,—later by just about a century than that of the Seatons, but alike in its causes. For they, too, were driven hither by governmental resentment. Their founder, (as he may be called,) the elder Joseph Gales, was one of those rare men who at times spring up from the body of the people, and by mere unassisted merit, apart from all adventitious advantages, make their way to a just distinction. Perhaps no better idea of him can be given than by likening him to one, less happy in his death, whom Science is now everywhere lamenting,—the late admirable Hugh Miller. A different career, rather than an inferior character, made Joseph Gales less conspicuous. He was born in 1761, at Eckington, near the English town of Sheffield. The condition of his family was above dependence, but not frugality.

Be education what else it may, there is one sort which never fails to work well: namely, that which a strong capacity, when denied the usual artificial helps, shapes out to its own advantage. Such, with little and poor assistance, became that of Joseph Gales, obtained progressively, as best it could be, in the short intervals which the body can allow to be stolen between labor and necessary rest.

Now the writer is thoroughly convinced, that, after this boy had worked hard all the day long, he never would have sat down to study half the night through, if it had not been a pleasure to him. In short, no sort of toil went hard with him. For he was a fine, manly youngster, cheerful and stalwart, one who never slunk from what he had set about, nor turned his back except upon what was dishonest. He wrought lightsomely, and even lustily, at his coarser pursuits; for, in that sturdy household, to work had long been held a duty.

Thus improving himself, at odd hours, until he was fit for the vocation of a printer, and looked upon by the village as a genius, our youth went to Manchester, and applied himself to that art, not only for itself, but as the surest means of further knowledge. Of course he became a master in the craft. At length, returning to his own town to exercise it, he grew, by his industry and good conduct, into a condition to exercise it on his own account, and set up a newspaper,—“The Sheffield Register.”

Born of the people, it was natural that Joseph Gales should in his journal side with the Reformers; and he did so: but with that unvarying moderation which his good sense and probity of purpose taught him, and which he ever after through life preserved. He kept within the right limits of whatever doctrine he embraced, and held a measure in all his political principles,—knowing that the best, in common with the worst, tend, by a law of all party, to exaggeration and extremes. Beyond this temperateness of mind nothing could move him. Thus guarded, by a rare equity of the understanding, from excess as to measures, he was equally guarded by a charity and a gentleness of heart the most exhaustless. In a word, it may safely be said of him, that, amidst all the heats of faction, he never fell into violence,—amidst all the asperities of public life, never stooped to personalities,—and in all that he wrote, left scarcely an unwise and not a single dishonest sentence behind him.

Such qualities, though not the most forward to set themselves forth to the public attention, should surely bring success to an editor. The well-judging were soon pleased with the plain good sense, the general intelligence, the modesty, and the invariable rectitude of the young man. Their suffrage gained, that of the rest began to follow. For, in truth, there are few things of which the light is less to be hid than that of a good newspaper. "The Register," by degrees, won a general esteem, and began to prosper. And as, according to the discovery of Malthus, Prosperity is fond of pairing, it soon happened that our printer went to falling in love. Naturally again, being a printer, he, from a regard for the eternal fitness of things, fell in love with an authoress.

This was Miss Winifred Marshall, a young lady of the town of Newark, who to an agreeable person, good connections, and advantages of education, joined a literary talent that had already won no little approval. She wrote verse, and published several novels of the "Minerva Press" order, (such as "Lady Emma Melcombe and her Family," "Matilda Berkley," etc.) of which only the names survive.

Despite the poetic adage about the course of true love, that of Joseph Gales ran smooth: Miss Marshall accepted his suit and they were married. Never were husband and wife better mated. They lived together most happily and long,—she dying, at an advanced age, only two years before him. Meantime, she had, from the first, brought him some marriage-portion beyond that which the Muses are wont to give with their daughters,—namely, laurels and bays; and she bore him three sons and five daughters, near half of whom the parents survived. Three (Joseph the younger, Winifred, and Sarah, now Mrs. Seaton) were born in England; a fourth, at the town of Altona, (near Hamburg,) from which she was named; and the rest in America.

To resume this story in the order of events. Mr. Gales went on with his journal, and when it had grown quite

flourishing, he added to his printing-office the inviting appendage of a bookstore, which also flourished. In the progress of both, it became necessary that he should employ a clerk. Among the applicants brought to him by an advertisement of what he needed, there presented himself an unfriended youth, with whose intelligence, modesty, and other signs of the future man within, he was so pleased that he at once took him into his employment,—at first, merely to keep his accounts,—but, by degrees, for superior things,—until, progressively, he (the youth) matured into his assistant editor, his dearest friend, and finally his successor in the journal. That youth was James Montgomery, the poet.

On the 10th of April, 1786, Mrs. Gales gave birth, at Eckington, their rural home, to her first child, Joseph, the present chief of the "Intelligencer."* Happy at home; the young mother could as delightedly look without. The business of her husband thrived apace; nor less the general regard and esteem in which he was personally held. He grew continually in the confidence and affection of his fellow-citizens; endearing himself especially, by his sober counsels and his quiet charities, to all that industrious class who knew him as one of their own, and could look up without reluctance to a superiority which was only the unpretending one of goodness and sense. Over them, without seeking it, he gradually obtained an extraordinary ascendancy, of which the following is a single instance. Upon some occasion of wages or want among the working-people of Sheffield, a great popular commotion had burst out, attended by a huge mob and riot, which the magistracy strove in vain to appease or quell. When all else had failed, Mr. Gales bethought him of trying what he could do. Driven into the thick of the crowd, in an open carriage, he suddenly appeared amongst the rioters, and, by a few plain words of remonstrance, convinced them that they could only hurt themselves by overturning the laws, that they should seek other

* Mr. Gales has since died.

modes of redress, and meantime had all better go home. They agreed to do so,—but with the condition annexed, that they should first see him home. Whereupon, loosening the horses from the carriage, they drew him, with loud acclamations, back to his house.

Such were his prospects and position for some seven years after his marriage, when, of a sudden, without any fault of his own, he was made answerable for a fact that rendered it necessary for him to flee beyond the realm of Great Britain.

As a friend to Reform, he had, in his journal, at first supported Pitt's ministry, which had set out on the same principle, but which, when the revolutionary movement in France threatened to overthrow all government, abandoned all Reform, as a thing not then safe to set about. From this change of views Mr. Gales dissented, and still advocated Reform. So, again, as to the French Revolution, not yet arrived at the atrocities which it speedily reached,—he saw no need of making war upon it. In its outset, he had, along with Fox and other Liberals, applauded it; for it then professed little but what Liberals wished to see brought about in England. He still thought it good for France, though not for his own country. Thus, moderate as he was, he was counted in the Opposition and jealously watched.

It was in the autumn of 1792, while he was gone upon a journey of business, that a King's-messenger, bearing a Secretary-of-State's warrant for the seizure of Mr. Gales's person, presented himself at his house. For this proceeding against him the following facts had given occasion. In his office was employed a printer named Richard Davison,—a very quick, capable, useful man, and therefore much trusted,—but a little wild, withal, at once with French principles and religion, with conventicles, and those seditious clubs that were then secretly organized all over the island. This person corresponded with a central club in London, and had been rash enough to write them, just then, an insurrectionary letter, setting forth revolutionary plans, the numbers, the means

they could command, the supplies of arms, etc., that they were forming. This sage epistle was betrayed into the hands of the Government. The discreet Dick they might very well have hanged; but that was not worth while. From his connection with the "Register," they supposed him to be only the agent and cover for a deeper man,—its proprietor; and at the latter only, therefore, had they struck. Nothing saved him from the blow, except the casual fact of his absence in another country, and their being ignorant of the route he had taken. This his friends alone knew, and where to reach him. They did so, at once, by a courier secretly despatched; and he, on learning what awaited him at home, instead of trusting to his innocence, chose rather to trust the seas; and, making his way to the coast, took the only good security for his freedom, by putting the German Ocean between him and pursuit. He sailed for Amsterdam, where arriving, he thence made his way to Hamburg, at which city he had decided that his family should join him. To England he could return only at the cost of a prosecution; and though this would, of necessity, end in an acquittal, it was almost sure to be preceded by imprisonment, while, together, they would half-ruin him. It was plain, then, that he must at once do what he had long intended to do, go to America.

Accordingly, he gave directions to his family to come to him, and to Montgomery that he should dispose of all his effects and settle up all his affairs. These offices that devoted friend performed most faithfully; remitting him the proceeds. The newspaper he himself bought and continued, under the name of the "Sheffield Iris." Still retaining his affection for the family, he passed into the household of what was left of them, and supplied to the three sisters of the elder Joseph Gales the place of a brother, and, wifeless and childless, lived on to a very advanced age, content with their society alone. The last of these dames died only a few months ago.

At Hamburg, whence they were to take ship for the United States, the family were detained all the winter by the delicate health of Mrs. Gales. This delay her husband put to profit, by mastering two things likely to be needful to him, — the German tongue and the art of short-hand. In the spring, they sailed for Philadelphia. Arrived there, he sought and at once obtained employment as a printer. It was soon perceived, not only that he was an admirable workman, but every way a man of unusual merit, and able to turn his hand to almost anything. By-and-by, reporters of Congressional debates being few and very indifferent, his employer, Claypole, said to him, — “You seem able to do everything that is wanted: pray, could you not do these Congressional Reports for us better than this drunken Callender, who gives us so much trouble?” Mr. Gales replied, with his usual modesty, that he did not know what he could do, but that he would try.

The next day, he attended the sitting of Congress, and brought away, in time for the compositors, a faithful transcript of such speeches as had been made. Appearing in the next morning's paper, it of course greatly astonished everybody. It seemed a new era in such things. They had heard of the like in Parliament, but had scarcely credited it. Claypole himself was the most astonished of all. Seizing a copy, he ran around the town, showing it to all he met, and still hardly comprehending the wonder which he himself had instigated. It need hardly be said that here was something far more profitable for Mr. Gales than type-setting.

But to apply this skill, possessed by none else, to the exclusive advantage of a journal of his own was yet more inviting; and the opportunity soon offering itself, he became the purchaser of the “Independent Gazetteer,” a paper already established. This he conducted with success until the year 1799, making both reputation and many friends. Among the warmest of these were some of the North Carolina members, and

especially that one whose name has ever since stood as a sort of proverb of honesty, Nathaniel Macon. By the representations of these friends, he was led to believe that their new State capital, Raleigh, where there was only a very decrepit specimen of journalism, would afford him at once a surer competence and a happier life than Philadelphia. Coming to this conclusion, he disposed of his newspaper and printing-office, and removed to Raleigh, where he at once established the “Register.” Of his late paper, the “Gazetteer,” we shall soon follow the fortunes to Washington, where it became the “Intelligencer”: meantime, we must finish what is left to tell of his own.

At Raleigh he arrived under auspices which gave him not only a reputation, but friends, to set out with. Both he soon confirmed and augmented. By the constant merit of his journal, its sober sense, its moderation, and its integrity, he won and invariably maintained the confidence of all on that side of politics with which he concurred, (the old Republican,) and scarcely less conciliated the respect of his opponents. He quickly obtained, for his skill, and not merely as a partisan reward, the public printing of his State, and retained it until, reaching the ordinary limit of human life, he withdrew from the press. In the just and kindly old commonwealth which he so long served, it would have been hard for any party, no matter how much in the ascendant, to move anything for his injury. For the love and esteem which he had the faculty of attracting from the first deepened, as he advanced in age, into an absolute reverence the most general for his character and person; and the good North State honored and cherished no son of her own loins more than she did Joseph Gales. In Raleigh, there was no figure that, as it passed, was greeted so much by the signs of a peculiar veneration as that great, stalwart one of his, looking so plain and unaffected, yet with a sort of nobleness in its very simplicity, a gentleness in its strength, an inborn

goodness and courtesy in all its roughness of frame,—his countenance mild and calm, yet commanding, thoughtful, yet pleasant, and betokening a bosom that no low thought had ever entered. You had in him, indeed, the highest image of that stanch old order from which he was sprung, and might have said, "Here's the soul of a baron in the body of a peasant." For he really looked, when well examined, like all the virtues done in rough-cast.

With him the age of necessary and of well-merited repose had now come; and judging that he could attain it only by quitting that habitual scene of business where it would still solicit him, he transferred his newspaper, his printing-office, and the bookstore which he had made their adjunct in Raleigh, as in Sheffield, to his third son, Weston; and removed to Washington, in order to pass the close of his days near two of the dearest of his children,—his son Joseph and his daughter Mrs. Seaton,—from whom he had been separated the most.

In renouncing all individual aims, Mr. Gales fell not into a mere life of meditation, but sought its future pleasures in the adoption of a scheme of benevolence, to the calm prosecution of which he might dedicate his declining powers, so long as his advanced age should permit. A worthy object for such efforts he recognized in the plan of African colonization, and of its affairs he accepted and almost to his death sustained the management in chief; achieving not less, by his admirable judgment, the warm approval and thanks of that wide-spread association, than, by the most amiable virtues of private life, winning in Washington, as he had done everywhere else, from all that approached him, a singular degree of deference and affection.

But the close of this long career of honor and of usefulness was now at hand. In 1839, he lost the wife whose tenderness had cheered the labors and whose gay intelligence had brightened the leisure of his existence. She had lived the delight of that intimate society to which

she had confined faculties that would have adorned any circle whatever; and she died lamented in proportion by it, and by the only others to whom she was much known,—the poor. Her husband survived her but two years,—expiring at his son's house in Raleigh, where he was on a visit, in April, 1841, at the age of eighty. He died as calm as a child, in the placid faith of a true Christian.

Still telling his story in the order of dates, the writer would now turn to the younger Joseph Gales. As we have seen, he arrived in this country when seven years old, and went to Raleigh about six years afterwards. There he was placed in a school, where he made excellent progress,—profiting by the recollection of his earlier lessons, received from that best of all elementary teachers, a mother of well-cultivated mind. His boyhood, as usual, prefigured the mature man: it was diligent in study, hilarious at play; his mind bent upon solid things, not the showy. For all good, just, generous, and kindly things he had the warmest impulse and the truest perceptions. Quick to learn and to feel, he was slow only of resentment. Never was man born with more of those lacteals of the heart which secrete the milk of human kindness. Of the classic tongues, he can be said to have learnt only the Latin: the Greek was then little taught in any part of our country. For the Positive Sciences he had much inclination; since it is told, among other things, that he constructed instruments for himself, such as an electrical machine, with the performances of which he much amazed the people of Raleigh. Meantime he was forming at home, under the good guidance there, a solid knowledge of all those fine old authors whose works make the undegenerate literature of our language and then constituted what they called Polite Letters. With these went hand in hand, at that time, in the academies of the South, a profane amusement of the taste. In short, our sinful youth were fond of stage-plays, and even wickedly enacted them,

instead of resorting to singing-schools. Joseph Gales the younger had his boyish emulation of Roscius and Garrick, and performed "top parts" in a diversity of those sad comedies and merry tragedies which boys are apt to make, when they get into buskins. But it must be said, that, as a theatric star, he presently waxed dim before a very handsome youth, a little his senior, who just then had entered his father's office. He was not only a printer, but had already been twice an editor, — last, in the late North Carolina capital, Halifax, — previously, in the great town of Petersburg, — and was bred in what seemed to Raleigh a mighty city, Richmond; in addition to all which strong points of reputation, he came of an F. F. V., and had been taught by the celebrated Ogilvie, of whom more anon. He was familiar with theatres, and had not only seen, but even criticized the great actors. He outshone his very brother-in-law and colleague that was to be. For this young gentleman was William Seaton.

Meantime, Joseph, too, had learnt the paternal art, — how well will appear from a single fact. About this time, his father's office was destroyed by fire, and with it the unfinished printing of the Legislative Journals and Acts of the year. Time did not allow waiting for new material from Philadelphia. Just in this strait, he that had of old been so inauspicious, Dick Davison, came once more into play, — but, this time, not as a marplot. He, strange to say, was at hand and helpful. For, after his political exploit, abandoning England in disgust at the consequences of his Gunpowder Plot, he, too, had not only come to America, but had chanced to set up his "type-stick" in the neighboring town of Warrenton, where, having flourished, he was now the master of a printing-office and the conductor of a newspaper. Thither, then, young Joseph was despatched, "copy" in hand. Richard — really a worthy man, after all — gladly atoned for his ancient hurtfulness, by lending his type and presses; and, falling to work with great vigor, our young Faust, with his own hands,

put into type and printed off the needful edition of the Laws.

He had also, by this time, as an important instrument of his intended profession, attained the art of stenography. When, soon after, he began to employ it, he rapidly became an excellent reporter; and eventually, when he had grown thoroughly versed in public affairs, confessedly the best reporter that we ever had.

He was now well-prepared to join in the manly strife of business or politics. His father chose, therefore, at once to commit him to himself. He judged him mature enough in principles, strong enough in sense; and feared lest, by being kept too long under guidance and the easy life of home, he should fall into inertness. He first sent him to Philadelphia, therefore, to serve as a workman with Birch and Small; after which, he made for him an engagement on the "National Intelligencer," as a reporter, and sent him to Washington, in October, 1807.

To that place, changing its name to the one just mentioned, the father's former paper, "The Gazetteer," had been transferred by his old associate, Samuel Harrison Smith. Its first issue there (tri-weekly) was on the 31st of October, 1800, under the double title of "The National Intelligencer and Washington Advertiser." The latter half of the title seems to have been dropped in 1810, when its present senior came, for a time, into its sole proprietorship.

More than twice the age of any other journal now extant there, — for the "Globe" came some thirty, the "Union" some forty-five years later, — the "Intelligencer" has long stood, in every worthy sense, the patriarch of our metropolitan press. It has witnessed the rise and fall around it of full a hundred competitors, — many of them declared enemies; not a few, what was more dangerous far, professed friends. Yet, in the face of all enmity and of such friendship, it has ever held on its calm way, never deserting the public cause, — as little extreme in its opposition as in its support of those in

power; so that its foes never forgot it, when they prevailed, but its friends repeatedly. To estimate the value of its influence, during its long career, would be impossible,—so much of right has it brought about, so much of wrong defeated.

Though it came hither with our Congress, a newspaper had once before been set up here,—either upon the expectation created by the laying of certain cornerstones, in 1792, that the Government would fix itself at this spot, or through an odd local faith in the dreams of some ancient visionary dwelling hard by, who had, many years before, foretold this as the destined site of a great imperial city, a second Rome, and so had bestowed upon Goose Creek the name of Tiber, long before this was Washington. The founder of this Pre-Adamite journal was Mr. Benjamin Moore; its name, “The Washington Gazette”; its issue, semi-weekly; its annual price, four dollars; and the two leading principles which, in that day of the infancy of political “platforms,” his salutatory announced, were, first, “to obtain a living for himself,” and, secondly, “to amuse and inform his fellow-mortals.” How long this day-star of our journalism shone, before night again swallowed up the premature dawn, cannot now be stated. It must have been published at what was then expected to be our city, but is our penitentiary, Greenleaf’s Point.

To the “Intelligencer” young Mr. Gales brought such vigor, such talent, and such skill in every department, that within two years, in 1809, he was admitted by Mr. Smith into partnership; within less than a year from which date, that gentleman, grown weary of the laborious life of the press, was content to withdraw and leave him sole proprietor, editor, and reporter. An enormous worker, however, it mattered little to him what tasks were to be assumed: he could multiply himself among them, and suffice for all.

In thus assuming the undivided charge of the paper, the young editor thought it becoming to set forth one main principle, that has, beyond a question, been admira-

bly the guide of his public life: he said to his readers,—“It is the dearest right, and ought to be cherished as the proudest prerogative of a freeman, to be guided by the unbiassed convictions of his own judgment. This right it is my firm purpose to maintain, and to preserve inviolate the independence of the print now committed into my hands.” Never was pledge more universally made or more rarely kept than this.

It was towards the close of Mr. Jefferson’s Presidency that Mr. Gales had entered the office of the “Intelligencer”; and it was during Mr. Madison’s first year that he became joint-editor of that paper. Of these Administrations it had been the supporter,—only following, in that regard, the transmitted politics of its original, the “Gazetteer,” derived from the elder Mr. Gales. Bred in these, the son had learnt them of his sire, just as he had adopted his religion or his morals. Sprung from one who had been persecuted in England as a Republican, it was natural that the son should love the faith for which an honored parent had suffered.

The high qualities and the strong abilities of the young editor did not fail to strike the discerning eye of President Madison, who speedily gave him his affection and confidence. To that Administration the “Intelligencer” stood in the most intimate and faithful relations,—sustaining its policy as a necessity, where it might not have been a choice. During the entire course of the war, the “Intelligencer” sustained most vigorously all the measures needful for carrying it on with efficiency; and it did equally good service in reanimating, whenever it had slackened at any disaster, the drooping spirit of our people. Nor did its editors, when there were two, stop at these proofs of sincerity, nor slink, when danger drew near, from that hazard of their own persons to which they had stirred up the country. When invasion came, they at once took to arms, as volunteer commonsoldiers, went to meet the enemy, and remained in the field until he had fallen back to the coast. And during the inva-

sion of Washington, moreover, their establishment was attacked and partially destroyed, through an unmanly spirit of revenge on the part of the British forces.

In October, 1812, proposing to himself the change of his paper into a daily one, as was accordingly brought about on the first of January ensuing, Mr. Gales invited Mr. Seaton, who had by this time become his brother-in-law, to come and join him. He did so; and the early tie of youthful friendship, which had grown between them at Raleigh, and which the new relation had drawn still closer, gradually matured into that more than friendship or brotherhood, that oneness and identity of all purposes, opinions, and interests which has ever since existed between them, without a moment's interruption, and has long been, to those who understood it, a rare spectacle of that concord and affection so seldom witnessed, and could never have come about except between men of singular virtues.

The same year that brought Gales and Seaton together as partners in business witnessed an alliance of a more interesting character; for it was in 1813 that Mr. Gales married the accomplished daughter of Theodorick Lee, younger brother of that brilliant soldier of the Revolution, the "Legionary Harry."

But, at this natural point, the writer must go back for a while, in order to bring down the story of William Seaton to where, uniting with his associate's, the two thus flow on in a single stream.

He was born January 11th, 1785, on the paternal estate in King William County, Virginia, one of a family of four sons and three daughters. At the good old mansion passed his childhood. There, too, according to what was then the wont in Virginia, he trod the first steps of learning, under the guidance of a domestic tutor, a decayed gentleman, old and bed-ridden; for the only part left him of a genteel inheritance was the gout. But when it became necessary to send his riper progeny abroad, for more advanced studies, Mr. Seaton very justly bethought him of going along with them; and so

betook himself, with his whole family, to Richmond, where he was the possessor of houses enough to afford him a good habitation and a genteel income. Here, then, along with his brothers and sisters, William was taught, through an ascending series of schools, until, at last, he arrived at what was the wonder of that day,—the academy of Ogilvie, the Scotchman. He, be it noted, had an earldom, (that of Finlater,) which slept while its heir was playing pedagogue in America: a strange mixture of the ancient rhapsodist with the modern strolling actor, of the lord with him who lives by his wits. Scot as he was, he was better fitted to teach anything rather than common sense. The writer must not give the idea, however, that there was in Lord Ogilvie anything but eccentricity to derogate from the honors of either his lineage or his learning. A very solid teacher he was not. A great enthusiast by nature, and a master of the whole art of discoursing finely of even those things which he knew not well, he dazzled much, pleased greatly, and obtained a high reputation; so that, if he did not regularly inform or discipline the minds of his pupils, he probably made them, to an unusual degree, amends on another side: he infused into them, by the glitter of his accomplishments, a high admiration for learning and for letters. Certainly, the number of his scholars that arrived at distinction was remarkable; and this is, of course, a fact conclusive of great merit of some sort as a teacher, where, as in his case, the pupils were not many. Without pausing to mention others of them who arrived at honor, it may be well enough to refer to Winfield Scott, William Campbell Preston, B. Watkins Leigh, William S. Archer, and William C. Rives.

The writer does not know if it had ever been designed that young Seaton should proceed from Ogilvie's classes to the more systematic courses of a college. Possibly not. Even among the wealthy, at that time, home-education was often employed. The children of both sexes were committed to the care of private tu-

tors, usually young Scotchmen, the graduates of Glasgow, Edinburgh, or Aberdeen, sent over to the planter, upon order, along with his yearly supply of goods, by his merchant abroad. Or else the sons were sent to select private schools, like that of Ogilvie, set up by men of such abilities and scholarship as were supposed capable of performing the whole work of institutions.

At any rate, our youth, without further preparation, at about the age of eighteen, entered earnestly upon the duties of life. He fell at once into his vocation, — impelled to it, no doubt, by the ambition for letters and public affairs which the lessons of Ogilvie usually produced. Party ran high. Virginia politics, flushed with recent success, had added to the usual passions of the contest those of victory.

Into the novelties of the day our student accordingly plunged, in common with nearly all others of a like age and condition. He became, in short, a politician. Though talent of every other sort abounded, that of writing promptly and pleasingly did not. Young Seaton was found to possess this, and therefore soon obtained leave to exercise it as assistant-editor of one of the Richmond journals. He had already made himself acquainted with the art of printing, in an office where he became the companion and friend of the late Thomas Ritchie, and it is more than probable that many of his youthful "editorials" were "set up" by his own hands. Attaining by degrees a youthful reputation, he received an invitation to take the sole charge of a respectable paper in Petersburg, "The Republican," the editor and proprietor of which, Mr. Thomas Field, was about to leave the country for some months. Acquitting himself here with great approval, he won an invitation to a still better position, — that of the proprietary editorship of the "North Carolina Journal," published at Halifax, the former capital of that State, and the only newspaper there. He accepted the offer, and became the master of his own independent journal. Of its being so he

proceeded at once to give his patrons a somewhat decisive token. They were chiefly Federalists; it was a region strongly Federal; and the gazette itself had always maintained the purest Federalism: but he forthwith changed its politics to Republican.

There can be no doubt that he who made a change so manly conducted his paper with spirit. Yet he must have done it also with that wise and winning moderation and fairness which have since distinguished him and his associate. William Seaton could never have fallen into anything of the temper or the taste, the morals or the manners, which are now so widely the shame of the American press; he could never have written in the ill spirit of mere party, so as to wound or even offend the good men of an opposite way of thinking. The inference is a sure one from his character, and is confirmed by what we know to have happened during his editorial career among the Federalists of Halifax. Instead of his paper's losing ground under the circumstances just mentioned, it really gained so largely and won so much the esteem of both sides, that, when he desired to dispose of it, in order to seek a higher theatre, he easily sold the property for double what it had cost him.

It was now that he made his way to Raleigh, the new State-capital, and became connected with the "Register." Nor was it long before this connection was drawn yet closer by his happy marriage with the lady whose virtues and accomplishments have so long been the modest, yet shining ornament and charm of his household and of the society of Washington. After this union, he continued his previous relationship with the "Register," until, as already mentioned, he came to the metropolis to join all his fortunes with those of his brother-in-law. From this point, of course, their stories, like their lives, become united, and merge, with a rare concord, into one. They have had no bickerings, no misunderstanding, no difference of view which a consultation did not at once reconcile; they have nev-

er known a division of interests; from their common coffer each has always drawn whatever he chose; and, down to this day, there has never been a settlement of accounts between them. What facts could better attest not merely a singular harmony of character, but an admirable conformity of virtues?

The history of the "Intelligencer" has, as to all its leading particulars, been for fifty years spread before thousands of readers, in its continuous diary. To re-chronicle any part of what is so well known would be idle in the extreme. Of the editors personally, their lives, since they became mature and settled, have presented few events such as are not common to all men, — little of vicissitude, beyond that of pockets now full and now empty, — nothing but a steady performance of duty, an exertion, whenever necessary, of high ability, and the gradual accumulation through these of a deeply felt esteem among all the best and wisest of the land. Amidst the many popular passions with which nearly all have, in our country, run wild, they have maintained a perpetual and sage moderation; amidst incessant variations of doctrine, they have preserved a memory and a conscience; in the frequent fluctuations of power, they have steadily checked the alternate excesses of both parties; and they have never given to either a factious opposition or a merely partisan support. Of their journal it may be said, that there has, in all our times, shone no such continual light on public affairs, there has stood no such sure defence of whatever was needful to be upheld. Tempering the heats of both sides, — re-nationalizing all spirit of section, — combating our propensity to lawlessness at home and aggression abroad, — spreading constantly on each question of the day a mass of sound information, — the venerable editors have been, all the while, a power and a safety in the land, no matter who were the rulers. Neither party could have spared an opposition so just or a support so well-measured. Thus it cannot be deemed an American exaggeration to declare the opinion as to the

influence of the "Intelligencer" over our public counsels, that its value is not easily to be overrated.

Never, meantime, was authority wielded with less assumption. The "Intelligencer" could not, of course, help being aware of the weight which its opinions always carried among the thinking; but it has never betrayed any consciousness of its influence, unless in a ceaseless care to deserve respect. Its modesty and candor, its fairness and courtesy have been invariable; nor less so, its observance of that decorum and those charities which constitute the very grace of all public life.

From the time of their coming together, down to the year 1820, Gales and Seaton were the exclusive reporters, as well as editors, of their journal, — one of them devoting himself to the Senate, and the other to the House of Representatives. Generally speaking, they published only running reports, — on special occasions, however, giving the speeches and proceedings entire. In those days they had seats of honor assigned to them directly by the side of the presiding officers, and over the snuff-box, in a quiet and familiar manner, the topics of the day were often discussed. To the privileges they then enjoyed, but more especially to their sagacity and industry, are we now indebted, as a country, for their "Register of Debates," which, with the "Intelligencer," has become a most important part of our national history. As in their journal nearly all the most eminent of American statesmen have discussed the affairs of the country, so have they been the direct means of preserving many of the speeches which are now the acknowledged ornaments of our political literature. Had it not been for Mr. Gales, the great intellectual combat between Hayne and Webster, for example, would have passed into a vague tradition, perhaps. The original notes of Mr. Webster's speech, now in Mr. Gales's library, form a volume of several hundred pages, and, having been corrected and interlined by the statesman's own

hand, present a treasure that might be envied. At the period just alluded to, Mr. Gales had given up the practice of reporting any speeches, and it was a mere accident that led him to pay Mr. Webster the compliment in question. That it was appreciated was proved by many reciprocal acts of kindness and the long and happy intimacy that existed between the two gentlemen, ending only with the life of the statesman. It was Mr. Webster's opinion, that the abilities of Mr. Gales were of the highest order; and yet the writer has heard of one instance in which even the editor could not get along without a helping hand. Mr. Gales had for some days been engaged upon the Grand Jury, and, with his head full of technicalities, entered upon the duty of preparing a certain editorial. In doing this, he unconsciously employed a number of legal phrases; and when about half through, found it necessary to come to a halt. At this juncture, he dropped a note to Mr. Webster, transmitting the unfinished article and explaining his difficulty. Mr. Webster took it in hand, finished it to the satisfaction of Mr. Gales, and it was published as editorial.

But the writer is trespassing upon pri-

vate ground, and it is with great reluctance that he refrains from recording a long list of incidents which have come to his knowledge, calculated to illustrate the manifold virtues of his distinguished friends. That they are universally respected and beloved by those who know them,—that their opinions on public matters have been solicited by Secretaries of State and even by Presidents opposed to them in politics,—that their journal has done more than any other in the country to promote a healthy tone in polite literature,—that their home-life has been made happy by the influences of refinement and taste,—and that they have given away to the poor money enough almost to build a city, and to the unfortunate spoken kind words enough to fill a library, are all assertions which none can truthfully deny. If, therefore, to look back upon a long life *not uselessly spent* is what will give us peace at last, then will the evening of their days be all that they could desire; and their “silver hairs,” the most appropriate crown of true patriotism,

“Will purchase them a good opinion,
And buy men's voices to commend their
deeds.”

SONNET.

WRITTEN AFTER A VIOLENT THUNDER-STORM IN THE COUNTRY.

AN hour ago, and prostrate Nature lay,
Like some sore-smitten creature, nigh to death,
With feverish, pallid lips, with laboring breath,
And languid eyeballs darkening to the day;
A burning noontide ruled with merciless sway
Earth, wave, and air; the ghastly-stretching heath,
The sullen trees, the fainting flowers beneath,
Drooped hopeless, shrivelling in the torrid ray:
When, sudden, like a cheerful trumpet blown
Far off by rescuing spirits, rose the wind,
Urging great hosts of clouds; the thunder's tone
Swells into wrath, the rainy cataracts fall,—
But pausing soon, behold creation shrined
In a new birth, God's covenant clasping all!

THE PROFESSOR'S STORY.

CHAPTER XIX.

THE SPIDER ON HIS THREAD.

THERE was nobody, then, to counsel poor Elsie, except her father, who had learned to let her have her own way so as not to disturb such relations as they had together, and the old black woman, who had a real, though limited influence over the girl. Perhaps she did not need counsel. To look upon her, one might well suppose that she was competent to defend herself against any enemy she was like to have. That glittering, piercing eye was not to be softened by a few smooth words spoken in low tones, charged with the common sentiments which win their way to maidens' hearts. That round, lithe, sinuous figure was as full of dangerous life as ever lay under the slender flanks and clean-shaped limbs of a panther.

There were particular times when Elsie was in such a mood that it must have been a bold person who would have intruded upon her with reproof or counsel. "This is one of her days," old Sophy would say quietly to her father, and he would, as far as possible, leave her to herself. These days were more frequent, as old Sophy's keen, concentrated watchfulness had taught her, at certain periods of the year. It was in the heats of summer that they were most common and most strongly characterized. In winter, on the other hand, she was less excitable, and even at times heavy and as if chilled and dulled in her sensibilities. It was a strange, paroxysmal kind of life that belonged to her. It seemed to come and go with the sunlight. All winter long she would be comparatively quiet, easy to manage, listless, slow in her motions; her eye would lose something of its strange lustre; and the old nurse would feel so little anxiety, that her whole expression and aspect would show the change, and people would say to her, "Why, Sophy, how young you're looking!"

As the spring came on, Elsie would leave the fireside, have her tiger-skin spread in the empty southern chamber next the wall, and lie there basking for whole hours in the sunshine. As the season warmed, the light would kindle afresh in her eyes, and the old woman's sleep would grow restless again,—for she knew, that, so long as the glitter was fierce in the girl's eyes, there was no trusting her impulses or movements.

At last, when the veins of the summer were hot and swollen, and the juices of all the poison-plants and the blood of all the creatures that feed upon them had grown thick and strong,—about the time when the second mowing was in hand, and the brown, wet-faced men were following up the scythes as they chased the falling waves of grass, (falling as the waves fall on sickle-curved beaches; the foam-flowers dropping as the grass-flowers drop,—with sharp semivowel-consonantal sounds,—*frsh*,—for that is the way the sea talks, and leaves all pure vowel-sounds for the winds to breathe over it, and all mutes to the unyielding earth,)—about this time of over-ripe midsummer, the life of Elsie seemed fullest of its malign and restless instincts. This was the period of the year when the Rockland people were most cautious of wandering in the leafier coverts which skirted the base of The Mountain, and the farmers liked to wear thick, long boots, whenever they went into the bushes. But Elsie was never so much given to roaming over The Mountain as at this season; and as she had grown more absolute and uncontrollable, she was as like to take the night as the day for her rambles.

At this season, too, all her peculiar tastes in dress and ornament came out in a more striking way than at other times. She was never so superb as then, and never so threatening in her scowling beauty. The barred skirts she always

fancied showed sharply beneath her diaphanous muslins; the diamonds often glittered on her breast as if for her own pleasure rather than to dazzle others; the asp-like bracelet hardly left her arm. Without some necklace she was never seen,—either the golden cord she wore at the great party, or a chain of mosaics, or simply a ring of golden scales. Some said that Elsie always slept in a necklace, and that when she died she was to be buried in one. It was a fancy of hers,—but many thought there was a reason for it.

Nobody watched Elsie with a more searching eye than her cousin, Dick Venner. He had kept more out of her way of late, it is true, but there was not a movement she made which he did not carefully observe just so far as he could without exciting her suspicion. It was plain enough to him that the road to fortune was before him, and that the first thing was to marry Elsie. What course he should take with her, or with others interested, after marrying her, need not be decided in a hurry.

He had now done all he could expect to do at present in the way of conciliating the other members of the household. The girl's father tolerated him, if he did not even like him. Whether he suspected his project or not Dick did not feel sure; but it was something to have got a foothold in the house, and to have overcome any prepossession against him which his uncle might have entertained. To be a good listener and a bad billiard-player was not a very great sacrifice to effect this object. Then old Sophy could hardly help feeling well-disposed towards him, after the gifts he had bestowed on her and the court he had paid her. These were the only persons on the place of much importance to gain over. The people employed about the house and farm-lands had little to do with Elsie, except to obey her without questioning her commands.

Mr. Richard began to think of reopening his second parallel. But he had lost something of the coolness with which he

had begun his system of operations. The more he had reflected upon the matter, the more he had convinced himself that this was his one great chance in life. If he suffered this girl to escape him, such an opportunity could hardly, in the nature of things, present itself a second time. Only one life between Elsie and her fortune,—and lives are so uncertain! The girl might not suit him as a wife. Possibly. Time enough to find out after he had got her. In short, he must have the property, and Elsie Venner, as she was to go with it,—and then, if he found it convenient and agreeable to lead a virtuous life, he would settle down and raise children and vegetables; but if he found it inconvenient and disagreeable, so much the worse for those that made it so. Like many other persons, he was not principled against virtue, provided virtue were a better investment than its opposite; but he knew that there might be contingencies in which the property would be better without its incumbrances, and he contemplated this conceivable problem in the light of all its possible solutions.

One thing Mr. Richard could not conceal from himself: Elsie had some new cause of indifference, at least, if not of aversion to him. With the acuteness which persons who make a sole business of their own interest gain by practice, so that fortune-hunters are often shrewd where real lovers are terribly simple, he fixed at once on the young man up at the school where the girl had been going of late, as probably at the bottom of it.

“Cousin Elsie in love!” so he communed with himself upon his lonely pillow. “In love with a Yankee school-master! What else can it be? Let him look out for himself! He'll stand but a bad chance between us. What makes you think she's in love with him? Met her walking with him. Don't like her looks and ways;—she's thinking about *something*, anyhow. Where does she get those books she is reading so often? Not out of our library, that's certain. If I could have ten minutes' peep into her chamber now, I would find out where

she got them, and what mischief she was up to."

At that instant, as if some tributary demon had heard his wish, a shape which could be none but Elsie's flitted through a gleam of moonlight into the shadow of the trees. She was setting out on one of her midnight rambles.

Dick felt his heart stir in its place, and presently his cheeks flushed with the old longing for an adventure. It was not much to invade a young girl's deserted chamber, but it would amuse a wakeful hour, and tell him some little matters he wanted to know. The chamber he slept in was over the room which Elsie chiefly occupied at this season. There was no great risk of his being seen or heard, if he ventured down-stairs to her apartment.

Mr. Richard Venner, in the pursuit of his interesting project, arose and lighted a lamp. He wrapped himself in a dressing-gown and thrust his feet into a pair of cloth slippers. He stole carefully down the stair, and arrived safely at the door of Elsie's room. The young lady had taken the natural precaution to leave it fastened, carrying the key with her, no doubt,—unless, indeed, she had got out by the window, which was not far from the ground. Dick could get in at this window easily enough, but he did not like the idea of leaving his footprints in the flower-bed just under it. He returned to his own chamber, and held a council of war with himself.

He put his head out of his own window and looked at that beneath. It was open. He then went to one of his trunks, which he unlocked, and began carefully removing its contents. What these were we need not stop to mention,—only remarking that there were dresses of various patterns, which might afford an agreeable series of changes, and in certain contingencies prove eminently useful. After removing a few of these, he thrust his hand to the very bottom of the remaining pile and drew out a coiled strip of leather many yards in length, ending in a noose,—a tough, well-seasoned *lasso*, looking as

if it had seen service and was none the worse for it. He uncoiled a few yards of this and fastened it to the knob of a door. Then he threw the loose end out of the window so that it should hang by the open casement of Elsie's room. By this he let himself down opposite her window, and with a slight effort swung himself inside the room. He lighted a match, found a candle, and, having lighted that, looked curiously about him, as Clodius might have done when he smuggled himself in among the Vestals.

Elsie's room was almost as peculiar as her dress and ornaments. It was a kind of museum of objects, such as the woods are full of to those who have eyes to see them, but many of them such as only few could hope to reach, even if they knew where to look for them. Crows' nests, which are never found but in the tall trees, commonly enough in the forks of ancient hemlocks, eggs of rare birds, which must have taken a quick eye and a hard climb to find and get hold of, mosses and ferns of unusual aspect, and quaint monstrosities of vegetable growth, such as Nature delights in, showed that Elsie had her tastes and fancies like any naturalist or poet.

Nature, when left to her own freaks in the forest, is grotesque and fanciful to the verge of license, and beyond it. The foliage of trees does not always require clipping to make it look like an image of life. From those windows at Canoe Meadow, among the mountains, we could see all summer long a lion rampant, a Shanghai chicken, and General Jackson on horseback, done by Nature in green leaves, each with a single tree. But to Nature's tricks with boughs and roots and smaller vegetable growths there is no end. Her fancy is infinite, and her humor not always refined. There is a perpetual reminiscence of animal life in her rude caricatures, which sometimes actually reach the point of imitating the complete human figure, as in that extraordinary specimen which nobody will believe to be genuine, except the men of science, and of which the discreet reader may have a

glimpse by application in the proper quarter.

Elsie had gathered so many of these sculpture-like monstrosities, that one might have thought she had robbed old Sophy's grandfather of his fetishes. They helped to give her room a kind of enchanted look, as if a witch had her home in it. Over the fireplace was a long, staff-like branch, strangled in the spiral coils of one of those vines which strain the smaller trees in their clinging embraces, sinking into the bark until the parasite becomes almost identified with its support. With these sylvan curiosities were blended objects of art, some of them not less singular, but others showing a love for the beautiful in form and color, such as a girl of fine organization and nice culture might naturally be expected to feel and to indulge, in adorning her apartment.

All these objects, pictures, bronzes, vases, and the rest, did not detain Mr. Richard Venner very long, whatever may have been his sensibilities to art. He was more curious about books and papers. A copy of Keats lay on the table. He opened it and read the name of *Bernard C. Langdon* on the blank leaf. An envelope was on the table with Elsie's name written in a similar hand; but the envelope was empty, and he could not find the note it contained. Her desk was locked, and it would not be safe to tamper with it. He had seen enough; the girl received books and notes from this fellow up at the school,—this usher, this Yankee quill-driver;—*he* was aspiring to become the lord of the Dudley domain, then, was he?

Elsie had been reasonably careful. She had locked up her papers, whatever they might be. There was little else that promised to reward his curiosity, but he cast his eye on everything. There was a clasp-Bible among her books. Dick wondered if she ever unclasped it. There was a book of hymns; it had her name in it, and looked as if it might have been often read;—what the *diablo* had Elsie to do with hymns?

Mr. Richard Venner was in an observ-

ing and analytical state of mind, it will be noticed, or he might perhaps have been touched with the innocent betrayals of the poor girl's chamber. Had she, after all, some human tenderness in her heart? That was not the way he put the question,—but whether she would take seriously to this schoolmaster, and if she did, what would be the neatest and surer and quickest way of putting a stop to all that nonsense. All this, however, he could think over more safely in his own quarters. So he stole softly to the window, and, catching the end of the leathern thong, regained his own chamber and drew in the lasso.

It needs only a little jealousy to set a man on who is doubtful in love or wooing, or to make him take hold of his courting in earnest. As soon as Dick had satisfied himself that the young schoolmaster was his rival in Elsie's good graces, his whole thoughts concentrated themselves more than ever on accomplishing his great design of securing her for himself. There was no time to be lost. He must come into closer relations with her, so as to withdraw her thoughts from this fellow, and to find out more exactly what was the state of her affections, if she had any. So he began to court her company again, to propose riding with her, to sing to her, to join her whenever she was strolling about the grounds, to make himself agreeable, according to the ordinary understanding of that phrase, in every way which seemed to promise a chance for succeeding in that amiable effort.

The girl treated him more capriciously than ever. She would be sullen and silent, or she would draw back fiercely at some harmless word or gesture, or she would look at him with her eyes narrowed in such a strange way and with such a wicked light in them that Dick swore to himself they were too much for him, and would leave her for the moment. Yet she tolerated him, almost as a matter of necessity, and sometimes seemed to take a kind of pleasure in trying her power upon him. This he soon found out, and humored her in the fancy that

she could exercise a kind of fascination over him,—though there were times in which he actually felt an influence he could not understand, an effect of some peculiar expression about her, perhaps, but still centring in those diamond eyes of hers which it made one feel so curiously to look into.

Whether Elsie saw into his object or not was more than he could tell. His idea was, after having conciliated the good-will of all about her as far as possible, to make himself first a habit and then a necessity with the girl,—not to spring any trap of a declaration upon her until tolerance had grown into such a degree of inclination as her nature was like to admit. He had succeeded in the first part of his plan. He was at liberty to prolong his visit at his own pleasure. This was not strange; these three persons, Dudley Venner, his daughter, and his nephew, represented all that remained of an old and honorable family. Had Elsie been like other girls, her father might have been less willing to entertain a young fellow like Dick as an inmate; but he had long outgrown all the slighter apprehensions which he might have had in common with all parents, and followed rather than led the imperious instincts of his daughter. It was not a question of sentiment, but of life and death, or more than that,—some dark ending, perhaps, which would close the history of his race with disaster and evil report upon the lips of all coming generations.

As to the thought of his nephew's making love to his daughter, it had almost passed from his mind. He had been so long in the habit of looking at Elsie as outside of all common influences and exceptional in the law of her nature, that it was difficult for him to think of her as a girl to be fallen in love with. Many persons are surprised, when others court their female relatives; they know them as good young or old women enough,—aunts, sisters, nieces, daughters, whatever they may be,—but never think of anybody's falling in love with them, any more than of their being struck by lightning.

But in this case there were special reasons, in addition to the common family delusion,—reasons which seemed to make it impossible that she should attract a suitor. Who would *dare* to marry Elsie? No, let her have the pleasure, if it was one, at any rate the wholesome excitement, of companionship; it might save her from lapsing into melancholy or a worse form of madness. Dudley Venner had a kind of superstition, too, that, if Elsie could only outlive three septenaries, twenty-one years, so that, according to the prevalent idea, her whole frame would have been thrice made over, counting from her birth, she would revert to the natural standard of health of mind and feelings from which she had been so long perverted. The thought of any other motive than love being sufficient to induce Richard to become her suitor had not occurred to him. He had married early, at that happy period when interested motives are least apt to influence the choice; and his single idea of marriage was, that it was the union of persons naturally drawn towards each other by some mutual attraction. Very simple, perhaps; but he had lived lonely for many years since his wife's death, and judged the hearts of others, most of all of his brother's son, by his own. He had often thought whether, in case of Elsie's dying or being necessarily doomed to seclusion, he might not adopt this nephew and make him his heir; but it had not occurred to him that Richard might wish to become his son-in-law for the sake of his property.

It is very easy to criticize other people's modes of dealing with their children. Outside observers see results; parents see processes. They notice the trivial movements and accents which betray the blood of this or that ancestor; they can detect the irrepressible movement of hereditary impulse in looks and acts which mean nothing to the common observer. To be a parent is almost to be a fatalist. This boy sits with legs crossed, just as his uncle used to whom he never saw; his grandfathers both died before he was

born, but he has the movement of the eyebrows which we remember in one of them, and the gusty temper of the other.

These are things parents can see, and which they must take account of in education, but which few except parents can be expected to really understand. Here and there a sagacious person, old, or of middle age, who has *triangulated* a race, that is, taken three or more observations from the several standing-places of three different generations, can tell pretty nearly the range of possibilities and the limitations of a child, actual or potential, of a given stock, — errors expected always, because children of the same stock are not bred just alike, because the traits of some less known ancestor are liable to break out at any time, and because each human being has, after all, a small fraction of individuality about him which gives him a flavor, so that he is distinguishable from others by his friends or in a court of justice, and which occasionally makes a genius or a saint or a criminal of him. It is well that young persons cannot read these fatal oracles of Nature. Blind impulse is her highest wisdom, after all. We make our great jump, and then she takes the bandage off our eyes. That is the way the broad sea-level of average is maintained, and the physiological democracy is enabled to fight against the principle of selection which would disinherit all the weaker children. The magnificent constituency of mediocrities of which the world is made up, — the people without biographies, whose lives have made a clear solution in the fluid menstruum of time, instead of being precipitated in the opaque sediment of history —

But this is a narrative, and not a disquisition.

CHAPTER XX.

FROM WITHOUT AND FROM WITHIN.

THERE were not wanting people who accused Dudley Venner of weakness and

bad judgment in his treatment of his daughter. Some were of opinion that the great mistake was in not “breaking her will” when she was a little child. There was nothing the matter with her, they said, but that she had been spoiled by indulgence. If *they* had had the charge of her, they’d have brought her down. She’d got the upperhand of her father now; but if he’d only taken hold of her in season! There are people who think that everything may be done, if the doer, be he educator or physician, be only called “in season.” No doubt, — but *in season* would often be a hundred or two years before the child was born; and people never send so early as that.

The father of Elsie Venner knew his duties and his difficulties too well to trouble himself about anything others might think or say. So soon as he found that he could not govern his child, he gave his life up to following her and protecting her as far as he could. It was a stern and terrible trial for a man of acute sensibility, and not without force of intellect and will, and the manly ambition for himself and his family-name which belonged to his endowments and his position. Passive endurance is the hardest trial to persons of such a nature.

What made it still more a long martyrdom was the necessity for bearing his cross in utter loneliness. He could not tell his griefs. He could not talk of them even with those who knew their secret spring. His minister had the unsympathetic nature which is common in the meaner sort of devotees, — persons who mistake spiritual selfishness for sanctity, and grab at the infinite prize of the great Future and Elsewhere with the egotism they excommunicate in its hardly more odious forms of avarice and self-indulgence. How could he speak with the old physician and the old black woman about a sorrow and a terror which but to name was to strike dumb the lips of Consolation?

In the dawn of his manhood he had found that second consciousness for which young men and young women go about

looking into each other's faces, with their sweet, artless aim playing in every feature, and making them beautiful to each other, as to all of us. He had found his other self early, before he had grown weary in the search and wasted his freshness in vain longings: the lot of many, perhaps we may say of most, who infringe the patent of our social order by intruding themselves into a life already upon half-allowance of the necessary luxuries of existence. The life he had led for a brief space was not only beautiful in outward circumstance, as old Sophy had described it to the Reverend Doctor. It was that delicious process of the tuning of two souls to each other, string by string, not without little half-pleasing discords now and then when some chord in one or the other proves to be over-strained or over-lax, but always approaching nearer and nearer to harmony, until they become at last as two instruments with a single voice. Something more than a year of this blissful doubled consciousness had passed over him when he found himself once more alone,—alone, save for the little diamond-eyed child lying in the old woman's arms, with the coral necklace round her throat and the rattle in her hand.

He would not die by his own act. It was not the way in his family. There may have been other, perhaps better reasons, but this was enough; he did not come of suicidal stock. He must live for this child's sake, at any rate; and yet,—oh, yet, who could tell with what thoughts he looked upon her? Sometimes her little features would look placid, and something like a smile would steal over them; then all his tender feelings would rush up into his eyes, and he would put his arms out to take her from the old woman,—but all at once her eyes would narrow and she would throw her head back; and a shudder would seize him as he stooped over his child,—he could not look upon her,—he could not touch his lips to her cheek; nay, there would sometimes come into his soul such frightful suggestions that he would hurry from the room lest the

hinted thought should become a momentary madness and he should lift his hand against the helpless infant which owed him life.

In those miserable days he used to wander all over The Mountain in his restless endeavor to seek some relief for inward suffering in outward action. He had no thought of throwing himself from the summit of any of the broken cliffs, but he clambered over them recklessly, as having no particular care for his life. Sometimes he would go into the accursed district where the venomous reptiles were always to be dreaded, and court their worst haunts, and kill all he could come near with a kind of blind fury that was strange in a person of his gentle nature.

One overhanging cliff was a favorite haunt of his. It frowned upon his home beneath in a very menacing way; he noticed slight seams and fissures that looked ominous;—what would happen, if it broke off some time or other and came crashing down on the fields and roofs below? He thought of such a possible catastrophe with a singular indifference, in fact with a feeling almost like pleasure. It would be such a swift and thorough solution of this great problem of life he was working out in ever-recurring daily anguish! The remote possibility of such a catastrophe had frightened some timid dwellers beneath The Mountain to other places of residence; here the danger was most imminent, and yet he loved to dwell upon the chances of its occurrence. Danger is often the best *counter-irritant* in cases of mental suffering; he found a solace in careless exposure of his life, and learned to endure the trials of each day better by dwelling in imagination on the possibility that it might be the last for him and the home that was his.

Time, the great consoler, helped these influences, and he gradually fell into more easy and less dangerous habits of life. He ceased from his more perilous rambles. He thought less of the danger from the great overhanging rocks and forests; they had hung there for centuries; it was not very likely they would crash or slide

in his time. He became accustomed to all Elsie's strange looks and ways. Old Sophy dressed her with ruffles round her neck, and hunted up the red coral branch with silver bells which the little toothless Dudleys had bitten upon for a hundred years. By an infinite effort, her father forced himself to become the companion of this child, for whom he had such a mingled feeling, but whose presence was always a trial to him and often a terror.

At a cost which no human being could estimate, he had done his duty, and in some degree reaped his reward. Elsie grew up with a kind of filial feeling for him, such as her nature was capable of. She never would obey him; that was not to be looked for. Commands, threats, punishments, were out of the question with her; the mere physical effects of crossing her will betrayed themselves in such changes of expression and color that it would have been senseless to attempt to govern her in any such way. Leaving her mainly to herself, she could be to some extent indirectly influenced, — not otherwise. She called her father "Dudley," as if he had been her brother. She ordered everybody and would be ordered by none.

Who could know all these things, except the few people of the household? What wonder, therefore, that ignorant and shallow persons laid the blame on her father of those peculiarities which were freely talked about, — of those darker tendencies which were hinted of in whispers? To all this talk, so far as it reached him, he was supremely indifferent, not only with the indifference which all gentlemen feel to the gossip of their inferiors, but with a charitable calmness which did not wonder or blame. He knew that his position was not simply a difficult, but an impossible one, and schooled himself to bear his destiny as well as he might and report himself only at Headquarters.

He had grown gentle under this discipline. His hair was just beginning to be touched with silver, and his expression was that of habitual sadness and anxiety. He had no counsellor, as we have seen,

to turn to, who did not know either too much or too little. He had no heart to rest upon and into which he might unburden himself of the secrets and the sorrows that were aching in his own breast. Yet he had not allowed himself to run to waste in the long time since he was left alone to his trials and fears. He had resisted the seductions which always beset solitary men with restless brains overwrought by depressing agencies. He disguised no misery to himself with the lying delusion of wine. He sought no sleep from narcotics, though he lay with throbbing, wide-open eyeballs through all the weary hours of the night.

It was understood between Dudley Venner and old Doctor Kittredge that Elsie was a subject of occasional medical observation, on account of certain mental peculiarities which might end in a permanent affection of her reason. Beyond this nothing was said, whatever may have been in the mind of either. But Dudley Venner had studied Elsie's case in the light of all the books he could find which might do anything towards explaining it. As in all cases where men meddle with medical science for a special purpose, having no previous acquaintance with it, his imagination found what it wanted in the books he read, and adjusted it to the facts before him. So it was he came to cherish those two fancies before alluded to: that the ominous birthmark she had carried from infancy might fade and become obliterated, and that the age of complete maturity might be signalized by an entire change in her physical and mental state. He held these vague hopes as all of us nurse our only half-believed illusions. Not for the world would he have questioned his sagacious old medical friend as to the probability or possibility of their being true. We are very shy of asking questions of those who know enough to destroy with one word the hopes we live on.

In this life of comparative seclusion to which the father had doomed himself for the sake of his child, he had found time

for large and varied reading. The learned Judge Thornton confessed himself surprised at the extent of Dudley Venner's information. Doctor Kittredge found that he was in advance of him in the knowledge of recent physiological discoveries. He had taken pains to become acquainted with agricultural chemistry; and the neighboring farmers owed him some useful hints about the management of their land. He renewed his old acquaintance with the classic authors. He loved to warm his pulses with Homer and calm them down with Horace. He received all manner of new books and periodicals, and gradually gained an interest in the events of the passing time. Yet he remained almost a hermit, not absolutely refusing to see his neighbors, nor ever churlish towards them, but on the other hand not cultivating any intimate relations with them.

He had retired from the world a young man, little more than a youth, indeed, with sentiments and aspirations all of them suddenly extinguished. The first had bequeathed him a single huge sorrow, the second a single trying duty. In due time the anguish had lost something of its poignancy, the light of earlier and happier memories had begun to struggle with and to soften its thick darkness, and even that duty which he had confronted with such an effort had become an endurable habit.

At a period of life when many have been living on the capital of their acquired knowledge and their youthful stock of sensibilities until their intellects are really shallower and their hearts emptier than they were at twenty, Dudley Venner was stronger in thought and tenderer in soul than in the first freshness of his youth, when he counted but half his present years. He was now on the verge of that decade which marks the decline of men who have ceased growing in knowledge and strength: from forty to fifty a man must move upward, or the natural falling off in the vigor of life will carry him rapidly downward. At the entrance of this decade his inward nature

was richer and deeper than in any earlier period of his life. If he could only be summoned to action, he was capable of noble service. If his sympathies could only find an outlet, he was never so capable of love as now; for his natural affections had been gathering in the course of all these years, and the traces of that ineffaceable calamity of his life were softened and partially hidden by new growths of thought and feeling, as the wreck left by a mountain-slide is covered over by the gentle intrusion of the soft-stemmed herbs which will prepare it for the stronger vegetation that will bring it once more into harmony with the peaceful slopes around it.

Perhaps Dudley Venner had not gained so much in worldly wisdom as if he had been more in society and less in his study. The indulgence with which he treated his nephew was, no doubt, imprudent. A man more in the habit of dealing with men would have been more guarded with a person with Dick's questionable story and unquestionable physiognomy. But he was singularly unsuspecting, and his natural kindness was an additional motive to the wish for introducing some variety into the routine of Elsie's life.

If Dudley Venner did not know just what he wanted at this period of his life, there were a great many people in the town of Rockland who thought they did know. He had been a widower long enough, — nigh twenty year, wa'n't it? He'd been aout to Sprawles's party, — there wa'n't anything to hender him why he shouldn't stir raound l'k other folks. What was the reason he didn't go abaout to taown-meetin's, 'n' Sahbath-meetin's, 'n' l'yceums, 'n' school-'xaminations, 'n' s'prise-parties, 'n' funerals, — and other entertainments where the still-faced two-story folks were in the habit of looking round to see if any of the mansion-house gentry were present? — Fac' was, he was livin' too lonesome daown there at the mansion-haouse. Why shouldn't he make up to the Jedge's daughter? She was genteel enough for him and — let's see,

how old was she? Seven-'n'-twenty, — no, six-'n'-twenty, — born the same year we buried our little Anny Mari'.

There was no possible objection to this arrangement, if the parties interested had seen fit to make it or even to think of it. But "Portia," as some of the mansion-house people called her, did not happen to awaken the elective affinities of the lonely widower. He met her once in a while, and said to himself that she was a good specimen of the grand style of woman; and then the image came back to him of a woman not quite so large, not quite so imperial in her port, not quite so incisive in her speech, not quite so judicial in her opinions, but with two or three more joints in her frame and two or three soft inflections in her voice which for some absurd reason or other drew him to her side and so bewitched him that he told her half his secrets and looked into her eyes all that he could not tell, in less time than it would have taken him to discuss the champion paper of the last Quarterly with the admirable "Portia." *Heu, quanto minus!* How much more was that lost image to him than all it left on earth!

The study of love is very much like that of meteorology. We know that just about so much rain will fall in a season; but on what particular day it will shower is more than we can tell. We know that just about so much love will be made every year in a given population; but who will rain his young affections upon the heart of whom is not known except to the astrologers and fortune-tellers. And why rain falls as it does, and why love is made just as it is, are equally puzzling questions.

The woman a man loves is always his own daughter, far more his daughter than the female children born to him by the common law of life. It is not the outside woman, who takes his name, that he loves: before her image has reached the centre of his consciousness, it has passed through fifty many-layered nerve-strainers, been churned over by ten thousand pulse-beats, and reacted upon by millions of lateral

impulses which bandy it about through the mental spaces as a reflection is sent back and forward in a saloon lined with mirrors. With this altered image of the woman before him his preëxisting ideal becomes blended. The object of his love is half the offspring of her legal parents and half of her lover's brain. The difference between the real and the ideal objects of love must not exceed a fixed maximum. The heart's vision cannot unite them stereoscopically into a single image, if the divergence passes certain limits. A formidable analogy, much in the nature of a proof, with very serious consequences, which moralists and match-makers would do well to remember! Double vision with the eyes of the heart is a dangerous physiological state, and may lead to missteps and serious falls.

Whether Dudley Venner would ever find a breathing image near enough to his ideal one, to fill the desolate chamber of his heart, or not, was very doubtful. Some gracious and gentle woman, whose influence would steal upon him as the first low words of prayer after that interval of silent mental supplication known to one of our simpler forms of public worship, gliding into his consciousness without hurting its old griefs, herself knowing the chastening of sorrow, and subdued into sweet acquiescence with the Divine will, — some such woman as this, if Heaven should send him such, might call him back to the world of happiness, from which he seemed forever exiled. He could never again be the young lover who walked through the garden-alleys all red with roses in the old dead and buried June of long ago. He could never forget the bride of his youth, whose image, growing phantom-like with the lapse of years, hovered over him like a dream while waking and like a reality in dreams. But if it might be in God's good providence that this desolate life should come under the influence of human affections once more, what an ecstasy of renewed existence was in store for him! His life had not all been buried under that narrow ridge of turf with the white stone at its head. It seem-

ed so for a while ; but it was not and could not and ought not to be so. His first passion had been a true and pure one ; there was no spot or stain upon it. With all his grief there blended no cruel recollection of any word or look he would have wished to forget. All those little differences, such as young married people with any individual flavor in their characters must have, if they are tolerably mated, had only added to the music of existence, as the lesser discords admitted into some perfect symphony, fitly resolved, add richness and strength to the whole harmonious movement. It was a deep wound that Fate had inflicted on him ; nay, it seemed like a mortal one ; but the weapon was clean, and its edge was smooth. Such wounds must heal with time in healthy natures, whatever a false sentiment may say, by the wise and beneficent law of our being. The recollection of a deep and true affection is rather a

divine nourishment for a life to grow strong upon than a poison to destroy it.

Dudley Venner's habitual sadness could not be laid wholly to his early bereavement. It was partly the result of the long struggle between natural affection and duty, on one side, and the involuntary tendencies these had to overcome, on the other, — between hope and fear, so long in conflict that despair itself would have been like an anodyne, and he would have slept upon some final catastrophe with the heavy sleep of a bankrupt after his failure is proclaimed. Alas ! some new affection might perhaps rekindle the fires of youth in his heart ; but what power could calm that haggard terror of the parent which rose with every morning's sun and watched with every evening star, — what power save alone that of him who comes bearing the inverted torch, and leaving after him only the ashes printed with his footsteps ?

THE ELECTION IN NOVEMBER.

WHILE all of us have been watching, with that admiring sympathy which never fails to wait on courage and magnanimity, the career of the new Timoleon in Sicily, — while we have been reckoning, with an interest scarcely less than in some affair of personal concern, the chances and changes that bear with furtherance or hindrance upon the fortune of united Italy, we are approaching, with a quietness and composure which more than anything else mark the essential difference between our own form of democracy and any other yet known in history, a crisis in our domestic policy more momentous than any that has arisen since we became a nation. Indeed, considering the vital consequences for good or evil that will follow from the popular decision in November, we might be tempted to regard the remarkable moderation

which has thus far characterized the Presidential canvass as a guilty indifference to the duty implied in the privilege of suffrage, or a stolid unconsciousness of the result which may depend upon its exercise in this particular election, did we not believe that it arose chiefly from the general persuasion that the success of the Republican party was a foregone conclusion.

In a society like ours, where every man may transmute his private thought into history and destiny by dropping it into the ballot-box, a peculiar responsibility rests upon the individual. Nothing can absolve us from doing our best to look at all public questions as citizens, and therefore in some sort as administrators and rulers. For, though during its term of office the government be practically as independent of the popular will,

as that of Russia, yet every fourth year the people are called upon to pronounce upon the conduct of their affairs. Theoretically, at least, to give democracy any standing-ground for an argument with despotism or oligarchy, a majority of the men composing it should be statesmen and thinkers. It is a proverb, that to turn a radical into a conservative there needs only to put him into office, because then the license of speculation or sentiment is limited by a sense of responsibility, — then for the first time he becomes capable of that comparative view which sees principles and measures, not in the narrow abstract, but in the full breadth of their relations to each other and to political consequences. The theory of democracy presupposes something of these results of official position in the individual voter, since in exercising his right he becomes for the moment an integral part of the governing power.

How very far practice is from any likeness to theory a week's experience of our politics suffices to convince us. The very government itself seems an organized scramble, and Congress a boys' debating-club, with the disadvantage of being reported. As our party-creeds are commonly represented less by ideas than by persons, (who are assumed, without too close a scrutiny, to be the exponents of certain ideas,) our politics become personal and narrow to a degree never paralleled, unless in ancient Athens or mediæval Florence. Our Congress debates and our newspapers discuss, sometimes for day after day, not questions of national interest, not what is wise and right, but what the Honorable Lafayette Skreemer said on the stump, or bad whiskey said for him, half a dozen years ago. If that personage, outraged in all the finer sensibilities of our common nature, by failing to get the contract for supplying the District Court-House at Skreemeropolisville City with revolvers, was led to disparage the union of these States, it is seized on as proof conclusive that the party to which he belongs are so many Catalines, — for Congress is unanimous

only in misspelling the name of that oft-invoked conspirator. The next Presidential Election looms always in advance, so that we seem never to have an actual Chief Magistrate, but a prospective one, looking to the chances of reëlection, and mingling in all the dirty intrigues of provincial politics with an unhappy talent for making them dirtier. The cheating mirage of the White House lures our public men away from present duties and obligations; and if matters go on as they have gone, we shall need a Committee of Congress to count the spoons in the public plate-closet, whenever a President goes out of office, — with a policeman to watch every member of the Committee. We are kept normally in that most unprofitable of predicaments, a state of transition, and politicians measure their words and deeds by a standard of immediate and temporary expediency, — an expediency not as concerning the nation, but which, if more than merely personal, is no wider than the interests of party.

Is all this a result of the failure of democratic institutions? Rather of the fact that those institutions have never yet had a fair trial, and that for the last thirty years an abnormal element has been acting adversely with continually increasing strength. Whatever be the effect of slavery upon the States where it exists, there can be no doubt that its moral influence upon the North has been most disastrous. It has compelled our politicians into that first fatal compromise with their moral instincts and hereditary principles which makes all consequent ones easy; it has accustomed us to makeshifts instead of statesmanship, to subterfuge instead of policy, to party-platforms for opinions, and to a defiance of the public sentiment of the civilized world for patriotism. We have been asked to admit, first, that it was a necessary evil; then that it was a good both to master and slave; then that it was the corner-stone of free institutions; then that it was a system divinely instituted under the Old Law and sanctioned under the New. With a representation, three-fifths of it based on

the assumption that negroes are men, the South turns upon us and insists on our acknowledging that they are things. After compelling her Northern allies to pronounce the "free and equal" clause of the preamble to the Declaration of Independence (because it stood in the way of enslaving men) a manifest absurdity, she has declared, through the Supreme Court of the United States, that negroes are not men in the ordinary meaning of the word. To eat dirt is bad enough, but to find that we have eaten more than was necessary may chance to give us an indigestion. The slaveholding interest has gone on step by step, forcing concession after concession, till it needs but little to secure it forever in the political supremacy of the country. Yield to its latest demand, — let it mould the evil destiny of the Territories, — and the thing is done past recall. The next Presidential Election is to say *Yes* or *No*.

But we should not regard the mere question of political preponderancy as of vital consequence, did it not involve a continually increasing moral degradation on the part of the Nonslaveholding States, — for Free States they could not be called much longer. Sordid and materialistic views of the true value and objects of society and government are professed more and more openly by the leaders of popular outcry, if it cannot be called public opinion. That side of human nature which it has been the object of all lawgivers and moralists to repress and subjugate is flattered and caressed; whatever is profitable is right; and already the slave-trade, as yielding a greater return on the capital invested than any other traffic, is lauded as the highest achievement of human reason and justice. Mr. Hammond has proclaimed the accession of King Cotton, but he seems to have forgotten that history is not without examples of kings who have lost their crowns through the folly and false security of their ministers. It is quite true that there is a large class of reasoners who would weigh all questions of right and wrong in the balance of trade; but we

cannot bring ourselves to believe that it is a wise political economy which makes cotton by unmaking men, or a far-seeing statesmanship which looks on an immediate money-profit as a safe equivalent for a beggared public sentiment. We think Mr. Hammond even a little premature in proclaiming the new Pretender. The election of November may prove a Cul-loden. Whatever its result, it is to settle, for many years to come, the question whether the American idea is to govern this continent, whether the Occidental or the Oriental theory of society is to mould our future, whether we are to recede from principles which eighteen Christian centuries have been slowly establishing at the cost of so many saintly lives at the stake and so many heroic ones on the scaffold and the battle-field, in favor of some fancied assimilation to the household arrangements of Abraham, of which all that can be said with certainty is that they did not add to his domestic happiness.

We believe that this election is a turning-point in our history; for, although there are four candidates, there are really, as everybody knows, but two parties, and a single question that divides them. The supporters of Messrs. Bell and Everett have adopted as their platform the Constitution, the Union, and the enforcement of the Laws. This may be very convenient, but it is surely not very explicit. The cardinal question on which the whole policy of the country is to turn — a question, too, which this very election must decide in one way or the other — is the interpretation to be put upon certain clauses of the Constitution. All the other parties equally assert their loyalty to that instrument. Indeed, it is quite the fashion. The removers of all the ancient landmarks of our policy, the violators of thrice-pledged faith, the planners of new treachery to established compromise, all take refuge in the Constitution, —

"Like thieves that in a hemp-plot lie,
Secure against the hue and cry."

In the same way the first Bonaparte re-

newed his profession of faith in the Revolution at every convenient opportunity; and the second follows the precedent of his uncle, though the uninitiated fail to see any logical sequence from 1789 to 1815 or 1860. If Mr. Bell loves the Constitution, Mr. Breckinridge is equally fond; that Egeria of our statesmen could be "happy with either, were t'other dear charmer away." Mr. Douglas confides the secret of his passion to the unloquacious clams of Rhode Island, and the chief complaint made against Mr. Lincoln by his opponents is that he is *too* Constitutional.

Meanwhile the only point in which voters are interested is,—What do they mean by the Constitution? Mr. Breckinridge means the superiority of a certain exceptional species of property over all others, nay, over man himself. Mr. Douglas, with a different formula for expressing it, means practically the same thing. Both of them mean that Labor has no rights which Capital is bound to respect,—that there is no higher law than human interest and cupidity. Both of them represent not merely the narrow principles of a section, but the still narrower and more selfish ones of a caste. Both of them, to be sure, have convenient phrases to be juggled with before election, and which mean one thing or another, or neither one thing nor another, as a particular exigency may seem to require; but since both claim the regular Democratic nomination, we have little difficulty in divining what their course would be after the fourth of March, if they should chance to be elected. We know too well what regular Democracy is, to like either of the two faces which each shows by turns under the same hood. Everybody remembers Baron Grimm's story of the Parisian showman, who in 1789 exhibited the *royal* Bengal tiger under the new character of *national*, as more in harmony with the changed order of things. Could the animal have lived till 1848, he would probably have found himself offered to the discriminating public as the *democratic* and *social* ornament

of the jungle. The Pro-slavery party of this country seeks the popular favor under even more frequent and incongruous *aliases*: it is now *national*, now *conservative*, now *constitutional*; here it represents Squatter-Sovereignty, and there the power of Congress over the Territories; but, under whatever name, its nature remains unchanged, and its instincts are none the less predatory and destructive.

Mr. Lincoln's position is set forth with sufficient precision in the platform adopted by the Chicago Convention; but what are we to make of Messrs. Bell and Everett? Heirs of the stock in trade of two defunct parties, the Whig and Know-Nothing, do they hope to resuscitate them? or are they only like the inconsolable widows of Père la Chaise, who, with an eye to former customers, make use of the late Andsoforth's gravestone to advertise that they still carry on the business at the old stand? Mr. Everett, in his letter accepting the nomination, gave us only a string of reasons why he should not have accepted it at all; and Mr. Bell preserves a silence singularly at variance with his patronymic. The only public demonstration of principle that we have seen is an emblematic bell drawn upon a wagon by a single horse, with a man to lead him, and a boy to make a nuisance of the tinkling symbol as it moves along. Are all the figures in this melancholy procession equally emblematic? If so, which of the two candidates is typified in the unfortunate who leads the horse?—for we believe the only hope of the party is to get one of them elected by some hocus-pocus in the House of Representatives. The little boy, we suppose, is intended to represent the party, which promises to be so conveniently small that there will be an office for every member of it, if its candidate should win. Did not the bell convey a plain allusion to the leading name on the ticket, we should conceive it an excellent type of the hollowness of those fears for the safety of the Union, in case of Mr. Lincoln's election, whose changes are so loudly rung,—its noise having once or

twice given rise to false alarms of fire, till people found out what it really was. Whatever profound moral it be intended to convey, we find in it a similitude that is not without significance as regards the professed creed of the party. The industrious youth who operates upon it has evidently some notion of the measured and regular motion that befits the tongues of well-disciplined and conservative bells. He does his best to make theory and practice coincide; but with every jolt on the road an involuntary variation is produced, and the sonorous pulsation becomes rapid or slow accordingly. We have observed that the Constitution was liable to similar derangements, and we very much doubt whether Mr. Bell himself (since, after all, the Constitution would practically be nothing else than his interpretation of it) would keep the same measured tones that are so easy on the smooth path of candidacy, when it came to conducting the car of State over some of the rough places in the highway of Manifest Destiny, and some of those passages in our politics which, after the fashion of new countries, are rather *corduroy* in character.

But, fortunately, we are not left wholly in the dark as to the aims of the self-styled Constitutional party. One of its most distinguished members, Governor Hunt of New York, has given us to understand that its prime object is the defeat at all hazards of the Republican candidate. To achieve so desirable an end, its leaders are ready to coalesce, here with the Douglas, and there with the Breckinridge faction of that very Democratic party of whose violations of the Constitution, corruption, and dangerous limberness of principle they have been the lifelong denouncers. In point of fact, then, it is perfectly plain that we have only two parties in the field: those who favor the extension of slavery, and those who oppose it,—in other words, a Destructive and a Conservative party.

We know very well that the partisans of Mr. Bell, Mr. Douglas, and Mr. Breckinridge all equally claim the title of conservative: and the fact is a very curious

one, well worthy the consideration of those foreign critics who argue that the inevitable tendency of democracy is to compel larger and larger concessions to a certain assumed communistic propensity and hostility to the rights of property on the part of the working classes. But the truth is, that revolutionary ideas are promoted, not by any unthinking hostility to the *rights* of property, but by a well-founded jealousy of its usurpations; and it is Privilege, and not Property, that is perplexed with fear of change. The conservative effect of ownership operates with as much force on the man with a hundred dollars in an old stocking as on his neighbor with a million in the funds. During the Roman Revolution of '48, the beggars who had funded their gains were among the staunchest reactionaries, and left Rome with the nobility. No question of the abstract right of property has ever entered directly into our politics, or ever will,—the point at issue being, whether a certain exceptional kind of property, already privileged beyond all others, shall be entitled to still further privileges at the expense of every other kind. The extension of slavery over new territory means just this,—that this one kind of property, not recognized as such by the Constitution, or it would never have been allowed to enter into the basis of representation, shall control the foreign and domestic policy of the Republic.

A great deal is said, to be sure, about the rights of the South; but has any such right been infringed? When a man invests money in any species of property, he assumes the risks to which it is liable. If he buy a house, it may be burned; if a ship, it may be wrecked; if a horse or an ox, it may die. Now the disadvantage of the Southern kind of property is,—how shall we say it so as not to violate our Constitutional obligations?—that it is exceptional. When it leaves Virginia, it is a thing; when it arrives in Boston, it becomes a man, speaks human language, appeals to the justice of the same God whom we all acknowledge, weeps at the memory of wife and children left behind,—in short,

hath the same organs and dimensions that a Christian hath, and is not distinguishable from ordinary Christians, except, perhaps, by a simpler and more earnest faith. There are people at the North who believe, that, beside *meum* and *tuum*, there is also such a thing as *suum*,— who are old-fashioned enough, or weak enough, to have their feelings touched by these things, to think that human nature is older and more sacred than any claim of property whatever, and that it has rights at least as much to be respected as any hypothetical one of our Southern brethren. This, no doubt, makes it harder to recover a fugitive chattel; but the existence of human nature in a man here and there is surely one of those accidents to be counted on at least as often as fire, shipwreck, or the cattle-disease; and the man who chooses to put his money into these images of his Maker cut in ebony should be content to take the incident risks along with the advantages. We should be very sorry to deem this risk capable of diminution; for we think that the claims of a common manhood upon us should be at least as strong as those of Freemasonry, and that those whom the law of man turns away should find in the larger charity of the law of God and Nature a readier welcome and surer sanctuary. We shall continue to think the negro a man, and on Southern evidence, too, as long as he is counted in the population represented on the floor of Congress,— for three-fifths of perfect manhood would be a high average even among white men; as long as he is hanged or worse, as an example and terror to others,— for we do not punish one animal for the moral improvement of the rest; as long as he is considered capable of religious instruction,— for we fancy the gorillas would make short work with a missionary; as long as there are fears of insurrection,— for we never heard of a combined effort at revolt in a menagerie. Accordingly, we do not see how the particular right of whose infringement we hear so much is to be made safer by the election of Mr. Bell, Mr. Breckinridge,

or Mr. Douglas,— there being quite as little chance that any of them would abolish human nature as that Mr. Lincoln would abolish slavery. The same generous instinct that leads some among us to sympathize with the sorrows of the bereaved master will always, we fear, influence others to take part with the rescued man.

But if our Constitutional Obligations, as we like to call our constitutional timidity or indifference, teach us that a particular divinity hedges the Domestic Institution, they do not require us to forget that we have institutions of our own, worth maintaining and extending, and not without a certain sacredness, whether we regard the traditions of the fathers or the faith of the children. It is high time that we should hear something of the rights of the Free States, and of the duties consequent upon them. We also have our prejudices to be respected, our theory of civilization, of what constitutes the safety of a state and insures its prosperity, to be applied wherever there is soil enough for a human being to stand on and thank God for making him a man. Is conservatism applicable only to property, and not to justice, freedom, and public honor? Does it mean merely drifting with the current of evil times and pernicious counsels, and carefully nursing the ills we have, that they may, as their nature it is, grow worse?

To be told that we ought not to agitate the question of Slavery, when it is that which is forever agitating us, is like telling a man with the fever and ague on him to stop shaking and he will be cured. The discussion of Slavery is said to be dangerous, but dangerous to what? The manufacturers of the Free States constitute a more numerous class than the slaveholders of the South: suppose they should claim an equal sanctity for the Protective System. Discussion is the very life of free institutions, the fruitful mother of all political and moral enlightenment, and yet the question of all questions must be tabooed. The Swiss guide enjoins silence in the region of avalanches, lest the mere vibration of the voice

should dislodge the ruin clinging by frail roots of snow. But where is our avalanche to fall? It is to overwhelm the Union, we are told. The real danger to the Union will come when the encroachments of the Slave-Power and the concessions of the Trade-Power shall have made it a burden instead of a blessing. The real avalanche to be dreaded, are we to expect it from the ever-gathering mass of ignorant brute force, with the irresponsibility of animals and the passions of men, which is one of the fatal necessities of slavery, or from the gradually increasing consciousness of the non-slaveholding population of the Slave States of the true cause of their material impoverishment and political inferiority? From one or the other source its ruinous forces will be fed, but in either event it is not the Union that will be imperilled, but the privileged Order who on every occasion of a thwarted whim have menaced its disruption, and who will then find in it their only safety.

We believe that the "irrepressible conflict"—for we accept Mr. Seward's much-denounced phrase in all the breadth of meaning he ever meant to give it—is to take place in the South itself; because the Slave-System is one of those fearful blunders in political economy which are sure, sooner or later, to work their own retribution. The inevitable tendency of slavery is to concentrate in a few hands the soil, the capital, and the power of the countries where it exists, to reduce the non-slaveholding class to a continually lower and lower level of property, intelligence, and enterprise,—their increase in numbers adding much to the economical hardship of their position and nothing to their political weight in the community. There is no home-encouragement of varied agriculture,—for the wants of a slave population are few in number and limited in kind; none of inland trade, for that is developed only by communities where education induces refinement, where facility of communication stimulates invention and variety of enterprise, where newspapers make every man's im-

provement in tools, machinery, or culture of the soil an incitement to all, and bring all the thinkers of the world to teach in the cheap university of the people. We do not, of course, mean to say that slaveholding states may not and do not produce fine men; but they fail, by the inherent vice of their constitution and its attendant consequences, to create enlightened, powerful, and advancing communities of men, which is the true object of all political organizations, and which is essential to the prolonged existence of all those whose life and spirit are derived directly from the people. Every man who has dispassionately endeavored to enlighten himself in the matter cannot but see, that, for the many, the course of things in slaveholding states is substantially what we have described, a downward one, more or less rapid, in civilization and in all those results of material prosperity which in a free country show themselves in the general advancement for the good of all and give a real meaning to the word Commonwealth. No matter how enormous the wealth centred in the hands of a few, it has no longer the conservative force or the beneficent influence which it exerts when equably distributed,—even loses more of both where a system of absenteeism prevails so largely as in the South. In such communities the seeds of an "irrepressible conflict" are surely, if slowly, ripening, and signs are daily multiplying that the true peril to their social organization is looked for, less in a revolt of the owned labor than in an insurrection of intelligence in the labor that owns itself and finds itself none the richer for it. To multiply such communities is to multiply weakness.

The election in November turns on the single and simple question, Whether we shall consent to the indefinite multiplication of them; and the only party which stands plainly and unequivocally pledged against such a policy, nay, which is not either openly or impliedly in favor of it, is the Republican party. We are of those who at first regretted that another candidate was not nominated at Chicago; but

we confess that we have ceased to regret it, for the magnanimity of Mr. Seward since the result of the Convention was known has been a greater ornament to him and a greater honor to his party than his election to the Presidency would have been. We should have been pleased with Mr. Seward's nomination, for the very reason we have seen assigned for passing him by,—that he represented the most advanced doctrines of his party. He, more than any other man, combined in himself the moralist's oppugnancy to Slavery as a fact, the thinker's resentment of it as a theory, and the statist's distrust of it as a policy,—thus summing up the three efficient causes that have chiefly aroused and concentrated the antagonism of the Free States. Not a brilliant man, he has that best gift of Nature, which brilliant men commonly lack, of being always able to do his best; and the very misrepresentation of his opinions which was resorted to in order to neutralize the effect of his speeches in the Senate and elsewhere was the best testimony to their power. Safe from the prevailing epidemic of Congressional eloquence as if he had been inoculated for it early in his career, he addresses himself to the reason, and what he says sticks. It was assumed that his nomination would have embittered the contest and tainted the Republican creed with radicalism; but we doubt it. We cannot think that a party gains by not hitting its hardest, or by sugaring its opinions. Republicanism is not a conspiracy to obtain office under false pretences. It has a definite aim, an earnest purpose, and the unflinching tenacity of profound conviction. It was not called into being by a desire to reform the pecuniary corruptions of the party now in power. Mr. Bell or Mr. Breckinridge would do that, for no one doubts their honor or their honesty. It is not unanimous about the Tariff, about State-Rights, about many other questions of policy. What unites the Republicans is a common faith in the early principles and practice of the Republic, a common persuasion that slavery,

as it cannot but be the natural foe of the one, has been the chief debaser of the other, and a common resolve to resist its encroachments everywhen and everywhere. They see no reason to fear that the Constitution, which has shown such pliant tenacity under the warps and twistings of a forty-years' proslavery pressure, should be in danger of breaking, if bent backward again gently to its original rectitude of fibre. "All forms of human government," says Machiavelli, "have, like men, their natural term, and those only are long-lived which possess in themselves the power of returning to the principles on which they were originally founded."

It is in a moral aversion to slavery as a great wrong that the chief strength of the Republican party lies. They believe as everybody believed sixty years ago; and we are sorry to see what appears to be an inclination in some quarters to blink this aspect of the case, lest the party be charged with want of conservatism, or, what is worse, with abolitionism. It is and will be charged with all kinds of dreadful things, whatever it does, and it has nothing to fear from an upright and downright declaration of its faith. One part of the grateful work it has to do is to deliver us from the curse of perpetual concession for the sake of a peace that never comes, and which, if it came, would not be peace, but submission,—from that torpor and imbecility of faith in God and man which have stolen the respectable name of Conservatism. A question which cuts so deep as the one which now divides the country cannot be debated, much less settled, without excitement. Such excitement is healthy, and is a sign that the ill humors of the body politic are coming to the surface, where they are comparatively harmless. It is the tendency of all creeds, opinions, and political dogmas that have once defined themselves in institutions to become inoperative. The vital and formative principle, which was active during the process of crystallization into sects, or schools of thought, or governments, ceases to act; and what was once a living emanation of the Eternal Mind, organically op-

erative in history, becomes the dead formula on men's lips and the dry topic of the annalist. It has been our good fortune that a question has been thrust upon us which has forced us to reconsider the primal principles of government, which has appealed to conscience as well as reason, and, by bringing the theories of the Declaration of Independence to the test of experience in our thought and life and action, has realized a tradition of the memory into a conviction of the understanding and the soul. It will not do for the Republicans to confine themselves to the mere political argument, for the matter then becomes one of expediency, with two defensible sides to it; they must go deeper, to the radical question of Right and Wrong, or they surrender the chief advantage of their position. What Spinoza says of laws is equally true of party-platforms, — that those are strong which appeal to reason, but those are impregnable which compel the assent both of reason and the common affections of mankind.

No man pretends that under the Constitution there is any possibility of interference with the domestic relations of the individual States; no party has ever remotely hinted at any such interference; but what the Republicans affirm is, that in every contingency where the Constitution can be construed in favor of freedom, it ought to be and shall be so construed. It is idle to talk of sectionalism, abolitionism, and hostility to the laws. The principles of liberty and humanity cannot, by virtue of their very nature, be sectional, any more than light and heat. Prevention is not abolition, and unjust laws are the only serious enemies that Law ever had. With history before us, it is no treason to question the infallibility of a court; for courts are never wiser or more venerable than the men composing them, and a decision that reverses precedent cannot arrogate to itself any immunity from reversal. Truth is the only unrepealable thing.

We are gravely requested to have no opinion, or, having one, to suppress it, on

the one topic that has occupied caucuses, newspapers, Presidents' messages, and Congress, for the last dozen years, lest we endanger the safety of the Union. The true danger to popular forms of government begins when public opinion ceases because the people are incompetent or unwilling to think. In a democracy it is the duty of every citizen to think; but unless the thinking result in a definite opinion, and the opinion lead to considerate action, they are nothing. If the people are assumed to be incapable of forming a judgment for themselves, the men whose position enables them to guide the public mind ought certainly to make good their want of intelligence. But on this great question, the wise solution of which, we are every day assured, is essential to the permanence of the Union, Mr. Bell has no opinion at all, Mr. Douglas says it is of no consequence which opinion prevails, and Mr. Breckinridge tells us vaguely that "all sections have an equal right in the common Territories." The parties which support these candidates, however, all agree in affirming that the election of its special favorite is the one thing that can give back peace to the distracted country. The distracted country will continue to take care of itself, as it has done hitherto, and the only question that needs an answer is, What policy will secure the most prosperous future to the helpless Territories, which our decision is to make or mar for all coming time? What will save the country from a Senate and Supreme Court where freedom shall be forever at a disadvantage?

There is always a fallacy in the argument of the opponents of the Republican party. They affirm that all the States and all the citizens of the States ought to have equal rights in the Territories. Undoubtedly. But the difficulty is that they cannot. The slaveholder moves into a new Territory with his *institution*, and from that moment the free white settler is virtually excluded. *His* institutions he cannot take with him; they refuse to root themselves in soil that is cultivated by slave-labor. Speech is no longer free;

the post-office is Austrianized; the mere fact of Northern birth may be enough to hang him. Even now in Texas, settlers from the Free States are being driven out and murdered for pretended complicity in a plot the evidence for the existence of which has been obtained by means without a parallel since the trial of the Salem witches, and the stories about which are as absurd and contradictory as the confessions of Goodwife Corey. Kansas was saved, it is true; but it was the experience of Kansas that disgusted the South with Mr. Douglas's panacea of "Squatter Sovereignty."

The claim of *equal* rights in the Territories is a specious fallacy. Concede the demand of the slavery-extensionists, and you give up every inch of territory to slavery, to the absolute exclusion of freedom. For what they ask (however they may disguise it) is simply this,—that their *local law* be made the law of the land, and coëxtensive with the limits of the General Government. The Constitution acknowledges no unqualified or interminable right of property in the labor of another; and the plausible assertion, that "that is property which the law makes property," (confounding a law existing anywhere with *the* law which is binding everywhere,) can deceive only those who have either never read the Constitution or are ignorant of the opinions and intentions of those who framed it. It is true only of the States where slavery already exists; and it is because the propagandists of slavery are well aware of this, that they are so anxious to establish by positive enactment the seemingly moderate title to a right of existence for their institution in the Territories,—a title which they do not possess, and the possession of which would give them the oyster and the Free States the shells. Laws accordingly are asked for to protect Southern property in the Territories,—that is, to protect the inhabitants from deciding for themselves what their frame of government shall be. Such laws will be passed, and the fairest portion of our national domain irrevocably closed to free labor, if the Non-Slave-

holding States fail to do their duty in the present crisis.

But will the election of Mr. Lincoln endanger the Union? It is not a little remarkable, that, as the prospect of his success increases, the menaces of secession grow fainter and less frequent. Mr. W. L. Yancey, to be sure, threatens to secede; but the country can get along without him, and we wish him a prosperous career in foreign parts. But Governor Wise no longer proposes to seize the Treasury at Washington,—perhaps because Mr. Buchanan has left so little in it. The old Mumbo-Jumbo is occasionally paraded at the North, but, however many old women may be frightened, the pulse of the stock-market remains provokingly calm. General Cushing, infringing the patent-right of the late Mr. James the novelist, has seen a solitary horseman on the edge of the horizon. The exegesis of the vision has been various, some thinking that it means a Military Despot,—though in that case the force of cavalry would seem to be inadequate,—and others the Pony Express. If it had been one rider on two horses, the application would have been more general and less obscure. In fact, the old cry of Disunion has lost its terrors, if it ever had any, at the North. The South itself seems to have become alarmed at its own scarecrow, and speakers there are beginning to assure their hearers that the election of Mr. Lincoln will do them no harm. We entirely agree with them, for it will save them from themselves.

To believe any organized attempt by the Republican party to disturb the existing internal policy of the Southern States possible presupposes a manifest absurdity. Before anything of the kind could take place, the country must be in a state of forcible revolution. But there is no premonitory symptom of any such convulsion, unless we except Mr. Yancey, and that gentleman's throwing a solitary somerset will hardly turn the continent head over heels. The administration of Mr. Lincoln will be conservative, because no government is ever intentionally oth-

erwise, and because power never knowingly undermines the foundation on which it rests. All that the Free States demand is that influence in the councils of the nation to which they are justly entitled by their population, wealth, and intelligence. That these elements of prosperity have increased more rapidly among them than in communities otherwise organized, with greater advantages of soil, climate, and mineral productions, is certainly no argument that they are incapable of the duties of efficient and prudent administration, however strong a one it may be for their endeavoring to secure for the Territories the single superiority that has made them what they are. The object of the Republican party is not the abolition of African slavery, but the utter extirpation of dogmas which are the logical sequence of the attempts to establish its righteousness and wisdom, and which would serve equally well to justify the enslavement of every white man unable to protect himself. They believe that slavery is a wrong morally, a mistake politically, and a misfortune practically, wherever it exists; that it has nullified our influence abroad and forced us to compromise with our better instincts at home; that it has perverted our government from its legitimate objects, weakened the respect for the laws by making them the tools of its purposes, and sapped the faith of men in any higher political morality than interest or any better statesmanship than chicanery. They mean in every lawful way to hem it within its present limits.

We are persuaded that the election of Mr. Lincoln will do more than anything else to appease the excitement of the country. He has proved both his ability and his integrity; he has had experience enough in public affairs to make him a statesman, and not enough to make him a politician. That he has not had more

will be no objection to him in the eyes of those who have seen the administration of the experienced public functionary whose term of office is just drawing to a close. He represents a party who know that true policy is gradual in its advances, that it is conditional and not absolute, that it must deal with facts and not with sentiments, but who know also that it is wiser to stamp out evil in the spark than to wait till there is no help but in fighting fire with fire. They are the only conservative party, because they are the only one based on an enduring principle, the only one that is not willing to pawn tomorrow for the means to gamble with today. They have no hostility to the South, but a determined one to doctrines of whose ruinous tendency every day more and more convinces them.

The encroachments of Slavery upon our national policy have been like those of a glacier in a Swiss valley. Inch by inch, the huge dragon with his glittering scales and crests of ice coils itself onward, an anachronism of summer, the relic of a bygone world where such monsters swarmed. But it has its limit, the kindlier forces of Nature work against it, and the silent arrows of the sun are still, as of old, fatal to the frosty Python. Geology tells us that such enormous devastators once covered the face of the earth, but the benignant sunlight of heaven touched them, and they faded silently, leaving no trace but here and there the scratches of their talons, and the gnawed boulders scattered where they made their lair. We have entire faith in the benignant influence of Truth, the sunlight of the moral world, and believe that slavery, like other worn-out systems, will melt gradually before it. "All the earth cries out upon Truth, and the heaven blesseth it; ill works shake and tremble at it, and with it is no unrighteous thing."

REVIEWS AND LITERARY NOTICES.

History of Flemish Literature. By OCTAVE DELEPIERRE, LL. D. 8vo. London. John Murray. 1860.

"WHEN I write in Danish," says Oehlen-schläger, "I write for only six hundred persons." And so, in view of this somewhat exaggerated statement, he himself translated his best works into the more favored and more widely spread Germanic idiom. It requires a certain amount of courage in an author to write in his own native tongue only, when he knows that he thereby limits the number of his readers. We see in our own days, among the Slavonic races, men whose writings breathe the most ardent patriotism, whose labors and researches are all concentrated within the sphere of their nationality, publishing, not in their own Polish, Czechish, or Serbian, but in German or French.

The history of language shows us a two-fold tendency,—one of divergence from some common stem, followed by one of concentration, of unity, in the literature. Thus, in France, the *Langue d'Oïl* superseded the richer and more melodious Provençal; in Spain the Castilian predominated; while for several centuries it has been the steady tendency of the High-German to become the language of letters and of the upper classes among the various Teutonic races. Since the Bible-translation of Luther, this central dialect has not only become the medium in which poet and philosopher, historian and critic address the nation, but it may be said to have entirely superseded the Northern and Southern forms. Whatever local or linguistic interest may be manifested for the works of Groth in the Ditmarsch *Platt-Deutsch*, or for the sweet Alemannic songs of Hebel, the centralizing tongue is that in which Schiller and Goethe wrote.

The allied Danish and Dutch have escaped this engulfing process. The former, instead of retreating, seeks in the present to enlarge its circuit; and great are the complaints in Schleswig-Holstein of the arbitrary and despotic imposition of Danish on a State of the German Confederation. The present government of Holland has not remained inactive. Much

has been done to encourage men of letters and counteract the Gallic influences which prevailed in the early part of the century.

But the Flemings speaking nearly the same language as their Protestant neighbors, where is their literature now? The language itself, in which are handed down to us some of the masterpieces of the Middle Ages, as "Reynard the Fox" and "Gudrun," is disregarded, even discountenanced, by Government. It is with a feeling of sadness that we read the annals of a literature which met so many obstacles to its progress. Despised by foreign rulers, thrust back by the Spanish policy of the Duke of Alva, its authors exiled and seeking refuge in other lands, its very existence has been a constant battling against the inroads of more powerful neighbors.

Surely, "if words be made of breath, and breath of life," there is nothing a nation can hold more dear than its own tongue. Its laws, its rulers, may change, its privileges and charters be wrenched from it, but that remains as an heirloom, the first gift to the child, the last and dearest treasure of the man. Perhaps nowhere more than in Flanders do we meet with a systematic oppression of a vernacular idiom. From the days of the contests with France, through the long Spanish troubles and dominion, the military occupation of the country by the troops of Louis XIV., the Austrian rule, the levelling tendency of the French Revolution, and the present aping of French manners by the higher powers of the land,—through all this there has been but one long, continuous struggle, and the ultimate result is now too plain.

We find the Flemish spoken by nearly two-thirds of the inhabitants of Belgium, divided from the Walloon or *Rouchi-Français* by a line of demarcation running from the Meuse through Liege and Waterloo, and ending in France, between Calais and Dunkirk. It differs in no material points from the Dutch, being essentially the same, if we except slight differences in spelling, as *ae* for *aa*, *ue* for *uu*, *y* for *ij*. Both should bear but one common name, the Nether-

landish. That differences should be sought can be accounted for only by the petty feeling of jealousy that exists between the neighboring states, their literary productions varying in grammatical construction scarcely more than the writings of English and American authors.

Mr. Octave Delepierre, who since 1830 has published some ten or twelve monographs relating to the antiquities and history of Flanders, has presented the English public during the course of the present year with a history of Flemish literature. With an evident predilection for authors south of the Meuse, Mr. Delepierre has nevertheless given us the first clear and connected account we possess of the history of letters in the Netherlands. Without careful or minute critical research, he has shown little that is new, nor has he sought to clear one point that was obscure. His work is pleasant reading, interspersed with occasional translations, though scarcely answering the requisites of literary history in the nineteenth century. Having followed the older work of Snellaert,* in the latter half of the volume, page for page, he has not even mentioned by name the authors of the last quarter of a century.

Let us glance at that portion of literature more particularly belonging to Flanders and Brabant.

The first expressions of the Germanic mind, the song of "Hildebrand," "Gudrun," the "Nibelungen," have been handed down to us in a form which shows their origin to have been Netherlandish. The first part of "Gudrun" is evidently so; and we find, as well in many of the older poems of chivalry, as "Charles and Elegast," "Floris and Blanchefloer," as in the national epos, intrinsic proofs that the unknown authors were from the regions of the Lower Rhine. These elder remnants, however, can scarcely be claimed by any one of the Teutonic races, as they are the common property of all; for we find the hero Siegfried in the Scandinavian Saga, as well as in the more southern tradition. Mr. Delepierre has translated the following song, almost Homeric in its form, which belongs to this early period, when Christianity had not obliterated the memories of barbarous days:—

* *Histoire de la Littérature Flamande*. Bruxelles. 1854.

"The Lord Halewyn knew a song: all those who heard it were attracted towards him.

"It was once heard by the daughter of the King, who was so beloved by her parents.

"She stood before her father: 'O father, may I go to the Lord Halewyn?'

"'Oh, no, my child, no! They who go to him never come back again.'

"She stood before her mother: 'O mother, may I go to the Lord Halewyn?'

"'Oh, no, my child, no! They who go to him never come back again.'

"She stood before her sister: 'O sister, may I go to the Lord Halewyn?'

"'Oh, no, sister, no! They who go to him never come back again.'

"She stood before her brother: 'O brother, may I go to the Lord Halewyn?'

"'Little care I where thou goest, provided thou preservest thine honor and thy crown.

"She goes up into her chamber; she clothes herself in her best garments.

"What does she put on first? A shift finer than silk.

"What does she gird round her lovely waist? Strong bands of gold.

"What does she put upon her scarlet petticoat? On every seam a golden button.

"What does she set on her beautiful fair hair? A massive golden crown.

"What does she put upon her kirtle? On every seam a pearl.

"She goes into her father's stable, and takes out his best charger. She mounts him proudly, and so, laughing and singing, rides through the forest. When she reaches the middle of the forest, she meets the Lord Halewyn.

"'Hail!' said he, approaching her, 'hail, beautiful virgin, with eyes so black and brilliant!'

"They proceed together, chatting as they go.

"They arrive at a field in which stands a gallows. The bodies of several women hang from it.

"The Lord Halewyn says to her: 'As you are the loveliest of all virgins, say, how will you die? The time is come.'

"'It is well: as I may choose, I choose the sword.

"'But, first of all, take off your tunic; for the blood of a virgin gushes out so far, that it might reach you, and I should be sorry.'

"But before he had divested himself of his tunic, his head rolled off and lay at his feet: his lips still murmured these words:

"'Go down there into that corn-field, and blow the horn, so that my friends may hear it.'

"'Into that corn-field I shall not go, neither shall I blow the horn. I do not follow the counsel of a murderer.'

"'Go, then, down under the gallows, and

gather the balm which you shall find there, and spread it over my bloody throat.'

"Under the gallows I shall not go; on your bloody throat I shall spread no balm. I do not follow the counsel of a murderer.'

"She took up the head by the hair, and washed it at a clear fountain.

"She mounted her charger proudly, and, laughing and singing, she rode through the forest.

"When she reached the middle of the forest, she met the mother of Halewyn. 'Beautiful virgin, have you not seen my son?'

"Your son, the Lord Halewyn, is gone hunting: you will never see him again.

"Your son, the Lord Halewyn, is dead. I have his head in my apron, which is red with his blood.'

"And when she arrived at her father's gate, she blew the horn like a man.

"And when her father saw her, he rejoiced at her return.

"He celebrated it by a feast, and the head of Halewyn was placed on the table."

Flemish writers claim as entirely their own that epic of the people, "Reynard the Fox." Their right to it was long contested; nor has anything been done since the labors of Willems, who, in opposition to the opinion of William Grimm, settles the authorship of the "Reinaert de Vos" on Utenhove, a priest of Aerdenburg. It seems natural to suppose that this most popular of Middle-Age productions should have originated in the very region which later gave to the world a school of painting that incarnated on canvas the phases of animal life, taking its delight and best inspirations in the burlesque side of human passions.

In its first period, Flemish literature found some encouragement from its princes. John I. of Brabant fostered it, and even took, himself, the title of Flemish Troubadour. Under Guy of Dampierre, who neither in heart nor mind was sympathetic with the people he ruled, we find Maerlant, still revered by his country; his name is ever coupled with the epithet of Father of Flemish Poets. Didactic rather than poetical, his influence was great in breaking down the barriers which separated the people from the higher classes, by adapting to their own home-idiom the best productions of the age. About this period we find prevalent those Northern singers corresponding to the *Trouvères*, *Troubadours*, and *Jongleurs*. They are in Flanders the *Spreker*, *Segger*, and *Vinder*, who, when travel-

ling through the country, took the name of *Gezel*, received in town or village, court or hamlet, as the wandering minstrel of the South. The golden age when sovereigns doffed their royal robes to lay them on the shoulders of some sweet-singing poet, as the old chronicles tell us, was of short duration in the North, if ever the *Sproken* or erotic poems may be said to have brought their authors into such favor. On the other hand, we find some of the wanderers arrested for theft and other crimes.

Little light has been thrown on their first ante-historical attempts. Until the late labors of German philologists, little had been done to clear up the confusion resting on this period of literary history. As yet the field has scarcely been explored beyond the regions not immediately connected with the literature of Germany. We have long historical poems of little interest, arranged without order, — interminable productions of thousands and ten thousands of lines of uncertain date, didactic and encyclopedia-like, besides unmistakable remnants of a Netherlandish theatre.

The battle of Roosebeke, where the second Artevelde and his companions succumbed to superior numbers, was the last great enterprise of the Flemings against the French. Half a century earlier, a strong league had been formed against these powerful neighbors. In the interior, the country was divided into factions, — the partisans and enemies of France. Prominent were the *Clauwaerts* and the *Leliarts*, from the lion's claw and the *fleur-de-lis* which they respectively wore on their badges. The country, which has ever been one of the battle-fields of Europe, was abandoned to all the horrors of civil war. The Duke of Brabant was childless. The Count of Flanders gave his daughter, his only legitimate child, in marriage to the Duke of Burgundy; and the provinces soon came into the hands of those ambitious and restless enemies of the Court of France. It may easily be imagined that these events were not without their influence on a language deteriorated on the one hand by constant contact with a Romanic idiom, and in Holland by the transmission of the sovereign crown to the House of Avesnes.

The "Chambers of Rhetoric," an institution peculiar to the Low Countries, reached their highest point of prosperity under the Burgundian rule. The wandering life of

poets and authors had nearly ceased. The *Gezellen*, settled in towns, and moved by the prevalent spirit which prompted men of one calling to unite into bodies, naturally fell into corporations analogous to the Guilds. Without attaching any very definite or clear idea to the term Rhetoric which they employed, these associations exerted great influence upon the whole literature of the Netherlands. Many would date their origin as far back as the early part of the twelfth century. In Alost, the Catherinists claimed to have existed as early as 1107, on the mere strength of their motto, *AMOR VINCIIT*. At any rate, we are left entirely to conjecture with regard to the first beginnings of these literary guilds, which seem in many respects an imitation of the poetical societies of Provence. Every poet of note was a participant in them. In Flanders there was scarcely a town or village that did not possess its Chamber. Brabant, Holland, Zealand soon followed in the movement. One of the principal, the Fountain of Ghent, seems to have exercised a certain supremacy over the other confraternities of art.

The proceedings of these companies, protected at first by princes, were carried on with great magnificence. They were in constant communication with each other throughout the country. Their *facteurs* or poets composed songs and theatrical pieces, which were performed by the members. They had a long array of officers, with princely names; and none was complete without a jester. Their larger assemblies were accompanied with long festivities, the solemn entry into a town or village being styled *Landjuweel* (Landjewel). The nobility mingled in them, incited by the example of Henry IV. of Brabant or Philippe-le-Bel. The wealth of the Netherlands was displayed on these solemnities, and the citizens rivalled their monarchs in magnificence. The burghers of Ghent and Bruges and Antwerp shone, on these occasions, in the gaudy pomp of princely patri-cians. All were invited to take part and dispute the prizes awarded by fair hands.

It can scarcely be expected that these guilds, composed in many cases of mechanics, should give rise to works of the highest order of merit. Their dramatic representations were rather gorgeous than tasteful, their attempts at wit little better than buffoonery, their humor mere personal vituperation. Yet even in matters of

taste they are not much inferior to the then more pretentious academies of other lands. It was an age of long religious dramas, of tortured rhymes and impossible metres, when strange and new versification imported from France found favor among a people whose silks and linens and rich tapestries were destined to reach a wider circulation than all the poetical effusions of their guilds, the "Lily," the "Violet," and the "Jesus with the Balsam Flower."

It was Philip the Fair who, wishing to centralize the scattered efforts of these societies, established at Malines, in 1493, a sovereign chamber, of which he appointed his chaplain, Pierre Aelters, *sovereign prince*. With an admixture of religion, in accordance with the spirit of the Middle Ages, the sacred number was fifteen. There were fifteen members. Fifteen young girls were to form part of it, in honor of the fifteen joys of Mary. Fifteen youths were instructed in the art of rhetoric, and the assemblies were held fifteen times a year. Charles V. was the last chief of this assembly, which had previously been removed to Ghent. In 1577 it greeted the arrival of the Prince of Orange, but this was its last sign of vitality.

The Chambers of Rhetoric reached their climax in a time of fermentation. The impatience, the feeling of uneasiness and restraint, is felt in the drama of these days, which was wholly under the control of the Chambers. The stage, that "mirror of the times," is often the first manifestation of the unquiet heaving and subsequent up-bubbling in the fluid compost of the mass that constitutes a nation. When freely developed, it is the pulse-beat of the people. And so, throughout the Netherlands, at the end of the fifteenth century and the beginning of the sixteenth, we find the allegorical drama giving way to more definite and direct personations. Those cold representations of vices and virtues, of vice in its nakedness, such as to render the reading, when not absolutely tedious, distasteful, to say the least, to our modern ideas,—all such aimless productions were giving way to the conscious expression of satire. Diatribes against prevalent abuses, personal invectives scarcely veiled, were fast becoming the order of the day. It is no wonder, then, that the guilds, which had found favor formerly, should gradually be crushed, in proportion as the rulers sought to check the spirit of reform. Among the

authors of this period may be mentioned Everaert and Machet. The *refrain* was much cultivated, and not, like the drama, for the expression of dissatisfaction. Anna Byns, an oracle with the Catholic party, wrote when the language was in its most degenerate state, under Margaret of Austria. She was styled the Sappho of Brabant, though her poems are all religious. They were translated into Latin, and were read as masterpieces till the middle of the last century.

A taste for religious writing prevailed in the Netherlands throughout the sixteenth century. William van Zuylen van Nyevelt first published a collection of the Psalms of David. These, in imitation of the French Calvinists, were sung to the most popular melodies. Zuylen found many imitators. The Catholic party composed songs in opposition to the Reformers; and we have psalms and songs by Utenhove, the painters Luc de Heere and Van Mander, by Van Haecht and Fruytiers. A long list of obscure names, if we except those of Marnix and Houwaert, is mentioned as belonging to this period,—their works mostly didactic or controversial. Houwaert, a Catholic, one of the avowed friends and partisans of the Prince of Orange, courted the Muses in the hottest days of civil strife. He published a poem, in sixteen cantos, entitled "The Gardens of the Virgins," tending to show the dangers to which the fair sex is exposed, and condemning as unreal all love not centred in God. With a remarkable fertility of composition he possesses an uncommon smoothness of versification, combined with a power, so successful in his age, of illustration from history or romance, from the sacred writings or the legendary lore of the people. The work was received in those days of trouble with unbounded enthusiasm. Brabant was thought to have given birth to a new Homer. His praises resounded in verse and song, and the young girls of Brussels crowned him with laurel.

The government of the Duke of Alva, and the succeeding years of revolution, were a period of desolation for Flanders. The Guilds of Rhetoric were dispersed; town after town was depopulated; Ghent, the loved city of Charles V., lost six thousand families; Leyden, Amsterdam, Haerlem, Gouda, afforded refuge to the emigrants. The golden age of literary activity is about to dawn in the Dutch republic. In the

other provinces the national language is more and more neglected. It gives umbrage to the foreign chiefs who act as sovereigns. With it they identify all the opposition that has prevailed against them. Archduke Albert carries his condescension no farther than to address in High-German such of his subjects as can speak only Flemish. His Walloons he treats with no more civility, answering them but in Spanish or Latin. Ymmeloot, lord of Steenbrugge, a native of Ypres, endeavors in 1614 to stem the current of opposition and reawaken a love for letters. He suggests many reforms in the versification, and gives the example. He is followed by many, and Ypres becomes for a time a centre of versifiers. But the spirit of originality has flown, and the literature of Holland is enriched with the name of many a Fleming who preferred exile to the new rule.

In 1618, the General Synod of Dordrecht decreed that a new translation of the Bible should be undertaken. Two Flemings, Baudaert and Walæus, and two Dutchmen, Bogerman and Hommius, completed it. Like the work of Luther, this tended in a great measure to fix the language, preventing the preponderance of one dialect over the other.

Foreign imitation begins to prevail in Flanders. Frederic de Conincq constructs dramas on the models of Lope de Vega, with the necessary quota of nocturnal visits, abductions, dagger-thrusts, and bravado. An action entirely Spanish is conducted in the veriest *patois* of Antwerp. Ogier follows in his footsteps, introducing upon the stage the coarsest language. He represents vice in its most revolting forms. His theory, as he himself explains it, is, that "it is necessary to represent vice on the stage, as the Romans formerly on certain days intoxicated their slaves and showed them to their children, in order that they might at an early age become inspired with a disgust for debauchery." Yet his comedies enjoyed the highest favor, and have been pronounced by native critics among the most remarkable and meritorious productions of the epoch. They are ever distinguished by vivacity, truth, and fidelity, in depicting the many-sided life of the people. He seems to have been a literary Ostade or Teniers, with less of ingenuousness and good-nature in the portraiture.

In the mean time the French language

continues to gain ground every day. In Brussels, native authors seek in vain to oppose the encroachments of the "Fransquillon," as Godin first styles them; but, save the feeble productions of Van der Borcht, the Jesuit Poirtiers, and the Dominican Vloers, we find but translations and imitations. Moons versifies some hundreds of fables. A half-sentimental, sickly style, consisting only of praises, of self-abnegation, of pious ejaculations, prevails. It is the worst of reactions; — the country, after its first outburst, had sunk into quietude, the lethargy of inaction.

Holland, on the other hand, is active and doing. Its poets and historians are at work, the precursors of Bilderdyk and Tollens, the poet of the people. Bruges, in the eighteenth century, produces two writers of merit, — Smidts and Labare. In French Flanders, De Swaen adapts from Corneille, and publishes original dramas. Many songs are composed both in the northern and southern provinces, mostly of a religious character. Philologers seek to revive the neglected idiom with little success. But the century is blank of great names. The Academy of Sciences and Belles-Lettres, established at Brussels by Maria Theresa, was composed of members totally unacquainted with the Flemish. It took no notice of the language beyond publishing a few prize-memoirs in its annals. The German barons who ruled cared little for their own tongue: how should they have manifested interest in that of their Belgian subjects? The subsequent French domination was no improvement. On the 13th of June, 1803, it was decreed by the Republic, — "In a year, reckoning from the publication of this present ordinance, the public acts, in the departments once called Belgium, . . . in those on the left bank of the Rhine, . . . where the custom of drawing up acts in the language of those countries may have been preserved, are henceforth to be written in French." The Bonaparte rule was not of a nature to restore former privileges. In spite of the feeble remonstrances that were urged against such arbitrary measures, an imperial decree of 1812 enjoined that all Flemish papers should appear with a French translation.

Under the rule of King William, vigorous measures were employed to reinstate the native idiom. At first warmly seconded, Government soon met with an unac-

countable opposition even from its subjects. The Dutch was combated by those connected with education. It was ridiculed by the Walloon population. Since the independence of Belgium, the *mouvement flamand* has been felt more than once by the would-be French rulers. In 1841, a Congress was held in Ghent, where all the members of the Government spoke in Flemish; energetic protests were addressed to the Chamber of Representatives, all with little avail. At present, though the language is nominally on a par with French, it meets with little encouragement. The philological labors of Willems entitle him to a place among the greatest of the present century; he was until his death the leader of the intellectual movement of his country.

Of later authors, we may mention the laureate Ledeganck, Henri Conscience, whose works have now been translated into English, French, German, Danish, and Swedish, Renier Snieders, Van Duyse, Dantzenberg. Modern literature seems to have taken a new flight; it is animated by the purest love of country, by an ardent desire in its authors to revive the use of their native tongue. The tendency is rather Germanic. At the Singers' Festival, held in Ghent a short time ago, the songs sung breathed a spirit of union and love for the sister languages. As a fair sample, we may quote the following: —

"Welaen, Germaen en Belg tezaem ten stryd
 Voor vryheid, tael en vaderland!
 De vaen van't duitsch en vlaemsche zang-
 verbond
 Prael op't gentsch eeregoud!
 Wy willen vry zyn, als de adelaer
 Die stout op eigen wieken dryft,
 Voor wien er slechts een koestring is, de zon.
 Alom waer der Germanen tael
 Zich heft en bloeid en't volk,
 Daer is ons vaderland!"

The Glaciers of the Alps. Being a Narrative of Excursions and Ascents, an Account of the Origin and Phenomena of Glaciers, and an Exposition of the Physical Principles to which they are related. By JOHN TYNDALL, F. R. S., etc., etc. With Illustrations. London: John Murray. 1860. pp. xx., 444.

OUR readers are probably aware that the question of the causes of glacier for-

mation and motion, cool as the subject may seem in itself, has demonstrated the existence of a great deal of latent heat among scientific men. In England, the so-called *viscous* theory of Professor J. D. Forbes held for a long while undisputed possession of the field. According to him, "a glacier is an imperfect fluid, or viscous body, which is urged down slopes of a certain inclination by the mutual pressure of its parts." With that impartial superciliousness to all foreign achievement which not seldom characterizes the British mind, the credit of all the results of observation and experiment on the glaciers was attributed to Professor Forbes, who seems to have accepted it with delightful complacency. But presently doubt, then unbelief, and at last downright opposition began to show themselves. The leader of the revolt was Professor Tyndall, whose book is now before us. The controversy has begotten no little bitterness of feeling; but none is shown in Mr. Tyndall's volume, which is throughout written in the truest spirit of science, — with the earnest frankness that becomes a seeker of truth, and the dignity that befits a lover of it.

Not content with any theoretic antagonism to the Forbes explanation of the phenomena, Mr. Tyndall devoted all the leisure of several years to an examination of them on the spot. At the risk of his life, he verified the previous observations of others and made new ones himself. At home, he made experiments upon the nature of ice, especially upon its capacity for regulation and the effect of pressure

upon it. He satisfied himself that snow may be changed to ice by pressure, that crumbled ice may in like manner be restored to its original condition, and that solid ice may be forced to take any form desired. Under proper conditions, lamination may be produced by the same means. The result of his investigations is, that the glacier is a solid body, and that *pressure* answers all the requirements of the glacier-problem, and is the only thing that will.

The book is one of uncommon interest, and discusses many topics beside the glaciers, though nothing that is not in some way related to them. Mr. Tyndall does justice to former investigators, — especially to M. Rendu, who, though imperfectly supplied with demonstrated facts, theorized the phenomena with the happiest inspiration, — and to Agassiz, of whose important observations, establishing for the first time the fact of more rapid motion in the middle of the glacier, Professor Forbes had appropriated the credit. The style is remarkably agreeable, in description vivid, and in its scientific parts clear. Indeed, we do not know whether we have enjoyed the narrative or the science the most. Professor Tyndall has the uncommon gift of being able to write science so that the unscientific can understand it, without descending to the low level of science made easy. The Royal Institution may well congratulate itself on having in him a man every way qualified to succeed Faraday, whenever (and may it be long first!) his chair is vacant.

ART.

MR. JARVES'S COLLECTION.

It seems an odd turn in the kaleidoscope of Fortune that associates a Prime Minister of the Sandwich Islands — where the only pictorial Art is a kind of illumination laboriously executed by the natives on each other's skins, thus forming a free peripatetic gallery — with a collection of pictures by early Italian masters. It is certainly a striking illustration of American multifariousness. From the dawning civ-

ilization of Hawaii Mr. Jarves withdraws to Italy, where culture has passed far beyond its noon, and finds himself equally at home in both. From Italy he has returned to America with by far the most important contribution to historical Art that has ever reached us. It is not easy to overestimate its value, whether intrinsically, or as an aid to intelligent and refining study. We can hardly expect, it is true,

ever to form such collections of Art in this country as would save our students the necessity of visiting Europe. This, indeed, would be hardly desirable; since a great deal of the refining and enlightening influence of foreign travel and observation is not received directly from the special objects that may have drawn us abroad, but incidentally and unexpectedly, by being brought into contact with strange systems of government and new forms of thought. But what we might have is such a collection as would enable those of us who cannot travel to enjoy some of the highest æsthetic advantages of travel, and would send our students to the galleries of the Old World already in a condition to appreciate and profit by them. Mr. Jarves's pictures afford the opportunity for an excellent beginning in such an undertaking.

Mr. Jarves's object has been to form a gallery that should exhibit the origin, progress, and culmination of Italian Art from the thirteenth to the seventeenth century, in such chronological order as should show the sequence and affiliation of the various schools and the various motive and inspiration that were operative in them. To quote his own language, Mr. Jarves began his undertaking with no "expectation of acquiring masterpieces, or many, if any, of those specimens upon which the reputation of the great masters is based. These are in the main either fixtures in their native localities or permanently absorbed into the great galleries of Europe; and America may scarcely hope ever to possess such. He did propose, however, to get together a collection which should *fairly* represent the varied qualities of the masters themselves, and the phases of inspiration, religious, æsthetic, or naturalistic, by which they were actuated. And he claims now to have succeeded in this to an extent which in the outset he did not dare to hope, and to have secured for the collection the approving verdict of European taste and connoisseurship in the recognition of it as a *valuable historical gallery of original paintings of the epochs and schools they claim to represent.*

"In putting forward this claim, he does it in full view of the character of the criticism and doubts such an assumption naturally begets. The public are right in doubting; and they should not be convinced except upon sound evidence. There-

fore, while he unhesitatingly claims for the collection the foregoing character, he expects and invites from the public the fullest measure of impartial and intelligent criticism.

"The object of the collection is a nucleus for an American Gallery, to be established in the most fitting place and upon a broad basis, sufficient to gratify and improve every variety of taste and to advance the æsthetic culture of the people.

"With this aim, he has declined repeated overtures pecuniarily advantageous to divert it in whole or part to other purposes; and in bringing it to America at his own risk and expense, it is solely to test the disposition of the public to second such a project. If it meet their approbation, the means best adapted for the purpose are to be maturely considered; but if otherwise, it is his intention to return the gallery to Europe.

"It is a simple question, whether, after having had the opportunity of becoming acquainted with the collection and his object in making it, the American public will sustain perfect this humble beginning of a Public Gallery of Art, or abandon the formation of one to future chances, when the difficulties will be much greater and the opportunities for success much fewer. It must be considered, that, at this moment, while genuine works of Art are growing more and more difficult to be procured, the rivalry of public and private collectors is rapidly increasing. It is true that the existing great galleries come into the market only for pictures specially wanted to fill some important gap in their series, for which they pay prices that would startle our public economists. America will have to undergo the competition, even if she now enters this field, of several important foreign galleries in the process of formation, among which are those of Manchester, with a subscribed capital, *as a beginning*, of £100,000; of the Association of St. Petersburg, for the same purpose, under the patronage of the Imperial Family; and of one even in Australia."

Mr. Jarves's collection is not confined by any means to what may be called the *curiosities* of Art. It contains one hundred and twenty-five pictures; and, rich as it is in works that mark the successive stages of development in Italian painting, it possesses also specimens of its later and most

perfect productions. Examples of the pure Byzantine bring us to those of the Greco-Italian school, and these to the early Italian, represented (in its Umbrian branch) by Cimabue, by Giotto and his followers, the Gaddi, Cavallini, Giotto, Orgagna, and others; while of the Sienese we have Duccio, Simone di Martino, and Lorenzetti, with more of less note. Of the Ascetics we have, among others, Frà Angelico, Castagno, and Giovanni di Paolo. The Realists are ushered in by Masolino, Masaccio, Filippo Lippi, and go on in an unbroken series through Botticelli, Filippino Lippi, and Cosimo Roselli, to Domenico Ghirlandajo, Leonardo, Raffaello, and a design of Michel Angelo; painted by one of his pupils. Nor does the succession end here; Andrea del Sarto, R. Ghirlandajo, Vasari, Bronzino, Pontormo, and others, follow. Of the Religionists, there are Lorenzo di Credi, Frà Bartolommeo, Perugino, and their scholars. The progress of landscape, history, and anatomical drawing may be traced in Paolo Uccello, Dello Delli, Piero di Cosimo, Pinturicchio, the Pollajuoli, and Luca Signorelli. Here also is Gentile da Fabriano. Venice gives us G. Bellini, M. Basaiti, Giorgione, and Paul Veronese. And of the later Sienese, there are Sodoma, Matteo da Siena, and Beccafumi. The list includes, also, Domenichino, Sebastian del Piombo, Guido, Salvator Rosa, Holbein, Rubens, and Lo Spagna.

The names we have cited will be enough to show those familiar with the subject the scope of the collection and its value as a consecutive series, embracing a period which few galleries in any country cover so completely, since few have been gathered on any historical plan.

The chief question, of course, is as to the authenticity of the pictures. This cannot be decided till they are exhibited and Mr. Jarves's proofs are before the public. It is mainly to be decided on internal evidence, and it is on such evidence that a great part of the very early pictures in foreign collections have been labelled with the names of particular artists. The weight of such evidence is to be determined by the judgment of experts, and we are informed that Mr. Jarves has a

mass of testimony from those best qualified to decide in such cases,—among it that of Sir Charles Eastlake, M. Rio, and the directors of the two great public galleries of Florence. After all, however, this appears to us a matter of secondary consequence. If the pictures are genuine productions of the periods they are intended to illustrate, if they are good specimens of their several schools of Art, the special names of the artists who may have painted them are a matter of less concern. The money-value of the collection might be lessened without affecting its worth in other more considerable respects, as an illustration of the rise and progress of the most important school of modern Art.

Every year it becomes more difficult to obtain pictures of the class of which Mr. Jarves's collection is mainly composed. The directors of European galleries have become alive to their value, and are sparing no effort to fill the *lacunæ* left by the more strictly *virtuoso* taste of a former generation. As far as the general public is concerned, such pictures must, no doubt, create the taste by which they will be appreciated. The style of the more archaic ones among them may be easily ridiculed, and the cry of Pre-Raphaelitism may be turned against them; but we should not forget that these earlier efforts, however they might fail in grace of treatment and ease of expression, are sincere and genuine products of their time, and very different in spirit and character from the productions of the modern school, which aims to reproduce a phase of Art when the thought and faith that animated it are gone past recall.

Mr. Jarves is desirous that the gallery should remain in his native city of Boston, and to that end is willing to part with it on very generous terms. We cannot but hope that there will be taste and public spirit enough to realize his design. By the side of the Museum of Natural History under the charge of Agassiz, we should like to see one of Art that would supply another great want in our culture. The Jarves Collection gives the opportunity for a most successful beginning, and we trust it will not be allowed to follow the Ninevite Marbles.

THE
ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. VI.—NOVEMBER, 1860.—NO. XXXVII.

THOMAS HOOD.

THOMAS HOOD was originally intended for business, and entered a mercantile house; but the failure of his health, at fifteen years of age, compelled him to leave it, and go to Scotland, where he remained two years, with much gain to his body and his mind. On his return to London, he applied himself to learn the art of engraving; but his constitution would not allow him to pursue it. Yet what he did acquire of this art, with his genius for comic observation, must have been of excellent service to him in his subsequent career. This, at first, was simply literary, in a subordinate connection with "The London Magazine." His relation to this periodical gave him opportunities, which he did not neglect, of knowing many of its brilliant contributors. Among these was Charles Lamb, who took a strong liking to the youthful sub-editor, and, doubtless, discovered a talent that in some points had resemblance to his own. The influence of his conversation and companionship may have brought Hood's natural qualities of mind into early growth, and helped them into early ripeness. Striking as the difference was, in some respects, between them, in other respects the likeness was quite as striking. Both were playful in manner, but melancholy by constitution, and in each there lurk-

ed an unsuspected sadness; both had tenderness in their mirth, and mirth in their tenderness; and both were born punsters, with more meaning in their puns than met the ear, and constantly bringing into sudden and surprising revelation the wonderful mysteries of words.

With a genius of so singular a cast, Hood was not destined to continue long a subordinate. Almost with manhood he began to be an independent workman of letters; and as such, through ever-varying gravities and gayeties, tears and laughter, grimsicalities and whimsicalities, prose and verse, he labored incessantly till his too early death. The whole was truly and entirely "Hood's Own." In mind he owed no man anything. Unfortunately, he did in money. That he might economize, and be free to toil in order to pay, he went abroad, residing between four and five years out of England, part of the time at Coblenz, in Rhenish Prussia, and part at Ostend, in Belgium. The climate of Rhenish Prussia was bad for his health, and the people were disagreeable to his feelings. The change to Belgium was at first pleasant and an improvement; but complete recovery soon seemed as far away as ever; nay, it was absolutely away forever. But in the midst

of his family — his wife, his little boy and girl, most loving and most loved — bravely he toiled, with pen and pencil, with head and heart; and while men held both their sides from laughter, he who shook them held both his sides from pain; while tears, kindly or comical, came at the touch of his genius into thousands of eyes, eyes were watching and weeping in secret by his bed-side in the lonely night, which, gazing through the cloud of sorrow on his thin features and his uneasy sleep, took note that the instrument was fast decaying which gave forth the enchantment and the charm of all this mirthful and melancholy music. Thus, in bodily pain, in bodily weakness even worse than pain, in pecuniary embarrassment worse than either, worst of all, often distressed in mind as to means of support for his family, he still persevered; his genius did not forsake him, nor did his goodness; the milk of human kindness did not grow sour, nor the sweet charities of human life turn into bitter irritations. But what a tragedy the whole suggests, in its combination of gayety with grief, and in the thought of laughter that must be created at the cost of sighs, of merriment in which every grin has been purchased by a groan!

An anecdote which we once read, always, when we recall it, deeply affects us. A favorite comic actor, on a certain evening, was hissed by the audience, who had always before applauded him. He burst into tears. He had been watching his dying wife, and had left her dead, as he came upon the stage. This was his apology for imperfection in his part. Poor Hood had also to unite comedy with tragedy, — not for a night, or a day, or a week, but for months and years. He had to give the comedy to the public, and keep the tragedy to himself; nor could he, if comedy failed him, plead with the public the tragedy of his circumstances. *That* was nothing to the public. He must give pleasure to the public, and not explanations and excuses. But genius, goodness, many friends, no enemy, the consciousness of imparting enjoyment to mul-

titudes, and to no man wretchedness, a heart alive with all that is tender and gentle, and strong to manful and noble purpose and achievement, — these are grand compensations, — compensations for even more ills than Hood was heir to; and with such compensations Hood was largely blessed. Though his funds were nothing to the bounty of his spirit, yet he did not refuse to himself the blessedness of giving. Want, to his eye of charity, was neither native nor foreign, but *human*; and as *human* he pitied it always, and, as far as he could, relieved it. While abroad, he was constantly doing acts of beneficence; and the burlesque style with which, in his correspondence, he tries to disguise his own goodness, while using the incidents as items to write about, is one of the most delightful peculiarities in his delightful letters. The inimitable combination of humanity and humor in these passages renders them equal to the best things that Hood has anywhere written. To crown all, Hood had happiness unalloyed in his children and his wife. Mrs. Hood seems to have deserved to the utmost the abounding love which her husband lavished on her. She was not only, as a devoted wife, a cheerer of his heart, but, as a woman of accomplishment and ability, she was a companion for his mind. Her judgment was as clear and sure as her affection was warm and strong. Her letters have often a grave tenderness and an insinuated humor hardly inferior to her husband's. But as she must write from fact and not from fancy, what she writes naturally bears the impression of her cares. Here is a passage from one of her latest letters, which, half sadly, half amusingly, reminds us of Mrs. Primrose and her "I'll-warrant" and "Between-ourselves" manner.

"Hood dines to-day," she writes, "with Doctor Bowring, in Queen Square. He knew him well years ago in 'The London Magazine'; and he wrote, a few days ago, to ask Hood to meet Bright and Cobden on business, — *I* think, to write songs for the League. I augur good from it. This comes of 'The Song

of the Shirt,' of which we hear something continually."

As an instance of her judgment, we may mention that she prophesied at once all the success which followed this same "Song of the Shirt." When read to her in manuscript,—"Now mind, Hood," said she, "mark my words, this will tell wonderfully! It is one of the best things you ever did." Her reference to "The Song" in her letter has a sort of pathetic *naïveté* in it; it shows that the thought with which she was concerned was practical, not poetical,—not her husband's fame, but her household cares. She was thinking of songs that would turn into substance,—of "notes" that could be exchanged for cash,—of evanescent flame that might be condensed into solid coal, which would, in turn, make the pot boil,—and of music that could be converted into mutton. O ye entranced bards, drunk with the god, seeing visions and dreaming dreams in the third heaven, that is, the third story! O ye voluminous historians, who live in the guilt and glory of the past, and are proud in making the biggest and thickest books for the dust, cobwebs, and moths of the future! O ye commentators, who delight to render obscurity more obscure, and who assume that in a multitude of words, as in a multitude of counsellors, there is wisdom! O ye critics, who vote yourselves the Areopagites of Intellect, whose decrees confer immortality in the Universe of Letters! O all ye that write or scribble,—all ye tribes, both great and small, of pen-drivers and paper-scrappers!—know ye, that, while ye are listening in your imaginative ambition to the praise of the elect or the applause of nations, your wives are often counting the coppers that are to buy the coming meal, alarmed at the approaching rent-day, or trembling in apprehension of the baker's bill.

Hood, in 1840, returned to reside in England during the small remainder of his life. For a few months he edited the "New Monthly," and then, for a few months more, a magazine of his own.

But the whole of this period was filled with bodily and mental trials, of which it is painful to read. Yet within this period it was that he wrote some of his finest things, both laughable and serious. It is, however, to be remarked, it was now he reached down to that well of tears which lay in the depth of his nature. Always before, there had been misty exhalations from it, that oozed up into the sunshine of his fancy, and that took all the shapes of glisten or of gloom which his Protean genius gave them. In the rapid eccentricities of cloud and coruscation, the source which supplied to the varying forms so much of their substance was hidden or unminded. But now the fountain of thought and tragedy had been reached, whence the waters of sin and suffering spring forth clear and unalloyed in their own deep loneliness, and we hear the gush and the murmur of their stream in such monodies as "The Song of the Shirt," "The Lay of the Laborer," and "The Bridge of Sighs."

Hood died in 1845, and was then only forty-six or forty-seven years old. Alike esteemed by the poor and the rich, both united to consecrate a monument to his memory. Kindly should we ever think of those who make our hearts and our tempers bright; who, without pomp of wisdom, help us to a cheerfulness which no proud philosophy can give; who, in the motley of checkered mirth and wit, sparkle on the resting-spots of life. Such men are rare, and as valuable as they are rare. The world wants them more than it wants heroes and victors: for mirth is better than massacre; and it is surely better to hear laughter sounding aloud the jubilee of the heart, than the shout of battle and yell of conquest. Precious, then, are those whose genius brings pleasure to the bosom and sunshine to the face; who not only call our thoughts into festive action, but brighten our affections into generous feeling. Though we may not loudly celebrate such men, we greatly miss them; and not on marble monuments, but in our warmest memories,

their names continue fresh. But laugh and make laugh as they may, they, too, have the destiny of grief; and unto them, as unto all men, come their passages of tragedy,—the days of evil, the nights of waking, and the need of pity.

When Hood was near his death a pension of a hundred pounds a year was settled on his wife, at the instance of Sir Robert Peel. The wife, so soon to become a widow, did not long survive her husband; then, in 1847, the pension was continued to their two orphan children, at the instance of Lord John Russell. Politics and parties were forgotten, in gratitude to an earnest lover of his kind; and the people, as well as the government, in helping to provide for those whom he left behind, showed that they had not forgotten one whose desire it was to improve even more than to amuse them. And still we cannot but feel sad that there should ever have been this need. Nor would there have been, had Hood had the strength to carry him into the vast reading public which has arisen since his death, and which it was not his fate to know. "The income," says his daughter, "which his works now produce to his children, might then have prolonged his life for many years."

We have written more on the personal relations of Hood than we had intended; but we have been carried on unwittingly, while reading the "Memorials" of him recently published and edited by his children. The loving worth of the man, as therein revealed, made us slow to quit the companionship of his character to discuss the qualities of his genius. We trust that our time has not been misspent, morally or critically; for, besides the moral good which we gain from the contemplation of an excellent man, we enjoy also the critical satisfaction of learning that whatever is best in literature comes out of that which is best in life. We therefore close this section of our article with a bit of prose and a bit of poetry, among Hood's "last things,"—personally and pathetically characteristic of his nature and his genius.

"DEAR MOIR,*

"God bless you and yours, and good-bye! I drop these few lines, as in a bottle from a ship water-logged and on the brink of foundering, being in the last stage of dropsical debility; but, though suffering in body, serene in mind. So, without reversing my union-jack, I await my last lurch. Till which, believe me, dear Moir,

"Yours most truly,

"THOMAS HOOD."

STANZAS.

"Farewell, Life! My senses swim,
And the world is growing dim;
Thronging shadows cloud the light,
Like the advent of the night;
Colder, colder, colder still,
Upward steals a vapor chill;
Strong the earthly odor grows,—
I smell the Mould above the Rose!

"Welcome, Life! The spirit strives!
Strength returns, and hope revives;
Cloudy fears and shapes forlorn
Fly like shadows at the morn;
O'er the earth there comes a bloom,
Sunny light for sullen gloom,
Warm perfume for vapors cold,—
I smell the Rose above the Mould!"

Nothing at first appears more easy than to define and to describe the genius of Hood. It is strictly singular, and entirely his own. That which is his is completely his, and no man can cry halves with him, or quarters,—hardly the smallest fraction. The estimate of his genius, therefore, puts the critic to no trouble of elaborate discrimination or comparison. When we think of Hood as a humorist, there is no need that we should at the same time think of Aristophanes, or Lucian, or Rabelais, or Swift, or Sterne, or Fielding, or Dickens, or Thackeray. When we think of him as a poet,—except in a few of his early compositions,—we are not driven to examine what he shares with Chaucer, or Spenser, or Shakespeare, or Milton, or Byron, or Coleridge, or Wordsworth, or any of the poetic masters of literature. Whether as humorist or as poet, he is in English litera-

* The *Delta* of Blackwood.

ture what Richter is in German literature, "the only one." Then the characteristics of his genius are outwardly so evident, that, in merely a glance, we fancy we comprehend them. But the more we think, the more we reflect, the more the difficulty opens on us of doing full justice to the mind of Hood. We soon discover that we are dealing, not with a mere punster or jester, not with a mere master of grimace or manufacturer of broad grins, not with an eccentric oddity in prose or verse, not with a merry-andrew who tickles to senseless laughter, not with a spasmodic melodramatist who writhes in fictitious pain, but that we are dealing with a sincere, truthful, and most gifted nature, — many-sided, many-colored, harmonious as a whole, and having a real unity as the centre of its power. To enter into a complete exposition of such a nature is not our purpose: we must content ourselves with noting some of its most striking literary and moral peculiarities. We do not claim for Hood, that he was a man of profound, wide, or philosophic intellect, or that for grandeur of imagination he could be numbered among the godlike; we do not claim that he opened up the deeps of passion, or brought down transcendent truths from the higher spheres of mind; we claim for him no praise for science or for scholarship: we merely maintain, that he was a man of rare humanity, of close, subtile, and various observation, of good sense and common sense, of intuitive insight into character, of catholic sympathy with his kind that towards the lowest was the most loving, of extraordinary social and miscellaneous knowledge that was always at his command, a thinker to the fullest measure of his needs, and, as humorist and poet, an originality and a novelty in the world of genius. This is our general estimate of Hood. What further we have to say shall be in accordance with it; and such has been the impressive influence of Hood's writings upon us, that our thoughts, whether we will or not, are more intent on their serious than on their comic import.

In all the writings of Hood that are not absolutely serious the *grotesque* is a present and pervading element. Often it shows itself, as if from an irresistible instinct of fantastic extravagance, in the wild and reckless sport of oddity. Combinations, mental, verbal, and pictorial, to ordinary mortals the strangest and the most remote, were to Hood innate and spontaneous. They came not from the outward,—they were born of the inward. They were purely subjective, the sportive pranks of Hood's own ME, when that ME was in its queerest moods. How naturally the impossible or the absurd took the semblance of consistency in the mental associations of Hood, we observe even in his private correspondence. "Jane," (Mrs. Hood,) he writes, "is now drinking porter,—at which I look half savage. . . . I must even *sip*, when I long to *swig*. I shall turn a fish soon, and have the pleasure of angling for myself." This, if without intention, would be a blunder or a bull. If it were written unwittingly, the result would be simply ludicrous, and consign it to the category of humor; but knowingly written, as we are aware it was, we must ascribe it to the category of wit.

This presence or absence of *intention* often decides whether a saying or an image is within the sphere of humor or of wit. But wit and humor constantly run into each other; and though the absence of intention at once shows that a ludicrous surprise belongs to the humorous, the presence of it will not so clearly define it as belonging to the witty. Nor will laughter quite settle this question; for there is wit which makes us laugh, and there is humor which does not. On the whole, it is as to what is purely wit that we are ever the most at fault. Certain phases of humor we cannot mistake,—especially those which are broadly comic or farcical. But sometimes we meet with incidents or scenes which have more in them of the pathetic than the comic, that we must still rank with the humorous. Here is a case in point. A time was when it was a penal offence in Ireland for

a priest to say Mass, and under particular circumstances a capital felony. A priest was malignantly prosecuted; but the judge, being humane, and better than the law, determined to confound the informer.

"Pray, Sir," said the judge, "how do you know he said Mass?"

"Because I heard him say it, my Lord."

"Did he say it in Latin?" asked the judge.

"Yes, my Lord."

"Then you understand Latin?"

"A little."

"What words did you hear him say?"

"*Ave Maria*."

"That is the Lord's Prayer, is it not?" asked the judge.

"Yes, my Lord."

"Here is a pretty witness to convict the prisoner!" cried the judge; "he swears *Ave Maria* is Latin for the Lord's Prayer!"

Now, surely, this scene is hardly laughable, and yet it is thoroughly humorous. But take an instance which is entirely comic:—"All ye blackguards as isn't lawyers," exclaimed a crier, "quit the Coort." Or this:—"Och, Counsellor, darling," said a peasant once to O'Connell, "I've no way *here* to show your Honor my gratitude! but *I wish I saw you knocked down in my own parish*, and may-be I wouldn't bring a faction to the rescue." A similar instance occurred in this country. An enthusiastic Irishwoman, listening once to a lecturer praising Ireland, exclaimed,—"I wish to God I saw that man in poverty, that I might do something to relieve him."

We shall now cite an example of pure wit.

"How can you defend this item, Mr. Curran," said Lord Chancellor Clare,—" 'To writing innumerable letters, £100'?"

"Why, my Lord," said Curran, "nothing can be more reasonable. *It is not a penny a letter*."

But we might fill the whole space of our article, ay, or of twenty articles, with

such illustrations; we will content ourselves with two others. The idea is the same in both; but in the first it seems to have a mixture of the witty and the humorous; in the second, it belongs entirely to the humorous.

A lady at a dinner-party passing near where Talleyrand was standing, he looked up and significantly exclaimed, "Ah!" In the course of the dinner, the lady having asked him across the table, why on her entrance he said "Oh!" Talleyrand, with a grave, self-vindictory look, answered,—"*Madame, je n'ai pas dit 'Oh!' J'ai dit 'Ah!'*"

Here is the second.—The Reverend Alonzo Fizzle had preached his farewell-sermon to his disconsolate people in Drowsytown. The next morning, Monday, he was strolling musingly along a silent road among the melancholy woods. The pastor of a neighboring flock, the Reverend Darius Dizzle, was driving by in his modest one-horse chaise.

"Take a seat, Fizzle?" said he.

"Don't care if I do," said Fizzle,—and took it.

"Why, the mischief, Fizzle," said Dizzle, "did you say in your farewell-sermon, that it was just as well to preach to the dead buried six feet under the earth as to the people of Drowsytown?"

"*I?—I?—I?*" gasped the astonished Fizzle. "A more alive and wakeful people are not upon the earth than the citizens of Drowsytown. What calumniator has thus outraged them and *me*? Who told you this? *Who* dared to say it?"

"Brother Ichabod Muzzle," calmly answered Dizzle.

Fizzle leaped out, hurried to his home, and was soon seen whipping his unfortunate horse in a certain direction. He was on his way to the residence of the Reverend Ichabod Muzzle, who lived five or six miles off. He reached the home of the Reverend Ichabod. The friends greeted each other. Fizzle, though pregnant with indignation, assumed the benignant air of the Beloved Disciple. Muzzle looked Platonically the incarnate idea of the Christian Parson.

"Fine day," said Fizzle.

"Lovely," said Muzzle.

"Glorious view from this window," observed Fizzle.

"Superb," replied Muzzle.

"The beauties of Nature are calming and consolatory," murmured Fizzle.

"And so are the doctrines of grace," whispered Muzzle.

Fizzle could hold out no longer. Still he tried to look the placid, and to speak with meekness.

"Pray, how did it come, Brother Muzzle," said Fizzle, "that you reported I declared in my farewell-sermon it was as easy to preach to the dead buried six feet under the earth as to the people of Drowsytown?"

"You have been grossly misinformed, my brother," replied Muzzle. "I didn't say *six feet*. I said *four feet*."

In Hood we have all varieties of wit and humor, both separate and intermingled.

As we have already observed, the grotesque is that which is most obviously distinctive in Hood's writings. But in different degrees it is combined with other elements, and in each combination altered and modified. The combination which more immediately arrests attention is that with the ludicrous. In this the genius of Hood seemed to hold a very festival of antics, oddity, and mirth; all his faculties seemed to rant and riot in the Saturnalia of comic incongruity. And it is difficult to say whether, in provoking laughter, his pen or his pencil is the more effective instrument. The mere illustrations of the subject-matter are in themselves irresistible. They reach at once and directly the instinctive sense of the ludicrous, and over them youth and age cackinnate together. We have seen a little girl, eight years old, laugh as if her heart would break, in merely looking at the pictures in a volume of Hood. The printed page she did not read or care to read; what the prints illustrated she knew nothing about; but her eyes danced with joy and overran with tears of childish merriment. But in

all this luxury of fun, whether by pen or pencil, no word, idea, image, or delineation obscures the transparency of innocence, or leaves the shadow of a stain upon the purest mind. To be at the same time so comic and so chaste is not only a moral beauty, but a literary wonder. It is hard to deal with the oddities of humor, however carefully, without casual slips that may offend or shame the reverential or the sensitive. Noble, on the whole, as Shakspeare was, we would not in a mixed company, until after cautious rehearsal, venture to read his comic passages aloud. We may apply the statement, also, to the comic portions of Burns, — and, indeed, to comic literature in general. But who has fear to read most openly anything that Hood ever wrote? or who has a memory of wounded modesty for anything that he ever read secretly of Hood's? Dr. Johnson says that dirty images were as natural to Swift as sublime ones were to Milton; — we may say that images at once lambent and laughable were those which were natural to Hood. Even when his mirth is broadest, it is decent; and while the merest recollection of his drollery will often convulse the face in defiance of the best-bred muscles, no thought arises which the dying need regret. Who can ever forget "The Lost Heir," or remember it but to laugh at its rich breadth of natural, yet farcical, absurdity? The very opening begins the giggle: —

"One day, as I was going by

That part of Holborn christened High," etc. Then there is that broadest of broad, but morally inoffensive stories, in which the laundress, in trying to cure a smoking chimney, blows herself to death, having merely power to speak a few words to Betty, — who gaspingly explains to her mistress "The Report from Below": —

"Well, Ma'am, you won't believe it,
But it's gospel fact and true,
But these words is all she whispered,—
'Why, where is the powder blew?'"

For other examples refer to "The Ode to Malthus" and "The Blow-up," which pain the sides while they cheer the heart.

Again, we find the grotesque through Hood's writings in union with the fantastic and the fanciful. His fertility in the most unexpected analogies becomes to the reader of his works a matter of continual wonder. Strange and curious contrasts and likenesses, both mental and verbal, which might never once occur even to a mind of more than common eccentricity and invention, seem to have been in his mind with the ordinary flow of thinking. Plenteous and sustained, therefore, as his wit is, it never fails to startle. We have no doubt of his endless resources, and yet each new instance becomes a new marvel. His wit, too, is usually pregnant and vital with force and meaning. This constitutes the singular and peculiar worth of his verbal wit in general, and of his puns in particular. In verbal wit he has had but few equals, and in puns he has had none. He made the pun an instrument of power; and had his wit been malignant, he could have pointed the pun to a sharpness that would have left wounds as deep as thought, and could have added a poison to it that would have kept them rankling as long as memory lasted. The secret of his power in the pun is, that he does not rest in the analogy of sound alone, but seeks also for analogy of significance. Generally there is a subtle coincidence between his meaning and what the sound of the pun signifies, and thus the pun becomes an amusing or illustrative image, or a most emphatic and striking condensation of his thought. "Take care of your cough," he writes to his engraver, "lest you go to coughy-pot, as I said before; but I did *not* say before, that nobody is so likely as a wood-engraver to cut his stick." Speaking of his wife, he says,—"To be sure, she still sticks to her old fault of going to sleep while I am dictating, till I vow to change my *Womanuensis* for a *Manuensis*." How keenly and well the pun serves him in burlesque, in his comic imitations of the great moralist! He hits off with inimitable ridicule the great moralist's dislike to Scotland. Boswell inquired the Doctor's opinion on illicit distillation, and

how the great moralist would act in an affray between the smugglers and the excise. "If I went by the *letter* of the law, I should assist the customs; but according to the *spirit*, I should stand by the contrabandists." The Doctor was always very satirical on the want of timber in the North. "Sir," said he to the young Lord of Icombally, who was going to join his regiment, "may Providence preserve you in battle, and especially your nether limbs! You may grow a walking-stick here, but you must import a wooden leg." At Dunsinnane the old prejudice broke out. "Sir," said he to Boswell, "Macbeth was an idiot; he ought to have known that every wood in Scotland might be carried in a man's hand. The Scotch, Sir, are like the frogs in the fable: if they had a log, they would make a king of it." We will quote here a stanza which contains quite a serious application of the pun; and for Hood's purpose no other word could so happily or so pungently express his meaning. The poem is an "Address to Mrs. Fry"; and the doctrine of it is, that it is better and wiser to teach the young and uncorrupted that are yet outside the prison than the vicious and the hardened who have got inside it. Thus he goes on:—

"I like your chocolate, good Mistress Fry!
 I like your cookery in every way;
 I like your Shrove-tide service and supply;
 I like to hear your sweet Pandæans play;
 I like the pity in your full-brimmed eye;
 I like your carriage and your silken gray,
 Your dove-like habits, and your silent preaching;
 But I don't like your *Newgatory* teaching."

Hood had not only an unexampled facility in the discovery of analogies in a multitude of separate resemblances and relations, but he had an equal facility of tracing with untiring persistency a single idea through all its possible variations. Take, for example, the idea of *gold*, in the poem of "Miss Kilmansegg," and there is hardly a conceivable reference to *gold* which imagination or human life can suggest, that is not presented to us.

But this play of words and thought would, after all, be in itself little more

than serious trifling, a mere exhibition of mental and verbal ingenuity. It would be a kind of intellectual and linguistical dexterity, which would give the author a singularity and supremacy above the world. It would make him the greatest of mental acrobats or jugglers, and he might almost deserve, as eminent a reputation as a similar class of artists in bodily achievements; possibly he might claim to be ranked with the man who cooked his dinner and ate it on a tight rope over the Niagara Rapids, or with the man who placed a pea-nut under a dish-cover and turned it into the American eagle. Such, however, is not Hood's case. In all feats of mental and verbal oddity, he does, indeed, rank the highest, — but *that* is the very lowest of his attainments. His pranks do verily cause us to laugh and wonder; but there is also that ever in his pranks which causes us to think, and even sometimes to weep. In much of his that seems burlesque, the most audacious, there are hidden springs of thought and tears. Often, when most he seems as the grimed and grinning clown in a circus girded by gaping spectators, he stops to pour out satire as passionate as that of Juvenal, or morality as eloquent and as pure as that of Pascal. And this he does without lengthening his face or taking off his paint. Sometimes, when he most absurdly scampers in his thoughts, when he kicks up the heels of his fancy in the most outrageous fashion, he is playing as it most doth please him on our human sympathy, and the human heart becomes an instrument to his using, out of which he discourseth eloquent music according to his moods. The interest one finds in reading Hood is often the sudden pleasure which comes upon him. When in the midst of what appears a wilful torrent of absurdity, there bursts out a rush of earnest and instinctive nature. We could quote enough in confirmation of this assertion to make a moderate volume. And then the large and charitable wisdom, which in Hood's genius makes the teacher humble in order to win the learner, we value all the more that it conceals authority in the guise of

mirth, and under the coat of motley or the mantle of extravagance insinuates effective and salutary lessons.

No writer has ever so successfully as Hood combined the grotesque with the terrible. He has the art, as no man but himself ever had, of sustaining the illusion of an awful or solemn narrative through a long poem, to be closed in a catastrophe that is at once unexpected and ludicrous. The mystification is complete; the secret of the issue is never betrayed; suspense is maintained with Spartan reticence; curiosity is excited progressively to its utmost tension; and the surprise at the end is oftentimes electric. "A Storm at Hastings" and "The Demon Ship" are of this class. But sometimes the terrible so prevails as to overpower the ludicrous, or rather, it becomes more terrible by the very presence of the ludicrous. We have evidence of this in the poem called "The Last Man." Sometimes we find the idea of the supernatural added to the ludicrous with great moral and imaginative effect. Observe with what pathetic tenderness this is done in the "Ode to the Printer's Devil," — with what solemn moral power in "The Tale of a Trumpet," — and with what historical satire and social insight in "The Knight and the Dragon." Sometimes the ludicrous element entirely disappears, and we have the purely terrible, — the terrible in itself, as in "The Tower of Lahneck," — the terrible in pathos, as in "The Work-House Clock," — the terrible in penitence and remorse, as in "The Lady's Dream," — the terrible in temptation and despair, as in "The Dream of Eugene Aram."

Hood, as we have seen, is a perfect master equally of the grotesque and the terrible. Some writers, it may be, were as powerful as he in the grotesque. Rabelais had a certain hugeness in it, which Hood did not have and did not need. Other writers transcended Hood in the region of the terrible. It is almost useless to name such sublime masters of it as Dante, Shakspeare, and Milton. But in the intermingling of the grotesque and

terrible, and in the infinite diversification of them as thus united, not only has Hood no equal, but no rival. In some few marked and outward directions of his genius he may have imitators; but in this magical alchemy of sentiment, thought, passion, fancy, and imagination, the secret of his laboratory was *his* alone; no other man has discovered it, and no other man, as he did, could use it. But he worked in the purely ideal also;—if he did not work supremely, he worked well, as we have proof in many of his serious poems, and particularly in his “Plea for the Midsummer Fairies.” And when aroused,—but that was rarely,—he could wield a burningly satiric pen, and with manly indignation and impassioned scorn wield it to chastise the hypocritical and the arrogant, as his letter to a certain pious lady and his “Ode to Rae Wilson” bear sufficient witness.

Along with the grotesque and terrible in Hood’s writings we also often observe a wizard-like command over the elements of the desolate, the weird, the sad, the forlorn, and the dreary. We may trace it in many of the poems to which we have already alluded. But it appears with all its lonely gloom of power in “The Haunted House.” This poem is surely the work of a fancy that must have often gone into the desert of the soul to meditate, and that must have made itself acquainted with all that is dismal in imagery and feeling. Pictures, in succession or combination, it would be impossible to conceive, which more dolefully impress the mind with a sense of doom, dread, and mystery; yet every picture is in itself natural, and, while each adds to the intensity of the impression, each is in itself complete.

Now, having gone over some of the most noticeable qualities in the writings of Hood, we come to the crowning quality of his genius, the *simply pathetic*. We could, if space remained, adduce many psychological and other reasons why we apply this phrase to the pathos of Hood. One reason is, that Hood’s pathos involves none of the complications of high-

er passion, nor any of the pomp which belongs, in mood, situation, or utterance, to the loftier phases of human suffering. The sorrow of those who most attracted his sympathy was not theatrical or imposing. It has been well said of him, that his “bias was towards all that was poor and unregarded.” And thus, while those who painfully moved the charity and compassion of his genius were considered by him the victims of artificial civilization, his own feeling for them was natural and instinctive; yet never did natural and instinctive feeling receive expression more artistic, but with that admirable art in which elaboration attains the utmost perfection of simplicity. It excites our wonder to observe how in pathos Hood’s genius divests itself of attributes which had seemed essential to its existence. All that is grotesque, whimsical, or odd disappears, and we have only the soul of pity in the sound of song,—in song “most musical, most melancholy.” In pathos, Hood’s is not what we should call a transformed genius so much as a genius becoming divested of its coarser life, and then breathing purely the inner spirit of goodness and beauty. The result is what one might almost term the “absolute” in pathos. Nothing is excluded that is necessary to impression; nothing is admitted that could vulgarize or weaken it. We have thus pathos at once practical and poetic,—pathos at once the most affecting and the most ideal,—coming from a heart rich with all human charities, and gaining worthy and immortal form by means of a subtle, deep, cultivated imagination. The pathetic, therefore, no less than the comic, in Hood’s writings has all the author’s peculiar originality, but has it in a higher order. Pathos was the product of the author’s mind when it was most matured by experience, and when suffering, without impairing its strength, had refined its characteristic benevolence to the utmost tenderness.

Hood’s pathos culminates in “The Song of the Shirt,” “The Lay of the Laborer,” and “The Bridge of Sighs.”

These are marvellous lyrics. In spirit and in form they are singular and remarkable. We cannot think of any poems which more show the mystic enchantment of genius. How else was a ragged sempstress in a squalid garret made immortal, nay, made universal, made to stand for an entire sisterhood of wretchedness? Here is the direst poverty, blear-eyed sorrow, dim and dismal suffering, — nothing of the romantic. A stern picture it is, which even the softer touches render sterner; still there is nought in it that revolts or shocks; it is deeply poetic, calls into passionate action the feelings of reverence and pity, and has all the dignity of tragedy. Even more wonderful is the transformation that a rustic hind undergoes in "The Lay of the Laborer," in which a peasant out of work personifies, with eloquent impressiveness, the claims and calamities of toiling manhood. But an element of the sublime is added in "The Bridge of Sighs." In that we have the truly tragic; for we have in it the union of guilt, grief, despair, and death. An angel from heaven, we think, could not sing a more gentle dirge, or one more pure; yet the ordinary associations suggested by the corpse of the poor, ruined, self-murdered girl are such as to the prudish and fastidious would not allow her to be mentioned, much less bring her into song. But in the pity almost divine with which Hood sings her fate there is not only a spotless delicacy, there is also a morality as elevated as the heavenly mercy which the lyrist breathes. The pure can afford to be pitiful; and the life of Hood was so exemplary, that he had no fear to hinder him from being charitable. The cowardice of conscience is one of the saddest penalties of sin; and to avert suspicion from one's self by severity to others is, indeed, the most miserable expediency of self-condemnation. The temper of charity and compassion seems natural to men of letters and of art. They are emotional and sensitive, and by the necessity of their vocation have to hold much communion with the inmost consciousness of our nature; they

thus learn the weakness of man, and the allowances that he needs; they are conversant with a broad and diversified humanity, and thence they are seldom narrow, intolerant, or self-righteous; feeling, too, their full share of moral and mortal imperfection, they refuse to be inquisitors of the unfortunate, but rather choose to be their advocates and helpers. No man ever had more of this temper than Hood; and out of it came these immortal lyrics upon which we have been commenting. For such a temper the writing of these lyrics was exceeding great reward; not only because they made the author an everlasting benefactor to the poor, but also because they became an interpretation of his own deeper genius, and revealed a nobler meaning in his works than had ever before been discerned. Henceforth, he was more thought of as a profound poet than as the greatest of mimes, jesters, and punsters. The lyrics of the poor saved him from imminent injustice. — All that we have further to say of these lyrics is to express our admiration as to the classical finish of their diction, and as to the wild, sweet, and strange music in their sadly sounding measures.

Hood is a writer to whom, in his degree, we may apply the epithet *Shakspearian*. We do not, indeed, compare him with Shakspeare in bulk or force of genius, but only in quality and kind. He had, as the great dramatist, the same disregard of the temporary and discernment of the essential; the same wonderful wealth of vocabulary, and the same bold dexterity in the use of it; the same caprices of jestings and conceits; the same comminglings of mirth and melancholy; the same many-sided conception of existence; the same embracing catholicity of tastes and tendencies; the same indifference to sects and factions; the same freedom from jealousies, asperities, and spites; and in the lower scale of his genius, he resembled the mighty dramatist in subtle perception of life and Nature, in his mental and moral independence, and in his intuitive divinations of abstract truth and individual character.

As a poet of the poor, Crabbe is the only poet with whom he can be critically compared. The comparison would be a contrast; and in order to handle it to any purpose, a long essay would be required. Hood wrote but a few short lyrics on the poor; Crabbe wrote volumes. Crabbe was *literal*; Hood *ideal*. Crabbe was concrete; Hood was abstract. Crabbe lived among the rural poor; Hood among the city poor. Crabbe saw the poor constantly, and went minutely and practically into the interior of their life; if Hood ever directly saw them at all, it was merely with casual glimpses, and he must have learned of them only by occasional report. Crabbe was a man of vigorous constitution, he lived a hardy life, and he lived it long; Hood was a man of feeble health, he lived a life of pain, and he closed it early. Crabbe had a hard youth, but after that a certain and settled competence; Hood's was also a youth of struggle, but struggle was his destiny to the end. These radical and circumstantial differences between the men will account for their different modes in thinking and writing of the poor. But both were men of genius, of genial humanity, and of singular originality. No one who reads Crabbe's writings will deny him genius; no one who reads them with adequate sympathy and attention will deny that his genius is vital with passion and imagination. Only the latent heat of passion and imagination could save these seemingly bald and monotonous narratives from being as dull as a dictionary. But they are not so; they have an interest which holds the reader with a fixedness of grasp which he cannot loosen. Crabbe's poetry of the poor is slow and epic; Hood's is rapid and lyrical. Crabbe's characters are only actual and intensified individuals; Hood's characters are idealized and representative persons. Hood gives you only the pathetic or tragical essentials; but, along with these, Crabbe gives you the complexity and detail of life which surrounded them. Hood presents you with the picture of a lonely woman at midnight toiling and starving in

the slavery of sewing; but Crabbe would trace her from her quiet country-home, through the follies which led her to a London garret. Hood, in his "Lay of the Laborer," makes you listen to the wail of a strong man imploring leave to toil; Crabbe would find him drunk in the beer-house or the gin-shop, and then carry you on to the catastrophe in his ruined home or in his penal death. Hood, in his "Bridge of Sighs," brings you into the presence of death, and you gaze, weeping, over the lifeless form of beauty that had once been innocent and blooming girlhood, but from which the spirit, early soiled and saddened, took violent flight in its despair; Crabbe would give us the record of her sins, and connect her end retributively with her conduct. Much is in Crabbe that is repulsive and austere; but he is, notwithstanding, an earnest moral teacher and a deep tragic poet. Let us be content with both Crabbe and Hood: we need to look at the aspect which each of them gives us of life,—the stern poetry of fact in Crabbe, and the lyrical poetry of feeling in Hood. Crabbe has dealt with groups and masses; Hood has immortalized single figures, which, by their isolation and intensity, take full and forcible possession of the mind, and can never be driven out from memory.

This is a rather serious conclusion of an article on a comic genius. As the humorist is for the most part on the play-side of literature, he should, we are apt to suppose, be entirely on the play-side of life. He ought to laugh and grow fat,—and he ought to have an easy-chair to laugh in. Why should he who makes so many joyous not have the largest mess of gladness to his share? He ought to be a favored Benjamin at the banquet of existence,—and have, above the most favored of his brethren, a double portion. He ought, like the wind, to be "a chartered libertine,"—to blow where he listeth, and have no one to question whence he cometh or whither he goeth. He ought to be the citizen of a comfortable world, and he ought to have an ungrudged freedom in it. What debt is he should not be al-

lowed to learn or to know,—and the idea of a dun it should not be possible for him even to conceive. Give him good cheer; enrich the juices of his blood, nourish generously the functions of his brain; give him delicate viands and rosy wine; give him smiles and laughter, music and flowers; let him inherit every region of creation, and be at home in air and water as well as on the earth; at last, in an Anacreontic bloom of age, let him in a song breathe away his life. Such is the lot, we believe, that many imagine as the condition of a humorist; but which the humorist, less than most men, has ever enjoyed. All great humorists have been men grave at heart, and often men of more than ordinary trials. None but the superficial can fail to recognize the severity of Rabelais's genius. The best portion of poor Molière's manhood was steeped in sorrow. The life of Swift was a hidden tragedy. The immortal wit of "Hudibras" did not save Butler from the straits and struggles of narrow means. Cervantes spent much of his time in a prison, and much of his grandest humor had there its birthplace. Farquhar died young, and in terrible distress of mind at the desolate prospect that he saw before his orphan children. How Sheridan died is familiar to us all. The very conditions of temperament which gave Sterne genius gave him also torment. Fielding and Smollett battled all their lives with adversity; and Goldsmith died in his prime, embittered in his last hours by distress and debt. Banim, the great Irish novelist, withered early out of life upon a government pittance of a pension; Griffin gave up literature, became a monk, and found in youth a grave; Carleton, one of the most gifted humorists that ever painted the many-colored pictures of Irish character, is now struggling against the pressure of a small

income in his advancing years. Not to carry this melancholy list farther,—which might be indefinitely prolonged,—we close it with the name of Thomas Hood.

But not by contest with realities of life alone have humorists been saved from temptations to any dangerous levity; great humorists, as we have said, have generally been earnest men, very grave at heart, and much that they have written has been tragedy in the guise of irony. All readers cannot find this out. They cannot see the grief of life beneath its grin; they cannot detect the scorn or the pity that is hidden in joke or banter; neither can they always find out the joke or banter that is covered by a solemn face; and many a sincere believer has been deemed an atheist because he burlesqued hypocrites with their own gravity. Numbers judge only by the outside, and never reach the spirit of writing or of man. They laugh at the contortions of grimace, but of the mysteries of mind or the pains of heart which underlie the contortions they know nothing. They snatch their rapid pleasure, and leave unvalued the worth of him who gives it; they care not for the cost of genius or labor at which it has been procured; and when they have had their transient indulgence, they have had all they sought and all that they could enjoy.

The relation of many to the humorist is illustrated by that of the doctor, on a certain occasion, to Liston, the celebrated comedian. Liston was subject to constitutional melancholy, and in a severe attack of it he consulted a famous physician.

"Go and see Liston," said the doctor.

"I am Liston," said the actor.

And thus the inner soul of a great humorist is often as unrecognized by those who read him as was the natural personality of Liston by the doctor.

FAYAL AND THE PORTUGUESE.

EVERY man when he first crosses the ocean is a Columbus to himself, no matter how many voyages by other navigators he may have heard described or read recorded. Geographies convince only the brain, not the senses, that the globe is round; and when personal experience exhibits the fact, it is as wonderful as if never before suggested. You have dwelt for weeks within one unbroken loneliness of sea and sky, with nothing that seemed solid in the universe but the bit of painted wood on which you have floated. Suddenly one morning something looms high and cloudlike far away, and you are told that it is land. Then you feel, with all ignorant races, as if the ship were a god, thus to find its way over that trackless waste, or as if this must be some great and unprecedented success, and in no way the expected or usual result of such enterprises. A sea-captain of twenty-five years' experience told me that this sensation never wore off, and that he still felt as fresh a sense of something extraordinary, on making land, as upon his first voyage. To discover for one's self that there is really another side to the ocean,—that is the astonishing thing. And when it happens, as in our case, that the haven thus gained is not merely a part of a great continent which the stupidest ship could not miss, if it only sailed far enough, but is actually a small volcanic island, a mere dot among those wild waves, a thing which one might easily have passed in the night, unsuspecting, and which yet was not so passed,—it really seems like the maddest piece of good-luck, as if one should go to sea in a bowl, hoping somewhere or other to land on the edge of a tea-cup.

As next day we stumbled on deck in the foggy dawn, the dim island five miles off seemed only dawning too, a shapeless thing, half-formed out of chaos, as if the leagues of gray ocean had grown weary of their eternal loneliness, and bungled

into something like land at last. The phrase "*making land*" at once became the simple and necessary expression; we had come upon the very process itself. Nearer still, the cliffs five hundred feet in height, and the bare conical hills of the interior, divided everywhere by canehedges into a regular checker-work of cultivation, prolonged the mystery; and the glimpses of white villages scarcely seemed to break the spell. Point after point we passed,—great shoulders of volcanic mountain thrust out to meet the sea, with steep green ravines furrowed in between them; and when at last we rounded the Espalamarca, and the white walls and the Moorish towers of Horta stood revealed before us, and a stray sunbeam pierced the clouds on the great mountain Pico across the bay, and the Spanish steamship in the harbor flung out her gorgeous ensign of gold and blood,—then, indeed, we felt that all the glowing cup of the tropics was proffered to our lips, and the dream of our voyage stood fulfilled.

Not one of our immediate party, most happily, had ever been beyond Boston Harbor before, and so we all plunged without fear or apology into the delicious sense of foreignness; we moved as those in dreams. No one could ever precisely remember what we said or what we did, only that we were somehow boated ashore till we landed with difficulty amid high surf on a wave-worn quay, amid an enthusiastic throng of women in dark-blue hooded cloaks which we all took for priestly vestments, and of beggars in a combination of patches which no sane person could reasonably take for vestments of any sort, until one saw how scrupulously they were washed and how carefully put together.

The one overwhelming fact of the first day abroad is the simple sensation that one is abroad: a truth that can never be made anything but commonplace in the

telling, or anything but wonderful in the fulfilling. What Emerson says of the landscape is true here: no particular foreign country is so remarkable as the necessity of being remarkable under which every foreign country lies. Horace Walpole found nothing in Europe so astonishing as Calais; and we felt that at every moment the first edge of novelty was being taken off for life, and that, if we were to continue our journey round the world, we never could have that first day's sensations again. Yet because no one can spare time to describe it at the moment, this first day has never yet been described; all books of travels begin on the second day; the daguerreotype-machine is not ready till the expression has begun to fade out. Months had been spent in questioning our travelled friends, sheets of old correspondence had been disintegrated, sketches studied, Bullar's unsatisfactory book read, and now we were on the spot, and it seemed as if every line and letter must have been intended to describe some other place on the earth, and not this strange, picturesque, Portuguese, Semi-Moorish Fayal.

One general truth came over us instantly, and it was strange to think that no one had happened to speak of it before. The essence of the surprise was this. We had always been left to suppose that in a foreign country one would immediately begin to look about and observe the foreign things,—these novel details having of course that groundwork of ordinary human life, the same all the world over. To our amazement, we found that it was the groundwork itself that was foreign; we were shifted off our feet; not the details, but the basis itself was wholly new and bewildering; and, instead of noting down, like intelligent travellers, the objects which were new, we found ourselves stupidly staring about to find something which was old,—a square inch of surface anywhere which looked like anything ever seen before,—that we might take our departure from that, and then begin to improve our minds. Perhaps this is difficult for the first hours in any for-

foreign country; certainly the untravelled American finds it utterly impossible in Fayal. Consider the incongruities. The beach beneath your feet, instead of being white or yellow, is black; the cliffs beside you are white or red, instead of black or gray. The houses are of white plaster on the outside, with wood-work, often painted in gay stripes, within. There are no chimneys to the buildings, but sometimes there is a building to the chimney; the latter being a picturesque tower with smoke coming from the top and a house appended to the base. One half the women go about bareheaded, save a handkerchief, and with a good deal of bareness at the other extremity,—while the other half wear hoops on their heads in the form of vast conical hoods attached to voluminous cloth cloaks which sweep the ground. The men cover their heads with all sorts of burdens, and their feet with nothing, or else with raw-hide slippers, hair outside. There is no roar or rumble in the streets, for there are no vehicles and no horses, but an endless stream of little donkeys, clicking the rough pavement beneath their sharp hoofs, and thumped solidly by screaming drivers. Who wears the new shoes on the island does not appear; but the hens limp about the houses, tethered to the old ones.

Further inspection reveals new marvels. The houses are roofed with red and black tiles, semi-cylindrical in shape and rusty in surface, and making the whole town look as if incrustated with barnacles. There is never a pane of glass on the lower story, even for the shops, but only barred windows and solid doors. Every house has a paved court-yard for the ground-floor, into which donkeys may be driven and where beggars or peasants may wait, and where one naturally expects to find Gil Blas in one corner and Sancho Panza in another. An English lady, on arriving, declared that our hotel was only a donkey-stable, and refused to enter it. In the intervals between the houses the streets are lined with solid stone walls from ten to twenty feet high,

protecting the gardens behind; and there is another stone wall inclosing the town on the water side, as if to keep the people from being spilled out. One must go some miles into the country before getting beyond these walls, or seeing an inch on either side. This would be intolerable, of course, were the country a level; but, as every rod of ground slopes up or down, it simply seems like walking through a series of roofless ropewalks or bowling-alleys, each being tilted up at an angle, so that one sees the landscape through the top, but never over the sides. Thus, walking or riding, one seldom sees the immediate foreground, but a changing background of soft valleys, an endless patchwork of varied green rising to the mountains in the interior of the island, or sinking to the blue sea, beyond which the mountain Pico rears its graceful outline across the bay.

From the street below comes up a constant hum of loud voices, often rising so high that one runs to see the fight commence, and by the time one has crossed the room it has all subsided and everybody is walking off in good-humor. Meanwhile the grave little donkeys are constantly pattering by, sometimes in pairs or in fours with a cask slung between; and mingled with these, in the middle of the street, there is an endless stream of picturesque figures, everybody bearing something on the head,—girls, with high water-jars, each with a green bough thrust in, to keep the water sweet,—boys, with baskets of fruit and vegetables,—men, with boxes, bales, bags, or trunks for the custom-house, or an enormous fagot of small sticks for firewood, or a long pole hung with wooden jars of milk, or with live chickens, head downward, or perhaps a basket of red and blue and golden fishes, fresh from the ocean and glistening in the sun. The strength of their necks seems wonderful, as does also their power of balancing. On a rainy day I have seen a tall man walk gravely along the middle of the street through the whole length of the town, bearing a large empty cask balan-

ced upon his head, over which he held an umbrella.

Perhaps it is a procession-day, and all the saints of some church are taken out for an airing. They are figures composed of wood and wax, life-size, and in full costume, each having a complete separate wardrobe, but more tawdry and shabby, let us hope, than the originals ever indulged in. Here are Saint Francis and Saint Isabella, Saint Peter with a monk kneeling before him, and Saint Margaret with her dog, and the sceptred and ermined Saint Louis, and then Joseph and Mary sitting amicably upon the same platform, with an additional force of bearers to sustain them. For this is the procession of the *Bem-casados* or Well-married, in honor of the parents of Jesus. Then there are lofty crucifixes and waving flags; and when the great banner, bearing simply the letters S. P. Q. R., comes flapping round the windy corner, one starts in wonder at the permanent might of that vast superstition which has grasped the very central symbol of ancient empire, and brought it down, like a boulder on a glacier, into modern days. It makes all Christianity seem but a vast palimpsest, since the letters which once meant "*Senatus Populusque Romanus*" stand now only for the feebler modern formula, "*Salve populum quem redemisti.*"

All these shabby splendors are interspersed among the rank and file of two hundred, or thereabouts, lay brethren of different orders, ranging in years from six to sixty. The Carmelites wear a sort of white bathing-dress, and the Brotherhood of Saint Francis are clothed in long brown robes, girded with coarse rope. The very old and the very young look rather picturesque in these disguises,—the latter especially, urchins with almost baby-faces, toddling along with lighted candle in hand; and one often feels astonished to recognize some familiar porter or shop-keeper in this ecclesiastical dress, as when discovering a pacific next-door neighbor beneath the bear-skin of an American military officer. A fit suggestion; for next follows a detachment of Portuguese troops-

of-the-line,—twenty shambling men in short jackets, with hair shaved close, looking most like children's wooden monkeys, by no means live enough for the real ones. They straggle along, scarcely less irregular in aspect than the main body of the procession; they march to the tap of the drum. I never saw a Fourth-of-July procession in the remotest of our rural districts which was not beautiful, compared to this forlorn display; but the popular homage is duly given, the bells jangle incessantly, and, as the procession passes, all men uncover their heads or have their hats knocked off by official authority.

Still watching from our hotel-window, turn now from the sham picturesqueness of the Church to the real and unconscious picturesqueness of every day. It is the orange-season, and beneath us streams an endless procession of men, women, and children, each bearing on the head a great graceful basket of yellow treasures. Opposite our window there is a wall by which they rest themselves, after their three-mile walk from the gardens. There they lounge and there they chatter. Little boys come slyly to pilfer oranges, and are pelted away with other oranges; for a single orange has here no more appreciable value than a single apple in our farmers' orchards; and, indeed, windfall oranges are left to decay, like windfall apples. During this season one sees oranges everywhere, even displayed as a sort of thank-offering on the humble altars of country-churches; the children's lips and cheeks assume a chronic yellowness; and the narrow side-walks are strewn with bits of peel, punched through and through by the boys' pop-guns, as our boys punch slices of potato.

All this procession files down, the whole day long, to the orange-yards by the quay. There one finds another merry group, or a series of groups, receiving and sorting the fragrant loads, papering, packing, boxing. In the gardens there seems no end to the varieties of the golden fruit, although only one or two are here being packed. There are shaddocks, *zamboas*,

limes, sour lemons, sweet lemons, oranges proper, and *Tangerinas*; these last being delicate, perfumed, thin-skinned, miniature-fruit from the land of the Moors. One may begin to eat oranges at Fayal in November; but no discriminating person eats a whole orange before March,—a few slices from the sunny side, and the rest is thrown upon the ground. One learns to reverse the ordinary principles of selection also, and choose the smaller and darker before the large and yellow: the very finest in appearance being thrown aside by the packers as worthless. Of these packers the Messrs. Dabney employ two hundred, and five hundred beside in the transportation. One knows at a glance whether the cargo is destined for America or England: the English boxes having the thin wooden top bent into a sort of dome, almost doubling the solid contents of the box. This is to evade the duty, the custom-house measurement being taken only at the corners. It also enables the London dealers to remove some two hundred oranges from every box, and still send it into the country as full.—When one thinks what a knowing race we came from, it is really wonderful where we Yankees picked up our honesty.

Let us take one more glance from the window; for there is a mighty jingling and rattling, the children are all running to see something, and the carriage is approaching. "The carriage": it is said advisedly; for there is but one street on the island passable to such an equipage, and but one such equipage to enjoy its privileges,—only one, that is, drawn by horses, and presentable in Broadway. There are three other vehicles, each the object of envy and admiration, but each drawn by oxen only. There is the Baroness, the only lady of title, who sports a sort of butcher's cart, with a white top; within lies a mattress, and on the mattress recline her ladyship and her daughter, as the cart rumbles and stumbles over the stones;—nor they alone, for, on emerging from an evening party, I have seen the oxen of the Baroness, unharnessed, quiet-

ly munching their hay at the foot of the stairs, while a pair of bare feet emerging from one end of the vehicle, and a hearty snore from the other, showed the mattress to be found a convenience by some one beside the nobility. Secondly, there is a stout gentleman near the Hotel, reputed to possess eleven daughters, and known to possess a pea-green omnibus mounted on an ox-cart; the windows are all closed with blinds, and the number of young ladies may be an approximation only. And, lastly, there sometimes rolls slowly by an expensive English curricle, lately imported; the springs are somehow deranged, so that it hangs entirely on one side; three ladies ride within, and the proprietor sits on the box, surveying in calm delight his two red oxen with their sky-blue yoke, and the tall peasant who drives them with a goad.

After a few days of gazing at objects like these, one is ready to recur to the maps, and become statistical. It would be needless to say (but that we all know far less of geography than we are supposed to know) that the Azores are about two-thirds of the way across the Atlantic, and about the latitude of Philadelphia; sharing, however, in the greater warmth of the European coast, and slightly affected, also, by the Gulf Stream. The islands are supposed to have been known to the Phœnicians, and Humboldt holds out a flattering possibility of Phœnician traces yet discoverable. This lent additional interest to a mysterious inscription which we hunted up in a church built in the time of Philip II., at the north end of the island; we had the satisfaction of sending a copy of it to Humboldt, though it turned out to be only a Latin inscription clothed in uncouth Greek characters, such as have long passed for Runic in the Belgian churches and elsewhere. The Phœnician traces yet remain to be discovered; so does a statue fabled to exist on the shore of one of the smaller islands, where Columbus landed in some of his earlier voyages, and, pacing the beach, looked eagerly towards the western sea: the statue is supposed still to

portray him. In the fifteenth century, at any rate, the islands were re-discovered. They have always since then been under Portuguese control, including in that phrase the period when Philip II. united that crown with his own; and they are ruled now by Portuguese military and civil governors, with the aid of local legislatures.

Fayal stands, with Pico and San Jorge, rather isolated from the rest of the group, and out of their sight. It is the largest and most populous of the islands, except St. Michael and Terceira; it has the best harbor and by far the most of American commerce, St. Michael taking most of the English. Whalers put into Fayal for fresh vegetables and supplies, and to transship their oil; while distressed vessels often seek the harbor to repair damages. The island is twenty-five miles long, and shaped like a turtle; the cliffs along the sea range from five hundred to a thousand feet in height, and the mountainous interior rises to three thousand. The sea is far more restless than upon our coast, the surf habitually higher; and there is such a depth of water in many places around the shore, that, on one occasion, a whale-ship, drawn too near by the current, broke her main-yard against the cliff, without grazing her keel.

The population numbers about twenty-five thousand, one-half of these being found in the city of Horta, and the rest scattered in some forty little hamlets lying at irregular distances along the shores. There are very few English or French residents, and no Americans but the different branches of the Consul's family, — a race whose reputation for all generous virtues has spread too widely to leave any impropriety in mentioning them here. Their energy and character have made themselves felt in every part of the island; and in the villages farthest from their charming home, one has simply to speak of *a familia*, "the family," and the introduction is sufficient. Almost every good institution or enterprise on the island is the creation of Mr. Dabney. He

transacts without charge the trade in vegetables between the peasants and the whale-ships, guarantying the price to the producers, giving them the profits, if any, and taking the risk himself; and the only provision for pauperism is found in his charities. Every Saturday, rain or shine, there flocks together from all parts of the island a singular collection of aged people, lame, halt, and blind, who receive, to the number of two hundred, a weekly donation of ten cents each, making a thousand dollars annually, which constitutes but a small part of the benefactions of this remarkable man, the true father of the island, with twenty-five thousand grown children to take care of.

Ten cents a week may not seem worth a whole day's journey on foot, but by the Fayal standard it is amply worth it. The usual rate of wages for an able-bodied man is sixteen cents a day; and an acquaintance of ours, who had just got a job on the roads at thirty cents a day, declined a good opportunity to emigrate to America, on the ground that it was best to "let well alone." Yet the price of provisions is by no means very low, and the difference is chiefly in abstinence. But fuel and clothing cost little, since little is needed,—except that no woman thinks herself really respectable until she has her great blue cloak, which requires an outlay of from fifteen to thirty dollars, though the whole remaining wardrobe may not be worth half that. The poorer classes pay about a dollar a month in rent; they eat fish several times a week and meat twice or thrice a year, living chiefly upon the coarsest corn-bread, with yams and beans. Still they contrive to have their luxuries. A soldier's wife, an elderly woman, said to me pathetically, "We have six *vintems* (twelve cents) a day, — my husband smokes and I take snuff, — and how are we to buy shoes and stockings?" But the most extreme case of economy which I discovered was that of a poor old woman, unable to tell her own age, who boarded with a poor family for four *patacos*

(twenty cents) a month, or five cents a week. She had, she said, a little place in the chimney to sleep in, and when they had too large a fire, she went out of doors. Such being the standard of ordinary living, one can compute the terrors of the famine which has since occurred in Fayal, and which has only been relieved through the contributions levied in this country, and the energy of Mr. Dabney.

Steeped in this utter poverty, — dwelling in low, dark, smoky huts, with earthen floors, — it is yet wonderful to see how these people preserve not merely the decencies, but even the amenities of life. Their clothes are a chaos of patches, but one sees no rags; all their well-worn white garments are white in the superlative degree; and when their scanty supply of water is at the scantiest, every bare foot on the island is sure to be washed in warm water at night. Certainly there are fleas and there are filthinesses in some directions; and yet it is amazing, especially for one accustomed to the Irish, to see an extreme of poverty so much greater, with such an utter absence of squalidness. But when all this is said and done, the position of the people of Fayal is an abject one, that is, it is a *European* position; it teaches more of history in a day to an untravelled American than all his studies had told him besides, — and he returns home ready to acquiesce in a thousand dissatisfactions, in view of that most wondrous of all recorded social changes, the transformation of the European peasant into the American citizen.

Fayal is not an expensive place. One pays six dollars a week at an excellent hotel, and there is nothing else to spend money on, except beggars and donkeys. For a shilling an hour one can go to ride, or, as the Portuguese phrase perhaps circuitously expresses it, go to walk on horse-back on a donkey, — *dar um passeio a cavallo n'um burro*. The beggars, indeed, are numerous; but one's expenditures are always happily limited by the great scarcity of small change. A half-cent, how-

ever; will buy you blessings enough for a lifetime, and you can find an investment in almost any direction. You visit some church or cemetery; you ask a question or two of a loungee in a black cloak, with an air like an exiled Stuart, and, as you part, he detains you, saying, "Sir, will you give me some little thing, (*alguma cousinha*,) — I am so poor?" Overwhelmed with a sense of personal humility, you pull out three half-cents and present them with a touch of your hat, he receives them with the same, and you go home with a feeling that a distinguished honor has been done you. The Spaniards say that the Portuguese are "mean even in their begging": they certainly make their benefactors mean; and I can remember returning home, after a donation of a whole *pataco*, (five cents,) with a debilitating sense of too profuse philanthropy.

It is inevitable that even the genteel life of Fayal should share this parsimony. As a general rule, the higher classes on the island, socially speaking, live on astonishingly narrow means. How they do it is a mystery; but families of eight contrive to spend only three or four hundred dollars a year, and yet keep several servants, and always appear rather stylishly dressed. The low rate of wages (two dollars a month at the very highest) makes servants a cheap form of elegance. I was told of a family employing two domestics upon an income of a hundred and twenty dollars. Persons come to beg, sometimes, and bring a servant to carry home what is given. I never saw a mechanic carry his tools; if it be only a hammer, the hired boy must come to fetch it.

Fortunately, there is not much to transport, the mechanic arts being in a very rudimentary condition. For instance, there are no saw-horses nor hand-saws, the smallest saw used being a miniature wood-saw, with the steel set at an angle, in a peculiar manner. It takes three men to saw a plank: one to hold the plank, another to saw, and a third to carry away the pieces.

Farming-tools have the same simplici-

ty. It is one odd result of the universal bare feet that they never will use spades; everything is done with a hoe, most skillfully wielded. There are no wheelbarrows, but baskets are the universal substitutes. The plough is made entirely of wood, only pointed with iron, and is borne to and from the field on the shoulder. The carts are picturesque, but clumsy; they are made of wicker-work, and the iron-shod wheels are solidly attached to the axle, so that all revolves together, amid fearful creaking. The people could not be induced to use a cart with movable wheels which was imported from America, nor will they even grease their axles, because the noise is held to drive away witches. Some other arts are a little more advanced, as any visitor to Mr. Harper's pleasant Fayal shop in Boston may discover. They make homespun cloth upon a simple loom, and out of their smoky huts come beautiful embroideries and stockings whose fineness is almost unequalled. Their baskets are strong and graceful, and I have seen men sitting in village doorways, weaving the beautiful broom-plant, yellow flowers and all, until basket and bouquet seemed one.

The greater part of the surface of the island is cultivated like a kitchen-garden, even up to the top of volcanic cones eight hundred feet high, and accessible only by steps cut in the earth. All the land is divided into little rectangular patches of various verdure,—yellow-blossomed broom, blue-flowering flax, and the contrasting green of lupines, beans, Indian corn, and potatoes. There is not a spire of genuine grass on the island, except on the Consul's lawn, but wilds covered with red heather, low *faya*-bushes, (whence the name of the island,) and a great variety of mosses. The cattle are fed on beans and lupines. Firewood is obtained from the opposite island of Pico, five miles off, and from the *Caldeira* or Crater, a pit five miles round and fifteen hundred feet deep, at the summit of Fayal, whence great fagots are brought upon the heads of men and girls. It is an oversight in the "New American Cyclopædia" to say

of Fayal that "the chief object of agriculture is the vine," because there are not a half dozen vineyards on the island, the soil being unsuitable; but there are extensive vineyards on Pico, and these are owned almost wholly by proprietors resident in Fayal.

There is a succession of crops of vegetables throughout the year; peas are green in January, which is, indeed, said to be the most verdant month of the twelve, the fields in summer becoming parched and yellow. The mercury usually ranges from 50° to 80°, winter and summer; but we were there during an unusually cool season, and it went down to 45°. This was regarded as very severe by the thinly clad Fayalese, and I sometimes went into cottages and found the children lying in bed to keep warm. Yet roses, geraniums, and callas bloomed out of doors all the time, and great trees of red camellia, which they cut as we cut roses. Superb scarlet banana-flowers decked our Christmas-Tree. Deciduous trees lose their leaves in winter there, however, and exotic plants retain the habits they brought with them, with one singular exception. The *Morus multicaulis* was imported, and the silk-manufacture with it; suddenly the trees seemed to grow bewildered, they put forth earlier and earlier in the spring, until they got back to January; the leaves at last fell so early that the worms died before spinning cocoons, and the whole enterprise was in a few years abandoned because of this vegetable insanity.

In spite of the absence of snow and presence of verdure, this falling of the leaves gives some hint of winter; yet blackbirds and canaries sing without ceasing. The latter are a variety possessing rather inferior charms, compared with the domestic species; but they have a pretty habit of flying away to Pico every night: it was pleasant to sit at sunset on the high cliffs at the end of the island and watch the little brown creatures, like fragments of the rock itself, whirled away over the foaming ocean. The orange-orchards were rather a disappointment; they suggested quince-trees with more shining

leaves; and, indeed, there was a hard, glossy, coriaceous look to the vegetation generally, which made us sometimes long for the soft, tender green of more temperate zones. The novel beauty of the Dabney gardens can scarcely be exaggerated; each step was a new incursion into the tropics,—a palm, a magnolia, a camphor-tree, a dragon-tree, suggesting Humboldt and Orotava, a clump of bamboos or cork-trees, or the startling strangeness of the great grass-like banana, itself a jungle. There are hedges of pittosporum, arbors veiled by passion-flowers, and two of that most beautiful of all living trees, the *araucaria*, or Norfolk Island pine,—one specimen being some eighty feet high, and said to be the tallest north of the equator. And when over all this luxuriant exotic beauty the soft clouds furled away and the sun showed us Pico, we had no more to ask, and the soft, beautiful blue cone became an altar for our gratitude, and the thin mist of hot volcanic air that flickered above it seemed the rising incense of the world.

In the midst of all these charming surprises, we found it hard to begin at once upon the study of the language, although the prospect of a six-months' stay made it desirable. We were pleased to experience the odd, stupid sensation of having people talk loud to us as being foreigners, and of seeing even the little children so much more at their ease than we were. And every step beyond this was a new enjoyment. We found the requisites for learning a language on its own soil to be a firm will, a quick ear, flexible lips, and a great deal of cool audacity. Plunge boldly in, expecting to make countless blunders; find out the shops where they speak English, and don't go there; make your first bargains at twenty-five per cent. disadvantage, and charge it as a lesson in the language; expect to be laughed at, and laugh yourself, because you win. The daily labor is its own reward. If it is a pleasure to look through a telescope in an observatory, gradually increasing its powers until a dim nebula is resolved into a whole galaxy of separate stars. how

much more when the nebula is one of language around you, and the telescope is your own more educated ear!

We discovered further, what no one had ever told us, that the ability to speak French, however poorly, is rather a drawback in learning any less universal language, because the best company in any nation will usually have some knowledge of French, and this tempts one to remain on neutral ground and be lazy. But the best company in Fayal was so much less interesting than the peasantry, that some of us persevered in studying the vernacular. To be sure, one finds English spoken by more of the peasants than of the small aristocracy of the island, so many of the former have spent some years in American whale-ships, and come back to settle down with their savings in their native village. In visiting the smaller hamlets on the island, I usually found that the owners of the two or three most decent houses had learned to speak English in this way. But I was amused at the dismay of an American sea-captain who on a shooting excursion ventured on some free criticisms on the agriculture of a farm, and was soon answered in excellent English by the proprietor.

"Look at the foolish fellow," quoth the captain, "carrying his plough to the field on his shoulder!"

"Sir," said the Portuguese, coolly, "I have no other way to take it there."

The American reserved his fire, thereafter, for bipeds with wings.

These Americanized sailors form a sort of humbler aristocracy in Fayal, and are apt to pride themselves on their superior knowledge of the world, though their sober habits have commonly saved them from the demoralization of a sailor's life. But the untravelled Fayalese peasantry are a very gentle, affectionate, childlike people, pensive rather than gay, industrious, but not ingenious, with few amusements and those the simplest, incapable of great crimes or very heroic virtues, educated by their religion up to the point of reverent obedience, but no higher.

Their grace and beauty are like our

impressions of the Italian peasantry, and probably superior to the reality in that case. Among the young men and boys, especially, one sees the true olive cheeks and magnificent black eyes of Southern races. The women of Fayal are not considered remarkable for beauty, but in the villages of Pico one sees in the doorways of hovels complexions like rose-petals, and faces such as one attributes to Evangeline, soft, shy, and innocent. But the figure is the chief wonder, the figure of woman as she was meant to be, beautiful in superb vigor,—not diseased and tottering, as with us, but erect and strong and stately; every muscle fresh and alive, from the crown of the steady head, to the sole of the emancipated foot,—and yet not heavy and clumsy, as one fancies barefooted women must be, but inheriting symmetry and grace from the Portuguese or Moorish blood. I have looked through the crowded halls of Saratoga in vain for one such figure as I have again and again seen descending those steep mountain-paths with a bundle of firewood on the head, or ascending them with a basket of farm-manure. No person who has never left America can appreciate the sensation of living among healthy women; often as I heard of this, I was utterly unprepared for the realization; I never lost the conscious enjoyment of it for a single day; and when I reached home and walked across Boston Common on a June Sunday, I felt as if I were in a hospital for consumptives.

This condition of health cannot be attributed to any mere advantage of climate. The higher classes of Fayal are feeble and sickly; their diet is bad, they take no exercise, and suffer the consequences; they have all the ills to which flesh is heir, including one specially Portuguese complaint, known by the odd name of *dôr do cotovelo*, elbow-disease, which corresponds to that known to Anglo-Saxons, by an equally bold symbol, as the green-eyed monster, Jealousy. So the physical superiority of the peasantry seems to come solely from their mode of life,—out-door labor, simple diet, and bare

feet. Change these and their health goes; domestic service in foreign families on the island always makes them ill, and often destroys their health and bloom forever; and strange to say, that which most nauseates and deranges their whole physical condition, in such cases, is the necessity of wearing shoes and stockings.

The Pico peasants have also the advantage of the Fayalese in picturesque-ness of costume. The men wear homespun blue jackets and blue or white trousers, with a high woollen cap of red or blue. The women wear a white waist with a gay kerchief crossed above the bosom, a full short skirt of blue, red, or white, and a man's jacket of blue, with tight sleeves. On the head there is the pretty round-topped straw hat with red and white cord, which is now so extensively imported from Fayal; and beneath this there is always another kerchief, tied under the chin, or hanging loosely. The costume is said to vary in every village, but in the villages opposite Horta this dress is worn by every woman from grandmother to smallest granddaughter; and when one sails across the harbor, in the lateen-sail packet-boat, and old and young come forth on the rocks to see the arrival, it seems like voyaging to some realm of butterflies.

This out-door life begins very early. As soon as the Fayalese baby is old enough to sit up alone, he is sent into the nursery. The nursery is the sunny side of the house-door. A large stone is selected, in a convenient position, and there the little dusky creature squats, hour after hour, clad in one garment at most, and looking at the universe through two black beads of eyes. Often the little dog comes and suns himself close by, and the little cat beside the dog, and the little pig beside the cat, and the little hen beside the pig, — a "Happy Family," a row of little traps to catch sunbeams, all down the lane. When older, the same child harnesses his little horse and wagon, he being the horse and a sheep's jawbone the wagon, and trots contentedly along, in almost the smallest amount of costume

accessible to mortals. All this refers to the genuine, happy, plebeian baby. The genteel baby is probably as wretched in Fayal as elsewhere, but he is kept more out of sight.

These children are seldom noisy and never rude: the race is not hilarious, and their politeness is inborn. Not an urchin of three can be induced to accept a sugar-plum until he has shyly slid off his little cap, if he has one, and kissed his plump little hand. The society of princes can hardly surpass the natural courtesy of the peasant, who insists on climbing the orange-tree to select for you the choicest fruit. A shopkeeper never can sell you a handful of nuts without bringing the bundle near to his lips, first, with a graceful wave of salutation. A lady from Lisbon told us that this politeness surpassed that of the native Portuguese; and the wife of an English captain, who had sailed with her husband from port to port for fifteen years, said that she had never seen anything to equal it. It is not the slavishness of inferiors, for the poorest exhibit it towards each other. You see two very old women talking eagerly in the street, each in a cloak whose every square inch is a patch, and every patch a different shade, — and each alternate word you hear seems to be *Senhora*. Among laboring men, the most available medium of courtesy is the little paper cigar; it contains about four whiffs, and is smoked by about that number of separate persons.

But to fully appreciate this natural courtesy, one must visit the humbler Fayalese at home. You enter a low stone hut, thatched and windowless, and you find the mistress within, a robust, black-eyed, dark-skinned woman, engaged in grinding corn with a Scriptural handmill. She bars your way with apologies; you must not enter so poor a house; you are so beautiful, so perfect, and she is so poor, she has "nothing but the day and the night," or some equally poetic phrase. But you enter and talk with her a little, and she readily shows you all her little possessions, — her chest on the earthen

floor, her one chair and stool, her tallow-candle stuck against the wall, her husk mattress rolled together, with the precious blue cloak inside of it. Behind a curtain of coarse straw-work is a sort of small boudoir, holding things more private, an old barrel with the winter's fuel in it, a few ears of corn hanging against the wall, a pair of shoes, and a shelf with a large pasteboard box. The box she opens triumphantly and exhibits her *santinhos*, or little images of saints. This is San Antonio, and this is Nossa Senhora do Conceição, Our Lady of the Conception. She prays to them every day for sunshine; but they do not seem to hear, this winter, and it rains all the time. Then, approaching the climax of her blessedness, with beaming face she opens a door in the wall, and shows you her pig.

The courtesy of the higher classes tends to formalism, and has stamped itself on the language in some very odd ways. The tendency common to all tongues, towards a disuse of the second person singular, as too blunt and familiar, is carried so far in Spanish and Portuguese as to disuse the second person plural also, except in the family circle, and to substitute the indirect phrases, *vuestra Merced* (in Spanish) and *vossa Mercê* (in Portuguese), both much contracted in speaking and familiar writing, and both signifying "your Grace." The joke of invariably applying this epithet to one's valet would seem sufficiently grotesque in either language, and here the Spanish stops; but Portuguese propriety has gone so far that even this phrase has become too hackneyed to be civil. In talking with your equals, it would be held an insult to call them simply "your Grace"; it must be some phrase still more courtly, — *vossa Excellencia*, or *vossa Senhoria*. One may hear an elderly gentleman talking to a young girl of fourteen, or, better still, two such damsels talking together, and it is "your Excellency" at every sentence; and the prescribed address on an envelope is "*Illustrissima Excellentissima Senhora Dona Maria*." The lower classes have not quite reached the "Excellen-

cy," but have got beyond the "Grace," and hence the personal pronouns are in a state of colloquial chaos, and the only safe way is to hold to the third person and repeat the name of Manuel or Maria, or whatever it may be, as often as possible.

This leads naturally to the mention of another peculiar usage. On visiting the Fayal post-office, I was amazed to find the letters arranged alphabetically in the order of the baptismal, not the family names, of the persons concerned,—as if we should enumerate Adam, Benjamin, Charles, and so on. But I at once discovered this to be the universal usage. Merchants, for instance, thus file their business papers; or rather, since four-fifths of the male baptismal names in the language fall under the four letters, A, F, J, M, they arrange only five bundles, giving one respectively to Antonio, Francisco, José or João, and Manuel, adding a fifth for sundries. This all seemed inexplicable, till at last there proved to be an historical kernel to the nut. The Portuguese, and to some extent the Spaniards, have kept nearer to the primitive usage which made the personal name the important one and the patronymic quite secondary. John Smith is not known conversationally as Mr. Smith, but as Mr. John, — Senhor João. One may have an acquaintance in society named Senhor Francisco, and another named Senhora Dona Christina, and it may be long before it turns out that they are brother and sister, the family name being, we will suppose, Garcia da Rosa; and even then it will be doubtful whether to call them Garcia or da Rosa. This explains the great multiplication of names in Spain and Portugal. The first name being the important one, the others may be added, subtracted, multiplied, or divided, with perfect freedom. A wife may or may not add her husband's name to her own; the eldest son takes some of the father's family names, the second son some of the mother's, saints' names are sprinkled in to suit the taste, and no confusion is produced, because the first name is the only one in common use. Each may, if

he pleases, carry all his ancestors on his visiting-card, without any inconvenience except the cost of pasteboard.

Fayal exhibits another point of courtesy to be studied. The gentleman of our party was early warned that it was very well to learn his way about the streets, but far more essential to know the way to the brim of his hat. Every gentleman touches his hat to every lady, acquaintance or stranger, in street or balcony. So readily does one grow used to this, that I was astonished, for a moment, at the rudeness of some French officers, just landed from a frigate, who passed some ladies, friends of mine, without raising the hat. "Are these," I asked, "the polite Frenchmen one reads about?"—not reflecting that I myself should not have ventured on bowing to strange ladies in the same position, without special instruction in Portuguese courtesies. These little refinements became, indeed, very agreeable, only alloyed by the spirit of caste in which they were performed,—elbowing the peasant-woman off the sidewalk for the sake of doffing the hat to the Baroness. I thought of the impartial courtesies shown towards woman as woman in my own country, and the spread eagle within me flapped his pinions. Then I asked myself, "What if the woman were black?" and the eagle immediately closed his wings, and flapped no more. But I may add, that afterwards, attending dances among the peasants, I was surprised to see my graceful swains in humble life smoking and spitting in the presence of white-robed belles, in a manner not to be witnessed on our farthest western borders.

The position of woman in Portuguese countries brings one nearer to that Oriental type from which modern society has been gradually diverging. Woman is secluded, so far as each family can afford it, which is the key to the Oriental system. Seclusion is aristocracy, and if it cannot be made complete, the household must do the best they can. Thus, in the lowest classes, one daughter is often decreed by the parents to be brought up

like a lady, and for this every sacrifice is to be made. Her robust sisters go bare-footed to the wells for water, they go miles unprotected into the lonely mountains; no social ambition, no genteel helplessness for them. But Mariquinha is taught to read, write, and sew; she is as carefully looked after as if the world wished to steal her; she wears shoes and stockings and an embroidered kerchief and a hooded cloak; and she never steps outside the door alone. You meet her, pale and demure, plodding along to mass with her mother. The sisters will marry laborers and fishermen; Mariquinha will marry a small shop-keeper or the mate of a vessel, or else die single. It is not very pleasant for the poor girl in the mean time; she is neither healthy nor happy; but "let us be genteel or die."

On *festa*-days she and her mother draw their hoods so low and their muffling handkerchiefs so high that the costume is as good as a *yashmak*, and in passing through the streets these one-eyed women seem like an importation from the "Arabian Nights." Ladies of higher rank, also, wear the hooded cloak for disguise and greater freedom, and at a fashionable wedding in the cathedral I have seen the jewelled fingers of the uninvited acquaintances gleam from the blue folds of broadcloth. But very rarely does one see the aristocratic lady in the street in her own French apparel, and never alone. There must be a male relative, or a servant, or, at the very least, a female companion. Even the ladies of the American Consul's family very rarely go out singly,—not from any fear, for the people are as harmless as birds, but from etiquette. The first foreign lady who walked habitually alone in the streets was at once christened "The Crazy American." A lady must not be escorted home from an evening party by a gentleman, but by a servant with a lantern; and as the streets have no lamps, I never could see the breaking-up of any such entertainment without recalling Retzsch's quaint pictures of the little German towns, and the burghers plodding home with their lanterns,—unless,

perchance, what a foreign friend of ours called a "sit-down chair" came rattling by, and transferred our associations to Cranford and Mr. Winkle.

We found or fancied other Orientalisms. A visitor claps his hands at the head of the court-yard stairs, to summon an attendant. The solid chimneys, with windows in them, are precisely those described by Urquhart in his delightful "Pillars of Hercules"; so are the gardens, divided into clean separate cells by tall hedges of cane; so is the game of ball played by the boys in the street, under the self-same Moorish name of *arri*; so is the mode of making butter, by tying up the cream in a goat-skin and kicking it till the butter comes. Even the architecture fused into one all our notions of Gothic and of Moorish, and gave great plausibility to Urquhart's ingenious argument for the latter as the true original. And it is a singular fact that the Mohammedan phrase *Oxalá*, "Would to Allah," is still the most familiar ejaculation in the Portuguese language and the habitual equivalent in their religious books for "Would to God."

We were treated with great courtesy and hospitality by our Portuguese neighbors, and an evening party in Fayal is in some respects worth describing. As one enters, the anteroom is crowded with gentlemen, and the chief reception-room seems like a large omnibus, lighted, dressed with flowers, and having a row of ladies on each side. The personal beauty is perhaps less than one expects, though one sees some superb dark eyes and blue-black hair; they dress with a view to the latest French fashions, and sometimes rather a distant view. At last a lady takes her seat at the piano, then comes an eager rush of gentlemen into the room, and partners are taken for cotillions, — large, double, *very* double cotillions, here called *contradanças*. The gentlemen appear in scrupulous black broadcloth and satin and white kid; in summer alone they are permitted to wear white trousers to parties; and we heard

of one anxious youth who, about the turn of the season, wore the black and carried the white in his pocket, peeping through the door, on arrival, to see which had the majority. It seemed a pity to waste such gifts of discretion on a monarchical country, when he might have emigrated to America and applied them to politics.

The company perform their dancing with the accustomed air of civilized festivity, "as if they were hired to do it, and were doubtful about being paid." Changes of figure are announced by a clapping of hands from one of the gentlemen, and a chorus of such applauses marks the end of the dance. Then they promenade slowly round the room, once or twice, in pairs; then the ladies take their seats, and instantly each gentleman walks hurriedly into the anteroom, and for ten minutes there is as absolute a separation of the sexes as in a Friends' Meeting. Nobody approves of this arrangement, in the abstract; it is all very well, they think, for gentlemen, if foreigners, to remain in the room, but it is not the Portuguese custom. Yet, with this exception, the manners are agreeably simple. Your admission to the house guaranties you as a proper acquaintance, there are no introductions, and you may address any one in any language you can coin into a sentence. Many speak French, and two or three English, — sometimes with an odd mingling of dialects, as when the Military Governor answered my inquiry, made in timid Portuguese, as to how long he had served in the army. "*Vinte-cinco annos*," he answered, in the same language; then, with an effort after an unexceptionable translation, "Vat you call, Twenty-cinq year"!

The great obstacle to the dialogue soon becomes, however, a deficit of subjects rather than of words. Most of these ladies never go out except to mass and to parties, they never read, and if one of them has some knowledge of geography, it is quite an extended education; so that, when you have asked them if they have ever been to St. Michael, and they have answered, Yes, — or to Lisbon, and

they have answered, No,—then social intercourse rather flags. I gladly record, however, that there were some remarkable exceptions to this, and that we found in the family of the late eminent Portuguese statesman, Mousinho d'Albuquerque, accomplishments and knowledge which made their acquaintance an honor.

During the intervals of the dancing, little trays of tea and of cakes are repeatedly carried round,—astonishing cakes, in every gradation of insipidity, with the oddest names: white poison, nuns' kisses, angels' crops, cats' tails, heavenly bacon, royal eggs, coruscations, cocked hats, and *esquecidos*, or oblivion cakes, the butter being omitted. It seems an unexpected symbol of the plaintive melancholy of the Portuguese character* that the small confections which we call kisses they call sighs, *suspiros*. As night advances, the cakes grow sweeter and the dances livelier, and the pretty national dances are at last introduced; though these are never seen to such advantage as when the peasants perform them on a Saturday or Sunday evening to the monotonous strain of a viola, the musician himself taking part in the complicated dance, and all the men chanting the refrain. Nevertheless they add to the gayety of our genteel entertainment, and you may stay at the party as long as you have patience,—if till four in the morning, so much the better for your popularity; for, though the gathering consist of but thirty people, they like to make the most of it.

Perhaps the next day one of these new friends kindly sends in a present for the ladies of the party: a bouquet of natural flowers with the petals carefully gilded; a *folar* or Easter cake, being a large loaf of sweetened bread, baked in a ring, and having whole eggs, shell and all, in the midst of it. One lady of our acquaintance received a pretty basket, which being opened revealed two little Portuguese pigs, about eight inches long, snow-white, wearing blue ribbons round their necks and scented with cologne.

Beyond these occasional parties, there seems very little society during the winter, the native ladies seldom either walking or riding, and there being no places of secular amusement. In summer, it is said, when the principal families resort to their vineyards at Pico, formalities are laid aside, and a simpler intercourse takes place. But I never saw any existence more thoroughly pitiable than that of the young men of the higher classes; they had literally nothing to do, except to dress themselves elegantly and lounge all day in an apothecary's shop. A very few went out shooting or fishing occasionally; but anything like employment, even mercantile, was entirely beneath their caste; and they only pardoned the constant industry of the American Consul and his family, as a sort of national eccentricity, for which they must not be severely condemned.

A good school-system is being introduced into all the Portuguese dominions, but there is no book-store in Fayal, though some dry-goods dealers sell a few religious books. We heard a rumor of a Portuguese "Uncle Tom" also, but I never could find the copy. The old Convent Libraries were sent to Lisbon, on the suppression of the monasteries, and never returned. There was once a printing-press on the island, but one of the Governors shipped it off to St. Michael. "There it goes," he said to the American Consul, "and the Devil take it!" The vessel was wrecked in the bay. "You see," he afterwards piously added, "the Devil *has* taken it." It is proper, however, to mention, that a press and a newspaper have been established since our visit, without further Satanic interference.

Books were scarce on the island. One official gentleman from Lisbon, quite an accomplished man, who spoke French fluently and English tolerably, had some five hundred books, chiefly in the former tongue, including seventy-two volumes of Balzac. His daughter, a young lady of fifteen, more accomplished than most of the belles of the island, showed me her

little library of books in French and Portuguese, including three English volumes, an odd selection,—“The Vicar of Wakefield,” Gregory’s “Legacy to his Daughters,” and Fielding’s “Life of Jonathan Wild.” But, indeed, her supply of modern Portuguese literature was almost as scanty, (there is so very little of it,) and we heard of a gentleman’s studying French “in order to have something to read,” which seemed the last stage in national decay.

Perhaps we were still more startled by the unexpected literary criticisms of a young lady from St. Michael, English on the father’s side, but still Roman Catholic, who had just read the New Testament, and thus naïvely gave it her indorsement in a letter to an American friend:—“I dare say you have read the New Testament; but if you have not, I recommend it to you. I have just finished reading it, and find it *a very moral and nice book.*” After this certificate, it will be safe for the Bible Society to continue its operations.

Nearly all the popular amusements in Fayal occur in connection with religion. After the simpler buildings and rites of the Romish Church in America, the Fayal churches impress one as vast baby-houses, and the services as acted charades. This perfect intermingling of the religious and the melodramatic was one of our most interesting experiences, and made the Miracle Plays of history a very simple and intelligible thing. In Fayal, holiday and holy-day have not yet undergone the slightest separation. A festival has to the people necessarily some religious association, and when the Americans celebrate the Fourth of July, Mr. Dabney’s servants like to dress with flowers a wooden image in his garden, the fierce figure-head of some wrecked vessel, which they boldly personify as the American Saint. On the other hand, the properties of the Church are as freely used for merrymaking. On public days there are fireworks provided by the priests; they are kept in the church till the time comes, and then touched off in front of the build-

ing, with very limited success, by the sacristan. And strangest of all, at the final puff and bang of each remarkable piece of pyrotechny, the bells ring out just the same sudden clang which marks the agonizing moment of the Elevation of the Host.

On the same principle, the theatricals which occasionally enliven the island take place in chapels adjoining the churches. I shall never forget the example I saw, on one of these dramatic occasions, of that one cardinal virtue of Patience, which is to the Portuguese race the substitute for all more positive manly qualities. The performance was to be by amateurs, and a written programme had been sent from house to house during the day; and this had announced the curtain as sure to rise at eight. But as most of the spectators went at six to secure places,—literally, places, for each carried his or her own chair,—one might suppose the audience a little impatient before the appointed hour arrived. But one would then suppose very incorrectly. Eight o’clock came, and a quarter past eight, but no curtain rose. Half-past eight. No movement nor sign of any. The people sat still. A quarter to nine. The people sat still. Nine o’clock. The people sat perfectly still, nobody talking much, the gentlemen being all the while separated from the ladies, and all quiet. At last, at a quarter past nine, the orchestra came in! They sat down, laid aside their instruments, and looked about them. Suddenly a whistle was heard behind the scenes. Nothing came of it, however. After a time, another whistle. The people sat still. Then the orchestra began to tune their instruments, and at half-past nine the overture began. And during all that inexplicable delay of one hour and a half, after a preliminary waiting of two hours, there was not a single look of annoyance or impatience, nor the slightest indication, on any face, that this was viewed as a strange or extraordinary thing. Indeed, it was not.

We duly attended, not on this occasion only, but on all ecclesiastical festivals,

grave or gay, — the only difficulty being to discover any person in town who had even approximate information as to when or where they were to occur. We saw many sights that are universal in Roman Catholic countries, and many that are peculiar to Fayal: we saw the “Procession of the Empress,” when, for six successive Saturday evenings, young girls walk in order through the streets white-robed and crowned; saw the vessels in harbor decorated with dangling effigies of Judas, on the appointed day; saw the bands of men at Easter going about with flags and plates to beg money for the churches, and returning at night with feet suspiciously unsteady; saw the feet-washing, on Maundy-Thursday, of twelve old men, each having a square inch of the instep washed, wiped, and cautiously kissed by the Vicar-General, after which twelve lemons were solemnly distributed, each with a silver coin stuck into the peel; saw and felt the showers of water, beans, flour, oranges, eggs, from the balcony-windows during Carnival; saw weddings in churches, with groups of male companions holding tall candles round kneeling brides; saw the distribution to the poor of bread and meat and wine from long tables arranged down the principal street, on Whitsunday, — a memorial vow, made long since, to deprecate the recurrence of an earthquake. But it must be owned that these things, so unspeakably interesting at first, became a little threadbare before the end of the winter; we grew tired of the tawdriness and shabbiness which pervaded them all, of the coarse faces of the priests, and the rank odor of the incense.

We had left Protestantism in a state of vehement intolerance in America, but we soon found, that, to hear the hardest things said against the priesthood, one must visit a Roman Catholic country. There was no end to the anecdotes of avarice and sensuality in this direction, and there seemed everywhere the strangest combination of official reverence with personal contempt. The principal official, or *Ouidor*, was known among his pa-

rishioners by the endearing appellation of “The Black Pig,” to which his appearance certainly did no discredit. There was a great shipwreck at Pico during our stay, and two hundred thousand dollars’ worth of rich goods was stranded on the bare rocks; there were no adequate means for its defence, and the peasants could hardly be expected to keep their hands off. But the foremost hands were those of the parish priest; for three weeks no mass was said in his church, and a funeral was left for days unperformed, that the representative of God might steal more silks and laces. When the next service occurred, the people remained quiet until the priest rose for the sermon; then they rose also tumultuously, and ran out of the church, crying, “*Ladrão!*” “Thief!” “But why this indignation?” said an intelligent Roman Catholic to us; “there is not a priest on either island who would not have done the same.” A few days after I saw this same cool critic, candle in hand, heading a solemn ecclesiastical procession in the cathedral.

In the country-villages there naturally lingers more undisturbed the simple, picturesque life of Roman Catholic society. Every hamlet is clustered round its church, almost always magnificently situated, and each has its special festivals. Never shall I forget one lovely day when we went to witness the annual services at Praya, held to commemorate an ancient escape from an earthquake. It was the first day of February. After weeks of rain, there came at one burst all the luxury of June, winter seemed to pass into summer in a moment, and blackbirds sang on every spray. We walked or rode over a steep promontory, down into a green valley, scooped softly to the sea: the church was by the beach. As we passed along, the steep paths converging from all the hills were full of women and men in spotless blue and white, with bright kerchiefs; they were all walking barefooted over the rocky ways, only the women stopping, ere reaching the church, to don stockings and shoes. Many persons sat in sunny places by the roadsides

to beg, with few to beg from,—blind old men, and groups of children clamorous for coppers, but propitiated by sugar-plums. Many others were bringing offerings, candles for the altar, poultry, which were piled, a living mass, legs tied, in the corner of the church, and small sums of money, which were recorded by an ancient man in a mighty book. The church was already so crowded that it was almost impossible to enter; the centre was one great flower-garden of head-dresses of kneeling women, and in the aisles were penitents, toiling round the church upon their knees, each bearing a lighted candle. But the services had not yet begun, and we went down among the rocks to eat our luncheon of bread and oranges; the ocean rolled in languidly, a summer sea; we sat beside sheltered, transparent basins, among high and pointed rocks, and great, indolent waves sometimes reared their heads, looking in upon our retreat, or flooding our calm pools with a surface of creamy effervescence. Every square inch of the universe seemed crowded with particles of summer.

On our way past the church, we had caught a glimpse of unwonted black small-clothes, and, slyly peeping into a little chapel, had seen the august Senate of Horta apparently arraying themselves for the ceremony. Presently out came a man with a great Portuguese flag, and then the Senators, two and two, with short black cloaks, white bands, and gold-tipped staves, trod stately towards the church. And as we approached the door, on our return, we saw these dignitaries sitting in their great arm-chairs, as one might fancy Venetian potentates, while a sonorous Portuguese sermon rolled over their heads as innocuously as a Thanksgiving discourse over any New-England congregation.

Do not imagine, by the way, that critical remarks on sermons are a monopoly of Protestantism. After one religious service in Fayal, my friend, the Professor of Languages, who sometimes gave lessons in English, remarked to me confiden-

tially, in my own tongue,—“His sermon is good, but his *exposition* is bad; he does not *expose* well.” Supposing him to refer to the elocution, I assented,—secretly thinking, however, that the divine in question had exposed himself exceedingly well.

Another very impressive ceremony was the Midnight Mass on New Year's Eve, when we climbed at midnight, through some close, dark passages in the vast church edifice, into a sort of concealed opera-box above the high altar, and suddenly opened windows looking down into the brilliantly lighted cathedral, crammed with kneeling people and throbbing with loud music. It seemed centuries away from all modern life,—a glimpse into some buried Pompeii of the Middle Ages.

More impressive still was Holy Week, when there were some rites unknown to other Roman Catholic countries. For three days the great cathedral was closely veiled from without and darkened within,—every door closed, every window obscured. Before this there had been seventy candles lighting up the high altar and the eager faces; now these were all extinguished, and through the dark church came chanting a procession bearing feeble candles and making a strange clapping sound, with *matracas*, like watchmen's rattles; men carried the symbolical bier of Jesus in the midst, to its symbolical rest beneath the altar, where the three candles, representing the three Marys, blazed above it. During the time of darkness there were frequent masses and sermons, while terrible transparencies of the Crucifixion were suddenly unrolled from the lofty pulpit, and the throng below wept in sympathy, and clapped their cheeks in token of anguish, like the flutter of many doves. Then came the Hallelujah Saturday, when at noon the mourning ended. It was a breathless moment. The priests kneeled in gorgeous robes, chanting monotonously, with their foreheads upon the altar-steps; and the hushed multitude hung upon their lips, in concentrated ecstasy, waiting for the coming joy. Suddenly burst the

words, *Gloria in Excelsis*. In an instant every door was flung open, every curtain withdrawn, the great church was bathed in meridian sunlight, the organ crashed out triumphant, the bells pealed, flowers were thrown from the galleries in profusion, friends embraced and kissed each other, laughed, talked, and cried, and all the sea of gay head-dresses below was tremulous beneath a mist of unaccustomed splendor. And yet (this thought smote me) all the beautiful transformation has come by simply letting in the common light of day. Then why not keep it always? Clear away, Humanity, these darkened windows, but clear away also these darkening walls, and show us that the simplest religion is the best!

I cannot dwell upon the narrative of our many walks:—to the Espalamarca, with its lonely telegraph-station;—to the Burnt Mountain, with its colored cliffs;—to visit the few aged nuns who still linger in what was once a convent;—to Porto Pim, with its curving Italian beach, its playing boys and picturesque fishermen beneath the arched gateway;—to the tufa-ledges near by, where the soft rocks are honeycombed with the cells hollowed by echini below the water's edge, a fact undescribed and almost unexampled, said Agassiz afterwards;—to the lofty, lonely Monte da Guia, with its solitary chapel on the peak, and its extinct crater, where the sea rolls in and out;—to the Dabney orange-gardens, on Sunday afternoons;—to the beautiful Mirante ravine, whenever a sudden rain filled the cascades and set the watermills and the washerwomen all astir, and the long brook ran down in whirls of white foam to the waiting sea;—or to the western shores of the island, where we turned to Ariadnes, as we watched departing home-bound vessels from those cliffs whose wave-worn fiords and innumerable sea-birds make a Norway of Fayal.

And I must also pass over still greater things:—the winter storms and shipwrecks, whose annals were they not written to the "New York Tribune"?—and the spring Sunday at superb Castello

Branco, with the whole rural population thronging to meet in enthusiastic affection the unwonted presence of the Consul himself, the feudalism of love;—and the ascent of the wild Caldeira, we climbing height after height, leaving the valleys below mottled with blue-robed women spreading their white garments to dry in the sun, and the great Pico peeping above the clouds across the bay, and seeming as if directly above our heads, and nodding to us ere it drew back again;—and, best of all, that wonderful ascension, by two of us, of Pico itself, seven thousand feet from the level of the sea, where we began to climb. We camped half-way up, and watched the sunset over the lower peaks of Fayal; we kindled fires of *faya*-bushes on the lonely mountain-sides, a beacon for the world; we slept in the loft of a little cattle-shed, with the calves below us, "the cows' sons," as our Portuguese attendant courteously called them; we waked next morning above the clouds, with one vast floor of white level vapor beneath us, such as Thoreau alone has described, with here and there an open glimpse of the sea far below, yet lifted up to an apparent level with the clouds, so as to seem like an Arctic scene, with patches of open water. Then we climbed through endless sheep-pastures and over great slabs of lava, growing steeper and steeper; we entered the crater at last, walled with snows of which portions might be of untold ages, for it is never, I believe, wholly empty; we climbed, in such a gale of wind that the guides would not follow us, the steeple-like central pinnacle, two hundred feet high; and there we reached, never to be forgotten, a small central crater at the very summit, where steam poured up between the stones,—and, oh, from what central earthy depths of wonder that steam came to us! There has been no eruption from any portion of Pico for many years, but it is a volcano still, and we knew that we were standing on the narrow and giddy summit of a chimney of the globe. That was a sensation indeed!

We saw many another wild volcanic cliff and fissure and cave on our two-days'

tour round the island of Fayal; but it was most startling, when, on the first morning, as we passed from green valley to valley along the road, suddenly all verdure and life vanished, and we found ourselves riding through a belt of white, coarse moss stretching from mountain to sea, covering rock and wall and shed like snow or moonlight or mountain-laurel or any other pale and glimmering thing; and when, after miles of ignorant wonder, we rode out of it into greenness again, and were told that we had crossed what the Portuguese call a *Misterio* or Mystery,—the track of the last eruption. The moss was the first primeval coating of vegetation just clothing those lava-rocks again.

But the time was coming when we must bid good-bye to picturesque Fayal. We had been there from November to May; it had been a winter of incessant

rains, and the first necessary of life had come to be a change of umbrellas; it had been colder than usual, making it a comfort to look at our stove, though we never lighted it; but our invalids had gained by even this degree of mildness, by the wholesome salt dampness, by the comforts of our hotel with its respectable Portuguese landlord and English landlady, and by the great kindness shown us by all others. At last we had begun to feel that we had squeezed the orange of the Azores a little dry, and we were ready to go. And when, after three weeks of rough sailing in the good bark Azor, we saw Cape Ann again, although it looked somewhat flat and prosaic after the headlands of Fayal, yet we knew that behind those low shores lay all that our hearts held dearest, and all the noblest hopes of the family of man.

MIDSUMMER AND MAY.

I.

VERY probably you never saw such a superb creature,—if that word, creature, does not endow her with too much life: a Semiramis, without the profligacy,—an Isis, without the worship,—a Sphinx, yes, a Sphinx, with her desert, wholong ago despaired of having one come to read her riddle, strong, calm, patient perhaps. In this respect she seemed to own no redundant life, just enough to eke along existence,—not living, but waiting.

I say, all this would have been one's impression; and one's impression would have been incorrect.

I really cannot state her age; and having attained to years of discretion, it is not of such consequence as it is often supposed to be, whether one be twenty or sixty. You would have been confident, that, living to count her hundreds, she would only have bloomed with more immortal

freshness; but such a thought would not have occurred to you at all, if you had not already felt that she was no longer young,—she possessed so perfectly that certain self-reliance, self-understanding, *aplomb*, into which little folk crystallize at an early age, but which is not to be found with those whose identities are cast in a larger mould, until they have passed through periods of fuller experience.

That Mrs. Laudersdale was the technical magnificent woman, I need not reiterate. I wish I knew some name gorgeous enough in sound and association for that given her at christening; but I don't. It is my opinion that she was born Mrs. Laudersdale, that her coral-and-bell was marked Mrs. Laudersdale, and that her name stands golden-lettered on the recording angel's leaf simply as Mrs. Laudersdale. It is naturally to be inferred, then, that there was a Mr. Laudersdale. There was. But not by any means a per-

son of consequence, you assume? Why, yes, of some, — to one individual at least. Mrs. Laudersdale was so weak as to regard him with complacency; she loved — adored her husband. Let me have the justice to say that no one suspected her of it. Of course, then, Mr. Roger Raleigh had no business to fall in love with her.

Well, — but he did.

At the time when Mrs. Laudersdale had become somewhat more than a reigning beauty, and held her sceptre with such apparent indifference that she seemed about abandoning it forever, she no longer dazzled with unventured combinations of colors and materials in dress. She wore most frequently, at this epoch, black velvet that suppld about her well-asserted contours; and the very trail of her skirt was unlike another woman's, for it coiled and bristled after her with a life and motion of its own, like a serpent. Her hair, of too dead a black for gloss or glister, was always adorned with a nasturtium-vine, whose vivid flames seemed like some personal emanation, and whose odor, acrid and single, dispersed a character about her; and the only ornaments she condescended to assume were of Etruscan gold, severely simple in design, elaborately intricate in workmanship. It is evident she was a poet in costume, and had at last *en règle* acquired a manner. But thirteen years ago she apparelled herself otherwise, and thirteen years ago it was that Mr. Roger Raleigh fell in love with her. This is how it was.

Among the many lakes in New Hampshire, there is one of extreme beauty, — a broad, shadowy water, some nine miles in length, with steep, thickly wooded banks, and here and there, as if moored on its calm surface, an island fit for the Bower of Bliss. At one spot along its shore was, and still is, an old country-house, formerly used as a hotel, but whose customers, always pleasure-seekers from the neighboring towns, had been drawn away by the erection of a more modern and satisfactory place of entertainment at the other extremity of the lake, and it had now been for many years closed. There were no

dwellings of any kind in its vicinity, so that it reigned over a solitude of a half-dozen miles in every direction. Once in a while the gay visitors in the more prosperous regions stretched their sails and skimmed along till they saw its white porticos and piazzas gleaming faintly up among the trees; once in a while a belated traveller tied his horse at the gate, and sought admittance in vain, at the empty house, of the shadows who may have kept it. It was not pleasant to see so goodly a mansion falling to ruin for want of fit occupancy, truly; and just as the walls had grown gray with rain and time, the chimneys choked and the casements shrunken, a merry company of friends and families, from another portion of the country, consolidated themselves into a society for the pursuit of happiness, rented the old place, put in carpenters and masons and glaziers, and, when the last tenants vacated the premises, took possession in state themselves. Care and responsibility were not theirs; the matron and her servants alone received such guests; the long summer-days were to come and go with them as joyously as with Bacchus and his crew.

Behold the party domesticated a fortnight at the Bawn, as it was afterward dubbed. Mr. Laudersdale had returned to New York that morning, and his wife had not been met since. Now, at about five o'clock, her white robe floated past the door, and she was seen moving up and down the long piazza and humming a faint little tune to herself. Just then a flock of young women, married and single, fluttered through door and windows to join her; and just then Mrs. Laudersdale stepped down from the end of the piazza and floated up the garden-path and into the woods that skirted the lake-shore and stretched far back and away. Thus abandoned, the others turned their attention to the expanse before and below them; and one or two made their way down to the brink, unhooked a boat, ventured in, and, lifting the single pair of oars, were soon laboring gayly out and creating havoc on the placid waters.

As Mrs. Laudersdale continued to walk, the path which she followed slowly descended to the pebbly rim, rich in open spaces, slopes of verdure just gilding in the declining sun, and coverts of cool, deep shadow. As she advanced leisurely, involved in pleasant fancy, something caught her eye, an unusual object, certainly, lying in a duskier recess; she drew nearer and hung a moment above it. Some fallen statue among rank Roman growth, some marble semblance of a young god, overlaced with a vine and plunged in tall ferns and beaded grasses? And she, bending there,—was it Diana and Endymion over again, Psyche and Eros? Ah, no!—simply Mrs. Laudersdale and Roger Raleigh. Only while one might have counted sixty did she linger to take the real beauty of the scene: the youth, adopted, as it were, to Nature's heart by the clustering growth that sprang up rebounding under the careless weight that crushed it; an attitude of complete and unconscious grace,—one arm thrown out beneath the head, the other listlessly fallen down his side, while the hand still detained the straw hat; the profile, by no means classic, but in strong relief, the dark hair blowing in the gentle wind, the flush of sleep that went and came almost perceptibly with the breath, and the sunbeam that slanting round suddenly suffused the whole. "Pretty boy!" thought Mrs. Laudersdale; "beautiful picture!" and she flitted on. But Roger Raleigh was not a boy, although sleep, that gives back to all stray glimpses of their primal nature, endowed him peculiarly with a look of childlike innocence unknown to his waking hours.

Startled, perhaps, by the intruding step, for it was no light one, a squirrel leaped from the bough to the grass, and, leaping, woke the sleeper. He himself, now unperceived, saw a vision in return,—this woman, young and rare, this queenly, perfect thing, floating on and vanishing among the trees. Whence had she come, and who was she? And hereupon he remembered the old Bawn and its occupants. Had she seen him? Unlikely; but yet,

unimportant as it was, it remained an interesting and open question in his mind. Bringing down the hair so ruffled in the idle breeze, he crowded his hat over it with a determined air, half ran, half tumbled, down the bank, sprang into his boat, and, shaking out a sail, went flirting over the lake as fast as the wind could carry him. Leaving a long, straight, shining wake behind him, Mr. Roger Raleigh skimmed along the skin of ripples, and, in order to avoid a sound of shrill voices, skirted the angle of an island, and found himself deceived by the echo and in the midst of them.

Mrs. McLean, Miss Helen Heath, and Miss Mary Purcell, who had embarked with a single pair of oars, were now shipwrecked on the waters wide, as Helen said; for one of their means of progress, she declared, had been snatched by the roaring waves and was floating in the trough of the sea, just beyond their reach. None of the number being acquainted with the process of sculling, they considered it imperative to secure the truant tool, unless they wished to perish floating about unseen; and having weighed the expediency of rigging Helen into a jury-mast, they were now using their endeavors to regain the oar,—Mary Purcell whirling them about like a maelström with the remaining one, and Mrs. McLean with her two hands grasping Helen's garments, while the latter half stood in the boat and half lay recumbent on the lake, tipping, slipping, dipping, till her head resembled a mermaid's; while they all three filled the air with more exclaim, shrieking, and laughter than could have been effected by a large-lunged mob.

"Bedlam let loose," thought the intruder, "or all the Naiads up for a frolic?" And as he shot by, a hush fell upon the noisy group,—Helen pausing and erecting herself from her ablutions, Mary's frantic efforts sending them as a broadside upon the Arrow and nearly capsizing it, and Mrs. McLean, ceasing merriment, staring from both her eyes, and saying nothing. Mr. Raleigh seized the oar in passing, and directly afterward had placed it in

Helen's hands. Receiving it with a profusion of thanks, she seated herself and bent to its use. But, looking back in a few seconds, Mr. Raleigh observed that the exhausted rowers had made scarcely a yard's distance. He had no inclination for gallant *devoir*, his eyes and thoughts were full of his late vision in the woods, he wished to reach home and dream; but in a moment he was again beside them, had taken their painter with a bow and an easy sentence, but neither with *empressement* nor heightened color, and, changing his course, was lending them a portion of the Arrow's swiftness in flight towards the Bawn. It seemed as if the old place sent its ghosts out to him this afternoon. Bringing them close upon the flat landing-rock, and hooking the painter therein, he sheered off, lifting his hat, and was gone.

"Roger! Roger Raleigh!" cried Mrs. McLean, from the shore, "come back!"

Obeying her with an air of puzzled surprise, the person so unceremoniously addressed was immediately beside her again.

"A cool proceeding, Sir!" said she, extending both her hands. "How long would you know your Cousin Kate to be here, and refuse to spare her an hour?"

"Upon my honor," said her cousin, bending very low over the hands, "I but this moment learn her presence in my neighborhood."

"Ah, Sir! and what becomes of my note sealed with sky-blue wax and despatched to you ten days ago?"

"It is true such a note lies on my table at this moment, and it is still sealed with sky-blue wax."

"And still unread?"

"You will not force me to confess such delinquency?"

"And still unread?"

"Ten thousand pardons! Shall I go home and read it?" And herewith the saucy indifference of his face became evident, as he raised it.

"No. But is that the way to serve a lady's communications? Fie, for a gal-

lant! I must take you in hand. These are your New Hampshire customs?"

"O Kate, nice customs curtsy to nice kings!"

"So I've heard, when curtsying was in fashion; but that is out of date, together with a good many other nice things,—caring for one's friends, for instance. Why don't you ask how all your uncles and aunts are, Sir?"

"How are all my uncles and aunts, Miss?"

"Oh, don't you know? I thought you didn't. There's another billet, inclosing a bit of pasteboard, lying on your table now unopened too, I'll warrant. Don't you read any of your letters?"

"Alphabetical or epistolary?"

"Answer properly, yes or no."

"No."

"Why?"

"I know no one that has authority to write to me, as half a reason."

"Thank you, for one, Sir. And what becomes of your Uncle Reuben?"

"Not included in the category."

"Then you're not aware that I've changed my estate? You don't know my name now, do you?"

"Bonny Kate, and sometimes Kate the curst, But Kate, the prettiest Kate in Christendom."

"Nonsense! What an exasperating boy! Just the same as ever! Well, it explains itself. Here comes a recent property unto me appertaining. McLean! My husband, Mr. John McLean,—my cousin, Mr. Roger Raleigh."

The new-comer was one of those "sterling men" always to be relied on, generally to be respected, and safely and appropriately leading society and subscription-lists. He was not very imaginative, and he understood at a glance as much of the other as he ever would understand. And the other, feeling instantly that only coin of the king's stamp would pass current here, turned his own counter royal side up, and met his host with genuine cordiality. Shortly afterward, Mrs. McLean withdrew for an improvement in her toilet, and soon returning,

found them comparing notes as to the condition of the country, tender bonds of the Union, and relative merits of rival candidates, for all which neither of them cared a straw.

"How do you find me, Sir?" she asked of her cousin.

"Radiant, rosy, and rarely arrayed."

"I see that your affections are to be won, and I proceed accordingly, by making myself charming, in the first place. And now, will you be cheered, but not inebriated, here under the trees, in company with dainty cheese-cakes compounded by these hands, and jelly of Helen Heath's moulding, and automatic trifles that caught an ordaining glimpse of Mrs. Laudersdale's eye and rushed madly together to become almond-pasty?"

"With a method in their madness, I hope."

"Yes, all the almonds not on one side."

"In company with cheese-cakes, jelly, and pasty, simply,—I should have claret and crackers at home, Capua willing. Will it pay?"

"You shall have Port here, when Mrs. Laudersdale comes."

"Not old enough to be crusty yet, Kate," said her husband.

"Very good, for you, John!"

"Mrs. Laudersdale is your housekeeper?" asked her cousin.

"Mrs. Laudersdale? That is rich! But I should never dare to tell her. Our housekeeper? Our cynosure! She is our argent-lidded Persian Girl,—our serene, imperial Eleanore;—

"Whene'er she moves,
The Samian Here rises, and she speaks
A Memnon smitten with the morning sun.'"

"Oh, indeed! And this is a conventicle of young matrimonial victims to practise cookery in seclusion, upon which I have blundered?"

"If the fancy pleases you, yes. There they are."

And hereon followed a series of necessary introductions.

Mr. Roger Raleigh sat with both arms leaning on the table before him, and wondering which of the ladies, half whose

names he had not heard, was the Samian Here,—if any of them was,—and if,—and if,—and here Mr. Roger Raleigh's reflections went wandering back to the lakeside path and its vision. Not inopportune at this moment, a white garment, which, it is unnecessary to say, he had long ago seen advancing, fluttered down the opposite path, and she herself approached.

"Ah! *Al fresco?*" said the pleasantest voice in the world.

"And isn't it charming?" asked Mrs. McLean. "Imagine us with tables spread outside the door in Fifth Avenue, in Chestnut Street, or on the Common!"

"Even then the arabesque would be wanting," said she, trailing a long branch of the wild grape-vine, with its pale and delicately fragrant blooms, along the snowy board. "Are the cheese-cakes a success, Mrs. McLean? I didn't dine, and am famished.—I see that you have at last heard from your cousin," she added, in an undertone.

"Yes; let me pre—— Roger!"

Quickly frustrating any such presentation, Mr. Roger Raleigh half turned, and, bowing, said,—

"I believe I have had the pleasure of meeting Mrs. Laudersdale before."

Her haughtiness would have frozen any one else. She bent with the least possible inclination, and sat down upon a stump that immediately became a throne. He resumed his former position, and drummed lightly on the table, while waiting to be served. In less complete repose than she had previously seen him, Mrs. Laudersdale now examined anew the individual before her.

Not by any means tall she found him, but having the square shoulders and broad chest which give, in so much greater a degree than mere height, an impression of strength,—a frame agile and compact, with that easy carriage of the head and that rapid movement so deceptively increasing the stature. The face, too, was probably what, if not informed by a singularly clean and fine soul, would, in the lapse of years, become gross,—the skin of a clear olive, which had slightly flushed as

he addressed herself, but not when speaking to other strangers, — kept beardless, and rather square in contour; the mouth not small, but keenly cut, like marble, and always quivering before he spoke, as if the lightning of his thought ran thither naturally to seek spontaneous expression; teeth white; chin cleft; nose of the unclassified order, rather long, the curve opposite to aquiline, and saved from sharpness by nostrils that dilated with a pulse of their own, as those of very proud and sensitive people are apt to do; a wide, low forehead crowned with dark hair, long and fine; heavy brows that overhung deep-set eyes of lightest hazel, but endowed by shadow with a power that no eye of gypsy-black ever swayed for an instant. His whole countenance reminded you of nothing so much as of the young heroes of the French Revolution, for whom irregular features and sallow cheeks were transmuted into brilliant and singular beauty. It wore an inwrapped air, and, with all its mobility, was a mask. He very seldom raised the lids, and his pallor, though owning more of the golden touch of the sun, was as dazzling as Mrs. Laudersdale's own.

Mrs. Laudersdale scarcely observed, — she felt; and probably she saw nothing but the general impression of what I have been telling you.

“Tea, Roger?” asked Mrs. McLean.

“Green, I thank you, and strong.”

Rising to receive it, he continued his course till it naturally brought him before Mrs. Laudersdale. Pausing deliberately and sipping the pungent tonic, he at last looked up, and said, —

“Well, you are offended?”

“Then you were awake when I stayed to look at you?” she asked, in reply; for curiosity is a solvent.

“Then you *did* stay and look at me? That is exactly what I wished to know. How did I look, Belphæbe?”

“Out of his eyes, tell him,” said Helen Heath, in passing.

“They were not open,” responded Mrs. Laudersdale. “And I cannot tell how you saw me.”

“I saw you as Virgil saw his mother, — I mean Æneas, — as the goddesses are always known, you remember, in departure.”

Mrs. Laudersdale felt a weight on her lids beneath his glance, and rose to approach the table.

“Allow me,” said Mr. Raleigh, taking her plate and bringing it back directly with a wafery slice of bread and a quaking tumulus of jelly.

Mrs. Laudersdale laughed, though perhaps scarcely pleased with him.

“How did you know my tastes so well?” she asked.

“Since they are not mine,” he replied. “Of course you eat jelly, because it is no trouble; you choose your bread thin for the same reason; likewise you would find a glass of that suave, rich cream delicious. Among all motions, you prefer smooth sailing; and I'll venture to say that you sleep in down all summer.”

Mrs. Laudersdale looked up in slow and still astonishment; but Mr. Raleigh was already pouring out the glass of cream.

“I've no doubt you would like to have me sweeten it,” said he, offering it to her; “but I will not humor such ascetic tendencies. I never approved of flagellation.”

And as he spoke, he was gone to break ground for a flirtation with Helen Heath.

Helen Heath appeared to be one of those gay, not-to-be-heart-broken damsels who can drink forever of this dangerous and exhilarating cup without showing symptoms of intoxication. Young men who have nothing worse to do with their time gravitate naturally and unawares toward them for amusement, and spin out the thread till they reach its end, without expectation, without surprise, without regret, without occasion for remorse. Mr. Raleigh could not have been more unfortunate than he was in meeting her, since it gave him reason and excuse henceforth for visiting the Bawn at all seasons.

The table was at last removed, the

dew began to fall, Mrs. Laudersdale shivered and withdrew toward the house.

"*Incessu patet dea,*" Mr. Raleigh remembered.

Somewhat later, he started from his seat, bade them all good-night, ran gayly down the bank, and shoved off from shore. And shortly after, Mrs. Laudersdale, looking from her window, saw, for an instant, a single fire-fly hovering over the dark lake. It was Mr. Roger Raleigh's distant lantern, as, stretched at ease, he turned the slow leaves of a Froissart, and suffered the Arrow to drift as it would across the night.

The next morning Mrs. Laudersdale descended, as usual, to the breakfast-table, at an hour when all the rest had concluded their repast. Miss Helen Heath alone remained, trifling with the tea-cups, and singing little exercises.

"Quite an acquisition, Mrs. Laudersdale!" said she.

"What?" said the other, languidly, leaning one arm on the table and looking about for any appetizing edible. "What is an acquisition?"

"You mean who. Mr. Raleigh, of course. But isn't it the queerest thing in the world, up here in this savage district, to light upon a gentleman?"

"Is this a savage district? And is Mr. Raleigh a gentleman?"

"Is he? I never saw his match."

"Nor I."

"What! don't you find him so? a thorough gentleman?"

"I don't know what a thorough gentleman is, I dare say," assented Mrs. Laudersdale, indifferently, with no spirit for repartee, breaking an egg and putting it down, crumbling a roll, and finally attacking a biscuit, but gradually raising the siege, yawning, and leaning back in her chair.

"You poor thing!" said Helen. "You are starving to death. What shall I get for you? I have influence in the kitchens. Does marmalade, to spread your muffins, present any attractions? or shall I beg for rusks? or what do you say to doughnuts? there are doughnuts in this

closet; crullers and milk are nice for breakfast."

And in a few minutes Helen had rifled a shelf of sufficient temptations to overcome Mrs. Laudersdale's abstinence.

"After all," said she then, "you didn't answer my question."

"What question?"

"If it weren't odd to meet Mr. Raleigh here."

"I don't know," said Mrs. Laudersdale.

"Dear! Mary Purcell takes as much interest. She said he was impertinent, made her talk too much, and made fun of her."

"Very likely."

"You are as aggravating as he! If you had anything to do except to look divinely, we'd quarrel. I thought I had a nice bit of entertaining news for you."

"Is that your trouble? I should be sorry to oppress you with it longer. Pray, tell it."

"Will it entertain you?"

"It won't bore you."

"I don't know that I *will* tell it on such terms. However, I—must talk. Well, then. I have not been dreaming by daylight, but up and improving my opportunities. Partly from himself, and partly from Kate, and partly from the matron here, I have made the following discoveries. Mr. Roger Raleigh has left some very gay cities, and crossed some parallels of latitude, to exile himself in this wilderness of ice and snow,—that's what you and I vote it, whether the trees are green and the sun shines, or not; and I don't see what bewitched mother to adopt such a suicidal plan as coming here to be buried alive. He, that is, Mr. Raleigh, to join my ends, has lived here for five years; and as he came when he was twenty, he is consequently about my age now,—I shouldn't wonder if a trifle older than you. He came here because an immense estate was bequeathed him on the condition that he should occupy this corner of it during one-half of every year from his twenty-first to his thirty-first. He has chosen to occupy it during the

entire year, running down now and then to have a little music or see a little painting. Sometimes a parcel of his friends, — he never was at college, hasn't any chums, and has educated himself by all manner of out-of-the-way dodges, — sometimes these friends, odd specimens, old music-masters, rambling artists, seedy tutors, fencers, boxers, hunters, clowns, all light down together, and then the neighborhood rings with this precious covey: the rest of the year, may-be, he don't see an individual. One result of this isolation is, that freaks which would be very strange escapades in other people with him are mere commonplaces. Sometimes he goes over to the city there, and roams round like a lost soul seeking for its body; sometimes he goes up a hundred miles or two, takes a guide and handles the mountains; and, except in the accidents at such times, he hasn't seen a woman since he came."

"That accounts," said Mrs. Laudersdale.

"Yes. But just think what a life!"

"He wouldn't stay, if he didn't like," replied Mrs. Laudersdale, to whom the words poverty and riches conveyed not the least idea.

"I don't know. He has an uncle, of whom he is very fond, in India," continued Helen, — "an unfortunate kind of man, with whom everything goes wrong, and who is always taking fevers; and once or twice Mr. Raleigh has started to go and take care of him, and lose the whole estate by the means. He intends to endow him, I believe, by-and-by, when the thing is at his disposal. This uncle kept him at school, when he was an orphan in different circumstances, at a Jesuit institution; and he and Miss Kent were always quarrelling over him, and she thought she had tied up her property nicely out of old Reuben Raleigh's way. It will be nuts, if he ever accepts his nephew's proposed present. The best of it all is, that, if he breaks the condition, — there's no accounting for the caprices of wills, — part of it goes to a needy institution, and part of it inalienably to Mrs. McLean, who" —

"Is an institution, too."

"Who is not needy. There, isn't that a pretty little *conte*?"

"Very," said Mrs. Laudersdale, having listened with increasing interest. "But, Helen, you'll be a gossip, if you go on and prosper."

"Why, my dear child! He'll be over here every day now; and do you suppose I'm going to flirt with any one, when I don't know his antecedents? There he is now!"

And as Mrs. Laudersdale turned, she saw Mr. Raleigh standing composedly in the doorway and surveying them. She bade him good-morning, coolly enough, while Helen began searching the grounds of the tea-cups, rather uncertain how much of her recital might have met his ears.

"Turning tea-cups, Gypsy Helen, and telling fates, all to no audience, and with no cross on your palm?" asked the guest.

"So you ignore Mrs. Laudersdale?"

"Not at all; you weren't looking at her cup, — if she has one. Will you have the morning paper?" he asked of that lady, who, receiving it, leisurely unfolded and glanced over its extent.

"Where's my Cousin Kate?" then demanded Mr. Raleigh of Helen, having regarded this performance.

"Gone shopping in town."

"Her vocation. For the day?"

"No, — it is time for their return now. When you hear wheels" —

"I hear them"; and he strolled to the window. "You should have said, when I heard tongues; Medes and Elamites and the dwellers in Mesopotamia were less cheerful. A very pretty team. So she took her conjugal appurtenance with her?"

"And left her cousinly impertinence behind her," retorted a gay voice from his elbow.

"Ah, Kate! are you there? It's not a moment since I saw you 'coming from the town.' A pretty hostess, you! I arrive on your invitation to pass the day" —

"But I didn't expect you before the sun."

"To pass the day, and find you absent and the breakfast-table not cleared away."

"My dear Roger, we have not quite taken our habits yet. As soon as the country-air shall have wakened and made over Helen and Mrs. Laudersdale, you will find us ready for company at day-break."

"What a passion for 'company'! I shall not be surprised some day to receive cards for your death-bed."

"Friends and relatives invited to attend? No, Roger, you mustn't be naughty. You shall receive cards for my dinner-party before we go, if you won't come without; for we have innumerable friends in town, already."

"Happy woman!"

"What's that? A newspaper? A newspaper! How McLean will chuckle!" And she seized the sheet which Mrs. Laudersdale had abandoned in sweeping from the room.

"Is there a Mr. Laudersdale? Where is he?" asked Mr. Raleigh, as he leaned against the window.

"Who?" asked his cousin, deep in a paragraph.

"Mr. Laudersdale. Where is he?"

"Oh! between his four planks, I suppose," she replied, thinking of the Sound-boat's berth, which probably contained the gentleman designated.

"Between his four planks," repeated Mr. Raleigh, in a musing tone, entirely misinterpreting her, and to this little accident owing nearly thirteen years' unhappiness.

"She must have married early," he continued.

"Oh, fabulously early," replied Mrs. McLean, between the lines she read. "She is Creole, I believe. She is perfect. The women are as infatuated about her as the men. Here's Helen Heath been dawdling round the table all the morning for the sake of chatting to her while she breakfasts. I don't know why, I'm sure; the woman's charming, but she's

too lazy even to talk. McLean! Another flurry in France."

And after shaking hands with Mr. Raleigh, that worthy seized the proffered paper and vanished behind it, leaving to his wife the entertainment of her cousin, which duty she seemed by no means in haste to assume, preferring to remain and vex her husband with a thousand little teasing arts. Meanwhile Mr. Raleigh proceeded to take that office upon himself, by crossing the hall, exploring the parlors, examining the manuscript commonplace-books, and finally by sketching on a leaf of his pocket-book Mrs. Laudersdale, at the other end of the piazza, half-swinging in the vines through which broad sunbeams poured, while Helen Heath was singing and several other ladies were busying themselves with books and needle-work in her vicinity."

"Ah, Mr. Raleigh!" said Helen Heath, as he put up the pocket-book and drew near,— "Mrs. Laudersdale and I have been wondering how you amuse yourself up here; and I make my discovery. You study animated nature; that is to say, you draw Mrs. Laudersdale and me."

"Mistaken, Miss Helen. I draw only Mrs. Laudersdale; and do you call that animated nature?"

"I wish you would draw Mrs. Laudersdale out."

At this point Mrs. Laudersdale *fell* out; but, without otherwise stirring from his position than by moving an apparently careless arm, Mr. Raleigh caught and restored her to her balance, as lightly as if he had brushed a floating gossamer from the air to his finger. For the first time, perhaps, in her life, a carnation blossomed an instant in her cheek, then all was as before,—only two of the party felt on that instant that in some mysterious manner their relations with each other were entirely changed.

"But what is it that you do with yourself?" persisted Helen. "Tell us, that we may do likewise."

"Will you come and see?" he asked,— his eyes, however, on Mrs. Laudersdale.

“Will you come in away from the lake to the brooks, and hang among the alders and angle, dreaming, all day long? Or will you rise at dead of night and go out on the lake with me and watch field after field of white lilies flash open as the sun touches them with his spear? Or will you lie during still noons up among the farmers’ fields where myriad bandrol corn-poppies flaunt over your head, and stain your finger-tips with the red berries that hang like globes of light in the palace-gardens of mites and midges, soaking yourself in hot sunshine and south-winds and heavy aromatic earth-scents?”

“Come!” said Mrs. Laudersdale, rising earnestly, like one in an eager dream.

“It is plain that you are in training for a poet,” said Helen Heath, laughing, to Mr. Raleigh. “Well, when will you take us? Are the lilies in bloom? Shall we go to-morrow morning?”

“I don’t know that I shall take you at all, Miss Helen;—river-lilies might suit you best; but these queens of the lakes, the great, calm pond-lilies, creatures of quiet and white radiance,—I have seen only one head that possessed enough of the genuine East-Indian repose to be crowned with them.”

“You like repose,” said Mrs. Laudersdale. “But what is it?”

“Repose is strength,—life that develops from within, and feels itself, and has no need of effort. Repose is inherent security.”

“Goodness!” exclaimed Helen. “Article first in a *new* dictionary,—encyclopedia, I should say. You worship, but you don’t possess your god, for you look at this moment like a shaft in the bow; and here comes an archer to give it flight.”

“Where are you going, Kate?” said her cousin.

“To pick strawberries in the garden. Want to come?”

The three could do no better than accept her invitation. The good ladies might stare as they could after Mrs. Laudersdale, and wonder what sudden sprite had possessed her, since for neither man

nor woman of the numerous party had she hitherto condescended to lift an unwonted eyelid; what they would have said to have seen her plunged in a strawberry-bed, gathering handfuls and raining them drop by drop into Helen Heath’s mouth, to silence her while she herself might talk,—her own fingers tipped with more sanguine shade than their native rose, her eyes full of the noon sparkle, and her lips parted with laughter,—we cannot say. Roger Raleigh forgot to move, to speak, to think, as he watched her. But in the midst of this brilliant and novel gayety of hers, there was still a dignity to make one feel that she had by no means abandoned her regal purple, but merely adorned it with profuse golden flourishes.

At dinner that day, Helen begged to know if there were not a great many routes in the vicinity practicable only on horseback, and thought she had attained her end when Mr. Raleigh put his horses and his escort at the service of herself and Mrs. Laudersdale during their stay.

“During our stay!” said Mrs. Laudersdale. “That reminds me that we are to go away!”

“Pleasantly, certainly. When snows fall and storms pipe, the Bawn is an ice-house,” said he.

After noon, the remainder of the day was interspersed with light thunder-showers, rendering tea on the grass again impossible; they passed the steaming cups, therefore, as they sat on the piazza curtained with dripping woodbine. The glitter of the drops in the sunset light, a jewelled scintillation, was caught in Mrs. Laudersdale’s eyes, and some unconscious excitement fanned a faint color to and fro on her cheek. At last the moon rose; the whole party, regardless of wet slippers, sauntered with Mr. Raleigh to the shore, where the little Arrow hung balancing on her restraining cord. Mrs. Laudersdale stepped in, Mr. Raleigh followed, took up an oar, and pushed out, both standing, and drifting slowly for a few rods’ distance; then Mr. Raleigh

made the shore again, assisted her out, and shot impatiently away alone. The waters shone like white fire in the wake he cut, great shadows fell through them where island and wood intercepted the broad ascending light, and Mrs. Laudersdale's gay laugh rung across them as the space grew,—a sweet, rich laugh, that all the spirits of the depths caught and played with like a rare beam that transiently illumined their shadowy, silent haunts.

The next day, and the next, and so for a fortnight, Mr. Roger Raleigh presented himself with the breakfast-urn at the Bawn, tarried during sunshine, slipped home by starlight across the lake. Every day Mrs. Laudersdale was more brilliant, and flashed with a cheery merriment like harmless summer-lightnings. One night, as he pushed away from the bank, he said,—

“*Au revoir* for five hours.”

“For five hours?” said Mrs. Laudersdale.

“For five hours.”

“At half-past three in the night?”

“In the morning.”

“And what brings you here at dead of dark?”

“The lilies and the dawn.”

“Indeed! And whom do you expect to find?”

“You and Miss Helen.”

“Well, summer and freedom are here; I am ready for all fates, all deeds of valor, vigils among the rest. We will await you at half-past three in the morning. Helen, we must sleep at high-pressure, soundly, crowding all we can on the square inch of time. *Au revoir*.”

A shadow stood on the piazza, in the semi-darkness, at the appointed hour; two other shadows flitted forward to meet it, and silently down the bank, into the boat, and out upon the lonely glimmering reaches of the water. Nobody spoke; the midnight capture of no fort was ever effected with more phantom-like noiselessness than now went to surprise the Vestals of the Lake; only as two hands touched for an instant, a strange thrill, like fire, quivered

through each and tore them apart more swiftly than two winds might cross each other's course. Helen Heath was drowsy and half-nodding in the bow, nodding with the more ease that it was still so dark and that Mr. Raleigh's back was toward her. Mrs. Laudersdale reclined in the stern. Mr. Raleigh once in a while sent them far along with a strong stroke, then only an occasional splash broke the charm of perfect stillness. Ever and anon they passed under the lee of some island, and the heavy air grew full of idle night-sweetness; the waning moon with all its sad and alien power hung low,—dun, malign, and distant, a coppery blotch on the rich darkness of heaven. They floated slowly, still; now and then she dipped a hand into the cool current; now and then he drew in his oars, and, bending forward, dipped his hand with hers. The stars retreated in a pallid veil that dimmed their beams, faint lights streamed up the sky,—the dark yet clear and delicious. They paused motionless in the shelter of a steep rock; over them a wild vine hung and swayed its long wreaths in the water, a sweet-brier starred with fragrant sleeping buds climbed and twisted, and tufts of ribbon-grass fell forward and streamed in the indolent ripple; beneath them the lake, lucid as some dark crystal, sheeted with olive transparence a bottom of yellow sand; here a bream poised on slowly waving fins, as if dreaming of motion, or a perch flashed its red fin from one hollow to another. The shadow lifted a degree, the eye penetrated to farther regions; a bird piped warily, then freely, a second and a third answered, a fourth took up the tale, blue-jay and thrush, cat-bird and bobolink; wings began to dart about them, the world to rustle overhead, near and far the dark prime grew instinct with sound, the shores and heavens blew out gales of melody, the air broke up in music. He lifted his oars silently; she caught the sweet-brier, and, lightly shaking it, a rain of dew-drops dashed with deepest perfume sprinkled them; they moved on. A thin mist breathed from the lake, steamed round the boat, and

lay like a white coverlet upon the water; a light wind sprang up and blew it in long rags and ribbons, lifted, and torn, and streaming, out of sight. All the air was pearly, the sky opaline, the water now crisply emblazoned with a dark and splendid jewelry,—the paved-work of a sapphire; a rosy fleece sailed across their heads, some furnace glowed in the east behind the trees, long beams fell resplendently through and lay beside vast shadows, the giant firs stood black and intense against a red and risen sun; they trailed with one oar through a pad of buds all-unaware of change, stole from the overhanging thickets through a high-walled pass, where, on the open lake, the broad, silent, yellow light crept from bloom to bloom and awoke them with a touch. How perfectly they put off sleep! with what a queenly calm displayed their spotless snow, their priceless gold, and shed abroad their matchless scent! He twined his finger round a slippery serpent-stem, turned the crimson underside of the floating pavilion, and brought up a waxen wonder from its throne to hang like a star in the black braids on her temple. An hour's harvesting among the nymphs, in this rich atmosphere of another world, and with a loaded boat they turned to shore again.

“Smothered in sweets!” exclaimed Mr. Raleigh, as he sprang out, and woke Helen Heath, where, slipped down upon the floor of the boat, her head fallen on her arms, she had lain half-asleep. They were the first words spoken during the morning, and in such situations silence is dangerous.

When the rest of the family descended to breakfast, they found the pictures framed in wreaths of lilies, great floats of them in hall and parlor, and the table laden with flat dishes where with coiled stems they crowded, a white, magnificent throng. Mr. Raleigh still lingered, and, while Mrs. Laudersdale and Helen renewed their toilets, had busied himself in weaving a crown of these and another of poppy-leaves, hanging the one on Mrs. Laudersdale's head, as she entered re-

freshed, snowy, and fragrant herself, and the sleep-giving things on Helen's,—the latter avenging herself by surveying her companion's adornment, and, as she adjusted the bloom-gray leaves of her own, inquiring if olives grew pickled.

Nothing could be more airy and blithe than were Mrs. Laudersdale's spirits all that morning,—bubbles dancing on a brook, nor foam-sparkle of rosy Champagne. She related their adventures with graphic swiftness, and improvised dangers and escapes with such a reckless disregard of truth that Mr. Raleigh was forced to come to the rescue with more startling improbabilities than they would have encountered in the Enchanted Forest.

The red dawn brought its rain, and before they rose from table the sunshine withdrew and large drops began to patter in good earnest. Mr. Raleigh, who had generally suffered others to entertain him, now, as Mrs. McLean ushered the whole company into the sewing-room, seemed spurred by gayety and brilliance, and to bring into employ all those secrets through which he had ever annihilated time. For a while devoting himself to the elder dames, he won the heart of one by a laborious invention of a million varicolored angles to a square barley-corn of worsted-work, involved Mrs. McLean's crocheting in an inextricable labyrinth as he endeavored to afford her some requisite conchological assistance, and turned with three strokes a very absurd drawing of Mrs. Laudersdale's into a splendid caricature. Having made himself thus generally useful, he now proceeded to make himself generally agreeable; went with all necessary gravity through a series of complicate dancing-steps with Miss Heath; begged Miss Purcell, who was longing to cry over her novel, to allow him to read for her, since he saw that she was trying her eyes, and therewith made *fiasco* of a page of delicious dolor; and being challenged to chess by a third, declared that was child's play, and dominoes was the game for science,—whereon, having seated a circle at that absorbing

sport, he deserted for a meerschaum and the gentlemen, and in company with Captain Purcell, Mr. McLean, and the rest, rolled up from the hall below wreaths of smoke, bursts of laughter, and finally chimes of those concordant voices with which gentlemen talk politics, and, even when agreeing infamously, become vociferant and high-colored.

It was after lunch that Mrs. Laudersdale, having grown weary of the needlewomen's thread of discourse, left the sewing-room and proceeded toward her own apartment. Just as she crossed the head of the staircase, the hall-door was flung open, admitting a gleeful blast of the boisterous gale, and an object that, puffing and blowing like a sad-hued dolphin, and shaking like a Newfoundland, appeared at first to be the famous South-West Wind, Esq., in proper person,—whose once sumptuous array clung to his form, and whose face and hands, shining as coal, rolled off the rain like a bronze.

"Bless my heart, Capua!" cried Mr. Raleigh, removing the stem from his lips; "how came you here?"

"Lors, Massa, it's only me," said Capua.

"So I see," replied his master, restoring the pipe to its former position. "How did you come?"

"'Bout swimm'd, I 'spect," answered Capua, grounding a chuckle on a reef of ivory. "'Ta'n't no fish-story, dat!"

"Well, what brings you?"

"Naughty Nan,—she hadn't been out"——

"Do you mean to say, you rascal! that you've taken Nan out on such a day? and round the lake, too, I'll warrant?" asked Mr. Raleigh, with some excitement.

"Jes' dat; an' round de lake, ob course; we couldn' come acrost."

"You've ruined her, then"——

"Bress you, Massa, she won't ketch no cold,—she! Smokes like a beaver now; came like streak o' lightnin'."

"You may as well swim her back,—and where we can all see the sport, too."

"But"——

"No buts about it, Capua," insisted his master, with mock gravity, the stem between his teeth.

"'Spect I'd better rub her down, now I'se here, an' wait'll it holds up a bit, Mass' Roger?" urged Capua, coaxingly.

"Do as you're bid!" ejaculated his master; which, evidently, from long habit, meant, Do as you please.

Mrs. Laudersdale and Helen Heath had crept down the stairs during this dialogue, and now stood interested spectators of the scene. Mrs. McLean came running down behind them.

"Forgotten me, Capua?" said she.

"Lors, Miss Kate!" he replied, scraping his foot and pulling off his hat,—“Cap never f'gets his friends, though you've growed. How d'ye do, Miss Kate?"

"Nicely, thank you. And how's your wife?"

"My wife? Well, she's 'bout beat out. Massa Roger 'n' I, we buried her; finer funeral dan Massa Roger's own mother, Miss Kate, dat was!"

"Poor fellow! I'm so sorry!" began Mrs. McLean, consolingly.

"Well, Miss Kate, you know some folks is easier spared 'n others. Some tongues sharper 'n others. Alwes liked to gib a hot temper time to cool, 's Massa says."

"And how do you do, Capua?"

"Pretty well, Miss Kate; leastways, I'se well enough,—a'n't so pretty."

"What is his name?" whispered Helen.

"'Annible, Missis," said the attentive Capua, whose eyes had been for some time oscillating with indecision between Helen Heath and Mrs. Laudersdale. "Hannibal Raleigh's my name; though Massa alwes call me Cap," he added, insinuatingly,—which, by the way, "Massa" never had been known to do.

"And are you always going to stay and take care of Master Roger?"

"'Spect I shall. Lors, Miss Kate, he's more bother to me 'n all my work,—dat boy!"

"That will do, Capua," said his master; "you may go." And therewith Capua scuffled away.

"Well, Roger, what does this mean?" asked Mrs. McLean, as the door closed.

"It means that Capua, having been dying of curiosity, has resolved to die game, and therefore takes matters into his own hands, and arrives to inspect my conduct and my company."

"Ah, I see. He trembles for his sceptre."

"Miss Heath," said Mr. McLean, rallying, "you received a great many of the sable shafts."

"A Saint Sebastiana," said his wife.

"Did Saint Sebastian die of his wounds?" asked Helen.

"Let me tell you, Miss Helen," said Mr. Raleigh, "that Capua is a connoisseur, and his *dictum* is worth all flatteries. If he had only been with us this morning!"

"You have teased me so much about that, Mr. Raleigh, that I have half a mind never to go with you on another expedition."

"Make no rash vows. I was just thinking what fine company you would be when trouting. The most enchanting quiet is required then, you are aware."

"Oh! when shall we go trouting?"

"We? It was only half a mind, then! We will go to-morrow, wind and weather agreeing."

"And what must I do?"

"You must keep still, stand in the shadow, and fish up-stream."

At this point, Capua put his head inside the door again.

"What is it?" asked Mr. Raleigh.

"Forgot to say, Massa," replied Capua, rolling his eyes fearfully, and still hesitating, and half-closing the door, and then looking back.

"Well, Capua?"

"Mass' Raleigh, your house done been burned up!" said Capua, at last, jerking back his head, as if afraid of losing it.

"Ah? And what did you do with"—

"Oh, eberyting safe an' sound. 'Ta'n't

dat house; 'ta'n't dis yer house Massa lib in;—Massa's *sparrer*-house. Reckoned I'd better come and 'form him."

"Is that all?" asked his master, who was accustomed to Capua's method of breaking ill news.

"Now, Mass' Roger, don't you go to being pervoked an' flyin' into one ob dese yer tempers! It's all distinguished now. Ole Cap didn' want to shock his young massa, so thought 'twarn't de wisest way to tell him 'twarn't de *sparrer*-house, either, at first. 'Twas de inside ob de libery, if he *must* know de troof; wet an' smutty dar now, mebbe, but no fire."

"Why not? What made the fire go out?" asked Mr. Raleigh, composedly.

"Well, two reasons," replied Capua, rolling a glance over the company;—"one was dis chile's exertions; an' t'other fact, on account ob wick de flames was checked, was because dere warn't no more to burn. Hi!"

"Capua, take Nan, and don't let me see your face again, till I send for it!" said his master, now slightly irate.

"Massa's nigger alwes mind him," was the dutiful response.

Mrs. Laudersdale's handkerchief fell at that moment from the hand that hung over the balustrade. Capua darted to restore it.

"Bress her pretty eyes!" said he. "Ole Cap see 's fur into a millstone as any one!" and vanished through the doorway.

"I beg your pardon," said Mr. Raleigh, turning to Mrs. Laudersdale. "He has refused to leave me, and I must indulge him too much, and my sins fall on the head of the nearest passer. He appears to have a constitutional inability to comprehend this absence of punishment. His immunity is so painful to him that I sometimes fancy him to be homesick for a lashing. Now if I do not hasten home, Kate, I shall find a conflagration of the whole house there before me."

And making quick adieux,—while Mrs. Laudersdale jested about tempting the raging waters, and the dinner-bell was

ringing, and Helen singing, "Come o'er the stream, Charlie, and dine wi' McLean,"—he opened the door, suffered a patch of blue sky to be seen, and the segment of an afternoon rainbow, shut it, and was gone.

Early again the next morning, Mr. Raleigh sought the Bawn, followed this time by Capua, who was determined not to lose any ground once made, and who now carried the rods, bait, and other paraphernalia.

"Powerful pretty woman, dat, Massa!" said he, as through the open doors a voice was heard gayly exclaiming and answering.

"Which one, Capua?" asked his master.

"A'n't no t'orrer," was his reply; "leastwise, a'n't no 'count,—good for nott'n. Now *she*,—pity she a'n't single, Massa,—should say she'd lived where sun was plenty and had laid up heaps in her heart."

Here Mrs. Laudersdale came out, and shortly afterward Helen and three or four others. In reply to their questions, Mr. Raleigh stated that the preceding day's disaster had been occasioned by a meerscham, and had merely charred a table with its superficies of papers and pamphlets, which Capua had chosen to magnify for his own purposes; and the assemblage immediately turned its course inland and toward the brooks. The two who led soon distanced the rest, Capua trudging respectfully behind and keeping them in sight. Here, as they brushed along through the woods, they delayed in order to examine a partridge's nest, to tree a squirrel, to gather some strange wild-flower opening at their approach. Here on the banks they watched the bitterns rise and sail heavily away, and finally in silence commenced the genuine sport.

"Nonsense!" said Helen Heath, meaningly, as Mrs. Laudersdale, when the others joined them, displayed her first capture. "Is that all you've caught?"

Mrs. Laudersdale drew in another for reply.

"How absurd!" said Helen. "Here a month ago you were the dearest and most helpless of mortals, and now you are doing everything!"

The other opened her eyes a moment, and then laughed.

"Hush!" said she.

"Shs! shs!" echoed Capua, making an infinite hubbub himself.

Silence accordingly reigned and produced a string fit for the Sultan's kitchen,—of all the number, Mrs. Laudersdale adding by far the majority,—possibly because her shining prey found destination in the same basket with Mr. Raleigh's,—possibly because, as Helen had intimated, a sudden deftness had bewitched her fingers, so that neither dropping rod nor tangling reel detained her for an instant.

"Our lines have fallen in pleasant places," said Helen, as they took at last their homeward path; "and what a shame! not an adventure yet!"

Mrs. McLean hung on Mr. Raleigh's arm as they went,—for she had taken a whim and feared to see her cousin in the fangs of a coquette; by which means Helen became the companion of Captain Purcell and his daughter, and Mrs. Laudersdale kept lightly in advance, leading a gambol with the greyhound that Capua had added to the party, and presenting in one person, as she went springing from knoll to knoll along the bank, now in sunshine, now in shade, lifting the green boughs or sweeping them aside, a succession of the vivid figures of some antique and processional frieze. Suddenly, with a quick cry, she disappeared, and Helen had her adventure. Mr. Raleigh darted forward, while the hound came frisking back; yet, when he found her fainting in the hollow, stood with stolid immobility until Capua snatched her up and carried her along in his arms, leaving his master to reflect how many times such swarthy servitors might have borne her, as a child, through her island-groves. And thus the party, somewhat sobered, resumed their march again. But in the discovery that he had not dared to

lift her in his arms, he who took such liberties with every one,—that, lying under her semblance of death, she had inspired him with a certain awe, that he had suddenly found this woman to be an object somewhat sacred, — in this discovery Mr. Raleigh learned not a little. And it would not, perhaps, be an untrue surmise that he found therein as much of pain as of any other emotion; since all the experiences and passions of life must share the phenomena of the great fact itself whose pulse beats through them; and if to love unawares be to dwell like a child in the region of thoughtless and innocent bliss, in attaining manhood all the sadness which is to be eliminated from life becomes apparent, and bliss henceforth must be sought and earned. From that day, then, Mr. Raleigh with difficulty retained his former habits, prevented any eagerness of manner, maintained a cautious vigilance, and in so doing he again became aware that the easy *insouciance* with which he addressed all other women had long been lost toward Mrs. Laudersdale, or, if yet existing, had become like the light and tender play of any lingering summer-wind in the tress upon her brow.

Mrs. Laudersdale's ankle having been injured by her fall, and Mrs. McLean having taken a cold, the two invalids now became during a week and a day the auditory for all quips and pranks that Miss Heath and Mr. Raleigh could devise. And on the event of their convalescence, the Lord of Misrule himself seemed to have ordained the course of affairs, with a swarming crew of all the imps and mischiefs ever hatched. Mr. Raleigh and Capua went and came with boat-loads of gorgeous stuff from across the lake, a little old man appeared on the spot in answer to a flight of telegrams, machinery and scenery rose like exhalations, music was brought from the city, all the avails of the family were to be found in garden, closet, house-top, conning hieroglyphical pages, and the whole chaotic confusion takes final shape and resolves into a little Spanish Masque, to which

kings and queens have once listened in courtly state, and which now unrolls its resplendent pageant before the eyes of Mrs. Laudersdale, translating her, as it were, into another planet, where familiar faces in pompous entablature look out upon her from a whirl of light and color, and familiar voices utter stately sentences in some honeyed unknown tongue. And finally, when the glittering parade finishes, and the strange groups, in their costly raiment, throng out for dancing, she herself gives her hand to some Prince of the pageantry, who does her homage, and, sealing the fact of her restoration, swims once round the room in a mist of harmony, and afterward sits by his side, captive to his will, and subject to his enchantment, while

“All night had the roses heard
The flute, violin, bassoon,
All night had the casement jessamine stirred
With the dancers dancing in tune,
Till a silence fell with the waking bird
And a hush with the setting moon.”

This little episode of illness and recovery having been thus duly celebrated, the masqueraders again forswore roofs and spent long days in distant junketing throughout the woods; the horses, too, were brought into requisition, and a flock of boats kept forever on the wing. And meanwhile, as Helen Heath said,—she then least of all comprehending the real drama of that summer,—Mrs. Laudersdale had taught them how the Greek animated his statue.

“And how was that?” asked Mr. Raleigh.

“He took it out-doors, I fancy, and called the winds to curl about it. He set its feet in morning-dew, he let in light and shade through green dancing leaves above it, he gave it glimpses of moon and star, he taught the forest-birds to chirp and whistle in its ear, and finally he steeped it in sunshine.”

“Sunshine, then, was the vivifying stroke?”

Helen nodded.

“You are mistaken,” said he; “the

man never found a soul in his work till he put his own there first."

"I always wonder," remarked Mrs. Laudersdale here, "that every artist, in brooding over his marble, adding, touching, bringing out effects, does not end by loving it,—absorbingly, because so beautiful to him,—despairingly, because to him forever silent."

"You needn't wonder anything about it," said Helen, mischievously. "All that you have to do is to make the most of your sunshine."

Mr. McLean, struck with some sudden thought, inspected the three as they stood in a blaze of the midsummer noon, then crossed over to his little wife, drew her arm in his, and held it with cautious imprisonment. The other wife did as she was bidden, and made the most of her sunshine.

If, on first acquaintance, Mrs. Laudersdale had fascinated by her repose, her tropical languor, her latent fire, the charm was none the less, when, turning, it became one dazzle of animation, of careless freedom, of swift and easy grace. Nor, unfamiliar as were such traits, did they seem at all foreign to her, but rather, when once donned, never to have been absent; as if, indeed, she had always been this royal creature, this woman bright and winning as some warm, rich summer's day. The fire that sleeps in marble never flashes and informs the whole mass so fully; if a pearl—lazy growth and accretion of amorphous life—should fuse and form again in sparkling crystals, the miracle would be less. And with what complete unconsciousness had she stepped from passive to positive existence, and found this new state to be as sweet and strange as any child has found it! Long a wife, she had known, nevertheless, nothing but quiet custom or indifference, and had dreamed of love only as the dark and silent side of the moon might dream of light. Now she grew and unfolded in the warmth of this season, like a blossom perfumed and splendid. Sunbeams seemed to lance themselves out of heaven and splinter about her. She queened it over

demesnes of sprite-like revelry; the life they led was sylvan; at their *fêtes* the sun assisted. The summer held to her lips a glass whose rosy effervescence, whose fleeting foam, whose tingling spirit exhaled a subtile madness of joy,—a draught whose lees were despair. So nearly had she been destitute of emotion hitherto that she had scarcely a right to be classed with humanity; now, indeed, she would win that right. Not only her character, but her beauty, became another thing under all this largess; one remembered the very Persian rose, in looking at her, and thought of gardens amid whose clouds of rich perfume the nightingales sang all night long; her manner, too, became strangely gracious, and a sweetness lingered after her presence, delicate and fine as the drop of honey in some flower's nectary. So she woke from her icy trance; but, alas! what had wakened her?

The summer was passing. Every day the garden-scenes of Watteau became vivid and real; every evening Venice was made possible, when shadowy barks slipped down dusk tides, freighted with song and laughter, and snatches of guitar-tinkling; and when some sudden torch, that for an instant had summoned with its red fire all fierce lights and strong glooms, dipped, hissed, and quenched below, and, a fantastic flotilla, they passed on into the broad brilliance of a rising moon, all Middle-Age mythology rose and wafted them back into the obscurity. It was a life too fine for every day, fare too rich for health; they must be exotics who did not wither in such hot-house air. It was rapidly becoming unnatural. They performed in the daylight stray clarified bits from Fletcher or Molière, drama of an era over-ripe; they sang only from an old book of madrigals; their very reading was fragmentary,—now an emasculated Boccaccio, then a curdling phantasm of Poe's, and after some such scenic horror as the "Red Death" Helen Heath dashed off the Pesther Waltzes.

If, finally, on one of the last August-nights, we had passed, Asmodeus-like, over the roofs, looking down, we should

have seen three things. First, that Mrs. Laudersdale slept like any innocent dreamer, and, wrapped with white moonlight, in her long and flowing outline, in her imperceptible breath, resembling some perfect statue that we fancy to be instinct with suspended life. Next, that Mr. Raleigh did not sleep at all, but absorbed himself, to the entire disturbance of Capua's slumbers, in the rapture of reproducing as he could the turbulent passion and joy of souls larger than his own. And, lastly, that Mrs. McLean woke with visions of burglars before her eyes, to find her pillow deserted and her husband sitting at a writing-table.

"How startled I was!" she exclaimed. "What are you doing, dear?"

"Writing to Laudersdale," he said, in reply.

"Why, what for?—what can you be writing to him for?"

"I think it best he should come and take his wife off my hands."

"How absurd! how contemptible! how all you husbands band together like a parcel of slaveholders, and hunt down each other's runaways!"

Mr. McLean laughed.

"Now, John, you're not making mischief?"

"No, child, I am preventing it." And therewith the worthy man, dropping the wax on the envelope, imprinted it with a Scotch crest, and put out the light. "That's off my mind!" said he.

At last September came; a few more weeks, and they would separate, perhaps, to the four corners of the earth. Mr. Raleigh arrived one afternoon at the Bawn, and finding no one to welcome him,—that is to say, Mrs. Laudersdale had gone out, and Helen Heath was invisible,—he betook himself to a solitary stroll, and, by a short cut through the woods, to the highway, and just before emerging from the green shadows he met Mrs. Laudersdale.

"Whither now, Wandering Willie?" said she; for, singularly enough, they seemed to avoid speaking each other's name in direct address, using always some

title suggested by their reading or singing, or some sportive impromptu.

"I am going to take the road."

"Like a gallant highwayman?" And without more ado, and naturally enough, she accompanied him.

The conversation, this afternoon, was sufficiently insignificant; indeed, Mrs. Laudersdale always affected you more by her silence than her speech, by what she was rather than by what she said; and it is only the impression produced on her by this walk with which we have any concern.

The road, narrow and winding in high banks fringed with golden-rod and purple asters, was at first completely shadowed,—an old, deep-rutted, cross country road, birch-trees shivering at either side, and every now and then a puff of pine-breath drifting in between. After a time it rose gradually into the turnpike, and became a long, dusty track, stretching as far as the eye could see, a straight, dazzling line, burnt white by summer-heats, powdered by travel. There was no wind stirring; the sky was lost in a hot film stained here and there with sulphurous wreaths; the distant fields, skirted by low hills, were bathed in an azure mist; nearer, a veil of dun and dimmer smoke from burning brush hung motionless; around their feet the dust whirled and fell again. Bathed in soft, voluptuous tints, hazed and mellowed, into what weird, strange country were they hastening? What visionary land of delight, replete with perfume and luxury, lay ever beyond?—what region rich, unknown, forbidden, whose rank vegetation steamed with such insidious poison? And on what arid, barren road, what weary road,—but, alas, long worn and beaten by the feet of other wayfarers! a road that ran real and strong through this noxious and seducing mirage!

A sudden blast of wind lifted a cloud of dust from before them and twisted it down among the meadows; the sun thrust aside his shroud and burnt for an instant on a scarlet maple-bough that hung in premature brilliance across the way. The hasty color, true and fine, was like a spell

against enchantment; it was the drop that tested the virtue of this chemistry and proved it naught.

Mrs. Laudersdale looked askance at her companion, then turned and met his gaze. Slowly her lashes fell, the earth seemed to fail beneath her feet, the light to swoon from her eyes, her lips shook, and a full flush swept branding and burning up throat and face, stinging her very forehead, and shooting down her fingertips. In an instant it had faded, and she shone the pallid, splendid thing she was before. In that instant, for the first time this summer, she comprehended that her husband's existence imported anything to her. Behind the maple-tree, the wood began again; without a syllable, she stepped aside, suffered him to pass, and hastened to bury herself in its recesses.

What lover ever accounted for his mistress's caprices? Mr. Raleigh proceeded on his walk alone. And what was her husband to him? He did not know that such a man existed. For him there had been no deadly allurements in the fervid scene; it had stretched a land of promise veiled in its azure ardors, with intimations of rapture and certainty of rest. Now, as he wandered on and turned down another lane to the woods, the tints grew deeper; his eyes, bent inward, saw all the world in the color of his thought; he would have affirmed that the bare brown banks were lined in deep-toned indigo flower-bells whose fragrance rose visible above them or curled from stem to stem, and that the hollows in which the path hid itself at last were of the same soft gloom. But, finally, when not far distant from the Bawn again, he shook off his reverie and struck another path that he might avoid rencontre. Perhaps the very sound that awoke him was the one he wished to shun; at the next step it became more distinct,—a child's voice singing some tuneless song; and directly a tiny apparition appeared before him, as if it had taken shape, with its wide, light eyes and corn-silk hair, from the most wan and watery of sunbeams. But what had a child to do in this paradise, thought he,

and from whence did it come? Impossible to imagine. Her garments, of rich material, hung freshly torn, it may be, but in shreds; her skin, if that of some fair and delicate nursling, was stained with berries and smeared with soil; she seemed to have no destination; and after surveying him a moment, she mounted a fallen tree, and, bending and swinging forward over a bough, still surveyed him.

"Ah, ha!" said Mr. Roger Raleigh; "what have we here?"

The child still looked in his face, but vouchsafed, in her swinging, no reply.

"What is the little lady's name?" he asked then.

This query, apparently more comprehensible, elicited a response. She informed him that her name was "Dymom, Pink, and Beauty."

"Indeed! And anything else?"

"Rose Pose," she added, as if soliciting the aid of memory by lifting her hands near her temples.

"Is that all?"

"Little silly Daffodilly."

"No more?"

"Rite."

"Rite,—ah, that is it! Rite what?"

"Rite!" said the child, authoritatively, bringing down her foot and shaking back her hair.

"And how old is Rite?"

"One, two, four, twenty. Maman is twenty;—Rite is twenty, too."

"When was Rite four?"

"A great while ago. She went to heaven in the afternoon," was added, confidentially, after a moment's inspection to see if he were worthy.

"Ah! And what was there there?"

"Pitchtures, and music, and peoples, and a great house."

"And where is Rite going now?"

"Going away in a ship."

"Rite will have to wash her face first."

But at this proposition the child flashed open her pale-blue orbs, half-closed them as a sleepy cat does, and, with no other change of countenance to mark her indignation, appeared to shut him out from her

contemplation. Directly afterward, she opened them again, bent forward and back over the swinging, and recommenced her song, as if there were not another person than herself within a hundred miles. Half-hidden in the great hemlock-bough, this tiny, fantastic creature, so fair, so supercilious, seemed in her waywardness a veritable fay, mate for any of the little men in green, bibbers of dewdrops, lodgers in bean-blossoms, Green-Jacket, Red-Cap, and White-Owl's-Feather.

Mr. Raleigh hesitated whether or not he should remain and watch her fade away into the twilight, wondered if she were bewitching him, then rubbed his hand across his eyes and said, in a disenchanted, matter-of-fact manner, —

“Do you know your way home, child?” and obtained, of course, no reply. For an instant he had half the mind to leave her to find it; but at once convicted of his absurdity, “Then I shall take you with me,” he said, making a step toward her, — “because you are, or will be, lost.”

At the motion, she darted past and stood defiantly just out of his reach. Mr. Raleigh attempted to seize her, but he might as easily have put his hand on a butterfly; she eluded him always when within his grasp, and led him such a dance up and down the forest-path as none other than a will-o'-the-wisp, it seemed, could have woven. All at once a dark figure glided out from another alley and snatched the sprite into its arms. It was a colored nurse, who poured out a torrent of broken French and English over the runaway, and made her acknowledgments to Mr. Raleigh in the same jargon. As she turned to go, the child stretched her arms toward her late pursuer, making the nurse pause, and, putting up her little lips, touched with them his own; then, picturesque as ever, and thrown into relief by the scarlet sack, snowy turban, and sable skin of her bearer, she disappeared. It is doubtful if in all his life Mr. Raleigh would ever receive a purer, sweeter kiss.

He had promised to be at the Bawn that evening, and now accordingly sought the shore, where the Arrow lay, and was

soon within the shelter of his own house. The arrangement of toilet was a brief matter; and that concluded, Mr. Raleigh entered his library, an apartment now slightly in disarray, and therefore, perhaps, not uncongenial with his present mood. After strolling round the place, Mr. Raleigh paused at the window an instant, the window overhung with clematis, and commanding the long stretch of water between him and the Bawn, which last was, however, too distant for any movement to be discerned there. Soon Mr. Raleigh turned his back upon the scene that lay pictured in such beauty below, and, throwing himself into a deep arm-chair, remained motionless and plunged in thought for many moments. Rising at last, he took from the table a package of letters from India that had arrived in his absence. Glancing absently at the superscriptions, breaking the seal of one, he replaced them: it would take too long to read them now; they must wait. Then Mr. Raleigh had recourse to a universal panacea, and walked to and fro across the room, with measured, unvarying steps, till the striking clock warned him that time was passing. Mr. Raleigh drew near his desk again, took up the pen, and hesitated; then recalling his gaze that had seemed to search his own inmost soul, he drew the paper nearer and wrote.

What he wrote, the very words, may not signify; with the theme one is sufficiently acquainted. Perhaps he poured out there all that had so often trembled on his lips without finding utterance; perhaps, if ever passionate heart flashed its own fire into its implements, this pen and paper quivered beneath the current throbbing through them. The page was brief, but therein all was said. Sealing it hastily, he summoned Capua.

“Capua,” said he, giving him the note, “you are to go with me across the lake now. We shall return somewhere between eleven and twelve. Just as we leave, you are to give this note to Mrs. Laudersdale. Do you understand?”

“Yah, Massa, let dis chile alone,” responded Capua, grinning at the prospect

of society, and speedily following his master.

The breeze had fallen, so that they rowed the whole distance, with the idle sail hanging loosely, and arrived only just as the red sunset painted the lake behind them with blushing shadows. Mr. Raleigh joined Helen Heath and his cousin in the hall; Capua, superb with the importance of his commission, sought another entrance. But just as the latter individual had crossed the threshold, he encountered the nurse whom his master had previously met in the wood. Nothing could have been more acceptable in his eyes than this addition to the circle below-stairs. Capua's hat was in his hand at once, and bows and curtsies and articulations and gesticulations followed with such confusing rapidity, that, when the mutually pleased pair turned in company toward the kitchens, a scrap of white paper, that had fluttered down in the disorder, was suffered to remain unnoticed on the floor. The courier had lost his *déspatch*. Coming in from her walk, not five minutes later, Mrs. Laudersdale's eye was caught thereby; stooping to take it, she read with surprise her own name thereon, and ascended the stairs possessed thereof.

What burden of bliss, what secret of sorrow, lay infolded there, that at the first thought she covered it with sudden kisses, and the next, crushing it against her heart, burst into a wild weeping? Again and again she read it, and at every word its intense magnetic strength thrilled her, rapt her from remembrance, conquered her. She seized a pencil and wrote hurriedly:—

“You are right. With you I live, without you I die. You shut heaven out from me; make earth, then, heaven. Come to me, for I love you. Yes, I love you.”

She did not stay to observe the contrast between her fervent sentences and the weak, faint characters that expressed them, but hastily sought the servant who was accustomed to act as postman, gave him directions to acquaint her of its reception, and watched him out of sight.

All that in the swiftness of a fever-fit. Scarcely had the boat vanished when old thoughts rushed over her again and she would have given her life to recall it. Returning, she found Capua eagerly searching for the lost letter, and thus learned that she was not to have received it until several hours later.

Perhaps no other woman in her situation could have done what Mrs. Laudersdale had done, without incurring more guilt. There could be few who had been reared in such isolation as she,—whose intellect, naturally subject to her affection, had become more so through the absence of systematic education,—whose morality had been allowed to be merely one of instinct,—to whom introspection had been till now a thing unknown,—and who, accepting a husband as another child accepts a parent, had, in the whirl of gay life where she afterward reigned, found so little time for thought, and remained in such mental unsophistication as to experience now her first passion.

As Mrs. Laudersdale entered her room again, the opposite door opened and admitted that individual the selfishness of whose marriage was but half expiated when he found himself on the surplus side of the world.

In the mean while, Mr. Raleigh was gayly passing the time with Helen Heath. There were to be some guests from the town that evening, and they were the topic of her discourse.

“I wonder if we are never to have tea,” said she at last, looking at her watch.

“I didn't know you were attached to the custom,” said he, indifferently, as he had said everything else, while intently listening for a footstep.

“Ah! but I like to see other folks take their bitters.”

“Do not even the publicans the same?”

“You will become a proficient chemist, converting the substance of my remarks to airy nothings through your gospel-retorts.”

“Oh, I understand your optics as well. You like to see other folks; taking the

bitters is another thing. The tea-bell is a tocsin."

"Pshaw! *You* don't care to see any one! But shall there be no more cakes and ale? Haven't you any sympathy for a sweet tooth?"

"None at all."

"Not even in Mrs. Laudersdale's instance?"

"Mrs. Laudersdale has a sweet tooth, then?" Mr. Raleigh asked in return, as if there were any trivial thing concerning her in which he could yet be instructed.

"I'm not going to tell you anything about Mrs. Laudersdale."

"There comes that desired object, the tea-tray. It's not to be formal, then, to-night. That's a blessing! What shall I bring you?" he continued,—"tea or cocoa?"

"Neither. You may have the tea, and I'll leave the cocoa for Mrs. Laudersdale."

"Mrs. Laudersdale drinks cocoa, then?"

"You may bring me some milk and macaroons."

As Mr. Raleigh was about to obey, his little apparition of the wood suddenly appeared in the doorway, followed by her nurse,—having arisen from the discipline of bath and brush, fair and spotless as a snowflake. She flitted by him with a mocking recognition.

"Rite!" cried a voice from above, familiar, but with how strange a tone in it! "Little Rite!"

"Maman!" cried the sprite, and went dancing up the stairs.

Mr. Raleigh's face, as he turned, darkened with a heavier flush than half a score of Indian summers branded upon it afterward.

"That is Mrs. Laudersdale's little maid?" asked he, when, after a few moments, he brought the required salver.

"Yes,—would you ever suspect it?"

Numberless as had been the times he had heard her speak of Rite, he never *had* suspected it, but had always at the name pictured some indifferent child, some baby-friend, or cousin by courtesy.

"She is not like her mother," said he, coolly.

"The very antipodes,—all her father.—Bless me! What is this? A real Laudersdale mess,—custards and cheese-cakes,—and I detest them both."

"Blame my unfortunate memory. I thought I had certainly pleased you, Miss Helen."

"When you forgot my orders? Well, never mind. Isn't she exquisite?"

"Isn't who exquisite? Oh, the little maid? Quite! Why hasn't she been here all summer?"

"She was always a sickly, ailing thing, and has been at one of those rich Westchester farms where health and immortality are made. And now she is going away to Martinique, where her grandmother will take charge of her, bottle up those spirits, and make her a second edition of her mother. By the way, how that mother has effervesced this summer!" continued Helen, as the detested custard disappeared. "I wonder what made her. Do you suppose it was because her husband was away?"

At that instant Mrs. Laudersdale came sailing down the stairs.

A week previously, when, to repay the civilities of their friends in the neighboring city, Mrs. McLean had made a little fancy-party, Helen, appearing as Champagne, all in rosy gauzes with a veiling foam of dropping silver lace, had begged Mrs. Laudersdale to give her prominence by dressing for Port; and accordingly that lady had arrayed herself in velvet, out of which her shoulders rose like snow, and whose rich duskiness made her perfect pallor more apparent, while its sumptuous body of color was sprinkled with glittering crystal drops and coruscations; and wreathing her forehead with crisp vine-leaves and tendrils, she had bunched together in intricate splendor all the amethysts, carbuncles, garnets, and rubies in the house, for grape-clusters at the ear, till she seemed, with her smile and her sunshine, the express and incarnate spirit of vintage. To-night, stripped of its sparkling drops, she wore the same dress, and

in her hair a wreath of fresh white roses. Behind her descended a tall and stately gentleman. She swept forward. "Mr. Raleigh," she murmured, while her eyes diffused their gloom and fell, "let me introduce you to my husband!"

The blow had come previously. Mr. Raleigh bowed almost to the ground, without a word, then looked up and offered his hand. Mr. Laudersdale comprehended the whole matter at a heartbeat, and took it. Then they moved on toward other friends, whom, while waiting for knowledge of his wife's return from her walk, Mr. Laudersdale had not seen. Mr. Raleigh went in search of Capua, and ere long reappeared.

It grew quite dark; the candles were lighted. Rite slipped in, and, after having flown about like a thistle-down for a while, mounted a chair and put her arms about her mother's shoulders. Then Mr. Raleigh, sitting silently on a sofa, attracted her, and shortly afterward she had curled herself beside him and fallen asleep with her head upon his knee; otherwise he did not touch her. Mrs. Laudersdale stood by an open casement; the servant who had carried her note came up the lawn and spoke to her from without. There was no one in the house, and he had left it on the library-table. The pressure of those tender little arms was yet warm about the mother's neck; she glanced side-long at the sleeping child. "He shall never see that note!" she murmured, and slipped through the casement.

Accustomed to all rash and intrepid adventure during this summer, it was nothing for her to unmoor a boat, enter it, and lift the oars, not pausing to observe that it was the Arrow. Just then, however, a little wind ruffled down and shook the sail, a wind not quite favorable, but in which she could tack across and back; she drew in the oars, put to the proof all her new boat-craft, and recklessly dashed through the dark element that curled and seethed about her. She had to make but two tacks in that hour's impetuous progress, before the house rose, as it had frequently done before, glooming at but a

few rods' distance, and loading with odorous breath the air that tossed its vines ere stealing across the lake. She trembled now, and remembered that she alone of all the party had always unconsciously evaded entering Mr. Raleigh's house, had never seen the house nearer than now, and never been its guest. It was entering some dark, unknown place; it was to intrude on a sacred region. But the breeze hurried her along while she thought, and the next moment the keel was buried in the sand. There was no time to lose; she left the boat, ascended a flight of stone steps close at hand, and was in the garden. Low, ripe greenery was waving over her here, deep alluring shadows opening around, full fresh fragrance fanning idly to and fro and stealing her soul away. Beyond, the lake gleamed darkly, the water lapped gently, the wind sighed and fell like a fluttering breath. She would have lingered forever,—she dared not linger a moment. She brushed the dew from the heavy blossoms as she swept on, then the drenching branches swayed and closed behind her; she found a door ajar, and hastily entered the first room which appeared.

There were stray starbeams in this apartment; her eyes were accustomed to the gloom; she could dimly discern the great book-cases lining the wall,—an antique chair,—the glittering key-board of a grand-piano that stood apart, yet thrilling perhaps with recent harmonies,—a colossal head of Antinous, that self-involved dreamer, stone-entranced in a calm of passion. She had been feverishly agitated; but as this white silence dawned upon her, so strong, yet voluptuous, never sad, making in its masque of marble one intense moment eternal, some of the same power spread soothingly over her. She paused a moment to gather the thronging thoughts. How still the room was! she had not known that music was at his command before. How sweet the air that blew in at the window! what late flowers bore such pungent balm? That portrait, leaning half-startled from the frame, was it his mother? These books, were they

the very ones that had fed his youth? How everything was yet warm from his touch! how his presence yet lingered! how much of his life had passed into the dim beauty of the place! How each fresh waft from the blooms without came drowned in fine perfume, laden with delicious languor! What heaven was there! and, ah! what heaven was yet possible there!

Something that had flitted from the table in the draught, and had hovered here and there along the floor, now lay at her foot; she caught it absently; it was her letter. To snatch it from its envelope, and so tear it the more easily to atoms, was her first thought; but as suddenly she paused. Was it hers? Though written and sealed by her hand, had she any longer possession therein? Had she more authority over it than over any other letter that might be in the room? Absurd refinement of honor! She broke the seal. Yet stay! Was there no justice due to him? That letter which had been read long before the intended time, whose delivery any accident might have frustrated, whose writer might have recalled it,—did it demand no magnanimity of reply on her part? Had he now no claim to the truth from her? As she knew what he never would have told her an hour later, had she a right to recede from the position she had taken in response, simply because she could and he could not? Should she ignobly refuse him his right?

Whether this were a sophism of sin or the logic of highest virtue, she, who would have blotted out her writing with her heart's blood, did not wait to weigh.

"To him, also, I owe a duty!" she exclaimed, dropped the letter where she had found it, and fled,—fled, hurrying through all the bewildering garden-walks, down from the fragrance, the serenity, the bowery seclusion, from all this conspiring loveliness that tempted her to dally and commanded her to stay,—fled from this dream of passion, this region of joy,—fled forever, as she thought, out into the wide, chill, lonely night.

Pushing off the boat and springing in, once more the water curled beneath the parting prow, and she shot with her flashing sail and hissing wake heedlessly, like a phantom, past another boat that was making more slowly in to shore.

"This way, Helen," murmurs a subdued voice. "There are some steps, Mr. Laudersdale. Here we are; but it's dark as Erebus. Give me your hand; I'm half afraid; after that spectre that walked the water just now, these shadows are not altogether agreeable. There's the door,—careful housekeeper, this Mr. Raleigh! I wonder what McLean would say. Don't believe he'd like it."

"What made you come, then?" asks Helen, as they step within.

"Oh, just for the frolic; it was getting stupid, too. I suppose we've ruined our dresses. But there! we must hurry and get back. I didn't think it would take so long. He can't manage a boat so well as Roger," adds Mrs. McLean, in a whisper.

"Goodness!" exclaims Helen. "I can't see an inch of the way. We shall certainly deal devastation."

"I've been exploring a mantel-shelf; here's a candle, but how to light it? Haven't you a match, Mr. Laudersdale?"

That gentleman produces one from a little pocket-safe; it proves a failure,—and so a second, and a third.

"This is the last, Mrs. McLean. Have your candle ready."

The little jet of flame flashes up.

"Quick, Helen! a scrap of paper, quick!"

"I don't know where to find any. Here's a billet on the floor; the seal's broken; Mr. Raleigh don't read his letters, you know; shall I take it?"

"Anything, yes! My fingers are burning! Quick, it's the last match! There!"

Helen waves a tiny flambeau, the candle is lighted, the flame whirled down upon the hearth and trodden out.

"I wonder what it was, though," adds Mrs. McLean, stooping over it. "Some of our correspondence. No matter, then. Now for that Indian mail. Here,—no,

— this must be it. ‘Mr. Roger Raleigh,’ — ‘Roger Raleigh, Esq.,’ — that’s not it. ‘Day, Knight, & Co., for Roger Raleigh.’ Why, Mr. Laudersdale, that’s your firm. Aren’t you the Co. there? Ah, here it is, — ‘Mrs. Catherine McLean, care of Mr. Roger Raleigh.’ Doesn’t that look handsomely, Helen?” contemplating it with newly married satisfaction.

“Now you have it, come!” urges Helen.

“No, indeed! I must find that Turkish tobacco, to reward Mr. Laudersdale for his heroic exertions in our behalf.”

Mr. Laudersdale, somewhat fastidious and given to rigid etiquette, looks as if the exertions would be best rewarded by haste. Mrs. McLean takes the candle in hand and proceeds on a tour of the apartment.

“There! isn’t this the article? John says it’s pitiful stuff, not to be compared with Virginia leaf. Look at this meerschäum, Mr. Laudersdale; there’s an example. Prettily colored, is it not?”

“Now are you coming?” asks Helen.

“Would you? We’ve never been here without my worshipful cousin before; I should like to investigate his domestic arrangements. Needle and thread. Now what do you suppose he is doing with needle and thread? Oh, it’s that little lacework that Mrs. ——— Sketches! I wonder whom he’s sketching. You, Helen? Me? Upside down, of course. No, it’s ——— Yes, we may as well go. Come!”

And in the same breath Mrs. McLean blows out the candle and precedes them. Mr. Laudersdale scorns to secure the sketch; and holding back the boughs for Miss Heath, and assisting her down the steps, quietly follows.

Meantime, Mrs. Laudersdale has reached her point of departure again, has stolen up out of the white fog now gathering over the lake, slipped into her former place, and found all nearly as before. The candles had been taken away, so that light came merely from the hall and doorways. Some of the guests were in the brilliant dining-room, some in the

back-parlor. Mr. Raleigh, while Fate was thus busying herself about him, still sat motionless, one hand upon the sofa’s side, one on the back, little Rite still sleeping on his knee. Capua came and exchanged a few words with his master; then the colored nurse stepped through the groups, sought the child, and carried her away, head and arms hanging heavy with slumber. Still Mr. Raleigh did not move. Mrs. Laudersdale stood in the window, vivid and glowing. There were no others in the room.

“Where is Mrs. McLean?” asked Mary Purcell at the door, after the charade in which she had been engaged was concluded.

“Gone across the lake with Nell and Mr. Laudersdale for a letter,” replied Master Fred Heath, who had returned that afternoon from the counting-room, with his employer, and now sauntered by.

Mrs. Laudersdale started; she had not escaped too early; but then — Her heart was beating in her throat.

“What letter?” asked Mrs. Heath, with amiable curiosity, as she joined them.

“Do you know what letter, Mr. Raleigh?”

“One from India, Madame,” was his response.

“Strange! Helen gone without permission! What was in the letter, I wonder. Do you know what was in the letter, Mr. Raleigh?”

“Congratulations, and a recommendation of Mrs. McLean’s cousin to her good graces,” he said.

“Oh, it was not Helen’s, then?”

“No.”

“My young gentleman’s not in good humor to-night,” whispered Mrs. Heath to Miss Purcell, with a significant nod, and moving off.

“How did you know what was in Mrs. McLean’s letter, Sir?” asked Mary Purcell.

“I conjectured. In Mrs. Heath’s place, I should have known.”

“There they come! — you can always tell Mrs. McLean’s laugh. You’ve lost all the charades, Helen!”

They came in, very gay, and seemed at once to arouse an airier and finer spirit among the humming clusters. Mr. Laudersdale did not join his wife, but sat on the piazza talking with Mr. McLean. People were looking at an herbal, others coquetting, others quiet. Some one mentioned music. Directly afterward, Mr. Raleigh rose and approached the piano. Every one turned. Taking his seat, he threw out a handful of rich chords; the instrument seemed to diffuse a purple cloud; then, buoyed over perfect accompaniment, the voice rose in that one love-song of the world. What depth of tenderness is there from which the "Adelaide" does not sound? What secret of tragedy, too? Singing, he throbbled through it a vitality as if the melody surcharged with beauty grew from his soul, and were his breath of life, indeed. The thrilling strain came to penetrate and fill one heart; the passionate despair surged round her; the silence following was like the hand that closes the eyes of the dead.

Mr. Raleigh did not rise, nor look up, as he finished.

"How melancholy!" said Helen Heath, breaking the hush.

"All music should be melancholy," said he.

"How absurd, Roger!" said his cousin. "There is much music that is only intensely beautiful."

"Intense beauty at its height always drops in pathos, or rather the soul does in following it,—since that is infinite, the soul finite."

"Nonsense! There's that song, Number Three in Book One"——

"I don't remember it."

"Well, there's no pathos there! It's just one trill of laughter and merriment, a sunbeam and effect. Play it, Helen."

Helen went, and, extending her hands before Mr. Raleigh, played a couple of bars; he continued where she left it, as one might a dream, and, strangely enough, the little, gushing sparkle of joy became a phantom of itself, dissolving away in tears.

"Oh, of course," said Mrs. McLean, "you can make mouths in a glass, if you

please; but I, for one, detest melancholy! Don't you, Mrs. Laudersdale?"

Mrs. Laudersdale had shrunk into the shadow of the curtain. Perhaps she did not hear the question; for her reply, that did not come at once, was the fragment of a Provençal romance, sung,—and sung in a voice neither sweet nor rich, but of a certain personal force as potent as either, and a stifled strength of tone that made one tremble.

"We're all alone, we're all alone!
The moon and stars are dead and gone,
The night's at deep, the winds asleep,
And thou and I are all alone!

"What care have we, though life there be?
Tumult and life are not for me!
Silence and sleep about us creep:
Tumult and life are not for thee!

"How late it is since such as this
Had topped the height of breathing bliss!
And now we keep an iron sleep,—
In that grave thou, and I in this!"

Her voice yet shivered through the room, he struck a chord of dead conclusion, the curtain stirred, she emerged from the gloom and was gone.

Mr. Raleigh rose and bade his cousin good-night. Mrs. McLean, however, took his arm and sauntered with him down the lawn.

"I thought Capua came with you," she remarked.

"He returned in a spare wherry, some time since," he replied; and thereon they made a few paces in silence.

"Roger," said the little lady, taking breath preparatory to wasting it, "I thought Helen was a coquette. I've changed my mind. The fault is yours."

He turned and looked down at her with some surprise.

"You know we haven't much more time, and certainly"——

"Kate!"

"Yes,—don't scold!—and if you are going to propose, I really think you ought to, or else"——

"You think I ought to marry Miss Heath?"

"Why—I—well——Oh, dear! I wish I had held my peace!"

"That might have been advisable."

"Don't be offended now, Roger!"

"Is there any reason to suppose her—to suppose me"——

"Yes, there!" replied Mrs. McLean, desperately.

He was silent a moment.

"Good God, Kate!" said he, then, clasping his hands behind his head, and looking up the deep transparence of the unanswering night. "What a blessing it is that life don't last forever!"

"But it does, Roger," she uttered under her breath,—terrified at his abrupt earnestness, and unwitting what storm she had aroused.

"The formula changes," he replied, with his old air, and retracing their steps.

The guests were all gone. Helen Heath was eating an ice; he bent over her chair and said,—

"Good-night, Miss Helen!"

"Oh, good-night, Mr. Raleigh! You are going? Well, we're all going soon. What a glorious summer it has been! Aren't you sorry we must part?"

"Why must we part?" he asked in a lower tone. "Where is the necessity of our parting? Why won't you stay forever, Helen?"

She turned and surveyed him quickly, while a red—whether of joy or anger he could not tell—flashed up her cheek.

"Do you mean"——

"Miss Heath, I mean, will you marry me?"

"Mr. Raleigh, no!"

With a bow he passed on.

Mr. Raleigh trimmed the Arrow's sail, for the breeze had sunk again, and swept slowly out with one oar suspended. A waning moon was rising behind the trees, it fell upon the little quay that had been built that summer, and seemed with its hollow beams still to continue the structure upon the water. The Arrow floated in the shadow just beyond. Mr. Raleigh's eyes were on the quay; he paused, nerveless, both oars trailing, a cold damp starting on his forehead. Some one approached as if looking out upon the dim sheet,—

some one who, deceived by the false light, did not know the end to be so near, and walked forward firmly and confidently. Indeed, the quay had been erected in Mr. Laudersdale's absence. The water was deep there, the bottom rocky.

"Shout and warn him of his peril!" urged a voice in Mr. Raleigh's heart.

"Let him drown!" urged another voice.

If he would have called, the sound died a murmur in his throat. His eyes were on the advancing figure; it seemed as if that object were to be forever branded on the retina. Still as he gazed, he was aware of another form, one sitting on the quay, unseen in shadow like himself, and seeing what he saw, and motionless as he. Would Mrs. Laudersdale dip her hands in murder? It all passed in a second of time; at the next breath he summoned every generous power in his body, sprang with the leap of a wild creature, and confronted the recoiling man. Ere his foot touched the quay, the second form had glided from the darkness, and seized her husband's arm.

"A thousand pardons, Sir," said Mr. Raleigh, then. "I thought you were in danger. Mrs. Laudersdale, good-night!"

It was an easy matter to regain the boat, to gather up his oars, and shoot away. Till they faded from sight, he saw her still beside him; and so they stood till the last echo of the dipping oars was muffled in distance and lost.

Summer-nights are brief; breakfast was late on the next morning,—or rather, Mrs. Laudersdale was late, as usual, to partake it.

"Shall I tell you some news?" asked Helen Heath.

She lifted her heavy eyes absently.

"Mrs. McLean has made her husband a millionaire. There was an Indian mail yesterday. Mr. Raleigh read his letters last night, after going home. His uncle is dying,—old, unfortunate, forlorn. Mr. Raleigh has abandoned everything, and must hew his own way in the world from this day forward. He left this morning for India."

When you saw Mrs. Laudersdale for the first time, at a period thirteen years later, would you have imagined her possessed of this little drama? You fancy now that in this flash all the wealth of her soul burned out and left her a mere volition and motive power? You are mistaken, as I said.

[To be continued.]

GONE.

A SILENT, odor-laden air,
 From heavy branches dropping balm ;
 A crowd of daisies, milky fair,
 That sunward turn their faces calm,
 So rapt, a bird alone may dare
 To stir their rapture with its psalm.

So falls the perfect day of June,
 To moonlit eve from dewy dawn ;
 With light winds rustling through the noon,
 And conscious roses half-withdrawn
 In blushing buds, that wake too soon,
 And flaunt their hearts on every lawn.

The wide content of summer's bloom,
 The peaceful glory of its prime, —
 Yet over all a brooding gloom,
 A desolation born of time,
 As distant storm-caps tower and loom
 And shroud the sun with heights sublime.

For they are vanished from the trees,
 And vanished from the thronging flowers,
 Whose tender tones thrilled every breeze,
 And sped with mirth the flying hours ;
 No form nor shape my sad eye sees,
 No faithful spirit haunts these bowers.

Alone, alone, in sun or dew !
 One fled to heaven, of earth afraid ;
 And one to earth, with eyes untrue
 And lips of faltering passion, strayed :
 Nor shall the strenuous years renew
 On any bough these leaves that fade.

Long summer-days shall come and go, —
 No summer brings the dead again ;
 I listen for that voice's flow,
 And ache at heart, with deepening pain ;
 And one fair face no more I know,
 Still living sweet, but sweet in vain.

EXPRESSION.

THE law of expression is the law of degrees, — of much, more, and most.

Nature exists to the mind not as an absolute realization, but as a condition, as something constantly becoming. It is neither entirely this nor that. It is suggestive and prospective; a body in motion, and not an object at rest. It draws the soul out and excites thought, because it is embosomed in a heaven of possibilities, and interests without satisfying. The landscape has a pleasure to us, because in the mind it is canopied by the ideal, as it is here canopied by the sky.

The material universe seems a suspense, something arrested on the point of transition from nonentity to absolute being, — wholly neither, but on the confines of both, which is the condition of its being perceptible to us. We are able to feel and use heat, because it is not entirely heat; and we see light only when it is mixed and diluted with its opposite. The condition of motion is that there be something at rest; else how could there be any motion? The river flows, because its banks do not. We use force, because it is only in part that which it would be. What could we do with unmixed power? Absolute space is not cognizable to the mind; we apprehend space only when limited and imprisoned in geometrical figures. Absolute life we can have no conception of; the absolute must come down and incarnate itself in the conditioned, and cease to be absolute, before it comes within the plane of our knowledge. The unconscious is not knowable; as soon as it is thought, it becomes conscious.

And this is God's art of expression. We can behold nothing pure; and all that we see is compounded and mixed. Nature stands related to us at a certain angle, and a little remove either way — back toward its grosser side, or up toward its ideal tendency — would place it beyond our ken. It is like the rainbow, which is a partial and an incomplete develop-

ment, — pure white light split up and its colors detached and dislocated, and which is seen only from a certain stand-point.

We remark, therefore, that all things are made of one stuff, and on the principle that a difference in degree produces a difference in kind. From the clod and the rock up to the imponderable, to light and electricity, the difference is only more or less of selection and filtration. Every grade is a new refinement, the same law lifted to a higher plane. The air is earth with some of the coarser elements purged away. From the zoöphyte up to man, more or less of spirit gives birth to the intervening types of life. All motion is but degrees of gravitating force; and the thousand colors with which the day paints the earth are only more or less of light. All form aspires toward the circle, and realizes it more or less perfectly. By more or less of heat the seasons accomplish their wonderful transformations on the earth and in the air. In the moral world, the eras and revolutions that check history are only degrees in the development of a few simple principles; and the variety of character that diversifies the world of men and manners springs from a greater or less predominance of certain individual traits.

This law of degrees, pushed a little farther, amounts to detachment and separation, and gives birth to contrast and comparison. This is one aspect in which the law manifests itself in the individual. The chairs and the pictures must come out from the wall before we can see them. The tree must detach itself from the landscape, either by form or color, before it becomes cognizable to us. There must be irregularity and contrast. Our bodily senses relate us to things on this principle; they require something brought out and disencumbered from the mass. The eye cannot see where there is no shade, nor the hand feel where there is no inequality of surface, nor the palate

taste where there is no predominance of flavor, nor the ear hear where there is no silence. Montaigne has the following pertinent passage, which also comes under this law: — "Whoever shall suppose a pack-thread equally strong throughout, it is utterly impossible it should break; for where will you have the breaking to begin? And that it should break altogether is not in Nature."

The palpableness and availableness of an object are in proportion as it is separated from its environments. We use water as a motive power by detaching a part from the whole and placing ourselves in the way of its tendency to unite again. All force and all motion are originated on this principle. It is by gravity that we walk and move and overcome resistance, and, in short, perform all mechanical action; yet the condition is that we destroy the settled equilibrium of things for the moment, and avail ourselves of the impulse that restores it again. The woodman chops by controlling and breaking the force which he the next moment yields to.

So in higher matters. We are conscious of pain and pleasure only through the predominance of some feeling. There must be degrees and differences again, and some part more relieved than another, to catch an expression on. Entire pain or an equal degree of physical suffering in every part of the body would be a perfect blank, complete numbness; and entire pleasure we could not be conscious of, and for the same reason. How could there be any contrast, any determining hue, any darker or brighter side? If the waters of the earth were all at the same altitude, how could there be any motion among the parts? Hence the fullest experience is never defined, and cannot be spoken. It is like the sphere, which, as it merges all possible form in itself, is properly of no form, as white is no color, and cannot be grasped and used as parts and fragments can; there are no angles and outlines to define and give emphasis.

Hence the pain or pleasure that is

definitely shaped in the consciousness and that can be spoken is necessarily partial, and does not go the full circle of our being. We are not conscious of our health and growth, because they are general and not local, and are not rendered prominent by contrast.

The dictionary and the sciences, in fact the whole province of human knowledge, hinge upon this principle. To know a thing is but to separate and distinguish it from something else; and classifying and systematizing are carrying the same law from the particular to the general. We cannot know one thing alone; two ideas enter into every distinct act of the understanding,—one latent and virtual, the other active and at the surface. To use familiar examples, we cannot distinguish white without having known black, nor evil without having known good, nor beauty without having known deformity. Thus every principle has two sides, like a penny, and one presupposes the other, which it covers.

When we come to the intellect and the expression of thought, the same law of detachment and separation prevails. In contemplation and enjoyment there are unity and wholeness; but in thinking, never. Our thoughts lie in us, like the granite rock in the earth, whole and continuous, without break or rupture, and shaped by a law of the spheres; but when they come to the surface in utterance, and can be grasped and defined, they lose their entireness and become partial and fragmentary, and hint a local and not a general law. We cannot speak entire and unmixed truth, because utterance separates a part from the whole, and consequently in a measure distorts and exaggerates and does injustice to other truths. The moment we speak, we are one-sided and liable to be assailed by the reverse side of the fact. Hence the hostility that exists between different sects and religions; their founders were each possessed of some measure of truth, and consequently stood near to a common ground of agreement, but in the statement it became vitiated and partial;

and the more their disciples have expounded and sought to lodge their principles in a logical system, the more they have diverged from the primitive sentiment. If the sects would let logic alone and appeal only to the consciousness of men, there would be no very steep difference between them, and each would promote the good of the other. But the moment we rest with the reason and the understanding there must be opposition and divergence, for they apprehend things by parts, and not by the mass; they deal with facts, and not with laws.

The fullest truth, as we have already hinted, never shapes itself into words on our lips. What we can speak is generally only foam from the surface, with more or less sediment in it; while the pure current flows untouched beneath. The deepest depths in a man have no tongue. He is like the sea, which finds expression only on its shoals and rocks; the great heart of it has no voice, no utterance.

The religious creeds will never be reconciled by logic; the more emphatically they are expressed, the more they differ. Ideas, in this respect, resemble the trees, which branch and diverge more and more widely as they proceed from the root and the germinal state. Men are radically the same in their feelings and sentiments, but widely different in their logic. Argument is reaction, and drives us farther and farther apart.

As the intellect expresses by detachment and contrast, it follows, that, the more emphatically an idea is expressed, the more it will be disencumbered of other ideas and stand relieved like a bust chiselled from a rock. It is suggestive and prospective, and, by being detached itself, will relieve others and still others. It makes a breach in the blank wall, and the whole is now pregnable. New possibilities are opened, a new outlook into the universe. Nothing, so to speak, has become something; one base metal has been transmuted into gold, and so given us a purchase on every other. When one thought is spoken, all others

become speakable. After one atom was created, the universe would grow of its own accord. The difficulty in writing is to utter the first thought, to break the heavy silence, to overcome the settled equilibrium, and disentangle one idea from the embarrassing many. It is a struggle for life. There is no place to begin at. We are burdened with unuttered and unutterable truth, but cannot, for the life of us, grasp it. It is a battle with Chaos. We plant shaft after shaft, but to no purpose. We get an idea half-defined, when it slips from us, and all is blank again in that direction. We seem to be struggling with the force of gravity, and to come not so near conquering as to being conquered. But at last, when we are driven almost to despair, and in a semi-passive state inwardly settling and composing ourselves, the thought comes. How much is then revealed and becomes possible! New facts and forces are commanded by it; much of our experience, that was before meaningless and unavailable, assumes order and comes to our use; and as long as the breach can be kept open and the detachment perfect, how easily we write! But if we drop the thread of our idea without knotting it, or looping it to some fact,—if we stop our work without leaving something inserted to keep the breach open, how soon all becomes a blank! the wound heals instantly; the equilibrium which we had for a moment arrested again asserts itself, and our work is a fragment and must always remain so. Neither wife nor friends nor fortune nor appetite should call one from his work, when he is possessed by this spirit and can utter his thought. We are caught up into these regions rarely enough; let us not come down till we are obliged.

The fullest development of this law, as it appears in the intellect, is Analogy. Analogy is the highest form of expression, the poetry of speech; and is detachment carried so far that it goes full circle and gives a sense of unity and wholeness again. It is the spherul form appearing in thought. The idea is not only detached,

but is wedded to some outward object, so that spirit and matter mutually interpret each other. Nothing can be explained by itself, or, in the economy of Nature, is explained by itself. The night explains the day, and the day interprets the night. Summer gives character to winter, and in winter we best understand the spirit of summer. The shore defines and emphasizes the sea, and the sea gives form and meaning to the shore.

To measure grain, we must have a bushel; and to confine water and air, we must have other than water and air to do it with. The bird flies by balancing itself against something else; the mountain is emphasized by the valley; and one color is brought out and individualized by another. Our mood of yesterday is understood and rendered available by our mood of to-day; and what we now experience will be read aright only when seen from the grounds of an opposite experience. Our life here will not be duly appreciated and its meaning made clear till seen from the life beyond.

The spiritual canopies the material as the sky canopies the earth, and is reached and expressed only by its aid. And this is Analogy,—the marrying of opposite facts, the perception of the same law breaking out in a thousand different forms,—the completing of the circle when only a segment is given. The visible and the invisible make up one sphere of which each is a part. We are related to both; our root is in one, our top in the other. Our ideas date from spirit and appear in fact. The ideal informs the actual. This is the way the intellect detaches and gets expressed. It is not its own interpreter, and, like everything else, is only one side of a law which is explained by the other side. The mind is the cope and the world the draw, to use the language of the moulder. The intellect uses the outward, as the sculptor uses marble, to embody and speak its thought. It seizes upon a fact as upon a lever, to separate and lift up some fraction of its meaning. From Nature, from science, from experience, it traces laws, till they

appear in itself, and thus finds a thread to string its thought on.

Without Analogy, without this marrying of the inward and the outward, there can be no speech, no expression. It is a necessity of our condition. Spirit is cognizable by us only when endowed with a material body; so an idea or a feeling can be stated only when it puts on the form and definiteness of the sensuous, the empirical. Hence the highest utterance is a perpetual marrying of thought with things, as in poetry,—a lifting up of the actual and a bringing down of the ideal,—giving a soul to the one and a body to the other. This takes place more or less in all speech, but only with genius is it natural and complete. Ordinary minds inherit their language and form of expression; but with the poet, or natural sayer, a new step is taken, and new analogies, new likenesses must be disclosed. He is distinguished from the second-hand man by the fulness and completeness of his expression; his words are round and embrace the two hemispheres, the actual and the ideal. He points out analogies under our feet, and presents the near and the remote wedded in every act of his mind. Nothing is old with him, but Nature is forever new like the day, and gives him pure and fresh thoughts as she gives him pure and fresh water. Hence the expressiveness of poetry and its power over the human heart. It differs from prose only in degree, not in essence. It goes farther and accomplishes more. It is the blossom of which prose is the bud, and comes with sincerity, simplicity, purity of motive, and a vital relation to Nature.

As men grow earnest and impassioned, and speak from their inmost heart, and without any secondary ends, their language rises to the dignity of poetry and employs tropes and figures. The more emphatic the statement, the more the thought is linked with things. The ideas of men in their ordinary mood are only half-expressed, like a stone propped up, but still sod-bound; but when they are fired and glowing with the heat of some

great passion, the operation of the mind is more complete and the detachment more perfect. The thought is not only evolved, but is thrown into the air, — disencumbered from the understanding, and set off against the clear blue of the imagination. Hence the direct and unequivocal statement of a man writing under the impulse of some strong feeling, or speaking to a thrilled and an excited audience. Nature, the world, his experience, is no longer hard and flinty, but plastic and yielding, and takes whatever impress his mind gives it. Facts float through his head like half-pressed grapes in the wine-press, steeped and saturated with meaning, and his expression becomes so round and complete as to astonish himself in his calmer moments.

People differ not so much in material as in this power of expressing it. The secret of the best writer lies in his art. He is not so much above the common stature; his experience is no richer than ours; but he knows how to put handles to his ideas, and we do not. Give a peasant his power of expression, or of welding the world within to the world without, and there would be no very precipitous inequality between them. The great writer says what we feel, but could not utter. We have pearls that lie no deeper than his, but have not his art of bringing them to the surface. We are mostly like an inland lake that has no visible outlet; while he is the same lake gifted with a copious channel.

The secret seems to lie in the temperament and in the transmuting and modifying medium. More or less of filtration does it all. Nature makes the poet, not by adding to, but by taking from; she takes all blur and opacity out of him; condenses, intensifies; lifts his nerves nearer the surface, sharpens his senses, and brings his whole organization to an edge. Sufficient filtration would convert charcoal into diamonds; and we shall everywhere find that the purest, most precious substances are the result of a refining, sorting, condensing process.

Our expression is clogged by the rub-

bish in our minds, the foolish personal matters we load the memory with. Ideas are not clearly defined, as the drift-wood in the river spoils the reflected image. We feel nothing intensely; our experience is a blur without distinct form and outline; in short, we are incumbered with too much clay. Hence, when a slow disease burns the dross and earth out of one, how keen and susceptible his organization becomes! The mud-wall grows transparent. Our senses lose their obtuseness, our capacity both for experience and expression is enlarged, and we not only live deeper, but nearer the surface.

It appears, then, that, as a general rule, our ability to express ourselves is in proportion to the fineness of our organization. Women, for this reason, are more adequate in expressing themselves than men; they stand removed one degree farther from the earth, and are conscious of feelings and sentiments that are never defined in our minds; the detachment is more perfect; shades and boundaries are more clearly brought out, and consequently the statement is more round and full.

One's capacity for expression is also affected by his experience, — not experience in time and space, but soul-experience, — joy, sorrow, pleasure, pain, love, hope, aspiration, and all intense feeling by which the genesis of the inward man is unfolded. What one has lived, that alone can he adequately say. The outward is the measure of the inward; it is as the earth and sky: so much earth as we see, so much sky takes form and outline. The spiritual, it is true, is illimitable, but the actual is the measure of that part of which we are made conscious. Experience furnishes the handle, but the intellect must supply the blade.

Intense feeling of any kind afterward gives us more entire command over some thought or power within us. Every inundation of passion enriches and gives us a deeper soil. The most painful experiences are generally the most productive. Cutting teeth is by no means a pleasant operation, yet it increases our

tools. Our lives are not thoroughly shaped out and individualized till we have lived and suffered in every part of us. A great feeling reveals new powers in the soul, as a deep breath fills air-cells in the lungs that are not reached by an ordinary inhalation. Love first revealed the poetic gift in Novalis; and in reading the *Autobiography of Goethe*, one can but notice the quickening of his powers after every new experience: a new love was a new push given the shuttle, and a new thread was added.

When we come nearer the surface of our subject and speak of language, we remark that pure English, so far as such is possible, is the most convenient and expressive. Saxon words cannot be used too plentifully. They abridge and condense and smack of life and experience, and form the nerve and sinew of the best writing of our day; while the Latin is the fat. The Saxon puts small and convenient handles to things, handles that are easy to grasp; while your ponderous Johnsonian phraseology distends and exaggerates, and never peels the chaff from the wheat. Johnson's periods act like a lever of the third kind,—the power applied always exceeds the weight raised; while the terse, laconic style of later writers is eminently a lever on the first principle, and gives the mind the utmost purchase on the subject in hand.

The language of life, and of men who speak to be understood, should be used more in our books. A great principle anchored to a common word or a familiar illustration never loses its hold upon the mind; it is like seeing the laws of Astronomy in the swing of a pendulum, or in the motion of the boy's ball,—or the law of the tides and the seasons appearing in the beating of the pulse, or in inspiring and expiring the breath. The near and the remote are head and tail of the same law, and good writing unites them, giving wholeness and continuity.

The language of the actual and the practical applied to the ideal brings it at once within everybody's reach, tames it, and familiarizes it to the mind. If the writers on metaphysics would deal more in our every-day speech, use commoner illustrations, seek to find some interpreter of the feelings and affections of the mind in Nature, out of the mind itself, and thus keep the life-principle and the thought-principle constantly wedded, making them mutually elucidate and explain each other, they would be far more fruitful and satisfying. Cousin is the only writer we know of who has made any attempt at this, and we believe him to be the most consistent and intelligent metaphysician that has yet appeared. Surely, one cannot reasonably object to the height in the heavens from which a man steals his fire, if he can feed it with his own fuel and cook meat with it. Though the genealogy of our ideas be traceable to Jove and Olympus, they must marry their human sisters, the facts of common life and experience, before they can be productive of anything positive and valuable.

Proverbs give us the best lessons in the art of expression. See what vast truths and principles informing such simple and common facts! It reminds one of suns and stars engraved on buttons and knife-handles. Proverbs come from the character, and are alive and vascular. There is blood and marrow in them. They give us pocket-editions of the most voluminous truths. Theirs is a felicity of expression that comes only at rare moments, and that is bought by long years of experience.

There is no waste material in a good proverb; it is clear meat, like an egg,—a happy result of logic, with the logic left out; and the writer who shall thus condense his wisdom, and as far as possible give the two poles of thought in every expression, will most thoroughly reach men's minds and hearts.

ITALIAN EXPERIENCES IN COLLECTING "OLD MASTERS."

As the taste for collecting objects of art is rapidly developing in America, it may be not without profit to point out some of the pitfalls which attend the amateur in this pursuit, especially in Italy, that exhaustless quarry of "originals" and "old masters"; though it should be remembered that a work of art may be both original and old and very bad too,—its intrinsic worth being a separate question from its age and authenticity. The results given are drawn from an actual experience of many years.

The most obvious risk is from the counterfeiter,—not from the vulgar shams distributed so widely over the world from the well-known *manufactories* of paintings in France, England, and other parts, which can deceive only the most ignorant or credulous, but from talent itself debased to forgery and trickery.

Many of the antique bronzes, terra-cottas, vases, classical and mediæval relics, so jealously cared for in the collections of Europe, are the clever imitations of a poor and honest artist in one of the Italian cities, whose miniature studio might almost be put inside one of our old-fashioned omnibuses. His designs, taken from genuine antiques, are reproduced with fidelity, and the coatings and marks of time counterfeited by chemical means and skilful manipulation. He sells his productions as imitations, at prices that barely provide him with daily bread, eking out his subsistence by repairs and restorations, in which he is equally happy. Living in obscurity, without the capital or sagacity to make himself known to the public, he is at the mercy of those who are interested in keeping him in privacy and buying his artistic labors at the wages of a clodhopper. His own responsibility goes not beyond fulfilling orders for the imitation of certain objects, the process of which he frankly explains to the inquisitive visitor. But, once in dishonest hands, antiquity and

authenticity replace modernism and imitation.

There are two ways of seduction and deceit. The one and safer for the operator is the *suggestive*, in which appearances are made by consummate tact and artful flattery to excite the imagination of the buyer so that he is led to believe what he desires without compromising the agent. The other is positive intrigue and absolute lying, so nicely done that the wealthy amateur is fleeced often in a fashion that confers a pleasure, and which, though he may subsequently detect it, gives him but a lame chance at redress. In most instances he deserves none. For, stimulated by vanity or fashion, without any true regard for art, he has offered so large a premium for a name, that it would indeed be wonderful, if a corresponding supply were not created. The living artist is sometimes sorely tempted to pander to illusions to secure that appreciation which the world gives more lavishly to fashion than to merit. Michel Angelo tested this disposition, even more current in his time than now; though some say it was done unknown to him. At all events, having finished the statue of a Cupid, after breaking off an arm, it was buried, and in due time discovered, disinterred, and brought to the notice of a distinguished Roman dignitary, who pronounced it to be a genuine antique and paid a large price for it; well pleased, as he had reason to be, with his prize. But afterwards, the deception being exposed, and the proof by means of the missing arm given that it was the work of the then unknown Florentine sculptor, the disenchanted connoisseur was furiously indignant, and disposed to take prompt vengeance upon the parties concerned.

To come back to our own day. Let us suppose a rich collector to have arrived in some well-known Italian market for art,—picture-jockeying is much the same everywhere,—in pursuit of "orig-

inals." Great is the commotion among dealers and their *sensali* or jackals. These latter are versed in intrigue and mystification, with enough intelligence to tell a good picture from a bad one, and a parrot-like acquaintance with names and schools. They are of all classes, from the decayed gentleman and artist, to shopkeepers, cobblers, cooks, and tailors, who find in the large commissions gained a temptation to forsake their petty legitimate callings for the lottery-like excitements and *finesse* of picture-dealing. No sooner has the stranger gone to his hotel than a watch is put upon his movements, and bribery and cajolery used to get access to him. It is the *sensale's* business to discover and offer pictures. He is supposed to know the locality of every one, good or bad, in his neighborhood. However jealous of each other, all are loyally pledged together to take in the stranger. Leagued with the dealer, artist, owner, courier, or servant, with any one, in fact, that by any possibility can stand between the buyer and his object, it has become almost an impossibility, especially for transient visitors, to purchase anything whatever without paying a heavy toll to intermediates. When the conspiracy is widely extended, the augmentation of price above what would be required in direct dealing with the owner is sometimes double or even quadruple. Occasionally, however, by way of compensation for their general evil, the *sensali*, having scented a prize, offer it first to the amateur, in view of their own increase of gain over what the dealer would allow. In this way, good pictures not unfrequently escape the merchant, and reach the collector at a lower price than if they had gone directly to the former.

The *sensali* are not without their use in another respect. So indirect and underhand is the Italian's mode of dealing in these matters, and so eccentric his notions as to value, that a foreigner is apt to be speedily disgusted or driven away by the magnitude of demands which in reality the seller never expects to realize. Hence the negotiation is best done

through an agent, the buyer having fixed his price, leaving the *sensale* to make what he can for himself. No purchaser, however, should give heed to any statement about the history or authenticity of the works offered to him through such channels, but rely both for value and facts upon his own resources; otherwise he will be deceived to an extent that would appear almost fabulous to the uninitiated.

Such are the preliminary difficulties that beset the amateur. We will suppose him in connection with the seller, and trace his progress. First, the quality of his judgment and the impressibility of his imagination are tested by a series of experiments as delicate as the atmospherical gauges of a barometer. He is of course not to be entrapped by copies or fabrications. He has a shrewd distrust of dealers, and therefore prefers to buy family-pictures or originals directly from chapels and convents. All Italians have a patriotic pride in getting rid of trash at the expense of the foreigner. The more common baits to entrap—by bringing pictures mysteriously boxed, grandly baptized, and liberally decorated with aristocratic seals and eloquent with academical certificates, anointed with refined flattery and obsequious courtesy—having failed, his *Eccellenza* being too knowing to be seduced into buying the ostentatiously furbished-up *roba* of shops, they set about to accommodate him with originals from first hands. By substituting old frames for new, dirtying the pictures, and other ingenious processes familiar to the initiated, and then putting them out to board in noble villas, antique palaces, or other localities the most natural for good pictures to be *discovered* in, spiced with a romance of decayed family-grandeur,—by employing new agents, and by hints sagaciously conveyed to the buyer, his curiosity is excited, hopes raised, and, finally, with much trouble and enhanced expense, he triumphantly carries off the very pictures which in a shop he could not be tempted to look at for fear of being caught with chaff, but which now, from a well-

got-up romance, have acquired a peculiar value in his eyes. Not that this sort of delicate mystification is reserved exclusively for foreigners. For we have detected in an altar-piece, borne away as a great prize by an Italian friend from a secluded little chapel attached to a noble villa in the vicinity of Florence, a worthless specimen of an old painter, from one of the secret depositories of the city, which had long been wholly unsalable on any terms.

Honest dealing exists in Italy, as elsewhere, and there are men whose statements may safely be received. But let the purchaser be cautious when led into out-of-the-way places to see newly found originals, and be slow to give heed to stories of churches being permitted to sell this or that work of art because they have a *façade* to repair or an altar to decorate,—and particularly if there be said anything of an inheritance to divide, or a sad tale of family distress requiring the sacrifice of long-cherished treasures, backed up by a well-gotten-up pantomime of unlockings and lockings, passages through mysterious corridors and vast halls, cautious showings amid a crowd of family-retainers or a retinue of monks. Sometimes the most wary is thus seduced into offering tenfold its worth for a common object thus seen by a carefully arranged light and with artificial surroundings.

Many good pictures are still to be had in Italy, if properly approached by those who know thoroughly the habits of the country. There are, however, but two means of procuring them: either to pay their full value as fixed by rival collectors, or to secure them by fortuitous circumstances for trifling sums. The extraordinary chances of discovery and the extreme variations of price attending this pursuit are curious and instructive. A few examples are worth relating. In 1856, a small picture, by Niccolò d'Alunno, was sold in Florence, by an artist to a dealer, for forty dollars; in a few weeks resold to an Englishman for five hundred; exhibited at the Manchester Exhibition, whence it subsequently passed into the

gallery of a distinguished personage for twenty-five hundred dollars. The "Leda" of Leonardo, repainted from motives of prudery by the great-grandfather of Louis-Philippe, was bought at the sale of that ex-king's pictures in Paris, in 1849, for thirty dollars, restored to its primitive condition, and sold, we are informed, for one hundred thousand francs. Ten years ago, an Angel, by the same artist, was found in the old-clothes market at Florence by an artist, bought for a few pence, cleaned and sold to Prince Galitzin for twenty-two thousand francs. The "Fortune" of Michel Angelo, or what was supposed to be, not long since was discovered in the same locality in a disastrous condition, secured for a few shillings, put in such order as was possible, and parted with to a French gentleman for three hundred dollars and a pension of one dollar a day during the lives of the seller and his son. Quite recently one of Correggio's most beautiful works was discovered under the canvas of a worthless picture acquired at a public auction in Rome for a few dimes, at the sale by a princely family of discarded pictures, and resold by its fortunate discoverer for fifteen thousand dollars, although the original proprietor instituted a suit against him for its recovery, but without success. In Florence, within three years past, a fine portrait, by Titian, of the Doge Andrea Gritti, was picked out from a large lot of worthless canvases for six dollars. The Madonna del Gran Duca, at the Pitti, was bought by the father of the late Grand Duke, with some other pictures, of a widow, for a few dollars. Instances like these might be multiplied, to show that in all times prizes do strangely and unexpectedly occur, and that pictures in their fortunes resemble their authors, often passing from extreme poverty into princely homes.

The changes in the money value placed upon the same works in different epochs are also curious. Indeed, a history of the *caprices* of art would be vastly entertaining. In 1740, at the sale in Paris of M. Crozat's collection, a drawing by Rapha-

el brought only ten francs. The same drawing, at the sale of the King of Holland's gallery, in 1850, fetched fourteen thousand francs. For the "Ezekiel," Raphael, in 1510, had but eight *scudi d'oro*, equivalent now to thirty dollars. At present, it would bring a fabulous sum, if sold. Within the memory of those now living, gold background pictures of the schools of Giotto and his successors, owing to the contempt the pseudo-classical French taste had excited for them, were brought out of suppressed churches and convents and publicly burned to obtain the trifling amount of gold which remained in the ashes. Amateurs are now more inclined to pay their weight in gold for such as have escaped the ravages of time and Vandalism; and the same government that permitted this destruction in 1859 passed stringent decrees to prevent their leaving the country, sequestering all in public buildings as national property.

Without cautious study and much well-paid-for experience, the stranger has small chance of successfully coping with the artifices that beset his every step. He must be well-grounded in the history of Italian painting, and possess a practical knowledge of the technical execution of its various masters. Haste and ignorance, united to wealth and vanity, are a rich mine for the *sensali*. To such collectors America — not to speak of Europe — owes many of its galleries of great names, to the very natural astonishment and skepticism of the spectators and the defamation of great reputations. Many of these purchases are the speculations of couriers, who, having artfully inoculated their employers with a taste for originals, take care to supply the demand, greatly to the benefit of their own pockets and the gratitude of those with whom they bring their masters into connection. We have been called by a countryman to admire his gallery of Claudes, Poussins, Rembrandts, Murillos, and Titians, for which he had expended a princely sum, but which there was no difficulty in recognizing as the shop *roba* got up ex-

pressly to entrap the unwary. One picture, worth, perhaps, for mere decoration, fifty dollars, had been secured as a great favor for twenty-two hundred dollars, the "last price" asked for it being three thousand. Another, by a feeble artist of the Carlo Dolce school, had been converted, by a substitution of names and sundry touchings-up, into a brilliant Guercino, at the cost of nearly one thousand dollars, of which the owner got about one-third, the confederates pocketing the rest.

Some amateurs deceive themselves after a manner which acquits the dealer of any participation in their illusions. A gentleman entered a well-known studio in Florence, not many years since, and inquired the price of a picture.

"Sixty dollars: the painting is by Furini," was the reply.

"I will take it," said the gentleman, eagerly insisting upon paying for it on the spot; which was no sooner done, than he turned round to the amused artist and triumphantly exclaimed, "Do you know you have sold me a Murillo for nothing?"

Benvenuti, President of the Academy of Florence, was once asked to attest the originality of an Andrea brought to him by some speculators. "I should be happy to gratify you, gentlemen," he replied, "but unfortunately I saw the picture painted." Nevertheless, certificates were obtained from more facile authorities, and the painting officially baptized for a market.

Certificates and documents need to be received as cautiously as the pictures themselves; perhaps more so, — for they are more easily forged. When genuine, the former are valuable only as they are the opinions of honest and competent judges; and both are trustworthy only so far as they are attached to the pictures to which they legitimately belong.

Genuine pictures have been sold and their documentary evidence kept for skilful imitations. We have even detected in certificates the fraudulent substitution of names. And sometimes, when honestly given, their testimony is of no value. One professional certificate in our possession,

of the last century, ascribes the portrait in question to Masaccio or Santi di Tito: as sensible a decision as if an English critic had decided that a certain picture of his school was either by Hogarth or Sir Thomas Lawrence. Cases are indeed rare, even in the public galleries, in which, outside of the picture itself, there is any trustworthy historical testimony as to its genealogy.

Counterfeits of the old masters of the later Italian schools, supported by false evidence, have at various times deceived good judges and obtained posts of honor in the galleries of Europe. Even when detected, their owners do not always repudiate their spurious treasures. They give their collections the benefit of doubts or of public ignorance. The most noted imitator of this class was Micheli of Florence. In view of his success and the use for a time made of his works, he must rank as a forger, though they are now in esteem solely for their intrinsic cleverness. Some still linger in remote galleries, with the savor of authenticity about them. A Raphael of his make long graced the Imperial Gallery of Russia. He did not confine himself to literal repetitions, but concocted new "originals" by combining parts of several pictures in worm-eaten panels or time-stained canvases, with such variations of motive or design as their supposed authors would naturally have made in repeating their ideas in fresher combinations,—sometimes leaving portions unfinished, ingeniously dirtying their surfaces, and giving to them that cracked-porcelain appearance common to the old masters. One thus prepared was bought at his studio for one hundred dollars, consigned to a priest in the country, in due time *discovered*, and the rumor of a great master in an exceedingly dirty and somewhat dilapidated state, but believed to be intact beneath the varnishes and grime of centuries, brought to the ears of a Russian, who after a delicate and wearisome negotiation obtained it for eight hundred dollars, and perhaps paid half as much more to the manufacturer for cleaning and restoring it.

Another sort of deception is the alteration of pictures by artists less-known or of inferior reputations to suit more fashionable and profitable names. In this way many works of much local interest, and often indeed of equal merit to those they are made to represent, are exterminated, to the serious detriment of the history of art. Lombardy, Umbria, and the Legations especially have suffered in this way.

Though no deception be intended, if pedigrees are lost, criticism is often sorely perplexed to decide upon authorship. Out of the multitudes of pictures in the European galleries, which are so decidedly baptized in catalogues, the public would be surprised to learn how few comparatively can be historically traced to their authors. The majority are named upon the authority of local judges, whose acquaintance with art may be limited to one speciality, or who rely upon such opinions as can be gathered from the best available sources. Hence the frequent changes in the nomenclatures. We cannot, therefore, accept such documents as infallible, except in those cases where internal evidence and historic record are alike unimpeachable.

The difficulty of deciding often arises from repetitions, and the excellence of pupils painting from the designs of their masters, and not unfrequently assisted by them. As we go back in art, this difficulty increases, from the oblivion which has overtaken once well-known names, and from the greater uniformity of processes and the more limited range of motives of the earliest artists.

The great religious masters of the thirteenth and fourteenth centuries gathered around them crowds of scholars, who travelled with them from city to city, partaking in their commissions and executing their designs, especially of *ex-voto* pictures, multiplied in that age by the piety of noble families, to commemorate some special interposition of divine power in their behalf and to honor their patron saints. Their usual compositions were the Madonna enthroned with the infant Jesus in her arms,

surrounded by holy personages or angels, with the portraits of those who ordered the paintings, in general of diminutive size to express humility, and kneeling in adoration with clasped hands and upraised eyes. Unless the characteristics of the master-hand are unmistakable in this class of works, they are to be ranked as of the schools of the great men whose general features they bear. And it must not be forgotten that frequently pupils developed into distinguished masters themselves. Taddeo Gaddi and Puccio Capanna worked under Giotto while he lived, and afterwards acquired distinction in an independent career.

A like close relation between master and scholar, the effect of which was to multiply works by joint labor, obtained among the contemporaries of Raphael as well as of Giotto. The precise number of the genuine works of Raphael, owing to the cleverness of many of his pupils, will perhaps never be known. Coindet ascribes to him from one hundred and eighty to two hundred Holy Families alone. Some writers compute the entire number of his paintings at from five hundred to six hundred; others quote twelve hundred as authentic. These exaggerated estimates only prove how extremely popular his designs became and the great number of pictures ordered from them, some of which no doubt had the advantage of being touched by his hand, while all in some way or other bear his mental impress.

Moreover, the great masters frequently changed their methods and styles, so that one might be mistaken for another, and at times studied and copied each other. Andrea del Sarto's copy of Raphael's Leo Tenth passed undetected even by Giulio Romano, who had himself worked on the latter. Rubens and Velasquez imitated and copied the great Italian masters, particularly Paul Veronese and Titian; the Caracci and their followers multiplied Correggios, Raphaels, and the chief Venetians; Girolamo da Carpi of Ferrara the same; and all with a degree of success that has greatly perplex-

ed later generations: their own works, in turn, as they became popular, experiencing from subsequent artists the same process of multiplication. Of the celebrated Madonna of Loreto there are not fewer than ten rival claimants for authenticity; while sketches, studies, and works not directly imitated from, but partaking of the character of great artists, and often clever enough to be confounded with their undoubted works, are not rare. Portraits, being direct studies from Nature, are difficult to decide upon. Hence it is that criticism is so variable in its decisions.

Beside the above sources of perplexity, it encounters another obstacle from the restorations pictures have undergone. Injured by time or obscured by repeated varnishings, they often require some degree of cleaning to make them intelligible. Unfortunately, in most instances, the process is sheer assassination. Many of the best works of public galleries have been subjected to scrubblings more analogous to the labors of a washtub than to the delicate and scientific treatment requisite to preserve intact the virgin surface of the painting. Mechanical operators have passed over them with as little remorse as locusts blight fields of grain. Their rude hands in numberless instances have skinned the pictures, obliterating those peerless tints, lights, and shadows, and those delicate but emphatic touches that bespeak the master-stroke, leaving instead cold, blank, hard surfaces and outlines, opaque shadows and crude coloring, out of tone, and in consequence with deteriorated sentiment as well as execution. The profound knowledge and vigorous or fairy-like handling which made their primary reputation are now forever gone, leaving little behind them except the composition to sustain it in competition with modern work. As bad, however, as is this wanton injury, that of repainting is greater. Inadequate to replace the delicate work he has rubbed off, to harmonize the whole and make it look fresh and new, the restorer passes his own brush over the entire picture, and thus

finally obscures whatever of technical originality there might still have been preserved after the cleaning.* The extent of injury European galleries have thus received is incalculable. One instance will suffice as an example of many. Some years gone by, the Titian's *Bella Donna* of the Pitti was intact. Unluckily it got into the hands of a professional cleaner. A celebrated dealer happened to be standing by when it was rehung. Looking at it, he exclaimed,—“Two weeks ago I would have given the Grand Duke two thousand pounds for that picture on speculation; now I would not give two hundred.”

Each restoration displaces more of the original and replaces it with the restorer. As the same hands generally have a monopoly of a public gallery, the contents of some are beginning to acquire a strange uniformity of external character, while the old masters in the same degree are vanishing from them. These remarks, however, are more applicable to past than to present systems; for a reform founded on true artistic principles is being everywhere inaugurated.

Oil-paintings gradually deepen in tone; while tempera, if protected from humidity, retain their brilliancy and clearness as long as the material on which they rest endures. The true occupation of the restorer is to put the work given to him in a condition as near as possible to its original state, carefully abstaining from obliterating the legitimate marks of age, and limiting himself to just what is sufficient for the actual conservation of the picture. One of the chief needs of many old pictures is the removal of old repaintings. This done, the less added the better, unless, if a piece be wanting, it can be so harmonized with the original as to escape observation. But this is a special art, and to be done only by those acquainted with the old methods. In perfect condition ancient paintings cannot be. We must receive them for what they are, with the corrodings and changes of time upon them. How interesting in this respect is the Sieneſe Gallery! Here the re-

storers has been stayed, and we find the pictures genuine as time itself, and more precious by far to the student than the most glaring and “refreshed” surfaces of those works in other galleries which are the wonder and admiration of superficial observers.

The greatest difficulty of the restorer is to harmonize *permanently* the new vehicles with the old; for the fresh tints are always liable to assume a different tone from the original, which have already been chemically acted upon by time.

It may be said that the skill which can escape detection in restoration is adequate to successful counterfeiting. This is true only in part; for *mending* is very different from *creating*. Instances, however, do occur of such attempts; but they seldom long escape detection, and never impose upon those who have experience in the arts of the restorer. Some years ago a Roman artist for a while successfully passed off his imitations of Claude, Salvator Rosa, and their schools, as originals, at large prices, with the usual guarantees of authenticity. To disarm suspicion, he was accustomed to allow himself to be seen at work only upon cheap, vulgar pictures, pretending he was competent to nothing better. Having sold one of his Claudes for four thousand dollars, the trick being detected, he was threatened with a public prosecution, the fear of which brought on his death.

The favorite field of the early masters was fresco-painting. Unlike painting in oils, it has no resources of transparency, brilliancy, and richness of coloring, but depends for its nobility of effect upon the hardier virtues of art and the more robust genius of the artist. His success lies in strong and eloquent design and composition, with but feeble aid from color. Fresco and tempera paintings were chiefly intended for the interiors of churches or public buildings, whose dim light harmonized their more or less crude and positive tones. It was, however, only through the breadth and freedom of wall-painting that the ambition of the early masters

was fully aroused and their powers found ample scope. Out of it they created a world of art unknown and unappreciable by those who cannot view it as it exists in the consecrated localities and amid the solemn associations whence it originated. All over Italy, by the road-side and in the sanctuary, there exists untold treasure of this sort, pure, grand or quaint, telling truth with the earnestness of conviction, and exhaling beauty through aroused feeling and refined sentiment, overflowing with virgin power and exalted efforts. Everywhere untransportable, often in localities untrodden except by the feet of the stolid peasant or the heavy-jawed monk, seen only by enthusiastic seekers, these monuments of a noble art are once more being awakened into vital existence by the piety and taste of a generation whose great joy it is to uncover and restore to the light of day those precious remains which were so often barbarously whitewashed by the clergy of the past two centuries, from no more cogent motive than to give greater light to their churches. Especially in Tuscany every souvenir of ancestral greatness is now cared for with a jealous patriotism honorable alike to the feeling and knowledge of its population. The chief desire of the country is now to reinvest her republican monuments with the character and aspect which best recall her olden freedom and enterprise. And the highest glory that can be bestowed upon these monuments is their careful conservation or restoration as they originally were designed; nothing being added or taken away except to their loss.

Not merely patriotism, but selfish acquisition demands of Italy the strict conservation of art. Her monuments are funds at interest for posterity. Indeed, her livelihood depends in no stinted measure upon her artistic attractions. And nowhere is there a livelier feeling for artistic beauty, greater respect for the past, and a wider-spread knowledge of art. In all times will other peoples come within her borders to enjoy and study that which she can still so lavishly bestow.

Tourists soundly rate Italians for their sordid indifference to their art, attributing to the people at large the spirit of the mercenary or ignorant class with whom they are most in contact. It is true that others may hear, as we have heard, from a noble marquis, in reply to a question about his family-pictures, "Ask my majordomo; had your question been about horses, I could have told you." They may meet aristocratic personages not above acting the picture-dealer in a covert manner, and, still worse, receive propositions to buy works of art robbed from public places. But such instances are uncommon. The common feeling is an enthusiastic pride in, and profound respect for, the names and the works that have done so much for the good and glory of Italy. Even the spirited deportment of the Signorina Borgherini, as told by Vasari, towards a dealer, who, during the siege of Florence, attempted to get possession of certain paintings belonging to her husband, to speculate upon by sending them to the king of France, may still find its counterpart in feeling, if not in fact, among some of the living daughters of that city.

"How, then," she exclaimed, "dost thou, Giovanni Battista, thou vile broker of frippery, miserable huckster of farthings, dost thou presume to come hither with the intent to lay thy fingers on the ornaments which belong to the chambers of gentlemen,—despoiling, as thou hast long done and art ever doing, our city of the fairest ornaments to embellish strange lands therewith? I prize these pictures from reverence to the memory of my father-in-law, from whom I had them, and from the love I bear to my husband; I mean to defend them, while I have life, with my own blood. Away with thee, then, base creature of nothingness! If again thou shouldst be so bold as to come on a similar errand to this house, thou shalt be taught what is the respect due to the dwelling of a gentleman, and that to thy serious discomfort; make sure of it!"

And so she drove the intriguing bargainer away, with "reproaches of such intolerable bitterness, that the like had

never before been hurled at man alive." Be it remembered, too, that Vasari was a good judge of the quality of a Florentine dame's scolding, for he had himself in his younger days passed a painful apprenticeship under the weight of Lucretia Fetti's tongue.

Criticism is too often local in its tone, being pledged, as it were, to the admiration of its favorite subjects and a corresponding disregard of those with which it is not familiar. Particularly in Italy, where the municipal feeling has been so strong, the partisans of each school were greatly prejudiced. Each people also very naturally prefers its own to another's art, and does not always question its motives of preference. The Florentines have overlooked the merits of their rivals, the Venetians and Sieneſe,—who, in turn, have reciprocated; while Italy, as a whole, has had but small regard for the works of other nations. England has been slow to recognize the great merits of the Southern schools; and France, Holland, and Germany are equally in the bondage of local tastes or transitory fashions. But true criticism is cosmopolitan. It tests merit according to the standard of the nature on which it is founded, not overlooking excellence in whatever respect or degree. A truly catholic view of art is the result only of its universal study. The critic may be just to all inspirations, and yet enjoy his own preferences. But, as Blackwood observes, too many "are self-endowed with the capacity to judge all matters relating to the fine arts just in proportion to the extent of their ignorance, because it is not difficult to condemn in general terms and to attain notoriety by shallow pretence." Neither "the narrowness of sect nor the noise of par-

ty" should be heard in this matter. As a great gallery should represent all phases of art through their several stages of progress and decay, meeting all wants and tastes, so criticism should be based upon a foundation equally broad,—not proud of its erudition nor dictatorial, but with due humility uttering its opinions, prompt to sustain them, and yet ever ready to listen and learn.

"Old masters" are almost a by-word of doubt or contempt in America, owing to the influx of cheap copies and pseudo-originals of no artistic value whatever. It is the more important, therefore, that they should be represented among us by such characteristic specimens as are still to be procured. Some modern artists are jealous of or indifferent to past genius, and sedulously disparage it in view of their own immediate interests. Bayle St. John, in his "Louvre," relates that he heard an associate of the Royal Academy deliberately and energetically declare, that, if it were in his power, he would slash with his knife all the works of the old masters, and thus compel people to buy modern. This spirit is both ungenerous and impolitic. If neither respect nor care for the works of departed talent be bestowed, what future has the living talent itself to look forward to? Art is best nourished by a general diffusion of æsthetic taste and feeling. There can be no invidious rivalry between the dead and the living. Alfred Tennyson looks not with evil eye upon John Milton. Why should a modern be jealous of a mediæval artist? The public can love and appreciate both. Nor should it be forgotten that it is precisely in those countries where old art is most appreciated that the modern is most liberally sustained.

'TENTY SCRAN'.

"Patience hath borne the bruise, and I the stroke."

"I THINK she's a-sinkin', Doctor," sobbed old Aunt Rhody, the nurse, as she came out of Mary Scranton's bed-room into the clean kitchen, where Doctor Parker sat before the fire, a hand on either knee, staring at the embers, and looking very grave.

Doctor Parker got up from the creaky chair, and went into the bed-room. It was very small, very clean, and two sticks of wood on the old iron dogs burned away gradually, and softened the cool April air.

Before this pretence of a fire sat an elderly woman, with grave, set features, an expression of sense and firmness, but a keen dark eye that raised question of her temper. Miss Lovina Perkins was her style, being half-aunt to the unpleasant-colored baby she now tended, rolled up in a flannel shawl, and permitted to be stupid undisturbedly, since its mother was dying.

Dying, evidently; she had not been conscious for several hours. Her baby had not had its welcome; she knew nothing, cared for nothing, felt nothing but the chill of the blood that stood still in her veins, and the choking of the heart that hardly beat.

Poor child! poor widow! Her head lay on the pillow, white as the linen, but of a different tint,—the indescribable pallor that you know and I know, who have seen it drawn over a dear face,—a tint that is best unknown, that cannot be reproduced by pen or pencil. Yet, for all its pallor, you saw at once that this face was still young, had been lovely, a true New-England beauty, quaint and trim and delicate as the slaty-gray snow-bird, with its white breast, and soft, bright eyes, that haunts the dusky fir-trees and dazzling hill-side slopes when no other bird dare show itself,—a quiet, shy creature, full of innocent trust and endurance, its

chirp and low repetition dearer than the gay song of lark or robin, because a wintry song.

But Mary Perkins had never been called handsome in Deerfield; if they said she was "a real pretty girl," it only meant kindly and gentle, in the Connecticut vernacular; and Tom Scranton, the village joiner, was first to find out that the delicate, oval face, with its profuse brown hair, its mild hazel eyes, and smiling mouth, was "jest like a pictur'." So Tom and Mary duly fell in love, got married,—nobody objecting,—went West, and eight months afterward Mary came home with a coffin. Tom had fallen from a ladder, been taken up and brought home dead, and she had travelled back five hundred miles to bury him in Deerfield, beside his father and mother; for he was their only son.

There were about a hundred dollars left for Mary. She could not work now, and she went to board with her half-sister, the Deerfield tailoress.

Mary Scranton was only nineteen; but she did not want to live,—not even for her baby's sake. All her sunshine and her strength went out of this world with Tom, and she had no energy to care to live without him. She did not say so to her sister,—for Miss Viny would have scolded her smartly,—nor did she tell Doctor Parker; but she prayed about it, and kept it in her heart all those silent days that she sat sewing baby-clothes, and looking forward to an hour that should, even through a death-agony, take her to Tom. She thought the baby would die, too, and then they should all be together;—for Mary had a positive temperament, without hope, because without imagination; what she had possessed and lost eclipsed with her all uncertainties of the future; and she thought seven times of Tom where she once thought of her

child, though she took pains to make its garments ready, and knit its tiny socks, and lay the lumbering old cradle, that she had been rocked in, with soft and warm wrappings, lest, indeed, the child should live longer than its mother. So she sat in Miss 'Viny's bed-room in an old rush-bottomed rocking-chair, sewing and sewing, day after day, the persistent will and intent to die working out its own fulfilling, her white lips growing more and more bloodless, her transparent cheek more wan, and the temples, from which her lustreless hair was carelessly knotted away, getting more hollow and clear and sharp-angled.

And now she lay on the bed, one hand under her cheek, the other picking restlessly at the blanket, — for consciousness was fluttering back.

"Give me the brandy, Aunt Rhody," said Doctor Parker, softly.

He poured a few drops into the spoon she brought, and held it to Mary's lips. The potent fluid stung the nerves into life again, and quickened the flickering circulation; her thin fingers lay quiet, her eyes opened and looked clear and calm at the Doctor. He tried to rouse her with an interest deeper to most women than their own agony or languor.

"You've got a nice little girl, Mary," said he, cheerfully.

The ghost of a smile lit her face.

"I'm content," said she, in a low whisper.

Aunt Rhody brought the baby and laid it on its mother's arm. The child stirred and cried, but Mary took no notice; her eyes were fixed and glazing. Suddenly she smiled a brilliant smile, stretched both arms upward, dropping her baby from its place. Only for one moment that recognizing look defied death and welcomed life; her arms dropped, her jaw fell; — it was over.

"I guess you'd better take the baby into the kitchen, Miss Loviny," said Aunt Rhody; "'t isn't considered lucky to keep 'em round where folks has died."

"Luck a'n't anything," grimly return-

ed Lovina, who had squeezed her tears back, lest the two or three that inclined to fall should spot the baby's blanket; "but I'm goin' to take her out into the kitchen, because I calculate to open the winder in here."

So the baby and Aunt 'Viny went out.

It was a new thing and a hard thing for Lovina Perkins to have a baby on her hands; she would rather have charged herself with the care of a farm, or the building of a house; she could work, she could order, plan, regulate, and execute; but what to do with a baby? There it lay, helpless, soft, incapable, not to be scolded, or worked, or made responsible in any way, the most impracticable creature possible: a kitten she could have put into a basket at night, and set in the shed; a puppy she could and would have drowned; but a baby, an unlucky, red, screeching creature, with a soul, was worse than all other evils. However, she couldn't let it die; so she went after some milk, and, with Aunt Rhody's help, after much patient disgust, taught the child how to live, and it lived.

Mary Scanton was buried next to Tom, and the June grass grew over both their graves, and people thought no more about it; only every now and then Doctor Parker came to Miss Perkins's house to ask after "baby," who grew daily fat and fair and smiling; and on one of these occasions he met the minister, Parson Goodyear, who had come, as Miss 'Viny expressed it, "o' purpose to take me to do, because I ha'n't presented the child for baptism."

"Fact is," continued she, "I ha'n't an idea what to call her. I don't favor callin' of her Mary, because that was her mother's name, and I couldn't think of two on 'em at once; and Scriptor names are generally rather ha'sh. Miss Parker, Doctor, kind of favored her bein' called Aribelly, because there was one of that name rather come over in the Mayflower; but I think it's too mighty for a child that's got to work; — what do you say?"

"I think you're right, Miss 'Viny," said the Doctor, as gravely as he could.

"I don't believe in fine names myself. I should think you might do worse than to call the baby Content;—that was your own mother's name, wasn't it? and it was the last word Mary spoke."

"Well, now, that's quite an idea, Doctor! I guess I will."

"And you will present her on the first Sabbath in May?" said Parson Good-year.

"Well, yes, if I'm spared," said Aunt 'Viny; and, being spared, on that sweet May-Sunday she carried the smiling little child up the aisle of the meeting-house, and had it baptized Content.

Strange to say,—yet not all strange,—before it was a year old, the baby had found its way quite down into the middle of Aunt 'Viny's heart. To be sure, it was a deal of trouble; it would ache and cry in a reasonless way, when nobody could tell what ailed it; it would take a great amount of caring-for with ungrateful silence and utter want of demonstration for a long time;—but then it was so helpless!—irresistible plea to a woman!—and under all Miss 'Viny's rough exterior, her heart was as sweet as the kernel of a butternut, though about as hard to discover. True, she was hard of feature, and of speech, as hundreds of New-England women are. Their lives are hard, their husbands are harder and stonier than the fields they half-reclaim to raise their daily bread from, their existence is labor and endurance; no grace, no beauty, no soft leisure or tender caress mitigates the life that wears itself away on wash-tubs, cheese-presses, churns, cooking-stoves, and poultry; but truth and strength and purity lie clear in these rocky basins, and love lurks like a jewel at the bottom,—visible only when some divine sun-ray lights it up,—love as true and deep and healthy as it is silent and unknown.

So Miss 'Viny's hardness gave way before "baby." She could not feel unmoved the tiny groping hands about her in the night, the soft beatings of the little heart against her arm, the round downy head that would nestle on her neck

to be rocked asleep; she could not resist that exquisite delight of miserable, exacting, feminine nature,—the knowledge that one thing in the world loved her better than anybody else. Sorry am I to betray this weakness of Aunt 'Viny's,—sorry to know how many strong-minded, intellectual, highly educated and refined women will object to this mean and jealous sentiment in a woman of like passions with themselves. I know, myself, that a lofty love will regard the good of the beloved object first, and itself last,—that jealousy is a paltry and sinful emotion; but, my dear creatures, I can't help it,—so it was. And if any one of you can, with a serene countenance and calm mind, see your husband devote himself to a much prettier, more agreeable, younger woman than yourself,—or hear your own baby scream to go from you to somebody else,—or even behold your precious female friend, your "congenial soul," as the *Rosa Matilda* literature hath it, fascinated by a young woman or young man to the neglect of yourself,—although in one and all of these instances the beloved object seeks his or her best good,—then let that superhuman female throw a stone at Aunt 'Viny;—but for the present she will not be lapidated.

Never, indeed, had she been quite as happy as now. Her life had been a routine of hard work. Love and marriage had never looked over the palings at her; and—to tell the truth—she had not suffered by their neglect, in her own estimation. She was one of those super-numerary women who are meant to do other people's work in life: servants, nurses, consolers; accepting their part with unconscious humility as a matter of course; quite as good as the *Santas* and *Santissimas* of legend and chronicle, and not nearly so intrusive. So this new phase had its own sweetness and special charm for Aunt 'Viny; the happiest hour in her day lying between daylight and dark, when waistcoats and jackets and trousers were laid aside, the dim light forbidding her to sew, and economy delaying the lamp,—so she could with a clear con-

science spare half an hour, while the tea-kettle boiled, for undressing "baby," rubbing the little creature down,—much as a groom might have done, only with a loving touch not kept for horses,—ending it with a long night-gown, and toasting its shell-pink feet at the fire, till, between the luxury of ease and warmth and tending, "baby" cooed herself to sleep, and lay along Miss 'Viny's lap like a petted kitten, the firelight playing soft lights over its fair head, sealed eyelids, and parted lips, tinting the relaxed arm and funny dimpled fist with a rosy glow, while Aunt 'Viny's face took on a tender brooding gleam that nobody who had seen her in church on Sunday, severely crunching fennel, or looking daggers at naughty boys, could have believed possible. But this expression is an odd wonder-worker. I saw but the other day a bad-eyed, bronzed, "hard-favored" Yankee, with a head all angles, a dirty face, the air of a terrified calf, and the habiliments of a poor farmer; I looked at him aristocratically, and thanked the Lord for my mind, my person, and my manners, in true Pharisaic triumph,—when his little blue-eyed daughter came round the corner and pulled at the tail of his ragged coat. Why, the man was transfigured! I wondered he was willing to shake hands with me when I left him; I knew before that his hands were brown and big and dirty, and mine were little and white and soap-scented; but I thought afterwards I'd as lief have been Peter as myself just then,—and I think so still. Wherefore, young ladies all, learn from this that the true cestus, fabled—No! I shall make an essay on that matter some day; I will not inflict it here.

So, by dint of hard work, Aunt 'Viny brought up her dead sister's child in the way it should go, nor ever for one moment grudged her labor or her time. Neither did she spoil Content by over-indulgence; her good sense kept the child unharmed, taught her hardy and self-reliant habits, made her useful all the time, and, even if Nature had not been beforehand with her, would have made her hap-

py. But 'Tenty had her father's firm and sunny character; she never cried but for good reason, and then screamed lustily and was over with it; fretting was out of the question,—she did not know how; her special faults were a strong will and a dogged obstinacy,—faults Miss 'Viny trained, instead of eradicating; so that 'Tenty emerged from district-school into the "'Cademy's" higher honors as healthy and happy an individual as ever arrived at the goodly age of fourteen without a silk dress or a French shoe to peacock herself withal. Every morning, rain or shine, she carried her tin pail to Doctor Parker's for milk, hung on the tea-kettle, set the table, wiped the dishes, weeded a bit of the prolific onion-bed, then washed her hands and brushed her hair, put on the green sun-bonnet or the blue hood, as the weather pleased, and trotted off to school, where she plodded over fractions, and wearied herself out with American history, and crammed geography, and wrote copies, for a whole year, when Aunt 'Viny thought she might learn her trade, being a stout girl of fifteen, and the 'Cademy knew her no more.

There is but little incident in a New-England village of the Deerfield style and size,—full of commonplace people, who live commonplace lives, in the same white and brown and red houses they were born in, and die respectably in their beds, and are quietly buried among the mulleins and dewberry-vines in the hill-side graveyard. Mary Scran-ton's life and death, though they possessed the elements of a tragedy, were divested of their tragic interest by this calm and pensive New-England atmosphere. Nothing so romantic had happened there for many years, or did occur again for more; yet nobody knew a romance had come and gone. People in Deerfield lived their lives with a view to this world and the next, after the old Puritanic fashion somewhat modified, and so preserved the equilibrium. No special beauty of the town attracted summer-visitors. It was a village of one street, intended to be straight, crossing a decorous brook that

turned the mill, and parting itself just below the church and the "store," to accommodate a small "green," where the geese waddled, hissed, and nibbled May-weed all summer, and the boys played ball sometimes after school. There was a post-office in the "store," beside boots, sugar, hams, tape, rake-tails, ploughs, St. Croix molasses, lemons, calico, cheese, flour, straw hats, candles, lamp-oil, crackers, and rum,—a good assortment of needles and thread, a shelf of school-books, a seed-drawer, tinware strung from the ceiling, apples in a barrel, coffee-mills and brooms in the windows, and hanging over the counter, framed and glazed, the following remarkable placard, copied out in a running hand:—

No
Credit Will be Given
in
This Store after
This Date.

Under no circumstances whatever.

My Reasons

I cannot buy goods or do business without cash, and as the bulk of my capital is now trusted out with the promise to pay which that promise has never been full filled I deem it a duty to myself and my Cash paying customers to sell goods for cash at the lowest market price.

I shall endeavor make it an interest of my customers to pay cash for all goods purchas by them. I shall offer goods at reduced rates as an inducement for all to pay cash.

If I am asked if I give credit I want this to be my answer

No Never.

ELKANAH MILLS.

Distrust not, O reader! This is *verbatim et literatim* a copy.

In front of the "store" was a hay-scale, across the way a tavern, and, at respectful distances along the street, white or red houses, with the inevitable front-door, south-door, kitchen- and shed-door, lilacs and altheas before the windows, fennel, tiger-lilies, sweet-brier, and Burgundy rose-

bushes, with red "pinies" and livid hydrangeas, or now and then a mat of stone-crop and "voilets" along the posy-bed that edged cabbage and potato-plots, while, without the fence, Bouncing-Bets adorned the road-side, or blue sea-pinks from the pasture-lot strayed beyond its rails.

Nothing happened in Deerfield; so nothing happened to "'Tenty Scran'," as the school-children nicknamed her. She earned her living now at tailoring and dress-making; for Miss 'Viny was much "laid up with rheumatiz," and could not go about as was her wont. Also, the art and mystery of housekeeping became familiar to the child, and economy of the domestic sort was a virtue she learned unconsciously by continual practice. She went to church on Sundays in a clean calico frock and a white cape, sat in the singers' seat and uplifted her voice in Lenox and Mear, Wells and Bethesda, shared her fennel with the children in the gallery, looked out the text in her Bible, and always thought Parson Good-year's sermon was intended for her good, and took it in accordingly.

I should like to say that 'Tenty Scran' was pretty; in fact, I have always regarded it as one of the chief pleasures of a literary calling, that you are not obliged to take people as they are, but can make them to order, since it takes no more pen-scratches to describe luxuriant curls and celestial eyes and roseate lips than it does to set forth much less lovely things; but when it comes to stubborn facts, why, there you have to come down to this world, and proceed accordingly,—so I must say 'Tenty was not handsome. She had fresh rosy cheeks and small brown eyes, hair to match the eyes, a nose undeniably pug, a full, wide mouth, and strong, white teeth,—fortunately, since every one showed when she laughed, and she laughed a great deal. Then she had a dumpy figure, and good large hands and feet, a look of downright honesty and good-temper, and a nice, clear voice in speech or singing, though she only sang hymns. But for all this, every-

body in Deerfield liked 'Tenty Scran'; old and young, men and maidens, all had a kindly welcome for her; and though Aunt 'Viny did not say much, she felt the more.

But "everybody has their sorrers," as Hannah-Ann Hall remarked, in one of her "'Cademy" compositions, and 'Tenty came to hers when she was about twenty-two. Miss Lovina was almost bed-ridden with the rheumatism that year, and 'Tenty had to come back twice a day from her work to see to her, so that she made it up by staying evenings, against her usual rules. Now about the middle of that May, Doctor Parker's scapegrace son Ned came home from sea, — a great, lazy, handsome fellow, who had run away from Deerfield in his fifteenth year, because it was so "darned stupid," to use his own phrase. Doctor Parker was old, and Mrs. Parker was old, too, but she called it nervous; and home was stupider than ever to Ned, particularly as he had broken his ankle and was laid on the sofa for a good six weeks at least. About the second of those weeks, Content Scranton came to "do over" Mrs. Parker's summer-gowns, and put her caps together after their semi-annual starching.

Of course 'Tenty sat in the "keeping-room," where the old sofa was; and of course Ned had nothing better to do than to watch the gay, good little bee at her toil, hear her involuntary snatches of hymn-singing, laugh at her bright simplicity, and fall in love with her, sailor-fashion, — "here to-day, and gone to-morrow."

'Tenty stayed a long time at Mrs. Parker's that summer; she seemed to get on so slowly with her work, but, as Mrs. Parker said, —

"Why, the fact of it is, 'Tenty is so handy and so spry, I can't see how to spare her. Ed'ard, he wants a sight of waitin' on; and I am so nervous, and husband is afflicted with neuralogy, beside that he is considerable in years, so we can't be around as we used to be; and 'Tenty steps about and gets Ed'ard his

books, and his victuals, and fixes his pillows, and keeps the light out of his eyes, so 't he isn't contented a moment of time without she's right there."

And while Mrs. Parker was conveying these ideas to Miss 'Viny, they were being illustrated in her own house after this fashion: —

"'Tenty," (three weeks had abolished the Miss,) "won't you give me that blue book off the shelf?"

'Tenty sprang up and handed the book, and went to her work again, beginning under her breath to hum

"Sweet fields beyond" —

"Dear me! this pillow has slipped away. 'Tenty, won't you fix it?"

Jump the second; — the pillow is put straight under Ned's dark curls, though he is so helpless she has to raise his head with one arm and arrange the cushion with the other; then the seam and hymn recommence.

"Sweet fields beyond the swelling" —

"I wish I had a drink of cold water."

Jump the third; — 'Tenty finishes her hymn on the way to the well, and brings the water, and holds the invalid up to drink it, and then the pillows fall again, and the book slips down, and everything goes wrong and has to be re-arranged, and at length 'Tenty goes back to her place by the window quite indisposed to sing, but glowing with a new, shy pleasure, for Ned had looked up at her with those great gray eyes that said so much more than his lips did, and laid his cheek against the stubbed hand that arranged his pillows, and said, — "Oh, 'Tenty! how good you are!" in tones that meant, "and how I love you!" as well, though he did not say it.

So matters progressed from day to day, Ned needing more and more care, till he made his first progress across the room with a cane and the help of 'Tenty's shoulder; after which experiment he began to recover rapidly, impelled by the prospect of getting away from that house and being free to go where he chose again.

For 'Tenty had ceased to amuse or interest him as much as she had done; six weeks had done away with the novelty of her deepening color and shy dropping eyes; beside, she laughed less, almost ceased to sing, sighed softly, and looked quiet and grave, instead of gay and unconscious. It was the old fable of sport to the boys and death to the frogs. She thought he was in earnest; he knew he was amusing himself.

Miss 'Viny noticed the change in her darling, but she was a woman who had acquired wisdom by experience, and she said nothing; she only grew more exacting of 'Tenty's presence, wanted her earlier in the evening, found fault with her food, and behaved generally so unlike her usual stern patience, that Content was really roused out of her dreaminess to wonder what ailed Aunt 'Viny.

As soon as Ned Parker was able to get out of doors again, he was heard of in every house in the village, making himself agreeable after his own fashion,—drinking hard cider with the old farmers, praising their wives' gingerbread and spruce-beer, holding skeins for the girls, going on picnics, huckleberrings, fishing-excursions, apple-bees, riding Old Boker, his father's horse, bare-backed down the street, playing ball on the green, and frequenting singing-school with one pretty girl and another, till all Deerfield shook its head and remarked that "That 'ere Ned Parker was a master-hand for carryin' on." And 'Tenty sewed harder than ever.

What makes me always put love into a story, Aunt Grundy? Why, because love is popular; because nine-tenths of the people who read smile to see the first and faintest hint of the tender passion in what they read; because a story without love is like bricks without straw; because a life without it is a life no doubt comfortable to lead, but uninteresting to hear. Love is your only democrat; Ethelinda in Fifth Avenue, glittering with the clear splendor of diamonds, and rustling like a white-birch-swamp with pale silks, gleaming through the twilight before an opera,

and looking violets at Sydney Hamilton over the top of her inlaid fan, is no more thrilled and rapt and tortured by the Disturber in Wings, than Biddy in the kitchen, holding tryst with her "b'y" at the sink-room window. Thousands of years ago, Theseus left Ariadne tearing the ripples of her amber-bright hair, and tossing her white arms with the tossing surf, in a vain agony of distraction and appeal: poets have sung the flirtation, painters have painted it; the story is an eternal legend of pain and passion, illuminated with lucent tints of age and the warm South, outlined with the statuesque purity of classic scenery and classic diction: but I myself never for a moment believed that Ariadne was a particle more unhappy or pitiable than Nancy Bunker, our seamstress, was, when Hiram Fenn went West to peddle essences, and married a female Hoosier whose father owned half a prairie. They would by no means make as lovely a picture; for Nancy's upper jaw projects, and she has a wart on her nose, very stiff black hair, and a shingle figure, none of which adds grace to a scene; and Hiram went off in the Slab-town stage, with a tin-box on his knees, instead of in a shell-shaped boat with silken sails; but I know Nancy reads love-stories with great zest, and I know she had a slow fever after Hiram was married. For, after all, love is the same thing ever since Paradise,—the unwearying tradition, the ever new presence, the rapture or the anguish unspeakable; and while 'Tenty Scran' sat and sewed at Squire Hall's new linen pantaloons, she set every stitch with a sigh, and sewed on every button with a pang that would have made Ariadne put both arms round her, and kiss her long and close, a sister in bonds,—though purple robes with jeweled borders, crescented pearls, and armlets of gold, would not have been at all congruous hugging a sixpenny calico with a linen collar.

Not that Ned neglected 'Tenty; he could not follow her about from house to house, and she had done sewing for his mother, and in the evening Aunt 'Viny

always needed her. But more than once he joined her after church, walked home to the door with her, and cheered her simple soul with his familiar looks and tones, and words of praise that made Adriadne Scran' think Theseus Parker a little more than mere man, something altogether adorable. However, she knew he was having a very good time when he didn't see her at all. The real reason why she ached and sighed over Squire Hall's pantaloons was, that she heard Ned in the next room helping Hannah-Ann Hall pack up the dinner for their grand Snake Hill picnic, and diverting the same Hannah-Ann with such wit and humor and frolic, that she declared several times she should split, and begged him not to be so funny.

Now 'Tenty never had a pleasant day, unless Ned was with her,—it had got as far as that; and the idea that he could and did enjoy himself so thoroughly and heartily without her was a dull pang that ate into her soul continually, and made her forlorn. Oh, these women! these pitiful creatures! not magnanimity enough in a whole race of them to be visible to the naked eye! jealous dogs-in-the-manger! If they weren't useful domestically, I should vote for having them exterminated from this great generous world, and give place to some better institution, which no doubt could be got up by the india-rubber companies or the scientific conventions. But as Alphonso of Castile did not make the world, one must take it as it is; and I will say, for the encouragement of philosophers, that I have known one magnanimous woman, and she a beautiful woman, moreover.

So 'Tenty sewed, and ached, and made Aunt 'Viny's bed and her gruel, read her Bible and prayed for Ned Parker, and thought she was growing very old, till one night he asked her to go to singing-school with him; whereupon she put on a pink calico dress, and began to recover her youth most wonderfully.

They went to Master Solon's singing-school, it is true; but they never got home to Aunt 'Viny's till half past nine,

and 'Tenty never could remember what tunes they sang; and the singers in church next Sunday asked her why she didn't come in when she got as far as the door, and 'Tenty said she thought the benches were all full! Truth, stern tutor of the historian, compels me to confess that 'Tenty and Ned Parker were sitting on the meeting-house steps most of that evening, in a touching attitude; for Ned was telling her how his ship had come into port and was going to sail again for South America, and he had an offer to join her as second mate; so he had got to say good-bye to his kind little nurse, and so forth and so on, with admonitions never to forget him, and how he never should forget her, and here was a little locket; and finally, sobered by her stifled sobs, Ned bent down his handsome head, and said, softly,—

“Won't you kiss me for good-bye, 'Tenty?”

Dear me! of course she kissed him, and thought how good he was to kiss her, and told him so. Whereupon he got better and better; and when the sexton came to ring the bell for nine o'clock, they only just heard his steps in time to steal away unobserved through the starry darkness, and go round past the pine-grove. So reaching home at the aforesaid late hour, where Mr. Ned became good again when he stooped to unlatch the gate, 'Tenty looked so fresh and rosy and sweet when she came in, that Aunt 'Viny growled to herself, found fault with her gruel, scolded at the blanket, tipped over the teacup, and worried 'Tenty back into stern reality, till the girl stole off to her bed. Not to sleep,—oh, no! Waste such sweetness on sleep? Never! She lay there, broad awake, and thought it all over, and how very nice it was to have anybody love her so much, and how she should like to be handsome and smart and worthy so much honor, till the cock crowed for dawn, and then she fell asleep, nowise daunted by the recollection that Ned had said nothing to her except that she was as sweet as a ripe blackberry and as pretty as a daisy; for to her inno-

cent logic actions spoke louder than words, and she knew that anybody who did so (?) must love her enough to marry her.

So Ned sailed for Valparaiso, and 'Tenty stayed at home. Aunt 'Viny got no better in all those winter-snows and blows; they are not favorable to rheumatism, these New-England airs; so 'Tenty had enough to do; but she was happy and contented. And winter crept by and merged into spring, and spring into autumn, before Deerfield heard any news of Ned Parker; though, in the mean time, one report after another of his being engaged to various girls, at length settling with marked weight on Hannah-Ann Hall, spread over the village and was the theme of Sunday-noon gossips and sewing-society meetings, greatly to 'Tenty's contempt and amusement,—though the contempt was too bitter and the amusement too tremulous to be pleasant. For did not she know better? People don't kiss people when they don't like them: a self-evident proposition, but one that required some assertion and repetition to weigh its right weight in her mind.

Poor little 'Tenty! In that cold November there came a letter to Doctor Parker just as he was getting out of his gig, after a round of visits. The post-master, going home to dinner, handed it to him, and, going back from dinner, was called in to lift him up-stairs to his bed. Ned Parker had been wrecked off the Horn, the crew took to their boats, and only one boat, with one surviving man to tell the tale, was picked up by a whaler coming back to New Bedford from the Pacific; all the rest were gone. Doctor Parker was old and feeble; this only child was all he had; paralysis smote his body when the smitten mind bowed before that dire knowledge, and he never looked up again. Content would have given anything to go and nurse him; but she, too, was stunned, and in the whirl of that great grief even Aunt 'Viny's demands were no more to her than a dull mechanic routine that she could hardly force her trembling steps to carry through. So she stayed at home, sewing all day and

crying all night, and looking generally miserable, though she said nothing; for whom could she speak to? Aunt 'Viny had resolutely kept her suspicions about Ned Parker to herself, though well she knew who had walked home from meeting with 'Tenty in those pleasant autumn Sundays now gone, pleasure and all. But Miss 'Viny believed in silence on such matters, and had held her peace; now it was too late to break it. Nor was 'Tenty disposed to tell her anything; for it occurred for the first time to her innocent soul that she had nothing to tell. So they both went on their way, with secret pity and still endurance.

After a brief illness of three days, poor old Doctor Parker's weary soul and body gave out; he died on a Thursday afternoon, and, in country-fashion, it was proposed to bury him on Sunday, from the church. Sunday came, cold and raw and blustering. 'Tenty took her usual seat in the gallery, but took it early, that she might see the "mourners" come in and fill the front pews kept for them. She wiped away the tears from her eyes, and looked on with a feeling of half envy, thinking of the son to whom no funeral honors should ever now be paid, slumbering in the cruel seas that break and roar about the Horn. She counted the bearers, all known faces; she watched Parson Goodyear into the pulpit; she saw Mrs. Parker on her brother's arm. But there was one other veiled female figure, shrouded also in black, whose presence she could no way account for; and when Parson Goodyear made his first long prayer, and sent up an earnest petition for the doubly bereaved woman before him, what did he mean by adding,—“And Thine other handmaid, in the bloom of her years bereaved of hope and promise,—her whom Thou hast afflicted from afar off, and made a widow before Thee”? What *did* it mean? 'Tenty's breath fluttered, and she turned cold. Just at that moment, one of her neighbors murmured under her bonnet,—“That's Hanner-Ann, next to Miss Parker; only to think how sly she's kep' it a

hull year! And she engaged to Ed'ard all that time! I wouldn't never ha' believed it, ef she hadn't had his letters to show for't, an' a gold watch he gin her; an' Miss Parker says she's knowed it all the time."

Little more did 'Tenty know of psalm or sermon; some whirling sounds passed her, and then a rush of people. She was last to leave the church; and when she got home, and went to make Miss 'Viny's tea, as she tilted the long well-sweep down and up to draw her pail of water, she looked earnestly down the depths of crystal, as if to see what lay below, then quietly opened her left hand above it;—something bright fell, dashed the clear drops from a fern that grew half-way down, tinkled against a projecting stone, made a little splash, and was gone. 'Tenty took up her pail and went into the shed; and Ned Parker's locket lies at the bottom of the well, for all I know, to this day. Thenceforth 'Tenty cried no more; though for many weeks she was grave, wretched, pining.

Winter set in with furious storms and heavy snows, but, strange to say, Aunt 'Viny grew better; she could sit up; at length could move about; and at last, one night when she sat by the fire knitting, suddenly looked up at 'Tenty and said,—

"You haven't seen Miss Parker lately, have you, Content?"

'Tenty shivered a little.

"No, I have not, Aunt 'Viny."

"Well, it appears as though you should go and see her; she's a weakly woman, but she can set her back up dreadful against the Lord's doings, and I don't know but what such kind of people need comfortin' more 'n others. It's a world full o' gales, this is, and everybody hasn't learnt the grass's lesson, to bend when the wind blows."

"The Lord sends the wind, Aunt 'Viny."

"The Lord sends everything, only folks don't allow it; they'd ruther lay it to the door of man, so 's to feel free to worry. But the worst thing He ever does

send to people is their own way, 'Tenty; and you'll know it before you die."

'Tenty turned away to her work, hardly convinced by Miss 'Viny's wisdom, and inwardly thinking she should like to try her own way for all that. However, 'Tenty suffered far less than she might have done, for indignation helped her; the feeling that Ned Parker had deliberately amused himself with her, while she was in mortal earnest, had lowered him not a little from his height. Then Aunt 'Viny's care diverted her sad thoughts from herself, by sending her upon daily errands to the poor and the sick, so that 'Tenty's pleasant face and voice became the hope of the hour to more than one poverty-stricken or dying woman; and so her own grief, measured by theirs, shrank and withdrew itself day by day, and became something she could now and then forget. And more than all, her naturally sweet temperament and healthy organization helped her to recover.

Myriads have died of a broken heart, no doubt, but it was physiologically broken; grief torments into sleeplessness, sleeplessness destroys the appetite, then strength goes, the circulation fails, and any latent evil lurking in the constitution springs on the helpless and willing victim and completes its work. This is a shockingly unromantic and material view to take of the matter, and brings to nought poems by the hundred and novels by the thousand; but is it not, after all, more true to God and human nature to believe in this view than to think He made men or women to be the sport of passion and circumstance, even to their destruction?

'Tenty Scran' was too healthy to break her heart,—and too unselfish; so she gradually recovered her bright bloom, and went to her work, and took care of Aunt 'Viny, as energetically and gaily as ever. Hannah-Ann Hall married a lawyer from Meriden, and moved away, quite consoled for Ned, within three years; but 'Tenty favored no lovers, though one or two approached her. There are some women who are like the aloe,—their life admits of but one pas-

sion. It comes late and lasts long, but never is repeated; the bloom dies out of its resplendence and odor, but no second flowering replaces it. She was one of these. But what one man lost in her love, a thousand of her fellow-creatures gained. 'Tenty was the Deerfield blessing, though she never knew it herself. All the sick wanted her; all the children pulled at her gown, and smiled at her from their plays; her heart and her hands were so full, no regret found place to nestle there, and silence brooded dove-like over that sorrowful time gone by.

After a while, some ten years after Ned Parker's death, Miss 'Viny took to her bed again,—this time never to rise. Slow consumption had fastened on her, and she knew well what was before her, for so had her mother died; but no saint was ever more patient than she. 'Tenty was the best of nurses, and had even learned to speak of her aunt's death without a tremor in her voice, the last triumph of her unselfishness; for Miss 'Viny could bear no agitation, and yet needed to speak of the event she neither dreaded nor desired.

"'Tenty," said she, one day, "I feel a sight easier to leave you than if you'd married Ned Parker."

"Why, Aunt?" said Content, a light blush only testifying her surprise at this address.

"Because he was a selfish feller; he always was. I believe some women are better off to marry, though I can't say but what I believe a single state is as good; but a woman that gets a real lazy, selfish feller gets pretty near the worst thing there is. I seemed kind of hard, 'Tenty, them days, but I had feelin' enough."

"I don't doubt but what you had, Aunt 'Viny; only one can't see far ahead, you know, when it rains. I'm sure I've been as happy as a clam these last six years, and I don't calculate to resk that by gettin' married, never. Besides, I've learned what you used to call the grass's lesson, pretty well."

Here Parson Goodyear interrupted the

conversation, and it never was resumed; for the week after, Miss 'Viny died, and Content was left alone in her little house, "to battle with the world," as people say. But no conflict ensued, since it takes two to make a quarrel, and 'Tenty was on good terms with the Deerfield world. So she lived on, peaceful and peace-making, till forty found her as comely and as happy as ever, a source of perpetual wonder to the neighbors, who said of her, "She has got the dreadfulest faculty of gettin' along I ever see," and thereby solved the problem, for all except one, and that other one 'Tenty's opposite in every trait, Miss Mehitable Hall, Hannah-Ann's older sister, an old maid of the straitest sect, and one who was nowise sustained under the inflictions of life by the consciousness of enough money to support her, and friends to care for her approaching age.

It was Miss Hitty Hall's delight to be miserable: rather an Irish expression, but the only one that suits her case. One bright October afternoon she came over to see Content, bringing her blue knitting, sure symptom of a visitation. 'Tenty welcomed her with her usual cordial homeliness, gave her the easiest chair she had, and commenced hospitalities.

"Do lay off your things, Miss Hall, and set awhile; I haven't seen you for quite a spell."

"Well, I don't really know how to," replied Miss Hitty. "I don't know but what everything will go to rack while I'm away. My help is dreadful poor,—I can't calculate for her noway. I shouldn't wonder if she was settin' in the keepin'-room this minute, looking at my best books."

"Oh, I guess not, Miss Hitty. Now do let me take off your bunnet, and make yourself easy. Bridget can't do much harm, and you're such a stranger."

"Well, I don't know but what I will,—there! Don't put yourself out for me, 'Tenty,—I'll set right here. Dear me! what a clever house this is! A'n't you lonesome? I do think it's dreadful to be left all alone in this wicked world; it ap-

pears as though I couldn't endure it no-ways, sometimes."

"Why, Miss Hitty! I'm sure you're extreme well off. Supposing, now, you had married a poor man, and had to work all your life, — or a cross man, always a-findin' fault, or" —

"Well, that's a consideration, re'lly. — Now there's Hanner-Ann's husband, — he's always nag-naggin' at her for something she's done or ha'n't done, the whole enduring time. She's real ailing, and he ha'n't no patience, — but then he's got means, and she wants for nothing. She had, to say, seven silk dresses, when I was there last time, and things to match, — that's something. — But I'm sure you have to work as hard as though you was a minister's wife, 'Tenty. I don't see how you do keep up."

"Oh, I like work, Miss Hitty. It kind of keeps my spirits up; and all the folks in Deerfield are as clever to me as though I belonged to 'em. I have my health, and I don't want for anything. I think I'm as well off as the Queen."

"You haven't had no great of troubles," groaned Miss Hitty. "I've suffered so many 'flections I'm most tired out; them is what wears on people, 'flections by death."

"I don't know," meekly answered 'Tenty; "I've had some, but I haven't laid 'em up much. I felt bad while they lasted; but I knew other folks's was so much worse, I was kind of shy about feelin' too bad over my troubles."

"Well, you've got a real faculty at takin' things easy; now I'm one of the feelin' kind. I set down often and often to knit, and get a-thinkin' over times back, and things people said and did years ago, and how bad I felt, till I feel jest so ag'in, and I get a-cryin' till it seems as though I should screech right out, and I can't sleep, nor I can't do nothing."

"A'n't you borrowin' trouble a little bit, Miss Hitty? I've kind of figured it out that it's best to let the things that's dead and done for stay so. I don't know as we've got any call to remember 'em. 'The Lord requireth that which is past,' it

says in the Bible; and I've always looked upon that as a kind of a hint to men that it wa'n't their business, but the Lord's."

"Oh, it's all very well to talk, 'Tenty Scran! — talk, do! — but 'tisn't so mighty easy to practise on't."

"Why, now, I think it's the easiest way, by a sight, Miss Hitty. I didn't mean to cast it up against you, for I know it's partly natur', but I do think folks can help natur' more'n they're generally willing to allow. I know it does seem as if you couldn't help thinkin' about troubles sometimes, and it's quite a chore to keep bright; but then it seems so much more cheery not to be fretted over things you can't help, and it is such a sight pleasanter for everybody else! I declare, it does seem jest as though the Lord had made this world for folks to have a good time in, only they don't all know how, and I always feel a call to help 'em."

"You're a master-piece to talk, 'Tenty, — but it don't make the difference with me it does with some folks; it seems as if I should ha' had a better time almost any way beside my way. I get more and more failin' every day, — I'm pretty near gone now. I don't know but what I shall die any time. I suffer so with rheumatiz, and I'm troubled considerable with a risin' of the lungs; and sometimes I do think I've got a spine in my back, it aches and creaks so nights."

"Why, I was thinking, since you set here, Miss Hitty, how spry you be, and you've got a real 'hullsome look to your face; I should say you'd grown fat."

"Fat!" exclaimed the indignant spinner; "about as fat as a hen's forehead! Why, Content Scran! I'm dreadful poor, — poor as Job's turkey; why, my arms is all bones and sinners."

"You don't say so! I guess that's knitting, Miss Hitty; you do knit beautiful. Is that worsted or cotton you're at now?"

Praise allayed Miss Hitty's wounded self-pity. She grew amiable under its slow-dropping dews always, as 'Tenty knew.

"Oh, this a'n't anything to boast of. I call this common knitting; it's a pair of socks I promised Miss Warner for her boy. Speakin' of her boy Ned makes me think;—have you heard the news, 'Tenty?"

"No, I haven't heard any."

"Well, it's jest like a story-book. Ned Parker, — he 't was Doctor Parker's son, an' promised to our Hanner-Ann, — he's turned up, it appears. He wa'n't drowned, but he was washed ashore, and the Indians they took him, and he wasn't able to get away for ten year; then a whaler's crew catched sight of him, havin' stopped there for water, and took him aboard, and he's been the world over since. He calculated everybody to Deerfield was dead and married, so he didn't come back; but now he is a-comin' back, for he's lost a leg, and he's got some money, and they say he is a-goin' to settle down here."

"Has he come yet, Miss Hitty?"

"No, they're expectin' of him to Miss Warner's every day;—you know she was Miss Parker's half-brother's wife."

"Yes, I have heard she was. But, Miss Hitty, don't roll up your work."

"Oh, I must be a-goin', — it's time; my help will be standin' on her head by this time, like enough. I don't see but what one Irish girl is about as confinin' as seven children, I'm sure."

With which despairing remark, Miss Hitty put on her shawl and calash and departed; while Content filled her tea-kettle and prepared for supper.

But while the kettle boiled, she sat down by the window, and thought about Miss Hitty's news. Her first feeling was one of surprise at herself, a sort of sad surprise, to feel how entirely the love that once threatened to wreck her life had died out of it. Hard, indeed, it is to believe that love can ever die! The young girl clings passionately even to her grief, and rejects as an insult the idea that such deep regret can become less in all a lifetime, — that love, immortal, vital, all-pervading, can perish from its prime, and flutter away into dust like the dead leaves

of a rose. Yet is it not the less true. Time, cold reason, bitter experience, all poison its life-springs; respect, esteem, admiration, all turn away from a point that offers no foothold for their clinging; and she who weeps to-day tears hot as life-blood ten years hereafter may look with cool distaste at the past passion she has calmly weighed and measured, and thank God that her wish failed and her hope was cut down. Yet there is a certain price to pay for all such experience, to such a heart as sat in the quieted bosom of Content. Had it been possible for her to love again, she would have felt the change in her nature far less; but with the stream, the fountain also had dried, and she was conscious that an aridness, unpleasant and unnatural, threatened to desolate her soul, and her conflict with this had been the hardest battle of all. It is so hard to love voluntarily, — to satisfy one's self with minor affections, — to know that life offers no more its grandest culmination, its divinest triumph, — to accept a succession of wax-lights because the sun and the day can return no more, — above all, to feel that the capacity of receiving that sunlight is fled, — that, so far, one's own power is eternally narrowed, like the loss of a right hand or the blinding of a right eye! Patience endures it, but even patience weeps to think how the fair intent of the Maker is marred, — to see the mutilated image, the brokenness of perfection!

Not that 'Tenty was conscious of all these ideas. They simplified themselves to her simple nature in a brief soliloquy, as she sat looking at the splendid haze of October, glorifying the scarlet maples and yellow elms of Deerfield Street, now steeped in a sunset of purpled crimson that struck its level rays across the sapphire hill-tops and transfigured briefly that melancholy earth dying into winter's desolations.

"Well, it is curious to think I ever cared so much for anybody as I did for Ned Parker! poor, selfish cre'tur', just playing with me for fun, as our kitty does

with a mouse! and I re'ly thought he was a fine man! Live and learn, I declare for't! He let me know what kind of cre'turs men are, though. I haven't had to be pestered with one all my life, I'm thankful: that's one good thing to come out of evil. I don't know but what I should like to feel as wide awake again as I did then; but 't isn't worth the price."

Saying which, Miss 'Tenty brewed her tea, spread her bread and butter, and with a bit of cheese made her savory meal, cleared it away, washed the dishes, and resumed her work as peacefully as if her life had been all as serene as to-day.

Ned Parker did come back to Deerfield, and settled there,— a coarse, red-faced, stout, sailor-like man, with a wooden leg. Ten years in Patagonia and ten years of whaling had not improved his aspect or his morals. He swore like a pirate, chewed, smoked a pipe, and now and then drank to excess; and by way of elegant diversion to these amusements, fell in love with Content Scran! Her trim figure, her bright, cheerful face, her pretty, neat little house and garden, the rumored "interest-money," that was the fruit of years of hard work and saving, all attracted this lazy, selfish man, who, remembering his youth, fancied he had only to ask, to receive; and was struck with astonishment to hear,—

"No, thank you," in a very calm, clear tone, answered to his proposition.

"Good Lord! you women are queer craft! I swear, I thought you'd lay to when I h'isted signals; I ha'n't forgot past times and the meetin'-house steps, if you have, 'Tenty Scran."

"You've forgotten Hannah-Ann Hall, I guess," retorted the indignant little woman.

Ned Parker swore a great oath; he *had* forgotten that passage,— though only for a moment.

"Look here!" said 'Tenty, coloring with quiet wrath. "I cannot be friendly, even, with a man that talks that way. You had your sport, makin' believe you

liked me, and I didn't know better than to believe you was an honest man. I did think a sight of you then, Ed'ard Parker. I a'n't ashamed to own it. I had reason to,— for your actions was louder than words. But when I come to know you hadn't meant nothing by all your praises and kisses and fine words, except just to have your own fun while you stayed, no matter what become of me, I see, after I'd got the tears out of my eyes, what kind of a self-seekin', mean, paltry man it was that could carry on so with an innocent young girl, and I hadn't no more respect for you than I have for a potato-peeling. I've lived to bless the Lord that kept me from you, and I a'n't going to take my blessings back. It's because I do remember them times that I say No, now. Your locket is at the bottom of our well; but any love I had with it is drowned deeper, down to the bottom of nothing. I wish you well, and to mend your ways; but I don't want to see you here, never!"

After this pungent dismissal, nothing was left for Ned Parker but to hobble from the house, cursing to himself for shame, while 'Tenty buried her face in her apron and cried as bitterly as if fifteen, instead of fifty, assailed her with its sorrows.

Why did she cry? Who knows? Perhaps, if you, my dear friend, longing for the face that bloomed, the lips that kissed, the eyes that smiled for you, years ago, should suddenly be confronted by those features, after years of death and decay had done their ghastly work on them, bones grinning from their clinging morsels of clay, you, too, might hide your head and cry with terror and disgust and regret. And again you might not. As I said before, who knows?

But after this, Content subsided into her peaceful routine. Ned Parker drank himself into delirium-tremens, spent all his money, and came upon the town. But at that juncture, the Reverend Everett Goodyear, Parson Goodyear's son and successor, interfered in his behalf, hired a room and a nurse for him, and had

him taken care of in the most generous and faithful way for the remaining year-and-a-half of his life. Mr. Goodyear said he was acting for Parker's friends; some said he had a rich uncle, who was moved to compassion at last; some thought it was Hannah-Ann Hall; but only one person knew, and she said nothing.

The day Ned Parker died, the young minister stepped in to see 'Tenty Scran', and told her he was gone. Content did not cry nor smile.

"I'm glad he's rested," said she; "though I haven't no certainty about his state hereafter."

"You must leave that with the Lord, Miss Content," said Mr. Goodyear. "You have done what was right; you can't think He will do less."

"That's a fact; and now I expect my last trouble is over."

"But it has taken almost all your money," hesitatingly replied the minister.

"Well, that's the least of my concerns,

Mr. Goodyear," smiled 'Tenty. "I'm spared my hands yet, and I sha'n't want for nothing while they last. When I get helpless, I expect the Lord will take care of me. I sha'n't worry about it till it comes."

"That is philosophy, certainly," said Mr. Goodyear.

"I don't know as it's that; but I guess it's six of common-sense and half-a-dozen of religion; I always thought they was near about the same thing. Fact is, people don't die of troubles in this world; they die of frettin' at 'em, only they don't seem to know it."

"According to that rule, you won't die this long time, Miss 'Tenty," said the minister, unable to resist a smile.

"Well, I don't know, Sir. I guess I shall live as long as I want to; and I expect I shall die content. I a'n't troubled."

"Blessed are the meek, for they shall inherit the earth," murmured Mr. Goodyear, as he walked away.

RECOLLECTIONS OF IRVING.

BY HIS PUBLISHER.

You are aware that one of the most interesting reunions of men connected with literary pursuits in England is at the annual dinner of the "Literary Fund,"—the management of which has been so often dissected of late by Dickens and others. It is a fund for disabled authors; and, like most other British charities, requires to be fed annually by a public dinner. A notable occasion of this kind happened on the 11th of May, 1842. It was at this that I first met Mr. Irving in Europe. The president of the festival was no less than the Queen's young husband, Prince Albert,—his first appearance in that (presidential) capacity. His three speeches were more than respectable, for

a prince; they were a *positive* success. In the course of the evening we had speeches by Hallam and Lord Mahon for the historians; Campbell and Moore for the poets; Talfourd for the dramatists and the bar; Sir Roderick Murchison for the *savans*; Chevalier Bunsen and Baron Brunnow for the diplomatists; G. P. R. James for the novelists; the Bishop of Gloucester; Gally Knight, the antiquary; and a goodly sprinkling of peers, *not* famed as authors. Edward Everett was present as American Minister; and Washington Irving (then on his way to Madrid in diplomatic capacity) represented American authors. Such an array of speakers in a single evening is rare indeed, and it

was an occasion long to be remembered.

The toasts and speeches were, of course, very precisely arranged beforehand, as etiquette requires, I suppose, being in the presence of "His Royal Highness," yet most of them were animated and characteristic. When "Washington Irving and American Literature" was propounded by the fugleman at the elbow of H. R. H., the cheering was vociferously hearty and cordial, and the interest and curiosity to see and hear Geoffrey Crayon seemed to be intense. His name appeared to touch the finest chords of genial sympathy and good-will. The other famous men of the evening had been listened to with respect and deference, but Mr. Irving's name inspired genuine enthusiasm. We had been listening to the learned Hallam, and the sparkling Moore, — to the classic and fluent author of "Ion," and to the "Bard of Hope," — to the historic and theologic diplomate from Prussia, and to the stately representative of the Czar. A dozen well-prepared sentiments had been responded to in as many different speeches. "The Mariners of England," "And doth not a meeting like this make amends," had been sung, to the evident satisfaction of the authors of those lyrics — (Campbell, by-the-way, who was near my seat, had to be "regulated" in his speech by his friend and publisher, Moxon, lest H. R. H. should be scandalized). And now everybody was on tiptoe for the author of "Bracebridge Hall." If his speech had been proportioned to the cheers which greeted him, it would have been the longest of the evening. When, therefore, he simply said, in his modest, beseeching manner, "I beg to return you my very sincere thanks," his brevity seemed almost ungracious to those who didn't know that it was physically impossible for him to make a speech. It was vexatious that routine had omitted from the list of speakers Mr. Everett, who was at Irving's side; but, as diplomate, the Prussian and Russian had precedence, and as American author, Irving, of course, was the representative man. An Englishman near me

said to his neighbor, — "Brief?" "Yes, but you can tell the *gentleman* in the very tone of his voice."

In the hat-room I was amused to see "little Tom Moore" in the crowd, appealing, with mock-pathos, to Irving, as the biggest man, to pass his ticket, lest he should be demolished in the crush. They left the hall together to encounter a heavy shower; and Moore, in his "Diary," tells the following further incident.

"The best thing of the evening (as far as I was concerned) occurred after the whole grand show was over. Irving and I came away together, and we had hardly got into the street, when a most pelting shower came on, and cabs and umbrellas were in requisition in all directions. As we were provided with neither, our plight was becoming serious, when a common cad ran up to me, and said, — "Shall I get you a cab, Mr. Moore? Sure, a'n't I the man that patronizes your Melodies?" He then ran off in search of a vehicle, while Irving and I stood close up, like a pair of male caryatides, under the very narrow protection of a hall-door ledge, and thought, at last, that we were quite forgotten by my patron. But he came faithfully back, and while putting me into the cab, (without minding at all the trifle I gave him for his trouble,) he said confidentially in my ear, — 'Now mind, whenever you want a cab, Misthur Moore, just call for Tim Flaherty, and I'm your man.' — Now, this I call *fame*, and of somewhat more agreeable kind than that of Dante, when the women in the street found him out by the marks of hell-fire on his beard."

When I said that Mr. Irving could not speak in public, I had forgotten that he did once get through with a very nice little speech on such an occasion as that just alluded to. It was at an entertainment given in 1837, at the old City Hotel in New York, by the New York booksellers to American authors. Many of "the Trade" will remember the good things said on that evening, and among them Mr. Irving's speech about Halleck, and about Rogers the poet, as the "friend

of American genius." At my request, he afterwards wrote out his remarks, which were printed in the papers of the day. Probably this was his last, if not his best effort in this line; for the Dickens-dinner remarks were not *complete*.

In 1845, Mr. Irving came to London from his post at Madrid, on a short visit to his friend, Mr. McLane, then American Minister to England. It was my privilege at that time to know him more domestically than before. It was pleasant to have him at my table at "Knickerbocker Cottage." With his permission, a quiet party of four was made up; — the others being Dr. Beattie, the friend and biographer of Campbell; Samuel Carter Hall, the *littérateur*, and editor of the "Art Journal"; and William Howitt. Irving was much interested in what Dr. Beattie had to tell about Campbell, and especially so in Carter Hall's stories of Moore and his patron, Lord Lansdowne. Moore, at this time, was in ill-health and shut up from the world. I need not attempt to quote the conversation. Irving had been somewhat intimate with Moore in former days, and found him doubtless an entertaining and lively companion, — but his replies to Hall about the "patronage" of my Lord Lansdowne, etc., indicated pretty clearly that he had no sympathy with the *small* traits and parasitical tendencies of Moore's character. If there was anything specially detestable to Irving and at variance with his very nature, it was that self-seeking deference to wealth and station which was so characteristic of the Irish poet.

I had hinted to one of my guests that Mr. Irving was sometimes "caught napping" even at the dinner-table, so that such an event should not occasion surprise. The conversation proved so interesting that I had almost claimed a victory, when, lo! a slight lull in the talk disclosed the fact that our respected guest was nodding. I believe it was a habit with him, for many years, thus to take "forty winks" at the dinner-table. Still, the conversation of that evening was a rich treat, and my English friends frequently thanked

me afterwards for the opportunity of meeting "the man of all others whom they desired to know."

The term of Mr. Irving's contract with his Philadelphia publishers expired in 1843, and, for five years, his works remained *in statu quo*, no American publisher appearing to think them of sufficient importance to propose definitely for a new edition. Surprising as this fact appears now, it is actually true that Mr. Irving began to think his works had "rusted out" and were "defunct," — for nobody offered to reproduce them. Being, in 1848, again settled in New York, and apparently able to render suitable business-attention to the enterprise, I ambitiously proposed an arrangement to publish Irving's Works. My suggestion was made in a brief note, written on the impulse of the moment; but (what was more remarkable) it was promptly accepted without the change of a single figure or a single stipulation. It is sufficient to remark, that the number of volumes since printed of these works (including the later ones) amounts to about eight hundred thousand.

The relations of friendship — I cannot say intimacy — to which this arrangement admitted me were such as any man might have enjoyed with proud satisfaction. I had always too much earnest *respect* for Mr. Irving ever to claim familiar intimacy with him. He was a man who would unconsciously and quietly command deferential regard and consideration; for in all his ways and words there was the atmosphere of true refinement. He was emphatically a gentleman, in the best sense of that word. Never forbidding or morose, he was at times (indeed always, when quite well) full of genial humor, — sometimes overflowing with fun. But I need not, here at least, attempt to sum up his characteristics.

That "Sunnyside" home was too inviting to those who were privileged there to allow any proper opportunity for a visit to pass unimproved. Indeed, it became so attractive to strangers and lion-hunters, that some of those whose *entrée*

was quite legitimate and acceptable refrained, especially during the last two years, from adding to the heavy tax which casual visitors began to levy upon the quiet hours of the host. Ten years ago, when Mr. Irving was in his best estate of health and spirits, when his mood was of the sunniest, and Wolfert's Roost was in the spring-time of its charms, it was my fortune to pass a few days there with my wife. Mr. Irving himself drove a snug pair of ponies down to the steamboat to meet us — (for, even then, Thackeray's "one old horse" was not the only resource in the Sunnyside stables). The drive of two miles from Tarrytown to that delicious lane which leads to the Roost, — who does not know all that, and how charming it is? Five hundred descriptions of the Tappan Sea and the region round about have not exhausted it. The modest cottage, almost buried under the luxuriant Melrose ivy, was then just made what it is, — a picturesque and comfortable retreat for a man of tastes and habits like those of Geoffrey Crayon, — snug and modest, but yet, with all its surroundings, a fit residence for a gentleman who had means to make everything suitable as well as handsome about him. Of this a word anon.

I do not presume to write of the home-details of Sunnyside, further than to say that this delightful visit of three or four days gave us the impression that Mr. Irving's element seemed to be at home, as head of the family. He took us for a stroll over the grounds, — some twenty acres of wood and dell, with babbling brooks, — pointing out innumerable trees which he had planted with his own hands, and telling us anecdotes and reminiscences of his early life: — of his being taken in the Mediterranean by pirates; — of his standing on the pier at Messina, in Sicily, and looking at Nelson's fleet sweeping by on its way to the Battle of Trafalgar; — of his failure to see the interior of Milan Cathedral, because it was being decorated for the coronation of the first Napoleon; — of his adventures in Rome with Allston, and how near

Geoffrey Crayon came to being an artist; — of Talleyrand, and many other celebrities; — and of incidents which seemed to take us back to a former generation. Often at this and subsequent visits I ventured to suggest, (not professionally,) after some of these reminiscences, "I hope you have taken time to make a note of these"; — but the oracle nodded a sort of humorous No. — A drive to Sleepy Hollow — Mr. Irving again managing the ponies himself — crowned our visit; and with such a coachman and guide, in such regions, we were not altogether unable to appreciate the excursion.

You are aware that in "Knickerbocker," especially, Mr. Irving made copious revisions and additions, when the new edition was published in 1848. The original edition (1809) was dedicated with mock gravity to the New York Historical Society; and the preface to the revision explains the origin and intent of the work. Probably some of the more literal-minded grandsons of Holland were somewhat unappreciative of the precise scope of the author's genius and the bent of his humor; but if this "veritable history" really elicited any "doubts" or any hostility, at the time, such misapprehension has doubtless been long since removed. It has often been remarked that Diedrich Knickerbocker had really enlisted more practical interest in the early annals of his native State than all other historians together, down to his time. But for him we might never have had an O'Callaghan or a Brodhead.

The "Sketch-Book" also received considerable new matter in the revised edition; and the story, in the preface, of the author's connection with Scott and with Murray added new interest to the volume, which has always been *the* favorite with the public. You will remember Mr. Bryant's remark about the change in the tone of Mr. Irving's temperament shown in this work as contrasted with Knickerbocker, and the probable cause of this change. Mr. Bryant's very delicate and judicious reference to the fact of Mr. Ir-

ving's early engagement was undoubtedly correct. A miniature of a young lady, intellectual, refined, and beautiful, was handed me one day by Mr. Irving, with the request that I would have a slight injury repaired by an artist and a new case made for it, the old one being actually worn out by much use. The painting (on ivory) was exquisitely fine. When I returned it to him in a suitable velvet case, he took it to a quiet corner and looked intently on the face for some minutes, apparently unobserved, his tears falling freely on the glass as he gazed. That this was a miniature of the lady, — Miss Hoffman, a sister of Ogden Hoffman, — it is not now, perhaps, indelicate to surmise. It is for a poet to characterize the nature of an attachment so loyal, so fresh, and so fragrant, *forty years* after death had snatched away the mortal part of the object of affection.

During one of his visits to the city, Mr. Irving suddenly asked if I could give him a bed at my house at Staten Island. I could. So we had a nice chatty evening, and the next morning we took him on a charming drive over the hills of Staten Island. He seemed to enjoy it highly, for he had not been there, I believe, since he was stationed there in a military capacity, during the War of 1812, as aid of Governor Tompkins. He gave us a humorous account of some of his equestrian performances, and those of the Governor, while on duty at the island; but neither his valor nor the Governor's was tested by any actual contact with the enemy.

In facility of composition, Mr. Irving, I believe, was peculiarly influenced by "moods." When in his usual good health, and the spirit was on him, he wrote very rapidly; but at other times composition was an irksome task, or even an impossible one. Dr. Peters says, he frequently rose from his bed in the night and wrote for hours together. Then again he would not touch his pen for weeks. I believe his most rapidly written work was the one often pronounced his most spirited one, and a model as a biography, the "Life of Goldsmith." Sitting at my desk

one day, he was looking at Forster's clever work, which I proposed to reprint. He remarked that it was a favorite theme of his, and he had half a mind to pursue it, and extend into a volume a sketch he had once made for an edition of Goldsmith's Works. I expressed a hope that he would do so, and within sixty days the first sheets of Irving's "Goldsmith" were in the printer's hands. The press (as he says) was "dogging at his heels," for in two or three weeks the volume was published.

Visiting London shortly after the "Life of Mahomet" was prepared for the press, I arranged with Mr. Murray, on the author's behalf, for an English edition of "Mahomet," "Goldsmith," etc., and took a request from Mr. Irving to his old friend Leslie, that he would make a *true* sketch of the venerable Diedrich Knickerbocker. Mr. Irving insisted that the great historian of the Manhattoes was not the vulgar old fellow they would keep putting on the omnibuses and ice-carts; but that, though quaint and old-fashioned, he was still of gentle blood. Leslie's sketches, however, (he made two,) did not hit the mark exactly; Mr. Irving liked Darley's better.

Among the briefer visits to Sunnyside which I had the good-fortune to enjoy was one with the estimable compiler of the "Dictionary of Authors." Mr. Irving's amiable and hospitable nature prompted him always to welcome visitors so kindly, that no one, however dull, and however uncertain his claims, would fail to be pleased with his visit. But when the genial host was in good health and in his best moods, and the visitor had any magnetism in his composition, when he found, in short, a kindred spirit, his talk was of the choicest. Of Sir Walter Scott, especially, he would tell us much that was interesting. Probably no two writers ever appreciated each other more heartily than Scott and Irving. The sterling good sense, and quiet, yet rich humor of Scott, as well as his literary tastes and wonderful fund of legendary lore, would find no more intelligent and discriminating admirer than

Irving; while the rollicking fun of the veritable Diedrich and the delicate fancy and pathos of Crayon were doubtless unaffectedly enjoyed by the great Scotsman. I wish I could tell you accurately one-half of the anecdotes which were so pleasantly related during those various brief visits at "the Cottage"; but I did not go there to take notes, and it is wicked to spoil good stories by misquotation. One story, however, I may venture to repeat.

You remember how the author of the "Pleasures of Hope" was once hospitably entertained by worthy people, under the supposition that he was the excellent missionary Campbell, just returned from Africa,—and how the massive man of state, Daniel Webster, had repeated occasion, in England, to disclaim honors meant for Noah, the man of words. Mr. Irving told, with great glee, a little story against himself, illustrating these uncertainties of distant fame. Making a small purchase at a shop in England, not long after his second or third work had given currency to his name, he gave his address ("Mr. Irving, Number," etc.) for the parcel to be sent to his lodgings. The salesman's face brightened: "Is it possible," said he, "that I have the pleasure of serving Mr. Irving?" The question, and the manner of it, indicated profound respect and admiration. A modest and smiling acknowledgment was inevitable. A few more remarks indicated still more deferential interest on the part of the man of tape; and then another question, about Mr. Irving's "latest work," revealed the pleasant fact that he was addressed as the famous Edward Irving, of the Scotch Church,—the man of divers tongues. The very existence of the "Sketch-Book" was probably unknown to his intelligent admirer. "All I could do," added Mr. Crayon, with that rich twinkle in his eye,— "all I could do was to take my tail between my legs and slink away in the smallest possible compass."

A word more about Mr. Irving's manner of life. The impression given by

Thackeray, in his notice (genial enough, and well-meant, doubtless) of Irving's death, is absurdly inaccurate. His picture of the "one old horse," the plain little house, etc., would lead one to imagine Mr. Irving a weak, good-natured old man, amiably, but parsimoniously, saving up his pennies for his "eleven nieces," (!) and to this end stinting himself, among other ways, to "a single glass of wine," etc., etc. Mr. Thackeray's notions of style and state and liveried retinues are probably not entirely un-English, notwithstanding he wields so sharp a pen against England's snobs; and he may naturally have looked for more display of greatness at the residence of an ex-ambassador. But he could scarcely appreciate that simple dignity and solid comfort, that unobtrusive *fitness*, which belonged to Mr. Irving's home-arrangements. There were no flunkies in gold and scarlet; but there were four or five good horses in the stable, and as many suitable carriages. Everything in the cottage was peculiarly and comfortably elegant, without the least pretension. As to the "single glass of wine," Mr. Irving, never a professed teetotaller, was always temperate on instinct both in eating and drinking; and in his last two years I believe he did not taste wine at all. In all financial matters, Mr. Irving's providence and preciseness were worthy of imitation by all professional literary men; but with exactness and punctuality he united a liberal disposition to make a suitable use of money, and to have all around him comfortable and appropriate. Knowing that he could leave a handsome independence for those nearest to him, he had no occasion for any such anxious care as Mr. Thackeray intimates.

Thackeray had been invited to Yonkers, to give his lecture on "Charity and Humor." At this "Ancient Dorp" he was the guest of Cozzens, and I had the honor of accompanying the greater and lesser humorist in a drive to Sunnyside, nine miles. (This call of an hour, by-the-way, was Thackeray's only glimpse of the place he described.) The interview was in every

way interesting. Mr. Irving produced a pair of antiquated spectacles, which had belonged to Washington, and Major Pendennis tried them on with evident reverence. The hour was well filled with rapid, pleasant chat; but no profound analysis of the characteristics of wit and humor was elicited either from the Stout Gentleman or from Vanity Fair. Mr. Irving went down to Yonkers, to hear Thackeray's lecture in the evening, after we had all had a slice of bear at Mr. Sparrowgrass's, to say nothing of sundry other courses, with a slight thread of conversation between. At the lecture, he was so startled by the eulogistic presentation of the lecturer to the audience, by the excellent chief of the committee, that I believe he did not once nod during the evening. We were, of course, proud to have as our own guest for the night such an embodiment of "Charity and Humor" as Mr. Thackeray saw in the front bench before him, but whom he considerately spared from holding up as an illustration of his subject.

Charity, indeed, practical "good-will toward men," was an essential part of Mr. Irving's Christianity, — and in this Christian virtue he was sometimes severely tested. Nothing was more irksome to him than to be compelled to endure calls of mere curiosity, or to answer letters either of fulsome eulogy of himself or asking for his eulogy of the MSS. or new work of the correspondent. Some letters of that kind he probably never did answer. Few had any idea of the *fagging* task they imposed on the distinguished victim. He would worry and fret over it trebly in anticipation, and the actual task itself was to him probably ten times as irksome as it would be to most others. Yet it would be curious to know how many letters of suggestion and encouragement he actually did write in reply to solicitations from young authors for his criticism and advice, and his recommendation, or, perhaps, his pecuniary aid. Always disposed to find merit, even where any stray grains of the article lay buried in rubbish,

he would amiably say the utmost that could justly be said in favor of "struggling genius." Sometimes his readiness to aid meritorious young authors into profitable publicity was shamefully abused, — as in the case of Maitland, an Englishman, who deliberately forged an absurdly distorted paraphrase of a note of Mr. Irving's, besides other disreputable use of the signature which he had enticed from him in answer to urgent appeals. But these were among the penalties of honorable fame and influence which he might naturally expect to pay. The sunny aspect on the "even tenor of his way" still prevailed; and until the hand of disease reached him in the last year of his life, very few probably enjoyed a more tranquil and unruffled existence.

It became almost a proverb, that Mr. Irving was a nearly solitary instance of a long literary career (half a century) untouched by even a breath of ill-will or jealousy on the part of a brother-author. The annals of the *genus irritabile* scarcely show a parallel to such a career. The most prominent American contemporary of Mr. Irving in imaginative literature, I suppose, was Fenimore Cooper, — whose genius raised the American name in Europe more effectively even than Irving's, at least on the Continent. Cooper had a right to claim respect and admiration, if not affection, from his countrymen, for his brilliant creations and his solid services to American literature; and he knew it. But, as we all know, — for it was patent, — when he returned from Europe, after sending his "Letter to his Countrymen," and gave us "Home as Found," his reception was much less marked with warmth and enthusiasm than Mr. Irving's was; and while he professed indifference to all such whims of popular regard, yet he evidently brooded a little over the relative amount of public attention extended to his brother-author. At any rate, he persistently kept aloof from Mr. Irving for many years; and not unfrequently discoursed, in his rather authoritative manner, about the humbuggery of success in this country, as

exhibited in some shining instances of popular and official favor. With great admiration for Cooper, whose national services were never recognized as they deserved to be, I trust no injustice is involved in the above suggestion, which I make somewhat presumptuously, — especially as Mr. Irving more than once spoke to me in terms of strong admiration of the works and genius of Cooper, and regretted that the great novelist seemed to cherish some unpleasant feeling towards him. One day, some time after I had commenced a library edition of Cooper's best works, and while Irving's were in course of publication in companionship, Mr. Irving was sitting at my desk, with his back to the door, when Mr. Cooper came in, (a little bustlingly, as usual,) and stood at the office-entrance, talking. Mr. Irving did not turn, (for obvious reasons,) and Cooper did not see him. Remembering his "Mr. Sharp, Mr. Blunt, — Mr. Blunt, Mr. Sharp," I had acquired caution as to introductions without mutual consent; but with a brief thought of how matters stood, (they had not met for several years,) and a sort of instinct that reduced the real difference between the parties to a baseless fabric of misapprehension, I stoutly obeyed the impulse of the moment, and simply said, — "Mr. Cooper, here is Mr. Irving." The latter turned, — Cooper held out his hand cordially, dashed at once into an animated conversation, took a chair, and, to my surprise and delight, the two authors sat for an hour, chatting in their best manner about almost every topic of the day and some of former days. They parted with cordial good wishes, and Mr. Irving afterwards frequently alluded to the incident as being a very great gratification to him. He may have recalled it with new satisfaction, when, not many months afterwards, he sat on the platform at the "Cooper Commemoration," and joined in Bryant's tribute to the genius of the departed novelist.

Mr. Irving was never a systematic collector of books, and his little library at

Sunnyside might have disappointed those who would expect to see there rich shelves of choice editions, and a full array of all the favorite authors among whom such a writer would delight to revel. Some rather antiquated tomes in Spanish, — indifferent sets of Calderon and Cervantes, and of some modern French and German authors, — a presentation-set of Cadell's "Waverley," as well as that more recent and elegant emanation from the classic press of Houghton, — a moderate amount of home-tools for the "Life of Washington," (rarer materials were consulted in the town-libraries and at Washington,) — and the remainder of his books were evidently a hap-hazard collection, many coming from the authors, with their respects, and thus sometimes costing the recipient their full (intrinsic) value in writing a letter of acknowledgment.

The little apartment had, nevertheless, become somewhat overcrowded, and a suggestion for a general renovation and pruning seemed to be gladly accepted, — so I went up and passed the night there for that purpose. Mr. Irving, in his easy-chair in the sitting-room, after dinner, was quite content to have me range at large in the library and to let me discard all the "lumber" as I pleased; so I turned out some hundred volumes of unclassic superfluity, and then called him in from his nap to approve or veto my proceedings. As he sat by, while I rapidly reported the candidates for exclusion, and he nodded assent, or as, here and there, he would interpose with "No, no, not *that*," and an anecdote or reminiscence would come in as a reason against the dismissal of the book in my hand, I could not help suggesting the scene in Don Quixote's library, when the priest and the barber entered upon their scrutiny of its contents. Mr. Irving seemed to be highly amused with this pruning process, and his running commentary on my "estimates of value" in weighing his literary collections was richly entertaining.

Observing that his library-table was

somewhat antiquated and inadequate, I persuaded him to let me make him a present of a new one, with the modern conveniences of drawers and snug corners for keeping his stray papers. When I sent him such a one, my stipulation for the return of the old one as a present to me was pleasantly granted. This relic was of no great intrinsic value; but, as he had written on this table many of his later works, including "Mahomet," "Goldsmith," "Wolfert's Roost," and "Washington," I prize it, of course, as one of the most interesting mementos of Sunnyside.

As an illustration of habit, it may be added, that, some time after the new table had been installed, I was sitting with him in the library, when he searched long and fruitlessly for some paper which had been "so *very* carefully stowed away in some *very* safe drawer" that it was not to be found, and the search ended in a sort of half-humorous, half-earnest denunciation of all "modern conveniences";—the simple old table, with its primitive facilities, was, after all, worth a dozen of these elegant contrivances for memory-saving and neatness.

One rather curious characteristic of Mr. Irving was excessive, unaffected modesty and distrust of himself and of his own writings. Considering how many a *débutant* in letters, not yet out of his teens, is so demonstratively self-confident as to the prospective effect of his genius on an expecting and admiring world, it was always remarkable to hear a veteran, whose fame for half a century had been cosmopolitan, expressing the most timid doubts as to his latest compositions, and fearing they were unequal to their position,—so unwilling, too, to occupy an inch of ground to which any other writer might properly lay claim. Mr. Irving had planned and made some progress in a work on the Conquest of Mexico, when he learned of Mr. Prescott's intentions, and promptly laid his project aside. His "Life of Washington," originating more than thirty years ago, was repeatedly

abandoned, as the successive works of Mr. Sparks, Mr. Paulding, and others, appeared; and though he was subsequently induced to proceed with his long-considered plan of a more dramatic and picturesque narrative from a new point of view, yet he was more than once inclined to put his MSS. into the fire, in the apprehension that the subject had been worn threadbare by the various compilations which were constantly coming out. When he ventured his first volume, the cordial and appreciative reception promptly accorded to it surprised as much as it cheered and pleased him; for though he despised hollow flattery, no young writer was more warmly sensitive than he to all discriminating, competent, and honest applause or criticism. When "Wolfert's Roost" was published, (I had to entice the papers of that volume from his drawers, for I doubt whether he would have collected them himself,) I saw him affected actually to tears, on reading some of the hearty and well-written personal tributes which that volume called forth. But though every volume was received in this spirit by the press and the public, he was to the last apprehensive of failure, until a reliable verdict should again reassure him. The very last volume of his works (the fifth of "Washington") was thus timidly permitted to be launched; and I remember well his expression of relief and satisfaction, when he said that Mr. Bancroft, Professor Felton, and Mr. Duyckinck had been the first to assure him the volume was all that it should be. His task on this volume had perhaps extended beyond the period of his robust health,—it had *fagged* him,—but he had been spared to write every line of it with his own hand, and my own copy is enriched by the autograph of his valedictory.

To refer, however briefly, to Mr. Irving's politics or religion, even if I had intimate knowledge of both, (which assuredly I had not,) would be, perhaps, to overstep decorous limits. It may, however, properly be mentioned, that, in the face

of all inherent probabilities as to his comfortable conservatism, and his earnest instincts in favor of fraternal conciliation and *justice*, (which was as marked a quality in him as in the great man whom he so faithfully portrayed,) in spite of all the considerations urged by timid gentlemen of the old school in favor of Fillmore and the *status quo*, he voted in 1856, as he told me, for Fremont. In speaking of the candidates then in the field, he said of Fremont, that his comparative youth and inexperience in party-politics were points in his favor; for he thought the condition of the country called for a man of nerve and energy, one in his prime, and unfettered by party-traditions and bargains for "the spoils." His characterization of a more experienced functionary, who had once served in the State Department, was more severe than I ever heard from him of any other person; and severity from a man of his judicious and kindly impulses had a meaning in it.

Favored once with a quiet Sunday at "the Cottage," of course there was a seat for us all in the family-pew at Christ Church in the village (Tarrytown). Mr. Irving's official station as Church-Warden was indicated by the ex-ambassador's meek and decorous presentation of the plate for the silver and copper offerings of the parishioners. At subsequent successive meetings of the General (State) Convention of the Protestant Episcopal Church, (to which I had been delegated from a little parish on Staten Island,) the names of Washington Irving and Fenimore Cooper were both recorded,—the latter representing Christ Church, Cooperstown. Mr. Irving for several years served in this capacity, and as one of the Missionary Committee of the Convention. His name was naturally sought as honoring any organization. He was the last person to be demonstrative or conspicuous either as to his faith or his works; but no disciple of Christ, perhaps, felt more devoutly than he did the reverential aspiration of "Glory to God in the highest, and on earth peace, good-will toward men."

Passing a print-window in Broadway one day, his eye rested on the beautiful engraving of "Christus Consolator." He stopped and looked at it intently for some minutes, evidently much affected by the genuine inspiration of the artist in this remarkable representation of the Saviour as the consoler of sorrow-stricken humanity. His tears fell freely. "Pray, get me that print," said he; "I must have it framed for my sitting-room." When he examined it more closely and found the artist's name, "It's by my old friend Ary Scheffer!" said he,—remarking further, that he had known Scheffer intimately, and knew him to be a true artist, but had not expected from him anything so excellent as this. I afterwards sent him the companion, "Christus Remunerator"; and the pair remained his daily companions till the day of his death. To me, the picture of Irving, amid the noise and bustle of noon in Broadway, shedding tears as he studied that little print, so feelingly picturing human sorrow and the source of its alleviation, has always remained associated with the artist and his works. If Irving could enjoy wit and humor and give that enjoyment to others, no other writer of books had a heart more tenderly sensitive than his to the sufferings and ills which flesh is heir to.

Of his later days,—of the calmly received premonitions of that peaceful end of which only the precise moment was uncertain,—of his final departure, so gentle and so fitting,—of that "Washington-Irving-day" so dreamily, blandly still, and almost fragrant, December though it was, when with those simple and appropriate obsequies his mortal remains were placed by the side of his brothers and sisters in the burial-ground of Sleepy Hollow, while thousands from far and near silently looked for the last time on his genial face and mourned his loss as that of a personal friend and a national benefactor, yet could hardly for *his* sake desire any more enviable translation from mortality,—of the many beau-

tiful and eloquent tributes of living genius to the life and character and writings of the departed author,—of all these you have already an ample record. I need not repeat or extend it. If you could have “assisted” at the crowning “Commemoration,” on his birthday, (April 3d,) at the Academy of Music, you would have found it in many respects memorably in accordance with the intrinsic fitness of things. An audience of five thousand, so evidently and discriminatingly intelligent, addressed for two hours by Bryant, with all his cool, judicious, deliberate criticism, warmed into glowing appreciation of the most delicate and peculiar beauties of the character and literary services he was to delineate,—and this rich banquet fittingly *desserted* by the periods of Everett,—such an evening was worthy of the subject, and worthy to be remembered. The heartiness and the genial insight into Irving’s best traits which the poet displayed were peculiarly gratifying to the nearer friends and relatives. His sketch and analysis, too, had a remarkable completeness for an address of that kind, while its style and manner were models of chaste elegance. Speaking of Irving’s contemporaries and predecessors, he warms into poetry, thus:—

“We had but one novelist before the era of the ‘Sketch-Book’: their number is now beyond enumeration by any but a professed catalogue-maker, and many of them are read in every cultivated form of human speech. Those whom we acknowledge as our poets—one of whom is the special favorite of our brothers in language who dwell beyond the sea—appeared in the world of letters and won its attention after Irving had become famous. We have wits and humorists and amusing essayists, authors of some of the airiest and most graceful contributions of the present century,—and we owe them to the new impulse given to our literature in 1819. I look abroad on these stars of our literary firmament,—some crowded together with their minute points of light in a galaxy, some standing apart in glorious constellations; I recognize Arcturus

and Orion and Perseus and the glittering jewels of the Southern Crown, and the Pleiades shedding sweet influences; but the Evening Star, the soft and serene light that glowed in their van, the precursor of them all, has sunk below the horizon. The spheres, meanwhile, perform their appointed courses; the same motion which lifted them up to the mid-sky bears them onward to their setting; and they, too, like their bright leader, must soon be carried by it below the earth.”

Let me quote also Mr. Bryant’s closing remarks:—

“Other hands will yet give the world a bolder, more vivid, and more exact portraiture. In the mean time, when I consider for how many years he stood before the world as an author, with still increasing fame,—half a century in this most changeful of centuries,—I cannot hesitate to predict for him a deathless renown. Since he began to write, empires have arisen and passed away; mighty captains have appeared on the stage of the world, performed their part, and been called to their account; wars have been fought and ended which have changed the destinies of the human race. New arts have been invented and adopted, and have pushed the old out of use; the household economy of half mankind has undergone a revolution. Science has learned a new dialect and forgotten the old; the chemist of 1807 would be a vain babbler among his brethren of the present day, and would in turn become bewildered in the attempt to understand them. Nation utters speech to nation in words that pass from realm to realm with the speed of light. Distant countries have been made neighbors; the Atlantic Ocean has become a narrow frith, and the Old World and the New shake hands across it; the East and the West look in at each other’s windows. The new inventions bring new calamities, and men perish in crowds by the recoil of their own devices. War has learned more frightful modes of havoc, and armed himself with deadlier weapons; armies are

borne to the battle-field on the wings of the wind, and dashed against each other and destroyed with infinite bloodshed. We grow giddy with this perpetual whirl of strange events, these rapid and ceaseless mutations; the earth seems to be reeling under our feet, and we turn to those who write like Irving for some assurance that we are still in the same world into which we were born; we read, and are quieted and consoled. In his pages we see that the language of the heart never becomes obsolete; that Truth and Good and Beauty, the offspring of God, are not subject to the changes which beset the inventions of men. We become satisfied that he whose works were the delight of our fathers, and are still ours, will be read with the same pleasure by those who come after us."

IRENE ANADYOMENE.

O'ER far Pacific waves the wanderer holding
 His steady course before the strong monsoon,
 Entranced, beholds the coral isle unfolding
 Its ring of emerald and its bright lagoon.

At first their shadowy helms in the faint distance
 The tree-tops rear; then, as he nearer glides,
 The white surf gleams where the firm reef's resistance
 Meets and hurls back the fiercely charging tides.

He sees outspread the wide sea-beach, all sparkling
 With coral sand and many-tinted shells,
 While high above, in tropic rankness darkling,
 A cloud of verdure ever-brooding dwells.

With growing wonder and delight the stranger,
 While his swift shallop nears the enchanted strand,
 Sees the white surf cleared with one flash of danger,
 And a broad portal opening through the land.

And deftly through the verdurous gateway steering,
 The strong-armed oarsmen urge their flying boat,
 Till now, the broad horizon disappearing,
 On the still island-lake they pause and float.

The gun booms loud. With wishful eyes receding,
 They watch from their swift boat the lessening isle.
 The yards are squared. Again the good ship speeding
 Sees the chafed waves beneath her counter file.

Long musing o'er his scientific pages,
 The curious voyager pursues the theme,
 And learns whate'er the geologic sages
 Have found or fancied, — building each his scheme.

This pleased him best:— In earth's red primal morning,
 When Nature's forces wrought with youthful heat,
 A mighty continent outspread, adorning
 Our planet's face, where now the surges beat:

A land of wondrous growths, of strange creations,
 Of ferns like oaks, of saurians huge and dire,
 Of marshes vast, their dreary habitations,
 Of mountains flaming with primeval fire.

At length, by some supernal fiat banished,
 The land sank down in one great cataclysm;
 The vales, the plains, the mountains slowly vanished,
 Buried and quenched in the wide sea's abysm.

'Twas then (so ran the scheme) on each lost crater
 The coral-builders laid their marvellous pile;
 Millions on millions wrought, till ages later
 Saw reared to light and air the circling isle.

Thus Science dreams: but from the dream upflashes
 On his swift thought the subtly shadowed truth,
 That all serener joys bloom on the ashes,
 The lava, and spent craters of lost youth.

The heart, long worn by fierce volcanic surges,
 Feels its old world slow sinking from the sight,
 Till o'er the wreck a home of peace emerges,
 Bright with unnumbered shapes of new delight.

THE PROFESSOR'S STORY.

CHAPTER XXI.

THE WIDOW ROWENS GIVES A TEA-PARTY.

THERE was a good deal of interest felt, as has been said, in the lonely condition of Dudley Venner in that fine mansion-house of his, and with that strange daughter, who would never be married, as many people thought, in spite of all the stories. The feelings expressed by the good folks who dated from the time when they "buried our little Anny Marí," and others of that homespun stripe, were founded in

reason, after all. And so it was natural enough that they should be shared by various ladies, who, having conjugated the verb *to live* as far as the preterpluperfect tense, were ready to change one of its vowels and begin with it in the present indicative. Unfortunately, there was very little chance of showing sympathy in its active form for a gentleman who kept himself so much out of the way as the master of the Dudley Mansion.

Various attempts had been made, from time to time, of late years, to get him out of his study, which had, for the most part, proved failures. It was a surprise, there-

fore, when he was seen at the Great Party at the Colonel's. But it was an encouragement to try him again, and the consequence had been that he had received a number of notes inviting him to various smaller entertainments, which, as neither he nor Elsie had any fancy for them, he had politely declined.

Such was the state of things when he received an invitation to take tea *sociably, with a few friends*, at Hyacinth Cottage, the residence of the Widow Rowens, relict of the late Beeri Rowens, Esquire, better known as Major Rowens. Major Rowens was at the time of his decease a promising officer in the militia, in the direct line of promotion, as his waistband was getting tighter every year; and, as all the world knows, the militia-officer who splits off most buttons and fills the largest sword-belt stands the best chance of rising, or, perhaps we might say, spreading, to be General.

Major Rowens united in his person certain other traits that help a man to eminence in the arm of the service referred to. He ran to high colors, to wide whisker, to open pores; he had the saddle-leather skin common in Englishmen, rarer in Americans,—never found in the Brahmin caste, oftener in the military and the commodores: observing people know what is meant; blow the seed-arrows from the white-kid-looking button which holds them on a dandelion-stalk, and the pricked-pincushion surface shows you what to look for. He had the loud, gruff voice which implies the right to command. He had the thick hand, stubbed fingers, with bristled pads between their joints, square, broad thumb-nails, and sturdy limbs, which mark a constitution made to use in rough out-door work. He had the never-failing predilection for showy switch-tailed horses that step high, and sidle about, and act as if they were going to do something fearful the next minute, in the face of awed and admiring multitudes gathered at mighty musters or imposing cattle-shows. He had no objection, either, to holding the reins in a wagon behind another kind of horse,—a slouching, list-

less beast, with a strong slant to his shoulder and a notable depth to his quarter and an emphatic angle at the hock, who commonly walked or lounged along in a lazy trot of five or six miles an hour; but, if a lively colt happened to come rattling up alongside, or a brandy-faced old horse-jockey took the road to show off a fast nag, and threw his dust into the Major's face, would pick his legs up all at once, and straighten his body out, and swing off into a three-minute gait, in a way that "Old Blue" himself need not have been ashamed of.

For some reason which must be left to the next generation of professors to find out, the men who are knowing in horse-flesh have an eye also for,—let a long dash separate the brute creation from the angelic being now to be named,—for lovely woman. Of this fact there can be no possible doubt; and therefore you shall notice, that, if a fast horse trots before two, one of the twain is apt to be a pretty bit of muliebriety, with shapes to her, and eyes flying about in all directions.

Major Rowens, at that time Lieutenant of the Rockland Fusileers, had driven and "traded" horses not a few before he turned his acquired skill as a judge of physical advantages in another direction. He knew a neat, snug hoof, a delicate pastern, a well-covered stifle, a broad haunch, a deep chest, a close ribbed-up barrel, as well as any other man in the town. He was not to be taken in by your thick-jointed, heavy-headed cattle, without any go to them, that suit a country-parson, nor yet by the "gaänted-up," long-legged animals, with all their constitutions bred out of them, such as rich greenhorns buy and cover up with their plated trappings.

Whether his equine experience was of any use to him in the selection of the mate with whom he was to go in double harness so long as they both should live, we need not stop to question. At any rate, nobody could find fault with the points of Miss Marilla Van Deusen, to whom he offered the privilege of becoming Mrs. Rowens. The *Van* must have been cross-

ed out of her blood, for she was an out-and-out brunette, with hair and eyes black enough for a Mohawk's daughter. A fine style of woman, with very striking tints and outlines,—an excellent match for the Lieutenant, except for one thing. She was marked by Nature for a widow. She was evidently got up for mourning, and never looked so well as in deep black, with jet ornaments.

The man who should dare to marry her would doom himself; for how could she become the widow she was bound to be, unless he would retire and give her a chance? The Lieutenant lived, however, as we have seen, to become Captain and then Major, with prospects of further advancement. But Mrs. Rowens often said she should never look well in colors. At last her destiny fulfilled itself, and the justice of Nature was vindicated. Major Rowens got overheated galloping about the field on the day of the Great Muster, and had a rush of blood to the head, according to the common report,—at any rate, something which stopped him short in his career of expansion and promotion, and established Mrs. Rowens in her normal condition of widowhood.

The Widow Rowens was now in the full bloom of ornamental sorrow. A very shallow crape bonnet, frilled and froth-like, allowed the parted raven hair to show its glossy smoothness. A jet pin heaved upon her bosom with every sigh of memory, or emotion of unknown origin. Jet bracelets shone with every movement of her slender hands, cased in close-fitting black gloves. Her sable dress was ridged with manifold flounces, from beneath which a small foot showed itself from time to time, clad in the same hue of mourning. Everything about her was dark, except the whites of her eyes and the enamel of her teeth. The effect was complete. Gray's *Elegy* was not a more perfect composition.

Much as the Widow was pleased with the costume belonging to her condition, she did not disguise from herself that under certain circumstances she might be

willing to change her name again. Thus, for instance, if a gentleman not too far gone in maturity, of dignified exterior, with an ample fortune, and of unexceptionable character, should happen to set his heart upon her, and the only way to make him happy was to give up her weeds and go into those unbecoming colors again for his sake,—why, she felt that it was in her nature to make the sacrifice. By a singular coincidence it happened that a gentleman was now living in Rockland who united in himself all these advantages. Who he was, the sagacious reader may very probably have divined. Just to see how it looked, one day, having bolted her door, and drawn the curtains close, and glanced under the sofa, and listened at the keyhole to be sure there was nobody in the entry,—just to see how it looked, she had taken out an envelope and written on the back of it *Mrs. Marilla Venner*. It made her head swim and her knees tremble. What if she should faint, or die, or have a stroke of palsy, and they should break into the room and find that name written? How she caught it up and tore it into little shreds, and then could not be easy until she had burned the small heap of pieces! But these are things which every honorable reader will consider imparted in strict confidence.

The Widow Rowens, though not of the mansion-house set, was among the most genteel of the two-story circle, and was in the habit of visiting some of the great people. In one of these visits she met a dashing young fellow with an olive complexion at the house of a professional gentleman who had married one of the white necks and pairs of fat arms from a distinguished family before referred to. The professional gentleman himself was out, but the lady introduced the olive-complexioned young man as Mr. Richard Venner.

The Widow was particularly pleased with this accidental meeting. Had heard Mr. Venner's name frequently mentioned. Hoped his uncle was well, and his charming cousin,—was she as original as

ever? Had often admired that charming creature he rode: *we* had had some fine horses. Had never got over her taste for riding, but could find nobody that liked a good long gallop since — well — she couldn't help wishing she was alongside of him, the other day, when she saw him dashing by, just at twilight.

The Widow paused; lifted a flimsy handkerchief with a very deep black border so as to play the jet bracelet; pushed the tip of her slender foot beyond the lowest of her black flounces; looked up; looked down; looked at Mr. Richard, the very picture of artless simplicity,—as represented in well-played genteel comedy.

“A good bit of stuff,” Dick said to himself,—“and something of it left yet; *caramba!*” The Major had not studied points for nothing, and the Widow was one of the right sort. The young man had been a little restless of late, and was willing to vary his routine by picking up an acquaintance here and there. So he took the Widow's hint. He should like to have a scamper of half a dozen miles with her some fine morning.

The Widow was infinitely obliged; was not sure that she could find any horse in the village to suit her; but it was so kind in him! Would he not call at Hyacinth Cottage, and let her thank him again there?

Thus began an acquaintance which the Widow made the most of, and on the strength of which she determined to give a tea-party and invite a number of persons of whom we know something already. She took a half-sheet of note-paper and made out her list as carefully as a country “merchant's” “clerk” adds up two and threepence (New-England nomenclature) and twelve and a half cents, figure by figure, and fraction by fraction, before he can be sure they will make half a dollar, without cheating somebody. After much consideration the list reduced itself to the following names: Mr. Richard Venner and Mrs. Blanche Creamer, the lady at whose house she had met him,—mansion-house

breed,—but will come,—soft on Dick; Dudley Venner,—take care of him herself; Elsie,—Dick will see to her,—won't it fidget the Creamer woman to see him round her? the old Doctor,—he's always handy; and there's that young master there, up at the school,—know him well enough to ask him,—oh, yes, he'll come. One, two, three, four, five, six,—seven; not room enough, without the leaf in the table; one place empty, if the leaf's in. Let's see,—Helen Darley,—she'll do well enough to fill it up,—why, yes, just the thing,—light brown hair, blue eyes,—won't my pattern show off well against her? Put her down,—she's worth her tea and toast ten times over,—nobody knows what a “thunder-and-lightning woman,” as poor Major used to have it, is, till she gets alongside of one of those old-maidish girls, with hair the color of brown sugar, and eyes like the blue of a teacup.

The Widow smiled with a feeling of triumph at having overcome her difficulties and arranged her party,—arose and stood before her glass, three-quarters front, one-quarter profile, so as to show the whites of the eyes and the down of the upper lip. “Splendid!” said the Widow,—and to tell the truth, she was not far out of the way, and with Helen Darley as a foil anybody would know she must be foudroyant and pyramidal,—if these French adjectives may be naturalized for this one particular exigency.

So the Widow sent out her notes. The black grief which had filled her heart and overflowed in surges of crape around her person had left a deposit half an inch wide at the margin of her note-paper. Her seal was a small youth with an inverted torch, the same on which Mrs. Blanche Creamer made her spiteful remark, that she expected to see that boy of the Widow's standing on his head yet; meaning, as Dick supposed, that she would get the torch right-side up as soon as she had a chance. That was after Dick had made the Widow's acquaintance, and Mrs. Creamer had got it into her foolish head that she would marry that young fellow, if she could catch him. How

could he ever come to fancy such a quad-room-looking thing as that, she should like to know?

It is easy enough to ask seven people to a party; but whether they will come or not is an open question, as it was in the case of the "vasty spirits." If the note issues from a three-story mansion-house, and goes to two-story acquaintances, they will all be in an excellent state of health, and have much pleasure in accepting this very polite invitation. If the note is from the lady of a two-story family to a three-story one, the former highly respectable person will find that an endemic complaint is prevalent, not represented in the weekly bills of mortality, which occasions numerous regrets in the bosoms of eminently desirable parties that they *cannot* have the pleasure of and-so-forth-ing.

In this case there was room for doubt, — mainly as to whether Elsie would take a fancy to come or not. If she should come, her father would certainly be with her. Dick had promised, and thought he could bring Elsie. Of course the young schoolmaster will come, and that poor tired-out looking Helen, — if only to get out of sight of those horrid Peckham wretches. They don't get such invitations every day. The others she felt sure of, — all but the old Doctor, — he might have some horrid patient or other to visit; tell him Elsie Venner's going to be there, — he always likes to have an eye on her, they say, — oh, he'd come fast enough, without any more coaxing.

She wanted the Doctor, particularly. It was odd, but she was afraid of Elsie. She felt as if she should be safe enough, if the old Doctor were there to see to the girl; and then she should have leisure to devote herself more freely to the young lady's father, for whom all her sympathies were in a state of lively excitement.

It was a long time since the Widow had seen so many persons round her table as she had now invited. Better have the plates set and see how they will fill it up with the leaf in. — A little too scattering

with only eight plates set; if she could find two more people now that would bring the chairs a little closer, — snug, you know, — which makes the company sociable. The Widow thought over her acquaintances. Why! how stupid! there was her good minister, the same that had married her, and might — might — bury her for aught she knew, and his granddaughter staying with him, — nice little girl, pretty, and not old enough to be dangerous; — for the Widow had no notion of making a tea-party and asking people to it that would be like to stand between her and any little project she might happen to have on anybody's heart, — not she! It was all right now; — Blanche was married and so forth; Letty was a child; Elsie was his daughter; Helen Darley was a nice, worthy drudge, — poor thing! — faded, faded, — colors wouldn't wash, — just what she wanted to show off against. Now, if the Dudley mansion-house people would only come, — that was the great point.

"Here's a note for us, Elsie," said her father, as they sat round the breakfast-table. Mrs. Rowens wants us all to come to tea."

It was one of "Elsie's days," as Old Sophy called them. The light in her eyes was still, but very bright. She looked up so full of perverse and wilful impulses, that Dick knew he could make her go with him and her father. He had his own motives for bringing her to this determination, — and his own way of setting about it.

"I don't want to go," he said. "What do you say, Uncle?"

"To tell the truth, Richard, I don't much fancy the Major's widow. I don't like to see her weeds flowering out quite so strong. I suppose you don't care about going, Elsie?"

Elsie looked up in her father's face with an expression which he knew but too well. She was just in the state which the plain sort of people call "contrary," when they have to deal with it in animals. She would insist on going to that tea-party; he knew it just as well before she spoke as after

she had spoken. If Dick had said he wanted to go and her father had seconded his wishes, she would have insisted on staying at home. It was no great matter, her father said to himself, after all; very likely it would amuse her; the Widow was a lively woman enough,—perhaps a little *comme il ne faut pas* socially, compared with the Thorntons and some other families; but what did he care for these petty village distinctions?

Elsie spoke.

"I mean to go. You must go with me, Dudley. You may do as you like, Dick."

That settled the Dudley-mansion business, of course. They all three accepted, as fortunately did all the others who had been invited.

Hyacinth Cottage was a pretty place enough, a little too much choked round with bushes, and too much overrun with climbing-roses, which, in the season of slugs and rose-bugs, were apt to show so brown about the leaves and so coleopterous about the flowers, that it might be questioned whether their buds and blossoms made up for these unpleasant animal combinations,—especially as the smell of whale-oil soap was very commonly in the ascendant over that of the roses. It had its patch of grass called "the lawn," and its glazed closet known as "the conservatory," according to that system of harmless fictions characteristic of the rural imagination and shown in the names applied to many familiar objects. The interior of the cottage was more tasteful and ambitious than that of the ordinary two-story dwellings. In place of the prevailing hair-cloth covered furniture, the visitor had the satisfaction of seating himself upon a chair covered with some of the Widow's embroidery, or a sofa luxurious with soft caressing plush. The sporting tastes of the late Major showed in various prints on the wall: Herring's "Plenipotentiary," the "red bullock" of the '34 Derby; "Cadland" and "The Colonel"; "Crucifix"; "West-Australian," fastest of modern racers; and ugly, game old "Boston," with his straight neck and ragged hips; and gray "Lady

Suffolk," "extending" herself till she measured a rod, more or less, skimming along within a yard of the ground, her legs opening and shutting under her with a snap, like the four blades of a compound jack-knife.

These pictures were much more refreshing than those dreary fancy death-bed scenes, common in two-story country-houses, in which Washington and other distinguished personages are represented as obligingly devoting their last moments to taking a prominent part in a *tableau*, in which weeping relatives, attached servants, professional assistants, and celebrated personages who might by a stretch of imagination be supposed present, are grouped in the most approved style of arrangement about the chief actor's pillow.

A single glazed bookcase held the family library, which was hidden from vulgar eyes by green silk curtains behind the glass. It would have been instructive to get a look at it, as it always is to peep into one's neighbor's bookshelves. From other sources and opportunities a partial idea of it has been obtained. The Widow had inherited some books from her mother, who was something of a reader: Young's "Night-Thoughts"; "The Preceptor"; "The Task, a Poem," by William Cowper; Hervey's "Meditations"; "Alonzo and Melissa"; "Buccaneers of America"; "The Triumphs of Temper"; "La Belle Assemblée"; Thomson's "Seasons"; and a few others. The Major had brought in "Tom Jones" and "Peregrine Pickle"; various works by Mr. Pierce Egan; "Boxiana"; "The Racing Calendar"; and a "Book of Lively Songs and Jests." The Widow had added the Poems of Lord Byron and T. Moore; "Eugene Aram"; "The Tower of London," by Harrison Ainsworth; some of Scott's Novels; "The Pickwick Papers"; a volume of Plays, by W. Shakspeare; "Proverbial Philosophy"; "Pilgrim's Progress"; "The Whole Duty of Man" (a present when she was married); with two celebrated religious works, one by William Law and the other by Philip

Doddridge, which were sent her after her husband's death, and which she had tried to read, but found that they did not agree with her. Of course the bookcase held a few school manuals and compendiums, and one of Mr. Webster's Dictionaries. But the gilt-edged Bible always lay on the centre-table, next to the magazine with the fashion-plates and the scrap-book with pictures from old annuals and illustrated papers.

The reader need not apprehend the recital, at full length, of such formidable preparations for the Widow's tea-party as were required in the case of Colonel Sprowle's Social Entertainment. A tea-party, even in the country, is a comparatively simple and economical piece of business. As soon as the Widow found that all her company were coming, she set to work, with the aid of her "smart" maid-servant and a daughter of her own, who was beginning to stretch and spread at a fearful rate, but whom she treated as a small child, to make the necessary preparations. The silver had to be rubbed; also the grand plated urn,—her mother's before hers,—style of the Empire,—looking as if it might have been made to hold the Major's ashes. Then came the making and baking of cake and gingerbread, the smell whereof reached even as far as the sidewalk in front of the cottage, so that small boys returning from school snuffed it in the breeze, and discoursed with each other on its suggestions; so that the Widow Leech, who happened to pass, remembered she hadn't called on Marilly Raowens for a consid'ble spell, and turned in at the gate and rang three times with long intervals,—but all in vain, the inside Widow having "spotted" the outside one through the blinds, and whispered to her aides-de-camp to let the old thing ring away till she pulled the bell out by the roots, but not to stir to open the door.

Widow Rowens was what they called a real smart, capable woman, not very great on books, perhaps, but knew what was what and who was who as well as another,—knew how to make the little

cottage look pretty, how to set out a tea-table, and, what a good many women never can find out, knew her own style and "got herself up tip-top," as our young friend Master Geordie, Colonel Sprowle's heir-apparent, remarked to his friend from one of the fresh-water colleges. Flowers were abundant now, and she had dressed her rooms tastefully with them. The centre-table had two or three gilt-edged books lying carelessly about on it, and some prints, and a stereoscope with stereographs to match, chiefly groups of picnics, weddings, etc., in which the same somewhat fatigued-looking ladies of fashion and brides received the attentions of the same unpleasant-looking young men, easily identified under their different disguises, consisting of fashionable raiment such as gentlemen are supposed to wear habitually. With these, however, were some pretty English scenes,—pretty except for the old fellow with the hanging under-lip who infests every one of that interesting series; and a statue or two, especially that famous one commonly called the *Lahcón*, so as to rhyme with moon and spoon, and representing an old man with his two sons in the embraces of two monstrous serpents.

There is no denying that it was a very dashing achievement of the Widow's to bring together so considerable a number of desirable guests. She felt proud of her feat; but as to the triumph of getting Dudley Venner to come out for a visit to Hyacinth Cottage, she was surprised and almost frightened at her own success. So much *might* depend on the impressions of that evening!

The next thing was to be sure that everybody should be in the right place at the tea-table, and this the Widow thought she could manage by a few words to the older guests and a little shuffling about and shifting when they got to the table. To settle everything the Widow made out a diagram, which the reader should have a chance of inspecting in an authentic copy, if these pages were allowed under any circumstances to be the vehicle of illustrations. If, however,

he or she really wishes to see the way the pieces stood as they were placed at the beginning of the game, (the Widow's gambit,) he or she had better at once take a sheet of paper, draw an oval, and arrange the characters according to the following schedule.

At the head of the table, the Hostess, Widow Marilla Rowens. Opposite her, at the other end, Rev. Dr. Honeywood. At the *right* of the Hostess, Dudley Venner, next him Helen Darley, next her Dr. Kittredge, next him Mrs. Blanche Creamer, then the Reverend Doctor. At the *left* of the Hostess, Bernard Langdon, next him Letty Forester, next Letty Mr. Richard Venner, next him Elsie, and so to the Reverend Doctor again.

The company came together a little before the early hour at which it was customary to take tea in Rockland. The Widow knew everybody, of course: who was there in Rockland she did not know? But some of them had to be introduced: Mr. Richard Venner to Mr. Bernard, Mr. Bernard to Miss Letty, Dudley Venner to Miss Helen Darley, and so on. The two young men looked each other straight in the eyes,—both full of youthful life, but one of frank and fearless aspect, the other with a dangerous feline beauty alien to the New England half of his blood.

The guests talked, turned over the prints, looked at the flowers, opened the "Proverbial Philosophy" with gilt edges, and the volume of Plays by W. Shakespeare, examined the horse-pictures on the walls, and so passed away the time until tea was announced, when they paired off for the room where it was in readiness. The Widow had managed it well; everything was just as she wanted it. Dudley Venner was between herself and the poor tired-looking schoolmistress with her faded colors. Blanche Creamer, a lax, tumble-to-pieces, *Greuze*-ish looking blonde, whom the Widow hated because the men took to her, was purgatoried between the two old Doctors, and could see all the looks that passed between Dick Venner and his cousin. The young

schoolmaster could talk to Miss Letty: it was his business to know how to talk to school-girls. Dick would amuse himself with his cousin Elsie. The old Doctors only wanted to be well fed and they would do well enough.

It would be very pleasant to describe the tea-table; but the truth is, it did not pretend to offer a plethoric banquet to the guests. The Widow had not visited at the mansion-houses for nothing, and she had learned there that an overloaded tea-table may do well enough for farm-hands when they come in at evening from their work and sit down unwashed in their shirt-sleeves, but that for decently bred people such an insult to the memory of a dinner not yet half-assimilated is wholly inadmissible. There was no lump of meat on the table, no wedge of cheese, no dish of pickles. Everything was delicate, and almost everything of fair complexion: white bread and biscuits, frosted and sponge cake, cream, honey, straw-colored butter; only a shadow here and there, where the fire had crisped and browned the surfaces of a stack of dry toast, or where a preserve had brought away some of the red sunshine of the last year's summer. The Widow shall have the credit of her well-ordered tea-table, also of her bountiful cream-pitchers; for it is well known that city-people find cream a very scarce luxury in a good many country-houses of more pretensions than Hyacinth Cottage. There are no better maxims for ladies who give tea-parties than these:—

Cream is thicker than water.

Large heart never loved little cream-pot.

There is a common feeling in genteel families that the third meal of the day is not so essential a part of the daily bread as to require any especial acknowledgment to the Providence that bestows it. Very devout people, who would never sit down to a breakfast or a dinner without the grace before meat which honors the Giver of it, feel as if they thanked Heaven enough for their tea and toast by partaking of them cheerfully without audible

petition or ascription. But the Widow was not exactly mansion-house-bred, and so thought it necessary to give the Reverend Doctor a peculiar look which he understood at once as inviting his professional services. He, therefore, uttered a few simple words of gratitude, very quietly,—much to the satisfaction of some of the guests, who had expected one of those elaborate effusions, with rolling up of the eyes and rhetorical accents, so frequent with eloquent divines when they address their Maker in genteel company.

Everybody began talking with the person sitting next at hand. Mr. Bernard naturally enough turned his attention first to the Widow; but somehow or other the right side of the Widow seemed to be more wide awake than the left side, next him, and he resigned her to the courtesies of Mr. Dudley Venner, directing himself, not very unwillingly, to the young girl next him on the other side. Miss Letty Forester, the granddaughter of the Reverend Doctor, was city-bred, as anybody might see, and city-dressed, as any woman would know at sight; a man might only feel the general effect of clear, well-matched colors, of harmonious proportions, of the cut which makes everything cling like a bather's sleeve where a natural outline is to be kept, and ruffle itself up like the hackle of a pitted fighting-cock where art has a right to luxuriate in silken exuberance. How this city-bred and city-dressed girl came to be in Rockland Mr. Bernard did not know, but he knew at any rate that she was his next neighbor and entitled to his courtesies. She was handsome, too, when he came to look, very handsome when he came to look again,—endowed with that city beauty which is like the beauty of wall-fruit, something finer in certain respects than can be reared off the pavement.

The truth is, the miserable routinists who keep repeating invidiously Cowper's

“God made the country and man made the town,”

as if the town were a place to kill out the

race in, do not know what they are talking about. Where could they raise such Saint-Michael pears, such Saint-Germains, such Brown Beurrés, as we had until within a few years growing within the walls of our old city-gardens? Is the dark and damp cavern where a ragged beggar hides himself better than a town-mansion that fronts the sunshine and backs on its own cool shadow, with gas and water and all appliances to suit all needs?

God made the *cavern* and man made the *house*! What then? The truth is, the pavement keeps a deal of mischief from coming up out of the earth, and, with a dash off of it in summer, just to cool the soles of the feet when it gets too hot, is the best place for many constitutions, as some few practical people have already discovered. And just so these beauties that grow and ripen against the city-walls, these young fellows with cheeks like peaches and young girls with cheeks like nectarines, show that the most perfect forms of artificial life can do as much for the human product as garden-culture for strawberries and blackberries.

If Mr. Bernard had philosophized or prosed in this way, with so pretty, nay, so lovely a neighbor as Miss Letty Forester waiting for him to speak to her, he would have to be dropped from this narrative as a person unworthy of his good-fortune, and not deserving the kind reader's further notice. On the contrary, he no sooner set his eyes fairly on her than he said to himself that she was charming, and that he wished she were one of his scholars at the Institute. So he began talking with her in an easy way; for he knew something of young girls by this time, and, of course, could adapt himself to a young lady who looked as if she might be not more than fifteen or sixteen years old, and therefore could hardly be a match in intellectual resources for the seventeen and eighteen year-old first-class scholars of the Apollinean Institute. But city-wall-fruit ripens early, and he soon found that this girl's training had so sharpened her wits and stored her memory, that

he need not be at the trouble to stoop painfully in order to come down to her level.

The beauty of good-breeding is that it adjusts itself to all relations without effort, true to itself always, however the manners of those around it may change. Self-respect and respect for others,—the sensitive consciousness poises itself in these as the compass in the ship's binnacle balances itself and maintains its true level within the two concentric rings that suspend it on their pivots. This thoroughbred school-girl quite enchanted Mr. Bernard. He could not understand where she got her style, her way of dress, her enunciation, her easy manners. The minister was a most worthy gentleman, but this was not the Rockland native-born manner; some new element had come in between the good, plain, worthy man and this young girl, fit to be a Crown Prince's partner where there were a thousand to choose from.

He looked across to Helen Darley, for he knew she would understand the glance of admiration with which he called her attention to the young beauty at his side; and Helen knew what a young girl could be, as compared with what too many a one is, as well as anybody.

This poor, dear Helen of ours! How admirable the contrast between her and the Widow on the other side of Dudley Venner! But, what was very odd, that gentleman apparently thought the contrast was to the advantage of this poor, dear Helen. At any rate, instead of devoting himself solely to the Widow, he happened to be just at that moment talking in a very interested and, apparently, not uninteresting way to his right-hand neighbor, who, on her part, never looked more charmingly,—as Mr. Bernard could not help saying to himself,—but, to be sure, he had just been looking at the young girl next him, so that his eyes were brimful of beauty, and may have spilled some of it on the first comer: for you know M. Becquerel has been showing us lately how everything is phosphorescent; that it soaks itself with light in an instant's exposure, so that it is wet with liquid sun-

beams, or, if you will, tremulous with luminous vibrations, when first plunged into the negative bath of darkness, and betrays itself by the light which escapes from its surface.

Whatever was the reason, this poor, dear Helen never looked so sweetly. Her plainly parted brown hair, her meek, blue eyes, her cheek just a little tinged with color, the almost sad simplicity of her dress, and that look he knew so well,—so full of cheerful patience, so sincere, that he had trusted her from the first moment as the believers of the larger half of Christendom trust the Blessed Virgin,—Mr. Bernard took this all in at a glance, and felt as pleased as if it had been his own sister Dorothea Elizabeth that he was looking at. As for Dudley Venner, Mr. Bernard could not help being struck by the animated expression of his countenance. It certainly showed great kindness, on his part, to pay so much attention to this quiet girl, when he had the thunder-and-lightning Widow on the other side of him.

Mrs. Marilla Rowens did not know what to make of it. She had made her tea-party expressly for Mr. Dudley Venner. She had placed him just as she wanted, between herself and a meek, delicate woman who dressed in gray, wore a plain breastpin with hair in it, who taught a pack of girls up there at the school, and looked as if she were born for a teacher,—the very best foil that she could have chosen; and here was this man, polite enough to herself, to be sure, but turning round to that very undistinguished young person, as if he rather preferred her conversation of the two!

The truth was that Dudley Venner and Helen Darley met as two travellers might meet in the desert, wearied, both of them, with their long journey, one having food, but no water, the other water, but no food. Each saw that the other had been in long conflict with some trial; for their voices were low and tender, as patiently borne sorrow and humbly uttered prayers make every human voice. Through these tones, more than

by what they said, they came into natural sympathetic relations with each other. Nothing could be more unstudied. As for Dudley Venner, no beauty in all the world could have so soothed and magnetized him as the very repose and subdued gentleness which the Widow had thought would make the best possible background for her own more salient and effective attractions. No doubt, Helen, on her side, was almost too readily pleased with the confidence this new acquaintance she was making seemed to show her from the very first. She knew so few men of any condition! Mr. Silas Peckham: he was her employer, and she ought to think of him as well as she could; but every time she thought of him it was with a shiver of disgust. Mr. Bernard Langdon: a noble young man, a true friend, like a brother to her,—God bless him, and send him some young heart as fresh as his own! But this gentleman produced a new impression upon her, quite different from any to which she was accustomed. His rich, low tones had the strangest significance to her; she felt sure he must have lived through long experiences, sorrowful like her own. Elsie's father! She looked into his dark eyes, as she listened to him, to see if they had any glimmer of that peculiar light, diamond-bright, but cold and still, which she knew so well in Elsie's. Anything but that! Never was there more tenderness, it seemed to her, than in the whole look and expression of Elsie's father. She must have been a great trial to him; yet his face was that of one who had been saddened, not soured, by his discipline. Knowing what Elsie must be to him, how hard she must make any parent's life, Helen could not but be struck with the interest Mr. Dudley Venner showed in her as his daughter's instructress. He was too kind to her; again and again she meekly turned from him, so as to leave him free to talk to the showy lady at his other side, who was looking all the while

“like the night

Of cloudless realms and starry skies”;

but still Mr. Dudley Venner, after a few

courteous words, came back to the blue eyes and brown hair; still he kept his look fixed upon her, and his tones grew sweeter and lower as he became more interested in talk, until this poor, dear Helen, what with surprise, and the bashfulness natural to one who had seen little of the gay world, and the stirring of deep, confused sympathies with this suffering father, whose heart seemed so full of kindness, felt her cheeks glowing with unwonted flame, and betrayed the pleasing trouble of her situation by looking so sweetly as to arrest Mr. Bernard's eye for a moment, when he looked away from the young beauty sitting next him.

Elsie meantime had been silent, with that singular, still, watchful look which those who knew her well had learned to fear. Her head just a little inclined on one side, perfectly motionless for whole minutes, her eyes seeming to grow small and bright, as always when she was under her evil influence, she was looking obliquely at the young girl on the other side of her cousin Dick and next to Bernard Langdon. As for Dick himself, she seemed to be paying very little attention to him. Sometimes her eyes would wander off to Mr. Bernard, and their expression, as old Dr. Kittredge, who watched her for a while pretty keenly, noticed, would change perceptibly. One would have said that she looked with a kind of dull hatred at the girl, but with a half-relenting reproachful anger at Mr. Bernard.

Miss Letty Forester, at whom Elsie had been looking from time to time in this fixed way, was conscious meanwhile of some unusual influence. First it was a feeling of constraint,—then, as it were, a diminished power over the muscles, as if an invisible elastic cobweb were spinning round her,—then a tendency to turn away from Mr. Bernard, who was making himself very agreeable, and look straight into those eyes which would not leave her, and which seemed to be drawing her towards them, while at the same time they chilled the blood in all her veins.

Mr. Bernard saw this influence coming

over her. All at once he noticed that she sighed, and that some little points of moisture began to glisten on her forehead. But she did not grow pale perceptibly; she had no involuntary or hysteric movements; she still listened to him and smiled naturally enough. Perhaps she was only nervous at being stared at. At any rate, she was coming under some unpleasant and unnatural influence or other, and Mr. Bernard had seen enough of the strange impression Elsie sometimes produced to wish this young girl to be relieved from it, whatever it was. He turned toward Elsie and looked at her in such a way as to draw her eyes upon him. Then he looked steadily and calmly into them. It was a great effort, for some perfectly inexplicable reason. At one instant he thought he could not sit where he was; he must go and speak to Elsie. Then he wanted to take his eyes away from hers; there was something intolerable in the light that came from them. But he was determined to look her down, and he believed he could do it, for he had seen her countenance change more than once when he had caught her gaze steadily fixed on him. All this took not minutes, but seconds. Presently she changed color slightly,—lifted her head, which was inclined a little to one side,—shut and opened her eyes two or three times, as if they had been pained or wearied,—and turned away baffled, and shamed, as it would seem, and shorn for the time of her singular and formidable or at least evil-natured power of swaying the impulses of those around her.

It takes too long to describe these scenes where a good deal of life is concentrated into a few silent seconds. Mr. Richard Venner had sat quietly through it all, although this short pantomime had taken place literally before his face. He saw what was going on well enough, and understood it all perfectly well. Of course the schoolmaster had been trying to make Elsie jealous, and had succeeded. The little school-girl was a decoy-duck,—that was all. Estates like the Dudley property were not to be had ev-

ery day, and no doubt the Yankee usher was willing to take some pains to make sure of Elsie. Doesn't Elsie look savage? Dick involuntarily moved his chair a little away from her, and thought he felt a pricking in the small white scars on his wrist. A dare-devil fellow, but somehow or other this girl had taken strange hold of his imagination, and he often swore to himself, that, when he married her, he would carry a loaded revolver with him to his bridal chamber.

Mrs. Blanche Creamer raged inwardly at first to find herself between the two old gentlemen of the party. It very soon gave her great comfort, however, to see that Marilla Rowens had just missed it in her calculations, and she chuckled immensely to find Dudley Venner devoting himself chiefly to Helen Darley. If the Rowens woman should hook Dudley, she felt as if she should gnaw all her nails off for spite. To think of seeing her barouching about Rockland behind a pair of long-tailed bays and a coachman with a band on his hat, while she, Blanche Creamer, was driving herself about in a one-horse "carriage"! Recovering her spirits by degrees, she began playing her surfaces off at the two old Doctors, just by way of practice. First she heaved up a glaring white shoulder, the right one, so that the Reverend Doctor should be stunned by it, if such a thing might be. The Reverend Doctor was human, as the Apostle was not ashamed to confess himself. Half-devoutly and half-mischievously he repeated inwardly, "Resist the Devil and he will flee from you." As the Reverend Doctor did not show any lively susceptibility, she thought she would try the left shoulder on old Dr. Kittredge. That worthy and experienced student of science was not at all displeased with the manœuvre, and lifted his head so as to command the exhibition through his glasses. "Blanche is good for half a dozen years or so, if she is careful," the Doctor said to himself, "and then she must take to her prayer-book." After this spasmodic failure of Mrs. Blanche Creamer's to stir up the old Doctors, she return-

ed again to the pleasing task of watching the Widow in her evident discomfiture. But dark as the Widow looked in her half-concealed pet, she was but as a pale shadow, compared to Elsie in her silent concentration of shame and anger.

“Well, there is one good thing,” said Mrs. Blanche Creamer; “Dick doesn’t get much out of that cousin of his this evening! Doesn’t he look handsome, though?”

So Mrs. Blanche, being now a good deal taken up with her observations of those friends of hers and ours, began to be rather careless of her two old Doctors, who naturally enough fell into conversation with each other across the white surfaces of that lady,—perhaps not very politely, but, under the circumstances, almost as a matter of necessity.

When a minister and a doctor get talking together, they always have a great deal to say; and so it happened that the company left the table just as the two Doctors were beginning to get at each other’s ideas about various interesting matters. If we follow them into the other parlor, we can, perhaps, pick up something of their conversation.

CHAPTER XXII.

WHY DOCTORS DIFFER.

THE company rearranged itself with some changes after leaving the tea-table. Dudley Venner was very polite to the Widow; but that lady having been called off for a few moments for some domestic arrangement, he slid back to the side of Helen Darley, his daughter’s faithful teacher. Elsie had got away by herself, and was taken up in studying the stereoscopic Laocoön. Dick, being thus set free, had been seized upon by Mrs. Blanche Creamer, who had diffused herself over three-quarters of a sofa and beckoned him to the remaining fourth. Mr. Bernard and Miss Letty were having a snug *tête-à-tête* in the recess of a bay-window. The two Doctors had taken two arm-chairs and sat squared off against each

other. Their conversation is perhaps as well worth reporting as that of the rest of the company, and, as it was carried on in a louder tone, was of course more easy to gather and put on record.

It was a curious sight enough to see those two representatives of two great professions brought face to face to talk over the subjects they had been looking at all their lives from such different points of view. Both were old; old enough to have been moulded by their habits of thought and life; old enough to have all their beliefs “fretted in,” as vintners say,—thoroughly worked up with their characters. Each of them looked his calling. The Reverend Doctor had lived a good deal among books in his study; the Doctor, as we will call the medical gentleman, had been riding about the country for between thirty and forty years. His face looked tough and weather-worn; while the Reverend Doctor’s, hearty as it appeared, was of finer texture. The Doctor’s was the graver of the two; there was something of grimness about it,—partly owing to the northeasters he had faced for so many years, partly to long companionship with that stern personage who never deals in sentiment or pleasantry. His speech was apt to be brief and peremptory; it was a way he had got by ordering patients; but he could discourse somewhat, on occasion, as the reader may find out. The Reverend Doctor had an open, smiling expression, a cheery voice, a hearty laugh, and a cordial way with him which some thought too lively for his cloth, but which children, who are good judges of such matters, delighted in, so that he was the favorite of all the little rogues about town. But he had the clerical art of sobering down in a moment, when asked to say grace while somebody was in the middle of some particularly funny story; and though his voice was so cheery in common talk, in the pulpit, like almost all preachers, he had a wholly different and peculiar way of speaking, supposed to be more acceptable to the Creator than the natural manner. In point of fact, most of our anti-papal and anti-pre-

latical clergymen do really *intone* their prayers, without suspecting in the least that they have fallen into such a Romish practice.

This is the way the conversation between the Doctor of Divinity and the Doctor of Medicine was going on at the point where these notes take it up.

"*Ubi tres medici, duo athei*, you know, Doctor. Your profession has always had the credit of being lax in doctrine, — though pretty stringent in *practice*, ha! ha!"

"Some priest said that," the Doctor answered, dryly. "They always talked Latin when they had a bigger lie than common to get rid of."

"Good!" said the Reverend Doctor; "I'm afraid they would lie a little sometimes. But isn't there some truth in it, Doctor? Don't you think your profession is apt to see 'Nature' in the place of the God of Nature, — to lose sight of the great First Cause in their daily study of secondary causes?"

"I've thought about that," the Doctor answered, "and I've talked about it and read about it, and I've come to the conclusion that nobody believes in God and trusts in God quite so much as the doctors; only it isn't just the sort of Deity that some of your profession have wanted them to take up with. There was a student of mine wrote a dissertation on the Natural Theology of Health and Disease, and took that old lying proverb for his motto. He knew a good deal more about books than ever I did, and had studied in other countries. I'll tell you what he said about it. He said the old Heathen Doctor, Galen, praised God for his handiwork in the human body, just as if he had been a Christian, or the Psalmist himself. He said they had this sentence set up in large letters in the great lecture-room in Paris where he attended: *I dressed his wound and God healed him*. That was an old surgeon's saying. And he gave a long list of doctors who were not only Christians, but famous ones. I grant you, though, ministers and doctors are very

apt to see differently in spiritual matters."

"That's it," said the Reverend Doctor; "you are apt to see 'Nature' where we see God, and appeal to 'Science' where we are contented with Revelation."

"We don't separate God and Nature, perhaps, as you do," the Doctor answered. "When we say that God is omnipresent and omnipotent and omniscient, we are a little more apt to mean it than your folks are. We think, when a wound heals, that God's *presence* and *power* and *knowledge* are there, healing it, just as that old surgeon did. We think a good many theologians, working among their books, don't see the facts of the world they live in. When we tell 'em of these facts, they are apt to call us materialists and atheists and infidels, and all that. We can't help seeing the facts, and we don't think it's wicked to mention 'em."

"Do tell me," the Reverend Doctor said, "some of these facts we are in the habit of overlooking, and which your profession thinks it can see and understand."

"That's very easy," the Doctor replied. "For instance: you don't understand or don't allow for idiosyncrasies as we learn to. We know that food and physic act differently with different people; but you think the same kind of truth is going to suit, or ought to suit, all minds. We don't fight with a patient because he can't take magnesia or opium; but you are all the time quarrelling over your beliefs, as if belief did not depend very much on race and constitution, to say nothing of early training."

"Do you mean to say that every man is not absolutely free to choose his beliefs?"

"The men you write about in your studies are, but not the men we see in the real world. There is some apparently congenital defect in the Indians, for instance, that keeps them from choosing civilization and Christianity. So with the Gypsies, very likely. Everybody knows that Catholicism or Protestantism is a good deal a matter of race. Constitution has

more to do with belief than people think for. I went to a Universalist church, when I was in the city one day, to hear a famous man whom all the world knows, and I never saw such pews-full of broad shoulders and florid faces, and substantial, wholesome-looking persons, male and female, in all my life. Why, it was astonishing. Either their creed made them healthy, or they chose it because they were healthy. Your folks have never got the hang of human nature."

"I am afraid this would be considered a degrading and dangerous view of human beliefs and responsibility for them," the Reverend Doctor replied. "Prove to a man that his will is governed by something outside of himself, and you have lost all hold on his moral and religious nature. There is nothing bad men want to believe so much as that they are governed by necessity. Now that which is at once degrading and dangerous cannot be true."

"No doubt," the Doctor replied, "all large views of mankind limit our estimate of the absolute freedom of the will. But I don't think it degrades or endangers us, for this reason, that, while it makes us charitable to the rest of mankind, our own sense of freedom, whatever it is, is never affected by argument. *Conscience won't be reasoned with.* We feel that we can practically do this or that, and if we choose the wrong, we know we are responsible; but observation teaches us that this or that other race or individual has not the same practical freedom of choice. I don't see how we can avoid this conclusion in the instance of the American Indians. The science of Ethnology has upset a good many theoretical notions about human nature."

"Science!" said the Reverend Doctor, "science! that was a word the Apostle Paul did not seem to think much of, if we may judge by the Epistle to Timothy: 'Oppositions of science falsely so called.' I own that I am jealous of that word and the pretensions that go with it. Science has seemed to me to be very often only the handmaid of skepticism."

"Doctor!" the physician said, emphatically, "science is knowledge. Nothing that is not *known* properly belongs to science. Whenever knowledge obliges us to doubt, we are always safe in doubting. Astronomers foretell eclipses, say how long comets are to stay with us, point out where a new planet is to be found. We see they *know* what they assert, and the poor old Roman Catholic Church has at last to knock under. So Geology *proves* a certain succession of events, and the best Christian in the world must make the earth's history square with it. Besides, I don't think you remember what great revelations of himself the Creator has made in the minds of the men who have built up science. You seem to me to hold his human masterpieces very cheap. Don't you think the 'inspiration of the Almighty' gave Newton and Cuvier 'understanding'?"

The Reverend Doctor was not arguing for victory. In fact, what he wanted was to call out the opinions of the old physician by a show of opposition, being already predisposed to agree with many of them. He was rather trying the common arguments, as one tries tricks of fence merely to learn the way of parrying. But just here he saw a tempting opening, and could not resist giving a home-thrust.

"Yes; but you surely would not consider it inspiration of the same kind as that of the writers of the Old Testament?"

That cornered the Doctor, and he paused a moment before he replied. Then he raised his head, so as to command the Reverend Doctor's face through his spectacles, and said,—

"I did not say that. You are clear, I suppose, that the Omniscient spoke through Solomon, but that Shakspeare wrote without his help?"

The Reverend Doctor looked very grave. It was a bold, blunt way of putting the question. He turned it aside with the remark, that Shakspeare seemed to him at times to come as near inspiration as any human being not included among the sacred writers.

"Doctor," the physician began, as from a sudden suggestion, "you won't quarrel with me, if I tell you some of my real thoughts, will you?"

"Say on, my dear Sir, say on," the minister answered, with his most genial smile; "your real thoughts are just what I want to get at. A man's real thoughts are a great rarity. If I don't agree with you, I shall like to hear you."

The Doctor began; and in order to give his thoughts more connectedly, we will omit the conversational breaks, the questions and comments of the clergyman, and all accidental interruptions.

"When the old ecclesiastics said that where there were three doctors there were two atheists, they lied, of course. They called everybody that differed from them atheists, until they found out that not believing in God wasn't nearly so ugly a crime as not believing in some particular dogma; then they called them *heretics*, until so many good people had been burned under that name that it began to smell too strong of roasting flesh, — and after that *infidels*, which properly means people without faith, of whom there are not a great many in any place or time. But then, of course, there was some reason why doctors shouldn't think about religion exactly as ministers did, or they never would have made that proverb. It's very likely that something of the same kind is true now; whether it is so or not, I am going to tell you the reasons why it would not be strange, if doctors should take rather different views from clergymen about some matters of belief. I don't, of course, mean all doctors nor all clergymen. Some doctors go as far as any old New-England divine, and some clergymen agree very well with the doctors that think least according to rule.

"To begin with their ideas of the Creator himself. They always see him trying to help his creatures out of their troubles. A man no sooner gets a cut, than the Great Physician, whose agency we often call *Nature*, goes to work, first to stop the blood, and then to heal the wound, and

then to make the scar as small as possible. If a man's pain exceeds a certain amount, he faints, and so gets relief. If it lasts too long, habit comes in to make it tolerable. If it is altogether too bad, he dies. That is the best thing to be done under the circumstances. So you see, the doctor is constantly in presence of a benevolent agency working against a settled order of things, of which pain and disease are the accidents, so to speak. Well, no doubt they find it harder than clergymen to believe that there can be any world or state from which this benevolent agency is wholly excluded. This may be very wrong; but it is not unnatural. They can hardly conceive of a permanent state of being in which cuts would never try to heal, nor habit render suffering endurable. This is one effect of their training.

"Then, again, their attention is very much called to human limitations. Ministers work out the machinery of responsibility in an abstract kind of way; they have a kind of algebra of human nature, in which *friction* and *strength* (or *weakness*) of *material* are left out. You see, a doctor is in the way of studying children from the moment of birth upwards. For the first year or so he sees that they are just as much pupils of their Maker as the young of any other animals. Well, their Maker trains them to *pure selfishness*. Why? In order that they may be sure to take care of themselves. So you see, when a child comes to be, we will say a year and a day old, and makes his first choice between right and wrong, he is at a disadvantage; for he has that *vis a tergo*, as we doctors call it, that force from behind, of a whole year's life of selfishness, for which he is no more to blame than a calf is to blame for having lived in the same way, purely to gratify his natural appetites. Then we see that baby grow up to a child, and, if he is fat and stout and red and lively, we expect to find him troublesome and noisy, and, perhaps, sometimes disobedient more or less; that's the way each new generation breaks its egg-shell; but if he is very weak and thin,

and is one of the kind that may be expected to die early, he will very likely sit in the house all day and read good books about other little sharp-faced children just like himself, who died early, having always been perfectly indifferent to all the out-door amusements of the wicked little red-cheeked children. Some of the little folks we watch grow up to be young women, and occasionally one of them gets nervous, what we call hysterical, and then that girl will begin to play all sorts of pranks, — to lie and cheat, perhaps, in the most unaccountable way, so that she might seem to a minister a good example of total depravity. We don't see her in that light. We give her iron and valerian, and get her on horse-back, if we can, and so expect to make her will come all right again. By-and-by we are called in to see an old baby, three-score years and ten or more old. We find this old baby has never got rid of that first year's teaching which led him to fill his stomach with all he could pump into it, and his hands with everything he could grab. People call him a miser. We are sorry for him; but we can't help remembering his first year's training, and the natural effect of money on the great majority of those that have it. So while the ministers say he 'shall hardly enter into the kingdom of heaven,' we like to remind them that 'with God all things are possible.'

"Once more, we see all kinds of monomania and insanity. We learn from them to recognize all sorts of queer tendencies in minds supposed to be sane, so that we have nothing but compassion for a large class of persons condemned as sinners by theologians, but considered by us as invalids. We have constant reasons for noticing the transmission of qualities from parents to offspring, and we find it hard to hold a child accountable in any moral point of view for inherited bad temper or tendency to drunkenness, — as hard as we should to blame him for inheriting gout or asthma. I suppose we are more lenient with human nature than theologians generally are. We know

that the spirits of men and their views of the present and the future go up and down with the barometer, and that a permanent depression of one inch in the mercurial column would affect the whole theology of Christendom.

"Ministers talk about the human will as if it stood on a high look-out, with plenty of light, and elbow-room reaching to the horizon. Doctors are constantly noticing how it is tied up and darkened by inferior organization, by disease, and all sorts of crowding interferences, until they get to look upon Hottentots and Indians — and a good many of their own race — as a kind of self-conscious blood-clocks with very limited power of self-determination. That's the *tendency*, I say, of a doctor's experience. But the people to whom they address their statements of the results of their observation belong to the thinking class of the highest races, and *they* are conscious of a great deal of liberty of will. So in the face of the fact that civilization with all it offers has proved a dead failure with the aboriginal races of this country, — on the whole, I say, a dead failure, — they talk as if they knew from their own will all about that of a Digger Indian! We are more apt to go by observation of the facts in the case. We are constantly seeing weakness where you see depravity. I don't say we're *right*; I only tell what you must often find to be the fact, right or wrong, in talking with doctors. You see, too, our notions of bodily and moral disease, or sin, are apt to go together. We used to be as hard on sickness as you were on sin. We know better now. We don't look at sickness as we used to, and try to poison it with everything that is offensive, — burnt toads and earth-worms and viper-broth, and worse things than these. We know that disease has something back of it which the body isn't to blame for, at least in most cases, and which very often it is trying to get rid of. Just so with sin. I will agree to take a hundred newborn babes of a certain stock and return seventy-five of them in a dozen years true and honest, if not 'pious' children.

And I will take another hundred, of a different stock, and put them in the hands of certain Ann-Street teachers, and seventy-five of them will be thieves and liars at the end of the same dozen years. I have heard of an old character, Colonel Jaques, I believe it was, a famous cattle-breeder, who used to say he could breed to pretty much any pattern he wanted to. Well, we doctors see so much of families, how the tricks of the blood keep breaking out, just as much in character as they do in looks, that we can't help feeling as if a great many people hadn't a fair chance to be what is called 'good,' and that there isn't a text in the Bible better worth keeping always in mind than that one, 'Judge not, that ye be not judged.'

"As for our getting any quarter at the hands of theologians, we don't expect it, and have no right to. You don't give each other any quarter. I have had two religious books sent me by friends within a week or two. One is Mr. Brownson's; he is as fair and square as Euclid; a real honest, strong thinker, and one that knows what he is talking about,—for he has tried all sorts of religions, pretty much. He tells us that the Roman Catholic Church is the one 'through which alone we can hope for heaven.' The other is by a worthy Episcopal rector, who appears to write as if he were in earnest, and he calls the Papacy the 'Devil's Masterpiece,' and talks about the 'Satanic scheme' of that very Church 'through which alone,' as Mr. Brownson tells us, 'we can hope for heaven'! What's the use in *our* caring about hard words after this,—'atheists,' heretics, infidels, and the like? They're, after all, only the cinders picked up out of those heaps of ashes round the stumps of the old stakes where they used to burn men, women, and children for not thinking just like other folks. They'll 'crock' your fingers, but they can't burn us.

"Doctors are the best-natured people in the world, except when they get fighting with each other. And they have some advantages over you. You inherit your

notions from a set of priests that had no wives and no children, or none to speak of, and so let their humanity die out of them. It didn't seem much to them to condemn a few thousand millions of people to purgatory or worse for a mistake of judgment. They didn't know what it was to have a child look up in their faces and say 'Father!' It will take you a hundred or two more years to get decently humanized, after so many centuries of *dehumanizing* celibacy.

"Besides, though our libraries are, perhaps, not commonly quite so big as yours, God opens one book to physicians that a good many of you don't know much about,—the Book of Life. That is none of your dusty folios with black letters between pasteboard and leather, but it is printed in bright red type, and the binding of it is warm and tender to every touch. They reverence that book as one of the Almighty's infallible revelations. They will insist on reading you lessons out of it, whether you call them names or not. These will always be lessons of charity. No doubt, nothing can be more provoking to listen to. But do beg your folks to remember that the Smithfield fires are all out, and that the cinders are very dirty and not in the least dangerous. They'd a great deal better be civil, and not be throwing old proverbs in the doctors' faces, when they say that the man of the old monkish notions is one thing and the man they watch from his cradle to his coffin is something very different."

It has cost a good deal of trouble to work the Doctor's talk up into this formal shape. Some of his sentences have been rounded off for him, and the whole brought into a more rhetorical form than it could have pretended to, if taken as it fell from his lips. But the exact course of his remarks has been followed, and as far as possible his expressions have been retained. Though given in the form of a discourse, it must be remembered that this was a conversation, much more fragmentary and colloquial than it seems as just read.

The Reverend Doctor was very far from taking offence at the old physician's freedom of speech. He knew him to be honest, kind, charitable, self-denying, wherever any sorrow was to be alleviated, always reverential, with a cheerful trust in the great Father of all mankind. To be sure, his senior deacon, old Deacon Shearer, — who seemed to have got his Scripture-teachings out of the "Vinegar Bible," (the one where *Vineyard* is misprinted *Vinegar*, which a good many people seem to have adopted as the true reading,) — his senior deacon had called Dr. Kittredge an "infidel." But the Reverend Doctor could not help feeling, that, unless the text, "By their fruits ye shall know them," were an interpolation, the Doctor was the better Christian of the two. Whatever his senior deacon might think about it, he said to himself that he shouldn't be surprised if he met the Doctor in heaven yet, inquiring anxiously after old Deacon Shearer.

He was on the point of expressing himself very frankly to the Doctor, with that benevolent smile on his face which had sometimes come near giving offence to the readers of the "Vinegar" edition, but he saw that the physician's attention had been arrested by Elsie. He looked in the same direction himself, and could not help being struck by her attitude and expression. There was something singularly graceful in the curves of her neck and the rest of her figure, but she was so perfectly still that it seemed as if she were hardly breathing. Her eyes were fixed on the young girl with whom Mr. Bernard was talking. He had often noticed their brilliancy, but now it seemed to him that they appeared dull, and the look on her features was as of some passion which had missed its stroke. Mr. Bernard's companion seemed unconscious that she was the object of this attention, and was listening to the young master as

if he had succeeded in making himself very agreeable.

Of course Dick Venner had not mistaken the game that was going on. The schoolmaster meant to make Elsie jealous, — and he had done it. That's it: get her savage first, and then come wheedling round her, — a sure trick, if he isn't headed off somehow. But Dick saw well enough that he had better let Elsie alone just now, and thought the best way of killing the evening would be to amuse himself in a little lively talk with Mrs. Blanche Creamer, and incidentally to show Elsie that he could make himself acceptable to other women, if not to herself.

The Doctor presently went up to Elsie, determined to engage her in conversation and get her out of her thoughts, which he saw, by her look, were dangerous. Her father had been on the point of leaving Helen Darley to go to her, but felt easy enough when he saw the old Doctor at her side, and so went on talking. The Reverend Doctor, being now left alone, engaged the Widow Rowens, who put the best face on her vexation she could, but was devoting herself to all the underground deities for having been such a fool as to ask that pale-faced thing from the Institute to fill up her party.

There is no space left to report the rest of the conversation. If there was anything of any significance in it, it will turn up by-and-by, no doubt. At ten o'clock the Reverend Doctor called Miss Letty, who had no idea it was so late; Mr. Bernard gave his arm to Helen; Mr. Richard saw to Mrs. Blanche Creamer; the Doctor gave Elsie a cautioning look, and went off alone, thoughtful; Dudley Venner and his daughter got into their carriage and were whirled away. The Widow's gambit was played, and she had not won the game.

REVIEWS AND LITERARY NOTICES.

Reminiscences of the late Thomas Assheton Smith, Esq.; or, The Pursuits of an English Country-Gentleman. By SIR J. E. EARDLEY-WILMOT. London: Murray. 1860.

WE are somewhat doubtful whether Charles Lamb would have included this handsome volume in a list of *books*. It is evidently the work of an eager sportsman, one learned in all the minutæ of the chase. Much of it is taken up with enthusiastic description of Mr. Smith's favorite horses and hounds, of the astonishing qualities of Rory O'More, of the splendid runs made by Fireship and Lightboat, of the notable improvement made in the Suffolk pack by Mr. Smith's judicious system of crossing. All this part of the book will doubtless interest any English gentleman who delights in pink and buckskins, and will especially please those who recollect the famous Tom Smith, as he was called, when,

"on a morning
Ruddy as health, he rode into the field
And then pursued the chase,"

over and through swamp, hedge, and ditch, with that dare-devil speed and recklessness that won for him the reputation of being the best rider, the hardest seat, and the first sportsman in all England.

And even to us, who never chased the fox nor ever crossed a thoroughbred, this portion of the work is not without a certain interest; for we take a species of pleasure in hearing or learning the technical terms of any art, trade, or pursuit whatsoever, and not often to American eyes comes the chance of becoming acquainted with the huntsman, the whipper-in, the ride to cover, and the eager, toilsome, dangerous chase.

Still we cannot help regarding the overabundance of these things as not only a blemish in the book as a work of art, which indeed it scarcely pretends to be, but also as a hindrance to the attainment of its object, which is the vindication of Mr. Smith's character from certain charges made against it by the "Times" and other London newspapers, which spoke but slightly of him, pronouncing him to have been a mere fox-hunting squire, and nothing more.

To contradict these and similar aspersions, his widow put all of Mr. Smith's correspondence into the hands of his warm friend, Sir J. E. Eardley-Wilmot, and left to him the task of defending the name and fame of her husband. These memoirs are the result, and we are of opinion, that, with the exception of the superabundant cricketing and hunting technicalities before mentioned, the work has been exceedingly well performed. The book is written in an unambitious, straightforward, gentlemanly style, that carries conviction with it; and as we rise from a perusal of it, with occasional skippings, we feel that the "Times" correspondent has now at least no excuse for harsh judgment of Mr. Smith, and that, if he was a reckless rider and a mighty hunter, he was also very much more and better.

Thomas Assheton Smith was born of sturdy and right English stock, as the following anecdote makes patent. His father opposed the building of the Menai Bridge, did not believe, in fact, that it could be built, considered the ferry good enough, and declared, that, if it should be finished, he for one would never set foot upon it. The possibility of building a bridge having been demonstrated to Mr. Smith by the completed structure, he, for the remainder of his life, when his occasions took him across the strait, made use of a boat. Other such anecdotes are told of him, setting forth his obstinacy and courage in a strong light, so that we are not surprised when we are informed that his son had a stern temper and was somewhat dictatorial in the field. We could have accounted for Tom Smith's severe countenance, though we had never heard of that two hours' battle at Eton, of which the school-traditions yet speak, when he fought a drawn fight with Jack Musters, who, the Squire always declared, spoiled his beauty for him. Neither do we wonder when we hear that he fought a six-foot carter in the street and beat him, or that, when nearly eighty years of age, he jumped off his horse and put up his hands to a farm-laborer who had insulted him, or that, when he ran as candidate for Parliament,

for Nottingham, and was hissed and groaned in that radical city, he stepped down from the hustings and proposed a set-to with any voter in the crowd. This was good crowing, but the old cock had taught him.

From Eton young Smith was removed to Oxford, where we are told he often rode out with the hounds and began his practice of keeping close up to them at the risk of his own and his horse's neck. Clearly the subject of these memoirs was not intended to shine in the schools and wisely did not make the attempt. Leaving college, Mr. Smith for a few years devoted himself to the improvement of his horses and hounds, and, as the author says, to "creating a new country near Salisbury Plain." The thread of his life is then followed down to the death of his father and his entrance upon the manifold duties of a large landed proprietor, owner of immense quarries, and landlord of some hundreds of tenants,—the pursuits, in short, of an English country-gentleman. Here is the real interest of the book. It is interesting to note the difference between this country-squire and that typical country-squire with which the plays and novels of the last hundred and fifty years have made us familiar. We all know him. Purple with Port, beef-witted, tyrannical, intolerant, ignorant, never happy unless when on horseback or drunk, nor looking happy then.

But the "glorious gains" of the nineteenth century have come to fox-hunters as well as to other men, and Squire Smith is a very much ameliorated Squire Western, though we see plain enough evidence that the original stock is the same in both. Both are good Tories, hate the French, and would fight for the Church; but we are sure that Squire Western considers a curate as but a poor creature, and we fear Squire Smith has not any Puritanical reverence for the clergy,—for curates, at least; for we are told, that, when the Reverend Mr. T. Dyson preached his first sermon, the Squire walked up to him in the church-porch, and, clapping him on the back, said to the young parson, "Well done, my boy! you shall have a mount on Rory next Tuesday for this!" But we do not think that Squire Western would have been liberal or politic enough to have given land and money to several neighboring congre-

gations of Dissenters, or that he would have given away to his quarrymen several thousand acres of good land together with building-materials. Nor have we such faith in the ability of the Georgian Squire as to believe that he, from his own observation and acute reasoning on facts which he had noticed when a boy in school, would ever have given to the world the famous wave-line bow to be a pattern on which all nations should model their vessels. Yet this our Victorian Squire has done, and he loses no credit by the fact that Mr. Scott Russell, the great naval architect, had at nearly the same time, working from entirely different premises, arrived at the same result.

Mr. Smith seems to us well worth knowing as the type of a great class of Englishmen,—that class to which the author of "School-Days at Rugby" gives the comprehensive patronymic of Brown,—a class bold, honest, energetic, not too affectionate, not too intellectual, perhaps, but, by virtue of their strength of hand, head, and will, and their inborn honesty of soul, the masters in some important respects of all the men that live.

Essays and Reviews. The Second Edition.
London: 1860. 8vo. pp. 434.

THE second English and the first American edition of the volume bearing the modest title given above have followed quickly its original publication. The title-page, indicating only the form of the matter in the volume, compels a reference to the table of contents in order to learn its substance. From this it appears that the *Essays and Reviews* are seven in number, each by a different author, and that they treat chiefly of topics connected with the study of Scripture,—the only one not directly indicating its relation to this study by its title being the first, on "The Education of the World," by the Reverend Frederick Temple, Head Master of Rugby School. The names of several of the authors, those, for instance, of the late Baden Powell, of Dr. Rowland Williams, and of Mr. Jowett, Regius Professor of Greek in the University of Oxford, are well known as among those of the most advanced and ablest leaders of thought in

the most liberal section of the English Church. It is not strange that a volume to which such men have contributed should have excited a general and deep interest among all who are interested in the present position of scholarship in England and of thought in regard to the most important subjects which can occupy the intellects of men.

Whatever expectations the announcement of the volume excited are well supported by its contents. It is the most important contribution made during the present generation in England to the establishment of a sound religious philosophy, and to the advance of religious truth. Whatever opposition some of the speculations contained in it may excite, whether the main views of its authors be accepted or not, (and in this notice we do not propose to consider whether they be true or not,) the principles upon which their opinions and speculations are based are so incontrovertible, and the learning and ability with which they are supported are so great, that the work must inevitably produce a lasting effect upon the tendency of thought in respect to the subjects it embraces and must lead to the reconsideration of many prevalent opinions. It is a book at once to start doubts in the minds of those attached to established forms and bound by ancient creeds, and to quiet doubts in those who have been perplexed in the bewilderments of modern metaphysical philosophy or have found it difficult to reconcile the truths established by science with their faith in the Christian religion. It is a book which serves as a landmark of the most advanced point to which religious thought has yet reached, and from which to take a new observation and departure.

The most striking external characteristic of these Essays is, that, having been "written in entire independence of each other, and without concert or comparison," they, without exception, present a close similarity in spirit and in tone. All of them are distinguished by a union of freedom with reverence, as rare as it is remarkable, in treating of subjects peculiarly likely to suffer from being handled in a conventional manner, and usually discussed with exaggerated freedom or with superstitious reverence. In tone and temper they leave nothing to be desired; they are

neither hot with zeal nor rash with controversial eagerness; but they are calm without coldness, earnest without extravagance. The fairness and candor displayed in them, the freedom from party-prejudice or bias, the clearness in the statement of difficulties, the honesty in the recognition of the limits of present knowledge, all indicate most clearly the growth of a worthy spirit in the treatment of subjects which have too often heretofore been fields for the exhibition of narrowness, intolerance, and bigotry. Such a book is not only an honor to the men engaged in its production, but of happy augury for the future progress of truth.

The topics which these Essays discuss are of as much interest in America as in England, to those outside the English Church as to those within it. But, at the same time, most of the Essays (and this consideration is not a satisfactory one) are of a kind which it would seem could have been produced only in England, and there only within the limits of the Church. In America we have no body of men capable of work so different in its parts, and, at the same time, exhibiting such soundness and extent of scholarship, such liberality of opinion, such disciplined habits of thought. Any single Essay in the volume might, perhaps, without any extravagance of supposition, have been the work of some American scholar; but the difficulty would be to find here seven writers each capable of producing one of the Essays. The intellectual discipline of English methods of study and of English institutions still produces a greater number of men capable of the highest sort of work, than the methods in vogue and the institutions established here. We have thinkers who venture as pioneers into the uncleared wilderness. Their vigorous blows bring down many an old tree moss-grown with errors, and their ploughs for the first time turn the soil covered with the fallen leaves of decayed beliefs; but we fail in our supply of those men who are to follow the pioneers and do the higher and more lasting constructive work of civilization. Now, as in past times, we must be content, so far as we may, to have this work done for us by the thinkers and scholars of other lands. But how long is this to last? Is the same sort of makeshift to be allowed in the processes of American thought, which in the expanse

of our territory we have allowed in the processes of material labor?

The publication of these "Essays and Reviews" marks, as we believe, an epoch in the history of thought in England. They will stand as the monument of the reaction of the best minds against the "Tractarian" movement on the one hand, and against the skeptical tendencies of much of the science and philosophy of recent times on the other. For while, at Oxford and elsewhere, a strong current has set back against the unimpeded progress of truth, while the attempt has been made, and not without a transient success, to rivet old fetters upon the hearts and intellects of men, another school; borrowing their metaphysics from Germany, and their notions of Christianity from the common creeds, have set up science in opposition to faith, and have treated religion, with more or less openness, as if it were a worn-out superstition. The essential value of this book is, that its various Essays are virtually an attempt—how far successful each reader must judge for himself—to show that the Christian religion is no fixed and formalized set of doctrines, but an expansive and fluent faith, adapting itself to the new needs of every generation and of each individual; not opposed to the teachings of science, but, when properly understood, entirely harmonious with them, and drawing continually fresh support from them; having nothing to fear from the progress of knowledge and the increase of light, but everything to gain; welcoming truth, whencesoever it may come, whatsoever it may be, whithersoever it may lead.

Beside the topics of thought treated of in this volume, it suggests incidentally many others of peculiar interest. As an indication of the present condition of English scholarship, it is full of encouragement for the future. For more than a century there has been very little deep, original, and productive study of the Scriptures in England. A new impulse has now been given to it. What will be its effect, and the effect of the liberalized and more tolerant spirit of which it is a proof, upon the constitution of the English Church can be foreseen but in part. It is certain that it must lead to great changes, and to a virtual breaking-down of many of the most confining sectarian barriers. No Articles and no Creeds can stand for many genera-

tions as the authoritative expressions of belief, after the character of the compulsion which they exercise is understood, after the history of sectarian differences is fairly stated, after the interpretation of Scripture is placed upon a sound basis, and the nature of Christianity and the object of the teachings of Christ are thus brought home to the intellects and the hearts of men.

A Journey in the Back-Country. By FREDERICK LAW OLMSTED. Author of "A Journey in the Seaboard Slave-States," "A Journey in Texas," "Walks and Talks of an American Farmer in England," etc. New York: Mason Brothers. 1860. pp. xvi., 492.

MR. OLMSTED is no ordinary traveller for amusement or adventure. He leaves home to instruct himself through his own eyes and ears concerning matters of general interest about which no trustworthy information was to be found in books. Looking at Slavery merely as an economist, with no political or moral prepossessions to mislead his judgment, he went to study for himself its workings and results as a form of labor, we might almost say, so cool-headed is he, as an application of forces, rather than as a social or political phenomenon. Self-possessed and wary, almost provokingly unsympathetic in his report of what he saw, pronouncing no judgment on isolated facts, and drawing no undue inferences from them, he has now generalized his results in a most interesting and valuable book. No more important contributions to contemporary American history have been made than in this volume and the two that preceded it. We know of no book that offers a parallel to them, except Arthur Young's "Travels in France." To discuss the question of Slavery without passion or even sentiment seemed an impossibility; yet Mr. Olmsted has shown that it can be done, and, having no theory to bolster, has contrived to tell us what he saw, and not what he went to see,—the rarest achievement among travellers. Without the charm of style, he has the truthfulness of Herodotus.

We do not forget that there was wisdom as well as wit in Dr. Johnson's sarcastic classification of facts with donkeys. The great majority of so-called facts, and espe-

cially those detailed by travellers, are of no consequence whatever to man or beast. What is it to us that Mr. A. has been condescending enough to look at the Venus of Milo, or that Mr. B., with more time than he knows what to do with already on his hands, must steal a couple of good working hours from Carlyle, worth probably five guineas apiece? That Hannibal crossed the Alps was something; that Goethe did was and is also of some consequence; but the transit of Mr. Anarithmon Smith need cause no excitement in the observatories. That a man has found out, by laborious counting, which is the middle word in the New Testament, is pretty sure to get into the newspapers as a remarkable fact; that he had discovered its central thought, and made it the keystone to knit together his else incomplete outward and inward lives, would hardly be esteemed of so much consequence. Facts are such different things, especially to different persons! The truth is, that we should distinguish between real facts and the mere images of facts, though the newspapers teach us to confound them, putting side by side, as they do, Garibaldi's entry into Naples and Dennis McQuigley's into the lock-up.

The man who gives us a really new fact deserves to be classed with him who makes two blades of grass grow where one grew before, for it contains the germinal principle of knowledge. We owe a large debt in this kind to Mr. Olmsted. He tells us much of what he saw, little of what he thought. He has good eyes, and that something behind them that makes a good observer. As respects the South, he has the advantage of being at once native and foreigner, so that what is merely American does not divide his attention with what is local and peculiar. Making entries in his diary before impressions have had time to cool, he has preserved even the dialect of those with whom he talked, and thus given a lively reality to his narrative.

Nearly one-half of Mr. Olmsted's present volume is devoted to a discussion of the conclusions to be drawn from the mass of observations he has thus far collected. His views are entitled to the more consideration that the tone of his mind is so dispassionate. He finds himself compelled to give his verdict against Slavery, whether it be considered morally, politically, or economically. We cannot but think that

the reading of his book will do great good in opening the minds of many to a perception that the agitation of the Slavery question is not a mere clash of unthinking prejudices between North and South, that Slavery itself is not a matter of purely local concern, but that it interests all parts of the Republic equally. It is certainly of paramount importance that we should understand the practical workings of a system which is converting what by natural increase will soon constitute a majority of the population in the fairest portion of our territory into a vast planting, hoeing, and cotton-picking machine.

Mr. Olmsted's qualifications as a traveller are so remarkable that we cannot help wishing that he would make a journey through New England and make us as thoroughly acquainted with its internal condition as we ought to be. We believe there is no book of the kind since that of President Dwight, and that gives us little of the sort of information we desire. It is an insight into the manners, modes of life, and ways of thinking that is of value; and Mr. Olmsted, who goes about, like Chaucer's Somner,

"Ever inquiring upon everything,"

is just the person to supply a great want in our literature. We know less of the domestic habits of a large part of our population than of those of the Saxons in the time of Alfred. But for a few glimpses which we get from Dunton, Madam Knight, the Rev. Jacob Bailey, and the Proceedings of Synods, we should be little better acquainted with the New Englanders of the century following the Restoration than with the primitive Aryans. Bailey's account of his voyage to England is the best contemporary testimony to the truth of Smollett's pictures of sea-life that we ever met with, and we cannot sufficiently regret that the whole of his journal during his college-life was not published. Mr. Olmsted would be sure of a grateful recognition from posterity, if he would do for New England what he has done for the South. We might not be flattered by his report, but we could not fail to be benefited by it. It would, perhaps, lead to the establishment of home missions among the Bad-Bread and Foul-Air tribes, who make more wretched captives for life and kill more children than the French and Indians together ever dreamed of.

Sketches of Parisian Life. The Greatness and Decline of César Birotteau. From the French of HONORÉ DE BALZAC. Translated by O. W. WIGHT and F. B. GOODRICH. New York: Rudd & Carleton, 130 Grand Street. 1860. pp. 387.

WE are very glad to see this beginning of a translation of Balzac, or de Balzac, as he chose to christen himself. Without intending an exact parallel, he might be called the Fielding of French Literature, — intensely masculine, an artist who works outward from an informing idea, a satirist whose humor will not let him despise human nature even while he exposes its weaknesses. The story of Cæsar Birotteau is well-chosen as an usher to the rest, for it is eminently characteristic, though it does not show the higher imaginative qualities of the author. It is one of the severest tests of genius to draw an ordinary character so humanly that we learn to love and respect it in spite of a thorough familiarity with its faults and absurdities. In this respect Balzac's "Birotteau" is a masterpiece. The translation, as far as we have had time to look into it, seems a very easy, spirited, and knowing one. The translators have overcome the difficulties of *slang* with great skill, rendering by equivalent vulgarisms which give the spirit where the letter would be unintelligible. We object, however, to a phrase like "vest-pocket," where we find it in the narrative, and not in the mouth of one of the personages. It is tailor's English, which is as bad as peddler's French. But this is a trifle where there is so much to commend in essentials, and we hope the translators will be encouraged to go on in a work so excellently begun.

Home Ballads and Poems. By JOHN GREENLEAF WHITTIER. Boston: Ticknor & Fields. 1860. pp. 206.

THE natural product of a creed which ignores the æsthetical part of man and reduces Nature to a uniform drab would seem to have been Bernard Barton. *His* verse certainly infringed none of the superstitions of the sect; for from title-page to colophon there was no sin either in the way of music or color. There was, indeed, a frugal and housewifely Muse, that

brewed a cup, neither cheering unduly nor inebriating, out of the emptyings of Wordsworth's teapot. How that little busy B. improved each shining hour, how neatly he laid his wax, it gives us a cold shiver to think of, — *ancora ci raccapriccia!* Against a copy of verses signed "B. B.," as we remember them in the hardy Annuals that went to seed so many years ago, we should warn our incautious offspring as an experienced duck might her brood against a charge of B. B. shot. It behooves men to be careful; for one may chance to suffer lifelong from these intrusions of cold lead in early life, as duellists sometimes carry about all their days a bullet from which no surgery can relieve them. Memory avenges our abuses of her, and, as an awful example, we mention the fact that we have never been able to forget certain stanzas of another B. B., who, under the title of Boston Bard, whilom obtained from newspaper-columns that concession which gods and men would unanimously have denied him.

George Fox, utterly ignoring the immense stress which Nature lays on established order and precedent, got hold of a half-truth which made him crazy, as half-truths are wont. But the inward light, whatever else it might be, was surely not of that kind "that never was on land or sea." There has been much that was poetical in the lives of Quakers, little in the men themselves. Poetry demands a richer and more various culture, and, however good we may find such men as John Woolman and Elias Boudinot, they make us feel painfully that the salt of the earth is something very different, to say the least, from the Attic variety of the same mineral. Let Armstrong and Whitworth and James experiment as they will, they shall never hit on a size of bore so precisely adequate for the waste of human life as the journal of an average Quaker. Compared with it, the sandy intervals of Swedenborg gush with singing springs, and Cotton Mather is a very Lucian for liveliness.

Yet this dry Quaker stem has fairly blossomed at last, and Nature, who can never be long kept under, has made a poet of Mr. Whittier as she made a General of Greene. To make a New England poet, she had her choice between Puritan and Quaker, and she took the Quaker. He is, on the whole, the most representative

poet that New England has produced. He sings her thoughts, her prejudices, her scenery. He has not forgiven the Puritans for hanging two or three of his co-sectaries, but he admires them for all that, calls on his countrymen as

“ Sons of men who sat in council with their
Bibles round the board,

Answering Charles's royal mandate with a
stern ‘ Thus saith the Lord, ’ ”

and at heart, we suspect, has more sympathy with Miles Standish than with Mary Dyer. Indeed,

“ Sons of men who sat in meeting with their
broadbrims o'er their brow,

Answering Charles's royal mandate with a
thee instead of *thou*, ”

would hardly do. Whatever Mr. Whittier may lack, he has the prime merit that he smacks of the soil. It is a New England heart he buttons his strait-breasted coat over, and it gives the buttons a sharp strain now and then. Even the native idiom crops out here and there in his verses. He makes *abroad* rhyme with *God*, *law* with *war*, *us* with *curse*, *scorner* with *honor*, *been* with *men*, *beard* with *shared*. For the last two we have a certain sympathy as archaisms, but with the rest we can make no terms whatever, — they must march out with no honors of war. The Yankee lingo is insoluble in poetry, and the accent would give a flavor of *essence-penny'r'y'l* to the very Beatitudes. It differs from Lowland Scotch as a *patois* from a dialect.

But criticism is not a game of jerk-straws, and Mr. Whittier has other and better claims on us than as a stylist. There is true fire in the heart of the man, and his eye is the eye of a poet. A more juicy soil might have made him a Burns or a Béranger for us. New England is dry and hard, though she have a warm nook in her, here and there, where the magnolia grows after a fashion. It is all very nice to say to our poets, “ You have sky and wood and waterfall and men and women, — in short, the entire outfit of Shakspeare; Nature is the same here as elsewhere ”; and when the popular lecturer says it, the popular audience gives a stir of approval. But it is all *bosh*, nevertheless. Nature is *not* the same here, and perhaps never will be, as in lands where man has mingled his being with hers for countless centuries, where every field is steeped in history, every crag is ivied

with legend, and the whole atmosphere of thought is hazy with the Indian summer of tradition. Nature without an ideal background is nothing. We may claim whatever merits we like, (and our orators are not too bashful,) we may be as free and enlightened as we choose, but we are certainly not interesting or picturesque. We may be as beautiful to the statistician as a column of figures, and dear to the political economist as a social phenomenon; but our hive has little of that marvellous bee-bread that can transmute the brain to finer issues than a gregarious activity in hoarding. The Puritans left us a fine estate in conscience, energy, and respect for learning; but they disinherited us of the past. Not a single stage-property of poetry did they bring with them but the good old Devil, with his graminivorous attributes, and even he could not stand the climate. Neither horn nor hoof nor tail of him has been seen for a century. He is as dead as the goat-footed Pan, whom he succeeded, and we tenderly regret him.

Mr. Whittier himself complains somewhere of

“ The rigor of our frozen sky, ”

and he seems to have been thinking of our clear, thin, intellectual atmosphere, the counterpart of our physical one, of which artists complain that it rounds no edges. We have sometimes thought that his verses suffered from a New England taint in a too great tendency to metaphysics and morals, which may be the bases on which poetry rests, but should not be carried too high above-ground. Without this, however, he would not have been the typical New England poet that he is. In the present volume there is little of it. It is more purely objective than any of its forerunners, and is full of the most charming rural pictures and glimpses, in which every sight and sound, every flower, bird, and tree, is neighborly and homely. He makes us see

“ the old swallow-haunted barns,
Brown-gabled, long, and full of seams
Through which the moted sunlight streams,
And winds blow freshly in to shake
The red plumes of the roasted cocks
And the loose hay-mow's scented locks, ” —

“ the cattle-yard
With the white horns tossing above the wall, ” —

the spring-blossoms that drooped over the river,

“Lighting up the swarming shad,”—
and

“the bulged nets sweeping shoreward
With their silver-sided haul.”

Every picture is full of color, and shows that true eye for Nature which sees only what it ought, and that artistic memory which brings home compositions and not catalogues. There is hardly a hill, rock, stream, or sea-fronting headland in the neighborhood of his home that he has not fondly remembered. Sometimes, we think, there is too much description, the besetting sin of modern verse, which has substituted what should be called wordy-painting for the old art of painting in a single word. The essential character of Mr. Whittier's poetry is lyrical, and the rush of the lyric, like that of a brook, allows few pictures. Now and then there may be an eddy where the feeling lingers and reflects a bit of scenery, but for the most part it can only catch gleams of color that mingle with the prevailing tone and enrich without usurping on it. This volume contains some of the best of Mr. Whittier's productions in this kind. “Skipper Ireson's Ride” we hold to be by long odds the best of modern ballads. There are others nearly as good in their way, and all, with a single exception, embodying native legends. In “Telling the Bees,” Mr. Whittier has enshrined a country superstition in a poem of exquisite grace and feeling. “The Garrison of Cape Ann” would have been a fine poem, but it has too much of the author in it, and to put a moral at the

end of a ballad is like sticking a cork on the point of a sword. It is pleasant to see how much our Quaker is indebted for his themes to Cotton Mather, who belabored his un-Friends of former days with so much bad English and worse Latin. With all his faults, that conceited old pedant contrived to make one of the most entertaining books ever written on this side the water, and we wonder that no one should take the trouble to give us a tolerably correct edition of it. Absurdity is common enough, but such a genius for it as Mather had is a rare and delightful gift.

This last volume has given us a higher conception of Mr. Whittier's powers. We already valued as they deserved his force of faith, his earnestness, the glow and hurry of his thought, and the (if every third stump-speaker among us were not a Demosthenes, we should have said Demosthenean) eloquence of his verse; but here we meet him in a softer and more meditative mood. He seems a Berserker turned Carthusian. The half-mystic tone of “The Shadow and the Light” contrasts strangely, and, we think, pleasantly, with the warlike clang of “From Perugia.” The years deal kindly with good men, and we find a clearer and richer quality in these verses where the ferment is over and the *rile* has quietly settled. We have had no more purely American poet than Mr. Whittier, none in whom the popular thought found such ready and vigorous expression. The future will not fail to do justice to a man who has been so true to the present.

RECENT AMERICAN PUBLICATIONS

RECEIVED BY THE EDITORS OF THE ATLANTIC MONTHLY.

Forty Years' Experience in Sunday Schools. By Stephen H. Tyng, D. D., Rector of St. George's Church, New York. New York. Sheldon & Co. 18mo. pp. 250. 50 cts.

Critical and Miscellaneous Essays and Poems. By T. Babington Macaulay. New and Revised Edition. New York. D. Appleton & Co. 12mo. pp. 358. 75 cts.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. VI.—DECEMBER, 1860.—NO. XXXVIII.

THE UNITED STATES AND THE BARBARY STATES.

SPEAK of the relations between the United States and the Barbary Regencies at the beginning of the century, and most of our countrymen will understand the War with Tripoli. Ask them about that Yankee crusade against the Infidel, and you will find their knowledge of it limited to Preble's attack. On this bright spot in the story the American mind is fixed, regardless of the dish we were made to eat for five-and-twenty years. There is also current a vague notion, which sometimes takes the shape of an assertion, that we were the first nation who refused to pay tribute to the Moorish pirates, and thus established a new principle in the maritime law of the Mediterranean. This, also, is a patriotic delusion. The money question between the President and the Pacha was simply one of amount. Our chief was willing to pay anything in reason; but Tripolitan prices were too high, and could not be submitted to.

The burning of the Philadelphia and the bombardment of Tripoli are much too fine a subject for rhetorical pyrotechnics to have escaped lecturers and orators of the Fourth-of-July school. We have all heard, time and again, how Preble, Decatur, Trippe, and Somers cannonaded, sabred, and blew up these pirates. We

have seen, in perorations glowing with pink fire, the Genius of America, in full naval uniform, sword in hand, standing upon a quarter-deck, his foot upon the neck of a turbaned Turk, while over all waves the flag of Freedom.

The Moorish sketch is probably different. In it, Brother Jonathan must appear with his liberty-cap in one hand and a bag of dollars in the other, bowing humbly before a well-whiskered Mussulman, whose shawl is stuck full of poniards and pistols. The smooth-faced unbeliever begs that his little ships may be permitted to sail up and down this coast unmolested, and promises to give these and other dollars, if his Highness, the Pacha, will only command his men to keep the peace on the high-seas. This picture is not so generally exhibited here; but it is quite as correct as the other, and as true to the period.

The year after Preble's recall, another New-England man, William Eaton, led an army of nine Americans from Egypt to Derne, the easternmost province of Tripoli,—a march of five hundred miles over the Desert. He took the capital town by storm, and would have conquered the whole Regency, if he had been supplied with men and money from our fleet. "Certainly," says Pascal Paoli

Peck, a non-commissioned officer of marines, one of the nine, "certainly it was one of the most extraordinary expeditions ever set on foot." Whoever reads the story will be of the same opinion as this marine with the wonderful name. Never was the war carried into Africa with a force so small and with completer success. Yet Eaton has not had the luck of fame. He was nearly forgotten, in spite of a well-written Life by President Felton, in Sparks's Collection, until a short time since; when he was placed before the public in a somewhat melodramatic attitude, by an article in a New York pictorial monthly. It is not easy to explain this neglect. We know that our Temple of Fame is a small building as yet, and that it has a great many inhabitants,—so many, indeed, that worthy heroes may easily be overlooked by visitors who do not consult the catalogue. But a man who has added a brilliant page to the *Gesta Dei per Novanglos* deserves a conspicuous niche. A brief sketch of his doings in Africa will give a good view of the position of the United States in Barbary, in the first years of the Republic.

Sixty years ago, civilized Europe not only tolerated the robbery, the murder, and the carrying into captivity of her own people, but actually recognized this triple atrocity as a privilege inherent to certain persons of Turkish descent and Mahometan religion inhabiting the northern coast of Africa. England or France might have put them down by a word long before; but, as the corsairs chiefly ravaged the defenceless coasts of Sardinia, Sicily, and Naples, the two great powers had no particular interest in crushing them. And there was always some jealous calculation of advantage, some pitiful project of turning them to future account, which prevented decisive action on the part of either nation. Then the wars which followed the French Revolution kept Europe busy at home and gave the Barbary sailors the opportunity of following their calling for a few years longer with impunity. The English, with large

fleets and naval stations in the Mediterranean, had nothing to fear from them, and were, probably, not much displeased with the contributions levied upon the commerce of other nations. Barbary piracy was a protective tax in favor of British bottoms. French merchantmen kept at home. Spain, Sweden, Denmark, and Holland tried to outbid one another for the favor of the Dey, Bey, and Pacha, and were robbed and enslaved whenever it suited the interests of their Highnesses. The Portuguese kept out of the Mediterranean, and protected their coast by guarding the Straits of Gibraltar.

Not long before the French Revolution, a new flag in their waters had attracted the greedy eyes of the Barbarians. When they learned that it belonged to a nation thousands of miles away, once a colony of England, but now no longer under her protection, they blessed Allah and the Prophet for sending these fish to their nets; and many Americans were made to taste the delights of the Patriarchal Institution in the dockyards of Algiers. As soon as the Federal Government was fairly established, Washington recommended to Congress to build a fleet for the protection of citizens in the Mediterranean. But the young nation needed at first all its strength to keep itself upright at home; and the opposition party professed a theory, that it would be safer and cheaper for the United States to give up ships altogether, and to get other people to carry for them. Consequently the plan of negotiating was resorted to. Agents were sent to Algiers to ransom the captives and to obtain a treaty by presents and the payment of a fixed tribute. Such a treaty was made in the summer of 1796. In March of the succeeding year, the Dey showed so much ill-temper at the backwardness of our payments, that Joel Barlow, the American Commissioner, thought it necessary to soothe his Highness by the promise of a frigate to be built and equipped in the United States. Thus, with Christian meekness, we furnished the Mussulman

with a rod for our own backs. These arrangements cost the United States about a million of dollars, all expenses included.

Having pacified Algiers, Mr. Barlow turned his attention to Tunis. Instead of visiting the Bey in person, he appointed a European merchant, named Famin, residing in Tunis, agent to negotiate a treaty for the United States. Of Famin Mr. Barlow knew nothing, but considered his French birth and the recommendation of the French Consul for Algiers sufficient proofs of his qualifications. Besides attending to his own trade, Monsieur Famin was in the habit of doing a little business for the Bey, and took care to make the treaty conform to the wishes of his powerful partner. The United States were to pay for the friendship and forbearance of Tunis one hundred and seven thousand dollars in money, jewels, and naval stores. Tunisian cargoes were to be admitted into American ports on payment of three per cent.; the same duty to be levied at Tunis on American shipments. If the Bey saluted an American man-of-war, he was to receive a barrel of powder for every gun fired. And he reserved the right of taking any American ship that might be in his harbor into his service to carry despatches or a cargo to any port in the Mediterranean.

When the treaty reached the United States, the Senate refused to ratify it. President Adams appointed Eaton, formerly a captain in the army, Consul for Tunis, with directions to present objections to the articles on the tariff, salutes, and impressment of vessels. Mr. Cathcart, Consul for Tripoli, was joined with him in the commission. They sailed in the United States brig *Sophia*, in December, 1798, and convoyed the ship *Hero* laden with naval stores, an armed brig, and two armed schooners. These vessels they delivered to the Dey of Algiers "for arrearages of stipulation and present dues." The offerings of his Transatlantic tributaries were pleasing to the Dey. He admitted the Consuls to an audience. After their shoes had been tak-

en off at the door of the presence-chamber, they were allowed to advance and kiss his hand. This ceremony over, the *Sophia* sailed for Tunis.

Here the envoys found a more difficult task before them. The Bey had heard of the ships and cargoes left at Algiers, and asked at once, Where were all the good things promised to him by Famin? The Consuls presented President Adams's letter of polite excuses, addressed to the Prince of Tunis, "the well-guarded city, the abode of felicity." The Bey read it, and repeated his question, — "Why has the Prince of America not sent the hundred and seven thousand dollars?" The Consuls endeavored to explain the dependence of their Bey on his Grand Council, the Senate, which august body objected to certain stipulations in Famin's treaty. If his Highness of Tunis would consent to strike out or modify these articles, the Senate would ratify the treaty, and the President would send the money as soon as possible. But the Bey was not to be talked over; he refused to be led away from the main question, — "Where are the money, the regalia, the naval stores?" He could take but one view of the case: he had been trifled with; the Prince of America was not in earnest.

Monsieur Famin, who found himself turned out of office by the Commissioners, lost no opportunity of insinuating that American promises were insincere, and any expectations built upon them likely to prove delusive.

After some weeks spent in stormy negotiations, this modification of the articles was agreed upon. The duty might be three or three hundred per cent., if the Consuls wished it, but it should be reciprocal. The Bey refused to give up the powder: fifteen barrels of powder, he said, might get him a prize worth a hundred thousand dollars; but salutes were not to be fired, unless demanded by the Consul on the part of the United States. The Bey also persisted in his intention of pressing American vessels into his service; but he waived this claim

in the case of national ships, and promised not to take merchantmen, if he could possibly do without them.

Convinced that no better terms could be obtained, Cathcart sailed for Tripoli, to encounter fresh troubles, leaving Eaton alone to bear the greediness and insolence of Tunis. The Bey and his staff were legitimate descendants of the two daughters of the horse-leech; their daily cry was, "Give! give!" The Bey told Eaton to get him a frigate like the one built for the Algerines.

"You will find I am as much to be feared as they. Your good faith I do not doubt," he added, with a sneer, "but your presents have been insignificant."

"But your Highness, only a short time since, received fifty thousand dollars from the United States."

"Yes, but fifty thousand dollars are nothing, and you have since altered the treaty; a new present is necessary; this is the custom."

"Certainly," chorused the staff; "and it is also customary to make presents to the Prime Minister and to the Secretary every time the articles are changed, and also upon the arrival of a new Consul."

To carry out this doctrine, the Admiral sent for a gold-headed cane, a gold watch, and twelve pieces of cloth. The Prime Minister wanted a double-barrelled gun and a gold chain. The Aga of the Port said he would be satisfied with something in the jewelry-line, simple, but rich. Officials of low rank came in person to ask for coffee and sugar. Even his Highness condescended to levy small contributions. Hearing that Eaton had a Grecian mirror in his house, he requested that it might be sent to decorate the cabin of his yacht.

As month after month passed, and no tribute-ship arrived, the Bey's threats grew louder and more frequent. At last he gave orders to fit out his cruisers. Eaton sent letters of warning to the Consuls at Leghorn and Gibraltar, and prepared to strike his flag. At the last moment the *Hero* sailed into port, laden with na-

val stores such as never before had been seen in Tunis. The Bey was softened. "It is well," he said; "this looks a little more like truth; but the guns, the powder, and the jewels are not on board."

A letter from Secretary Pickering instructed Eaton to try to divert the Bey's mind from the jewels; but if that were impossible, to order them in England, where they could be bought more cheaply; and to excuse the delay by saying "that the President felt a confidence, that, on further reflection upon all circumstances in relation to the United States, the Bey would relinquish this claim, and therefore did not give orders to provide the present." As the jewels had been repeatedly promised by the United States, this weak attempt to avoid giving them was quite consistent with the shabby national position we had taken in the Mediterranean. It met with the success it deserved. The Bey was much too shrewd a fellow, especially in the matter of presents, to be imposed upon by any such Yankee pretences. The jewels were ordered in London, and, as compensation for this new delay, the demand for a frigate was renewed. After nearly two years of anxiety, Eaton could write home that the prospects of peace were good.

His despatches had not passed the Straits when the Pacha of Tripoli sent for Consul Cathcart, and swore by "Allah and the head of his son," that, unless the President would give him two hundred and fifty thousand dollars for a new treaty, and an annual subsidy of twenty thousand, he would declare war against the United States.

These two years of petty humiliations had exasperated Eaton's bold and fiery temper. He found some relief in horse-whipping Monsieur Famin, who had been unceasing in his quiet annoyances, and in writing to the Government at home despatches of a most undiplomatic warmth and earnestness. From the first, he had advised the use of force. "If you would have a free commerce in those seas, you must defend it. It is useless to buy a peace. The more you give, the more

the Turks will ask for. Tribute is considered an evidence of your weakness; and contempt stimulates cupidity. *Qui se fait brebis, le loup le mange.* What are you afraid of? The naval strength of the Regencies amounts to nothing. If, instead of sending a sloop with presents to Tunis, you will consign to me a transport with a thousand trusty marines, well officered, under convoy of a forty-four-gun frigate, I pledge myself to surprise Porto Farina and destroy the Bey's arsenal. As to Tripoli, two frigates and four gun-boats would bring the Pacha to terms. But if you yield to his new demands, you must make provision to pay Tunis double the amount, and Algiers in proportion. Then, consider how shameful is your position, if you submit. 'Tributary to the pitiful sand-bank of Tripoli?' says the world; and the answer is affirmative, without a blush. Habit reconciles mankind to everything, even humiliation, and custom veils disgrace. But what would the world say, if Rhode Island should arm two old merchantmen, put an Irish renegade into one and a Methodist preacher in another, and send them to demand a tribute of the Grand Seignior? The idea is ridiculous; but it is exactly as consistent as that Tripoli should say to the American nation, — 'Give me tribute, or tremble under the chastisement of my navy!'

This was sharp language for a Consul to hold to a Secretary of State; but it was as meekly borne as the other indignities which came from Barbary.

An occurrence in Algiers completes the picture of "Americans in the Mediterranean" in the year 1800. In October, the United States ship *Washington*, Captain Bainbridge, lay in that port, about to sail for home. The Dey sent for Consul O'Brien, and laid this alternative before him: either the *Washington* should take the Algerine Ambassador to Constantinople, or he, the Dey, would no longer hold to his friendship with the United States. O'Brien expostulated warmly, but in vain. He thought it his duty to submit. The Ambassador, his

suite, amounting to two hundred persons, their luggage and stores, horses, sheep, and horned cattle, and their presents to the Sultan, of lions, tigers, and antelopes, were sent on board. The Algerine flag was hoisted at the main, saluted with seven guns, and the United States ship *Washington* weighed anchor for Constantinople.

Eaton's rage boiled over when he heard of this freak of the Dey. He wrote to O'Brien, — "I frankly own, I would have lost the peace, and been myself impaled, rather than have yielded this concession. Will nothing rouse my country?"*

When the news reached America, Mr. Jefferson was President. He was not roused. He regretted the affair; but hoped that time, and a more correct estimate of interest, would produce justice in the Dey's mind; and he seemed to believe that the majesty of pure reason, more potent than the music of Orpheus,

"Dictus ob hoc lenire tigres, rabidosque leones,"

would soften piratical Turks. Mr. Madison's despatch to O'Brien on the subject is written in this spirit. "The sending to Constantinople the national ship-of-war, the *George Washington*, by force, under the Algerine flag, and for such a purpose, has deeply affected the sensibility, not only of the President, but of the people of the United States. Whatever temporary effects it may have had favorable to our interest, the indignity is of so serious a nature, *that it is not impossible that it may be deemed necessary, on a fit occasion, to revive the question.* Viewing it in this light, the President wishes that nothing may be said or done by you that may unnecessarily preclude the competent authority from animadverting on that

* Some time after, the Bey of Tunis ordered Eaton to send his ship, the *Gloria*, with despatches to the United States. Eaton sent her to Leghorn, and sold her at a loss. "The flag of the United States," he wrote, "has never been seen floating in the service of a Barbary pirate under my agency."

transaction in any way that a vindication of the national honor may be thought to prescribe."

Times have changed since then, and our national spirit with them. The Secretary's Quaker-like protest offers a ludicrous contrast to the wolf-to-lamb swagger of our modern diplomacy. What faithful Democrat of 1801 would have believed that the day would come of the Kostza affair, of the African right-of-search quarrel, the Greytown bombardment, and the seizure of Miramon's steamers?

It is clear that our President and people were in no danger of being led into acts of undue violence by "deeply affected sensibility" or the "vindication of the national honor," when a violent blow aimed by the Pacha of Tripoli at their Mediterranean trade roused them to a show of self-defence. Early in May he declared war against the United States, although Consul Cathcart offered him ten thousand dollars to leave the American flag-staff up for a short time longer. Even then, if Mr. Jefferson could have consulted no one but himself, not a ship would have sailed from these shores. But the merchants were too powerful for him; they insisted upon protection in the Mediterranean. A squadron of three frigates and a sloop under Commodore Dale was fitted out and despatched to Gibraltar; and the nations of the earth were duly notified by our diplomatic agents of our intentions, that they might not be alarmed by this armada.

In June of this year a fire broke out in the palace at Tunis, and fifty thousand stand of arms were destroyed. The Bey sent for Eaton; he had apportioned his loss among his friends, and it fell to the United States to furnish ten thousand stand without delay.

"It is only the other day," said Eaton, "that you asked for eighty twenty-four pounders. At this rate, when are our payments to have an end?"

"Never," was the answer. "The claims we make are such as we receive from all friendly nations, every two or three

years; and you, like other Christians, will be obliged to conform to it."

Eaton refused to state the claim to his Government. The Bey said, Very well, he would write himself; and threatened to turn Eaton out of the Regency.

At this juncture Commodore Dale arrived at Gibraltar. The Bey paid us the compliment of believing that he had not been sent so far for nothing, and allowed Eaton a few months' respite.

Now was the time to give the Turks their lesson; but Dale's hands were tied by his orders. Mr. Jefferson's heart was not in violent methods of dealing with his fellow-men in Barbary. He thought our objects might be accomplished by a display of force better and more cheaply than by active measures. A dislike of naval war and of public expenditure* made his constitutional conscience, always tender, very sensitive on this question of a cruise against Tripoli. Fearful lest our young sailors should go too far, he instructed the Commodore not to overstep the strict line of defence. Hence, when Sterret, in the *Enterprise*, captured a Tripolitan schooner, after a brisk engagement, he disarmed and dismantled her, and left her, with the survivors of her crew on board, to make the best of their way home again. Laymen must have found it difficult, even in 1801, to discover the principle of this delicate distinction between killing and taking prisoners; but it was "according to orders." Commodore Dale returned home at the end of the year, having gathered few Afri-

* The Administration was saturated with this petty parsimony, as may be seen in an extract from a letter written by Madison to Eaton, announcing the approach of Dale and his ships:—"The present moment is peculiarly favorable for the experiment, not only as it is a provision against an immediate danger, but as we are now at peace and amity with all the rest of the world, *and as the force employed would, if at home, be at nearly the same expense, with less advantage to our mariners.*" Linkum Fidelius has given the Jeffersonian plan of making war in two lines:—

"We'll blow the villains all sky-high,
But do it with e-co-no-my." •

can laurels; Commodore Morris came out the next season with a larger fleet, and gathered none at all.

There is no better established rule, in commencing hostilities, public or private, than this: If you strike at all, strike with all your might. Half-measures not only irritate, they encourage. When the Bey of Tunis perceived that Dale did little and Morris less, he thought he had measured exactly the strength of the United States navy, and had no reason to feel afraid of it. His wants again became clamorous, and his tone menacing. The jewels arrived from England in the Constellation, but did not mollify him.

"Now," said he, "I must have a thirty-six-gun frigate, like the one you sent to the Dey of Algiers."

Eaton protested that there was no frigate in the treaty, and that we would fight rather than yield to such extortion.

The Prime Minister blew a cloud from his pipe. "We find it all puff; we see how you carry on the war with Tripoli."

"But are you not ashamed to make this demand, when you have just received these valuable jewels?"

"Not at all. We expected the full payment of peace stipulations in a year. You came out with nothing, and three years have elapsed since you settled the treaty. We have waited all this time, but you have made us no consideration for this forbearance. Nor have we as yet received any evidence of the veritable friendship of the Prince of America, notwithstanding the repeated intimations we have given him that such an expression of his sincerity would be agreeable to us. His Excellency, my master, is a man of great forbearance; but he knows what steps to take with nations who exhaust his patience with illusive expressions of friendship."

Eaton answered, angrily, that the Bey might write himself to the President, if he wanted a frigate. For his part, he would never transmit so outrageous a demand.

"Then," retorted the Bey, "I will send you home, and the letter with you."

The letter was composed by the dragoman and forwarded to the United States, but Eaton was allowed to remain.

Disgusted with the shameful position of our affairs in the Mediterranean, Eaton requested Mr. Madison to recall him, unless more active operations against the enemy should be resolved upon. "I can no longer talk of resistance and coercion," he wrote, "without exciting a grimace of contempt and ridicule. . . The operations of our squadron this season have done less than the last to aid my efforts. Government may as well send out Quaker meeting-houses to float about this sea as frigates with ——— in command. . . If further concessions are to be made here, I desire I may not be the medium through whom they shall be presented. Our presents show the Bey our wealth and our weakness and stimulate his avarice to new demands."

The display of latent force by the United States fleet, from which our Government had expected so much, increased the insolence of the Bey of Tunis to such a point that Eaton was obliged to withdraw from his post, and a new war seemed inevitable. The Americans had declared Tripoli blockaded; but, as their ships were seldom on the coast, little attention was paid to them. It happened, however, that a Tunisian vessel, bound for Tripoli, was captured when attempting to enter the harbor, and declared a prize. Shortly after, Commodore Morris anchored off Tunis and landed to visit the Consul. The Bey, who held the correct doctrine on the subject of paper blockades, pronounced the seizure illegal and demanded restitution. During his stay on shore, the Commodore had several interviews with the Bey's commercial agent in relation to this prize question. The behavior of that official was so offensive that the Commodore determined to go on board his ship without making the usual farewell visit at Court. As he was stepping into his boat from the mole, he was arrested by the commercial agent for a debt of twenty-two thousand dollars, borrowed by Eaton to assist Hamet Ca-

ramanli in his expedition against Tripoli. Eaton remonstrated indignantly. He alone was responsible for the debt; he had given abundant security, and was willing to pay handsomely for further forbearance. In vain; the agent would take nothing but the money. Eaton hurried to the palace to ask the Bey if this arrest was by his order. The Bey declined to answer or to interfere. There was no help for it; the Commodore was caught. To obtain permission to embark, he was obliged to get the money from the French Consul-General, and to promise restitution of the captured vessel and cargo. As soon as he was at liberty, the Commodore, accompanied by Eaton, went to the palace to protest against this breach of national hospitality and insult to the flag. Eaton's remarks were so distasteful to the Bey that he ordered him again to quit his court,—this time peremptorily,—adding, that the United States must send him a Consul “with a disposition more congenial to Barbary interests.”

Eaton arrived in Boston on the 5th of May, 1803. The same season Preble sailed into the Mediterranean, with the *Constitution*, “a bunch of pine boards,” as she was then called in derision, poorly fitted out, and half-manned; and with three other vessels in no better condition. But here, at last, was a captain whom no cautious or hesitating instructions could prevent from doing the work set before him to the best of his ability. Sword in hand, he maintained the principle of “Death before tribute,” so often and so unmeaningly toasted at home; and it was not his fault, if he did not establish it. At all events, he restored the credit of our flag in the Mediterranean.

When the news reached home of the burning of the *Philadelphia*, of the attack of the fireships, and of the bombardment of Tripoli, the blood of the nation was up. Arch-democratic scruples as to the expediency, economy, or constitutionality of public armed ships were thenceforth utterly disregarded. Since then, it has never been a question whether the United States should have a navy

or not. To Preble fairly belongs the credit of establishing it upon a permanent footing, and of heading the roll of daring and skilful officers the memory of whose gallantry pervades the service and renders it more effective than its ships and its guns.

The Administration yielded to the popular feeling, and attempted to claim for themselves the credit of these feats of arms, which they had neither expected nor desired. A new fleet was fitted out, comprising our whole navy except five ships. Here again the cloven foot became visible. Preble, who had proved himself a captain of whom any nation might be proud, was superseded by Commodore Barron, on a question of seniority etiquette, which might have been easily settled, had the Government so wished it.

Eaton had spent a year at home, urging upon the authorities, whenever the settlement of his accounts took him to Washington, more effective measures against Tripoli,—and particularly an alliance with Hamet Caramanli, the Ex-Pacha, who had been driven from his throne by his brother Jusuf, a much more able man. In spite of his bitter flings at their do-nothing policy, the Administration sent him out in the fleet, commissioned as General Agent for the Barbary Regencies, with the understanding that he was to join Hamet and assist him in an attack upon Derne. His instructions were vague and verbal; he had not even a letter to our proposed ally. Eaton was aware of his precarious position; but the hazardous adventure suited his enterprising spirit, and he determined to proceed in it. “If successful, for the public,—if unsuccessful, for myself,” he wrote to a friend, quoting from his classical reminiscences; “but any personal risk,” he added, with a rhetorical flourish, “is better than the humiliation of treating with a wretched pirate for the ransom of men who are the rightful heirs of freedom.”

He sailed in the *John Adams*, in June, 1804. The *President*, *Congress*, *Essex*, and *Constellation* were in company. On

the 5th of September the fleet anchored at Malta. In a few weeks the plan of the expedition was settled, and the necessary arrangements made, with the consent and under the supervision of Barron. Eaton then went on board the United States brig *Argus*, Captain Isaac Hull, detached specially on this service by the Commodore, and sailed for Alexandria, to hunt up Hamet and to replace him upon a throne.

On the 8th of December, Eaton and his little party, Lieutenant Blake, Midshipmen Mann and Danielson, of the navy, and Lieutenant O'Bannon of the marines, arrived in Cairo. Here they learned that Hamet had taken service with the rebel Mamlouk Beys and was in command of an Arab force in Upper Egypt. A letter from Preble to Sir Alexander Ball insured the Americans the hearty good wishes of the English. They were lodged in the English house, and passed for United States naval officers on a pleasure-trip. In this character they were presented to the Viceroy by Dr. Mendrici, his physician, who had known Eaton intimately in Tunis, and was much interested in this enterprise. The recommendation of the Doctor obtained a private audience for Eaton. He laid his plans frankly before his Highness, who listened favorably, assured him of his approval, and ordered couriers to be sent to Hamet, bearing a letter of amnesty and permission to depart from Egypt.

The messengers returned with an answer. The Ex-Pacha was unwilling to trust himself within the grasp of the Viceroy; he preferred a meeting at a place near Lake Fayoum, (Mœris,) on the borders of the Desert, about one hundred and ninety miles from the coast. Regardless of the danger of travelling in this region of robbery and civil war, Eaton set off at once, accompanied by Blake, Mann, and a small escort. After a ride of seventy miles, they fell in with a detachment of Turkish cavalry, who arrested them for English spies. This accident they owed to the zeal of the French Consul, M. Drouette, who, having heard

that they were on good terms with the English, thought it the duty of a French official to throw obstacles in their way. Luckily the Turkish commandant proved to be a reasonable man. He listened to their story and sent off a courier to bring Hamet to them. The Pacha soon arrived. He expressed an entire willingness to be reinstated upon his throne by the Americans, and to do what he could for himself with his followers and friendly Arab tribes in the province of Derne. In case of success, he offered brilliant advantages to the United States. A convention was drawn up in this sense, signed by him as legitimate Pacha of Tripoli, and by Eaton, as agent for the United States.

The original plan was to proceed to Derne in the *Argus*; but the Turkish Governor of Alexandria refused to permit so large a force to embark at that port; and Hamet himself showed a strong disinclination to venture within the walls of the enemy. The only course left was to march over the Desert. Eaton adopted it with his usual vigor. The Pacha and his men were directed to encamp at the English cut, between Aboukir Bay and Lake Mareotis. Provisions were bought, men enlisted, camels hired, and a few Arabs collected together by large promises and small gifts. The party, complete, consisted of the Americans already mentioned, Farquhar, an Englishman, Pascal Paoli Peck, whose name we take pleasure in writing again, with six men of his corps, twenty-five artillerymen of all nations, principally Levanters, and thirty-eight Greeks. The followers of the Pacha, hired Arabs, camel-drivers, servants, and vagabonds, made up their number to about four hundred.

On the 8th of March, 1805, Eaton advanced into the Desert westward, towards the famous land of Cyrene, like Aryandes the Persian, and Amrou, general of the Caliph Omar. The little army marched along slowly, "on sands and shores and desert wildernesses," past ruins of huge buildings, — relics of three civilizations that had died out, — mostly mere stones

to Eaton, whose mind was too preoccupied by his wild enterprise to speculate much on what others had done there before him. Want of water, scarcity of provisions, the lazy dilatoriness of the Arabs, who had never heard of the American axiom, "Time is money," gave him enough to think of. But worse than these were the daily outbreaks of the ill-feeling which always exists between Mussulman and Christian. The Arabs would not believe that Christians could be true friends to Mussulmans. They were not satisfied with Eaton's explanations of the similarity between the doctrines of Islam and of America, but tried again and again to make him repeat the soul-saving formula, "*Allah Allah Mohammed ben Allah,*" and thus at once prove his sincerity and escape hell. The Pacha himself, an irresolute, weak man, could not quite understand why these infidels should have come from beyond the seas to place him upon a throne. A suspicion lurked in his heart that their real object was to deliver him to his brother as the price of a peace, and any occurrence out of the daily routine of the march brought this unpleasant fancy uppermost in his thoughts. On one point the Mahometan mind of every class dwelt always, — "How could Allah permit these dogs, who followed the religion of the Devil, to possess such admirable riches?" The Arabs tried hard to obtain a share of them. They yelped about the Americans for money, food, arms, and powder. Even the brass buttons of the infidels excited their cupidity.

Eaton's patience, remarkable in a man of his irascible temper, many promises, and a few threats, kept the Crescent and the Cross moving on together in comparative peace until the 8th of April. On that day an outbreak of ill-temper occurred so violent that the two parties nearly came to blows. Turks were drawn up on one side, headed by Hamet, — Americans on the other, with the Greeks and Levanters. Swords were brandished and muskets pointed, and much abuse discharged. Nothing but the good sense of

one of the Pacha's officers and Eaton's cool determination prevented the expedition from destroying itself on the spot.

Peace was at last restored, and kept until the 15th, when the army reached the Gulf of Bomba. In this bay, known to the ancients as the Gulf of Plataea, it is said that the Greeks landed who founded the colony of Cyrene. Eaton had written to Captain Hull to meet him here with the *Argus*, and, relying upon her stores, had made this the place of fulfillment of many promises. Unfortunately, no *Argus* was to be seen. Sea and shore were as silent and deserted as when *Batus* the Dorian first saw the port from his penteconters, six hundred years or more before Christ. A violent tumult arose. The Arabs reproached the Americans bitterly for the imposture, and declared their intention of deserting the cause immediately. Luckily, before these wild allies had departed, a sail appeared upon the horizon; they were persuaded to wait a short time longer. It was the *Argus*. Hull had seen the smoke of their fires, and stood in. He anchored before dark; provisions were sent on shore; and plenty in the camp restored quiet and discipline.

On the 23d they resumed their march, and on the 25th, at two in the afternoon, encamped upon a hill overlooking the town of Derne. Deserters came in with the information that two-thirds of the inhabitants were in favor of Hamet; but that Hassan Bey, the Governor, with eight hundred fighting-men, was determined to defend the place; Jusuf had sent fifteen hundred men to his assistance, who were within three days' march. Hamet's Arabs seized upon this opportunity to be alarmed. It became necessary to promise the chiefs two thousand dollars before they would consent to take courage again.

Eaton reconnoitred the town. He ascertained that a ten-inch howitzer on the terrace of the Governor's house was all he had to fear in the way of artillery. There were eight nine-pounders mounted on a bastion looking seaward, but use-

less against a land-attack. Breastworks had been thrown up, and the walls of houses loopholed for musketry.

The next day, Eaton summoned Hassan to surrender the place to his legitimate sovereign, and offered to secure him his present position in case of immediate submission. The flag was sent back with the answer, "My head or yours!" and the Bey followed up this Oriental message by offering six thousand dollars for Eaton's head, and double the sum, if he were brought in alive.

At six o'clock on the morning of the 27th, the *Argus*, *Nautilus*, and *Hornet* stood in, and, anchoring within a hundred yards of the battery, silenced it in three-quarters of an hour. At the same time the town was attacked on one side by Hamet, and on the other by the Americans. A hot fire of musketry was kept up by the garrison. The Greek artillery-men shot away the rammer of their only field-piece, after a few discharges, rendering the gun useless. Finding that a number of his small party were falling, Eaton ordered a charge, and led it. Dashing through a volley of bullets, the Christians took the battery in flank, carried it, planted the American flag, and turned the guns upon the town. Hamet soon cut his way to the Bey's palace, and drove him to sanctuary to escape being taken prisoner. After a lively engagement of two hours and a half, the allies had complete possession of the town. Fourteen of the Christians had been killed or wounded, three of them American marines. Eaton himself received a musket-ball in his wrist.

The Ex-Pacha had scarcely established himself in his new conquest before Jusuf's army appeared upon the hills near the town. Hassan Bey succeeded in escaping from sanctuary, and took the command. After several fruitless attempts to buy over the rebel Arabs, the Bey, on the 13th of May, made a sudden attack upon the quarter of the town held by Hamet's forces, and drove all before him as far as the Governor's house; but a few volleys from the nine-pounders sent him

and his troops back at full speed. Hamet's cavalry pursued, and cut down a great many of them. This severe lesson made the Bey cautious. Henceforward he kept his men in the hills, and contented himself with occasional skirmishing-parties.

After this affair numerous Arabs of rank came over, and things looked well for the cause of the legitimate Pacha. Eaton already fancied himself marching into Tripoli under the American flag, and releasing with his own hands the crew of the *Philadelphia*. He wrote to Barron of his success, and asked for supplies of provisions, money, and men. A few more dollars, a detachment of marines, and the fight was won. His answer was a letter from the Commodore, informing him, "that the reigning Pacha of Tripoli has lately made overtures of peace, which the Consul-General, Colonel Lear, has determined to meet, viewing the present moment propitious to such a step." With the letter came another from Lear, ordering Eaton to evacuate Derne. Eaton sent back an indignant remonstrance, and continued to hold the town. But on the 11th of June the *Constellation* came in, bringing the news of the conclusion of peace, and of the release of the captives, upon payment of sixty thousand dollars. Colonel Lear wrote, that, by an article of the treaty, Hamet's wife and children would be restored to him, on condition of his leaving the Regency. No other provision was made for him.

When the Ex-Pacha (Ex for the third time) heard that thenceforth he must depend upon his own resources, he requested that he might be taken off in the *Constellation*, as his life would not be safe when his adherents discovered that his American friends had betrayed him. Eaton took every precaution to keep the embarkation a secret, and succeeded in getting all his men safely on board the frigate. He then, the last of the party, stepped into a small boat, and had just time to save his distance, when the shore was crowded with the shrieking Arabs. Finding the Christians out of

their reach, they fell upon their tents and horses, and swept away everything of value.

It was a rapid change of scene. Six hours before, the little American party held Derne triumphantly against all comers from Jusuf's dominions, and Hamet had prospects of a kingdom. Now he was a beggar, on his way to Malta, to subsist there for a time on a small allowance from the United States. Even his wife and children were not to be restored to him; for, in a secret stipulation with the Pacha, Lear had waived for four years the execution of that article of the treaty. The poor fellow had been taken up as a convenience, and was dropped when no longer wanted. But he was only an African Turk, and, although not black, was probably dark enough in complexion to weaken his claims upon the good feeling and the good faith of the United States.

Eaton arrived at home in November of the same year,* disgusted with the officers, civil and naval, who had cut short his successful campaign, and had disregarded, as of no importance, the engagements he had contracted with his Turkish ally. His report to the Secretary of the Navy expressed in the most direct language his opinion of the treaty and his contempt for the reasons assigned by Lear and Barron for their sudden action. The enthusiastic welcome he received from his countrymen encouraged his dissatisfaction. The American people decreed him a triumph after their fashion,—public dinners, addresses of congratulation, the title of Hero of Derne. He had shown just the qualities mankind admire,—boldness, tenacity, and dashing courage. Few could be found who did not regret that Preble had not been there to help him onward to Tripoli and to a peace without payments. And as Eaton was not the man to carry on a war, even of words, without throwing his whole soul into the conflict, he proclaimed to all hearers that the Govern-

* About this time came Meli-Meli, Ambassador from Tunis, in search of an indemnity and the frigate.

ment was guilty of duplicity and meanness, and that Lear was a compound of envy, treachery, and ignorance.

But this violence of language recoiled upon himself,—

“And so much injured more his side,
The stronger arguments he applied.”

The Administration steadily upheld Lear; and good Democrats, who saw every measure refracted through the dense medium of party-spirit, of course defended their leaders, and took fire at Eaton's overbearing manner and insulting intolerance of their opinions. Thus, although the general sentiment of the country was strongly in his favor, at Washington he made many enemies. A resolution was introduced into the House of Representatives to present him with a medal, or with a sword; it was violently opposed by John Randolph and others, postponed from time to time, and never passed. Eaton received neither promotion, nor pecuniary compensation, nor an empty vote of thanks. He had even great delay and difficulty in obtaining the settlement of his accounts* and the repayment of the money advanced by him.

Disappointment, debt, and hard drinking soon brought Eaton's life to a close. He died in obscurity in 1811. Among his papers was found a list of officers who composed a Court Martial held in Ohio by General St. Clair in 1793. As time passed, he had noted in the margin of the paper the fate of each man. All were either “Dead” or “Damned by brandy.” His friends might have completed the melancholy roll by writing under his name the same epitaph.

However wrong Eaton may have been in manners and in morals, he seems to have been right in complaining of the treatment he received from the Administration. The organs of the Government asserted that Eaton had exceeded his instructions, and had undertaken projects

* Massachusetts gave him ten thousand acres, to be selected by him or by his heirs, in any of the unappropriated land of the Commonwealth in the District of Maine. Act passed March 3d, 1806.

the end of which could not be foreseen, — that the Administration had never authorized any specific engagement with Hamet, an inefficient person, and not at all the man he was supposed to be, — and that the alliance with him was much too expensive and dangerous to justify its further prosecution. Unfortunately for this view of the case, the dealings of the United States with Hamet dated back to the beginning of the war with Tripoli. A diversion in his favor was no new project, but had been considered for more than three years. Eaton and Cathcart had recommended it in 1801, and Government approved of the plan. In 1802, when Jusuf Pacha offered Hamet the Beyship of Benghazi and Derne, to break up these negotiations, the United States Consuls promised him Jusuf's throne, if he would refuse the offer, and threatened, if he accepted it, to treat him as an enemy, and to send a frigate to prevent him from landing at Derne. Later, when the Bey of Tunis showed some inclination to surrender Hamet to his brother, the Consuls furnished him with the means of escape to Malta. In 1803, he crossed over to Derne in an English brig, hoping to receive assistance from the American fleet; but Commodore Morris left him to his own resources; he was unable to hold his ground, and fled to Egypt. All this was so well known at home, that members of the Opposition in Congress jokingly accused the Administration of undertaking to decide constitutional questions for the people of Tripoli.

Before the news of this flight into Egypt reached the United States, Eaton had been instructed by the President to take command of an expedition on the coast of Barbary in connection with Hamet. It had been determined to furnish a few pieces of field-artillery, a thousand stand of arms, and forty thousand dollars as a loan to the Pretender. But when the President heard of Hamet's reverses, he withheld the supplies, and sent Eaton out as "General Agent for the several Barbary States," without special instructions. The Secretary of the Navy wrote

at the same time to Commodore Barron: — "With respect to the Ex-Bashaw of Tripoli, we have no objection to your availing yourself of his coöperation with you against Tripoli, if you shall, upon a full view of the subject, after your arrival upon the station, consider his coöperation expedient. The subject is committed entirely to your discretion. In such an event, you will, it is believed, find Mr. Eaton extremely useful to you."

After Commodore Barron had reached his station, he did consider the "coöperation" expedient; and ordered Hull in the *Argus* to Alexandria with Eaton in search of Hamet, "the legitimate sovereign of the reigning Bashaw of Tripoli." If Eaton succeeded in finding the Pacha, Hull was to carry him and his suite to Derne, "or such other place as may be determined the most proper for coöperating with the naval force under my command against the common enemy. . . You may assure the Bashaw of the support of my squadron at Benghazi or Derne, and that I will take the most effectual measures with the forces under my command for coöperating with him against the usurper his brother, and for reëstablishing him in the Regency of Tripoli. Arrangements to this effect with him are confided to the discretion with which Mr. Eaton is vested by the Government."

It would seem from these extracts that Eaton derived full authority from Barron to act in this matter, independently of his commission as "General Agent." We do not perceive that he exceeded a reasonable discretion in the "arrangements" made with Hamet. After so many disappointments, the refugee could not be expected to leave a comfortable situation and to risk his head without some definite agreement as to the future; and the convention made with him by Eaton did not go beyond what Hamet had a right to demand, or the instructions of the Commodore, — even in Article II., which was afterward particularly objected to by the Government. It ran thus: —

"The Government of the United States shall use their utmost exertions, so far as

comports with their own honor and interest, their subsisting treaties, and the acknowledged law of nations, to reëstablish the said Hamet Bashaw in the possession of his sovereignty of Tripoli against the pretensions of Joseph Bashaw," etc.

We should add, that Hamet, to satisfy himself of the truth of Eaton's representations, sent one of his followers to Barron, who confirmed the treaty; and that the Commodore, when he received Eaton's despatch, announcing his departure from Aboukir, wrote back a warm approval of his energy, and notified him that the *Argus* and the *Nautilus* would be sent immediately to Bomba with the necessary stores and seven thousand dollars in money. Barron added, — "You may depend upon the most active and vigorous support from the squadron, as soon as the season and our arrangements will permit us to appear in force before the enemy's walls."

So much for Eaton's authority to pledge the faith of the United States. As to the question of expense: the whole cost of the expedition, up to the evacuation of Derne, was thirty-nine thousand dollars. Eaton asserted, and we see no reason to doubt his accuracy, that thirty thousand more would have carried the American flag triumphantly into Tripoli. Lear paid sixty thousand for peace.

Hamet was set on shore at Syracuse with thirty followers. Two hundred dollars a month were allowed him for the support of himself and of them, until particular directions should be received from the United States concerning him. He wrote more than once to the President for relief, resting his claims upon Eaton's convention and the letter of the Secretary of State read to him by Consul Cathcart in 1802. In this letter, the Secretary declared, that, in case of the failure of the combined attack upon Derne, it would be proper for our Government "to restore him to the situation from which he was drawn, or to make some other convenient arrangement that may be more eligible to him." Hamet asked that at least the President would restore to him

his wife and family, according to the treaty, and send them all back to Egypt. "I cannot suppose," he wrote, "that the engagements of an American agent would be disputed by his Government, . . . or that a gentleman has pledged towards me the honor of his country on purpose to deceive me."

Eaton presented these petitions to the President and to the public, and insisted so warmly upon the harsh treatment his ally had received from the United States, that two thousand four hundred dollars were sent to him in 1806, and again, in 1807, Davis, Consul for Tripoli, was directed to insist upon the release of the wife and children. They were delivered up by Jusuf in 1807, and taken to Syracuse in an American sloop-of-war. Here ended the relations of the United States with Hamet Caramanli.*

Throughout this whole African chapter, the darling economy of the Administration was a penny-wise policy which resulted in the usual failure. Already in 1802, Mr. Gallatin reported that two millions and a half, in round numbers, had been paid in tribute and presents. The expense of fitting out the four squadrons is estimated by Mr. Sabine at three millions and a half. The tribute extorted after 1802 and the cost of keeping the ships in the Mediterranean amount at the lowest estimate to two millions more. Most of this large sum might have been saved by giving an adequate force and full powers to Commodore Dale, who had served under Paul Jones, and knew how to manage such matters.

Unluckily for their fame, the Administration was equally parsimonious in national spirit and pluck, and did their ut-

* He remained in Sicily until 1809, when he was offered the Beyship of Derne by his brother. He accepted it; two years later, fresh troubles drove him again into exile. He died in great poverty at Cairo. Jusuf reigned until 1832, and abdicated in favor of a son. A grandson of Jusuf took up arms against the new Pacha. The intervention of the Sultan was asked; a corps of Turkish troops entered Tripoli, drove out both Pachas, and reannexed the Regency to the Porte.

most to protect themselves against the extravagance of such reckless fellows as Preble, Decatur, and Eaton. In the spring of 1803, while Preble was fitting out his squadron, Mr. Simpson, Consul at Tangier, was instructed to buy the good-will of the Emperor of Morocco. He disobeyed his instructions, and the Emperor withdrew his demands when he saw the American ships. About the same time, the Secretary of State wrote to Consul Cathcart in relation to Tripoli:—

“It is thought best that you should not be tied down to a refusal of presents, whether to be included in the peace, or to be made from time to time during its continuance,—especially as in the latter case the title to the presents will be a motive to its continuance,—to admit that the Bashaw shall receive in the first instance, including the consular present, the sum of \$20,000, and at the rate afterwards of \$8,000 or \$10,000 a year. . . The presents, whatever the amount or purpose of them, (except the consular present, which, as usual, may consist of jewelry, cloth, etc.,) must be made in money and not in stores, to be biennial rather than annual; and the arrangement of the presents is to form no part of the public treaty, if a private promise and understanding can be substituted.”

After notifying Cathcart of his appointment to Tunis, the Secretary directs him to evade the thirty-six-gun frigate, and to offer the Bey ten thousand dollars a year for peace, to be arranged in the same underhand way.

Tripoli refused the money; it was not enough. The Bey of Tunis rejected both the offer and the Consul. He wrote to Mr. Jefferson that he considered some of Cathcart's expressions insulting, and that he insisted upon the thirty-six-gun frigate. Mr. Jefferson answered on the 27th of January, 1804, after he knew of the insult to Morris and of the expulsion of Eaton. Beginning with watery generalities about “mutual friendships and the interests arising out of them,” he regretted that there should be any misconcep-

tion of his motives on the part of the Bey. “Such being our regard for you, it is with peculiar concern I learn from your letter that Mr. Cathcart, whom I had chosen from a confidence in his integrity, experience, and good dispositions, has so conducted himself as to incur your displeasure. In doing this, be assured he has gone against the letter and spirit of his instructions, which were, that his deportment should be such as to make known my esteem and respect for your character both personal and public, and to cultivate your friendship by all the attentions and services he could render. . . In selecting another character to take the place of Mr. Cathcart, I shall take care to fix on one who, I hope, will better fulfil the duties of respect and esteem for you, and who, in so doing only, will be the faithful representative and organ of our earnest desire that the peace and friendship so happily subsisting between the two countries may be firm and permanent.”

Most people will agree with Eaton, that “the spirit which dictated this answer betrays more the inspiration of Carter's Mountain * than of Bunker Hill.”

Lear, who was appointed Consul-General in 1803, was authorized by his instructions to pay twenty thousand dollars down and ten thousand a year for peace, and a sum not to exceed five hundred dollars a man for ransom.

When Barron's squadron anchored at Malta, Consul O'Brien came on board to say that he had offered, by authority, eight thousand dollars a year to Tunis, instead of the frigate, and one hundred and ten thousand to Tripoli for peace and the ransom of the crew of the Philadelphia, and that both propositions had been rejected.

Finally, after fitting out this fourth squadron, at an expense of one million five hundred and seventy thousand dollars, and with Eaton in possession of Derne, the Administration paid sixty thou-

* The scene of Mr. Jefferson's celebrated retreat from the British. A place of frequent resort for Federal editors in those days.

sand dollars for peace and ransom, when Preble, ten months previously, could have obtained both for one hundred and fifty thousand dollars. Thus they spent two millions to save ninety thousand, and left the principle of tribute precisely where it was before.

What makes this business still more remarkable is, that the Administration knew from the reports of our consuls and from the experience of our captains that the force of the pirates was insignificant, and that they were wretched sailors and poor shots. Sterret took a Tripolitan cruiser of fourteen guns after an engagement of thirty minutes; he killed or wounded fifty of her crew, and did not lose a man, nor suffer any material damage in his hull or rigging. There was no one killed on the American side when Decatur burned the *Philadelphia*. The *Constitution* was under the fire of the Tripolitan batteries for two hours without losing a man, and was equally fortunate when she ran in a second time and lay within musket-shot of the mole, exposed to the fire of the enemy for three-quarters of an hour. These Tripolitan batteries mounted one hundred and fifteen guns. Three years later, Captain Ichabod Sheffield, of the schooner *Mary Ann*, furnished in person an example of the superiority of the Yankee over the Turk. Consul Lear had just given forty-eight thousand dollars to the Dey of Algiers, in full payment of tribute "up to date." Nevertheless, the *Mary Ann*, of and from New York to Leghorn, was seized in the Straits of Gibraltar by an Algerine corsair. A prize-crew of nine Turks was sent on board; the captain, two men, and a boy left in her to do the work; she was ordered to Algiers; and the pirate sailed away. Having no instructions from Washington, Sheffield and his men determined to strike a blow for liberty, and fixed upon their plan. Algiers was in sight, when Sheffield hurled the "grains" overboard, and cried that he had struck a fish. Four Turks, who were on deck, ran to the side to look over. Instantly the Americans threw three of them into the sea. The oth-

ers, hearing the noise, hurried upon deck. In a hand-to-hand fight which followed two more were killed with handspikes, and the remaining four were overpowered and sent adrift in a small boat. Sheffield made his way, rejoicing, to Naples. When the Dey heard how his subjects had been handled, he threatened to put Lear in irons and to declare war. It cost the United States sixteen thousand dollars to appease his wrath.

The cruise of the Americans against Tripoli differed little, except in the inferiority of their force, from numerous attacks made by European nations upon the Regencies. Venice, England, France, had repeatedly chastised the pirates in times past. In 1799, the Portuguese, with one seventy-four-gun ship, took two Tripolitan cruisers, and forced the Pacha to pay them eleven thousand dollars. In 1801, not long before our expedition, the French Admiral Gaunthomme overhauled two Tunisian corsairs in chase of some Neapolitan vessels. He threw all their guns overboard, and bade them beware how they provoked the wrath of the First Consul by plundering his allies. But all of them left, as we did, the principle of piracy or payments as they found it. At last this evil was treated in a manner more creditable to civilization. In 1812, the Algerines captured an American vessel, and made slaves of the crew. After the peace with England, in 1815, Decatur, in the *Guerrière*, sailed into the Mediterranean, and captured off Cape de Gat, in twenty-five minutes, an Algerine frigate of forty-six guns and four hundred men. On board the *Guerrière*, four were wounded, and no one killed. Two days later, off Cape Palos, he took a brig of twenty-two guns and one hundred and eighty men. He then sailed into the harbor of Algiers with his prizes, and offered peace, which was accepted. The Dey released the American prisoners, relinquished all claims to tribute in future, and promised never again to enslave an American. Decatur, on our part, surrendered his prizes, and agreed to consular presents, — a mitigated form of trib-

ute, similar in principle, but, at least, with another name. From Algiers he went to Tunis, and demanded satisfaction of that Regency for having permitted a British man-of-war to retake in their port two prizes to Americans in the late war with England. The Bey submitted, and paid forty-six thousand dollars. He next appeared before Tripoli, where he compelled the Pacha to pay twenty-six thousand dollars, and to surrender ten captives, as an indemnity for some breaches of international law. In fifty-four days he brought all Barbary to submission. It is true, that, the next spring, the Dey of Algiers declared this treaty null, and fell back upon the time-honored system of annual tribute. But it was too late. Before it became necessary for Decatur to pay him another visit, Lord Exmouth avenged the massacre of the Neapolitan fishermen at Bona by completely destroying the fleet and forts of Algiers, in a bombardment of seven hours. Christian prisoners of every nation were liberated in all the Regencies, and the slave-system,

as applied to white men, finally abolished.

Preble, Eaton, and Decatur are our three distinguished African officers. As Barron's squadron did not fire a shot into Tripoli, indeed never showed itself before that port, to Eaton alone belongs the credit of bringing the Pacha to terms which the American Commissioner was willing to accept. The attack upon Derne was the feat of arms of the fourth year, and finished the war.

Ours is not a new reading of the earlier relations of the United States with the Barbary powers. The story can be found in the Collection of State Papers, and more easily in the excellent little books of Messrs. Sabine and Felton. But a "popular version" despises documents. Under the pressure of melodrama, history will drift into Napoleon's "fable agreed upon"; and if it be true, as Emerson says, that "no anchor, no cable, no fence, avail to keep a fact a fact," it is not at all likely that a paper in a monthly magazine will do it.

SUNSHINE.

I HAVE always worked in the carpet-factories. My father and mother worked there before me and my sisters, as long as they lived. My sisters died first;—the one, I think, out of deep sorrow; the other from too much joy.

My older sister worked hard, knew nothing else but work, never thought of anything else, nor found any joy in work, scarcely in the earnings that came from it. Perhaps she pined for want of more air, shut up in the rooms all day, not caring to find it in walking or in the fields, or even in books. Household-work awaited her daily after the factory-work, and a dark, strange religion oppressed and did not sustain her, Sundays. So we scarcely wondered when

she died. It seemed, indeed, as if she had died long ago, — as if the life had silently passed away from her, leaving behind a working body that was glad at last to find a rest it had never known before.

My other sister was far different. Very much younger, not even a shadow of the death that had gone before weighed heavily upon her. Everybody loved her, and her warm, flashing spirit that came out in her sunny smile. She died in a season of joy, in the first flush of summer. She died, as the June flowers died, after their happy summer-day of life.

At last I was left alone, to plod the same way, every night and morning, — out with the sunrise from the skirts of the town, over the bridge across the stream

that fell into our great river which has worked for us so long, to the tall, grim factory-building where my work awaited me, and home again at night. I lived on in the house we all of us had lived in. At first it was alone in the wood. But the town crept out to meet it, and soon but little woodland was left around it. "Gloomy Robert" they called me, as I walked back and forth upon the same track, seldom lifting my head to greet friend or stranger. Though I walked over well-known ground, my thoughts were wandering in strange romances. My evening-readings furnished the land I lived in,—seldom this Western home, but the East, from Homer's time to the days of Haroun Alraschid. I was so faithful at my work that my responsibilities were each year increased; and though my brain lived in dreams, I had sufficient use of it for my little needs each day. I never forgot to answer the wants of the greedy machines while I was within sound of them; but away from them I forgot all external sight and sound. I can remember in my boyhood once I was waked from my reveries. I was walking beneath a high stone-wall, with my eyes and head bent down as usual, when I was roused by a shower of rose-buds that fell over my shoulders and folded arms. I heard laughter, and looked up to see a childish face with sunny, golden curls tumbling over it; and a surprised voice cried out, "Gloomy Robert is looking up!" The picture of the face hung in my memory long after, with the sound of the happy voice, as though it came out of another world. But it remained only a picture, and I never asked myself whether that sunny face ever made any home happy, nor did I ever listen for that voice again from behind the high stone-wall.

Many years of my life passed away. There were changes in the factories. The machines grew more like human beings, and we men could act more like machines. There were fewer of us needed; but I still held my place, and my steadiness gave me a position.

One day, in the end of May, I was walking early in the morning towards the factories, as usual, when suddenly there fell across my path a glowing beam of sunshine that lighted up the grass before me. I stopped to see how the green blades danced in its light, how the sunshine fell down the sloping bank across the stream below. Whirring insects seemed to be suddenly born in its beam. The stream flowed more gayly, the flowers on its brim were richer in color. A voice startled me. It was only that of one of my fellow-workmen, as he shouted, "Look at Gloomy Robert!—there's a sunbeam in his way, and he stumbles over it!" It was really so. I had stumbled over a beam of sunlight. I had never observed the sunshine before. Now, what life it gave, as it gleamed under the trees! I kept on my way, but the thought of it followed me all up the weary stairs into the high room where the great machines were standing silently. Suddenly, after my work began, through a high narrow window poured a strip of sunshine. It fell across the colored threads which were weaving diligently their work. This day the work was of an unusually artistic nature. We have our own artists in the mills, artists who must work under severe limitations. Within a certain space their fancy revels, and then its lines are suddenly cut short. Nature scatters her flowers as she pleases over the field, does not measure her groups to see that they stand symmetrically, nor count her several daisies that they may be sure to repeat themselves in regular order. But our artist must fit his stems to certain angles so that their lines may be continuous, constantly repeating themselves, the same group recurring, yet in a hidden monotony.

My pattern of to-day had always pleased me, for we had woven many yards of it before,—the machines and I. There were rich green leaves and flowers, gay flowers that shone in light and hid themselves in shade, and I had always admired their grace and coloring. To-day they had seemed to me cold and dusky. All

my ideas that I had gained from conventional carpet-flowers, which, woven almost beneath my hand, had seemed to rival Nature's, all these ideas had been suddenly swept away. My eyes had opened upon real flowers waving in real sunshine; and my head grew heavy at the sound of the clanking machine weaving out yards of unsunned flowers. If only that sunshine, I thought, would light up these green leaves, put a glow on these brilliant flowers, instead of this poor coloring which tries to look like sunshine, we might rival Nature. But the moment I was so thinking, the rays of sunlight I have spoken of fell on the gay threads. They seemed, before my eyes, to seize upon the poor yellow fibres which were trying to imitate their own glow, and, winding themselves round them, I saw the shuttle gather these rays of sunlight into the meshes of its work. I was to stand there till noon. So, long before I left, the gleam of sunshine had left the narrow window and was hidden from the rest of the long room by the gray stone-walls of another building which rose up outside. But as long as they lingered over the machine that I was watching, I saw, as though human fingers were placing them there, rays of sunlight woven in among the green leaves and brilliant flowers.

After that gleam had gone, my work grew dark and dreary, and, for the first time, my walls seemed to me like prison-walls. I longed for the end of my day's work, and rejoiced that the sun had not yet set when I was free again. I was free to go out across the meadows, up the hills, to catch the last rays of sunset. Then coming home, I stooped to pick the flowers which grew by the wayside in the waning light.

All that June which followed, I passed my leisure hours and leisure days in the open air, in the woods. I chased the sunshine from the fields in under the deep trees, where it only flickered through the leaves. I hunted for flowers, too, beginning with the gay ones which shone with color. I wondered how it was they

could drink in so much of the sun's glow. Then I fell to studying all the science of color and all the theories which are woven about it. I plunged into books of chemistry, to try to find out how it was that certain flowers should choose certain colors out from the full beam of light. After the long days, I sat late into the night, studying all that books could tell me. I collected prisms, and tried, in scattering the rays, to learn the properties of each several pencil of light. I grew very wise and learned, but never came nearer the secret I was searching for,—why it was that the Violet, lying so near the Dandelion, should choose and find such a different dress to wear. It was not the rarer flowers that I brought home, at first. My hands were filled with Dandelions and Buttercups. The Saint-John's-Wort delighted me, and even the gaudy Sunflower. I trained the vines which had been drooping round our old house,—the gray time-worn house; the “natural-colored house,” the neighbors called it. I thought of the blind boy who fancied the sound of the trumpet must be scarlet, as I trained up the brilliant scarlet trumpet-flower which my sister had planted long ago.

So the summer passed away. My companions and neighbors did not wonder much, that, after studying so many books, I should begin to study flowers and botany. And November came. My occupation was not yet taken away, for Golden-Rod and the Asters gleamed along the dusty roadside, and still underneath the Maples there lay a sunny glow from the yellow leaves not yet withered beneath them.

One day I received a summons from our overseer, Mr. Clarkson, to visit him in the evening. I went, a little disturbed, lest he might have some complaint to make of the engrossing nature of my present occupations. This I was almost led to believe, from the way in which he began to speak to me. His perorations, to be sure, were apt to be far wide of his subject; and this time, as usual, I could allow him two or three minutes'

talk before it became necessary for me to give him my attention.

At last it came out. I was wanted to go up to Boston about a marvellous piece of carpet which had appeared from our mills. It had lain in the warehouse some time, had at last been taken to Boston, and a large portion of it had been sold, the pattern being a favorite one. But suddenly there had been a change. In opening one of the rolls and spreading it broadly in the show-room of Messrs. Gobelin's warehouse, it had appeared the most wonderful carpet that ever was known. A real sunlight gleamed over the leaves and flowers, seeming to flicker and dance among them as on a broad meadow. It shed a radiance which paled the light that struggled down between the brick walls through the high windows. It had been subject of such wonder that Messrs. Gobelin had been obliged to ask a high price of admission for the many that flocked to see it. They had eagerly examined the other rolls of carpeting, in the hope of finding a repetition of the wonder, and were inclined at one time to believe that this magical effect was owing to a new method of lighting their apartments. But it was only in this beautiful pattern and through a certain portion of it that this wonderful appearance was shown. Some weeks ago they had sent to our agent to ask if he knew the origin of this wonderful tapestry. He had consulted with the designer of the pattern, who had first claimed the discovery of the combination of colors by which such an effect was produced, but he could not account for its not appearing throughout the whole work. My master had then examined some of the workmen, and learned, in the midst of his inquiries, what had been my late occupations and studies.

"If," he continued, "I had been inclined to apply any of my discoveries to the work which I superintended, he was willing, and his partners were willing, to forgive any interference of that sort, of mine, in affairs which were strictly their own, as long as the discoveries seemed of so astonishing a nature."

I am not able to give all our conversation. I could only say to my employer, that this was no act of mine, though I felt very sure that the sunshine which astonished them in Messrs. Gobelin's carpet-store was the very sunbeam that shone through the window of the factory on the 27th of May, that summer. When he asked me what chemical preparation could insure a repetition of the same wonderful effect, I could only say, that, if sunlight were let in upon all the machines, through all the windows of the establishment, a similar effect might be produced. He stared at me. Our large and substantial mill was overshadowed by the high stone-walls of the rival company. It had taken a large amount of capital to raise our own walls; it would take a still larger to induce our neighbors to remove theirs. So we parted,—my employer evidently thinking that I was keeping something behind, waiting to make my profit on a discovery so interesting to him. He called me back to tell me, that, after working so long under his employ, he hoped I should never be induced by higher wages or other proffers to leave for any rival establishment.

I was not left long in quiet. I received a summons to Boston. Mr. Stuart, the millionaire, had bought the wonderful carpet at an immense price. He had visited our agent himself, had invited the designer to dinner, and now would not be satisfied until I had made him a visit in Boston.

I went to his house. I passed up through broad stairways, and over carpets such as I had never trod nor woven. I should have liked to linger and satisfy my eyes with looking at the walls decorated with paintings, and at the statuary, which seemed to beckon to me like moving figures. But I passed on to the room where Mr. Stuart and his friends awaited me. Here the first thing that struck me was the glowing carpet across which I must tread. It was lying in an oval saloon, which had been built, they told me, for the carpet itself. The light was admitted only from the ceiling, which was

so decorated that no clear sunlight could penetrate it; but down below the sunbeams lay flickering in the meadow of leaves, and shed a warm glow over the whole room.

But my eyes directly took in many things besides the flowery ground beneath me. At one end of the room stood a colossal bust of Juno, smiling grandly and imperturbably, as if she were looking out from the great far-away past. I think this would have held my looks and my attention completely, but that Mr. Stuart must introduce me to his friends. So I turned my glance away; but it was drawn directly towards a picture which hung before me, — a face that drove away all recollection of the colossal goddess. The golden hair was parted over a broad brow; from the gentle, dreamy eyes there came a soft, penetrating glance, and a vagueness as of fancy rested over the whole face. I scarcely heard a word that was spoken to me as I looked upon this new charm, and I could hardly find answers for the questions that surrounded me.

But I was again roused from my dreamy wonderment by a real form that floated in and sent away all visions of imagination. "My daughter," said Mr. Stuart, and I looked up into the same dreamy eyes which had been winning me in the picture. But these looked far beyond me, over me, perhaps, or through me, — I could scarcely say which, — and the mouth below them bent into a welcoming smile. While she greeted the other guests, I had an opportunity to watch the stately grace of Mr. Stuart's daughter, who played the part of hostess as one long accustomed to it.

"A queen!" I had exclaimed to myself, as she entered the room, "and my Juno!"

The gentlemen to whom I had been introduced had been summoned earlier, as in a learned committee, discussing the properties of the new discovery. After the entrance of the ladies, I was requested to lead Miss Stuart to dinner, and sat by her side through the clanging of dishes

and a similar clangor of the table-talk of tongues.

"Speaking of light," said the Professor, turning to me, "why cannot you bring, by your unknown chemical ways, some real sunlight into our rooms, in preference to this metallic gas-light?"

I turned to the windows, before which the servant had just drawn the heavy curtains still closer, to shut out the gleams of a glowing sunset which had ventured to penetrate between its folds.

"I see your answer," said Miss Stuart. "You wonder, as I do, why a little piece of artificial sunlight should astonish us so much more than the cheap sunlight of every day which the children play in on the Common."

"I think your method, Mr. Desmond," said the Chemist, "must be some power you have found of concentrating all the rays of a pencil of light, disposing in some way of their heating power. I should like to know if this is a fluid agent or some solid substance."

"I should like to see," interrupted another gentleman, "the anvil where Mr. Desmond forges his beams. Could not we get up a party, Miss Stuart, an evening-party, to see a little bit of sunlight struck out, — on a moonshiny night, too?"

"In my lectures on chemistry," began Mr. Jasper. He was interrupted by Mr. Stuart.

"You will have to write your lectures over again. Mr. Desmond has introduced such new ideas upon chemistry that he will give you a chance for a new course."

"You forget," said the Chemist, "that the laws of science are the same and immutable. My lectures, having once been written, are written. I only see that Mr. Desmond has developed theories which I have myself laid down. As our friend the Artist will tell us, sunlight is sunlight, wherever you find it, whether you catch it on a carpet or on a lady's face."

"But I am quite ashamed," said Miss Stuart, "that we ladies so seldom have the sunlight on our faces. I think we might agree to Mr. Green's proposal to go out somewhere and see where the sun-

beams really are made. We shut them out with our curtains, and turn night into a make-believe day."

"But the sun is so trying!" put in Miss Lester. "Just think how much more becoming candle-light is! There is not one of my dresses which would stand a broad sunbeam."

"I see," said Mr. Stuart, "that, when Mr. Desmond has perfected his studies, we shall be able to roof over the whole of Boston with our woven sunlight by day and gas-light by night, quite independent of fogs and uncertain east-winds."

So much of the dinner-conversation dwelt upon what was supposed to be interesting to me, and a part of my profession. It was laggingly done; for presently the talk fell into an easier flow,—a wonder about Mrs. This, and speculation concerning Mr. That. Mr. Blank had gone to Europe with half his family, and some of them knew why he had taken the four elder children, and others wondered why he had left the rest behind. I was talked into a sort of spasmodic interest about a certain Maria, who was at the ball the night before, but could not be at the dinner to-day. In an effort to show me why she would be especially charming to me, her personal appearance, the style of her conversation and dress, her manner of life, all were pulled to pieces, and discussed, dissected, and classified, in the same way as I would handle one of the *Compositæ*.

Miss Stuart spoke but little. She fluttered gayly over the livelier conversation, but seemed glad to fall back into a sort of wearied repose, where she appeared to be living in a higher atmosphere than the rest of us. This air of repose the others seemed to be trying to reach, when they got no farther than dulness; and some of the gentlemen, I thought, made too great efforts in their attempts to appear bored. Especially one of them exerted himself greatly to gape so often in the face of a lady with whom he was striving to keep up an appearance of conversation, that the exertion itself must have wearied him.

After the ladies had left, the Chemist seated himself by me, that he might, as he openly said, get out of me the secret of my sunshine. The more I disowned the sunshine, the more he felt sure that I possessed some secret clue to it. I need not say, that, in all my talk with these gentlemen, I had constantly tried to show that I could claim no influence in setting the sun's rays among the green carpeted leaves.

I was urged to stay many days in Boston, was treated kindly, and invited here and there. I grew to feel almost at home at Mr. Stuart's. He was pleased to wonder at the education which I had given myself, as he called it. I sat many long mornings in Miss Stuart's drawing-room, and she had the power of making me talk of many things which had always been hidden even from myself. It was hardly a sympathy with me which seemed to unlock my inner thoughts; it was as though she had already looked through them, and that I must needs bring them out for her use. That same glance which I have already spoken of, which seemed to pass over and through me, invited me to say in words what I felt she was beginning to read with her eyes. We went together, the day before I was to leave town, to the Gallery of Paintings.

As we watched a fine landscape by Kensett, a stream of sunshine rested a moment on the canvas, giving motion and color, as it were, to the pictured sunlight.

Miss Stuart turned to me.

"Why will you not imprison sunlight in that way, Mr. Desmond? That would be artistic."

"You forget," I said, "if I could put the real sunlight into such a picture, it would no longer be mine; I should be a borrower, not a creator of light; I should be no more of an artist than I am now."

"You will always refuse to acknowledge it," she said; "but you can never persuade me that you have not the power to create a sunbeam. An imprisoned sunbeam! The idea is absurd."

"It is because the idea is so absurd,"

I said, "that, if I felt the power were mine to imprison sunbeams, I should hardly care to repeat the effort. The sunshine rests upon the grass, freely we say, but in truth under some law that prevents its penetrating farther. A sunbeam existing in the absence of the sun is, of course, an absurdity. Yet they are there, the sunbeams of last spring, in your oval room, as I saw them one day in May."

"Which convinces me," said Miss Stuart, "that you are an artist. That is not real sunshine. You have created it. You are born for an artist-life. Do not go back to your drudgery."

"Daily work," I answered, "must become mechanical work, if we perform it in a servile way. A lawyer is perhaps inspired, when he is engaged in a cause on which he thinks his reputation hangs; but, day by day, when he goes down to the work that brings him his daily bread, he is quite as likely to call it his drudgery as I my daily toil."

She left her seat and walked with me towards a painting which hung not far from us. It represented sunset upon the water. "The tender-curving lines of creamy spray" were gathering up the beach; the light was glistening across the waves; and shadows and light almost seemed to move over the canvas.

"There," said Miss Stuart, "is what I call work that is worthy. I know there was inspiration in every touch of the brush. I know there was happy life in the life that inspired that painting. It is worth while to live and to show that one has been living in that way."

"But I think," said I, "that the artist even of that picture laid aside his brush heavily, when he sighed to himself that he must call it finished. I believe that in all the days that it lay upon his easel he went to it many times with weariness, because there was monotony in the work, — because the work that he had laid out for himself in his fancy was far above what he could execute with his fingers. The days of drudgery hung heavily on the days of inspiration; and it was only

when he carried his heart into the most monotonous part of his work that he found any inspiration in it, that he could feel he had accomplished anything."

We turned suddenly away into a room where we had not been before. I could not notice the pictures that covered the walls for the sake of one to which Miss Stuart led the way. After looking upon that, there could be no thought of finding out any other. It possessed the whole room. The inspiration which uplifted the eyes fell over the whole painting. We looked at it silently, and it was not till we had left the building that Miss Stuart said, —

"We have seen there something which takes away all thought of artist or style of painting or work. I have never been able to ask myself what is the color of the eyes of that Madonna, or of her flowing hair, or the tone of the drapery. I see only an expression that inspires the whole figure, gives motion to the hands, life to the eyes, thought to the lips, and soul to the whole being."

"The whole inspiration, the whole work," I said, "is far above us. It is quite above me. No, I am not an artist; my fingers do not tingle for the brush. This is an inspiration I cannot reach; it floats above me. It moves and touches me, but shows me my own powerlessness."

I left Boston. I went back to winter, to my old home, to my every-day's work. My work was not monotonous; or if one tone did often recur in it, I built upon it, out of my heart and life, full chords of music. The vision of Margaret Stuart came before my eyes in the midst of all mechanical labor, in all the hours of leisure, in all the dreams of night. My life, indeed, grew more varied than ever; for I found myself more at ease with those around me, finding more happiness than I had ever found before in my intercourse with others. I found more of myself in them, more sympathy in their joy or sorrow, myself more of an equal with those around me.

The winter months passed quickly away.

Mr. Clarkson frequently showed his disappointment because the mills no longer produced the wonder of last year. For me, it had almost passed out of my thoughts. It seemed but a part of the baser fabric of that vision where Margaret Stuart reigned supreme. I saw no way to help him; but more and more, daily, rejoiced in the outer sunshine of the world, in the fresh, glowing spring, in the flowers of May. So I was surprised again, when, near the close of May, after a week of stormy weather, the sunlight broke through the window where it had shone the year before. It hung a moment on the threads of work,—then, seeming to spurn them, fell upon the ground.

We were weaving, alas! a strange "arabesque pattern," as it was called, with no special form,—so it seemed to my eyes,—bringing in gorgeous colors, but set in no shape which Nature ever produced, either above the earth or in metals or crystals hid far beneath. How I reproached myself, on Mr. Clarkson's account, that I had not interceded, just for this one day of sunshine, for some pattern that Nature might be willing to acknowledge! But the hour was past, I knew it certainly, when the next day the sun was clouded, and for many days we did not see its face again.

So the time passed away. Another summer came along, and another glowing autumn, and that winter I did not go to Boston. Mr. Clarkson let me fall back again into my commonplace existence. I was no longer more than one of the common workmen. Perhaps, indeed, he looked upon me with a feeling of disappointment, as though a suddenly discovered diamond had turned to charcoal in his hands. Sometimes he consulted me upon chemical matters, finding I knew what the books held, but evidently feeling a little disturbed that I never brought out any hidden knowledge.

This second winter seemed more lonely to me. The star that had shone upon me seemed farther away than ever. I could see it still. It was hopelessly dis-

tant. My Juno! For a little while I could imagine she was thinking of me, that my little name might be associated in her memory with what we had talked of, what we had seen together, with some of the high things which I knew must never leave her thoughts. But this glimmering memory of me I knew must have faded away as her life went on, varied as it was with change of faces, sounds of music, and whirl of excitement. Then, too, I never heard her name mentioned. She was out of my circle, as far away from my sphere as the heroines of those old romances that I had read so long ago; but more life-like, more warm, more sunny was her influence still. It uplifted my work, and crowned my leisure with joy. I blessed the happy sunshine of that 27th of May, which in a strange way had been the clue that led to my knowledge of her.

The longest winter-months melt away at last into spring, and so did these. May came with her promises and blights of promise. Recalling, this time, how sunshine would come with the latter end of May through the dark walls, I begged of Mr. Clarkson that a favorite pattern of mine might be put upon the looms. Its design was imagined by one of my companions in my later walks. He was an artist of the mills, and had been trying to bring within the rigid lines that were required some of the grace and freedom of Nature. He had scattered here some water-lilies among broad green leaves. My admiration for Nature, alas! had grown only after severe cultivation among the strange forms which we carpet-makers indulge in with a sort of mimicry of Nature. So I cannot be a fair judge of this, even as a work of art. I see sometimes tapestries in a meadow studded with buttercups, and I fancy patterns for carpets when I see a leaf casting its shadow upon a stone. So I may be forgiven for saying that these water-lilies were dear to me as seeming like Nature, as they were lying upon their green leaves. Mr. Clarkson granted my request, and,

for a few days, this pattern was woven by the machine. These trial-days I was excited from my usual calmness. The first day the sunshine did not reach the narrow window. The second day we had heavy storm and rain. But the third day, not far from the expected hour, the sunshine burst through the little space. It fell upon my golden threads; it seemed directly to embrace them joyously, to encircle them closely. The sunlight seemed to incorporate itself with the woolly fibre, to conceal itself among the work where the shuttle chose to hide it. I fancied a sort of laughing joy, a clatter and dash in the machinery itself, as though there were a happy time, where was usually only a monotonous whirl. I could scarcely contain myself till noon.

When I left my room, I found, on inquiry, that Mr. Clarkson was not in the building, and was to be away all day. I went out into the air for a free breath, and looked up into the glowing sky, yet was glad to go back again to my machines, which I fancied would greet me with an unwonted joy. But, as I passed towards the stairway, I glanced into one of the lower rooms, where some of the clerks were writing. I fancied Mr. Clarkson might be there. There were women employed in this room, and suddenly one who was writing at a desk attracted my attention. I did not see her face; but the impression that her figure gave me haunted me as I passed on. Some one passing me saw my disturbed look.

“What have you seen? a ghost?” he asked.

“Who is writing in that room? Can you tell me?” I said.

“You know them all,” was his answer, “except the new-comer, Miss Stuart. Have not you heard the talk of her history,—how the father has failed and died and all that, and how the daughter is glad enough to get work under Mr. Clarkson’s patronage?”

The bell was ringing that called me, and I could not listen to more. My brain was whirling uncertainly, and I doubted if I ought to believe my ears. I went

back to my work more dazed and bewildered than ever in my youthful days. I forgot the wonder of the morning. It was quite outshone by the wonder of the afternoon. I longed for my hour of release. I longed for a time for thought,—to learn whether what had been told me could be true. When the time came, I hastened down-stairs; but I found the door of the office closed. Its occupants had all gone. I hastened through the village, turned back again, and on the bridge over the little stream met Margaret Stuart. She was the same. It made no difference what were her surroundings, she was the same; there was the same wonderful glance, the same smile of repose. It made no difference where or how I met her, she ruled me still. She greeted me with the same air and manner as in her old home when I saw her first.

She told me afterwards of the changes and misfortunes of the past year, of her desire for independence, and how she found she was little able to uphold it herself.

“Some of my friends,” she said, “were very anxious I should teach singing,—I had such a delicious voice, which had been so well cultivated. I could sing Italian opera-songs and the like. But I found I could only sing the songs that pleased me, and it was doubtful whether they would happen to suit the taste or the voice of those I should try to teach. For, I must confess it, I have never cultivated my voice except for my own pleasure, and never for the sake of the art. I did try to teach music a little while, and, oh, it was hopeless! I remembered some of our old talks about drudgery, and thought it had been a happy thing for me, if I had ever learned how to drudge over anything. What I mean is, I have never learned how to go through a monotonous duty; how to give it an inspiration which would make it possible or endurable. It would have been easier to summon up all my struggling for the sake of one great act of duty. I did not know how to scatter it over work day after day the same.

Worse than all, in spite of all my education, I did not know enough of music to teach it."

She went on, not merely this evening, but afterwards, to tell me of the different efforts she had made to earn a living for herself with the help of kind friends.

"At last," she said, "I bethought me of my handwriting, of the 'elegant' notes which used to receive such praise; and when I met Mr. Clarkson one day in Boston, I asked him what price he would pay me for it. I will tell you that he was very kind, very thoughtful for me. He fancied the work he had to offer would be distasteful to me; but he has made it as agreeable, as easy to be performed, as can be done. My aunt was willing to come here with me. She has just enough to live upon herself, and we are likely to live comfortably together here. So I am trying that sort of work you praised so much when you were with me; and I shall be glad, if you can go on and show me what inspiration can bring into it."

So day after day I saw her, and evening after evening we renewed the old talks. The summer passed on, and the early morning found her daily at her work, every day pursuing an unaccustomed labor. Her spirit seemed more happy and joyous than ever. She seemed far more at home than in the midst of crowded streets and gay, brilliant rooms. Her expression was more earnest and spiritual than ever, — her life, I thought, gayer and happier.

So I thought till one evening, when we had walked far away down the little stream that led out of the town. We stopped to look into its waters, while she leaned against the trunk of a tree that overshadowed it. We watched the light and shade that flickered below, the shadow of the clover-leaves, of the long reeds that hung almost across the stream. The quiet was enhanced by the busy motion below, the bustle of little animal life, the skimming of the water-insects, the tender rustling of the leaves, and the gentle murmuring of the stream itself. Then I looked at her, from the golden hair upon her

head down to its shadow in the brook below. I saw her hands folded over each other, and, suddenly, they looked to me very thin and white and very weary. I looked at her again, and her whole posture was one of languor and weariness, — the languor of the body, not a weariness of the soul. There was a happy smile on the lips, and a gleam of happiness from under the half-closed eyes. But, oh, so tired and faint did the slender body look that I almost feared to see the happier spirit leave it, as though it were incumbered by something which could not follow it.

"Margaret!" I exclaimed. "You are wearing yourself away. You were never made for such labor. You cannot learn this sort of toil. You are of the sunshine, to play above the dusty earth, to gladden the dreary places. Look at my hands, that are large for work, — at my heavy shoulders, fitted to bear the yoke. Let me work for us both, and you shall still be the inspiration of my work, and the sunshine that makes it gold. The work we talked of is drudgery for you; you cannot bear it."

I think she would not agree to what I said about her work. She "had begun to learn how to find life in every-day work, just as she saw a new sun rise every day." But she did agree that we would work together, without asking where our sunshine came from, or our inspiration.

So it was settled. And her work was around and within the old "natural-colored" house, whose walls by this time were half-embowered in vines. There was gay sunshine without and within. And the lichen was yellow that grew on the deeply sloping roof, and we liked to plant hollyhocks and sunflowers by the side of the quaint old building, while scarlet honeysuckles and trumpet-flowers and gay convolvuli gladdened the front porch.

There was but one question that was left to be disputed between us. Margaret still believed I was an artist, all-undeveloped.

"Those sunbeams" —

"I had nothing to do with them. They married golden threads that seemed kindred to them."

"It is not true. Sunbeams cannot exist without the sun. Your magnetic power, perhaps, attracted the true sunbeam, and you recreated others."

She fancies, if I would only devote myself to Art, I might become an American Murillo, and put a Madonna upon canvas.

But before we carried the new sunshine into the old house, I had been summoned again by Mr. Clarkson. Another wonderful piece of carpeting had gone out from the works, discovered by our agent before it had left our warehouse. It was the Water-Lily pattern,—lilies sitting among green leaves with sunshine playing in and out and among them. So dazzling it seemed, that it shed a light all round the darkened walls of the ware-

house. It was priceless, he thought, a perfect unique. Better, almost, that never such a pattern should appear again. It ought to remain the only one in the world.

And it did so remain. The rival establishment built a new chimney to their mill, which shut out completely all sunshine or hope of sunshine from our narrow windows. This was accomplished before the next May, and I showed Mr. Clarkson how utterly impossible it was for the most determined sunbeam ever to mingle itself with our most inviting fabrics. Mr. Clarkson pondered a long time. We might build our establishment a story higher; we might attempt to move it. But here were solid changes, and the hopes were uncertain. Affairs were going on well, and the reputation of the mills was at its height. And the carpets of sunshine were never repeated.

THE TWO TONGUES.

WHOEVER would read a profound political pamphlet under the guise of a brilliant novel may find it in "Sibyl, or The Two Nations." The gay overture of "The Eve of the Derby," at a London club, with which the curtain rises, contrasts with the evening amusements of the *prolétaire* in the gin-palaces of Manchester in a more than operatic effectiveness, and yet falls rather below than rises above the sober truth of present history. And we are often tempted to bind up the novel of the dashing Parliamenteer with our copy of "Ivanhoe," that we may thus have, side by side, from the pens of the Right Honorable Benjamin Disraeli and Sir Walter Scott, the beginning and the end of these eight hundred years of struggle between Norman rule and Saxon endurance. For let races and families change as they will, there have ever been in England two

nations; and the old debate of Wamba and Gurth in the forest-glade by Rotherwood is illustrated by the unconscious satires of last week's "Punch." In Chartism, Reform-Bills, and Strikes, in the etiquette which guards the Hesperides of West-End society, in the rigid training which stops many an adventurer midway in his career, are written the old characters of the forest-laws of Rufus and the Charter of John. Races and families change, but the distinction endures, is stamped upon all things pertaining to both.

We in America, who boast our descent from this matrimony of Norman and Saxon, claim also that we have blent the features of the two into one homogeneous people. In this country, where the old has become new, and the new is continually losing its raw lustre before the glitter of some fresher splendor, the traces

of the contest are all but obliterated. Only our language has come to us with the brand of the fatherland upon it. In our mother-tongue prevails the same principle of dualism, the same conflict of elements, which not all the lethean baptism of the Atlantic could wash out. The two nations of England survive in the two tongues of America.

We beg the reluctant reader not to prematurely pooh-pooh as a "miserable mouse" this conclusion, thinking that we are only serving up again that old story of Wamba and Gurth with an added *sauce-piquante* from Dean Trench. We admit that we allude to that original composition of English past and present from a Latin and a Teutonic stock. But that is to us not an ultimate, but a primal fact. It is the premise from which we propose to trace out the principle now living and working in our present speech. We commence our history with that strife of the tongues which had at the outset also their battle of Hastings, their field of Sanilac. There began the feud which to-day continues to divide our language, though the descendants of the primitive stocks are inextricably mingled.

For it is as in "Sibyl." That novel showed us the peer's descendants at the workman's forge, while the manufacturer's grandchildren were wearing the ermine and the strawberry-leaves. There is the constant passing to and fro across the one border-line which never changes. Dandy Mick and Devilsdust save a little money and become "respectable." We can follow out their history after Mr. Disraeli leaves them. They marry Harriet and Caroline, and contrive to educate a sharp boy or two, who will rise to become superintendents in the mills and to speculate in cotton-spinning. They in turn send into trade, with far greater advantages, their sons. The new generation, still educating, and, faithful to the original impulse, putting forth its fresh and aspiring tendrils, gets one boy into the church, another at the bar, and keeps a third at the great *Rouge-et-Noir* table of commerce. Some one of their stakes has a

run of luck. Either it is my Lord Eldon who sits on the wool-sack, or the young curate bids his Oxford laurels against a head-mastership of a public school and covers his baldness with a mitre, or Jones Lloyd steps from his back parlor into the carriage which is to take Lord Overstone to the House of Peers. From the day when young Osborne, the bold London 'prentice, leaped into the Thames to fish up thence his master's daughter, and brought back, not only the little lady, but the ducal coronet of Leeds in prospective, to that when Thomas Newcome the elder walked up to the same London that he might earn the "bloody hand" for Sir Brian and Sir Barnes, English life has been full of such gallant achievements.

So it has been with the words these speak. The phrases of the noble Canon Chaucer have fallen to the lips of peasants and grooms, while many a pert Cockney saying has elbowed its sturdy way into her Majesty's High Court of Parliament. Yet still there are two tongues flowing through our daily talk and writing, like the Missouri and Mississippi, with distinct and contrasted currents.

And this appears the more strikingly in this country, where other distinctions are lost. We have an aristocracy of language, whose phrases, like the West-End men of "Sibyl," are effeminate, extravagant, conventional, and prematurely worn-out. These words represent ideas which are theirs only by courtesy and conservatism, like the law-terms of the courts, or the "cant" of certain religious books. We have also a plebeian tongue, whose words are racy, vigorous, and healthy, but which men look askance at, when met in polite usage, in solemn literature, and in sermons. Norman and Saxon are their relative positions, as in the old time when "Ox" was for the serf who drove a-field the living animal, and "Beef" for the baron who ate him; but their lineage is counter-crossed by a hundred, nay, a thousand vicissitudes.

With this aristocracy of speech we are all familiar. We do not mean with the

speech of our aristocracy, which is quite another thing, but that which is held appropriate for "great occasions," for public parade, and for pen, ink, and types. It is cherished where all aristocracies flourish best,—in the "rural districts." There is a style and a class of words and phrases belonging to country newspapers, and to the city weeklies which have the largest bucolic circulation, which you detect in the Congressional eloquence of the honorable member for the Fifteenth District, Mass., and in the Common-School Reports of Boston Corner, — a style and words that remind us of the country gentry whose titles date back to the Plantagenets. They look so strangely beside the brisk, dapper curtnesses in which metropolitan journals transact their daily squabbles! We never write one of them out without an involuntary addition of quotation-marks, as a New-Yorker puts to his introduction of his verdant cousin the supplementary, "From the Jerseys." Their etymological Herald's Office is kept by schoolmasters, and especially schoolma'ams, or, in the true heraldic tongue, "Preceptresses of Educational Seminaries." You may find them in Mr. Hobbs, Jr.'s, celebrated tale of "The Bun-Baker of Cos-Cob," or in Bowline's thrilling novelette of "Beauty and Booty, or The Black Buccaneer of the Bermudas." They glitter in the train of "Napoleon and his Marshals," and look down upon us from the heights of "The Sacred Mountains."

Occasionally you will find them degraded from their high estate and fallen among the riff-raff of slang. They become "seedy" words, stripped of their old meaning, mere *chevaliers d'industrie*, yet with something of the air noble about them which distinguishes them from the born "cad." The word "convey" once suffered such eclipse, (we are glad to say it has come up again,) and consorted, unless Falstaff be mistaken, with such low blackguards as "nim" and "cog" and "prig" and similar "flash" terms.

But we do not propose to linger among the "upper-ten" of the dictionaries. The wont of such is to follow the law of he-

reditary aristocracies: the old blood gets thin, there is no sparkle to the *sangre azul*, the language dies out in poverty. The strong, new, popular word forces its way up, is heard at the bar, gets quoted in the pulpit, slips into the outer ring of good society. King Irving or King Emerson lays his pen across its shoulder and it rises up ennobled, till finally it is accepted of the "Atlantic Monthly," and its court-presentation is complete.

We have thus indicated the nature of the great contest in language between the conventional and the idiomatic. Idioms are just what their name implies. They are the commonalty of language,—private, proletarian words, who do the work, "*dum alteri tulerunt honores.*" They come to us from all handiworks and callings, where you will always find them at their posts. Sharp, energetic, incisive, they do the hard labor of speech,—that of carrying heavy loads of thought and shaping new ideas.

We think them vulgar at first, and savoring of the shop; but they are useful and handy, and we cannot do without them. They rivet, they forge, they coin, they "fire up," "brake up," "switch off," "prospect," "shin" for us when we are "short," "post up" our books, and finally ourselves, "strike a lead," "follow a trail," "stand up to the rack," "dicker," "swap," and "peddle." They are "whole teams" beside the "one-horse" vapidities which fail to bear our burdens. The Norman cannot keep down the Saxon. The Saxon finds his Wat Tyler or Jack Cade. Now "Mose" brings his Bowery Boys into our parlor, or Cromwell Judd recruits his Ironsides from the hamlets of the Kennebec.

We declare for the *prolétaires*. We vote the working-words ticket. We have to plead the cause of American idioms. Some of them have, as we said, good blood in them and can trace their lineage and standing to the English Bible and Book of Common Prayer; others are "new men," born under hedge-rows and left as foundlings at furnace-doors. And before we go farther, we have a

brief story to tell in illustration of the two tongues.

A case of assault and battery was tried in a Western court. The plaintiff's counsel informed the jury in his opening, that he was "prepared to prove that the defendant, a steamboat-captain, menaced his client, an English traveller, and put him in bodily fear, commanding him to vacate the avenue of the steamboat with his baggage, or he would precipitate him into the river." The evidence showed that the captain called out,—"Stranger, ef you don't tote your plunder off that gang-plank, I'll spill you in the drink."

We submit that for terseness and vigor the practitioner at the bar of the Ohio had the better of the learned counsel who appeared at the bar of justice, albeit his client was in a Cockney mystification at the address.

The illustration will serve our turn. It points to a class of phrases which are indigenous to various localities of the land, in which the native thought finds appropriate, bold, and picturesque utterance. And these in time become incorporate into the universal tongue. Of them is the large family of political phrases. These are coined in moments of intense excitement, struck out at white heat, or, to follow our leading metaphor, like the speakers who use them, come upon the stump in their shirt-sleeves. Every campaign gives us a new horde. Some die out at once; others felicitously tickle the public ear and ring far and wide. They "speak for Buncombe," are Barn-Burners, Old Hunkers, Hard Shells, Soft Shells, Log-Rollers, Pipe-Layers, Woolly Heads, Silver Grays, Locofocos, Fire-Eaters, Adamantines, Free Soilers, Freedom Shriekers, Border Ruffians. They spring from a bon-mot or a retort. The log-cabin and hard-cider watchwords were born of a taunt, like the "Gueux" of the Netherlands. The once famous phrase, Gerrymandering, some of our readers may remember. Governor Elbridge Gerry contrived, by a curious arrangement of districts in Massachusetts, to transfer the balance of power to his

own party. One of his opponents, poring over the map of the Commonwealth, was struck by the odd look of the geographical lines which thus were drawn, curving in and out among the towns and counties. "It looks," said he, "like a Salamander." "Looks like a Gerry-mander!" ejaculated another; and the term stuck long and closely.

Now and then you have the aristocratic and democratic sides of an idea in use at the same time. Those who style themselves "Gentlemen of the Press" are known to the rest of mankind as "Dead Heads,"—being, for paying purposes, literally, *capita mortua*.

So, too, our colleges are provided, over and above the various dead languages of their classic curriculum, with the two tongues. The one serves the young gentlemen, especially in their Sophomoric maturity, with appropriate expressions for their literary exercises and public flights. The other is for their common talk, tells who "flunked" and was "deaded," who "fished" with the tutor, who "cut" prayers, and who was "digging" at home. Each college, from imperial Harvard and lordly Yale to the freshest Western "Institution," whose three professors fondly cultivate the same number of aspiring Alumni, has its particular dialect with its quadrennial changes. The just budded Freshmen of the class of '64 could hardly without help decipher "The Rebelliad," which in the Consulship of Plancus Kirkland was the epic of the day. The good old gentlemen who come up to eat Commencement dinners and to sing with quavery voices the annual psalm thereafter, are bewildered in the mazes of the college-speech of their grandsons. Whence come these phrases few can tell. Like witty Dr. S——'s "quotation," which never was anything else, they started in life as sayings, springing full-grown, like Pallas Athene, from the laboring brain of some Olympic Sophister. Here in the quiet of our study in the country, we wonder if the boys continue as in our day to "create a shout," instead of "making a call," upon their lady acquaintances,—if

they still use "ponies,"—if they "group," and get, as we did, "parietals" and "publics" for the same.

The police courts contribute their quota. Baggage-smashing, dog-smudging, ring-dropping, watch-stuffing, the patent-safe men, the confidence men, garroters, shysters, policy-dealers, mock-auction Peter Funks, bogus-ticket swindlers, are all terms which have more or less outgrown the bounds of their Alsatia of Thieves' Latin and are known of men.

Even the pulpit, with its staid decorums, has its idioms, which it cannot quite keep to itself. We hear in the religious world of "professors," and "monthly concerts," (which mean praying, and not psalmody,) of "sensation-preaching," (which takes the place of the "painful" preaching of old times,) of "platform-speakers," of "revival-preachers," of "broad pulpits," and "Churches of the Future," of the "Eclipse of Faith" and the "Suspense of Faith," of "liberal" Christians, (with no reference to the contribution-plates,) of "subjective" and "objective" sermons, "Spurgeonisms," and "businessmen's meetings." And we can never think without a smile of that gifted genius, whoever he was, who described a certain public exercise as "*the most eloquent prayer ever addressed to a Boston audience.*" He surely created a new and striking idiom.

The boys do, as Young America should, their share. And the sayings of street urchins endure with singular tenacity. Like their sports, which follow laws of their own, uninfluenced by meteorological considerations, tending to the sedentary games of marbles in the cold, chilly spring, and bursting into base- and football in the midsummer solstice, strict tradition hands down from boy to boy the well-worn talk. There are still "busters," as in our young days, and the ardent youth upon floating cakes of ice "run bendolas" or "kittly-benders," or simply "benders." In different latitudes the phrase varies,—one-half of it going to Plymouth Colony, and the other abiding in Massachusetts Bay. And this ten-

dency to dismember a word is curiously shown in that savory fish which the Indian christened "scup-paug." Eastward he swims as "scup," while at the Manhattan end of the Sound he is fried as "porgie." And apropos of him, let us note a curious instance of the tenacity of associated ideas. The street boys of our day and early home were wont to term the *hetairai* of the public walks "scup." The young Athenians applied to the classic courtesans the epithet of *σαπέρδιον*, the name of a small fish very abundant in the Black Sea. Here now is a bit of slang which may fairly be warranted to keep fresh in any climate.

But boy-talk is always lively and pointed; not at all precise, but very prone to prosopopeia; ever breaking out of the bounds of legitimate speech to invent new terms of its own. Dr. Busby addresses Brown, Jr., as Brown Secundus, and speaks to him of his "young companions." Brown himself talks of "the chaps," or "the fellows," who in turn know Brown only as Tom Thumb. The power of nicknaming is a school-boy gift, which no discouragement of parents and guardians can crush out, and which displays thoroughly the idiomatic faculty. For a man's name was once *his*, the distinctive mark by which the world got at his identity. Long, Short, White, Black, Greathead, Longshanks, etc., told what a person in the eyes of men the owner presented. The hereditary or aristocratic process has killed this entirely. Men no longer make their names; even the poor foundlings, like Oliver Twist, are christened alphabetically by some Bumble the Beadle. But the nickname restores his lost rights, and takes the man at once out of the *ignobile vulgus* to give him identity. We recognize this gift and are proud of our nicknames, when we can get them to suit us. Only the sharp judgment of our peers reverses our own heraldry and sticks a surname like a burr upon us. The nickname is the idiom of nomenclature. The sponsorial appellation is generally meaningless, fished piously out of Scripture or profanely out

of plays and novels, or given with an eye to future legacies, or for some equally insufficient reason apart from the name itself. So that the gentleman who named his children One, Two, and Three, was only reducing to its lowest term the prevailing practice. But the nickname abides. It has its hold in affection. When the "old boys" come together in Gore Hall at their semi-centennial Commencement, or the "Puds" or "Porks" get together after long absence, it is not to inquire what has become of the Rev. Dr. Heavysterne or his Honor Littleton Coke, but it is, "Who knows where Hockey Jones is?" and "Did Dandy Glover really die in India?" and "Let us go and call upon Old Sykes" or "Old Roots" or "Old Conic-Sections,"—thus meaning to designate Professor ——, LL.D., A. A. S., F. R. S., etc. A college president who had no nickname would prove himself, *ipso facto*, unfit for his post. It is only dreadfully affected people who talk of "Tully"; the sensible all cling to the familiar "Chick-Pea" or Cicero, by which the wart-faced orator was distinguished. For it is not the boys only, but all American men, who love nicknames, the idioms of nomenclature. The first thing which is done, after a nominating convention has made its platform and balloted for its candidates, is to discover or invent a nickname: Old Hickory, Tippecanoe, The Little Giant, The Little Magician, The Mill-Boy of the Slashes, Honest John, Harry of the West, Black Dan, Old Buck, Old Rough and Ready. A "good name" is a tower of strength and many votes.

And not only with candidates for office, the spots on whose "white garments" are eagerly sought for and labelled, but in the names of places and classes the principle prevails, the democratic or Saxon tongue gets the advantage. Thus, we have for our states, cities, and ships-of-war the title of fondness which drives out the legal title of ceremony. Are we not "Yankees" to the world, though to the diplomatists "citizens of the United States of America"? We

have a Union made up upon the map of Maine, New Hampshire, etc., to California; we have another in the newspapers, composed of the Lumber State, the Granite State, the Green-Mountain State, the Nutmeg State, the Empire State, the Keystone State, the Blue Hen, the Old Dominion, of Hoosiers, Crackers, Suckers, Badgers, Wolverines, the Palmetto State, and Eldorado. We have the Crescent City, the Quaker City, the Empire City, the Forest City, the Monumental City, the City of Magnificent Distances. We hear of Old Ironsides sent to the Mediterranean to relieve the Old Tea-Wagon, ordered home. Everywhere there obtains the Papal principle of taking a new title upon succeeding to any primacy. The Norman imposed his laws upon England; the courts, the parish-registers, the Acts of Parliament were all his; but to this day there are districts of the Saxon Island where the postman and census-taker inquire in vain for Adam Smith and Benjamin Brown, but must perforce seek out Bullhead and Bandyshins. So indomitable is the Saxon.

We have not done yet with our national idioms. In the seaboard towns nautical phrases make tarry the talk of the people. "Where be you a-cruising to?" asks one Nantucket matron of her gossip. "Sniver-dinner, I'm going to Egypt; Seth B. has brought a letter from Turkey-wowner to Old Nancy." "Dressed-to-death-and-drawers-empty, don't you see we're goin' to have a squall? You had better take in your stu'n'-sails." The good woman was dressed up, intending, "as soon as ever dinner was over," to go, not to the land of the Pharaohs, but to the negro-quarter of the town, with a letter which "Seth B." (her son, thus identified by his middle letter) had brought home from Talcahuana.

For the rural idioms we refer the reader to the late Sylvester Judd's "Margaret" and "Richard Edney," and to the Jack Downing Letters.

The town is not behind the country. For, whatever is the current fancy, pugilism, fire-companies, racing, railway-build-

ing, or the opera, its idioms invade the talk. The Almighty Dollar of our worship has more synonymes than the Roman Pantheon had divinities. We are not "well-informed," but "posted" or "posted up." We are not "hospitably entreated" any more, but "put through." We do not "meet with misadventure," but "see the elephant," which we often do through the Hibernian process of "fighting the tiger."

Purists deplore this, but it is inevitable; and if one searches beneath the surface, there is often a curious deposit of meaning, sometimes auriferous enough to repay our use of cradle and rocker. We "panned out," the other day, a phrase which gave us great delight, and which illustrated a fact in New England history worth noting. We were puzzling over the word "soddollager," which Bartlett, we think, defines as "Anything very large and striking,"—*Anglicé*, a "whopper,"—"also a peculiar fish-hook." The word first occurs in print, we believe, in Mr. Cooper's "Home as Found," applied to a patriarch among the white bass of Otsego Lake, which could never be captured. We assumed at once that there was a latent reason for the term, and all at once it flashed upon us that it was a rough fisherman's random-shot at the word "doxology." This, in New England congregations, as all know, was wont to be sung, or "j'ined in," by the whole assembly, and given with particular emphasis, both because its words were familiar to all without book, and because it served instead of the chanted creed of their Anglican forefathers. The last thing, after which nothing could properly follow, the most important and most conspicuous of all, it represented to our Yankee Walton the crowning hope of his life,—the big bass, after taking which he might put hook-and-line on the shelf. By a slight transposition, natural enough to untrained organs, "doxology" became "soddollager."

We are not making a dictionary of Americanisms, but merely wandering a little way into our native forests. We refer to the prevalent habit of idiomatic

speech as a fact that makes part of our literature. It cannot be ignored, nor do we see how it is to be avoided. It is well, of course, to retain the sterling classic basis of our speech as we received it from abroad, and to this all that is best and purest in our literature past and present will tend. But we hold to no Know-Nothing platform which denies a right of naturalization to the worthy. As Ruskin says of the river, that it does not make its bed, but finds it, seeking out, with infinite pains, its appointed channel, so thought will seek its expression, guided by its inner laws of association and sympathy. If the mind and heart of a nation become barbarized, no classic culture can keep its language from corruption. If its ideas are ignoble, it will turn to the ignoble and vulgar side of every word in its tongue, it will affix the mean sense it desires to utter where it had of old no place. It converts the prince's palace into a stable or an inn; it pulls down the cathedral and the abbey to use the materials for the roads on which it tramples. It is good to sanctify language by setting some of its portions apart for holy uses,—at least, by preserving intact the high religious association which rests upon it. The same silver may be moulded to the altar-chalice or the Bacchic goblet; but we touch the one with reverent and clean hands, while the other is tossed aside in the madness of the revel. Men clamor for a new version of the Sacred Scriptures, and profess to be shocked at its plain outspokenness, forgetting that to the pure all things are pure, and that to the prurient all things are foul. It was a reverent and a worshipping age that gave us that treasure, and so long as we have the temper of reverence and worship we shall not ask to change it.

And to return once more to our original illustration. We have the two nations also in us, the Norman and the Saxon, the dominant and the aspiring, the patrician and the *prolétaire*. The one rules only by right of rule, the other rises only by right of rising. The power of conservatism perishes, when there is no longer

anything to keep; the might of radicalism overflows into excess, when the proper check is taken away or degraded. So long as the noble is noble and "*noblesse oblige*," so long as Church and State are true to their guiding and governing duties, the elevation of the base is the elevation of the whole. If the standards of what is truly aristocratic in our language are standards of nobility of thought, they will endure and draw up to them, on to the episcopal thrones and into the Upper House of letters, all that is most worthy. Whatever makes the nation's life will make its speech. War was once the career of the Norman, and he set the seal

of its language upon poetry. Agriculture was the Saxon's calling, and he made literature a mirror of the life he led. We in this new land are born to new heritages, and the terms of our new life must be used to tell our story. The Herald's College gives precedence to the Patent-Office, and the shepherd's pipe to the steam-whistle. And since all literature which can live stands only upon the national speech, we must look for our hopes of coming epics and immortal dramas to the language of the land, to its idioms, in which its present soul abides and breathes, and not to its classicalities, which are the empty shells upon its barren sea-shore.

MIDSUMMER AND MAY.

[Continued.]

II.

WHEN Miss Kent, the maternal great-aunt of Mr. Raleigh, devised her property, the will might possibly have been set aside as that of a monomaniac, but for the fact that he cared too little about anything to go to law for it, and for the still more important fact that the heirs-at-law were sufficiently numerous to engulf the whole property and leave no ripple to attest its submerged existence, had he done so; and on deserting it, he was better pleased to enrich the playfellow of his childhood than a host of unknown and unloved individuals. I cannot say that he did not more than once regret what he had lost: he was not of a self-denying nature, as we know; on the contrary, luxurious and accustomed to all those delights of life generally to be procured only through wealth. But, for all that, there had been intervals, ere his thirteen years' exile ended, in which, so far from regret, he experienced a certain joy at remembrance of this rough and

rugged point of time where he had escaped from the chrysalid state to one of action and freedom and real life. He had been happy in reaching India before his uncle's death, in applying his own clear understanding to the intricate entanglements of the affairs before him, in rescuing his uncle's commercial good name, and in securing thus for himself a foothold on the ladder of life, although that step had not occurred to him till thrust there by the pressure of circumstances. For the rest, I am not sure that Mr. Raleigh did not find his path suiting him well enough. There was no longer any charm in home; he was forbidden to think of it. That strange summer, that had flashed into his life like the gleam of a carnival-torch into quiet rooms, must be forgotten; the forms that had peopled it, in his determination, should become shadows. Valiant vows! Yet there must have come moments, in that long lapse of days and years, when the whole season gathered up its garments and swept imperiously through his memory: nights,

when, under the shadow of the Himmaleh, the old passion rose at spring-tide and flooded his heart and drowned out forgetfulness, and a longing asserted itself, that, if checked as instantly by honor as despair, was none the less insufferable and full of pain, — warm, wide, Southern nights, when all the stars, great and golden, leaned out of heaven to meet him, and all ripe perfumes, wafted by their own principle of motion, floated in the rich dusk and laden air about him, and the phantom of snow on topmost heights sought vainly to lend him its calm. Days also must have showered their fervid sunshine on him, as he journeyed through plains of rice, where all the broad reaches whitening to harvest filled him with intense and bitterest loneliness. What region of spice did not recall the noons when they two had trampled the sweet-fern on wide, high New England pastures, and breathed its intoxicating fragrance? and what forest of the tropics, what palms, what blooms, what gorgeous affluence of color and of growth, equalled the wood on the lake-shores, with its stately hemlocks, its joyous birches, its pale-blue, shadow-blanchèd violets? Nor was this regret, that had at last become a part of the man's identity, entirely a selfish one. He had no authority whatever for his belief, yet believe he did, that, firmly and tenderly as he loved, he was loved, and of the two fates his was not the harder. But a man, a man, too, in the stir of the world, has not the time for brooding over the untoward events of his destiny that a woman has; his tender memories are forever jostled by cent. per cent.; he meets too many faces to keep the one in constant and unchanging perpetuity sacredly before his thought. And so it happened that Mr. Raleigh became at last a silent, keen-eyed man, with the shadow of old and enduring melancholy on his life, but with no certain sorrow there.

In the course of time his business-connections extended themselves; he was associated with other men more intent than he upon their aim; although not wealthy, years might make him so; his

name commanded respect. Something of his old indifference lingered about him; it was seldom that he was in earnest; he drifted with the tide, and, except to maintain a clear integrity before God and men and his own soul, exerted scarcely an effort. It was not an easy thing for him to break up any manner of life; and when it became necessary for one of the firm to visit America, and he as the most suitable was selected, he assented to the proposition with not a heart-beat. America was as flat a wilderness to him as the Desert of Sahara. On landing in India, he had felt like a semi-conscious sleeper in his dream, the country seemed one of phantasms: the Lascars swarming in the port, — the merchants wrapped in snowy muslins, who moved like white-robed bronzes faintly animate, — the strange faces, modes, and manners, — the stranger beasts, immense, and alien to his remembrance; all objects that crossed his vision had seemed like a series of fantastic shows; he could have imagined them to be the creations of a heated fancy or the weird deceits of some subtle draught of magic. But now they had become more his life than the scenes which he had left; this land with its heats and its languors had slowly and passively endeared itself to him; these perpetual summers, the balms and blisses of the South, had unconsciously become a need of his nature. One day all was ready for his departure; and in the clipper ship *Osprey*, with a cargo for Day, Knight, and Company, Mr. Raleigh bade farewell to India.

The *Osprey* was a swift sailer and handled with consummate skill, so that I shall not venture to say in how few days she had weathered the Cape, and, ploughing up the Atlantic, had passed the Windward Islands, and off the latter had encountered one of the severest gales in Captain Tarbell's remembrance, although he was not new to shipwreck. If Mr. Raleigh had found no time for reflection in the busy current of affairs, when, ceasing to stand aside, he had mingled in the turmoil and become a part of the generations of men, he could not fail to find it

in this voyage, not brief at best, and of which every day's progress must assure him anew toward what land and what people he was hastening. Moreover, Fate had woven his lot, it seemed, inextricably among those whom he would shun; for Mr. Laudersdale himself was deeply interested in the Osprey's freight, and it would be incumbent upon him to extend his civilities to Mr. Raleigh. But Mr. Raleigh was not one to be cozened by circumstances more than by men.

The severity of the gale, which they had met some three days since, had entirely abated; the ship was laid to while the slight damage sustained was undergoing repair, and rocked heavily under the gray sky on the long, sullen swell and roll of the grayer waters. Mr. Raleigh had just come upon deck at dawn, where he found every one in unaccountable commotion. "Ship to leeward in distress," was all the answer his inquiries could obtain, while the man on the topmast was making his observations. Mr. Raleigh could see nothing, but every now and then the boom of a gun came faintly over the distance. The report having been made, it was judged expedient to lower a boat and render her such assistance as was possible. Mr. Raleigh never could tell how it came to pass that he found himself one of the volunteers in this dangerous service.

The disabled vessel proved to be a schooner from the West Indies in a sinking condition. A few moments sufficed to relieve a portion of her passengers, sad wretches who for two days had stared death in the face, and they pulled back toward the Osprey. A second and third journey across the waste, and the remaining men prepared to lower the last woman into the boat, when a stout, but extremely pale individual, who could no longer contain his frenzy of fear, clambered down the chains and dropped in her place. There was no time to be lost, and nothing to do but submit; the woman was withdrawn to wait her turn with the captain and crew, and the laden boat again labored back to the ship. Each

trip in the heavy sea and the blinding rain occupied no less than a couple of hours, and it was past noon when, uncertain just before if she might yet be there, they again came within sight of the little schooner, slowly and less slowly settling to her doom. As they approached her at last, Mr. Raleigh could plainly detect the young woman standing at a little distance from the anxious group, leaning against the broken mast with crossed arms, and looking out over the weary stretch with pale, grave face and quiet eyes. At the motion of the captain, she stepped forward, bound the ropes about herself, and was swung over the side to await the motion of the boat, as it slid within reach on the top of the long wave, or receded down its shining, slippery hollow. At length one swell brought it nearer, Mr. Raleigh's arms snatched the slight form and drew her half-fainting into the boat, a cloak was tossed after, and one by one the remainder followed; they were all safe, and some beggared. The bows of the schooner already plunged deep down in the gaping gulfs, they pulled bravely away, and were tossed along from billow to billow.

"You are very uncomfortable, Mademoiselle Le Blanc?" asked the rescued captain at once of the young woman, as she sat beside him in the stern-sheets.

"*Moi?*" she replied. "*Mais non, Monsieur.*"

Mr. Raleigh wrapped the cloak about her, as she spoke. They were equidistant from the two vessels, neither of which was to be seen, the rain fell fast into the hissing brine, their fate still uncertain. There was something strangely captivating and reassuring in this young girl's equanimity, and he did not cease speculating thereon till they had again reached the Osprey, and she had disappeared below.

By degrees the weather lightened; the Osprey was on the wing again, and a week's continuance of this fair wind would bring them into port. The next day, toward sunset, as Mr. Raleigh turned about in his regular pacing of the deck, he

saw at the opposite extremity of the ship the same slight figure dangerously perched upon the taffrail, leaning over, now watching the closing water, and now eagerly shading her eyes with her hand to observe the ship which they spoke, as they lay head to the wind, and for a better view of which she had climbed to this position. It was not Mr. Raleigh's custom to interfere; if people chose to drown themselves, he was not the man to gain-say them; but now, as his walk drew him toward her, it was the most natural thing in the world to pause and say, —

“*Il serait fâcheux, Mademoiselle, lorsqu'on a failli faire naufrage, de se noyer*” — and, in want of a word, Mr. Raleigh ignominiously descended to his vernacular — “with a lee-lurch.”

The girl, resting on the palm of one hand, and unsupported otherwise, bestowed upon him no reply, and did not turn her head. Mr. Raleigh looked at her a moment, and then continued his walk. Returning, the thing happened as he had predicted, and, with a little quick cry, Mademoiselle Le Blanc was hanging by her hands among the ropes. Reaching her with a spring, “*Viens, petite!*” he said, and with an effort placed her on her feet again before an alarm could have been given.

“*Ah! mais je crus c'en était fait de moi!*” she exclaimed, drawing in her breath like a sob. In an instant, however, surveying Mr. Raleigh, the slight emotion seemed to yield to one of irritation, that she had been rescued by him; for she murmured quickly, in English, head haughtily thrown back and eyes downcast, — “Monsieur thinks that I owe him much for having saved my life!”

“Mademoiselle best knows its worth,” said he, rather amused, and turning away.

The girl was still looking down; now, however, she threw after him a quick glance.

“*Tenez!*” said she, imperiously, and stepping toward him. “You fancy me very ungrateful,” she continued, lifting her slender hand, and with the back of it brushing away the floating hair at her

temples. “Well, I am not, and at some time it may be that I prove it. I do not like to owe debts; but, since I must, I will not try to cancel them with thanks.”

Mr. Raleigh bowed, but said nothing. She seemed to think it necessary to efface any unpleasant impression, and, with a little more animation and a smile, added, —

“The Captain Tarbell told me your name, Mr. Raleigh, and that you had not been at home for thirteen years. *Ni moi non plus*, — at least, I suppose it is home where I am going; yet I remember no other than the island and my” —

And here the girl opened her eyes wide, as if determined that they should not fill with tears, and looked out over the blue and sparkling fields around them. There was a piquancy in her accent that made the hearer wish to hear further, and a certain artlessness in her manner not met with recently by him. He moved forward, keeping her beside him.

“Then you are not French,” he said.

“I? Oh, no, — nor Creole. I was born in America; but I have always lived with mamma on the plantation; *et maintenant, il y a six mois qu'elle est morte!*”

Here she looked away again. Mr. Raleigh's glance followed hers, and, returning, she met it bent kindly and with a certain grave interest upon her. She appeared to feel reassured, somewhat protected by one so much her elder.

“I am going now to my father,” she said, “and to my other mother.”

“A second marriage,” thought Mr. Raleigh, “and before the orphan's crapes are” — Then, fearful lest she should read his thought, he added, — “And how do you speak such perfect English?”

“Oh, my father came to see us every other year, and I have written home twice a week since I was a little child. Mamma, too, spoke as much English as French.”

“I have not been in America for a long time,” said Mr. Raleigh, after a few steps. “But I do not doubt that you will find enjoyment there. It will be new; wom-

anhood will have little like youth for you ; but, in every event, it is well to add to our experience, you know."

"What is it like, Sir? But I know! Rows of houses, very counterparts of rows of houses, and they of rows of houses yet beyond. Just the toy-villages in boxes, uniform as graves and ugly as bricks"—

"Brick houses are not such ugly things. I remember one, low and wide, possessed of countless gables, covered with vines and shaded with sycamores; it could not have been so picturesque, if built of the marble of Paros, and gleaming temple-white through masks of verdure."

"It seems to me that I, too, remember such a one," said she, dreamily. "*Maison non, je m'y perds.* Yet, for all that, I shall not find the New York avenues lined with them."

"No; the houses there are palaces."

"I suppose, then, I am to live in a palace," she answered, with a light tinkling laugh. "That is fine; but one may miss the verandas, all the whiteness and coolness. How one must feel the roof!"

"Roofs should be screens, and not prisons, not shells, you think?" said Mr. Raleigh.

"At home," she replied, "our houses are, so to say, parasols; in those cities they must be iron shrouds. *Ainsi soit il!*" she added, and shrugged her shoulders like a little fatalist.

"You must not take it with such desperation; perhaps you will not be obliged to wear the shroud."

"Not long, to be sure, at first. We go to freeze in the country, a place with distant hills of blue ice, my old nurse told me,—old Ursule. Oh, Sir, she was drowned! I saw the very wave that swept her off!"

"That was your servant?"

"Yes."

"Then, perhaps, I have some good news for you. She was tall and large?"

"*Oui.*"

"Her name was Ursule?"

"*Oui! je dis que oui!*"

Mr. Raleigh laughed at her eagerness.

"She is below, then," he said,—"not

drowned. There is Reynolds. Mr. Reynolds, will you take this young lady to her servant, Ursule, the woman you rescued?"

And Mademoiselle Le Blanc disappeared under that gentleman's escort.

The ordinary restraints of social life not obtaining so much on board ship as elsewhere, Mr. Raleigh saw his acquaintance with the pale young stranger fast ripening into friendliness. It was an agreeable variation from the monotonous routine of his voyage, and he felt that it was not unpleasant to her. Indeed, with that childlike simplicity that was her first characteristic, she never saw him without seeking him, and every morning and every evening it became their habit to pace the deck together. Sunrise and twilight began to be the hours with which he associated her; and it was strange, that, coming, as she did, out of the full blaze of tropical suns, she yet seemed a creature that had taken life from the fresh, cool, dewy hours, and that must fairly dissolve beneath the sky of noon. She puzzled him, too, and he found singular contradictions in her: to-night, sweetness itself,—to-morrow, petulant as a spoiled child. She had all a child's curiosity, too; and he amused himself by seeing, at one time, with what novelty his adventures struck her, when, at another, he would have fancied she had always held Taj and Himmaleh in her garden. Now and then, excited, perhaps, by emulation and wonder, her natural joyousness broke through the usually sad and quiet demeanor; and she related to him, with dramatic *abandon*, scenes of her gay and innocent island-life, so that he fancied there was not an emotion in her experience hidden from his knowledge, till, all-unaware, he tripped over one reserve and another, that made her, for the moment, as mysterious a being as any of those court-ladies of ancient *régimes*, in whose lives there were strange *lacunæ* and spaces of shadow. And a peculiarity of their intercourse was, that, let her depart in what freak or perversity she pleased, she seemed always to have a certainty of

finding him in the same mood in which she had left him,—as some bright wayward vine of Southern forests puts out a tendril to this or that enticing point, yet, winding back, will find its first support unchanged. Shut out, as Mr. Raleigh had been, from any but the most casual female society, he found a great charm in this familiarity, and, without thinking how lately it had begun or how soon it must cease, he yielded himself to its presence. At one hour she seemed to him an impetuous and capricious thing, for whose better protection the accident of his companionship was extremely fortunate,—at another hour, a woman too strangely sweet to part with; and then Mr. Raleigh remembered that in all his years he had really known but two women, and one of these had not spent a week in his memory.

Mademoiselle Le Blanc came on deck, one evening, and, wrapping a soft, thick mantle round her, looked about for a minute, shaded her eyes from the sunset, meantime, with a slender, transparent hand, bowed to one, spoke to another, slipped forward and joined Mr. Raleigh, where he leaned over the ship's side.

“*Voici ma capote!*” said she, before he was aware of her approach. “*Ciel! qu'il fait frais!*”

“We have changed our skies,” said Mr. Raleigh, looking up.

“It is not necessary that you should tell me that!” she replied. “I shiver all the time. I shall become a little iceberg, for the sake of floating down to melt off Martinique!”

“Warm yourself now in the sunset; such a blaze was kindled for the purpose.”

“Whenever I see a sunset, I find it to be a splendid fact, *une jouissance vraie*, Monsieur, to think that men can paint,—that these shades, which are spontaneous in the heavens, and fleeting, can be rivalled by us and made permanent,—that man is more potent than light.”

“But you are all wrong in your *jouissance*.”

She pouted her lip, and hung over the

side in an attitude that it seemed he had seen a hundred times before.

“That sunset, with all its breadth and splendor, is contained in every pencil of light.”

She glanced up and laughed.

“Oh, yes! a part of its possibilities. Which proves?” —

“That color is an attribute of light and an achievement of man.”

“*Cà et là,
Toute la journée,
Le vent vain va
En sa tournée,*”

hummed the girl, with a careless dismissal of the subject.

Mr. Raleigh shut up the note-book in which he had been writing, and restored it to his pocket. She turned about and broke off her song.

“There is the moon on the other side,” she said, “floating up like a great bubble of light. She and the sun are the scales of a balance, I think; as one ascends, the other sinks.”

“There is a richness in the atmosphere, when sunset melts into moonrise, that makes one fancy it enveloping the earth like the bloom on a plum.”

“And see how it has powdered the sea! The waters look like the wings of the *papillon bleu*.”

“It seems that you love the sea.”

“Oh, certainly. I have thought that we islanders were like those Chinese who live in great *tanka*-boats on the rivers; only our boat rides at anchor. To climb up on the highest land, and see yourself girt with fields of azure enamelled in sheets of sunshine and fleets of sails, and lifted against the horizon, deep, crystalline, and translucent as a gem,—that makes one feel strong in isolation, and produces keen races. Don't you think so?”

“I think that isolation causes either vivid characteristics or idiocy, seldom strong or healthy ones; and I do not value race.”

“Because you came from America!” — with an air of disgust,—“where there is yet no race, and the population is still too fluctuating for the mould of one.”

"I come from India, where, if anywhere, there is race."

"But, pshaw! that was not what we were talking about."

"No, Mademoiselle, we were speaking of an element even more fluctuating than American population."

"Of course I love the sea; but if the sea loves me, it is the way a cat loves the mouse."

"It is always putting up a hand to snatch you?"

"I suppose I am sent to Nineveh and persist in shipping for Tarshish. I never enter a boat without an accident. The Belle Voyageuse met shipwreck, and I on board. That was anticipated, though, by all the world; for the night before we set sail,—it was a very murk, hot night,—we were all called out to see the likeness of a large merchantman transfigured in flames upon the sky,—spars and ropes and hull one net and glare of fire."

"A mirage, probably, from some burning ship at sea."

"No, I would rather think it supernatural. Oh, it was frightful! Rather superb, though, to think of such a spectral craft rising to warn us with ghostly flames that the old Belle Voyageuse was riddled with rats!"

"Did it burn blue?" asked Mr. Raleigh.

"Oh, if you're going to make fun of me, I'll tell you nothing more!"

As she spoke, Capua, who had considered himself, during the many years of wandering, both guiding and folding star to his master, came up, with his eyes rolling fearfully in a lively expansion of countenance, and muttered a few words in Mr. Raleigh's ear, lifting both hands in comical consternation the while.

"Excuse me a moment," said Mr. Raleigh, following him, and, meeting Captain Tarbell at the companion-way, the three descended together.

Mr. Raleigh was absent some fifteen minutes, at the end of that time rejoining Mademoiselle Le Blanc.

"I did not mean to make fun of you," said he, resuming the conversation as if

there had been no interruption. "I was watching the foam the Osprey makes in her speed, which certainly burns blue. See the flashing sparks! now that all the red fades from the west, they glow in the moon like broken amethysts."

"What did you mean, then?" she asked, pettishly.

"Oh, I wished to see if the idea of a burning ship was so terrifying."

"Terrifying? No; I have no fear; I never was afraid. But it must, in reality, be dreadful. I cannot think of anything else so appalling."

"Not at all timid?"

"Mamma used to say, those that know nothing fear nothing."

"Eminently your case. Then you cannot imagine a situation in which you would lose self-possession?"

"Scarcely. Isn't it people of the finest organization, comprehensive, large-souled, that are capable of the extremes either of courage or fear? Now I am limited, so that, without rash daring or pale panic, I can generally preserve equilibrium."

"How do you know all this of yourself?" he asked, with an amused air.

"*Il se présentait des occasions*," she replied, briefly.

"So I presumed," said he. "Ah? They have thrown out the log. See, we make progress. If this breeze holds!"

"You are impatient, Mr. Raleigh. You have dear friends at home, whom you wish to see, who wish to see you?"

"No," he replied, with a certain bitterness in his tone. "There is no one to whom I hasten, no one who waits to receive me."

"No one? But that is terrible! Then why should you wish to hasten? For me, I would always be willing to loiter along, to postpone home indefinitely."

"That is very generous, Mademoiselle."

"Mr. Raleigh" —

"Well?"

"I wish — please — you must not say Mademoiselle. Nobody will address me so, shortly. Give me my name, — call me Marguerite. *Je vous en prie.*"

And she looked up with a blush deepening the apple-bloom of her cheek.

"Marguerite? Does it answer for pearl or for daisy with you?"

"Oh, they called me so because I was such a little round white baby. I couldn't have been very precious, though, or she never would have parted with me. Yes, I wish we might drift on some lazy current for years. I hate to shorten the distance. I stand in awe of my father, and I do not remember my mother."

"Do not remember?"

"She is so perfect, so superb, so different from me! But she ought to love her own child!"

"Her own child?"

"And then I do not know the customs of this strange land. Shall I be obliged to keep an establishment?"

"Keep an establishment?"

"It is very rude to repeat my words so! You oughtn't! Yes, keep an establishment!"

"I beg your pardon, Mademoiselle."

"No, it is I who am rude."

"Not at all, — but mysterious. I am quite in the dark concerning you."

"Concerning me?"

"Ah, Miss Marguerite, it is my turn now."

"Oh! It must be — This is your mystery, *n'est ce pas?* Mamma was my grandmamma. My own mother was far too young when mamma gave her in marriage; and, to make amends, mamma adopted me and left me her name and her fortune. So that I am very wealthy. And now shall I keep an establishment?"

"I should think not," said Mr. Raleigh, with a smile.

"Do you know, you constantly reassure me? Home grows less and less a bugbear when you speak of it. How strange! It seems as if I had known you a year, instead of a week."

"It would probably take that period of time to make us as well acquainted under other circumstances."

"I wish you were going to be with us always. Shall you stay in America, Mr. Raleigh?"

"Only till the fall. But I will leave you at your father's door" —

And then Mr. Raleigh ceased suddenly, as if he had promised an impossibility.

"How long before we reach New York?" she asked.

"In about nine hours," he replied, — adding, in unconscious undertone, "if ever."

"What was that you said to yourself?" she asked, in a light and gayly inquisitive voice, as she looked around and over the ship. "Why, how many there are on deck! It is such a beautiful night, I suppose. Eh, Mr. Raleigh?"

"Are you not tired of your position?" he asked. "Sit down beside me here." And he took a seat.

"No, I would rather stand. Tell me what you said."

"Sit, then, to please me, Marguerite, and I will tell you what I said."

She hesitated a moment, standing before him, the hood of her capote, with its rich purple, dropping from the fluttering yellow hair that the moonlight deepened into gold, and the fire-opal clasp rising and falling with her breath, like an imprisoned flame. He touched her hand, still warm and soft, with his own, which was icy. She withdrew it, turned her eyes, whose fair, faint lustre, the pale forget-me-not blue, was darkened by the antagonistic light to an amethystine shadow, inquiringly upon him.

"There is some danger," she murmured.

"Yes. When you are not a mark for general observation, you shall hear it."

"I would rather hear it standing."

"I told you the condition."

"Then I shall go and ask Captain Tarbell."

"And come sobbing back to me for 'reassurance.'"

"No," she said, quickly, "I should go down to Ursule."

"Ursule has a mattress on deck; I assisted her up."

"There is the captain! Now" —

He seized her hand and drew her down

beside him. For an instant she would have resisted, as the sparkling eyes and flushed cheeks attested, — and then, with the instinctive feminine baseness that compels every woman, when once she has met her master, she submitted.

“I am sorry, if you are offended,” said he. “But the captain cannot attend to you now, and it is necessary to be guarded in movement; for a slight thing on such occasions may produce a panic.”

“You should not have forced me to sit,” said she, in a smothered voice, without heeding him; “you had no right.”

“This right, that I assume the care of you.”

“Monsieur, you see that I am quite competent to the care of myself.”

“Marguerite, I see that you are determined to quarrel.”

She paused a moment, ere replying; then drew a little nearer and turned her face toward him, though without looking up.

“Forgive me, then!” said she. “But I would rather be naughty and froward, it lets me stay a child, and so you can take me in keeping, and I need not think for myself at all. But if I act like a woman grown, then comes all the responsibility, and I must rely on myself, which is such trouble now, though I never felt it so before, — I don’t know why. Don’t you see?” And she glanced at him with her head on one side, and laughing archly.

“You were right,” he replied, after surveying her a moment; “my proffered protection is entirely superfluous.”

She thought he was about to go, and placed her hand on his, as it lay along the side. “Don’t leave me,” she murmured.

“I have no intention of leaving you,” he said.

“You are very good. I have never seen one like you. I love you well.” And, bathed in moonlight, she raised her face and her glowing lips toward him.

Mr. Raleigh gazed in the innocent eyes a moment, to seek the extent of her meaning, and felt, that, should he take advantage of her childlike forgetfulness, he

would be only reënacting the part he had so much condemned in one man years before. So he merely bent low over the hand that lay in his, raised it, and touched his lips to that. In an instant the color suffused her face, she snatched the hand away, half rose trembling from her seat, then sank into it again.

“*Soit, Monsieur!*” she exclaimed, abruptly. “But you have not told me the danger.”

“It will not alarm you now?” he replied, laughing.

“I have said that I am not a coward.”

“I wonder what you would think of me when I say that without doubt I am.”

“You, Mr. Raleigh?” she cried, astonishment banishing anger.

“Not that I betray myself. But I have felt the true heart-sinking. Once, surprised in the centre of an insurrection, I expected to find my hair white as snow, if I escaped.”

“Your hair is very black. And you escaped?”

“So it would appear.”

“They suffered you to go on account of your terror? You feigned death? You took flight?”

“Hardly, neither.”

“Tell me about it,” she said, imperiously.

Though Mr. Raleigh had exchanged the singular reserve of his youth for a well-bred reticence, he scarcely cared to be his own hero.

“Tell me,” said she. “It will shorten the time; and that is what you are trying to do, you know.”

He laughed.

“It was once when I was obliged to make an unpleasant journey into the interior, and a detachment was placed at my service. We were in a suspected district quite favorable to their designs, and the commanding officer was attacked with illness in the night. Being called to his assistance, I looked abroad and fancied things wore an unusual aspect among the men, and sent Capua to steal down a covered path and see if anything were wrong.

Never at fault, he discovered a revolt, with intent to murder my companion and myself, and retreat to the mountains. Of course there was but one thing to do. I put a pistol in my belt and walked down and in among them, singled out the ring-leader, fixed him with my eye, and bade him approach. My appearance was so sudden and unsuspected that they forgot defiance."

"*Bien*, but I thought you were afraid."

"So I was. I could not have spoken a second word. I experienced intense terror, and that, probably, gave my glance a concentration of which I was unaware and by myself incapable; but I did not suffer it to waver; I could not have moved it, indeed; I kept it on the man while he crept slowly toward me. I shall never forget the horrible sensation. I did not dare permit myself to doubt his conquest; but if I had failed, as I then thought, his approach was like the slow coil of a serpent about me, and it was his glittering eyes that had fixed mine, and not mine his. At my feet, I commanded him, with a gesture, to disarm. He obeyed, and I breathed; and one by one they followed his example. Capua, who was behind me, I sent back with the weapons, and in the morning gave them their choice of returning to town with their hands tied behind their backs, or of going on with me and remaining faithful. They chose the latter, did me good service, and I said nothing about the affair."

"That was well. But were you really frightened?"

"So I said. I cannot think of it yet without a slight shudder."

"Yes, and a rehearsal. Your eyes charge bayonets now. I am not a Sepoy."

"Well, you are still angry with me?"

"How can I be angry with you?"

"How, indeed? So much your senior that you owe me respect, Miss Marguerite. I am quite old enough to be your father."

"You are, Sir?" she replied, with surprise. "Why, are you fifty-five years old?"

"Is that Mr. Laudersdale's age?"

"How did you know Mr. Laudersdale was my father?"

"By an arithmetical process. That is his age?"

"Yes; and yours?"

"Not exactly. I was thirty-seven last August."

"And will be thirty-eight next?"

"That is the logical deduction."

"I shall give you a birthday-gift when you are just twice my age."

"By what courier will you make it reach me?"

"Oh, I forgot. But — Mr. Raleigh?"

"What is it?" he replied, turning to look at her, — for his eyes had been wandering over the deck.

"I thought you would ask me to write to you."

"No, that would not be worth while."

His face was too grave for her to feel indignation.

"Why?" she demanded.

"It would give me great pleasure, without doubt. But in a week you will have too many other cares and duties to care for such a burden."

"That shows that you do not know me at all. *Vous en avez usé mal avec moi!*"

Though Mr. Raleigh still looked at her, he did not reply. She rose and walked away a few steps, coming back.

"You are always in the right, and I consequently in the wrong," she said. "How often to-night have I asked pardon? I will not put up with it!"

"We shall part in a few hours," he replied; "when you lose your temper, I lose my time."

"In a few hours? Then is the danger which you mentioned past?"

"I scarcely think so."

"Now I am not going to be diverted again. What is this dreadful danger?"

"Let me tell you, in the first place, that we shall probably make the port before our situation becomes apparently worse, — that we do not take to the boats, because we are twice too many to fill them, owing to the *Belle Voyageuse*, and because it might excite mutiny, and for several other because, — that every one is

on deck, Capua consoling Ursule, the captain having told to each, personally, the possibility of escape" —

"*Allez au but !*"

"That the lights are closed, the hatches battened down; and by dint of excluding the air we can keep the flames in a smouldering state and sail into harbor a shell of safety over this core of burning coal."

"Reducing the equation, the ship is on fire?"

"Yes."

She did not speak for a moment or two, and he saw that she was quite faint. Soon recovering herself,—

"And what do you think of the mirage now?" she asked. "Where is Ursule? I must go to her," she added suddenly, after a brief silence, starting to her feet.

"Shall I accompany you?"

"Oh, no."

"She lies on a mattress there, behind that group,"—nodding in the implied direction; "and it would be well, if you could lie beside her and get an hour's rest."

"Me? I couldn't sleep. I shall come back to you,—may I?" And she was gone.

Mr. Raleigh still sat in the position in which she had left him, when, a half-hour afterward, she returned.

"Where is your cloak?" he asked, rising to receive her.

"I spread it over Ursule, she was so chilly."

"You will not take cold?"

"I? I am on fire myself."

"Ah, I see; you have the Saturnalian spirit in you."

"It is like the Revolution, the French, is it not?—drifting on before the wind of Fate, this ship full of fire and all red-hot raging turbulence. Just look up the long sparkling length of these white, full shrouds, swelling and curving like proud swans, in the gale,—and then imagine the devouring monster below in his den!"

"Don't imagine it. Be quiet and sit beside me. Half the night is gone."

"I remember reading of some pirates once, who, driving forward to destruction on fearful breakers, drank and sang and died madly. I wish the whole ship's company would burst out in one mighty chorus now, or that we might rush together with tumultuous impulse and dance,—dance wildly into death and daylight."

"We have nothing to do with death," said Mr. Raleigh. "Our foe is simply time. You dance, then?"

"Oh, yes. I dance well,—like those white fluttering butterflies,—as if I were *au gré du vent*."

"That would not be dancing well."

"It would not be dancing well to *be* at the will of the wind, but it is perfection to appear so."

"The dance needs the expression of the dancer's will. It is breathing sculpture. It is mimic life beyond all other arts."

"Then well I love to dance. And I do dance well. Wait,—you shall see."

He detained her.

"Be still, little maid!" he said, and again drew her beside him, though she still continued standing.

At this moment the captain approached.

"What cheer?" asked Mr. Raleigh.

"No cheer," he answered, gloomily, dinting his finger-nails into his palm. "The planks forward are already hot to the hand. I tremble at every creak of cordage, lest the deck crash in and bury us all."

"You have made the Sandy Hook light?"

"Yes; too late to run her ashore."

"You cannot try that at the Highlands?"

"Certain death."

"The wind scarcely" —

"Veered a point. I am carrying all sail. But if this tooth of fire gnaws below, you will soon see the masts go by the board. And then we are lost, indeed!"

"Courage! she will certainly hold together till you can hail the pilots."

"I think no one need tremble when he has such an instance of fearlessness

before him," replied the captain, bowing to Marguerite; and turning away, he hid his suspense and pain again under a calm countenance.

Standing all this while beside Mr. Raleigh, she had heard the whole of the conversation, and he felt the hand in his growing colder as it continued. He wondered if it were still the same excitement that sent the alternate flush and pallor up her cheek. She sat down, leaning her head back against the bulwark, as if to look at the stars, and suffering the light, fine hair to blow about her temples before the steady breeze. He bent over to look into her eyes, and found them fixed and lustreless.

"Marguerite!" he exclaimed.

She tried to speak, but the teeth seemed to hinder the escape of her words, and to break them into bits of sound; a shiver shook her from head to foot.

"I wonder if this is fear," she succeeded in saying. "Oh, if there were somewhere to go, something to hide me! A great horror is upon me! I am afraid! *Seigneur Dieu! Mourir par le feu! Périssons alors au plus vite!*" And she shuddered, audibly.

Mr. Raleigh passed his arm about her and gathered her closer to himself. He saw at once, that, sensitive as she was to every impression, this fear was a contagious one, a mere gregarious affinity, and that she needed the preponderating warmth and strength of a protecting presence, the influence of a fuller vitality. He did not speak, but his touch must in some measure have counteracted the dread that oppressed her. She ceased trembling, but did not move.

The westering moon went to bury herself in banks of cloud; the wind increasing piped and whistled in strident threatening through the rigging; the ship vibrated to the concussive voice of the minute-gun. No murmurs but those of wind and water were heard among the throng; they drove forward in awful, pallid silence. Suddenly the shriek of one voice, but from fourscore throats, rent the agonized quiet. A red light

was running along the deck, a tongue of flame lapping round the fore-castle, a spire shooting aloft. Marguerite hid her face in Mr. Raleigh's arm; a great sob seemed to go up from all the people. The captain's voice thundered through the tumult, and instantly the mates sprang forward and the jib went crashing overboard. Mr. Raleigh tore his eyes away from the fascination of this terror, and fixed them by chance on two black specks that danced on the watery horizon. He gazed with intense vision a moment. "The tugs!" he cried. The words thrilled with hope in every dying heart; they no longer saw themselves the waiting prey of pain and death, of flames and sea. Some few leaped into the boat at the stern, lowered and cut it away; others dropped spontaneously into file, and passed the dripping buckets of sea-water, to keep, if possible, the flames in check. Mr. Raleigh and Marguerite crossed over to Ursule.

The sight of her nurse, passive in despair, restored to the girl a portion of her previous spirit. She knelt beside her, talking low and rapidly, now and then laughing, and all the time communicating nerve with her light, firm finger-touches. Except their quick and unintelligible murmurs, and the plash and hiss of water, nothing else broke the torturing hush of expectation. There was a half-hour of breathless watch ere the steam-tugs were alongside. Already the place was full of fervid torment, and they had climbed upon every point to leave below the stings of the blistering deck. None waited on the order of their going, but thronged and sprang precipitately. Ursule was at once deposited in safety. The captain moved to conduct Marguerite across, but she drew back and clung to Mr. Raleigh.

"*J'ai honte,*" she said; "*je ne bougerai pas plus tôt que vous.*"

The breath of the fierce flames scorched her cheek as she spoke, the wind of their roaring progress swept her hair. He lifted her over without further consultation, and still kept her in his care.

There was a strange atmosphere on board the little vessels, as they labored about and parted from the doomed Osprey. Many were subdued with awe and joy at their deliverance; others broke the tense strain of the last hours in suffocating sobs. Every throb of the panting engines they answered with waiting heart-beats, as it sent them farther from the fearful wonder, now blazing in multiplex lines of fire against the gray horizon. Mr. Raleigh gazed after it as one watches the conflagration of a home. Marguerite left her quiet weeping to gaze with him. An hour silently passed, and as the fiery phantom faded into dawn and distance she sang sweetly the first few lines of an old French hymn. Another voice took up the measure, stronger and clearer; those who knew nothing of the words caught the spirit of the tune; and no choral service ever pealed up temple-vaults with more earnest accord than that in which this chant of grateful, exultant devotion now rose from rough-throated men and weary women in the crisp air and yellowing spring-morning.

As the moment of parting approached, Marguerite stood with folded hands before Mr. Raleigh, looking sadly down the harbor.

"I regret all that," she said,—"these days that seem years."

"An equivocal phrase," he replied, with a smile.

"But you know what I mean. I am going to strangers; I have been with you. I shall find no one so kind to me as you have been, Monsieur."

"Your strangers can be much kinder to you than I have been."

"Never! I wish they did not exist! What do I care for them? What do they care for me? They do not know me; I shall shock them. I miss you, I hate them, already. *Non! Personne ne m'aime, et je n'aime personne!*" she exclaimed, with low-toned vehemence.

"Rite," began Mr. Raleigh.

"Rite! No one but my mother ever called me that. How did you know it?"

"I have met your mother, and I knew you a great many years ago."

"Mr. Raleigh!" And there was the least possible shade of unconscious regret in the voice before it added,—“And what was I?”

"You were some little wood-spirit, the imp of a fallen cone, mayhap, or the embodiment of birch-tree shadows. You were a soiled and naughty little beauty, not so different from your present self, and who kissed me on the lips."

"And did you refuse to take the kiss?"

He laughed.

"You were a child then," he said. "And I was not"——

"Was not?"——

Here the boat swung round at her moorings, and the shock prevented Mr. Raleigh's finishing his sentence.

"Ursule is with us, or on the other one?" she asked.

"With us."

"That is fortunate. She is all I have remaining, by which to prove my identity."

"As if there could be two such maidens in the world!"

Marguerite left him, a moment, to give Captain Tarbell her address, and returning, they were shortly afterward seated side by side in a coach, Capua and Ursule following in another. As they stopped at the destined door, Mr. Raleigh alighted and extended his hand. She lingered a moment ere taking it,—not to say adieu, nor to offer him cheek or lip again.

"*Que je te remercie!*" she murmured, lifting her eyes to his. "*Que je te trouve bon!*" and sprang before him up the steps.

He heard her father meet her in the hall; Ursule had already joined them; he reëntered the coach and rolled rapidly beyond recall.

The burning of the Osprey did not concern Mr. Raleigh's business-relations. Carrying his papers about him, he had personally lost thereby nothing of consequence. He refreshed himself, and pro-

ceeded at once to the transactions awaiting him. In a brief time he found that affairs wore a different aspect from that for which he had been instructed, and letters from the house had already arrived, by the overland route, which required mutual reply and delay before he could take further steps; so that Mr. Raleigh found himself with some months of idleness upon his hands, in a land with not a friend. There lay a little scented billet, among the documents on his table, that had at first escaped his attention; he took it up wonderingly, and broke the seal. It was from his Cousin Kate, and had been a few days before him. Mrs. McLean had heard of his expected arrival, it said, and begged him, if he had any time to spare, to spend it with her in his old home by the lake, whither every summer they had resorted to meditate on the virtues of the departed. There was added, in a different hand, whose delicate and pointed characters seemed singularly familiar, —

“Come o’er the stream, Charlie, dear Charlie,
brave Charlie!

Come o’er the stream, Charlie, and dine
wi’ McLean!”

Mr. Raleigh looked at the matter a few moments; he did not think it best to remain long in the city; he would be glad to know if sight of the old scenes could renew a throb. He answered his letters, replenished his wardrobe, and took, that same day, the last train for the North. At noon of the second day thereafter he found Mr. McLean’s coach, with that worthy gentleman in person, awaiting him, and he stepped out, when it paused at the foot of his former garden, with a strange sense of the world as an old story, a twice-told tale, a maze of error.

Mrs. McLean came running down to meet him, — a face less round and rosy than once, as the need of pink cap-ribbons testified, but smiling and bright as youth.

“The same little Kate,” said Mr. Raleigh, after the first greeting, putting his hands on her shoulders and smiling down at her benevolently.

“Not quite the same Roger, though,” said she, shaking her head. “I expected this stain on your skin; but, dear me! your eyes look as if you had not a friend in the world.”

“How can they look so, when you give me such a welcome?”

“Dear old Roger, you *are* just the same,” said she, bestowing a little caress upon his sleeve. “And if you remember the summer before you went away, you will not find that pleasant company so very much changed either.”

“I do not expect to find them at all.”

“Oh, then they will find you; because they are all here, — at least the principals; some with different names, and some, like myself, with duplicates,” — as a shier Kate came down toward them, dragging a brother and sister by the hand, and shaking chestnut curls over rosy blushes.

After making acquaintance with the new cousins, Mr. Raleigh turned again to Mrs. McLean.

“And who are there here?” he asked.

“There is Mrs. Purcell, — you remember Helen Heath? Poor Mrs. Purcell, whom you knew, died, and her slippers fitted Helen. She chaperons Mary, who is single and speechless yet; and Captain, now Colonel, Purcell makes a very good silent partner. He is hunting in the West, on furlough; she is here alone. There is Mrs. Heath, — you never have forgotten her?”

“Not I.”

“There is” —

“And how came you all in the country so early in the season, — anybody with your devotion to company?”

“To be made April fools, John says.”

“Why, the willows are not yet so yellow as they will be.”

“I know it. But we had the most fatiguing winter; and Mrs. Laudersdale and I agreed, that, the moment the snow was off the ground up here, we would fly away and be at rest.”

“Mrs. Laudersdale? Can she come here?”

“Goodness! Why not? The last few

summers we have always spent together."

"She is with you now, then?"

"Oh, yes. She is the least changed of all. I didn't mean to tell, but keep her as a surprise. Of course, you will be a surprise to everybody. — There, run along, children; we'll follow. — Yes, won't it be delightful, Roger? We can all play at youth again."

"Like skeletons in some Dance of Death!" he exclaimed. "We shall be hideous in each other's sight."

"McLean, I am a bride," said his wife, not heeding the late misanthropy; "Helen is a girl; the ghost of the prior Mrs. Purcell shall be *rediviva*; and Katy there" —

"Wait a bit, Kate," said her cousin. "Before you have shuffled off mortality for the whole party, sit down under this hedge, — here is an opportune bench, — and give me accounts from the day of my departure."

"Dear me, Roger, as if that were possible! The ocean in a tea-cup? Let me see, — you had a flirtation with Helen that summer, didn't you? Well, she spent the next winter at the Fort with the Purcells. It was odd to miss both her and Mrs. Laudersdale from society at once. Mrs. Laudersdale was ill; I don't know exactly what the trouble was. You know she had been in such an unusual state of exhilaration all that summer; and as soon as she left New Hampshire and began the old city-life, she became oppressed with a speechless melancholy, I believe, so that the doctors foreboded insanity. She expressed great disinclination to follow their advice, and her husband finally banished them all. It was a great care to him; he altered much. McLean surmised that she didn't like to see him, while she was in this state; for, though he used to surround her with every luxury, and was always hunting out new appliances, and raising the heavens for a trifle, he kept himself carefully out of her sight during the greater part of the winter. I don't know whether she became insufferably lonely, or whether

the melancholy wore off, or she conquered it, and decided that it was not right to go crazy for nothing, or what happened. But one cold March evening he set out for his home, dreary, as usual, he thought; and he found the fire blazing and reddening the ceiling and curtains, the room all aglow with rich shadows, and his wife awaiting him, in full toilet, just as superb as you will see her tonight, just as sweet and cold and impassible and impenetrable. At least," continued Mrs. McLean, taking breath, "I have manufactured this little romance out of odds and ends that McLean has now and then reported from his conversation. I dare say there isn't a bit of it true, for Mr. Laudersdale isn't a man to publish his affairs; but *I* believe it. One thing is certain: Mrs. Laudersdale withdrew from society one autumn and returned one spring, and has queened it ever since."

"Is Mr. Laudersdale with you?"

"No. But he will come with their daughter shortly."

"And with what do you all occupy yourselves, pray?"

"Oh, with trifles and tea, as you would suppose us to do. Mrs. Purcell gossips and lounges, as if she were playing with the world for spectator. Mrs. Laudersdale lounges, and attacks things with her finger-ends, as if she were longing to remould them. Mrs. McLean gossips and scolds, as if it depended on her to keep the world in order."

"Are you going to keep me under the hedge all night?"

"This is pretty well! Hush! Who is that?"

As Mrs. McLean spoke, a figure issued from the tall larches on the left, and crossed the grass in front of them, — a woman, something less tall than a gypsy queen might be, the round outlines of her form rich and regular, with a certain firm luxuriance, still wrapped in a morning-robe of palm-spread cashmere. In her hand she carried various vines and lichens that had maintained their orange-tawny stains under the winter's snow, and the black

hair that was folded closely over forehead and temple was crowned with bent sprays of the scarlet maple-blossom. As vivid a hue dyed her cheek through warm walking, and with a smile of unconscious content she passed quickly up the slope and disappeared within the doorway. She impressed the senses of the beholder like some ripe and luscious fruit, a growth of sunshine and summer.

"Well," said Mrs. McLean, drawing breath again, "who is it?"

"Really, I cannot tell," replied Mr. Raleigh.

"Nor guess?"

"And that I dare not."

"Must I tell you?"

"Was it Mrs. Laudersdale?"

"And shouldn't you have known her?"

"Scarcely."

"Mercy! Then how did you know me? She is unaltered."

"If that is Mrs. Purcell, at the window, she does not recognize me, you see; neither did — Both she and yourself are nearly the same; one could not fail to know either of you; but of the Mrs. Laudersdale of thirteen years ago there remains hardly a vestige."

If Mrs. McLean, at this testimony, indulged in that little inward satisfaction which the most generous woman may feel, when told that her color wears better than the color of her dearest friend, it must have been quickly quenched by the succeeding sentence.

"Yes, she is certainly more beautiful than I ever dreamed of a woman's being. If she continues, I do not know what perfect thing she will become. She is too exquisite for common use. I wonder her husband is not jealous of every mote in the air, of rain and wind, of every day that passes over her head, — since each must now bear some charm from her in its flight."

Mr. Raleigh was talking to Mrs. McLean as one frequently reposes confidence in a person when quite sure that he will not understand a word you say.

An hour afterward, Mrs. Purcell joined Mrs. McLean.

"So that is Mr. Raleigh, is it?" she said. "He looks as if he had made the acquaintance of Siva the Destroyer. There's nothing left of him. Is he taller, or thinner, or graver, or darker, or what? My dear Kate, your cousin, that promised to be such a hero, has become a mere man-of-business. Did you ever burn fire-crackers? You have probably found some that just fizzed out, then." And Mrs. Purcell took an attitude.

"Roger is a much finer man than he was, I think, — so far as I could judge in the short time we have seen each other," replied Mrs. McLean, with spirit.

"Do you know," continued Mrs. Purcell, "what makes the Laudersdale so gay? No? She has a letter from her lord, and he brings you that little Rite next week. I must send for the Colonel to see such patterns of conjugal felicity as you and she. Ah, there is the tea-bell!"

Mr. Raleigh was standing with one hand on the back of his chair, when Mrs. Laudersdale entered. The cheek had resumed its usual pallor, and she was in her customary colors of black and gold. She carried a curiously cut crystal glass, which she placed on the sideboard, and then moved toward her chair. Her eye rested casually for a moment on Mr. Raleigh, as she crossed the threshold, and then returned with a species of calm curiosity.

"Mrs. Laudersdale has forgotten me?" he asked, with a bow. His voice, not susceptible of change in its tone of Southern sweetness, identified him.

"Not at all," she replied, moving toward him, and offering him her hand quietly. "I am happy at meeting Mr. Raleigh again." And she took her seat.

There was something in her grasp that relieved him. It was neither studiously cold, nor absurdly brief, nor traitorously tremulous. It was simply and forgetfully indifferent. Mr. Raleigh surveyed her with interest during the light table-talk. He had been possessed with a restless wish to see her once more, to ascertain if she had yet any fraction of her old power over him; he had all the more deter-

minedly banished himself from the city,—to find her in the country. Now he sought for some trace of what had formerly aroused his heart. He rose from table convinced that the woman whom he once loved with the whole fervor of youth and strength and buoyant life was no more, that she did not exist, and that Mr. Raleigh might experience a new passion, but his old one was as dead as the ashes that cover the Five Cities of the Plain. He wondered how it might be with her. For a moment he cursed his inconstancy; then he feared lest she were of larger heart and firmer resolve than he,—lest her love had been less light than his; he could scarcely feel himself secure of freedom,—he must watch. And then stole in a deeper sense of loneliness than exile and foreign tongues had taught him,—the knowledge of being single and solitary in the world, not only for life, but for eternity.

The evening was passed in the recitation of affairs by himself and his cousins alone together, and until a week completed its tale of dawns and sunsets there was the same diurnal recurrence of question and answer. One day, as the afternoon was paling, Rite came.

Mr. Raleigh had fallen asleep on the vine-hidden seat outside the bay-window, and was awakened, certainly not by Mrs. Laudersdale's velvets trailing over the drawing-room carpet. She was just entering, slow-paced, though in haste. She held out both of her beautiful arms. A little form of airy lightness, a very snow-wreath, blew into them.

"*O ma maman! Est ce que c'est toi,*" it cried. "*O comme tu es douce! Si belle, si molle, si chère!*" And the fair head was lying beneath the dark one, the face hidden in the bent and stately neck.

Mr. Raleigh left his seat, unseen, and betook himself to another abode. As he passed the drawing-room door, on his return, he saw the mother lying on a lounge, with the slight form nestled beside her, playing with it as some tame leopardess might play with her silky whelp. It was almost the only portion of the maternal nature developed within her.

It seemed as if the tea-hour were a fated one. Mr. Raleigh had been out on the water and was late. As he entered, Rite sprang up, half-overturning her chair, and ran to clasp his hand.

"I did not know that you and Mr. Raleigh were acquainted," said Mrs. McLean.

"Oh, Madam, Mr. Raleigh and I had the pleasure of being shipwrecked together," was the reply; and except that Mrs. Laudersdale required another napkin where her cup had spilled, all went on smoothly.

Mrs. Laudersdale took Marguerite entirely to herself for a while. She seemed, at first, to be like some one suddenly possessed of a new sense, and who did not know in the least what to do with it; but custom and familiarity destroyed this sentiment. She did not appear to entertain a doubt of her child's natural affection, but she had care to fortify it by the exertion of every charm she possessed. From the presence of dangerous rivals in the house, an element of determination blended with her manner, and she moved with a certain conscious power, as if wonderful energies were but half-latent with her, as if there were kingdoms to conquer and crowns to win, and she the destined instrument. You would have selected her, at this time of her lavish devotion to Marguerite, as the one woman of complete capability, of practical effective force, and have declared that there was nothing beyond her strength. The relation between herself and her child was certainly as peculiar as anything else about them; the disparity of age seemed so slight that they appeared like sisters, full of mutual trust, the younger leaning on the elder for support in the most trivial affairs. They walked through the woods together, learned again its glades and coverts, searched its early treasure of blossoms; they went out on the lake and spent long April afternoons together, floating about cove and inlet of island-shores; they returned with innocent gayety to that house which once the mother, in her moment of passion,

had fancied to be a possible heaven of delight, and which, since, she had found to be a very indifferent limbo. For, after all, we derive as much happiness from human beings as from Nature, and it was a tie of placid affection that bound her to the McLeans, not of sympathetic union, and her husband was careful never to oppress her with too much of his society. Whether this woman, who had lived a life of such wordless emotion, who had never bestowed a confidence, suddenly blossomed like a rose and took the little new-comer into the gold-dust and fragrance of her heart, or whether there was always between them the thin impalpable division that estranged the past from the present, there was nothing to tell; it seemed, nevertheless, as if they could have no closer bond, had they read each other's thoughts from birth.

That this assumption of Marguerite could not continue exclusive Mr. Raleigh found, when now and then joined in his walks by an airy figure flitting forward at his side: now and then; since Mrs. Laudersdale, without knowing how to prevent, had manifested an uneasiness at every such rencontre;—and that it could not endure forever, another gentleman, without so much reason, congratulated himself,—Mr. Frederic Heath, the confidential clerk of Day, Knight, and Company,—a rather supercilious specimen, quite faultlessly got up, who had accompanied her from New York at her father's request, and who already betrayed every symptom of the suitor. Meanwhile, Mrs. McLean's little women clamorously demanded and obtained a share of her attention, —although Capua and Ursule, with their dark skins, brilliant dyes, and equivocal dialects, were creatures of a more absorbing interest.

One afternoon, Marguerite came into the drawing-room by one door, as Mr. Raleigh entered by another; her mother was sitting near the window, and other members of the family were in the vicinity, having clustered preparatory to the tea-bell.

Marguerite had twisted tassels of the

willow-catkins in her hair, drooping things, in character with her wavy grace, and that sprinkled her with their fragrant yellow powder, the very breath of spring; and in one hand she had imprisoned a premature lace-winged fly, a fairy little savage, in its sheaths of cobweb and emerald, and with its jewel eyes.

“Dear!” said Mrs. Purcell, gathering her array more closely about her. “How do you dare touch such a venomous sprite?”

“As if you had an insect at the North with a sting!” replied Marguerite, suffering it, a little maliciously, to escape in the lady's face, and following the flight with a laugh of childlike glee.

“Here are your snowflakes on stems, mamma,” she continued, dropping anemones over her mother's hands, one by one;—“that is what Mr. Raleigh calls them. When may I see the snow? You shall wrap me in eider, that I may be like all the boughs and branches. How buoyant the earth must be, when every twig becomes a feather!” And she moved toward Mr. Raleigh, singing, “Oh, would I had wings like a dove!”

“And here are those which, if not daffodils, yet

‘Come before the swallow dares, and take
The winds of March with beauty,’”

he said, giving her a basket of hepaticas and winter-green.

Marguerite danced away with the purple trophy, and, emptying a carafe into a dish of moss that stood near, took them to Mrs. Laudersdale, and, sitting on the footstool, began to rearrange them. It was curious to see, that, while Mrs. Laudersdale lifted each blossom and let the stem lie across her hand, she suffered it to fall into the place designated for it by Marguerite's fingers, that sparkled in the mosaic till double wreaths of gold-threaded purple rose from the bed of vivid moss and melted into a fringe of the starry spires of winter-green.

“Is it not sweet?” said she then, bending over it.

“They have no scent,” said her mother.

“Oh, yes, indeed! the very finest, the

most delicate, a kind of aërial perfume; they must of course alchemize the air into which they waste their fibres with some sweetness."

"A smell of earth fresh from 'wholesome drench of April rains,'" said Mr. Raleigh, taking the dish of white porcelain between his brown, slender hands. "An immature scent, just such an innocent breath as should precede the epigea, that spicy, exhaustive wealth of savor, that complete maturity of odor, marriage of daphne and linnæa. The charm of these first bidders for the year's favor is neither in the ethereal texture, the depth or delicacy of tint, nor the large-lobed, blood-stained, ancient leaves. This imponderable soul gives them such a helpless air of babyhood."

"Is fragrance the flower's soul?" asked Marguerite. "Then anemones are not divinely gifted. And yet you said, the other day, that to paint my portrait would be to paint an anemone."

"A satisfactory specimen in the family-gallery," said Mrs. Purcell.

"A flaw in the indictment!" replied Mr. Raleigh. "I am not one of those who paint the lily."

"Though you've certainly added a perfume to the violet," remarked Mr. Frederic Heath, with that sweetly lingering accent familiarly called the drawl, as he looked at the hepaticas.

"I don't think it very complimentary, at any rate," continued Marguerite. "They are not lovely after bloom, — only the little pink-streaked, budded bells, that hang so demurely. *Oui, dà!* I have exchanged great queen magnolias for rues; what will you give me for pomegranates and oleanders?"

"Are the old oleanders in the garden yet?" asked Mrs. Laudersdale.

"Not the very same. The hurricane destroyed those, years ago; these are others, grand and rosy as sunrise sometimes."

"It was my Aunt Susanne who planted those, I have heard."

"And it was your daughter Rite who planted these."

"She buried a little box of old keepsakes at its foot, after her brother had examined them, — a ring or two, a coin from which she broke and kept one half" —

"Oh, yes! we found the little box, found it when Mr. Heath was in Martinique, all rusted and moulded and falling apart, and he wears that half of the coin on his watch-chain. See!"

Mrs. Laudersdale glanced up indifferently, but Mrs. Purcell sprang from her elegant lounging and bent to look at her brother's chain.

"How odd that I never noticed it, Fred!" she exclaimed. "And how odd that I should wear the same!" And, shaking her *châtelaine*, she detached a similar affair.

They were placed side by side in Mr. Raleigh's hand; they matched entirely, and, so united, they formed a singular French coin of value and antiquity, the missing figures on one segment supplied by the other, the embossed profile continued and lost on each, the scroll begun by this and ended by that; they were plainly severed portions of the same piece.

"And this was buried by your Aunt Susanne Le Blanc?" asked Mrs. Purcell, turning to Mrs. Laudersdale again, with a flush on her cheek.

"So I presume."

"Strange! And this was given to mamma by her mother, whose maiden name was Susan White. There's some *diablerie* about it."

"Oh, that is a part of the ceremony of money-hiding," said Mr. Raleigh. "Kidd always buried a little imp with his pots of gold, you know, to work deceitful charms on the finder."

"Did he?" said Marguerite, earnestly.

They all laughed thereat, and went in to tea.

EPITHALAMIA.

I.

THE WEDDING.

O LOVE! the flowers are blowing in park and field,
With love their bursting hearts are all revealed.
So come to me, and all thy fragrance yield!

O Love! the sun is sinking in the west,
And sequent stars all sentinel his rest.
So sleep, while angels watch, upon my breast!

O Love! the flooded moon is at its height,
And trances sea and land with tranquil light.
So shine, and gild with beauty all my night!

O Love! the ocean floods the crooked shore,
Till sighing beaches give their moaning o'er.
So, Love, o'erflow me, till I sigh no more!

II.

THE GOLDEN WEDDING.

O WIFE! the fragrant Mayflower now appears,
Fresh as the Pilgrims saw it through their tears.
So blows our love through all these changing years.

O wife! the sun is rising in the east,
Nor tires to shine, while ages have increased.
So shines our love, and fills my happy breast.

O wife! on yonder beach the ocean sings,
As when it bore the Mayflower's drooping wings.
So in my heart our early love-song rings.

O wife! the moon and stars slide down the west
To make in fresher skies their happy quest.
So, Love, once more we'll wed among the blest!

ARTHUR HALLAM.

WE were standing in the old English church at Clevedon on a summer afternoon. And here, said my companion, pausing in the chancel, sleeps Arthur Hallam, the friend of Alfred Tennyson, and the subject of "In Memoriam."

"'Tis well, 'tis something, we may stand
Where he in English earth is laid."

His burial-place is on a hill overhanging the Bristol Channel, a spot selected by his father as a fit resting-place for his beloved boy. And so

"They laid him by the pleasant shore,
And in the hearing of the wave."

Dying at twenty-two, the hope and pride of all who knew him, "remarkable for the early splendor of his genius," the career of this young man concentrates the interest of more than his native country. Tennyson has laid upon his early grave a poem which will never let his ashes be forgotten, or his memory fade like that of common clay. What Southey so felicitously says of Kirke White applies most eloquently to young Hallam:—"Just at that age when the painter would have wished to fix his likeness and the lover of poetry would delight to contemplate him, in the fair morning of his virtues, the full spring-blossom of his hopes,—just at that age hath death set the seal of eternity upon him, and the beautiful hath been made permanent."

Arthur Henry Hallam was born in Bedford Place, London, on the 1st of February, 1811. The eldest son of Henry Hallam, the eminent historian and critic, his earliest years had every advantage which culture and moral excellence could bring to his education. His father has feelingly commemorated his boyish virtues and talents by recording his "peculiar clearness of perception, his facility of acquiring knowledge, and, above all, an undeviating sweetness of disposition, and adherence to his sense of what was right and becoming." From that tearful record, not publicly circulat-

ed, our recital is partly gathered. Companions of his childhood have often told us well-remembered incidents of his life, and this is the too brief story of his earthly career.

When about eight years of age, Arthur resided some time in Germany and Switzerland, with his father and mother. He had already become familiar with the French language, and a year later he read Latin with some facility. Although the father judiciously studied to repress his son's marked precocity of talent, Arthur wrote about this time several plays in prose and in rhyme,—compositions which were never exhibited, however, beyond the family-circle.

At ten years of age he became a pupil at a school in Putney, under the tuition of an excellent clergyman, where he continued two years. He then took a short tour on the Continent, and, returning, went to Eton, where he studied nearly five years. While at Eton, he was reckoned, according to the usual test at that place, not a first-rate Latin student, for his mind had a predominant bias toward English literature, and there he lingered among the exhaustless fountains of the earlier poetry of his native tongue. One who knew him well in those years has described him to us as a sweet-voiced lad, moving about the pleasant playing-fields of Eton with a thoughtful eye and a most kindly expression. Afterwards, as Tennyson, singing to the witch-elms and the towering sycamore, paints him, he mixed in all the simple sports, and loved to gather a happy group about him, as he lay on the grass and discussed grave questions of state. And again,—

"Thy converse drew us with delight,
The men of rath and riper years:
The feeble soul, a haunt of fears,
Forgot his weakness in thy sight."

His taste for philosophical poetry increased with his years, and Wordsworth

and Shelley became his prime favorites. His contributions to the "Eton Miscellany" were various, sometimes in prose and now and then in verse. A poet by nature, he could not resist the Muse's influence, and he expressed a genuine emotion, oftentimes elegantly, and never without a meaning.

In the summer of 1827 he left Eton, and travelled with his parents eight months in Italy. And now began that life of thought and feeling so conspicuous to the end of his too brief career. Among the Alps his whole soul took the impress of those early introductions to what is most glorious and beautiful in Nature. After passing the mountains, Italian literature claimed his attention, and he entered upon its study with all the ardor of a young and earnest student. An Abbate who recognized his genius encouraged him with his assistance in the difficult art of Italian versification, and, after a very brief stay in Italy, at the age of seventeen, he wrote several sonnets which attracted considerable attention among scholars. Very soon after acquiring the Italian language, the great Florentine poet opened to him his mystic visions. Dante became his worship, and his own spirit responded to that of the author of the "Divina Commedia."

His growing taste led him to admire deeply all that is noble in Art, and he soon prized with enthusiasm the great pictures of the Venetian, the Tuscan, and the Roman schools. "His eyes," says his father, "were fixed on the best pictures with silent, intense delight." One can imagine him at this period wandering with all the ardor of youthful passion through the great galleries, not with the stolid stony gaze of a cold-blooded critic, but with that unmixed enthusiasm which so well becomes the unwearied traveller in his buoyant days of experience among the unveiled glories of genius now first revealed to his astonished vision.

He returned home in 1828, and went to reside at Cambridge, having been en-

tered, before his departure for the Continent, at Trinity College. It is said that he cared little for academical reputation, and in the severe scrutiny of examination he did not appear as a competitor for accurate mathematical demonstrations. He knew better than those about him where his treasures lay,—and to some he may have seemed a dreamer, to others an indifferent student, perhaps. His aims were higher than the tutor's black-board, and his life-thoughts ran counter to the usual college-routine. Disordered health soon began to appear, and a too rapid determination of blood to the brain often deprived him of the power of much mental labor. At Florence he had been seized with a slight attack of the same nature, and there was always a tendency to derangement of the vital functions. Irregularity of circulation occasioned sometimes a morbid depression of spirits, and his friends anxiously watched for symptoms of returning health. In his third Cambridge year he grew better, and all who knew and loved him rejoiced in his apparent recovery.

About this time, some of his poetical pieces were printed, but withheld from publication. It was the original intention for the two friends, Alfred Tennyson and Arthur Hallam, to publish together; but the idea was abandoned. Such lines as these the young poet addressed to the man who was afterwards to lend interest and immortality to the story of his early loss:—

"Alfred, I would that you beheld me now,
Sitting beneath a mossy, ivied wall
On a quaint bench, which to that structure
old
Winds an accordant curve. Above my
head
Dilates immeasurable a wild of leaves,
Seeming received into the blue expanse
That vaults this summer noon. Before me
lies
A lawn of English verdure, smooth and
bright,
Mottled with fainter hues of early hay,
Whose fragrance, blended with the rose-
perfume
From that white flowering bush, invites my
sense

To a delicious madness,—and faint thoughts
Of childish years are borne into my brain
By unforgotten ardors waking now.
Beyond, a gentle slope leads into shade
Of mighty trees, to bend whose eminent
crown

Is the prime labor of the pettish winds,
That now in lighter mood are twirling leaves
Over my feet, or hurrying butterflies,
And the gay humming things that summer
loves,
Through the warm air, or altering the bound
Where yon elm-shadows in majestic line
Divide dominion with the abundant light.”

And this fine descriptive passage was
also written at this period of his life:—

“The garden trees are busy with the shower
That fell ere sunset: now methinks they
talk,
Lowly and sweetly, as befits the hour,
One to another down the grassy walk.
Hark! the laburnum from his opening flower
This cheery creeper greets in whisper
light,
While the grim fir, rejoicing in the night,
Hoarse mutters to the murmuring sycamore.
What shall I deem their converse? Would
they hail
The wild gray light that fronts yon massive
cloud,
Or the half-bow rising like pillared
fire?
Or are they sighing faintly for desire
That with May dawn their leaves may be
o'erflowed,
And dews about their feet may never
fail?”

The first college prize for English declamation was awarded to him this year; and his exercise, “The Conduct of the Independent Party during the Civil War,” greatly improved his standing at the University. Other honors quickly followed his successful essay, and he was chosen to deliver an oration in the College Chapel just before the Christmas vacation. This was in the year 1831. He selected as his subject the one eminently congenial to his thought; and his theme, “The Influence of Italian upon English Literature,” was admirably treated. The oration is before us as we write, and we turn the pages with a fond and loving eye. We remember, as we read, his brief sojourn,—that he died “in the sweet hour of prime,”—and we are astonished at the

eloquent wisdom displayed by a lad of twenty summers. “I cannot help considering,” he says, “the sonnets of Shakespeare as a sort of homage to the Genius of Christian Europe, necessarily exacted, although voluntarily paid, before he was allowed to take in hand the sceptre of his endless dominion.” And he ends his charming disquisition in these words:—
“An English mind that has drunk deep at the sources of Southern inspiration, and especially that is imbued with the spirit of the mighty Florentine, will be conscious of a perpetual freshness and quiet beauty resting on his imagination and spreading gently over his affections, until, by the blessing of Heaven, it may be absorbed without loss in the pure inner light of which that voice has spoken, as no other can,—

‘Light intellectual, yet full of love,
Love of true beauty, therefore full of joy,
Joy, every other sweetness far above.’”

It was young Hallam’s privilege to be among Coleridge’s favorites, and in one of his poems Arthur alludes to him as a man in whose face “every line wore the pale cast of thought.” His conversations with “the old man eloquent” gave him intense delight, and he often alluded to the wonderful talks he had enjoyed with the great dreamer, whose magical richness of illustration took him captive for the time being.

At Abbotsford he became known to Sir Walter Scott, and Lockhart thus chronicles his visit:—

“Among a few other friends from a distance, Sir Walter received this summer [1829] a short visit from Mr. Hallam, and made in his company several of the little excursions which had in former days been of constant recurrence. Mr. Hallam had with him his son, Arthur, a young gentleman of extraordinary abilities, and as modest as able, who not long afterwards was cut off in the very bloom of opening life and genius. His beautiful verses, ‘On Melrose seen in Company with Scott,’ have since been often printed.”

"I lived an hour in fair Melrose:
 It was not when 'the pale moonlight'
 Its magnifying charm bestows;
 Yet deem I that I 'viewed it right.'
 The wind-swept shadows fast careered,
 Like living things that joyed or feared,
 Adown the sunny Eildon Hill,
 And the sweet winding Tweed the distance
 crowned well.

"I inly laughed to see that scene
 Wear such a countenance of youth,
 Though many an age those hills were green,
 And yonder river glided smooth,
 Ere in these now disjointed walls
 The Mother Church held festivals,
 And full-voiced anthemings the while
 Swelled from the choir, and lingered down
 the echoing aisle.

"I coveted that Abbey's doom:
 For if, I thought, the early flowers
 Of our affection may not bloom,
 Like those green hills, through countless
 hours,
 Grant me at least a tardy waning,
 Some pleasure still in age's paining;
 Though lines and forms must fade away,
 Still may old Beauty share the empire of
 Decay!

"But looking toward the grassy mound
 Where calm the Douglas chieftains lie,
 Who, living, quiet never found,
 I straightway learnt a lesson high:
 For there an old man sat serene,
 And well I knew that thoughtful mien
 Of him whose early lyre had thrown
 Over these mouldering walls the magic of
 its tone.

"Then ceased I from my envying state,
 And knew that aweless intellect
 Hath power upon the ways of Fate,
 And works through time and space un-
 check'd.
 That minstrel of old Chivalry
 In the cold grave must come to be;
 But his transmitted thoughts have part
 In the collective mind, and never shall
 depart.

"It was a comfort, too, to see
 Those dogs that from him ne'er would
 rove,
 And always eyed him reverently,
 With glances of depending love.
 They know not of that eminence
 Which marks him to my reasoning sense;
 They know but that he is a man,
 And still to them is kind, and glads them
 all he can.

"And hence their quiet looks confiding,
 Hence grateful instincts seated deep,
 By whose strong bond, were ill betiding,
 They'd risk their own his life to keep.
 What joy to watch in lower creature
 Such dawning of a moral nature,
 And how (the rule all things obey)
 They look to a higher mind to be their law
 and stay!"

At the University he lived a sweet and gracious life. No man had truer or fonder friends, or was more admired for his excellent accomplishments. Earnest in whatever he attempted, his enthusiasm for all that was high and holy in literature stamped his career at Trinity as one of remarkable superiority. "I have known many young men, both at Oxford and elsewhere, of whose abilities I think highly, but I never met with one whom I considered worthy of being put into competition with Arthur for a moment," writes his early and intimate friend. "I can scarcely hope to describe the feelings with which I regarded him, much less the daily beauty of his existence, out of which they grew," writes another of his companions. Politics, literature, philosophy he discussed with a metaphysical subtilty marvellous in one so young. The highest comprehension seemed native to his mind, so that all who came within the sphere of his influence were alike impressed with his vast and various powers. The life and grace of a charmed circle, the display of his gifts was not for show, and he never forgot to keep the solemn injunction, "*My son, give me thine heart,*" clearly engraven before him.

Among his favorite authors, while at the University, we have been told he greatly delighted in the old dramatists, Webster, Heywood, and Fletcher. The grace and harmony of style and versification which he found particularly in the latter master became one of his favorite themes, and he often dwelt upon this excellence. He loved to repeat the sad old strains of Bion; and Æschylus and Sophocles interested him deeply.

On leaving Cambridge, he took his degree and went immediately to London to reside with his father. It was a beautiful

relation which always existed between the elder and the younger scholar; and now, as soon as Arthur had been entered on the boards of the Inner Temple, the father and son sat down to read law together. Legal studies occupied the young student till the month of October, 1832, when he became an inmate of the office of an eminent conveyancer in Lincoln's Inn Fields. Although he applied himself diligently to obtain a sound practical knowledge of the profession he had chosen, his former habits of literary pursuit did not entirely desert him. During the winter he translated most of the sonnets in the "*Vita Nuova*," and composed a dramatic sketch with Raffaello for the hero. About this period he wrote brief, but excellent, memoirs of Petrarch, Voltaire, and Burke, for the "*Gallery of Portraits*," then publishing by the Society for the Diffusion of Useful Knowledge. But his time, when unoccupied at the office, was principally devoted to metaphysical research and the history of philosophical opinion. His spirits, sometimes apt to be graver than is the wont of youth, now became more animated and even gay, so that his family were cheered on to hope that his health was firmly gaining ground. The unpleasant symptoms which manifested themselves in his earlier years had almost entirely disappeared, when an attack of intermittent fever in the spring of 1833 gave the fatal blow to his constitution. In August, the careful, tender father took his beloved son into Germany, trusting to a change of climate for restoration. Travelling slowly, they lingered among the scenes connected with a literature and a history both were so familiar with, and many pleasant and profitable hours of delightful converse gladdened Arthur's journey. It is difficult to picture a more interesting group of travellers through the picturesque regions they were again exploring.

No child was ever more ardently loved—nay, worshipped—by his father than Arthur Hallam. The parallel, perhaps, exists in Edmund Burke's fond attachment for and subsequent calamity in the loss of his son Richard. That passage in

the life of the great statesman is one of the most affecting in all biographical literature. "The son thus deeply lamented," says Prior, "had always conducted himself with much filial duty and affection. Their confidence on all subjects was even more unreserved than commonly prevails between father and son, and their esteem for each other higher. . . . The son looked to the father as one of the first, if not the very first, character in history; the father had formed the very highest opinion of the talents of the son, and among his friends rated them superior to his own." The same confiding companionship grew up between Henry Hallam and his eldest boy, and continued till "death set the seal of eternity" upon the young and gifted Arthur.

The travellers were returning to Vienna from Pesth; a damp day set in while they were on the journey; again intermittent fever attacked the sensitive invalid, and suddenly, mysteriously, his life was ended. It was the 15th of September, 1833, and Arthur Hallam lay dead in his father's arms. Twenty-two brief years, and all high hopes for him, the manly, the noble-spirited, this side the tomb, are broken down forever. Well might his heart-crushed father sob aloud, "He seemed to tread the earth as a spirit from some better world." The author of "*Horæ Subsecivæ*" aptly quotes Shakspeare's memorable words, in connection with the tragic bereavement of that autumnal day in Vienna:—

"The idea of thy life shall sweetly creep
Into my study of imagination;
And every lovely organ of thy life
Shall come apparelled in more precious
habit,
More moving delicate, and full of life,
Into the eye and prospect of my soul,
Than when thou liv'dst indeed."

Standing by the grave of this young person, now made so renowned by the genius of a great poet, whose song has embalmed his name and called the world's attention to his death, the inevitable reflection is not of sorrow. He sleeps well who is thus lamented, and "nothing can touch him further."

THE CONFESSIONS OF A MEDIUM.

It is not yet a year since I ceased to act as a Spiritual Medium. (I am forced to make use of this title as the most intelligible, but I do it with a strong mental protest.) At first, I desired only to withdraw myself quietly from the peculiar associations into which I had been thrown by the exercise of my faculty, and be content with the simple fact of my escape. A man who joins the Dashaways does not care to have the circumstance announced in the newspapers. "So, he was an habitual drunkard," the public would say. I was overcome by a similar reluctance,—nay, I might honestly call it shame,—since, although I had at intervals officiated as a Medium for a period of seven years, my name had been mentioned, incidentally, only once or twice in the papers devoted especially to Spiritualism. I had no such reputation as that of Hume or Andrew Jackson Davis, which would call for a public statement of my recantation. The result would be, therefore, to give prominence to a weakness, which, however manfully overcome, might be remembered to my future prejudice.

I find, however, that the resolution to be silent leaves me restless and unsatisfied. And in reflecting calmly—objectively, for the first time—upon the experience of those seven years, I recognize so many points wherein my case is undoubtedly analogous to that of hundreds of others who may be still entangled in the same labyrinth whence I have but recently escaped, so clear a solution of much that is enigmatical, even to those who reject Spiritualism, that the impulse to write weighs upon me with the pressure of a neglected duty. I *cannot* longer be silent, and, in the conviction that the truth of my statement will be evident enough to those most concerned in hearing it, without the authority of any name, (least of all, of one so little known as mine,) I now give my confession to the world. The names of the individuals whom I

shall have occasion to introduce are, of course, disguised; but, with this exception, the narrative is the plainest possible record of my own experience. Many of the incidents which I shall be obliged to describe are known only to the actors therein, who, I feel assured, will never foolishly betray themselves. I have therefore no fear that any harm can result from my disclosures.

In order to make my views intelligible to those readers who have paid no attention to psychological subjects, I must commence a little in advance of my story. My own individual nature is one of those apparently inconsistent combinations which are frequently found in the children of parents whose temperaments and mental personalities widely differ. This class of natures is much larger than would be supposed. Inheriting opposite, even conflicting, traits from father and mother, they assume, as either element predominates, diverse characters; and that which is the result of temperament (in fact, congenital inconsistency) is set down by the unthinking world as moral weakness or duplicity. Those who have sufficient skill to perceive and reconcile—or, at least, govern—the opposing elements are few, indeed. Had the power come to me sooner, I should have been spared the necessity of making these confessions.

From one parent I inherited an extraordinarily active and sensitive imagination,—from the other, a sturdy practical sense, a disposition to weigh and balance with calm fairness the puzzling questions which life offers to every man. These conflicting qualities—as is usual in all similar natures—were not developed in equal order of growth. The former governed my childhood, my youth, and enveloped me with spells, which all the force of the latter and more slowly ripened faculty was barely sufficient to break. Luxuriant weeds and brambles covered

the soil which should have been ploughed and made to produce honest grain. Unfortunately, I had no teacher who was competent to understand and direct me. The task was left for myself, and I can only wonder, after all that has occurred, how it has been possible for me to succeed. Certainly, this success has not been due to any vigorous exercise of virtue on my part, but solely to the existence of that cool, reflective reason which lay *perdue* beneath all the extravagances of my mind.

I possessed, even as a child, an unusual share of what phrenologists call Concentrativeness. The power of absorption, of self-forgetfulness, was at the same time a source of delight and a torment. Lost in some wild dream or absurd childish speculation, my insensibility to outward things was chastised as carelessness or a hardened indifference to counsel. With a memory almost marvellous to retain those things which appealed to my imagination, I blundered painfully over the commonest tasks. While I frequently repeated the Sunday hymn, at dinner, I was too often unable to give the least report of the sermon. Withdrawn into my corner of the pew, I gave myself up, after the enunciation of the text, to a complete abstraction, which took no note of time or place. Fixing my eyes upon a knot in one of the panels under the pulpit, I sat moveless during the hour and a half which our worthy old clergyman required for the expounding of the seven parts of his discourse. They could never accuse me of sleeping, however; for I rarely even winked. The closing hymn recalled me to myself, always with a shock, or sense of pain, and sometimes even with a temporary nausea.

This habit of abstraction — properly a complete *passivity* of the mind — after a while developed another habit, in which I now see the root of that peculiar condition which made me a Medium. I shall therefore endeavor to describe it. I was sitting, one Sunday, just as the minister was commencing his sermon, with my eyes carelessly following the fingers of my right

hand, as I drummed them slowly across my knee. Suddenly, the wonder came into my mind, — How is it my fingers move? What set them going? What is it that stops them? The mystery of that communication between will and muscle, which no physiologist has ever fathomed, burst upon my young intellect. I had been conscious of no intention of thus drumming my fingers; they were in motion when I first noticed them: they were certainly a part of myself, yet they acted without my knowledge or design! My left hand was quiet; why did its fingers not move also? Following these reflections came a dreadful fear, as I remembered Jane, the blacksmith's daughter, whose elbows and shoulders sometimes jerked in such a way as to make all the other scholars laugh, although we were sorry for the poor girl, who cried bitterly over her unfortunate, ungovernable limbs. I was comforted, however, on finding that I could control the motion of my fingers at pleasure; but my imagination was too active to stop there. What if I should forget how to direct my hands? What if they should refuse to obey me? What if my knees, which were just as still as the hymn-books in the rack before me, should cease to bend, and I should sit there forever? These very questions seemed to produce a temporary paralysis of the will. As my right hand lay quietly on my knee, and I asked myself, with a stupid wonder, "Now, can I move it?" it lay as still as before. I had only questioned, not willed. "No I cannot move it," I said, in real doubt. I was conscious of a blind sense of exertion, wherein there was yet no proper exertion, but which seemed to exhaust me. Fascinated by this new mystery, I contemplated my hand as something apart from myself, — something subordinate to, but not identical with, me. The rising of the congregation for the hymn broke the spell, like the snapping of a thread.

The reader will readily understand that I carried these experiences much farther. I gradually learned to suspend (perhaps in imagination only, but therefore none

the less really) the action of my will upon the muscles of my arms and legs; and I did it with the greater impunity, from knowing that the stir consequent upon the conclusion of the services would bring me to myself. In proportion as the will became passive, the activity of my imagination was increased, and I experienced a new and strange delight in watching the play of fantasies which appeared to come and go independently of myself. There was still a dim consciousness of outward things mingled with my condition; I was not beyond the recall of my senses. But one day, I remember, as I sat motionless as a statue, having ceased any longer to attempt to control my dead limbs, more than usually passive, a white, shining mist gradually stole around me; my eyes finally ceased to take cognizance of objects; a low, musical humming sounded in my ears, and those creatures of the imagination which had hitherto crossed my brain as *thoughts* now spoke to me as audible voices. If there is any happy delirium in the first stages of intoxication, (of which, thank Heaven, I have no experience,) it must be a sensation very much like that which I felt. The death of external and the birth of internal consciousness overwhelmed my childish soul with a dumb, ignorant ecstasy, like that which savages feel on first hearing the magic of music.

How long I remained thus I know not. I was aroused by feeling myself violently shaken. "John!" exclaimed my mother, who had grasped my arm with a determined hand,—"bless the boy! what ails him? Why, his face is as white as a sheet!" Slowly I recovered my consciousness, saw the church and the departing congregation, and mechanically followed my parents. I could give no explanation of what had happened, except to say that I had fallen asleep. As I ate my dinner with a good appetite, my mother's fears were quieted. I was left at home the following Sunday, and afterwards only ventured to indulge sparingly in the exercise of my newly discovered faculty. My mother, I was conscious,

took more note of my presence than formerly, and I feared a repetition of the same catastrophe. As I grew older and my mind became interested in a wider range of themes, I finally lost the habit, which I classed among the many follies of childhood.

I retained, nevertheless, and still retain, something of that subtle instinct which mocks and yet surpasses reason. My feelings with regard to the persons whom I met were quite independent of their behavior towards me, or the estimation in which they were held by the world. Things which puzzled my brain in waking hours were made clear to me in sleep, and I frequently felt myself blindly impelled to do or to avoid doing certain things. The members of my family, who found it impossible to understand my motives of action,—because, in fact, there were no *motives*,—complacently solved the difficulty by calling me "queer." I presume there are few persons who are not occasionally visited by the instinct, or impulse, or faculty, or whatever it may be called, to which I refer. I possessed it in a more than ordinary degree, and was generally able to distinguish between its suggestions and the mere humors of my imagination. It is scarcely necessary to say that I assume the existence of such a power, at the outset. I recognize it as a normal faculty of the human mind,—not therefore universal, any more than the genius which makes a poet, a painter, or a composer.

My education was neither general nor thorough; hence I groped darkly with the psychological questions which were presented to me. Tormented by those doubts which at some period of life assail the soul of every thinking man, I was ready to grasp at any solution which offered, without very carefully testing its character. I eagerly accepted the theory of Animal Magnetism, which, so far as it went, was satisfactory; but it only illustrated the powers and relations of the soul in its present state of existence; it threw no light upon that future which I was not willing to take upon faith alone.

Though sensible to mesmeric influences, I was not willing that my spiritual nature should be the instrument of another's will, — that a human being, like myself, should become possessed of all my secrets and sanctities, touching the keys of every passion with his unhallowed fingers. In the phenomena of clairvoyance I saw only other and more subtle manifestations of the power which I knew to exist in my own mind. Hence, I soon grew weary of prosecuting inquiries which, at best, would fall short of solving my own great and painful doubt, — Does the human soul continue to exist after death? That it could take cognizance of things beyond the reach of the five senses, I was already assured. This, however, might be a sixth sense, no less material and perishable in its character than the others. My brain, as yet, was too young and immature to follow the thread of that lofty spiritual logic in the light of which such doubts melt away like mists of the night. Thus, uneasy because undeveloped, erring because I had never known the necessary guidance, seeking, but almost despairing of enlightenment, I was a fit subject for any spiritual epidemic which seemed to offer me a cure for worse maladies.

At this juncture occurred the phenomena known as the "Rochester Knockings." (My home, let me say, is in a small town not far from New York.) I shared in the general interest aroused by the marvellous stories, which, being followed by the no less extraordinary display of some unknown agency at Norwalk, Connecticut, excited me to such a degree that I was half-converted to the new faith before I had witnessed any spiritual manifestation. Soon after the arrival of the Misses Fox in New York I visited them in their rooms at the Howard House. Impressed by their quiet, natural demeanor, the absence of anything savoring of jugglery, and the peculiar character of the raps and movements of the table, I asked my questions and applied my tests, in a passive, if not a believing frame of mind. In fact, I had

not long been seated, before the noises became loud and frequent.

"The spirits like to communicate with you," said Mrs. Fish: "you seem to be nearer to them than most people."

I summoned, in succession, the spirits of my mother, a younger brother, and a cousin to whom I had been much attached in boyhood, and obtained correct answers to all my questions. I did not then remark, what has since occurred to me, that these questions concerned things which I knew, and that the answers to them were distinctly impressed on my mind at the time. The result of one of my tests made a very deep impression upon me. Having mentally selected a friend whom I had met in the train that morning, I asked, — "Will the spirit whose name is now in my mind communicate with me?" To this came the answer, slowly rapped out, on calling over the alphabet, — "*He is living!*"

I returned home, very much puzzled. Precisely those features of the exhibition (let me call it such) which repulse others attracted me. The searching daylight, the plain, matter-of-fact character of the manifestations, the absence of all solemnity and mystery, impressed me favorably towards the spiritual theory. If disembodied souls, I said, really exist and can communicate with those in the flesh, why should they choose moonlight or darkness, graveyards or lonely bed-chambers, for their visitations? What is to hinder them from speaking at times and in places where the senses of men are fully awake and alert, rather than when they are liable to be the dupes of the imagination? In such reflections as these I was the unconscious dupe of my own imagination, while supposing myself thoroughly impartial and critical.

Soon after this, circles began to be formed in my native town, for the purpose of table-moving. A number of persons met, secretly at first, — for as yet there were no avowed converts, — and quite as much for sport as for serious investigation. The first evening there was no satisfactory manifestation. The table moved a little,

it is true, but each one laughingly accused his neighbors of employing some muscular force: all isolated attempts were vain. I was conscious, nevertheless, of a curious sensation of numbness in the arms, which recalled to mind my forgotten experiments in church. No rappings were heard, and some of the participants did not scruple to pronounce the whole thing a delusion.

A few evenings after this we met again. Those who were most incredulous happened to be absent, while, accidentally, their places were filled by persons whose temperaments disposed them to a passive seriousness. Among these was a girl of sixteen, Miss Abby Fetters, a pale, delicate creature, with blond hair and light-blue eyes. Chance placed her next to me, in forming the ring, and her right hand lay lightly upon my left. We stood around a heavy circular dining-table. A complete silence was preserved, and all minds gradually sank into a quiet, passive expectancy. In about ten minutes I began to feel, or to imagine that I felt, a stream of light,—if light were a palpable substance,—a something far finer and more subtile than an electric current, passing from the hand of Miss Fetters through my own into the table. Presently the great wooden mass began to move,—stopped,—moved again,—turned in a circle, we following, without changing the position of our hands,—and finally began to rock from side to side, with increasing violence. Some of the circle were thrown off by the movements; others withdrew their hands in affright; and but four, among whom were Miss Fetters and myself, retained their hold. My outward consciousness appeared to be somewhat benumbed, as if by some present fascination or approaching trance, but I retained curiosity enough to look at my companion. Her eyes, sparkling with a strange, steady light, were fixed upon the table; her breath came quick and short, and her cheek had lost every trace of color. Suddenly, as if by a spasmodic effort, she removed her hands; I did the same, and the table stopped. She threw

herself into a seat, as if exhausted, yet, during the whole time, not a muscle of the hand which lay upon mine had stirred. I solemnly declare that my own hands had been equally passive, yet I experienced the same feeling of fatigue,—not muscular fatigue, but a sense of *deadness*, as if every drop of nervous energy had been suddenly taken from me.

Further experiments, the same evening, showed that we two, either together or alone, were able to produce the same phenomena without the assistance of the others present. We did not succeed, however, in obtaining any answers to our questions, nor were any of us impressed by the idea that the spirits of the dead were among us. In fact, these table-movings would not, of themselves, suggest the idea of a spiritual manifestation. "The table is bewitched," said Thompson, a hard-headed young fellow, without a particle of imagination; and this was really the first impression of all: some unknown force, latent in the dead matter, had been called into action. Still, this conclusion was so strange, so incredible, that the agency of supernatural intelligences finally presented itself to my mind as the readiest solution.

It was not long before we obtained rappings, and were enabled to repeat all the experiments which I had tried during my visit to the Fox family. The spirits of our deceased relatives and friends announced themselves, and generally gave a correct account of their earthly lives. I must confess, however, that, whenever we attempted to pry into the future, we usually received answers as ambiguous as those of the Grecian oracles, or predictions which failed to be realized. Violent knocks or other unruly demonstrations would sometimes interrupt an intelligent communication which promised us some light on the other life: these, we were told, were occasioned by evil or mischievous spirits, whose delight it was to create disturbances. They never occurred, I now remember, except when Miss Fetters was present. At the time,

we were too much absorbed in our researches to notice the fact.

The reader will perceive, from what he knows of my previous mental state, that it was not difficult for me to accept the theories of the Spiritualists. Here was an evidence of the immortality of the soul, — nay, more, of its continued individuality through endless future existences. The idea of my individuality being lost had been to me the same thing as complete annihilation. The spirits themselves informed us that they had come to teach these truths. The simple, ignorant faith of the Past, they said, was worn out; with the development of science, the mind of man had become skeptical; the ancient fountains no longer sufficed for his thirst; each new era required a new revelation; in all former ages there had been single minds pure enough and advanced enough to communicate with the dead and be the mediums of their messages to men, but now the time had come when the knowledge of this intercourse must be declared unto all; in its light the mysteries of the Past became clear; in the wisdom thus imparted, that happy Future which seems possible to every ardent and generous heart would be secured. I was not troubled by the fact that the messages which proclaimed these things were often incorrectly spelt, that the grammar was bad and the language far from elegant. I did not reflect that these new and sublime truths had formerly passed through my own brain as the dreams of a wandering imagination. Like that American philosopher who looks upon one of his own neophytes as a man of great and profound mind because the latter carefully remembers and repeats to him his own carelessly uttered wisdom, I saw in these misty and disjointed reflections of my own thoughts the precious revelation of departed and purified spirits.

How a passion for the unknown and unattainable takes hold of men is illustrated by the search for the universal solvent, by the mysteries of the Rosicrucians, by the patronage of fortune-tellers,

even. Wholly absorbed in spiritual researches, — having, in fact, no vital interest in anything else, — I soon developed into what is called a Medium. I discovered, at the outset, that the peculiar condition to be attained before the tables would begin to move could be produced at will.* I also found that the passive state into which I naturally fell had a tendency to produce that trance or suspension of the will which I had discovered when a boy. External consciousness, however, did not wholly depart. I saw the circle of inquirers around me, but dimly, and as phantoms, — while the impressions which passed over my brain seemed to wear visible forms and to speak with audible voices.

I did not doubt, at the time, that spirits visited me, and that they made use of my body to communicate with those who could hear them in no other way. Beside the pleasant intoxication of the semi-trance, I felt a rare joy in the knowledge that I was elected above other men to be their interpreter. Let me endeavor to describe the nature of this possession. Sometimes, even before a spirit would be called for, the figure of the person, as it existed in the mind of the inquirer, would suddenly present itself to me, — not to my outward senses, but to my interior, instinctive knowledge. If the recollection of the other embraced also the voice, I heard the voice in the same manner, and unconsciously imitated it. The answers to the questions I knew by the same instinct, as soon as the questions were spok-

* In attempting to describe my own sensations, I labor under the disadvantage of speaking mostly to those who have never experienced anything of the kind. Hence, what would be perfectly clear to myself, and to those who have passed through a similar experience, may be unintelligible to the former class. The Spiritualists excuse the crudities which their Plato, St. Paul, and Shakspeare utter, by ascribing them to the imperfection of human language; and I may claim the same allowance in setting forth mental conditions of which the mind itself can grasp no complete idea, seeing that its most important faculties are paralyzed during the existence of those conditions.

en. If the question was vague, asked for information rather than *confirmation*, either no answer came, or there was an impression of a *wish* of what the answer might be, or, at times, some strange involuntary sentence sprang to my lips. When I wrote, my hand appeared to move of itself; yet the words it wrote invariably passed through my mind. Even when blindfolded, there was no difference in its performance. The same powers developed themselves in a still greater degree in Miss Fetters. The spirits which spoke most readily through her were those of men, even coarse and rude characters, which came unsummoned. Two or three of the other members of our circle were able to produce motions in the table; they could even feel, as they asserted, the touch of spiritual hands; but, however much they desired it, they were never personally possessed as we, and therefore could not properly be called Mediums.

These investigations were not regularly carried on. Occasionally the interest of the circle flagged, until it was renewed by the visit of some apostle of the new faith, usually accompanied by a "Preaching Medium." Among those whose presence especially conduced to keep alive the flame of spiritual inquiry was a gentleman named Stilton, the editor of a small monthly periodical entitled "Revelations from the Interior." Without being himself a Medium, he was nevertheless thoroughly conversant with the various phenomena of Spiritualism, and both spoke and wrote in the dialect which its followers adopted. He was a man of varied, but not profound learning, an active intellect, giving and receiving impressions with equal facility, and with an unusual combination of concentrativeness and versatility in his nature. A certain inspiration was connected with his presence. His personality overflowed upon and influenced others. "My mind is not sufficiently submissive," he would say, "to receive impressions from the spirits, but my atmosphere attracts them and encourages them to speak." He was a stout, strongly built man, with coarse black hair,

gray eyes, large animal mouth, square jaws, and short, thick neck. Had his hair been cropped close, he would have looked very much like a prize-fighter; but he wore it long, parted in the middle, and as meek in expression as its stiff waves would allow.

Stilton soon became the controlling spirit of our circle. His presence really seemed, as he said, to encourage the spirits. Never before had the manifestations been so abundant or so surprising. Miss Fetters, especially, astonished us by the vigor of her possessions. Not only Samson and Peter the Great, but Gibbs the Pirate, Black Hawk, and Joe Manton, who had died the previous year in a fit of delirium-tremens, prophesied, strode, swore, and smashed things in turn, by means of her frail little body. As Cribb, a noted pugilist of the last century, she floored an incautious spectator, giving him a black eye which he wore for a fortnight afterwards. Singularly enough, my visitors were of the opposite cast. Hypatia, Petrarch, Mary Magdalen, Abelard, and, oftenest of all, Shelley, proclaimed mystic truths from my lips. They usually spoke in inspired monologues, without announcing themselves beforehand, and often without giving any clue to their personality. A practised stenographer, engaged by Mr. Stilton, took down many of these communications as they were spoken, and they were afterwards published in the "Revelations." It was also remarked, that, while Miss Fetters employed violent gestures and seemed to possess a superhuman strength, I, on the contrary, sat motionless, pale, and with little sign of life except in my voice, which, though low, was clear and dramatic in its modulations. Stilton explained this difference without hesitation. "Miss Abby," he said, "possesses soul-matter of a texture to which the souls of these strong men naturally adhere. In the spirit-land the superfluities repel each other; the individual souls seek to remedy their imperfections: in the union of opposites only is to be found the great harmonia of life. You, John, move up-

on another plane; through what in you is undeveloped, these developed spirits are attracted."

For two or three years, I must admit, my life was a very happy one. Not only were those occasional trances an intoxication, nay, a coveted indulgence, but they cast a consecration over my life. My restored faith rested on the sure evidence of my own experience; my new creed contained no harsh or repulsive feature; I heard the same noble sentiments which I uttered in such moments repeated by my associates in the faith, and I devoutly believed that a complete regeneration of the human race was at hand. Nevertheless, it struck me sometimes as singular that many of the Mediums whom I met — men and women chosen by spiritual hands to the same high office — excited in my mind that instinct of repulsion on which I had learned to rely as a sufficient reason for avoiding certain persons. Far as it would have been from my mind, at that time, to question the manifestations which accompanied them, I could not smother my mistrust of their characters. Miss Fetters, whom I so frequently met, was one of the most disagreeable. Her cold, thin lips, pale eyes, and lean figure gave me a singular impression of voracious hunger. Her presence was often announced to me by a chill shudder, before I saw her. Centuries ago one of her ancestors must have been a ghoul or vampire. The trance of possession seemed, with her, to be a form of dissipation, in which she indulged as she might have catered for a baser appetite. The new religion was nothing to her; I believe she valued it only on account of the importance she obtained among its followers. Her father, a vain, weak-minded man, who kept a grocery in the town, was himself a convert.

Stilton had an answer for every doubt. No matter how tangled a labyrinth might be exhibited to him, he walked straight through it.

"How is it," I asked him, "that so many of my fellow-mediums inspire me with an instinctive dislike and mistrust?"

"By mistrust you mean dislike," he answered; "since you know of no reason to doubt their characters. The elements of soul-matter are differently combined in different individuals, and there are affinities and repulsions, just as there are in the chemical elements. Your feeling is chemical, not moral. A want of affinity does not necessarily imply an existing evil in the other party. In the present ignorance of the world, our true affinities can only be imperfectly felt and indulged; and the entire freedom which we shall obtain in this respect is the greatest happiness of the spirit-life."

Another time I asked, —

"How is it that the spirits of great authors speak so tamely to us? Shakspeare, last night, wrote a passage which he would have been heartily ashamed of, as a living man. We know that a spirit spoke, calling himself Shakspeare; but, judging from his communication, it could not have been he."

"It probably was not," said Mr. Stilton. "I am convinced that all malicious spirits are at work to interrupt the communications from the higher spheres. We were thus deceived by one professing to be Benjamin Franklin, who drew for us the plan of a machine for splitting shingles, which we had fabricated and patented at considerable expense. On trial, however, it proved to be a miserable failure, a complete mockery. When the spirit was again summoned, he refused to speak, but shook the table to express his malicious laughter, went off, and has never since returned. My friend, we know but the alphabet of Spiritualism, the mere A B C; we can no more expect to master the immortal language in a day than a child to read Plato after learning his letters."

Many of those who had been interested in the usual phenomena gradually dropped off, tired, and perhaps a little ashamed, in the reaction following their excitement; but there were continual accessions to our ranks, and we formed, at last, a distinct clan or community. Indeed, the number of *secret* believers

in Spiritualism would never be suspected by the uninitiated. In the sect, however, as in Masonry and the Catholic Church, there are circles within circles, — concentric rings, whence you can look outwards, but not inwards, and where he alone who stands at the centre is able to perceive everything. Such an inner circle was at last formed in our town. Its object, according to Stilton, with whom the plan originated, was to obtain a purer spiritual atmosphere, by the exclusion of all but Mediums and those non-mediumistic believers in whose presence the spirits felt at ease, and thus invite communications from the farther and purer spheres.

In fact, the result seemed to justify the plan. The character of the trance, as I had frequently observed, is vitiated by the consciousness that disbelievers are present. The more perfect the atmosphere of credulity, the more satisfactory the manifestations. The expectant company, the dim light, the conviction that a wonderful revelation was about to dawn upon us, excited my imagination, and my trance was really a sort of delirium, in which I spoke with a passion and an eloquence I had never before exhibited. The fear, which had previously haunted me, at times, of giving my brain and tongue into the control of an unknown power, was forgotten; yet, more than ever, I was conscious of some strong controlling influence, and experienced a reckless pleasure in permitting myself to be governed by it. "Prepare," I concluded, (I quote from the report in the "Revelations,") "prepare, sons of men, for the dawning day! Prepare for the second and perfect regeneration of man! For the prison-chambers have been broken into, and the light from the interior shall illuminate the external! Ye shall enjoy spiritual and passional freedom; your guides shall no longer be the despotism of ignorant laws, nor the whip of an imaginary conscience,—but the natural impulses of your nature, which are the melody of Life, and the natural affinities, which are its harmony! The reflections from the upper spheres shall irradiate the

lower, and Death is the triumphal arch through which we pass from glory to glory!"

— I have here paused, deliberating whether I should proceed farther in my narrative. But no; if any good is to be accomplished by these confessions, the reader must walk with me through the dark labyrinth which follows. He must walk over what may be considered delicate ground, but he shall not be harmed. One feature of the trance condition is too remarkable, too important in its consequences, to be overlooked. It is a feature of which many Mediums are undoubtedly ignorant, the existence of which is not even suspected by thousands of honest Spiritualists.

Let me again anticipate the regular course of my narrative, and explain. A suspension of the Will, when indulged in for any length of time, produces a suspension of that inward consciousness of good and evil which we call Conscience, and which can be actively exercised only through the medium of the Will. The mental faculties and the moral perceptions lie down together in the same passive sleep. The subject is, therefore, equally liable to receive impressions from the minds of others, and from their passions and lusts. Besides this, the germs of all good and of all evil are implanted in the nature of every human being; and even when some appetite is buried in a crypt so deep that its existence is forgotten, let the warder be removed, and it will gradually work its way to the light. Persons in the receptive condition which belongs to the trance may be surrounded by honest and pure-minded individuals, and receive no harmful impressions; they may even, if of a healthy spiritual temperament, resist for a time the aggressions of evil influences; but the final danger is always the same. The state of the Medium, therefore, may be described as one in which the Will is passive, the Conscience passive, the outward senses partially (sometimes wholly) suspended, the mind helplessly subject to the operations of other minds, and the

passions and desires released from all restraining influences.* I make the statement boldly, after long and careful reflection, and severe self-examination.

As I said before, I did not entirely lose my external consciousness, although it was very dim and dream-like. On returning to the natural state, my recollection of what had occurred during the trance became equally dim; but I retained a general impression of the character of the possession. I knew that some foreign influence — the spirit of a dead poet, or hero, or saint, I then believed — governed me for the time; that I gave utterance to thoughts unfamiliar to my mind in its conscious state; and that my own individuality was lost, or so disguised that I could no longer recognize it. This very circumstance made the trance an indulgence, a spiritual intoxication, no less fascinating than that of the body, although accompanied by a similar reaction. Yet, behind all, dimly evident to me, there was an element of terror. There were times when, back of the influences which spoke with my voice, rose another, — a vast, overwhelming, threatening power, the nature of which I could not grasp, but which I knew was evil. Even when in my natural state, listening to the harsh utterances of Miss Feters or the lofty spiritual philosophy of Mr. Stilton, I have felt, for a single second, the touch of an icy wind, accompanied by a sensation of unutterable dread.

Our secret circle had not held many sessions before a remarkable change took place in the character of the revelations. Mr. Stilton ceased to report them for his paper.

“We are on the threshold, at last,” said he; “the secrets of the ages lie beyond. The hands of spirits are now lifting the veil, fold by fold. Let us not be

* The recent experiments in *Hypnotism*, in France, show that a very similar psychological condition accompanies the trance produced by gazing fixedly upon a bright object held near the eyes. I have no doubt, in fact, that it belongs to every abnormal state of the mind.

startled by what we hear: let us show that our eyes can bear the light,—that we are competent to receive the wisdom of the higher spheres, and live according to it.”

Miss Feters was more than ever possessed by the spirit of Joe Manton, whose allowance of grog having been cut off too suddenly by his death, he was continually clamoring for a dram.

“I tell you,” yelled he, or rather she, “I won’t stand sich meanness. I ha’n’t come all the way here for nothin’. I’ll knock Erasmus all to thunder, if you go for to turn me out dry, and let him come in.”

Mr. Stilton thereupon handed him, or her, a tumbler half-full of brandy, which she gulped down at a single swallow. Joe Manton presently retired to make room for Erasmus, who spoke for some time in Latin, or what appeared to be Latin. None of us could make much of it; but Mr. Stilton declared that the Latin pronunciation of Erasmus was probably different from ours, or that he might have learned the true Roman accent from Cicero and Seneca, with whom, doubtless, he was now on intimate terms. As Erasmus generally concluded by throwing his arms, or rather the arms of Miss Feters, around the neck of Mr. Stilton, — his spirit fraternizing, apparently, with the spirit of the latter, — we greatly regretted that his communications were unintelligible, on account of the superior wisdom which they might be supposed to contain.

I confess, I cannot recall the part I played in what would have been a pitiable farce, if it had not been so terribly tragical, without a feeling of utter shame. Nothing but my profound sympathy for the thousands and tens of thousands who are still subject to the same delusion could compel me to such a sacrifice of pride. Curiously enough, (as I thought *then*, but not now,) the enunciation of sentiments opposed to my moral sense — the abolition, in fact, of all moral restraint — came from my lips, while the actions of Miss Feters hinted at their practical application. Upon the ground

that the interests of the soul were paramount to all human laws and customs, I declared — or rather, *my voice* declared — that self-denial was a fatal error, to which half the misery of mankind could be traced; that the passions, held as slaves, exhibited only the brutish nature of slaves, and would be exalted and glorified by entire freedom; and that our sole guidance ought to come from the voices of the spirits who communicated with us, instead of the imperfect laws constructed by our benighted fellow-men. How clear and logical, how lofty, these doctrines seemed! If, at times, something in their nature repelled me, I simply attributed it to the fact that I was still but a neophyte in the Spiritual Philosophy, and incapable of perceiving the truth with entire clearness.

Mr. Stilton had a wife, — one of those meek, amiable, simple-hearted women whose individuality seems to be completely absorbed into that of their husbands. When such women are wedded to frank, tender, protecting men, their lives are truly blessed; but they are willing slaves to the domestic tyrant. They bear uncomplainingly, — many of them even without a thought of complaint, — and die at last with their hearts full of love for the brutes who have trampled upon them. Mrs. Stilton was perhaps forty years of age, of middle height, moderately plump in person, with light-brown hair, soft, inexpressive gray eyes, and a meek, helpless, imploring mouth. Her voice was mild and plaintive, and its accents of anger (if she ever gave utterance to such) could not have been distinguished from those of grief. She did not often attend our sessions, and it was evident, that, while she endeavored to comprehend the revelations, in order to please her husband, their import was very far beyond her comprehension. She was now and then a little frightened at utterances which no doubt sounded lewd or profane to her ears; but after a glance at Mr. Stilton's face, and finding that it betrayed neither horror nor surprise, would persuade herself that everything must be right.

“Are you sure,” she once timidly whispered to me, “are you very sure, Mr. ———, that there is no danger of being led astray? It seems strange to me; but perhaps I don't understand it.”

Her question was so indefinite, that I found it difficult to answer. Stilton, however, seeing me engaged in endeavoring to make clear to her the glories of the new truth, exclaimed, —

“That's right, John! Your spiritual plane slants through many spheres, and has points of contact with a great variety of souls. I hope my wife will be able to see the light through you, since I appear to be too opaque for her to receive it from me.”

“Oh, Abijah!” said the poor woman, “you know it is my fault. I try to follow, and I hope I have faith, though I don't see everything as clearly as you do.”

I began also to have my own doubts, as I perceived that an “affinity” was gradually being developed between Stilton and Miss Fetters. She was more and more frequently possessed by the spirit of Erasmus, whose salutations, on meeting and parting with his brother-philosopher, were too enthusiastic for merely masculine love. But, whenever I hinted at the possibility of mistaking the impulses of the soul, or at evil resulting from a too sudden and universal liberation of the passions, Stilton always silenced me with his inevitable logic. Having once accepted the premises, I could not avoid the conclusions.

“When our natures are in harmony with spirit-matter throughout the spheres,” he would say, “our impulses will always be in accordance. Or, if there should be any temporary disturbance, arising from our necessary intercourse with the gross, blinded multitude, we can always fly to our spiritual monitors for counsel. Will not they, the immortal souls of the ages past, who have guided us to a knowledge of the truth, assist us also in preserving it pure?”

In spite of this, in spite of my admiration of Stilton's intellect, and my yet unshaken faith in Spiritualism, I was conscious that the harmony of the circle was

becoming impaired to me. Was I falling behind in spiritual progress? Was I too weak to be the medium for the promised revelations? I threw myself again and again into the trance, with a recklessness of soul which fitted me to receive any, even the darkest impressions, to catch and proclaim every guilty whisper of the senses, and, while under the influence of the excitement, to exult in the age of license which I believed to be at hand. But darker, stronger grew the terror which lurked behind this spiritual carnival. A more tremendous power than that which I now recognized as coming from Stilton's brain was present, and I saw myself whirling nearer and nearer to its grasp. I felt, by a sort of blind instinct, too vague to be expressed, that some demoniac agency had thrust itself into the manifestations,—perhaps had been mingled with them from the outset.

For two or three months, my life was the strangest mixture of happiness and misery. I walked about with the sense of some crisis hanging over me. My "possessions" became fiercer and wilder, and the reaction so much more exhausting that I fell into the habit of restoring myself by means of the bottle of brandy which Mr. Stilton took care should be on hand, in case of a visit from Joe Manton. Miss Fetters, strange to say, was not in the least affected by the powerful draughts she imbibed. But, at the same time, my waking life was growing brighter and brighter under the power of a new and delicious experience. My nature is eminently social, and I had not been able—indeed, I did not desire—wholly to withdraw myself from intercourse with non-believers. There was too much in society that was congenial to me to be given up. My instinctive dislike to Miss Abby Fetters and my compassionate regard for Mrs. Stilton's weakness only served to render the company of intelligent, cultivated women more attractive to me. Among those whom I met most frequently was Miss Agnes Honeywood, a calm, quiet, unobtrusive girl, the characteristic

of whose face was sweetness rather than beauty, while the first feeling she inspired was respect rather than admiration. She had just that amount of self-possession which conceals without conquering the sweet timidity of woman. Her voice was low, yet clear; and her mild eyes, I found, were capable, on occasion, of both flashing and melting. Why describe her? I loved her before I knew it; but, with the consciousness of my love, that clairvoyant sense on which I had learned to depend failed for the first time. Did she love me? When I sought to answer the question in her presence, all was confusion within.

This was not the only new influence which entered into and increased the tumult of my mind. The other half of my two-sided nature—the cool, reflective, investigating faculty—had been gradually ripening, and the questions which it now began to present seriously disturbed the complacency of my theories. I saw that I had accepted many things on very unsatisfactory evidence; but, on the other hand, there was much for which I could find no other explanation. Let me be frank, and say, that I do not *now* pretend to explain all the phenomena of Spiritualism. This, however, I determined to do,—to ascertain, if possible, whether the influences which governed me in the trance state came from the persons around, from the exercise of some independent faculty of my own mind, or really and truly from the spirits of the dead. Mr. Stilton appeared to notice that some internal conflict was going on; but he said nothing in regard to it, and, as events proved, he entirely miscalculated its character.

I said to myself,—“If this chaos continues, it will drive me mad. Let me have one bit of solid earth beneath my feet, and I can stand until it subsides. Let me throw over the best bower of the heart, since all the anchors of the mind are dragging!” I summoned resolution. I made that desperate venture which no true man makes without a pang of forced courage; but, thank God! I did not make

it in vain. Agnes loved me, and in the deep, quiet bliss which this knowledge gave I felt the promise of deliverance. She knew and lamented my connection with the Spiritualists; but, perceiving my mental condition from the few intimations which I dared to give her, discreetly held her peace. But I could read the anxious expression of that gentle face none the less.

My first endeavor to solve the new questions was to check the *abandon* of the trance condition, and interfuse it with more of sober consciousness. It was a difficult task; and nothing but the circumstance that my consciousness had never been entirely lost enabled me to make any progress. I finally succeeded, as I imagined, (certainty is impossible,) in separating the different influences which impressed me, — perceiving where one terminated and the other commenced, or where two met and my mind vibrated from one to the other until the stronger prevailed, or where a thought which seemed to originate in my own brain took the lead and swept away with me like the mad rush of a prairie colt. When out of the trance, I noticed attentively the expressions made use of by Mr. Stilton and the other members of the circle, and was surprised to find how many of them I had reproduced. But might they not, in the first place, have been derived from me? And what was the vague, dark Presence which still overshadowed me at such times? What was that Power which I had tempted, — which we were all tempting, every time we met, — and which continually drew nearer and became more threatening? I knew not; and I know not. I would rather not speak or think of it any more.

My suspicions with regard to Stilton and Miss Fetters were confirmed by a number of circumstances which I need not describe. That he should treat his wife in a harsh, ironical manner, which the poor woman felt, but could not understand, did not surprise me; but at other times there was a treacherous tenderness about him. He would dilate eloquently

upon the bliss of living in accordance with the spiritual harmonies. Among *us*, he said, there could be no more hatred or mistrust or jealousy, — nothing but love, pure, unselfish, perfect love. “You, my dear,” (turning to Mrs. Stilton,) “belong to a sphere which is included within my own, and share in my harmonies and affinities; yet the soul-matter which adheres to you is of a different texture from mine. Yours has also its independent affinities; I see and respect them; and even though they might lead our bodies — our outward, material lives — away from one another, we should still be true to that glorious light of love which permeates all soul-matter.”

“Oh, Abijah!” cried Mrs. Stilton, really distressed, “how can you say such a thing of me? You know I can never adhere to anybody else but you!”

Stilton would then call in my aid to explain his meaning, asserting that I had a faculty of reaching his wife’s intellect, which he did not himself possess. Feeling a certain sympathy for her painful confusion of mind, I did my best to give his words an interpretation which soothed her fears. Then she begged his pardon, taking all the blame to her own stupidity, and received his grudging, unwilling kiss with a restored happiness which pained me to the heart.

I had a growing presentiment of some approaching catastrophe. I felt, distinctly, the presence of unhallowed passions in our circle; and my steadfast love for Agnes, borne thither in my bosom, seemed like a pure white dove in a cage of unclean birds. Stilton held me from him by the superior strength of his intellect. I began to mistrust, even to hate him, while I was still subject to his power, and unable to acquaint him with the change in my feelings. Miss Fetters was so repulsive that I never spoke to her when it could be avoided. I had tolerated her, heretofore, for the sake of her spiritual gift; but now, when I began to doubt the authenticity of that gift, her hungry eyes, her thin lips, her flat breast, and cold, dry hands excit-

ed in me a sensation of absolute abhorrence.

The doctrine of Affinities had some time before been adopted by the circle, as a part of the Spiritual Truth. Other circles, with which we were in communication, had also received the same revelation; and the ground upon which it was based, in fact, rendered its acceptance easy. Even I, shielded as I was by the protecting arms of a pure love, sought in vain for arguments to refute a doctrine, the practical operation of which, I saw, might be so dangerous. The soul had a right to seek its kindred soul: that I could not deny. Having found, they belonged to each other. Love is the only law which those who love are bound to obey. I shall not repeat all the sophistry whereby these positions were strengthened. The doctrine soon blossomed and bore fruit, the nature of which left no doubt as to the character of the tree.

The catastrophe came sooner than I had anticipated, and partly through my own instrumentality; though, in any case, it must finally have come. We were met together at the house of one of the most zealous and fanatical believers. There were but eight persons present,—the host and his wife, (an equally zealous proselyte,) a middle-aged bachelor neighbor, Mr. and Mrs. Stilton, Miss Fetters and her father, and myself. It was a still, cloudy, sultry evening, after one of those dull, oppressive days when all the bad blood in a man seems to be uppermost in his veins. The manifestations upon the table, with which we commenced, were unusually rapid and lively. "I am convinced," said Mr. Stilton, "that we shall receive important revelations to-night. My own mind possesses a clearness and quickness, which, I have noticed, always precede the visit of a superior spirit. Let us be passive and receptive, my friends. We are but instruments in the hands of loftier intelligences, and only through our obedience can this second advent of Truth be fulfilled."

He looked at me with that expression which I so well knew, as the signal for a

surrender of my will. I had come rather unwillingly, for I was getting heartily tired of the business, and longed to shake off my habit of (spiritual) intoxication, which no longer possessed any attraction, since I had been allowed to visit Agnes as an accepted lover. In fact, I continued to hold my place in the circle principally for the sake of satisfying myself with regard to the real nature and causes of the phenomena. On this night, something in Mr. Stilton's face arrested my attention, and a rapid inspiration flashed through my mind. "Suppose," I thought, "I allow the usual effect to be produced, yet reverse the character of its operation? I am convinced that he has been directing the current of my thought according to his will; let me now render myself so thoroughly passive, that my mind, like a mirror, shall reflect what passes through his, retaining nothing of my own except the simple consciousness of what I am doing." Perhaps this was exactly what he desired. He sat, bending forward a little over the table, his square jaws firmly set, his eyes hidden beneath their heavy brows, and every long, wiry hair on his head in its proper place. I fixed my eyes upon him, threw my mind into a state of perfect receptivity, and waited.

It was not long before I felt his approach. Shadow after shadow flitted across the still mirror of my inward sense. Whether the thoughts took words in his brain or in mine,—whether I first caught his disjointed musings, and, by their utterance reacting upon him, gave system and development to *his* thoughts,—I cannot tell. But this I know: what I said came wholly from him,—not from the slandered spirits of the dead, not from the vagaries of my own imagination, but from *him*. "Listen to me!" I said. "In the flesh I was a martyr to the Truth, and I am permitted to communicate only with those whom the Truth has made free. You are the heralds of the great day; you have climbed from sphere to sphere, until now you stand near the fountains of light. But it is not enough

that you see : your lives must reflect the light. The inward vision is for you, but the outward manifestation thereof is for the souls of others. Fulfil the harmonies in the flesh. Be the living music, not the silent instruments."

There was more, much more of this,—a plenitude of eloquent sound, which seems to embody sublime ideas, but which, carefully examined, contains no more palpable substance than sea-froth. If the reader will take the trouble to read an "Epic of the Starry Heavens," the production of a Spiritual Medium, he will find several hundred pages of the same character. But, by degrees, the revelation descended to details, and assumed a personal application. "In you, in all of you, the spiritual harmonies are still violated," was the conclusion. "You, Abijah Stilton, who are chosen to hold up the light of truth to the world, require that a transparent soul, capable of transmitting that light to you, should be allied to yours. She who is called your wife is a clouded lens ; she can receive the light only through John ——, who is her true spiritual husband, as Abby Fetters is *your* true spiritual wife !"

I was here conscious of a sudden cessation of the influence which forced me to speak, and stopped. The members of the circle opposite to me—the host, his wife, neighbor, and old Mr. Fetters—were silent, but their faces exhibited more satisfaction than astonishment. My eye fell upon Mrs. Stilton. Her face was pale, her eyes widely opened, and her lips dropped apart, with a stunned, bewildered expression. It was the blank face of a woman walking in her sleep. These observations were accomplished in an instant ; for Miss Fetters, suddenly possessed with the spirit of Black Hawk, sprang upon her feet. "Ugh ! ugh !" she exclaimed, in a deep, harsh voice, "where's the pale-face ? Black Hawk, he like him,—he love him much !"—and therewith threw her arms around Stilton, fairly lifting him off his feet. "Ugh ! fire-water for Black Hawk !—big Injun drink !"—and she tossed off a tumbler of

brandy. By this time I had wholly recovered my consciousness, but remained silent, stupefied by the extraordinary scene.

Presently Miss Fetters became more quiet, and the possession left her. "My friends," said Stilton, in his cold, unmoved voice, "I feel that the spirit has spoken truly. We must obey our spiritual affinities, or our great and glorious mission will be unfulfilled. Let us rather rejoice that we have been selected as the instruments to do this work. Come to me, Abby ; and you, Rachel, remember that our harmony is not disturbed, but only made more complete."

"Abijah !" exclaimed Mrs. Stilton, with a pitiful cry, while the tears burst hot and fast from her eyes ; "dear husband, what does this mean ? Oh, don't tell me that I'm to be cast off ! You promised to love me and care for me, Abijah ! I'm not bright, I know, but I'll try to understand you ; indeed I will ! Oh, don't be so cruel !—don't" —— And the poor creature's voice completely gave way.

She dropped on the floor at his feet, and lay there, sobbing piteously.

"Rachel, Rachel," said he,—and his face was not quite so calm as his voice,— "don't be rebellious. We are governed by a higher Power. This is all for our own good, and for the good of the world. Besides, ours was not a perfect affinity. You will be much happier with John, as he harmonizes" ——

I could endure it no longer. Indignation, pity, the full energy of my will, possessed me. He lost his power over me then, and forever.

"What !" I exclaimed, "you, blasphemer, beast that you are, you dare to dispose of your honest wife in this infamous way, that you may be free to indulge your own vile appetites ?—you, who have outraged the dead and the living alike, by making me utter your forgeries ? Take her back, and let this disgraceful scene end !—take her back, or I will give you a brand that shall last to the end of your days !"

He turned deadly pale, and trembled. I knew that he made a desperate effort to bring me under the control of his will, and laughed mockingly as I saw his knit brow and the swollen veins in his temples. As for the others, they seemed paralyzed by the suddenness and fierceness of my attack. He wavered but for an instant, however, and his self-possession returned.

“Ha!” he exclaimed, “it is the Spirit of Evil that speaks in him! The Devil himself has risen to destroy our glorious fabric! Help me, friends! help me to bind him, and to silence his infernal voice, before he drives the pure spirits from our midst!”

With that, he advanced a step towards me, and raised a hand to seize my arm, while the others followed behind. But I was too quick for him. Weak as I was, in comparison, rage gave me strength, and a blow, delivered with the rapidity of lightning, just under the chin, laid him senseless on the floor. Mrs. Stilton screamed, and threw herself over him. The rest of the company remained as if stupefied. The storm which had been gathering all the evening at the same instant broke over the house in simultaneous thunder and rain.

I stepped suddenly to the door, opened it, and drew a long, deep breath of relief, as I found myself alone in the darkness. “Now,” said I, “I have done tampering with God’s best gift; I will be satisfied with the natural sunshine which beams from His Word and from His Works; I have learned wisdom at the expense of shame!” I exulted in my new freedom, in my restored purity of soul; and the wind, that swept down the dark, lonely street, seemed to exult with me. The rains beat upon me, but I heeded them not; nay, I turned aside from the homeward path, in order to pass by the house where Agnes lived. Her window was dark, and I knew she was sleeping, lulled by the storm; but I stood a moment below, in the rain, and said aloud, softly, —

“Now, Agnes, I belong wholly to you!

Pray to God for me, darling, that I may never lose the true light I have found at last!”

My healing, though complete in the end, was not instantaneous. The habit of the trance, I found, had really impaired the action of my will. I experienced a periodic tendency to return to it, which I have been able to overcome only by the most vigorous efforts. I found it prudent, indeed, to banish from my mind, as far as was possible, all subjects, all memories, connected with Spiritualism. In this work I was aided by Agnes, who now possessed my entire confidence, and who willingly took upon herself the guidance of my mind at those seasons when my own governing faculties flagged. Gradually my mental health returned, and I am now beyond all danger of ever again being led into such fatal dissipations. The writing of this narrative, in fact, has been a test of my ability to overlook and describe my experience without being touched by its past delusions. If some portions of it should not be wholly intelligible to the reader, the defect lies in the very nature of the subject.

It will be noticed that I have given but a partial explanation of the spiritual phenomena. Of the genuineness of the physical manifestations I am fully convinced, and I can account for them only by the supposition of some subtile agency whereby the human will operates upon inert matter. Clairvoyance is a sufficient explanation of the utterances of the Mediums,—at least of those which I have heard; but there is, as I have said before, *something* in the background, which I feel too indistinctly to describe, yet which I know to be Evil. I do not wonder at, though I lament, the prevalence of the belief in Spiritualism. In a few individual cases it may have been productive of good, but its general tendency is evil. There are probably but few Stiltons among its apostles, few Miss Fetteresses among its Mediums; but the condition which accompanies the trance, as I have shown, inevitably removes the wholesome check which holds our baser passions in

subjection. The Medium is at the mercy of any evil will, and the impressions received from a corrupt mind are always liable to be accepted by innocent believers as revelations from the spirits of the holy dead. I shall shock many honest souls by this confession, but I hope and believe that it may awaken and enlighten others. Its publication is necessary, as an expiation for some of the evil which has been done through my own instrumentality.

I learned, two days afterwards, that Stilton (who was not seriously damaged by my blow) had gone to New York, taking Miss Fetters with him. Her ignorant, weak-minded father was entirely satisfied with the proceeding. Mrs. Stil-

ton, helpless and heart-broken, remained at the house where our circle had met, with her only child, a boy of three years of age, who, fortunately, inherited her weakness rather than his father's power. Agnes, on learning this, insisted on having her removed from associations which were at once unhappy and dangerous. We went together to see her, and, after much persuasion, and many painful scenes which I shall not recapitulate, succeeded in sending her to her father, a farmer in Connecticut. She still remains there, hoping for the day when her guilty husband shall return and be instantly forgiven.

My task is ended; may it not have been performed in vain!

JOHN ANDRE AND HONORA SNEYD.

MANY of our readers will remember the exquisite lines in which Béranger paints the connection between our mortal lives and the stars of the sky. With every human soul that finds its way to earth, a new gem is added to the azure belt of heaven. Thenceforth the two exist in mutual dependence, each influencing the other's fate; so that, when death comes to seal the lips of the man, a flame is paled and a lamp extinguished in the gulf above. In every loosened orb that shoots across the face of night the experienced eye may trace the story and the fall of a fellow-being. Youth, beauty, wealth, the humility of indigence and the pride of power, alike find their term revealed in the bright, silent course of the celestial spark; and still new signs succeed to provoke the sympathy or dazzle the philosophy of the observer.

“Quelle est cette étoile qui file,
Qui file, file, et disparaît?”

It is unfortunate that such a pretty manner of accounting for the nature and origin of falling stars should be unsus-

tained by sound astronomical data, and utterly discountenanced by Herschel and Bond. There is something in the theory very pleasant and very flattering to human nature; and there are passages in the history of our race that might make its promulgation not unacceptable. When, among the innumerable “patines of bright gold” that strew the floor of heaven, we see one part from the sphere of its undistinguished fellows, and, filling its pathway with radiant light, vanish noiselessly into annihilation, we cannot but be reminded of those characters that, with no apparent reason for being segregated from the common herd, are, through some strange conjuncture, hurried from a commonplace life by modes of death that illuminate their memory with immortal fame. It is thus that the fulfilment of the vow made in the heat of battle has given Jephthah's name a melancholy permanence above all others of the captains of Israel. Mutius would long ago have been forgotten, among the thousands of Roman soldiers

as brave as he, and not less wise, who gave their blood for the good city, but for the fortunate brazier that stood in the tent of his enemy. And Leander might have safely passed and repassed the Hellespont for twenty years without leaving anything behind to interest posterity; it was failure and death that made him famous.

Eighty years ago a tragedy was consummated by the river Hudson, which, in the character of its victim and the circumstances of his story, goes far to yield another example to the list of names immortalized by calamity. On the 2d of October, 1780, a young British officer of undistinguished birth and inconsiderable rank was hanged at Tappan. Amiable as his private life was, and respectable as were his professional abilities, it is improbable that the memory of John André, had he died upon the battle-field or in his bed, would have survived the generation of those who knew and who loved him. The future, indeed, was opening brilliantly before him; but it was still nothing more than the future. So far in his career he had hardly accomplished anything better than the attainment of the mountain-top that commanded a view of the Promised Land. It is solely and entirely to the occasion and the circumstances of his death that we are to ascribe the peculiar and universal interest in his character that has ever since continued to hold its seat in the bosom of friend and of foe. To this day, the most distinguished American and English historians are at issue respecting the justice of his doom; and to this day, the grave inquirer into the rise and fall of empires pauses by the way to glean some scanty memorial of his personal adventures. As often happens, the labors of the lesser author who pursues but a single object may encounter more success on that score than the writer whose view embraces a prodigious range; and many trifling details, too inconsiderable to find place in the pages of the annals of a state, reward the inquiry that confines itself to the elucidation of the conduct of an individual.

John André was born in England,

probably at London, — possibly at Southampton, — in the year 1751. His father was an honest, industrious Switzer, who, following the example of his countrymen and his kindred, had abandoned the rugged land of his birth, and come over to England to see what could be made out of John Bull. The family-name appears to have originally been St. André; and this was the style of the famous dancing-master who gave to the courtiers of Charles II. their graceful motions.

“St. André’s feet ne’er kept more equal time,”

wrote Dryden, in his “MacFlecknoe”; and the same writer again brings him forward in the third act of “Limberham.” It must be remembered that in those days the teacher of fencing and dancing occupied a very respectable position; and St. André’s career was sufficiently prosperous to tempt a young kinsman, who felt the elements of success strong within him, to cross the seas in his own turn, and find wealth and reputation in those pleasant pastures which England above all other countries then laid open to the skilful adventurer.

Nicholas St. André, who came to London about the close of the seventeenth century, and who was undoubtedly nearly related to the future Major André, seems to have passed through a career hardly paralleled by that of Gil Blas himself. From the humblest beginnings, his ready wit, his multifarious accomplishments, and his indomitable assurance speedily carried him to the topmost wave of social prosperity. A brief instruction in surgery gave him such a plausible appearance of proficiency in the art as to permit his public lectures to be favorably received, and to lead to his employment in the royal household. George I. made him Anatomist to the Court, and, as a token of especial grace, on one occasion, went so far as to bestow upon the young Swiss his own sword. His attainments in all the amusements of a gentleman probably had more to do with these advancements, however, than any professional skill. He was a capital linguist;

at fencing, leaping, running, and other manly exercises, he found few rivals; and his dabbings in architecture and botany were at least as notable as his mastership of chess and his skill as a musician. But when it came to a scientific test of his surgical and anatomical pretensions, his failure was lamentable indeed. The unquenchable thirst for notoriety — which he may have mistaken for fame — was perpetually leading him into questionable positions, and finally covered his name with ridicule and confusion.

An impudent woman, known as Mary Tofts, declared to the world, that, instead of a human child, she had given birth to a litter of rabbits. How such a ridiculous tale ever found believers, it is impossible to conceive; but such was the case. All England, with the very small exception of those who united the possession of learning with common sense, was imbued with the frenzy. The price of warrens was abated to a mere song, and for a season a Londoner would as readily have eaten a baked child as a roasted rabbit. The children of men were believed to populate the burrows, and authorities of the highest reputation lent an unhesitating support to the delusion. The learned Whiston published in the circumstance a fulfilment of a prophecy of Esdras, and St. André loudly urged the authenticity of the entire fable and of the theories that were founded upon it. But the satiric pen of Swift, the burin of Hogarth, and the graver investigations of Cheselden at last turned the popular tide, and covered St. André in particular with such a load of contemptuous obloquy as to drive him forever from the high circles he had moved in. So great was his spleen, that, from that time forth, he would never suffer a dish upon his table or a syllable in his conversation that could in any way bring to mind the absurd occasion of his disgrace.

If all reports are to be believed, St. André's career had led him into many singular adventures. He had saved Voltaire's life, by violently detaining Lord Peterborough, when the latter stood pre-

pared to punish with peremptory death some peccadillo of the Frenchman's. Voltaire fled from the scene, while his adversary struggled to be released. His services to Pope, when the poet was overturned in Lord Bolingbroke's coach, did not protect him from a damaging allusion in the Epilogue to the Satires, where the source of the wealth that he got by his marriage with Lady Betty Molyneux is more plainly than politely pointed out. Leaving forever, therefore, the sphere in which he had encountered so much favor and so much severity, he retired to Southampton to end his days in the society of his kindred; and it is more than probable that an indisposition to proclaim too loudly their identity of race with the unlucky surgeon was the cause of their modification of name by the immediate family from which John André sprung.

The father of our hero was a thrifty London trader, whose business as a Turkey merchant had been prosperous enough to persuade him that no other career could possibly be so well adapted for his son. The lad was of another opinion; but those were not the days when a parent's will might be safely contravened. Sent to Geneva to complete the education that had been commenced at London, he returned to a seat in the counting-room with intellectual qualifications that seemed to justify his aspirations for a very different scene of action. He was a fluent linguist, a ready and graceful master of the pencil and brush, and very well versed in the schools of military design. Add to these a proficiency in poetry and music, a person of unusual symmetry and grace, a face of almost feminine softness, yet not descending from the dignity of manhood, and we have an idea of the youth who was already meditating the means of throwing off the chains that bound him to the inkhorn and ledger, and embracing a more brilliant and glorious career. With him, the love of fame was an instinctive passion. The annals of his own fireside taught him how easily the path to distinction might be trod by men of parts and address; and he knew

in his heart that opportunity was the one and the only thing needful to insure the accomplishment of his desires. Of very moderate fortunes and utterly destitute of influential connections, he knew that his education better qualified him for the useful fulfilment of military duties than perhaps any man of his years in the service of the king. Once embarked in the profession of arms, he had nothing to rely upon but his own address to secure patronage and promotion,—nothing but his own merits to justify the countenance that his ingenuity should win. Without undue vanity, it is tolerably safe to say now that he was authorized by the existing state of things to confidently predicate his own success on these estimates.

It is not easy to underrate the professional standard of the English officer a hundred years ago. That some were good cannot be denied; that most were bad is very certain. As there was no school of military instruction in the realm, so no proof of mental or even of physical capacity was required to enable a person to receive and to hold a commission. A friend at the Horse Guards, or the baptismal gift of a godfather, might nominate a baby three days old to a pair of colors. Court influence or the ready cash having thus enrolled a puny suckling among the armed defenders of the state, he might in regular process of seniority come out a full-fledged captain or major against the season for his being soundly birched at Eton; and an ignorant school-boy would thus be qualified to govern the lives and fortunes of five hundred stalwart men, and to represent the honor and the interests of the empire in that last emergency when all might be depending on his courage and capacity. Even women were thus saddled upon the pay-lists; and the time is within the memory of living men, when a gentle lady, whose knowledge of arms may be presumed to have never extended beyond the internecine disputes of the nursery, habitually received the salary of a captaincy of dragoons. In ranks thus officered, it was easy to fore-

petent ability, when once backed by patronage.

So long, however, as his dependence upon his father endured, it was useless for André to anticipate the day when he might don the king's livery. The repugnance with which his first motion in the matter was greeted, and the affectionate opposition of his mother and sisters, seem to have at least silenced, if they did not extinguish his desires. And when the death of his father, in 1769, left him free to select his own pathway through the world, a new conjuncture of affairs again caused him to smother his cherished aspirations.

The domestic relations of the André family were ever peculiarly tender and affectionate; and in the loss of its head the survivors confessed a great and a corroding sorrow. To repair the shattered health and recruit the exhausted spirits of his mother and sisters, the son resolved to lead them at once away from the daily contemplation of the grave to more cheerful scenes. The medicinal waters of Derbyshire were then in vogue, and a tour towards the wells of Buxton and of Matlock was undertaken. Among the acquaintances that ensued from this expedition was that of the family of the Rev. Mr. Seward of Lichfield; and while a warm and lasting friendship rapidly grew up between André and Miss Anna Seward, his heart was surrendered to the charms of her adopted sister, Miss Honora Sneyd.

By every account, Honora Sneyd must have been a paragon of feminine loveliness. Her father was a country-gentleman of Staffordshire, who had been left, by the untimely death of their mother, to the charge of a bevy of infants. The solicitude of friends and relatives had sought the care of these, and thus Honora became virtually a daughter of Mrs. Seward's house. The character of this establishment may be conjectured from the history of Anna Seward. Remote from the crushing weight of London authority, she grew up in a provincial atmosphere of literary and social refinement, and fondly

believed that the polite praises (for censure was a thing unknown among them) that were bandied about in her own coterie would be cordially echoed by the voices of posterity. In this she has been utterly deceived; but at the same time it must be confessed that there was much in the tone of the reigning circles at Lichfield, in those days, to contrast most favorably with the manners of the literary sovereigns of the metropolis, or the intellectual elevation of the rulers of fashion. At Lichfield, it was polite to be learned, and good-breeding and mutual admiration went hand in hand.

In such an atmosphere had Miss Sneyd been educated; and the enthusiastic, not to say romantic, disposition of Miss Seward must have given additional effect to every impulse that taught her to acknowledge and rejoice in the undisguised admiration of the young London merchant. His sentiments were as pure and lofty as her own; his person was as attractive as that of any hero of romance; and his passion was deep and true. With the knowledge and involuntary approbation of all their friends, the love-affair between the two young people went on without interruption or opposition. It seemed perfectly natural and proper that they should be brought together. It was not, therefore, until a formal betrothal began to loom up, that the seniors on either side bethought themselves of the consequences. Neither party was a beggar; but neither was in possession of sufficient estate to render a speedy marriage advisable. It was concluded, then, to prohibit any engagement, which must inevitably extend over several years, between two young persons whose acquaintance was of so modern a date, and whose positions involved a prolonged and wide separation. To this arrangement it would appear that Honora yielded a more implicit assent than her lover. His feelings were irretrievably interested; and he still proposed to himself to press his suit without intermission during the term of his endurance. His mistress, whose affections had not yet passed entirely beyond

her own control, was willing to receive as a friend the man whom she was forbidden to regard as an elected husband.

It was by the representations of Miss Seward, who strongly urged on him the absolute necessity of his adherence to trade, if he wished to secure the means of accomplishing matrimony, that André was now persuaded to renounce, for some years longer, his desire for the army. He went back to London, and applied himself diligently to his business. An occasional visit to Lichfield, and a correspondence that he maintained with Miss Seward, served to keep his flame sufficiently alive. His letters are vivacious and characteristic, and the pen-and-ink drawings with which his text was embellished gave them additional interest. Here is a specimen of them. It will be noted, that, according to the sentimental fashion of the day, his correspondent must be called Julia because her name is Anna.

“London, October 19, 1769.

“FROM the midst of books, papers, bills, and other implements of gain, let me lift up my drowsy head awhile to converse with dear Julia. And first, as I know she has a fervent wish to see me a quill-driver, I must tell her that I begin, as people are wont to do, to look upon my future profession with great partiality. I no longer see it in so disadvantageous a light. Instead of figuring a merchant as a middle-aged man, with a bob wig, a rough beard, in snuff-coloured clothes, grasping a guinea in his red hand, I conceive a comely young man, with a tolerable pig-tail, wielding a pen with all the noble fierceness of the Duke of Marlborough brandishing a truncheon upon a sign-post, surrounded with types and emblems, and canopied with cornucopias that disembody their stores upon his head; Mercuries reclin'd upon bales of goods; Genii playing with pens, ink, and paper; while, in perspective, his gorgeous vessels ‘launched on the bosom of the silver Thames’ are wafting to distant lands the produce of this commercial na-

tion. Thus all the mercantile glories crowd on my fancy, emblazoned in the most effulgent colouring of an ardent imagination. Borne on her soaring pinions, I wing my flight to the time when Heaven shall have crowned my labours with success and opulence. I see sumptuous palaces rising to receive me; I see orphans, and widows, and painters, and fiddlers, and poets, and builders, protected and encouraged; and when the fabrick is pretty nearly finished by my shattered pericranium, I cast my eyes around, and find John André by a small coal-fire in a gloomy compting-house in Warnford Court, nothing so little as what he has been making himself, and in all probability never to be much more than he is at present. But, oh! my dear Honora! it is for thy sake only I wish for wealth.—You say she was somewhat better at the time you wrote last. I must flatter myself that she will soon be without any remains of this threatening disease.

“It is seven o’clock.—You and Honora, with two or three more select friends, are now probably encircling your dressing-room fireplace. What would I not give to enlarge that circle! The idea of a clean hearth, and a snug circle round it, formed by a few select friends, transports me. You seem combined together against the inclemency of the weather, the hurry, bustle, ceremony, censoriousness, and envy of the world. The purity, the warmth, the kindly influence of fire, to all for whom it is kindled, is a good emblem of the friendship of such amiable minds as Julia’s and her Honora’s. Since I cannot be there in reality, pray, imagine me with you; admit me to your *conversationés*:—Think how I wish for the blessing of joining them!—and be persuaded that I take part in all your pleasures, in the dear hope, that, ere it be very long, your blazing hearth will burn again for me. Pray, keep me a place; let the poker, tongs, or shovel represent me:—But you have Dutch tiles, which are infinitely better; so let Moses, or Aaron, or Balaam’s ass be my representative.

“But time calls me to Clapton. I quit

you abruptly till to-morrow: when, if I do not tear the nonsense I have been writing, I may perhaps increase its quantity. Signora Cynthia is in clouded majesty. Silvered with her beams, I am about to jog to Clapton upon my own stumps; musing, as I homeward plod my way.—Ah! need I name the subject of my contemplations?

“*Thursday.*

“I had a sweet walk home last night, and found the Claptonians, with their fair guest, a Miss Mourgue, very well. My sisters send their amities, and will write in a few days.

“This morning I returned to town. It has been the finest day imaginable; a solemn mildness was diffused throughout the blue horizon; its light was clear and distinct rather than dazzling; the serene beams of an autumnal sun! Gilded hills, variegated woods, glittering spires, ruminating herds, bounding flocks, all combined to enchant the eyes, expand the heart, and ‘chase all sorrows but despair.’ In the midst of such a scene, no lesser sorrow can prevent our sympathy with Nature. A calmness, a benevolent disposition seizes us with sweet, insinuating power. The very brute creation seem sensible of these beauties. There is a species of mild cheerfulness in the face of a lamb, which I have but indifferently expressed in a corner of my paper, and a demure, contented look in an ox, which, in the fear of expressing still worse, I leave unattempted.

“Business calls me away—I must dispatch my letter. Yet what does it contain? No matter—You like anything better than news. Indeed, you have never told me so; but I have an intuitive knowledge upon the subject, from the sympathy which I have constantly perceived in the tastes of Julia and *Cher Jean*. What is it to you or me,

“If here in the city we have nothing but riot;
If the Spitalfield weavers can’t be kept quiet;
If the weather is fine, or the streets should be dirty;
Or if Mr. Dick Wilson died aged of thirty?

"But if I was to hearken to the versifying grumbling I feel within me, I should fill my paper, and not have room left to intreat that you would plead my cause with Honora more eloquently than the enclosed letter has the power of doing. Apropos of verses, you desire me to recollect my random description of the engaging appearance of the charming Mrs. ———. Here it is at your service.

"Then rustling and bustling the lady comes
down,
With a flaming red face and a broad yellow
gown,
And a hobbling out-of-breath gait, and a
frown.

"This little French cousin of our's, Delarise, was my sister Mary's playfellow at Paris. His sprightliness engages my sisters extremely. Doubtless they tell much of him to you in their letters.

"How sorry I am to bid you adieu! Oh, let me not be forgot by the friends most dear to you at Lichfield. Lichfield! Ah, of what magic letters is that little word composed! How graceful it looks, when it is written! Let nobody talk to me of its original meaning, 'The Field of Blood'! Oh, no such thing! It is the field of joy! 'The beautiful city, that lifts her fair head in the valley, and says, *I am, and there is none beside me.*' Who says she is vain? Julia will not say so,—nor yet Honora,—and least of all, their devoted

"JOHN ANDRÉ."

It is not difficult to perceive in the tone of this letter that its writer was not an accepted lover. His interests with the lady, despite Miss Seward's watchful care, were already declining; and the lapse of a few months more reduced him to the level of a valued and entertaining friend, whose civilities were not to pass the conventional limits of polite intercourse. To André this fate was very hard. He was hopelessly enamored; and so long as fortune offered him the least hope of even-

tual success, he persevered in the faith that Honora might yet be his own. But every returning day must have shaken this faith. His visits were discontinued and his correspondence dropped. Other suitors pressed their claims, and often urged an argument which it was beyond his means to supply. They came provided with what Parson Hugh calls good gifts: "Seven hundred pounds and possibilities is good gifts." Foremost among these dangerous rivals were two men of note in their way: Richard Lovell Edgeworth, and the eccentric, but amiable Thomas Day.

Mr. Day was a man whose personal charms were not great. Overgrown, awkward, pitted with the small-pox, he offered no pleasing contrast to the discarded André: but he had twelve hundred pounds a year. His notions in regard to women were as peculiar as his estimate of his own merit. He seems to have really believed that it would be impossible for any beautiful girl to refuse her assent to the terms of the contract by which she might acquire his hand. These were absurd to a degree; and it is not cause for surprise that Miss Sneyd should have unhesitatingly refused them. Poor Mr. Day was not prepared for such continued ill-luck in his matrimonial projects. He had already been very unfortunate in his plans for obtaining a perfect wife,—having vainly provided for the education of two foundlings between whom he promised himself to select a paragon of a helpmate. To drop burning sealing-wax upon their necks, and to discharge a pistol close to their ears, were among his philosophical rules for training them to habits of submission and self-control; and the upshot was, that they were fain to attach themselves to men of less wisdom, but better taste. Miss Sneyd's conduct was more than he could well endure, after all his previous disappointments; and he went to bed with a fever that did not leave him till his passion was cured. He could not at this time have anticipated, however, that the friendly hand which had aided the prosecution of his addresses

was eventually destined to receive and hold the fair prize which so many were contending for.

Richard Lovell Edgeworth, the ambassador and counsellor of Mr. Day in this affair, was at the very moment of the rejection himself enamored of Miss Sneyd. But Edgeworth had a wife already, — a pining, complaining woman, he tells us, who did not make his home cheerful, — and honor and decency forbade him to open his mouth on the subject that occupied his heart. He wisely sought refuge in flight, and in other scenes the natural exuberance of his disposition afforded a relief from the pangs of an unlawful and secret passion. Lord Byron, who met him forty years afterwards, in five lines shows us the man: if he was thus seen in the dry wood, we can imagine what he was in the green: — “I thought Edgeworth a fine old fellow, of a clarety, elderly, red complexion, but active, brisk, and endless. He was seventy, but did not look fifty, — no, nor forty-eight even.” He was in France when the death of his father left him to the possession of a good estate, — and that of his wife occurring in happy concurrence, he lost little time in opening in his own behalf the communications that had failed when he spoke for Mr. Day. His wooing was prosperous; in July, 1773, he married Miss Sneyd.

It is a mistake, sanctioned by the constant acceptance of historians, to suppose that it was this occasion that prompted André to abandon a commercial life. The improbability of winning Honora's hand, and the freedom with which she received the addresses of other men, undoubtedly went far to convince him of the folly of sticking to trade with but one motive; and so soon as he attained his majority, he left the desk and stool forever, and entered the army. This was a long time before the Edgeworth marriage was undertaken, or even contemplated.

Lieutenant André of the Royal Fusiliers had a very different line of duty to perform from Mr. André, merchant, of

Warnford Court, Throgmorton Street; and the bustle of military life, doubtless, in some degree diverted his mind from the disagreeable contemplation of what was presently to occur at Lichfield. Some months were spent on the Continent and among the smaller German courts about the Rhine. After all was over, however, and the nuptial knot fairly tied that destroyed all his youthful hopes, he is related to have made a farewell expedition to the place of his former happiness. There, at least, he was sure to find one sympathizing heart. Miss Seward, who had to the very last minute contended with her friend against Mr. Edgeworth and in support of his less fortunate predecessor, now met him with open arms. No pains were spared by her to alleviate, since she could not remove, the disappointment that evidently possessed him. A legend is preserved in connection with this visit that is curious, though manifestly of very uncertain credibility. It is said that an engagement had been made by Miss Seward to introduce her friend to two gentlemen of some note in the neighborhood, Mr. Cunningham and Mr. Newton. On the appointed morning, while awaiting their expected guests, Cunningham related to his companion a vision — or rather, a series of visions — that had greatly disturbed his previous night's repose. He was alone in a wide forest, he said, when he perceived a rider approaching him. The horseman's countenance was plainly visible, and its lines were of a character too interesting to be readily forgotten. Suddenly three men sprang forth from an ambush among the thickets, and, seizing the stranger, hauled him from his horse and bore him away. To this succeeded another scene. He stood with a great multitude near by some foreign town. A bustle was heard, and he beheld the horseman of his earlier dream again led along a captive. A gibbet was erected, and the prisoner was at once hanged. In narrating this tale, Cunningham averred that the features of its hero were still fresh in his recollection; the door open-

ed, and in the face of André, who at that moment presented himself, he professed to recognize that which had so troubled his slumbers.

Such is the tale that is recorded of the supernatural revelation of André's fate. If it rested on somewhat better evidence than any we are able to find in its favor, it would be at least more interesting. But whether or no the young officer continued to linger in the spirit about the spires of Lichfield and the romantic shades of Derbyshire, it is certain that his fleshly part was moving in a very different direction. In 1774, he embarked to join his regiment, then posted in Canada, and arrived at Philadelphia early in the autumn of the year.

It is not within the design of this paper to pursue to any length the details of André's American career. Regimental duties in a country district rarely afford matter worthy of particular record; and it is not until the troubles of our Revolutionary War break out, that we find anything of mark in his story. He was with the troops that Carleton sent down, after the fall of Ticonderoga, to garrison Chambly and St. John's, and to hold the passage of the Sorel against Montgomery and his little army. With the fall of these forts, he went into captivity. There is too much reason to believe that the imprisonment of the English on this occasion was not alleviated by many exhibitions of generosity on the part of their captors. Montgomery, indeed, was as humane and honorable as he was brave; but he was no just type of his followers. The articles of capitulation were little regarded, and the prisoners were, it would seem, rapidly despoiled of their private effects. "I have been taken by the Americans," wrote André, "and robbed of everything save the picture of Honora, which I concealed in my mouth. Preserving that, I think myself happy." Sent into the remote parts of Pennsylvania, his companions and himself met with but scant measure of courtesy from the mountaineers of that region; nor was he exchanged for many

long and weary months. Once more free, however, his address and capacity soon came to his aid. His reports and sketches speedily commended him to the especial favor of the commander-in-chief, Sir William Howe; and ere long he was promoted to a captaincy and made aide-de-camp to Sir Charles Grey. This was a dashing, hard-fighting general of division, whose element was close quarters and whose favorite argument was the cold steel. If, therefore, André played but an inactive part at the Brandywine, he had ample opportunity on other occasions of tasting the excitement and the horrors of war. The night-surprises of Wayne at Paoli, and of Baylor on the Hudson,—the scenes of Germantown and Monmouth,—the reduction of the forts at Verplanck's Ferry, and the forays led against New Bedford and the Vineyard,—all these familiarized him with the bloody fruits of civil strife. But they never blunted for one moment the keenness of his humanity, or warped those sentiments of refinement and liberality that always distinguished him. Within the limited range of his narrow sphere, he was constantly found the friend and reliever of the wounded or captive Americans, and the protector and benefactor of the followers of his own banner. Accomplished to a degree in all the graces that adorn the higher circles of society, he was free from most of their vices; and those who knew him well in this country have remarked on the universal approbation of both sexes that followed his steps, and the untouched heart that escaped so many shafts. Nor, while foremost in the brilliant pleasures that distinguished the British camp and made Philadelphia a Capua to Howe, was he ever known to descend to the vulgar sports of his fellows. In the balls, the theatricals, the picturesque *Mischianza*, he bore a leading hand; but his affections, meanwhile, appear to have remained where they were earliest and last bestowed. In our altered days, when marriage and divorce seem so often interchangeable words, and

loyal fidelity but an Old-World phrase, ill-fashioned and out of date, there is something very attractive in this hopeless constancy of an exiled lover.

Beyond the seas, meanwhile, the object of this unfortunate attachment was leading a happy and a useful life in the fulfilment of the various duties of a wife, a mother, and a friend. Her husband was a large landed proprietor, and in public spirit was inferior to no country-gentleman of the kingdom. Many of his notions were fanciful enough, it must be allowed; but they were all directed to the improvement and amelioration of his native land and its people. In these pursuits, as well as in those of learning, Mrs. Edgeworth was the active and useful coadjutor of her husband; and it was probably to the desire of this couple to do something that would make the instruction of their children a less painful task than had been their own, that we are indebted for the adaptation of the simpler rudiments of science to a childish dress. In 1778 they wrote together the First Part of "Harry and Lucy," and printed a handful of copies in that large black type which every one associates with the first school-days of his childhood. From these pages she taught her own children to read. The plan was communicated to Mr. Day, who entered into it eagerly; and an educational library seemed about to be prepared for the benefit of a far-away household in the heart of Ireland. But a hectic disorder, that had threatened Mrs. Edgeworth's life while yet a child, now returned upon her with increased virulence; and the kind and beautiful mistress of Edgeworthstown was compelled to forego this and every other earthly avocation. Mr. Day expanded his little tale into the delightful story of "Sandford and Merton," a book that long stood second only to "Robinson Crusoe" in the youthful judgment of the great boy-world; and in later years, Maria Edgeworth included "Harry and Lucy" in her "Early Lessons." It is thus a point to be noticed, that nothing but the *res angusta domi*, the lack of wealth,

on the part of young André, was the cause of that series of little volumes being produced by Miss Edgeworth, which so long held the first place among the literary treasures of the nurseries of England and America. Lazy Lawrence, Simple Susan, and a score more of excellently conceived characters, might never have been called from chaos to influence thousands of tender minds, but for André's narrow purse.

The ravages of the insidious disease with which she was afflicted soon came to an end; and after a term of wedlock as brief as it was prosperous, Mrs. Edgeworth's dying couch was spread.—"I have every blessing," she wrote, "and I am happy. The conversation of my beloved husband, when my breath will let me have it, is my greatest delight: he procures me every comfort, and, as he always said he thought he should, contrives for me everything that can ease and assist my weakness,—

'Like a kind angel, whispers peace,
And smooths the bed of death.'

Rightly viewed, the closing scenes in the life of this estimable woman are not less solemn, not less impressive, than those of that memorable day, when, with all the awful ceremonials of offended justice and the stern pageantries of war, her lover died in the full glare of noonday before the eyes of assembled thousands. He had played for a mighty stake, and he had lost. He had perilled his life for the destruction of our American empire, and he was there to pay the penalty: and surely never, in all the annals of our race, has a man more gallantly yielded up his forfeited breath, or under circumstances more impressive. He perished regretted alike by friend and foe; and perhaps not one of the throng that witnessed his execution but would have rejoicingly hailed a means of reconciling his pardon with the higher and inevitable duties which they owed to the safety of the army and the existence of the state. And in the aspect which the affair has since taken, who can say that

André's fate has been entirely unfortunate? He drank out the wine of life while it was still sparkling and foaming and bright in his cup: he tasted none of the bitterness of its lees till almost his last sun had risen. When he was forever parted from the woman whom he loved, a new, but not an earthly mistress succeeded to the vacant throne; and thenceforth the love of glory possessed his heart exclusively. And how rarely has a greater lustre attached to any name than to his! His bones are laid with those of the wisest and mightiest of the land; the gratitude of monarchs cumbers the earth with his sepulchral honors; and his memory is consecrated in the most eloquent pages of the history not only of his own country, but of that which sent him out of existence. Looked upon thus, death might have been welcomed

by him as a benefit rather than dreaded as a calamity, and the words applied by Cicero to the fate of Crassus be repeated with fresh significancy,—“*Mors donata quam vita erepta.*”

The same year that carries on its records the date of André's fall witnessed the death of a second Honora Edgeworth, the only surviving daughter of Honora Sneyd. She is represented as having inherited all the beauty, all the talents of her mother. The productions of her pen and pencil seem to justify this assertion, so far as the precocity of such a mere child may warrant the ungarnered fruits of future years. But with her parent's person she received the frailties of its constitution; and, ere girlhood had fairly opened upon her way of life, she succumbed to the same malady that had wrecked her mother.

WE SHALL RISE AGAIN.

WE know the spirit shall not taste of death:

Earth bids her elements,

“Turn, turn again to me!”

But to the soul, unto the soul, she saith,

“Flee, alien, flee!”

And circumstance of matter what doth weigh?

Oh! not the height and depth of this to know

But reachings of that grosser element,

Which, entered in and clinging to it so,

With earthlier earthiness than dwells in clay,

Can drag the spirit down, that, looking up,

Sees, through surrounding shades of death and time,

With solemn wonder, and with new-born hope,

The dawning glories of its native clime;

And inly swell such mighty floods of love,

Unutterable longing and desire,

For that celestial, blessed home above,

The soul springs upward like the mounting fire,

Up, through the lessening shadows on its way,

While, in its raptured vision, grows more clear

The calm, the high, illimitable day

To which it draws more near and yet more near.

Draws near? Alas! its brief, its waning strength
 Upward no more the fetters' weight can bear:
 It falters,— pauses,— sinks; and, sunk at length,
 Plucks at its chain in frenzy and despair.

Not forever fallen! Not in eternal prison!
 No! hell with fire of pain
 Melteth apart its chain;
 Heaven doth once more constrain:
 It hath arisen!

And never, never again, thus to fall low?
 Ah, no!
 Terror, Remorse, and Woe,
 Vainly they pierced it through with many sorrows;
 Hell shall regain it,— thousand times regain it;
 But can detain it
 Only awhile from ruthless Heaven's to-morrows.

That sin is suffering,
 It knows,— it knows this thing;
 And yet it courts the sting
 That deeply pains it;
 It knows that in the cup
 The sweet is but a sup,
 That Sorrow fills it up,
 And who drinks drains it.

It knows; who runs may read.
 But, when the fetters dazzle, heaven's far joy seems dim;
 And 'tis not life but so to be inwound.
 A little while, and then — behold it bleed
 With madness of its throes to be unbound!

It knows. But when the sudden stress
 Of passion is resistlessness,
 It drags the flood that sweeps away,
 For anchorage, or hold, or stay,
 Or saving rock of stableness,
 And there is none,—
 No underlying fixedness to fasten on:
 Unsounded depths; unsteadfast seas;
 Wavering, yielding, bottomless depths:
 But these!

Yea, sometimes seemeth gone
 The Everlasting Arm we lean upon!

So blind, as well as maimed and halt and lame,
 What sometimes makes it see?
 Oppressed with guilt and gnawed upon of shame,
 What comes upon it so,

Faster and faster stealing,
 Flooding it like an air or sea
 Of warm and golden feeling ?
 What makes it melt,
 Dissolving from the earthiness that made it hard and heavy ?
 What makes it melt and flow,
 And melt and melt and flow, —
 Till light, clear-shining through its heart of dew,
 Makes all things new ?

Loosed from the spirit of infirmity, listen its cry.

“ Was it I that longed for oblivion,
 O wonderful Love ! was it I,
 That deep in its easeful water
 My wounded soul might lie ?
 That over the wounds and anguish
 The easeful flood might roll ?
 A river of loving-kindness
 Has healed and hidden the whole.
 Lo ! in its pitiful bosom
 Vanish the sins of my youth, —
 Error and shame and backsliding
 Lost in celestial rath.

“ O grace too great !
 O excellency of my new estate !

“ No more, for the friends that love me,
 I shall veil my face or grieve
 Because love outrunneth deserving ;
 I shall be as they believe.
 And I shall be strong to help them,
 Filled of Thy fulness with stores
 Of comfort and hope and compassion.
 Oh, upon all my shores,
 With the waters with which Thou dost flood me,
 Bid me, my Father, o'erflow !
 Who can taste Thy divineness,
 Nor hunger and thirst to bestow ?
 Send me, oh, send me !
 The wanderers let me bring !
 The thirsty let me show
 Where the rivers of gladness spring,
 And fountains of mercy flow !
 How in the hills shall they sit and sing,
 With valleys of peace below !”

Oh that the keys of our hearts the angels would bear in their bosoms !
 For revelation fades and fades away,
 Dream-like becomes, and dim, and far-withdrawn ;
 And evening comes to find the soul a prey,
 That was caught up to visions at the dawn ;

Sword of the spirit, — still it sheathes in rust,
And lips of prophecy are sealed with dust.

High lies the better country,
The land of morning and perpetual spring ;
But graciously the warder
Over its mountain-border
Leans to us, beckoning, — bids us, "Come up hither !"
And though we climb with step unfixed and slow,
From visioning heights of hope we look off thither,
And we must go.

And we shall go ! And we shall go !
We shall not always weep and wander so, —
Not always in vain,
By merciful pain,
Be upcast from the hell we seek again !
How shall we,
Whom the stars draw so, and the uplifting sea ?
Answer, thou Secret Heart ! how shall it be,
With all His infinite promising in thee ?

Beloved ! beloved ! not cloud and fire alone
From bondage and the wilderness restore,
And guide the wandering spirit to its own ;
But all His elements, they go before :
Upon its way the seasons bring,
And hearten with foreshadowing
The resurrection-wonder,
What lands of death awake to sing
And germs of hope swell under ;
And full and fine, and full and fine,
The day distils life's golden wine ;
And night is Palace Beautiful, peace-chambered.
All things are ours ; and life fills up of them
Such measure as we hold.
For ours beyond the gate,
The deep things, the untold,
We only wait.

THE PROFESSOR'S STORY.

CHAPTER XXIII.

THE WILD HUNTSMAN.

THE young master had not forgotten the old Doctor's cautions. Without attributing any great importance to the warning he had given him, Mr. Bernard had so far complied with his advice that he was becoming a pretty good shot with the pistol. It was an amusement as good as many others to practise, and he had taken a fancy to it after the first few days.

The popping of a pistol at odd hours in the back-yard of the Institute was a phenomenon more than sufficiently remarkable to be talked about in Rockland. The viscous intelligence of a country-village is not easily stirred by the winds which ripple the fluent thought of great cities, but it holds every straw and entangles every insect that lights upon it. It soon became rumored in the town that the young master was a wonderful shot with the pistol. Some said he could hit a fo'pence-ha'penny at three rod; some, that he had shot a swallow, flying, with a single ball; some, that he snuffed a candle five times out of six at ten paces, and that he could hit any button in a man's coat he wanted to. In other words, as in all such cases, all the common feats were ascribed to him, as the current jokes of the day are laid at the door of any noted wit, however innocent he may be of them.

In the natural course of things, Mr. Richard Venner, who had by this time made some acquaintances, as we have seen, among that class of the population least likely to allow a live cinder of gossip to go out for want of air, had heard incidentally that the master up there at the Institute was all the time practising with a pistol, that they say he can snuff a candle at ten rods, (that was Mrs. Blanche Creamer's version,) and that he could hit anybody he wanted to right in the eye, as far as he could see the white of it.

Dick did not like the sound of all this any too well. Without believing more than half of it, there was enough to make the Yankee schoolmaster too unsafe to be trifled with. However, shooting at a mark was pleasant work enough; he had no particular objection to it himself. Only he did not care so much for those little popgun affairs that a man carries in his pocket, and with which you couldn't shoot a fellow, — a robber, say, — without getting the muzzle under his nose. Pistols for boys; long-range rifles for men. There was such a gun lying in a closet with the fowling-pieces. He would go out into the fields and see what he could do as a marksman.

The nature of the mark that Dick chose for experimenting upon was singular. He had found some panes of glass which had been removed from an old sash, and he placed these successively before his target, arranging them at different angles. He found that a bullet would go through the glass without glancing or having its force materially abated. It was an interesting fact in physics, and might prove of some practical significance hereafter. Nobody knows what may turn up to render these out-of-the-way facts useful. All this was done in a quiet way in one of the bare spots high up the side of The Mountain. He was very thoughtful in taking the precaution to get so far away; rifle-bullets are apt to glance and come whizzing about people's ears, if they are fired in the neighborhood of houses. Dick satisfied himself that he could be tolerably sure of hitting a pane of glass at a distance of thirty rods, more or less, and that, if there happened to be anything behind it, the glass would not materially alter the force or direction of the bullet.

About this time it occurred to him also that there was an old accomplishment of his which he would be in danger of losing for want of practice, if he did not

take some opportunity to try his hand and regain its cunning, if it had begun to be diminished by disuse. For his first trial, he chose an evening when the moon was shining, and after the hour when the Rockland people were like to be stirring abroad. He was so far established now that he could do much as he pleased without exciting remark.

The prairie horse he rode, the mustang of the Pampas, wild as he was, had been trained to take part in at least one exercise. This was the accomplishment in which Mr. Richard now proposed to try himself. For this purpose he sought the implement of which, as it may be remembered, he had once made an incidental use,—the *lasso*, or long strip of hide with a slip-noose at the end of it. He had been accustomed to playing with such a thong from his boyhood, and had become expert in its use in capturing wild cattle in the course of his adventures. Unfortunately, there were no wild bulls likely to be met with in the neighborhood, to become the subjects of his skill. A stray cow in the road, an ox or a horse in a pasture, must serve his turn,—dull beasts, but moving marks to aim at, at any rate.

Never, since he had galloped in the chase over the Pampas, had Dick Vener felt such a sense of life and power as when he struck the long spurs into his wild horse's flanks, and dashed along the road with the lasso lying like a coiled snake at the saddle-bow. In skilful hands, the silent, bloodless noose, flying like an arrow, but not like that leaving a wound behind it,—sudden as a pistol-shot, but without the tell-tale explosion,—is one of the most fearful and mysterious weapons that arm the hand of man. The old Romans knew how formidable, even in contest with a gladiator equipped with sword, helmet, and shield, was the almost naked *retiarius* with his net in one hand and his three-pronged javelin in the other. Once get a net over a man's head, or a cord round his neck, or, what is more frequently done nowadays, *bonnet* him by knocking his hat down over his eyes, and

he is at the mercy of his opponent. Our soldiers who served against the Mexicans found this out too well. Many a poor fellow has been lassoed by the fierce riders from the plains, and fallen an easy victim to the captor who had snared him in the fatal noose.

But, imposing as the sight of the wild huntsmen of the Pampas might have been, Dick could not help laughing at the mock sublimity of his situation, as he tried his first experiment on an unhappy milky mother who had strayed from her herd and was wandering disconsolately along the road, laying the dust, as she went, with thready streams from her swollen, swinging udders. "Here goes the Don at the windmill!" said Dick, and tilted full speed at her, whirling the lasso round his head as he rode. The creature swerved to one side of the way, as the wild horse and his rider came rushing down upon her, and presently turned and ran, as only cows and — it wouldn't be safe to say it — can run. Just before he passed,—at twenty or thirty feet from her,—the lasso shot from his hand, uncoiling as it flew, and in an instant its loop was round her horns. "Well cast!" said Dick, as he galloped up to her side and dexterously disengaged the lasso. "Now for a horse on the run!"

He had the good luck to find one, presently, grazing in a pasture at the roadside. Taking down the rails of the fence at one point, he drove the horse into the road and gave chase. It was a lively young animal enough, and was easily roused to a pretty fast pace. As his gallop grew more and more rapid, Dick gave the reins to the mustang, until the two horses stretched themselves out in their longest strides. If the first feat looked like play, the one he was now to attempt had a good deal the appearance of real work. He touched the mustang with the spur, and in a few fierce leaps found himself nearly abreast of the frightened animal he was chasing. Once more he whirled the lasso round and round over his head, and then shot it forth, as the rattlesnake shoots his head from the

loops against which it rests. The noose was round the horse's neck, and in another instant was tightened so as almost to stop his breath. The prairie horse knew the trick of the cord, and leaned away from the captive, so as to keep the thong tensely stretched between his neck and the peak of the saddle to which it was fastened. Struggling was of no use with a halter round his windpipe, and he very soon began to tremble and stagger, — blind, no doubt, and with a roaring in his ears as of a thousand battle-trumpets, — at any rate, subdued and helpless. That was enough. Dick loosened his lasso, wound it up again, laid it like a pet snake in a coil at his saddle-bow, turned his horse, and rode slowly along towards the mansion-house.

The place had never looked more stately and beautiful to him than as he now saw it in the moonlight. The undulations of the land, — the grand mountain-screen which sheltered the mansion from the northern blasts, rising with all its hanging forests and parapets of naked rock high towards the heavens, — the ancient mansion, with its square chimneys, and body-guard of old trees, and cincture of low walls with marble-pillared gateways, — the fields, with their various coverings, — the beds of flowers, — the plots of turf, one with a gray column in its centre bearing a sun-dial on which the rays of the moon were idly shining, another with a white stone and a narrow ridge of turf, — over all these objects, harmonized with all their infinite details into one fair whole by the moonlight, the prospective heir, as he deemed himself, looked with admiring eyes.

But while he looked, the thought rose up in his mind like waters from a poisoned fountain, that there was a deep plot laid to cheat him of the inheritance which by a double claim he meant to call his own. Every day this ice-cold beauty, this dangerous, handsome cousin of his, went up to that place, — that usher's girl-trap. Every day, — regularly now, — it used to be different. Did she go only to get out of his, her cousin's, reach? Was

she not rather becoming more and more involved in the toils of this plotting Yankee?

If Mr. Bernard had shown himself at that moment a few rods in advance, the chances are that in less than one minute he would have found himself with a noose round his neck, at the heels of a mounted horseman. Providence spared him for the present. Mr. Richard rode his horse quietly round to the stable, put him up, and proceeded towards the house. He got to his bed without disturbing the family, but could not sleep. The idea had fully taken possession of his mind that a deep intrigue was going on which would end by bringing Elsie and the schoolmaster into relations fatal to all his own hopes. With that ingenuity which always accompanies jealousy, he tortured every circumstance of the last few weeks so as to make it square with this belief. From this vein of thought he naturally passed to a consideration of every possible method by which the issue he feared might be avoided.

Mr. Richard talked very plain language with himself in all these inward colloquies. Supposing it came to the worst, what could be done then? First, an accident might happen to the schoolmaster which should put a complete and final check upon his projects and contrivances. The particular accident which might interrupt his career must, evidently, be determined by circumstances; but it must be of a nature to explain itself without the necessity of any particular person's becoming involved in the matter. It would be unpleasant to go into particulars; but everybody knows well enough that men sometimes get in the way of a stray bullet, and that young persons occasionally do violence to themselves in various modes, — by fire-arms, suspension, and other means, — in consequence of disappointment in love, perhaps, oftener than from other motives. There was still another kind of accident which might serve his purpose. If anything should happen to Elsie, it would be the most natural thing in the world that his uncle

should adopt him, his nephew and only near relation, as his heir. Unless, indeed, Uncle Dudley should take it into his head to marry again. In that case, where would he, Dick, be? This was the most detestable complication which he could conceive of. And yet he had noticed—he could not help noticing—that his uncle had been very attentive to, and, as it seemed, very much pleased with, that young woman from the school. What did that mean? Was it possible that he was going to take a fancy to her?

It made him wild to think of all the several contingencies which might defraud him of that good-fortune which seemed but just now within his grasp. He glared in the darkness at imaginary faces: sometimes at that of the handsome, treacherous schoolmaster; sometimes at that of the meek-looking, but, no doubt, scheming, lady-teacher; sometimes at that of the dark girl whom he was ready to make his wife; sometimes at that of his much respected uncle, who, of course, could not be allowed to peril the fortunes of his relatives by forming a new connection. It was a frightful perplexity in which he found himself, because there was no one single life an accident to which would be sufficient to insure the fitting and natural course of descent to the great Dudley property. If it had been a simple question of helping forward a casualty to any one person, there was nothing in Dick's habits of thought and living to make that a serious difficulty. He had been so much with lawless people, that a life between his wish and his object seemed only as an obstacle to be removed, provided the object were worth the risk and trouble. But if there were two or three lives in the way, manifestly that altered the case.

His Southern blood was getting impatient. There was enough of the New-Englander about him to make him calculate his chances before he struck; but his plans were liable to be defeated at any moment by a passionate impulse such as the dark-hued races of Southern Europe

and their descendants are liable to. He lay in his bed, sometimes arranging plans to meet the various difficulties already mentioned, sometimes getting into a paroxysm of blind rage in the perplexity of considering what object he should select as the one most clearly in his way. On the whole, there could be no doubt where the most threatening of all his embarrassments lay. It was in the probable growing relation between Elsie and the schoolmaster. If it should prove, as it seemed likely, that there was springing up a serious attachment tending to a union between them, he knew what he should do, if he was not quite so sure how he should do it.

There was one thing at least which might favor his projects, and which, at any rate, would serve to amuse him. He could, by a little quiet observation, find out what were the schoolmaster's habits of life: whether he had any routine which could be calculated upon; and under what circumstances a strictly private interview of a few minutes with him might be reckoned on, in case it should be desirable. He could also very probably learn some facts about Elsie: whether the young man was in the habit of attending her on her way home from school; whether she stayed about the school-room after the other girls had gone; and any incidental matters of interest which might present themselves.

He was getting more and more restless for want of some excitement. A mad gallop, a visit to Mrs. Blanche Creamer, who had taken such a fancy to him, or a chat with the Widow Rowens, who was very lively in her talk, for all her sombre colors, and reminded him a good deal of some of his earlier friends, the *señoritas*,—all these were distractions, to be sure, but not enough to keep his fiery spirit from fretting itself in longings for more dangerous excitements. The thought of getting a knowledge of all Mr. Bernard's ways, so that he would be in his power at any moment, was a happy one.

For some days after this he followed

Elsie at a long distance behind, to watch her until she got to the school-house. One day he saw Mr. Bernard join her: a mere accident, very probably, for it was only once this happened. She came on her homeward way alone,—quite apart from the groups of girls who strolled out of the school-house yard in company. Sometimes she was behind them all,—which was suggestive. Could she have stayed to meet the schoolmaster?

If he could have smuggled himself into the school, he would have liked to watch her there, and see if there was not some understanding between her and the master which betrayed itself by look or word. But this was beyond the limits of his audacity, and he had to content himself with such cautious observations as could be made at a distance. With the aid of a pocket-glass he could make out persons without the risk of being observed himself.

Mr. Silas Peckham's corps of instructors was not expected to be off duty or to stand at ease for any considerable length of time. Sometimes Mr. Bernard, who had more freedom than the rest, would go out for a ramble in the day-time; but more frequently it would be in the evening, after the hour of "retiring," as bedtime was elegantly termed by the young ladies of the Apollinean Institute. He would then not unfrequently walk out alone in the common roads, or climb up the sides of The Mountain, which seemed to be one of his favorite resorts. Here, of course, it was impossible to follow him with the eye at a distance. Dick had a hideous, gnawing suspicion that somewhere in these deep shades the schoolmaster might meet Elsie, whose evening wanderings he knew so well. But of this he was not able to assure himself. Secrecy was necessary to his present plans, and he could not compromise himself by over-eager curiosity. One thing he learned with certainty. The master returned, after his walk one evening, and entered the building where his room was situated. Presently a light betrayed the window of his apartment. From a wooded bank,

some thirty or forty rods from this building, Dick Venner could see the interior of the chamber, and watch the master as he sat at his desk, the light falling strongly upon his face, intent upon the book or manuscript before him. Dick contemplated him very long in this attitude. The sense of watching his every motion, himself meanwhile utterly unseen, was delicious. How little the master was thinking what eyes were on him!

Well,—there were two things quite certain. One was, that, if he chose, he could meet the schoolmaster alone, either in the road or in a more solitary place, if he preferred to watch his chance for an evening or two. The other was, that he commanded his position, as he sat at his desk in the evening, in such a way that there would be very little difficulty,—so far as that went; of course, however, silence is always preferable to noise, and there is a great difference in the marks left by different casualties. Very likely nothing would come of all this espionage; but, at any rate, the first thing to be done with a man you want to have in your power is to learn his habits.

Since the tea-party at the Widow Rowens's, Elsie had been more fitful and moody than ever. Dick understood all this well enough, you know. It was the working of her jealousy against that young school-girl to whom the master had devoted himself for the sake of piquing the heiress of the Dudley mansion. Was it possible, in any way, to exasperate her irritable nature against him, and in this way to render her more accessible to his own advances? It was difficult to influence her at all. She endured his company without seeming to enjoy it. She watched him with that strange look of hers, sometimes as if she were on her guard against him, sometimes as if she would like to strike at him as in that fit of childish passion. She ordered him about with a haughty indifference which reminded him of his own way with the dark-eyed women whom he had known so well of old. All this added a secret pleasure to the other motives he

had for worrying her with jealous suspicions. He knew she brooded silently on any grief that poisoned her comfort,—that she fed on it, as it were, until it ran with every drop of blood in her veins,—and that, except in some paroxysm of rage, of which he himself was not likely the second time to be the object, or in some deadly vengeance wrought secretly, against which he would keep a sharp look-out, so far as he was concerned, she had no outlet for her dangerous, smouldering passions.

Beware of the woman who cannot find free utterance for all her stormy inner life either in words or song! So long as a woman can talk, there is nothing she cannot bear. If she cannot have a companion to listen to her woes, and has no musical utterance, vocal or instrumental,—then, if she is of the real woman sort, and has a few heartfuls of wild blood in her, and you have done her a wrong,—double-bolt the door which she may enter on noiseless slipper at midnight,—look twice before you taste of any cup whose draught the shadow of her hand may have darkened!

But let her talk, and, above all, cry, or, if she is one of the coarser-grained tribe, give her the run of all the red-hot expletives in the language, and let her blister her lips with them until she is tired, she will sleep like a lamb after it, and you may take a cup of coffee from her without stirring it up to look for its sediment.

So, if she can sing, or play on any musical instrument, all her wickedness will run off through her throat or the tips of her fingers. How many tragedies find their peaceful catastrophe in fierce roudades and strenuous bravuras! How many murders are executed in double-quick time upon the keys which stab the air with their dagger-strokes of sound! What would our civilization be without the piano? Are not Erard and Broadwood and Chickering the true humanizers of our time? Therefore do I love to hear the all-pervading *tum tum* jarring the walls of little parlors in houses with

double door-plates on their portals, looking out on streets and courts which to know is to be unknown, and where to exist is not to live, according to any true definition of living. Therefore complain I not of modern degeneracy, when, even from the open window of the small unlovely farm-house, tenanted by the hard-handed man of bovine flavors and the flat-patterned woman of broken-down countenance, issue the same familiar sounds. For who knows that Almira, but for these keys, which throb away her wild impulses in harmless discords, would not have been floating, dead, in the brown stream which runs through the meadows by her father's door,—or living, with that other current which runs beneath the gas-lights over the slimy pavement, choking with wretched weeds that were once in spotless flower?

Poor Elsie! She never sang nor played. She never shaped her inner life in words: such utterance was as much denied to her nature as common articulate speech to the deaf mute. Her only language must be in action. Watch her well by day and by night, Old Sophy! watch her well! or the long line of her honored name may close in shame, and the stately mansion of the Dudleys remain a hissing and a reproach till its roof is buried in its cellar!

CHAPTER XXIV.

ON HIS TRACKS.

"Abel!" said the old Doctor, one morning, "after you've harnessed Cautic, come into the study a few minutes, will you?"

Abel nodded. He was a man of few words, and he knew that the "will you" did not require an answer, being the true New-England way of rounding the corners of an employer's order,—a tribute to the personal independence of an American citizen.

The hired man came into the study in the course of a few minutes. His face

was perfectly still, and he waited to be spoken to; but the Doctor's eye detected a certain meaning in his expression, which looked as if he had something to communicate.

"Well?" said the Doctor.

"He 's up to mischief o' some kind, I guess," said Abel. "I jest happened daown by the mansion-haouse last night, 'n' he come aout o' the gate on that queer-look-in' creatur' o' his. I watched him, 'n' he rid, very slow, all raoun' by the Institoot, 'n' acted as ef he was spyin' abaout. He looks to me like a man that 's calc'latin' to do some kind of ill-turn to somebody. I shouldn't like to have him raoun' me, 'f there wa'n't a pitchfork or an eel-spear or some sech weep'n within reach. He may be all right; but I don't like his looks, 'n' I don't see what he 's lurkin' raoun' the Institoot for, after folks is abed."

"Have you watched him pretty close for the last few days?" said the Doctor.

"W'll, yes,—I've had my eye on him consid'ble o' the time. I haf to be pooty shy abaout it, or he 'll find aout th't I 'm on his tracks. I don' want him to get a spite ag'inst me, 'f I c'n help it; he looks to me like one o' them kind that kerries what they call slung-shot, 'n' hits ye on the side o' th' head with 'em so suddin y' never know what hurts ye."

"Why," said the Doctor, sharply,— "have you ever seen him with any such weapon about him?"

"W'll, no,—I caän't say that I hev," Abel answered. "On'y he looks kin' o' dangerous. May-be he 's all jest 'z he ought to be,—I caän't say that he a'n't,—but he 's aout late nights, 'n' lurkin' raoun' jest 'z ef he wuz spyin' somebody; 'n' somehaow I caän't help mistrustin' them Portagee-lookin' fellahs. I caän't keep the run o' this chap all the time; but I've a notion that old black woman daown 't the mansion-haouse knows 'z much abaout him 'z anybody."

The Doctor paused a moment, after hearing this report from his private detective, and then got into his chaise, and turned Caustic's head in the direction of

the Dudley mansion. He had been suspicious of Dick from the first. He did not like his mixed blood, nor his looks, nor his ways. He had formed a conjecture about his projects early. He had made a shrewd guess as to the probable jealousy Dick would feel of the schoolmaster, had found out something of his movements, and had cautioned Mr. Bernard,—as we have seen. He felt an interest in the young man,—a student of his own profession, an intelligent and ingenuously unsuspecting young fellow, who had been thrown by accident into the companionship or the neighborhood of two persons, one of whom he knew to be dangerous, and the other he believed instinctively might be capable of crime.

The Doctor rode down to the Dudley mansion solely for the sake of seeing Old Sophy. He was lucky enough to find her alone in her kitchen. He began talking with her as a physician; he wanted to know how her rheumatism had been. The shrewd old woman saw through all that with her little beady black eyes. It was something quite different he had come for, and Old Sophy answered very briefly for her aches and ails.

"Old folks' bones a'n't like young folks," she said. "It 's the Lord's doin's, 'n' 't a'n't much matter. I sha'n' be long roun' this kitchen. It 's the young Missis, Doctor,—it 's our Elsie,—it 's the baby, as we use' t' call her,—don' you remember, Doctor? Seventeen year ago, 'n' her poor mother eryin' for her,—'Where is she? where is she? Let me see her!'—'n' how I run up-stairs,—I could run then,—'n' got the coral necklace 'n' put it round her little neck, 'n' then showed her to her mother,—'n' how her mother looked at her, 'n' looked, 'n' then put out her poor thin fingers 'n' lifted the necklace,—'n' fell right back on her piller, as white as though she was laid out to bury?"

The Doctor answered her by silence and a look of grave assent. He had never chosen to let Old Sophy dwell upon these matters, for obvious reasons. The

girl must not grow up haunted by perpetual fears and prophecies, if it were possible to prevent it.

"Well, how has Elsie seemed of late?" he said, after this brief pause.

The old woman shook her head. Then she looked up at the Doctor so steadily and searchingly that the diamond eyes of Elsie herself could hardly have pierced more deeply.

The Doctor raised his head, by his habitual movement, and met the old woman's look with his own calm and scrutinizing gaze, sharpened by the glasses through which he now saw her.

Sophy spoke presently in an awed tone, as if telling a vision.

"We shall be havin' trouble before long. The' 's somethin' comin' from the Lord. I 've had dreams, Doctor. It 's many a year I 've been a-dreamin', but now they 're comin' over 'n' over the same thing. Three times I 've dreamed one thing, Doctor, — one thing!"

"And what was that?" the Doctor said, with that shade of curiosity in his tone which a metaphysician would probably say is an index of a certain tendency to belief in the superstition to which the question refers.

"I ca'n' jestly tell y' what it was, Doctor," the old woman answered, as if bewildered and trying to clear up her recollections; "but it was somethin' fearful, with a great noise 'n' a great cryin' o' people, — like the Las' Day, Doctor! The Lord have mercy on my poor chil', 'n' take care of her, if anything happens! But I 's feared she 'll never live to see the Las' Day, 'f 't don' come pooty quick."

Poor Sophy, only the third generation from cannibalism, was, not unnaturally, somewhat confused in her theological notions. Some of the Second-Advent preachers had been about, and circulated their predictions among the kitchen-population of Rockland. This was the way in which it happened that she mingled her fears in such a strange manner with their doctrines.

The Doctor answered solemnly, that of

the day and hour we knew not, but it became us to be always ready. — "Is there anything going on in the household different from common?"

Old Sophy's wrinkled face looked as full of life and intelligence, when she turned it full upon the Doctor, as if she had slipped off her infirmities and years like an outer garment. All those fine instincts of observation which came straight to her from her savage grandfather looked out of her little eyes. She had a kind of faith that the Doctor was a mighty conjuror, who, if he would, could bewitch any of them. She had relieved her feelings by her long talk with the minister, but the Doctor was the immediate adviser of the family, and had watched them through all their troubles. Perhaps he could tell them what to do. She had but one real object of affection in the world, — this child that she had tended from infancy to womanhood. Troubles were gathering thick round her; how soon they would break upon her, and blight or destroy her, no one could tell; but there was nothing in all the catalogue of terrors that might not come upon the household at any moment. Her own wits had sharpened themselves in keeping watch by day and night, and her face had forgotten its age in the excitement which gave life to its features.

"Doctor," Old Sophy said, "there 's strange things goin' on here by night and by day. I don' like that man, — that Dick, — I never liked him. He giv' me some o' these things I' got on; I take 'em 'cos I know it make him mad, if I no take 'em; I wear 'em, so that he needn' feel as if I didn' like him; but, Doctor, I hate him, — jes' as much as a member o' the church has the Lord's leave to hate anybody."

Her eyes sparkled with the old savage light, as if her ill-will to Mr. Richard Venner might perhaps go a little farther than the Christian limit she had assigned. But remember that her grandfather was in the habit of inviting his friends to dine with him upon the last enemy he had bagged, and that her grandmother's

teeth were filed down to points, so that they were as sharp as a shark's.

"What is it that you have seen about Mr. Richard Venner that gives you such a spite against him, Sophy?" asked the Doctor.

"What I've seen 'bout Dick Venner?" she replied, fiercely. "I'll tell y' what I've seen. Dick wan's to marry our Elsie, — that's what he wan's; 'n' he don't love her, Doctor, — he hates her, Doctor, as bad as I hate him! He wan's to marry our Elsie, 'n' live here in the big house, 'n' have nothin' to do but jes' lay still 'n' watch Massa Venner 'n' see how long 't'll take him to die, 'n' 'f he don't die fas' 'nuff, help him some way 't' die fasser! — Come close up 't' me, Doctor! I wan' 't' tell you somethin' I tol' th' minister 't'other day. Th' minister, he come down 'n' prayed 'n' talked good, — he's a good man, that Doctor Honeywood, 'n' I tol' him all 'bout our Elsie, — but he didn't tell nobody what to do to stop all what I been dreamin' about happenin'. Come close up to me, Doctor!"

The Doctor drew his chair close up to that of the old woman.

"Doctor, nobody mus'n' never marry our Elsie 's long 's she lives! Nobody mus'n' never live with Elsie but Ol' Sophy; 'n' Ol' Sophy won't never die 's long 's Elsie 's alive to be took care of. But I 's feared, Doctor, I 's greatly feared Elsie wan' to marry somebody. The 's a young gen'l'm'n up at that school where she go, — so some of 'em tells me, — 'n' she loves 't' see him 'n' talk wi' him, 'n' she talks about him when she 's 'asleep sometimes. She mus'n' never marry nobody, Doctor! If she do, he die, certain!"

"If she has a fancy for the young man up at the school there," the Doctor said, "I shouldn't think there would be much danger from Dick."

"Doctor, nobody know nothin' 'bout Elsie but Ol' Sophy. She no like any other creatur' th't ever drawed the bref o' life. If she ca'n' marry one man cos she love him, she marry another man cos she hate him."

"Marry a man because she hates him, Sophy? No woman ever did such a thing as that, or ever will do it."

"Who tol' you Elsie was a woman, Doctor?" said Old Sophy, with a flash of strange intelligence in her eyes.

The Doctor's face showed that he was startled. The old woman could not know much about Elsie that he did not know; but what strange superstition had got into her head, he was puzzled to guess. He had better follow Sophy's lead and find out what she meant.

"I should call Elsie a woman, and a very handsome one," he said. "You don't mean that she has any ugly thing about her, except — you know — under the necklace?"

The old woman resented the thought of any deformity about her darling.

"I didn't say she had nothin' — but jes' that — you know. My beauty have anything ugly? She 's the beautifulest-shaped lady that ever had a shinin' silk gown drawed over her shoulders. On'y she a'n't like no other woman in none of her ways. She don't cry 'n' laugh like other women. An' she ha'n' got the same kind o' feelin's as other women. — Do you know that young gen'l'm'n up at the school, Doctor?"

"Yes, Sophy, I've met him sometimes. He 's a very nice sort of young man, handsome, too, and I don't much wonder Elsie takes to him. Tell me, Sophy, what do you think would happen, if he should chance to fall in love with Elsie, and she with him, and he should marry her?"

"Put your ear close to my lips, Doctor, dear!" She whispered a little to the Doctor, then added aloud, "He die, — that 's all."

"But surely, Sophy, you a'n't afraid to have Dick marry her, if she would have him for any reason, are you? He can take care of himself, if anybody can."

"Doctor!" Sophy answered, "nobody can take care of hisself that live wi' Elsie! Nobody never in all this worl' mus' live wi' Elsie but Ol' Sophy, I tell you. You don't think I care for Dick? What do I care, if Dick Venner die? He wan's

to marry our Elsie so 's to live in the big house 'n' get all the money 'n' all the silver things 'n' all the chists full o' linen 'n' beautiful clothes! That 's what Dick wan's. An' he hates Elsie 'cos she don' like him. But if he marries Elsie, she 'll make him die some wrong way or other, 'n' they 'll take her 'n' hang her, or he 'll get mad with her 'n' choke her.—Oh, I know his chokin' tricks!—he don' leave his keys roun' for nothin'!"

"What 's that you say, Sophy? Tell me what you mean by all that."

So poor Sophy had to explain certain facts not in all respects to her credit. She had taken the opportunity of his absence to look about his chamber, and, having found a key in one of his drawers, had applied it to a trunk, and, finding that it opened the trunk, had made a kind of inspection for contraband articles, and, seeing the end of a leather thong, had followed it up until she saw that it finished with a noose, which, from certain appearances, she inferred to have seen service of at least doubtful nature. An unauthorized search; but Old Sophy considered that a game of life and death was going on in the household, and that she was bound to look out for her darling.

The Doctor paused a moment to think over this odd piece of information. Without sharing Sophy's belief as to the kind of use this mischievous-looking piece of property had been put to, it was certainly very odd that Dick should have such a thing at the bottom of his trunk. The Doctor remembered reading or hearing something about the *lasso* and the *lariat* and the *bolas*, and had an indistinct idea that they had been sometimes used as weapons of warfare or private revenge; but they were essentially a huntsman's implements, after all, and it was not very strange that this young man had brought one of them with him. Not strange, perhaps, but worth noting.

"Do you really think Dick means mischief to anybody, that he has such dangerous-looking things?" the Doctor said, presently.

"I tell you, Doctor. Dick means to have Elsie. If he ca'n' get her, he never let nobody else have her. Oh, Dick 's a dark man, Doctor! I know him! I 'member him when he was little boy,—he always cunnin'. I think he mean mischief to somebody. He come home late nights,—come in softly,—oh, I hear him! I lay awake, 'n' got sharp ears,—I hear the cats walkin' over the roofs,—'n' I hear Dick Venner, when he comes up in his stockin'-feet as still as a cat. I think he mean mischief to somebody. I no like his looks these las' days.—Is that a very pooty gen'l'm'n up at the school-house, Doctor?"

"I told you he was good-looking. What if he is?"

"I should like to see him, Doctor,—I should like to see the pooty gen'l'm'n that my poor Elsie loves. She mus'n' never marry nobody,—but, oh, Doctor, I should like to see him, 'n' jes' think a little how it would ha' been, if the Lord hadn' been so hard on Elsie."

She wept and wrung her hands. The kind Doctor was touched, and left her a moment to her thoughts.

"And how does Mr. Dudley Venner take all this?" he said, by way of changing the subject a little.

"Oh, Massa Venner, he good man, but he don' know nothin' 'bout Elsie, as Ol' Sophy do. I keep close by her; I help her when she go to bed, 'n' set by her sometime when she 'sleep; I come to her in th' mornin' 'n' help her put on her things."—Then, in a whisper,—“Doctor, Elsie lets Ol' Sophy take off that necklace for her. What you think she do, 'f anybody else tech it?"

"I don't know, I'm sure, Sophy,—strike the person, perhaps."

"Oh, yes, strike 'em! but not with her hands, Doctor!"—The old woman's significant pantomime must be guessed at.

"But you haven't told me, Sophy, what Mr. Dudley Venner thinks of his nephew, nor whether he has any notion that Dick wants to marry Elsie."

"I tell you. Massa Venner, he good man, but he no see nothin' 'bout what

goes on here in the house. He sort o' broken-hearted, you know,—sort o' giv' up,—don' know what to do wi' Elsie, 'xcep' say 'Yes, yes.' Dick always look smilin' 'n' behave well before him. One time I thought Massa Venner b'lieve Dick was goin' to take to Elsie; but now he don' seem to take much notice;—he kin' o' stupid-like 'bout sech things. It 's trouble, Doctor; 'cos Massa Venner bright man naterally,—'n' he 's got a great heap o' books. I don' think Massa Venner never been jes' heself sence Elsie 's born. He done all he know how,—but, Doctor, that wa'n' a great deal. You men-folks don' know nothin' 'bout these young gals; 'n' 'f you knowed all the young gals that ever lived, y' wouldn' know nothin' 'bout our Elsie."

"No,—but, Sophy, what I want to know is, whether you think Mr. Venner has any kind of suspicion about his nephew,—whether he has any notion that he 's a dangerous sort of fellow,—or whether he feels safe to have him about, or has even taken a sort of fancy to him."

"Lor' bless you, Doctor, Massa Venner no more idee 'f any mischief 'bout Dick than he has 'bout you or me. Y' see, he very fond o' the Cap'n,—that Dick's father,—'n' he live so long alone here, 'long wi' us, that he kin' o' like to see mos' anybody 't 's got any o' th' ol' family-blood in 'em. He ha'n't got no more suspicions 'n a baby,—y' never see sech a man 'n y'r life. I kin' o' think he don' care for nothin' in this world 'xcep' jes' t' do what Elsie wan's him to. The fus' year after young Madam die he do nothin' but jes' set at the window 'n' look out at her grave, 'n' then come up 'n' look at the baby's neck 'n' say, '*It 's fadin', Sophy, a'n't it?*' 'n' then go down in the study 'n' walk 'n' walk, 'n' then kneel down 'n' pray. Doctor, there was two places in

the old carpet that was all threadbare, where his knees had worn 'em. An sometimes,—you remember 'bout all that,—he 'd go off up into The Mountain 'n' be gone all day, 'n' kill all the Ugly Things he could find up there.—Oh, Doctor, I don' like to think o' them days!—An' by-'n'-by he grew kin' o' still, 'n' begun to read a little, 'n' 't las' he got 's quiet 's a lamb, 'n' that 's the way he is now. I think he 's got religion, Doctor; but he a'n't so bright about what 's goin' on, 'n' I don' believe he never suspec' nothin' till somethin' happens;—for the 's somethin' goin' to happen, Doctor, if the Las' Day doesn' come to stop it; 'n' you mus' tell us what to do, 'n' save my poor Elsie, my baby that the Lord hasn' took care of like all his other childer."

The Doctor assured the old woman that he was thinking a great deal about them all, and that there were other eyes on Dick besides her own. Let her watch him closely about the house, and he would keep a look-out elsewhere. If there was anything new, she must let him know at once. Send up one of the men-servants, and he would come down at a moment's warning.

There was really nothing definite against this young man; but the Doctor was sure that he was meditating some evil design or other. He rode straight up to the Institute. There he saw Mr. Bernard, and had a brief conversation with him, principally on matters relating to his personal interests.

That evening, for some unknown reason, Mr. Bernard changed the place of his desk and drew down the shades of his windows. Late that night Mr. Richard Venner drew the charge of a rifle, and put the gun back among the fowling-pieces, swearing that a leather halter was worth a dozen of it.

A PLEA FOR FREEDOM FROM SPEECH AND FIGURES OF SPEECH-MAKERS.

I OBSERVE, Messieurs of the "Atlantic," that your articles are commonly written in the imperial style; but I must beg allowance to use the first person singular. I cannot, like old Weller, spell myself with a *We*. Ours is, I believe, the only language that has shown so much sense of the worth of the individual (to himself) as to erect the first personal pronoun into a kind of votive column to the dignity of human nature. Other tongues have, or pretend, a greater modesty.

I.

What a noble letter it is! In it every reader sees himself as in a glass. As for me, without my *I*-s, I should be as poorly off as the great mole of Hadrian, which, being the biggest, must be also, by parity of reason, the blindest in the world. When I was in college, I confess I always liked those passages best in the choruses of the Greek drama which were well sprinkled with *ai ai*, they were so grandly simple. The force of great men is generally to be found in their intense individuality,—in other words, it is all in their *I*. The merit of this essay will be similar.

What I was going to say is this.

My mind has been much exercised of late on the subject of two epidemics, which, showing themselves formerly in a few sporadic cases, have begun to set in with the violence of the cattle-disease: I mean Eloquentia and Statuaria. They threaten to render the country unfit for human habitation, except by the Deaf and Blind. We had hitherto got on very well in Chesumpscot, having caught a trick of silence, perhaps from the fish which we cured, *more medicorum*, by laying them out. But this summer some misguided young men among us got up a lecture-association. Of course it led to a general quarrel; for every pastor in the town wished to have the censorship

of the list of lecturers. A certain number of the original projectors, however, took the matter wholly into their own hands, raised a subscription to pay expenses, and resolved to call their lectures "The Universal Brotherhood Course,"—for no other reason, that I can divine, but that they had set the whole village by the ears. They invited that distinguished young apostle of Reform, Mr. Philip Vandal, to deliver the opening lecture. He has just done so, and, from what I have heard about his discourse, it would have been fitter as the introductory to a nunnery of Kilkenny cats than to anything like universal brotherhood. He opened our lyceum as if it had been an oyster, without any regard for the feelings of those inside. He pitched into the world in general, and all his neighbors past and present in particular. Even the babe unborn did not escape some unsavory epithets in the way of vaticination. I sat down, meaning to write you an essay on "The Right of Private Judgment as distinguished from the Right of Public Vituperation"; but I forbear. It may be that I do not understand the nature of philanthropy.

Why, here is Philip Vandal, for example. He loves his kind so much that he has not a word softer than a brickbat for a single mother's son of them. He goes about to save them by proving that not one of them is worth damning. And he does it all from the point of view of an early (*a knurly*) Christian. Let me illustrate. I was sauntering along Broadway once, and was attracted by a bird-fancier's shop. I like dealers in out-of-the-way things,—traders in bigotry and virtue are too common,—and so I went in. The gem of the collection was a terrier,—a perfect beauty, uglier than philanthropy itself, and hairier, as a Cockney would say, than the 'ole British hairy-stocracy. "A'n't he a stunner?" said my disrespectable friend, the master of

the shop. "Ah, you should see him worry a rat! He does it like a puffed Christian!" Since then, the world has been divided for me into Christians and *perfect* Christians; and I find so many of the latter species in proportion to the former, that I begin to pity the rats. They (the rats) have at least one virtue,—they are not eloquent.

It is, I think, a universally recognized truth of natural history, that a young lady is sure to fall in love with a young man for whom she feels at first an unconquerable aversion; and it must be on the same principle that the first symptoms of love for our neighbor almost always manifest themselves in a violent disgust at the world in general, on the part of the apostles of that gospel. They give every token of hating their neighbors consumedly; *argal*, they are going to be madly enamored of them. Or, perhaps, this is the manner in which Universal Brotherhood shows itself in people who wilfully subject themselves to infection as a prophylactic. In the natural way we might find the disease inconvenient and even expensive; but thus vaccinated with virus from the udders (whatever they may be) that yield the (butter-)milk of human kindness, the inconvenience is slight, and we are able still to go about our ordinary business of detesting our brethren as usual. It only shows that the milder type of the disease has penetrated the system, which will thus be enabled to out-Jenneral its more dangerous congener. Before long we shall have physicians of our ailing social system writing to the "Weekly Brandreth's Pill" somewhat on this wise:—"I have a very marked and hopeful case in Pequawgus Four Corners. Miss Hepzibah Tarbell, daughter of that arch-enemy of his kind, Deacon Joash T., attended only one of my lectures. In a day or two the symptoms of eruption were most encouraging. She has already quarrelled with all her family,—accusing her father of bigamy, her uncle Benoni of polytheism, her brother Zeno C. of aneurism, and her sister Eudoxy Trithemia of the variation of the magnetic needle. If ev-

er hopes of seeing a perfect case of Primitive Christian were well-founded, I think we may entertain them now."

What I chiefly object to in the general-denunciation sort of reformers is that they make no allowance for character and temperament. They wish to repeal universal laws, and to patch our natural skins for us, as if they always wanted mending. That while they talk so much of the godlike nature of man, they should so forget the human natures of men! The Flathead Indian squeezes the child's skull between two boards till it shapes itself into a kind of gambrel-roof against the rain,—the readiest way, perhaps, of uniforming a tribe that wear no clothes. But does he alter the inside of the head? Not a hair's-breadth. You remember the striking old gnostic poem that tells how Aaron, in a moment of fanatical zeal against that member by which mankind are so readily led into mischief, proposes a rhinotomic sacrifice to Moses? What is the answer of the experienced law-giver?

"Says Moses to Aaron,

'Tis the fashion to wear 'em!'"

Shall we advise the Tadpole to get his tail cut off, as a badge of the reptile nature in him, and to achieve the higher sphere of the Croakers at a single hop? Why, it is all he steers by; without it, he would be as helpless as a compass under the flare of Northern Lights; and he no doubt regards it as a mark of blood, the proof of his kinship with the preadamite family of the Saurians. Shall we send missionaries to the Bear to warn him against raw chestnuts, because they are sometimes so discomfiting to our human intestines, which are so like his own? One sermon from the colic were worth the whole American Board.

Moreover, as an author, I protest in the name of universal Grub Street against a unanimity in goodness. Not to mention that a Quaker world, all faded out to an autumnal drab, would be a little tedious,—what should we do for the villain of our tragedy or novel? No rascals, no literature. You have your choice. Were we

weak enough to consent to a sudden homogeneousness in virtue, many industrious persons would be thrown out of employment. The wife and mother, for example, with as indeterminate a number of children as the Martyr Rogers, who visits me monthly,—what claim would she have upon me, were not her husband forever taking to drink, or the penitentiary, or Spiritualism? The pusillanimous lapse of her lord into morality would not only take the very ground of her invention from under her feet, but would rob her and him of an income that sustains them both in blissful independence of the curse of Adam. But do not let us be disheartened. Nature is strong; she is persistent; she completes her syllogism after we have long been feeding the roots of her grasses, and has her own way in spite of us. Some ancestral Cromwellian trooper leaps to life again in Nathaniel Greene, and makes a general of him, to confute five generations of Broadbrims. The Puritans were good in their way, and we enjoy them highly as a preterite phenomenon; but they were *not* good at cakes and ale, and that is one reason why they are a preterite phenomenon.

I suppose we are all willing to let a public censor like P. V. run amuck whenever he likes,—so it be not down our street. I confess to a good deal of tolerance in this respect, and, when I live in Number 21, have plenty of stoicism to spare for the griefs of the dwellers in No. 23. Indeed, I agreed with our young Cato heartily in what he said about Statues. We must have an Act for the Suppression, either of Great Men, or else of Sculptors. I have not quite made up my mind which are the greater nuisances; but I am sure of this, that there are too many of both. They used to be *rare*, (to use a Yankeeism omitted by Bartlett,) but nowadays they are overdone. I am half-inclined to think that the sculptors club together to write folks up during their lives in the newspapers, quieting their consciences with the hope of some day making them look so mean in bronze or marble as to make all square again. Or do

we really have so many? Can't they help growing twelve feet high in this new soil, any more than our maize? I suspect that Posterity will not thank us for the hereditary disease of Carrara we are entailing on him, and will try some heroic remedy, perhaps lithotripsy.

Nor was I troubled by what Mr. Vandal said about the late Benjamin Webster. I am not a Boston man, and have, therefore, the privilege of thinking for myself. Nor do I object to his claiming for women the right to make books and pictures and (shall I say it?) statues,—only this last becomes a grave matter, if we are to have statues of all the great women, too! To be sure, there will not be the trousers-difficulty,—at least, not at present; what we may come to is none of my affair. I even go beyond him in my opinions on what is called the Woman Question. In the gift of speech, they have always had the advantage of us; and though the jealousy of the other sex have deprived us of the orations of Xantippe, yet even Demosthenes does not seem to have produced greater effects, if we may take the word of Socrates for it,—as I, for one, very gladly do.

No,—what I complain of is not the lecturer's opinions, but the eloquence with which he expressed them. He does not like statues better than I do; but is it possible that he fails to see that the one nuisance leads directly to the other, and that we set up three images of Talkers for one to any kind of man who was useful in his generation? Let him beware, or he will himself be petrified after death. Boston seems to be specially unfortunate. She has more statues and more speakers than any other city on this continent. I have with my own eyes seen a book called "The Hundred Boston Orators." This would seem to give her a fairer title to be called the *tire* than the *hub* of creation. What with the speeches of her great men while they are alive, and those of her surviving great men about those aforesaid after they are dead, and those we look forward to from her *ditto ditto* yet to be upon her *ditto ditto* now in be-

ing, and those of her paulopost *ditto ditto* upon her *ditto ditto* yet to be, and those — But I am getting into the house that Jack built. And yet I remember once visiting the Massachusetts State-House and being struck with the Pythagorean fish hung on high in the Representatives' Chamber, the emblem of a silence too sacred, as would seem, to be observed except on Sundays. Eloquent Philip Vandal, I appeal to you as a man and a brother, let us two form (not an Antediluvian, for there are plenty, but) an Antidiluvian Society against the flood of milk-and-water that threatens the land. Let us adopt as our creed these two propositions:—

I. *Tongues were given us to be held.*

II. *Dumbness sets the brute below the man:— Silence elevates the man above the brute.*

Every one of those hundred orators is to me a more fearful thought than that of a hundred men gathering samphire. And when we take into account how large a portion of them (if the present mania hold) are likely to be commemorated in stone or some even more durable material, the conception is positively stunning. Let us settle all scores by subscribing to a colossal statue of the late Town-Crier in bell-metal, with the inscription, "VOX ET PRÆTEREA NIHIL," as a comprehensive tribute to oratorical powers in general. *He*, at least, never betrayed his clients. As it is, there is no end to it. We are to set up Horatius Vir in effigy for inventing the Normal Schoolmaster, and by-and-by we shall be called on to do the same ill-turn for Elihu Mulciber for getting uselessly learned (as if any man had ideas enough for twenty languages!) without any schoolmaster at all. We are the victims of a droll antithesis. Daniel would not give in to Nebuchadnezzar's taste in statuary, and we are called on to fall down and worship an image of Daniel which the Assyrian monarch would have gone to grass again sooner than have it in his back-parlor. I do not think lions are agreeable, especially the shaved-poodle

variety one is so apt to encounter;—I met one once at an evening party. But I would be thrown into a den of them rather than sleep in the same room with that statue. Posterity will think we cut pretty figures indeed in the monumental line! Perhaps there is a gleam of hope and a symptom of convalescence in the fact that the Prince of Wales, during his late visit, got off without a single speech. The cheerful hospitalities of Mount Auburn were offered to him, as to all distinguished strangers, but nothing more melancholy. In his case I doubt the expediency of the omission. Had we set a score or two of orators on him and his suite, it would have given them a more intimidating notion of the offensive powers of the country than West Point and all the Navy-Yards put together.

In the name of our common humanity, consider, too, what shifts our friends in the sculpin line (as we should call them in Chesumpscot) are put to for originality of design, and what the country has to pay for it. The Clark Mills (that turns out equestrian statues as the Stark Mills do calico-patterns) has pocketed fifty thousand dollars for making a very dead bronze horse stand on his hind-legs. For twenty-five cents I have seen a man at the circus do something more wonderful,—make a very living bay horse dance a redowa round the amphitheatre on his (it occurs to me that *hind-legs* is indelicate) posterior extremities to the wayward music of an out-of-town (*Scoticè*, out-o'-toon) band. Now, I will make a handsome offer to the public. I propose for twenty-five thousand dollars to suppress my design for an equestrian statue of a distinguished general officer as he *would have* appeared at the Battle of Buena Vista. This monument is intended as a weathercock to crown the new dome of the Capitol at Washington. By this happy contrivance, the horse will be freed from the degrading necessity of touching the earth at all,—thus distancing Mr. Mills by two feet in the race for originality. The pivot is to be placed so far behind the middle of the horse, that the

statue, like its original, will always indicate which way the wind blows by going along with it. The inferior animal I have resolved to model from a spirited saw-horse in my own collection. In this way I shall combine two striking advantages. The advocates of the Ideal in Art cannot fail to be pleased with a charger which embodies, as it were, merely the abstract notion or quality, Horse, and the attention of the spectator will not be distracted from the principal figure. The material to be pure brass. I have also in progress an allegorical group commemorative of Governor Wise. This, like-Wise, represents only a potentiality. I have chosen, as worthy of commemoration, the moment when and the method by which the Governor meant to seize the Treasury at Washington. His Excellency is modelled in the act of making one of his speeches. Before him a despairing reporter kills himself by falling on his own steel pen; a broken telegraph-wire hints at the weight of the thoughts to which it has found itself inadequate; while the Army and Navy of the United States are conjointly typified in a horse-marine who flies headlong with his hands pressed convulsively over his ears. I think I shall be able to have this ready for exhibition by the time Mr. Wise is nominated for the Presidency, — certainly before he is elected. The material to be plaster, made of the shells of those oysters with which Virginia shall have paid her public debt. It may be objected, that plaster is not durable enough for verisimilitude, since bronze itself could hardly be expected to outlast one of the Governor's speeches. But it must be remembered that his mere effigy cannot, like its prototype, have the pleasure of hearing itself talk; so that to the mind of the spectator the oratorical despotism is tempered with some reasonable hope of silence. This design, also, is intended only *in terrorem*, and will be suppressed for an adequate consideration.

I find one comfort, however, in the very hideousness of our statues. The fear of what the sculptors will do for

them after they are gone may deter those who are careful of their memories from talking themselves into greatness. It is plain that Mr. Caleb Cushing has begun to feel a wholesome dread of this posthumous retribution. I cannot in any other way account for that nightmare of the solitary horseman on the edge of the horizon, in his Hartford Speech. His imagination is infected with the terrible consciousness, that Mr. Mills, as the younger man, will, in the course of Nature, survive him, and will be left loose to seek new victims of his nefarious designs. Formerly the punishment of the wooden horse was a degradation inflicted on private soldiers only; but Mr. Mills (whose genius could make even Pegasus look wooden, in whatever material) flies at higher game, and will be content with nothing short of a general. Mr. Cushing advises extreme measures. He counsels us to sell our real estate and stocks, and to leave a country where no man's reputation with posterity is safe, being merely as clay in the hands of the sculptor. To a mind undisturbed by the terror natural in one whose military reputation insures his cutting and running, (I mean, of course, in marble and bronze,) the question becomes an interesting one, — To whom, in case of a general exodus, shall we sell? The statues will have the land all to themselves, — until the Aztecs, perhaps, repeople their ancient heritage, shall pay divine honors to these images, whose ugliness will revive the traditions of the classic period of Mexican Art. For my own part, I never look at one of them now without thinking of at least one human sacrifice.

I doubt the feasibility of Mr. Cushing's proposal, and yet something ought to be done. We must put up with what we have already, I suppose, and let Mr. Webster stand threatening to blow us all up with his pistol pointed at the elongated keg of gunpowder on which his left hand rests, — no bad type of the great man's state of mind after the nomination of General Taylor, or of what a country member would call a penal statue. But

do we reflect that Vermont is half marble, and that Lake Superior can send us bronze enough for regiments of statues? I go back to my first plan of a prohibitory enactment. I had even gone so far as to make a rough draught of an Act for the Better Observance of the Second Commandment; but it occurred to me that convictions under it would be doubtful, from the difficulty of satisfying a jury that our graven images did really present a likeness to any of the objects enumerated in the divine ordinance. Perhaps a double-barrelled statute might be contrived that would meet both the oratorical and the monumental difficulty. Let a law be passed that all speeches delivered more for the benefit of the orator than that of the audience, and all eulogistic ones of whatever description, be pronounced in the chapel of the Deaf and Dumb Asylum, and all statues be set up within the grounds of the Institution for the Blind. Let the penalty for infringement in the one case be to read the last President's Message, and in the other to look at the Webster statue one hour a day, for a term not so long as to violate the spirit of the law forbidding cruel and unusual punishments.

Perhaps it is too much to expect of our legislators that they should pass so self-denying an ordinance. They might, perhaps, make all oratory but their own penal, and then (who knows?) the reports of their debates might be read by the few unhappy persons who were demoniacally possessed by a passion for that kind of thing, as girls are sometimes said to be by an appetite for slate-pencils. *Vita brevis, lingua longa.* I protest that among lawgivers I respect Numa, who declared, that, of all the Camenæ, Tacita was most worthy of reverence. The ancient Greeks also (though they left too much oratory behind them) had some good notions, especially if we consider that they had not, like modern Europe, the advantage of communication with America. Now the Greeks had a Muse of Beginning, and the wonder is, considering how easy it is to talk and how hard to say anything,

that they did not hit upon that other and more excellent Muse of Leaving-off. The Spartans, I suspect, found her out and kept her selfishly to themselves. She were indeed a goddess to be worshipped, a true Sister of Charity among that loquacious sisterhood!

Endlessness is the order of the day. I ask you to compare Plutarch's lives of demigods and heroes with our modern biographies of deminoughts and zeroes. Those will appear but tailors and ninth-parts of men in comparison with these, every one of whom would seem to have had nine lives, like a cat, to justify such prolixity. Yet the evils of print are as dust in the balance to those of speech.

We were doing very well in Chesumpscot, but the Lyceum has ruined all. There are now two debating-clubs, seminaries of multiloquence. A few of us old-fashioned fellows have got up an opposition club and called it "The Jolly Oysters." No member is allowed to open his mouth except at high-tide by the calendar. We have biennial festivals on the evening of election-day, when the constituency avenges itself in some small measure on its Representative elect by sending a baker's dozen of orators to congratulate him.

But I am falling into the very vice I condemn,—like Carlyle, who has talked a quarter of a century in praise of holding your tongue. And yet something should be done about it. Even when we get one orator safely under-ground, there are ten to pronounce his eulogy, and twenty to do it over again when the meeting is held about the inevitable statue. I go to listen: we all go: we are under a spell. 'Tis true, I find a casual refuge in sleep; for Drummond of Hawthornden was wrong when he called Sleep the child of Silence. Speech begets her as often. But there is no sure refuge save in Death; and when my life is closed untimely, let there be written on my headstone, with impartial application to these Black Brunswickers mounted on the high horse of oratory and to our equestrian statues,—

Os sublime did it!

REVIEWS AND LITERARY NOTICES.

Fr. Rogeri Bacon Opera quædam hactenus inedita. Vol. I. Containing, I. *Opus Tertium*,—II. *Opus Minus*,—III. *Compendium Philosophiæ.* Edited by J. S. BREWER, M. A., Professor of English Literature, King's College, London, and Reader at the Rolls. Published by the Authority of the Lords Commissioners of Her Majesty's Treasury, under the Direction of the Master of the Rolls. London: Longman, Green, Longman, and Roberts. 1859. 8vo. pp. c., 573.

SIR JOHN ROMILLY has shown good judgment in including the unpublished works of Roger Bacon in the series of "Chronicles and Memorials of Great Britain and Ireland during the Middle Ages," now in course of publication under his direction. They are in a true sense important memorials of the period at which they were written, and, though but incidentally illustrating the events of the time, they are of great value in indicating the condition of thought and learning as well as the modes of mental discipline and acquisition during the thirteenth century.

The memory of Roger Bacon has received but scant justice. Although long since recognized as one of the chief lights of England during the Middle Ages, the clinging mist of popular tradition has obscured his real brightness and distorted its proportions, while even among scholars he has been more known by reputation than by actual acquaintance with his writings. His principal work, his "*Opus Majus*," was published for the first time in London in 1733, in folio, and afterwards at Venice in 1750, in the same form. Down to the publication of the volume before us, it was the only one of his writings of much importance which had been printed complete, if indeed it is to be called complete,—the Seventh Part having been omitted by the editor, Dr. Jebb, and never having since been published.

The facts known concerning Roger Bacon's life are few, and are so intermingled with tradition that it is difficult wholly to separate them from it. Born of a good family at Ilchester, in Somersetshire, near

the beginning of the thirteenth century, he was placed in early youth at Oxford, whence, after completing his studies in grammar and logic, "he proceeded to Paris," says Anthony Wood, "according to the fashion prevalent among English scholars of those times, especially among the members of the University of Oxford." Here, under the famous masters of the day, he devoted himself to study for some years, and made such progress that he received the degree of Doctor in Divinity. Returning to Oxford, he seems soon to have entered into the Franciscan Order, for the sake of securing a freedom from worldly cares, that he might the more exclusively give himself to his favorite pursuits. At various times he lectured at the University. He spent some later years out of England, probably again in Paris. His life was embittered by the suspicions felt in regard to his studies by the brethren of his order, and by their opposition, which proceeded to such lengths that it is said he was cast into prison, where, according to one report, he died wretchedly. However this may have been, his death took place before the beginning of the fourteenth century. The scientific and experimental studies which had brought him into ill-favor with his own order, and had excited the suspicion against him of dealing in magic and forbidden arts, seem to have sown the seed of the popular traditions which at once took root around his name. Friar Bacon soon became, and indeed has remained almost to the present day, a half-mythical character. To the imagination of the common people, he was a great necromancer; he had had dealings with the Evil One, who had revealed many of the secrets of Nature to him; he had made a head of brass that could speak and foretell future events; and to him were attributed other not less wonderful inventions, which seem to have formed a common stock for popular legends of this sort during the Middle Ages, and to have been ascribed indiscriminately to one philosopher or another in various countries and in various times.* The references in our

* See *The Famous Historie of Fryer Bacon*,

early literature to Friar Bacon, as one who had had familiarity with spirits and been a master in magic arts, are so numerous as to show that the belief in these stories was wide-spread, and that the real character of the learned Friar was quite given over to oblivion. But time slowly brings about its revenges; and the man whom his ignorant and stupid fellows thought fit to hamper and imprison, and whom popular credulity looked upon with that half-horror and half-admiration with which those were regarded who were supposed to have put their souls in pawn for the sake of tasting the forbidden fruit, is now recognized not only as one of the most profound and clearest thinkers of his time, but as the very first among its experimental philosophers, and as a prophet of truths which, then neglected and despised, have since been adopted as axioms in the progress of science. "The precursor of Galileo," says M. Hauréau, in his work on Scholastic Philosophy, "he learned before him how rash it is to offend the prejudices of the multitude, and to desire to give lessons to the ignorant."

The range of Roger Bacon's studies was encyclopedic, comprehending all the branches of learning then open to scholars. Brucker, in speaking of him in his History of Philosophy, has no words strong enough to express his admiration for his abilities and learning. "Seculi sui indolem multum superavit," "vir summus, tantaque occultioris philosophiæ cognitione et experientia nobilis, ut merito Doctoris Mirabilis titulum reportaverit."* The logical and metaphysical studies, in the intricate subtleties of which most of the schoolmen of his time involved themselves, presented less attraction to Bacon than the pursuits of physical science and the investigation of Nature. His genius, displaying the practical bent of his English mind, turning with weariness from the endless verbal discussions of the Nominalists and Realists, and recognizing the impossibility of solving the questions which divided the schools of Europe into two hostile camps,

containing the Wonderful Things that he did in his Life, also the Manner of his Death; with the Lives and Deaths of the Conjurers Bungye and Vandermast. Reprinted in Thom's *Early English Romances*.

* *Historia Crit. Phil.* Period. II. Pars II. Liber II. Cap. iii. § 23.

led him to the study of branches of knowledge that were held in little repute. He recognized the place of mathematics as the basis of exact science, and proceeded to the investigation of the facts and laws of optics, mechanics, chemistry, and astronomy. But he did not limit himself to positive science; he was at the same time a student of languages and of language, of grammar and of music. He was versed not less in the arts of the *Trivium* than in the sciences of the *Quadrivium*.*

But in rejecting the method of study then in vogue, and in opposing the study of facts to that of questions which by their abstruseness fatigued the intellect, which were of more worth in sharpening the wit than in extending the limits of knowledge, and which led rather to vain contentions than to settled conclusions,—in thus turning from the investigation of abstract metaphysics to the study of Nature, Roger Bacon went so far before his age as to condemn himself to solitude, to misappreciation, and to posthumous neglect. Unlike men of far narrower minds, but more conformed to the spirit of the times, he founded no school, and left no disciples to carry out the system which he had advanced, and which was one day to have its triumph. At the end of the thirteenth century the scholastic method was far from having run its career. The minds of men were occupied with problems which it alone seemed to be able to resolve, and they would not abandon it at the will of the first innovator. The questions in dispute were embittered by personal feeling and party animosities. Franciscans and Dominicans were divided by points of logic not less than by the rules of their orders.† Ignorance and passion alike gave ardor to discussion, and it was vain to attempt to convince the heated partisans on one side or the other, that the truths they sought were beyond the reach of human faculties, and that their dialectics and

* A barbarous distich gives the relations of these two famous divisions of knowledge in the Middle Ages:—

"*Gramm loquitur, Dia verba docet, Rhet verba colorat,*
Mus canit, Ar numerat, Geo ponderat, Ast colit astra."

† See Hauréau, *De la Philosophie Scolastique*, II. 284-5.

metaphysics served to bewilder more than to enlighten the intellect. The disciples of subtle speculatists like Aquinas, or of fervent mystics like Donaventura, were not likely to recognize the worth and importance of the slow processes of experimental philosophy.

The qualities of natural things, the limits of intellectual powers, the relations of man to the universe, the conditions of matter and spirit, the laws of thought, were too imperfectly understood for any man to attain to a comprehensive and correct view of the sources and methods of study and discovery of the truth. Bacon shared in what may be called, without a sneer, the childishnesses of his time, childishnesses often combined with mature powers and profound thought. No age is fully conscious of its own intellectual disproportions; and what now seem mere puerilities in the works of the thinkers of the Middle Ages were perhaps frequently the result of as laborious effort and as patient study as what we still prize in them for its manly vigor and permanent worth. In a later age, the Centuries of the "*Sylva Sylvarum*" afford a curious comment on the Aphorisms of the "*Novum Organum*."

The "*Opus Majus*" of Bacon was undertaken in answer to a demand of Pope Clement IV. in 1266, and was intended to contain a review of the whole range of science, as then understood, with the exception of logic. Clement had apparently become personally acquainted with Bacon, at the time when, as legate of the preceding Pope, he had been sent to England on an ineffectual mission to compose the differences between Henry III. and his barons, and he appears to have formed a just opinion of the genius and learning of the philosopher.

The task to which Bacon had been set by the Papal mandate was rapidly accomplished, in spite of difficulties which might have overcome a less resolute spirit; but the work extended to such great length in his hands, that he seems to have felt a not unnatural fear that Clement, burdened with the innumerable cares of the Pontificate, would not find leisure for its perusal, much less for the study which some part of it demanded. With this fear, fearful also that portions of his work might be deficient in clearness, and dreading lest it might be lost on its way to Rome, he

proceeded to compose a second treatise, called the "*Opus Minus*," to serve as an abstract and specimen of his greater work, and to embrace some additions to its matter. Unfortunately, but a fragment of this second work has been preserved, and this fragment is for the first time published in the volume just issued under the direction of the Master of the Rolls. But the "*Opus Minus*" was scarcely completed before he undertook a third work, to serve as an introduction and preamble to both the preceding. This has been handed down to us complete, and this, too, is for the first time printed in the volume before us. We take the account of it given by Professor Brewer, the editor, in his introduction.

"Inferior to its predecessors in the importance of its scientific details and the illustration it supplies of Bacon's philosophy, it is more interesting than either, for the insight it affords of his labors, and of the numerous obstacles he had to contend with in the execution of his work. The first twenty chapters detail various anecdotes of Bacon's personal history, his opinions on the state of education, the impediments thrown in his way by the ignorance, the prejudices, the contempt, the carelessness, the indifference of his contemporaries. From the twentieth chapter to the close of the volume he pursues the thread of the *Opus Majus*, supplying what he had there omitted, correcting and explaining what had been less clearly or correctly expressed in that or in the *Opus Minus*. In Chapter LII. he apologizes for diverging from the strict line he had originally marked out, by inserting in the ten preceding chapters his opinions on three abstruse subjects, Vacuum, Motion, and Space, mainly in regard to their spiritual significance. 'As these questions,' he says, 'are very perplexing and difficult, I thought I would record what I had to say about them in some one of my works. In the *Opus Majus* and *Opus Minus* I had not studied them sufficiently to prevail on myself to commit my thoughts about them to writing; and I was glad to omit them, owing to the length of those works, and because I was much hurried in their composition.' From the fifty-second chapter to the close of the volume he adheres to his subject without further digression, but with so much vigor of thought and freshness of observations, that, like the *Opus Minus*, the *Opus Tertium* may be fairly considered an independent work."—pp. xlii-xlv.*

* Mr. Brewer has in most respects per-

The details which Bacon gives of his personal history are of special interest as throwing light upon the habits of life of a scholar in the thirteenth century. Their autobiographic charm is increased by their novelty, for they give a view of ways of life of which but few particulars have been handed down.

Excusing himself for the delay which had occurred, after the reception of the Pope's letter, before the transmission of the writings he had desired, Bacon says that he was strictly prohibited by a rule of his Order from communicating to others any writing made by one of its members, under penalty of loss of the book, and a diet for many days of bread and water. Moreover, a fair copy could not be made, supposing that he succeeded in writing, except by scribes outside of the Order; and they might transcribe either for themselves or others, and through their dishonesty it very often happened that books were divulged at Paris.

"Then other far greater causes of delay occurred, on account of which I was often ready to despair; and a hundred times I thought to give up the work I had undertaken; and, had it not been for reverence for the Vicar of the only Saviour, and [regard to] the profit to the world to be secured through him alone, I would not have proceeded, against these hindrances, with this affair, for all those who are in the Church of Christ, however much they might have prayed and urged me. The first hindrance was from those who were set over me, to whom you had written nothing in my favor, and who, since I could not reveal your secret [commission] to them, being bound

formed his work as editor in a satisfactory manner. The many difficulties attending the deciphering of the text of ill-written manuscripts and the correction of the mistakes of ignorant scribes have been in great part overcome by his patience and skill. Some passages of the text, however, require further revision. The Introduction is valuable for its account of existing manuscripts, but its analysis of Bacon's opinions is unsatisfactory. Nor are the translations given in it always so accurate as they should be. The analyses of the chapters in side-notes to the text are sometimes imperfect, and do not sufficiently represent the current of Bacon's thought; and the volume stands in great need of a thorough Index. This omission is hardly to be excused, and ought at once to be supplied in a separate publication.

not to do so by your command of secrecy, urged me with unutterable violence, and with other means, to obey their will. But I resisted, on account of the bond of your precept, which obliged me to your work, in spite of every mandate of my superiors. . . .

"But I met also with another hindrance, which was enough to put a stop to the whole matter, and this was the want of [means to meet] the expense. For I was obliged to pay out in this business more than sixty livres of Paris,* the account and reckoning of which I will set forth in their place hereafter. I do not wonder, indeed, that you did not think of these expenses, because, sitting at the top of the world, you have to think of so great and so many things that no one can estimate the cares of your mind. But the messengers who carried your letters were careless in not making mention to you of these expenses; and they were unwilling to expend a single penny, even though I told them that I would write to you an account of the expenses, and that to every one of them should be returned what was his. I truly have no money, as you know, nor can I have it, nor consequently can I borrow, since I have nothing wherewith to repay. I sent then to my rich brother, in my country, who, belonging to the party of the king, was exiled with my mother and my brothers and the whole family, and oftentimes being taken by the enemy redeemed himself with money, so that thus being ruined and impoverished, he could not assist me, nor even to this day have I had an answer from him.

"Considering, then, the reverence due

* This sum was a large one. It appears that the necessaries of life were cheap and luxuries dear at Paris during the thirteenth century. Thus, we are told, in the year 1226, a house sold for forty-six livres; another with a garden, near St. Eustache, sold for two hundred livres. This sum was thought large, being estimated as equal to 16,400 francs at present. Sixty livres were then about five thousand francs, or a thousand dollars. Lodgings at this period varied from 5 to 17 livres the year. An ox was worth 1 livre 10 sols; a sheep, 6 sols 3 deniers. Bacon must at some period of his life have possessed money, for we find him speaking of having expended two thousand livres in the pursuit of learning. If the comparative value assumed be correct, this sum represented between \$30,000 and \$40,000 of our currency.

to you, and the nature of your command, I solicited many and great people, the faces of some of whom you know well, but not their minds; and I told them that a certain affair of yours must be attended to by me in France, (but I did not disclose to them what it was,) the performance of which required a large sum of money. But how often I was deemed a cheat, how often repulsed, how often put off with empty hope, how often confused in myself, I cannot express. Even my friends did not believe me, because I could not explain to them the affair; and hence I could not advance by this way. In distress, therefore, beyond what can be imagined, I compelled serving-men and poor to expend all that they had, to sell many things, and to pawn others, often at usury; and I promised them that I would write to you every part of the expenses, and would in good faith obtain from you payment in full. And yet, on account of the poverty of these persons, I many times gave up the work, and many times despaired and neglected to proceed; and indeed, if I had known that you would not attend to the settling of these accounts, I would not for the whole world have gone on,—nay, rather, I would have gone to prison. Nor could I send special messengers to you for the needed sum, because I had no means. And I preferred to spend whatever I could procure in advancing the business rather than in despatching a messenger to you. And also, on account of the reverence due to you, I determined to make no report of expenses before sending to you something which might please you, and by ocular proof should give witness to its cost. On account, then, of all these things, so great a delay has occurred in this matter.”*

There is a touching simplicity in this account of the trials by which he was beset, and it rises to dignity in connection with a sentence which immediately follows, in which he says, the thought of “the advantage of the world excited me, and the revival of knowledge, which now for many ages has lain dead, vehemently urged me forward.” Motives such as these were truly needed to enable him to make head against such difficulties.

The work which he accomplished, remarkable as it is from its intrinsic quali-

ties, is also surprising from the rapidity with which it was performed, in spite of the distractions and obstacles that attended it. It would seem that in less than two years from the date of Clement’s letter, the three works composed in compliance with its demand were despatched to the Pope. Bacon’s diligence must have been as great as his learning. In speaking, in another part of the “*Opus Tertium*,” of the insufficiency of the common modes of instruction, he gives incidentally an account of his own devotion to study. “I have labored much,” he says, “on the sciences and languages; it is now forty years since I first learned the alphabet, and I have always been studious; except two years of these forty, I have been always engaged in study; and I have expended much, [in learning,] as others generally do; but yet I am sure that within a quarter of a year, or half a year, I could teach orally, to a man eager and confident to learn, all that I know of the powers of the sciences and languages, provided only that I had previously composed a written compend. And yet it is known that no one else has worked so hard or on so many sciences and tongues; for men used to wonder formerly that I kept my life on account of my excessive labor, and ever since I have been as studious as I was then, but I have not worked so hard, because, through my practice in knowledge, it was not needful.”* Again he says, that in the twenty years in which he had specially labored in the study of wisdom, neglecting the notions of the crowd, he had spent more than two thousand pounds [livres] in the acquisition of secret books, and for various experiments, instruments, tables, and other things, as well as in seeking the friendship of learned men, and in instructing assistants in languages, figures, the use of instruments and tables, and many other things. But yet, though he had examined everything that was necessary for the construction of a preliminary work to serve as a guide to the wisdom of philosophy, though he knew how it was to be done, with what aids, and what were the hindrances to it, still he could not proceed with it, owing to the want of means. The cost of employing proper persons in the work, the rarity and costliness of books, the expense of in-

* *Opus Tertium*. Cap. iii. pp. 15–17.

* *Opus Tertium*. Cap. xx. p. 65.

struments and of experiments, the need of infinite parchment and many scribes for rough copies, all put it beyond his power to accomplish. This was his excuse for the imperfection of the treatise which he had sent to the Pope, and this was a work worthy to be sustained by Papal aid.*

* *Opus Tertium*. Capp. xvi., xvii.

Roger Bacon's urgency to the Pope to promote the works for the advancement of knowledge which were too great for private efforts bears a striking resemblance to the words addressed for the same end by his great successor, Lord Bacon, to James I. "Et ideo patet," says the Bacon of the thirteenth century, "quod scripta principalia de sapientia philosophiæ non possunt fieri ab uno homine, nec a pluribus, nisi manus prælatorum et principum juvent sapientes cum magna virtute." "Horum quos enumeravimus omnium defectuum remedia," says the Bacon of the seventeenth century, ". . . opera sunt vere basilica; erga quæ privati alicujus conatus et industria fere sic se habent ut Mercurius in bivio, qui digito potest in viam intendere, pedem inferre non potest."—*De Aug. Scient. Lib. II. Ad Regem Suum*.

A still more remarkable parallelism is to be found in the following passages. "Nam facile est dicere, fiant scripturæ completæ de scientiis, sed nunquam fuerunt apud Latinos aliquæ condignæ, nec fient, nisi aliud consilium habeatur. Et nullus sufficeret ad hoc, nisi dominus papa, vel imperator, aut aliquis rex magnificus, sicut est dominus rex Franciæ. Aristoteles quidem, auctoritate et auxiliis regum, et maxime Alexandri, fecit in Græco quæ voluit, et multis millibus hominum usus est in experientia scientiarum, et expensis copiosis, sicut historiæ narrant." (*Opus Tertium*, Cap. viii.) Compare with this the following passage from the part of the *De Augmentis* already cited:—"Et exploratoribus ac speculatoribus Naturæ satisfaciendum de expensis suis; alias de quamplurimis scitu dignissimis nunquam fitemus certiores. Si enim Alexander magnam vim pecuniæ supeditavit Aristoteli, qua conduceret venatores, aucupes, piscatores et alios, quo instructor accederet ad conscribendam historiam animalium; certe majus quiddam debetur iis, qui non in saltibus naturæ pererrant, sed in labyrinthis artium viam sibi aperiunt."

Other similar parallelisms of expression on this topic are to be found in these two authors, but need not be here quoted. Many resemblances in the words and in the spirit of the philosophy of the two Bacons have been pointed out, and it has even been supposed that the later of these two great philosophers borrowed his famous doctrine of "Idols"

The enumeration by Bacon of the trials and difficulties of a scholar's life at a time when the means of communicating knowledge were difficult, when books were rare and to be obtained only at great cost, when the knowledge of the ancient languages was most imperfect, and many of the most precious works of ancient philosophy were not to be obtained or were to be found only in imperfect and erroneous translations, depicts a condition of things in vivid contrast to the present facilities for the communication and acquisition of learning, and enables us in some degree to estimate the drawbacks under which scholars prosecuted their studies before the invention of printing. That with such impediments they were able to effect so much is wonderful; and their claim on the gratitude and respect of their successors is heightened by the arduous nature of the difficulties with which they were forced to contend. The value of their work receives a high estimate, when we consider the scanty means with which it was performed.

from the classification of the four chief hindrances to knowledge by his predecessor. But the supposition wants foundation, and there is no reason to suppose that Lord Bacon was acquainted with the works of the Friar. The Rev. Charles Forster, in his *Mahometanism Unveiled*, a work of some learning, but more extravagance, after speaking of Roger Bacon as "strictly and properly an experimentalist of the Saracenic school," goes indeed so far as to assert that he "was the undoubted, though unowned, original whence his great namesake drew the materials of his famous experimental system." (Vol. II. pp. 312-317.) But the resemblances in their systems, although striking in some particulars, are on the whole not too great to be regarded simply as the results of corresponding genius, and of a common sense of the insufficiency of the prevalent methods of scholastic philosophy for the discovery of truth and the advancement of knowledge. "The same sanguine and sometimes rash confidence in the effect of physical discoveries, the same fondness for experiment, the same preference of inductive to abstract reasoning pervade both works," the *Opus Majus* and the *Novum Organum*.—Hallam, *Europe during the Middle Ages*, III. 431. See also Hallam, *Literature of Europe*, I. 113; and Mr. Ellis's Preface to the *Novum Organum*, p. 90, in the first volume of the admirable edition of the *Works of Lord Bacon* now in course of publication.

Complaining of the want of books, Bacon says,—“The books on philosophy by Aristotle and Avicenna, by Seneca and Tully and others, cannot be had except at great cost, both because the chief of them are not translated into Latin, and because of others not a copy is to be found in public schools of learning or elsewhere. For instance, the most excellent books of Tully *De Republica* are nowhere to be found, so far as I can hear, and I have been eager in the search for them in various parts of the world and with various agents. It is the same with many other of his books. The books of Seneca also, the flowers of which I have copied out for your Beatitude, I was never able to find till about the time of your mandate, although I had been diligent in seeking for them for twenty years and more.”* Again, speaking of the corruption of translations, so that they are often unintelligible, as is especially the case with the books of Aristotle, he says that “there are not four Latins [that is, Western scholars] who know the grammar of the Hebrews, the Greeks, and the Arabians; for I am well acquainted with them, and have made diligent inquiry both here and beyond the sea, and have labored much in these things. There are many, indeed, who can speak Greek and Arabic and Hebrew, but scarcely any who know the principles of the grammar so as to teach it, for I have tried very many.”†

In his treatise entitled “*Compendium Studii Philosophiæ*,” which is printed in this volume for the first time, he adds in relation to this subject,—“Teachers are not wanting, because there are Jews everywhere, and their tongue is the same in substance with the Arabic and the Chaldean, though they differ in mode. . . . Nor would it be much, for the sake of the great advantage of learning Greek, to go to Italy, where the clergy and the people in many places are purely Greek; moreover, bishops and archbishops and rich men and elders might send thither for books, and for one or for more persons who know Greek, as Lord Robert, the sainted Bishop of Lincoln, ‡ did indeed

* *Opus Tertium*. Cap. xv. pp. 55, 56.

‡ The famous Grostête, who died in 1253. “*Vir in Latino et Græco peritissimus*,” says Matthew Paris.

do,—and some of those [whom he brought over] still survive in England.”* The ignorance of the most noted clerks and lecturers of his day is over and over again the subject of Bacon’s indignant remonstrance. They were utterly unable to correct the mistakes with which the translations of ancient works were full. “The text is in great part horribly corrupt in the copy of the Vulgate at Paris, . . . and as many readers as there are, so many correctors, or rather corruptors, . . . for every reader changes the text according to his fancy.”† Even those who professed to translate new works of ancient learning were generally wholly unfit for the task. Hermann the German knew nothing of science, and little of Arabic, from which he professed to translate; but when he was in Spain, he kept Saracens with him who did the main part of the translations that he claimed. In like manner, Michael Scot asserted that he had made many translations; but the truth was, that a certain Jew named Andrew worked more than he upon them.‡ William Fleming was, however, the most ignorant and most presuming of all.§ “Certain I am that it were better for the Latins that the wisdom of Aristotle had not been translated, than to have it thus perverted and obscured, . . . so that the more men study it the less they know, as I have experienced with all who have stuck to these books. Wherefore my Lord Robert of blessed memory altogether neglected them, and proceeded by his own experi-

* *Comp. Studii Phil.* Cap. vi.

† *Opus Minus*, p. 330.

‡ This was Michael Scot the Wizard, who would seem to have deserved the place that Dante assigned to him in the *Inferno*, if not from his practice of forbidden arts, at least from his corruption of ancient learning in his so-called translations. Strange that he, of all the Schoolmen, should have been honored by being commemorated by the greatest poet of Italy and the greatest of his own land! In the Notes to the *Lay of the Last Minstrel*, his kinsman quotes the following lines concerning him from Satchell’s poem on *The Right Honorable Name of Scott*:—

“His writing pen did seem to me to be
Of hardened metal like steel or acumie;
The volume of [his book] did seem so large
to me
As the Book of Martyrs and Turks Historie.”

§ *Comp. Studii Phil.* Cap. viii. p. 472.

ments, and with other means, until he knew the things concerning which Aristotle treats a hundred thousand times better than he could ever have learned them from those perverse translations. And if I had power over these translations of Aristotle, I would have every copy of them burned; for to study them is only a loss of time and a cause of error and a multiplication of ignorance beyond telling. And since the labors of Aristotle are the foundation of all knowledge, no one can estimate the injury done by means of these bad translations." *

Bacon had occasion for lamenting not only the character of the translations in use, but also the fact that many of the most important works of the ancients were not translated at all, and hence lay out of the reach of all but the rare scholars, like himself and his friend Grostête, who were able, through their acquaintance with the languages in which they were written, to make use of them, provided manuscripts could be found for reading. "We have few useful works on philosophy in Latin. Aristotle composed a thousand volumes, as we read in his Life, and of these we have but three of any notable size, namely,—on Logic, Natural History, and Metaphysics; so that all the other scientific works that he composed are wanting to the Latins, except some tractates and small little books, and of these but very few. Of his Logic two of the best books are deficient, which Hermann had in Arabic, but did not venture to translate. One of them, indeed, he did translate, or caused to be translated, but so ill that the translation is of no sort of value and has never come into use. Aristotle wrote fifty excellent books about Animals, as Pliny says in the eighth book of his Natural History, and I have seen them in Greek, and of these the Latins have only nineteen wretchedly imperfect little books. Of his Metaphysics the Latins read only the ten books which they have, while there are many more; and of these ten which they read, many chapters are wanting in the translation, and almost infinite lines. Indeed, the Latins have nothing worthy; and therefore it is necessary that they should know the languages, for the sake of translating those things that are deficient and needful. For, moreover, of the works on secret sciences, in

which the secrets and marvels of Nature are explored, they have little except fragments here and there, which scarcely suffice to excite the very wisest to study and experiment and to inquire by themselves after those things which are lacking to the dignity of wisdom; while the crowd of students are not moved to any worthy undertaking, and grow so languid and asinine over these ill translations, that they lose utterly their time and study and expense. They are held, indeed, by appearances alone; for they do not care what they know, but what they seem to know to the silly multitude." *

These passages may serve to show something of the nature of those external hindrances to knowledge with which Bacon himself had had to strive, which he overcame, and which he set himself with all his force to break down, that they might no longer obstruct the path of study. What scholar, what lover of learning, can now picture to himself such efforts without emotion,—without an almost oppressive sense of the contrast between the wealth of his own opportunities and the penury of the earlier scholar? On the shelves within reach of his hand lie the accumulated riches of time. Compare our libraries, with their crowded volumes of ancient and modern learning, with the bare cell of the solitary Friar, in which, in a single small cupboard, are laid away a few imperfect manuscripts, precious as a king's ransom, which it had been the labor of years to collect. This very volume of his works, a noble monument of patient labor, of careful investigation, of deep thought, costs us but a trivial sum; while its author, in his poverty, was scarcely able, without begging, to pay for the parchment upon which he wrote it, as, uncheered by the anticipation that centuries after his death men would prize the works he painfully accomplished, he leaned against his empty desk, half-discouraged by the difficulties that beset him. All honor to him! honor to the schoolmen of the Middle Ages! to the men who kept the traditions of wisdom alive, who trimmed the wick of the lamp of learning when its flame was flickering, and who, when its light grew dim and seemed to be dying out, supplied it with oil hardly squeezed by their own hands,

* *Comp. Studii Phil.* Cap. viii. p. 469.
VOL. VI.

* *Comp. Studii Phil.* Cap. viii. p. 473.

drop by drop, from the scanty olives which they had gathered from the eternal tree of Truth! In these later days learning has become cheap. What sort of scholar must he now be, who should be worthy to be put into comparison with the philosopher of the thirteenth century?

The general scheme of Bacon's system of philosophy was at once simple and comprehensive. The scope of his thought had a breadth uncommon in his or in any time. In his view, the object of all philosophy and human learning was to enable men to attain to the wisdom of God; and to this end it was to be subservient absolutely, and relatively so far as regarded the Church, the government of the state, the conversion of infidels, and the repression of those who could not be converted. All wisdom was included in the Sacred Scriptures, if properly understood and explained. "I believe," said he, "that the perfection of philosophy is to raise it to the state of a Christian law." Wisdom was the gift of God, and as such it included the knowledge of all things in heaven and earth, the knowledge of God himself, of the teachings of Christ, the beauty of virtue, the honesty of laws, the eternal life of glory and of punishment, the resurrection of the dead, and all things else.*

To this end all special sciences were ordained. All these, properly speaking, were to be called speculative; and though they each might be divided into two parts, the practical and the speculative, yet one alone, the most noble and best of all, in respect to which there was no comparison with the others, was in its own nature practical: this was the science of morals, or moral philosophy. All the works of Art and Nature are subservient to morals, and are of value only as they promote it. They are as nothing without it; as the whole wisdom of philosophy is as nothing without the wisdom of the Christian faith. This science of morals has six principal divisions. The first of these is theological, treating of the relations of man to God and to spiritual things; the second is political, treating of public laws and the government of states; the third is ethical, treating of virtue and vice; the fourth treats of the revolutions of religious sects, and of the proofs of the Christian faith.

* *Opus Tertium*. Cap. xxiv. pp. 80-82.

"This is the best part of all philosophy." Experimental science and the knowledge of languages come into use here. The fifth division is hortatory, or of morals as applied to duty, and embraces the art of rhetoric and other subsidiary arts. The sixth and final division treats of the relations of morals to the execution of justice.* Under one or other of these heads all special sciences and every branch of learning are included.

Such, then, being the object and end of all learning, it is to be considered in what manner and by what methods study is to be pursued, to secure the attainment of truth. And here occurs one of the most remarkable features of Bacon's system. It is in his distinct statement of the prime importance of experiment as the only test of certainty in the sciences. "However strong arguments may be, they do not give certainty, apart from positive experience of a conclusion." "It is the prerogative of experiment to test the noble conclusions of all sciences which are drawn from arguments." All science is ancillary to it.† And of all branches of learning, two are of chief importance: languages are the first gate of wisdom; mathematics the second.‡ By means of foreign tongues we gain the wisdom which men have collected in past times and other countries; and without them the sciences are not to be pursued, for the requisite books are wanting in the Latin tongue. Even theology must fail without a knowledge of the original texts of the Sacred Writings and of their earliest expositors. Mathematics are of scarcely less importance; "for he who knows not mathematics cannot know any other physical science,—what is more, cannot discover his own ignorance or find its proper remedies." "The sciences cannot be known by logical and sophistical arguments, such as are commonly used, but only by mathematical demonstrations."§ But this view of the essential importance of these two studies did not prevent Bacon from rising to the height from which he beheld the mutual importance and relations of all knowledge. We do not know where to find a clearer statement of the connec-

* *Opus Tertium*. Capp. xiv., xv., pp. 48-53.

† *Id.* Cap. xiii. pp. 43-44.

§ *Opus Majus*. pp. 57, 64.

tion of the sciences than in the following words:—"All sciences are connected, and support each other with mutual aid, as parts of the same whole, of which each performs its work, not for itself alone, but for the others as well: as the eye directs the whole body, and the foot supports the whole; so that any part of knowledge taken from the rest is like an eye torn out or a foot cut off."*

Such, then, in brief, appears to have been Bacon's general system of philosophy. He has nowhere presented it in a compact form; and his style of writing is often so corrupt, and his use of terms so inexact, that any exposition of his views, exhibiting them in a methodical arrangement, is liable to the charge of possessing a definiteness of statement beyond that which his opinions had assumed in his own mind. Still, the view that has now been given of his philosophy corresponds as nearly as may be with the indications afforded by his works. The details of his system present many points of peculiar interest. He was not merely a theorist, with speculative views of a character far in advance of those of the mass of contemporary schoolmen, but a practical investigator as well, who by his experiments and discoveries pushed forward the limits of knowledge, and a sound scholar who saw and displayed to others the true means by which progress in learning was to be secured. In this latter respect, no parts of his writings are more remarkable than those in which he urges the importance of philological and linguistic studies. His remarks on comparative grammar, on the relations of languages, on the necessity of the study of original texts, are distinguished by good sense, by extensive and (for the time) exact scholarship, and by a breadth of view unparalleled, so far as we are aware, by any other writer of his age. The treatise on the Greek Grammar—which occupies a large portion of the incomplete "Compendium Studii Philosophiæ," and which is broken off in the middle by the mutilation of the manuscript—contains, in addition to many curious remarks illustrative of the learning of the period, much matter of permanent interest to the student of language. The passages which we have quoted in regard to the defects of the trans-

lations of Greek authors show to how great a degree the study of Greek and other ancient tongues had been neglected. Most of the scholars of the day contented themselves with collecting the Greek words which they found interpreted in the works of St. Augustine, St. Jerome, Origen, Martianus Capella, Boëthius, and a few other later Latin authors; and were satisfied to use these interpretations without investigation of their exactness, or without understanding their meaning. Hugo of Saint Victor, (Dante's "Ugo di Sanvittore è qui con elli,") one of the most illustrious of Bacon's predecessors, translates, for instance, *mechanica* by *adulterina*, as if it came from the Latin *mæcha*, and derives *economica* from *æquus*, showing that he, like most other Western scholars, was ignorant even of the Greek letters.* Michael Scot, in respect to whose translations Bacon speaks with merited contempt, exhibits the grossest ignorance, in his version from the Arabic of Aristotle's History of Animals. For example, a passage in which Aristotle speaks of taming the wildest animals, and says, "Beneficio enim mitescunt, veluti crocodilorum genus afficitur erga sacerdotem a quo curatur ut alantur," ("They become mild with kind treatment, as crocodiles toward the priest who provides them with food,") is thus unintelligibly rendered by him: "Genus autem karoluo et hiridon habet pacem lehhium et domesticatur cum illo, quoniam cogitat de suo cibo."† Such a medley makes it certain that he knew neither Greek nor Arabic, and was willing to compound a third language, as obscure to his readers as the original was to him. Bacon points out many instances of this kind; and it is against such errors—errors so destructive to all learning—that he inveighs with the full force of invective, and protests with irresistible arguments. His acquirements in Greek and in Hebrew prove that he had devoted long labor to the study of these languages, and that he understood them far better than many scholars who made more pretence of learning. Nowhere are the defects of the scholarship of the Middle Ages more point-

* See Hauréau: *Nouvel Examen de l'Édition des Œuvres de Hugues de Saint-Victor*. Paris, 1859. p. 52.

† Jourdain: *Recherches sur les Traductions Latines d'Aristote*. Paris, 1819. p. 373.

* *Opus Tertium*. Cap. iv. p. 18.

edly and ably exhibited than in what he has said of them.

But, although his knowledge in this field was of uncommon quality and amount, it does not seem to have surpassed his acquisitions in science. "I have attempted," he says in a striking passage, "with great diligence, to attain certainty as to what is needful to be known concerning the processes of alchemy and natural philosophy and medicine. . . . And what I have written of the roots [of these sciences] is, in my judgment, worth far more than all that the other natural philosophers now alive suppose themselves to know; for in vain, without these roots, do they seek for branches, flowers, and fruit. And here I am boastful in words, but not in my soul; for I say this because I grieve for the infinite error that now exists, and that I may urge you [the Pope] to a consideration of the truth."* Again he says, in regard to his treatise "De Perspectiva," or On Optics,— "Why should I conceal the truth? I assert that there is no one among the Latin scholars who could accomplish, in the space of a year, this work; no, nor even in ten years."† In mathematics, in chemistry, in optics, in mechanics, he was, if not superior, at least equal, to the best of his contemporaries. His confidence in his own powers was the just result of self-knowledge and self-respect. Natural genius, and the accumulations of forty years of laborious study pursued with a method superior to that which guided the studies of others, had set him at the head of the learned men of his time; and he was great enough to know and to claim his place. He had the self-devotion of enthusiasm, and its ready, but dignified boldness, based upon the secure foundation of truth.

In spite of the very imperfect style in which he wrote, and the usually clumsy and often careless construction of his sentences, his works contain now and then noble thoughts expressed with simplicity and force. "Natura est instrumentum Divinæ operationis," might be taken as the motto for his whole system of natural science. In speaking of the value of words, he says,— "Sed considerare debemus quod verba habent maximam potestatem, et omnia miracula facta a principio mundi fere facta sunt per verba. Et opus

animæ rationalis præcipuum est verbum, et in quo maxime delectatur." In the "Opus Tertium," at the point where he begins to give an abstract of his "Opus Majus," he uses words which remind one of the famous "Franciscus de Verulamio sic cogitavit." He says,— "Cogitavi quod intellectus humanus habet magnam debilitationem ex se. . . . Et ideo volui excludere errorum humanorum causas, quia dum hæc durant in corde hominis impossibile est ipsum videre veritatem." This is strikingly similar to Lord Bacon's "errores qui invaluerunt, quique in æternum invaliduri sunt, alii post alios, si mens sibi permittatur." Such citations of passages remarkable for thought or for expression might be indefinitely extended, but we have space for only one more, in which the Friar attacks the vices of the Roman court with an energy that brings to mind the invectives of the greatest of his contemporaries. "Curia Romana, quæ solebat et debet regi sapientia Dei, nunc depravatur. . . . Laceratur enim illa sedes sacra fraudibus et dolis injustorum. Perit justitia; pax omnis violatur; infinita scandala suscitantur. Mores enim sequuntur ibidem perversissimi; regnat superbia, ardet avaritia, invidia corrodit singulos, luxuria diffamat totam illam curiam, gula in omnibus dominatur." It was not the charge of magic alone that brought Roger Bacon's works into discredit with the Church, and caused a nail to be driven through their covers to keep the dangerous pages closed tightly within.

There is no reason to doubt that Bacon's investigations led him to discoveries of essential value, but which for the most part died with him. His active and piercing intellect, which employed itself on the most difficult subjects, which led him to the formation of a theory of tides, and brought him to see the need and with prophetic anticipation to point out the means of a reformation of the calendar, enabled him to discover many of what were then called the Secrets of Nature. The popular belief that he was the inventor of gunpowder had its origin in two passages in his treatise "On the Secret Works of Art and Nature, and on the Nullity of Magic,"* in one of which he describes some

* Reprinted in the Appendix to the volume edited by Professor Brewer. A translation of this treatise was printed at London as early as 1597; and a second version, "faithfully

* *Opus Tertium*. Cap. xii. p. 42.

† *Id.* Cap. ii. p. 14.

of its qualities, while in the other he apparently conceals its composition under an enigma.* He had made experiments with Greek fire and the magnet; he had constructed burning-glasses, and lenses of various power; and had practised with multiplying-mirrors, and with mirrors that magnified and diminished. It was no wonder that a man who knew and employed such wonderful things, who was known, too, to have sought for artificial gold, should gain the reputation of a wizard, and that his books should be looked upon with suspicion. As he himself says,—“Many books are esteemed magic, which are not so, but contain the dignity of knowledge.” And he adds,—“For, as it is unworthy and unlawful for a wise man to deal with magic, so it is superfluous and unnecessary.” †

There is a passage in this treatise “On the Nullity of Magic” of remarkable character, as exhibiting the achievements, or, if not the actual achievements, the things esteemed possible by the inventors of the thirteenth century. There is in it a seeming mixture of fancy and of fact, of childish credulity with more than mere haphazard prophecy of mechanical and physical results which have been so lately reached in the progress of science as to be among new things even six centuries

translated out of Dr. Dee’s own copy by T. M.,” appeared in 1659.

* “Sed tamen sal petræ LURU VOPO VIR CAN UTRINET sulphuris; et sic facies tonitruum et coruscationem, si scias artificium. Videas tamen utrum loquar ænigmate aut secundum veritatem.” (p. 551.) One is tempted, to read the last two words of the dark phrase as phonographic English, or, translating the *vir*, to find the meaning to be, “O man! you can try it.”

† This expression is similar in substance to the closing sentences of Sir Kenelm Digby’s Discourse at Montpellier on the Powder of Sympathy, in 1657. “Now it is a poor kind of pusillanimity and faint-heartedness, or rather, a gross weakness of the Understanding, to pretend any effects of charm or magick herein, or to confine all the actions of Nature to the grossness of our Senses, when we have not sufficiently consider’d nor examined the true causes and principles whereon ’tis fitting we should ground our judgment: we need not have recourse to a Demon or Angel in such difficulties.

“Nec Deus intersit, nisi dignus vindice nodus Inciderit.”

after Bacon’s death. Its positiveness of statement is puzzling, when tested by what is known from other sources of the nature of the discoveries and inventions of that early time; and were there reason to question Bacon’s truth, it would seem as if he had mistaken his dreams for facts. As it stands, it is one of the most curious existing illustrations of the state of physical science in the Middle Ages. It runs as follows:—“I will now, in the first place, speak of some of the wonderful works of Art and Nature, that I may afterwards assign the causes and methods of them, in which there is nothing magical, so that it may be seen how inferior and worthless all magic power is, in comparison with these works. And first, according to the fashion and rule of Art alone. Thus, machines can be made for navigation without men to row them; so that ships of the largest size, whether on rivers or the sea, can be carried forward, under the guidance of a single man, at greater speed than if they were full of men [rowers]. In like manner, a car can be made which will move, without the aid of any animal, with incalculable impetus; such as we suppose the scythed chariots to have been which were anciently used in battle. Also, machines for flying can be made, so that a man may sit in the middle of the machine, turning an engine, by which wings artificially disposed are made to beat the air after the manner of a bird in flight. Also, an instrument, small in size, for raising and depressing almost infinite weights, than which nothing on occasion is more useful: for, with an instrument of three fingers in height, and of the same width, and of smaller bulk, a man might deliver himself and his companions from all danger of prison, and could rise or descend. Also, an instrument might be easily made by which one man could draw to himself a thousand men by force and against their will, and in like manner draw other things. Instruments can be made for walking in the sea or in rivers, even at the bottom, without bodily risk: for Alexander the Great made use of this to see the secrets of the sea, as the Ethical Astronomer relates. These things were made in ancient times, and are made in our times, as is certain; except, perhaps, the machine for flying, which I have not seen, nor have I known any one who had seen it, but I know a

wise man who thought to accomplish this device. And almost an infinite number of such things can be made; as bridges across rivers without piers or any supports, and machines and unheard-of engines." Bacon goes on to speak of other wonders of Nature and Art, to prove, that, to produce marvellous effects, it is not necessary to aspire to the knowledge of magic, and ends this division of his subject with words becoming a philosopher:—"Yet wise men are now ignorant of many things which the common crowd of students [*vulgus studentium*] will know in future times."*

It is much to be regretted that Roger Bacon does not appear to have executed the second and more important part of his design, namely, "to assign the causes and methods" of these wonderful works of Art and Nature. Possibly he was unable to do so to his own satisfaction; possibly he may upon further reflection have refrained from doing so, deeming them mysteries not to be communicated to the vulgar;—"for he who divulges mysteries diminishes the majesty of things; wherefore Aristotle says that he should be the breaker of the heavenly seal, were he to divulge the secret things of wisdom."† However this may have been, we may safely doubt whether the inventions which he reports were in fact the result of sound scientific knowledge, whether they had indeed any real existence, or whether they were only the half-realized and imperfect creations of the prophetic soul of the wide world dreaming of things to come.

The matters of interest in the volume before us are by no means exhausted, but we can proceed no farther in the examination of them, and must refer those readers who desire to know more of its contents to the volume itself. We can assure them that they will find it full of vivid illustrations of the character of Bacon's time,—of the thoughts of men at an epoch of which less is commonly known than of periods more distant, but less connected by intellectual sympathy and moral relations with our own. But the chief interest of Bacon's works lies in their exhibition to us of himself, a man foremost in his own time in all knowledge, endowed by Nature with a genius of peculiar force and clearness of intuition, with a resolute

energy that yielded to no obstacles, with a combination so remarkable of the speculative and the practical intellect as to place him in the ranks of the chief philosophers to whom the progress of the world in learning and in thought is due. They show him exposed to the trials which the men who are in advance of their contemporaries are in every age called to meet, and bearing these trials with a noble confidence in the final prevalence of the truth,—using all his powers for the advantage of the world, and regarding all science and learning of value only as they led to acquaintance with the wisdom of God and the establishment of Christian virtue. He himself gives us a picture of a scholar of his times, which we may receive as a not unworthy portrait of himself. "He does not care for discourses and disputes of words, but he pursues the works of wisdom, and in them he finds rest. And what others dim-sighted strive to see, like bats in twilight, he beholds in its full splendor, because he is the master of experiments; and thus he knows natural things, and the truths of medicine and alchemy, and the things of heaven as well as those below. Nay, he is ashamed, if any common man, or old wife, or soldier, or rustic in the country knows anything of which he is ignorant. Wherefore he has searched out all the effects of the fusing of metals, and whatever is effected with gold and silver and other metals and all minerals; and whatever pertains to warfare and arms and the chase he knows; and he has examined all that pertains to agriculture, and the measuring of lands, and the labors of husbandmen; and he has even considered the practices and the fortune-telling of old women, and their songs, and all sorts of magic arts, and also the tricks and devices of jugglers; so that nothing which ought to be known may lie hid from him, and that he may as far as possible know how to reject all that is false and magical. And he, as he is above price, so does he not value himself at his worth. For, if he wished to dwell with kings and princes, easily could he find those who would honor and enrich him; or, if he would display at Paris what he knows through the works of wisdom, the whole world would follow him. • But, because in either of these ways he would be impeded in the great pursuits

* *Nullity of Magic*, pp. 532-542.

† *Comp. Stud. Phil.* p. 416.

of experimental philosophy, in which he chiefly delights, he neglects all honor and wealth, though he might, when he wished, enrich himself by his knowledge."

Popular Music of the Olden Time. A Collection of Ancient Songs, Ballads, and Dance-Tunes, Illustrative of the National Music of England. With Short Introductions to the Different Reigns, and Notices of the Airs from Writers of the Sixteenth and Seventeenth Centuries. Also, a Short Account of the Minstrels. By W. CHAPPELL, F. S. A. The whole of the Airs harmonized by G. A. McFARREN. 2 vols. pp. 384, 439. London: Cramer, Beale, & Chappell. New York: Webb & Allen.

IN tracing the history of the English nation, no line of investigation is more interesting, or shows more clearly the progress of civilization, than the study of its early poetry and music. Sung alike in the royal palaces and in the cottages and highways of the nation, the ballads and songs reflect most accurately the manners and customs, and not a little of the history of the people; while, as indicating the progress of intellectual culture, the successive changes in language, and the steady advance of the science of music, and of its handmaid, poetry, they possess a value peculiarly their own.

The industry and learning of Percy, Warton, and Ritson have rendered a thorough acquaintance with early English poetry comparatively easy; while in the work whose comprehensive title heads this article the research of Chappell presents to us all that is valuable of the "Popular Music of the Olden Time," enriched by interesting incidents and historical facts which render the volumes equally interesting to the general reader and to the student in music. Chappell published his collection of "National English Airs" about twenty years ago. Since that time, he tells us in his preface, the increase of material has been so great, that it has been advisable to rewrite the entire work, and to change the title, so that the present edition has all the freshness of a new publication, and contains more than one hundred and fifty additional airs.

The opening chapters are devoted to a

concise historical account of English minstrelsy, from the earliest Saxon times to its gradual extinction in the reigns of Edward IV. and Queen Elizabeth; and while presenting in a condensed form all that is valuable in Percy and others, the author has interwoven in the narrative much curious and interesting matter derived from his own careful studies. Much of romantic interest clusters around the history of the minstrels of England. They are generally supposed to have been the successors of the ancient bards, who from the earliest times were held in the highest veneration by nearly all the people of Europe, whether of Celtic or Gothic origin. According to Percy, "Their skill was considered as something divine; their persons were deemed sacred; their attendance was solicited by kings; and they were everywhere loaded with honors and rewards." Our Anglo-Saxon ancestors, on their migration into Britain, retained their veneration for poetry and song, and minstrels continued in high repute, until their hold upon the people gradually yielded to the steady advance of civilization, the influence of the printing-press, and the consequent diffusion of knowledge. It is to be borne in mind that the name, minstrel, was applied equally to those who sang, and accompanied their voices with the harp, or some other instrument, and to those who were skilled in instrumental music only. The harp was the favorite and indeed the national instrument of the Britons, and its use has been traced as far back as the first invasion of the country by the Saxons. By the laws of Wales, no one could pretend to the character of a freeman or gentleman, who did not possess or could not play upon a harp. Its use was forbidden to slaves; and a harp could not be seized for debt, as the simple fact of a person's being without one would reduce him to an equality with a slave. Other instruments, however, were in use by the early Anglo-Saxons, such as the Psaltery, the Fiddle, and the Pipe. The minstrels, clad in a costume of their own, and singing to their quaint tunes the exploits of past heroes or the simple love-songs of the times, were the favorites of royalty, and often, and perhaps usually, some of the better class held stations at court; and under the reigns of Henry I. and II., Richard I., and John, minstrelsy

flourished greatly, and the services of the minstrels were often rated higher than those of the clergy. These musicians seem to have had easy access to all places and persons, and often received valuable grants from the king, until, in the reign of Edward II., (1315,) such privileges were claimed by them, that a royal edict became necessary to prevent impositions and abuses.

In the fourteenth century music was an almost universal accomplishment, and we learn from Chaucer, in whose poetry much can be learned of the music of his time, that country-squires could sing and play the lute, and even "songes make and well indite." From the same source it appears that then, as now, one of the favorite accomplishments of a young lady was to sing well, and that her prospects for marriage were in proportion to her proficiency in this art. In those days the bass-viol (*viol-de-gamba*) was a popular instrument, and was played upon by ladies, — a practice which in these modern times would be considered a violation of female propriety, and even then some thought it "an unmannerly instrument for a woman." In Elizabeth's time vocal music was held in the highest estimation, and to sing well was a necessary accomplishment for ladies and gentlemen. A writer of 1602 says to the ladies, "It shall be your first and finest praise to sing the note of every new fashion at first sight." That some of the fair sex may have carried their musical practice too far, like many who have lived since then, is perhaps indicated in some verses of that date which run in the following strain :—

"This is all that women do:
Sit and answer them that woo;
Deck themselves in new attire,
To entangle fresh desire;
After dinner sing and play,
Or, dancing, pass the time away."

To many readers one of the most interesting features of Chappell's work will be the presentation of the original airs to which were sung the ballads familiar to us from childhood, learned from our English and Scotch ancestors, or later in life from Percy's "Reliques" and other sources; and the musician will detect, in even the earliest compositions, a character and substance, a beauty of cadence and rhythmic ideality, which render in

comparison much of our modern song-music tamer, if possible, than it now seems. Here are found the original airs of "Agin-court," "All in the Downs," "Barbara Allen," "The Barley-Mow," "Cease, rude Boreas," "Derry Down," "Frog he would a-wooing go," "One Friday morn when we set sail," "Chanson Roland," "Chevy Chace," and scores of others which have rung in our ears from nursery-days.

The ballad-mongers took a wide range in their writings, and almost every subject seems to have called for their rhymes. There is a curious little song, dating back to 1601, entitled "O mother, a Hoop," in which the value of hoop-skirts is set forth by a fair damsel in terms that would delight a modern belle. It commences thus :—

"What a fine thing have I seen to-day!
O mother, a Hoop!
I must have one; you cannot say Nay;
O mother, a Hoop!"

Another stanza shows the practical usefulness of the hoop :—

"Pray, hear me, dear mother, what I have
been taught:
Nine men and nine women o'erset in a boat;
The men were all drowned, but the women
did float,
And by help of their hoops they all safely
got out."

The fashion for hoops was revived in 1711, in which year was published in England "A Panegyrick upon the Late, but most Admirable Invention of the Hoop-Pettycoat." A few years later, (1726,) in New England, a three-penny pamphlet was issued with the title, "Hoop Petticoats Arraigned and Condemned by the Light of Nature and Law of God," by which it would seem that our worthy ancestors did not approve of the fashion. In 1728 we find *hoop-skirts* and *negro girls* and other "chattels" advertised for sale in the same shop!

The celebrated song, "Tobacco is an Indian weed," is traced to George Withers, of the time of James I. Perhaps no song has been more frequently "reset"; but the original version, as is generally the case, is the best.

One of the most satisfactory features of Chappell's work is the thoroughness with which he traces the origin of tunes, and his acute discrimination and candid judg-

ment. As an instance of this may be mentioned his article on "God save the Queen"; and wherever we turn, we find the same evidence of honest investigation. So far as is possible, he has arranged his airs and his topics chronologically, and presented a complete picture of the condition of poetry and music during the reigns of the successive monarchs of England. The musician will find these volumes invaluable in the pursuit of his studies, the general reader will be interested in the well-drawn descriptions of men, manners, and customs, and the antiquary will pore over the pages with a keen delight.

The work is illustrated with several specimens of the early style of writing music, the first being an illuminated engraving and fac-simile of the song, "Sumer is icumen in,"—the earliest secular composition, in parts, known to exist in any country, its origin being traced back to 1250. It should have been mentioned before this that the very difficult task of reducing the old songs to modern characters and requirements, and harmonizing them, has been most admirably done by McFarren, who has thus made intelligible and available what would otherwise be valuable only as curiosities.

1. *Folk-Songs*. Selected and edited by JOHN WILLIAMSON PALMER, M. D. Illustrated with Original Designs. New York: Charles Scribner. 1861. Small folio. pp. xxiii., 466.
2. *Loves and Heroines of the Poets*. Edited by RICHARD HENRY STODDARD. New York: Derby & Jackson. 1861. Quarto. pp. xviii., 480.
3. *A Forest Hymn*. By WILLIAM CULLEN BRYANT. With Illustrations of John A. Hows. New York: W. A. Townsend & Co. 1861. Small quarto. pp. 32.

WE have no great liking for illustrated books. Poems, to be sure, often lend themselves readily to the pencil; but, in proportion as they stand in need of pictures, they fall short of being poetry. We have never yet seen any attempts to help Shakspeare in this way that were not as crutches to an Indian runner. To illustrate poetry truly great in itself is like illuminating to show off a torchlight-procession. We doubt if even Michel An-

gelo's copy of Dante was so great a loss as has sometimes been thought. We have seen missals and other manuscripts that were truly *illuminated*,—

"laughing leaves

That Franco of Bologna's pencil limned";

but the line of those artists ended with Frà Angelico, whose works are only larger illuminations in fresco and on panel. In those days some precious volume became the Laura of a poor monk, who lavished on it all the poetry of his nature, all the unsatisfied longing of a lifetime. Shut out from the world, his single poem or book of saintly legends was the window through which he looked back on real life, and he stained its panes with every brightest hue of fancy and tender half-tint of reverie. There was, indeed, a chance of success, when the artist worked for the love of it, gave his whole manhood to a single volume, and mixed his life with his pigments. But to please yourself is a different thing from pleasing Tom, Dick, and Harry, which is the problem to be worked out by whoever makes illustrations to be multiplied and sold by thousands. In Dr. Palmer's "Folk-Songs," if we understand his preface rightly, the artists have done their work for love, and it is accordingly much better done than usual. The engravings make a part of the page, and the designs, with few exceptions, are happy. Numerous fac-similes of handwriting are added for the lovers of autographs; and in point of printing, it is beyond a question the handsomest and most tasteful volume ever produced in America. The Riverside Press may fairly take rank now with the classic names in the history of the art. But it is for the judgment shown in the choice of the poems that the book deserves its chief commendation. Our readers do not need to be told who Dr. Palmer is, or that one who knows how to write so well himself is likely to know what good writing is in others. We have never seen so good and choice a *florilegium*. The width of its range and its catholicity may be estimated by its including William Blake and Dibdin, Bishop King and Dr. Maginn. It would be hard to find the person who would not meet here a favorite poem. We can speak from our own knowledge of the length of labor and the loving care that have been devoted to it, and the result is

a gift-book unique in its way and suited to all seasons and all tastes. Nor has the binding (an art in which America is far behind-hand) been forgotten. The same taste makes itself felt here, and Matthews of New York has seconded it with his admirable workmanship.

In Mr. Stoddard's volume we have a poet selecting such poems as illustrate the loves of the poets. It is a happy thought happily realized. With the exception of Dante, Petrarch, and Tasso, the choice is made from English poets, and comes down to our own time. It is a book for lovers, and he must be exacting who cannot find his mistress somewhere between the covers. The selection from the poets of the Elizabethan and Jacobian periods is particularly full; and this is as it should be; for at no time was our language more equally removed from conventionalism and commonplace, or so fitted to refine strength of passion with recondite thought and airy courtliness of phrase. The book is one likely to teach as well as to please; for, though everybody knows how to fall in love, few know how to love. It is a mirror of womanly loveliness and manly devotion. Mr. Stoddard has done his work with the instinct of a poet, and we cordially commend his truly precious volume both to those

"who love a coral lip
And a rosy cheek admire,"

and to those who

"Interassured of the mind,
Are careless, eyes, lips, hands, to miss";

for both likings will find satisfaction here. The season of gifts comes round oftener for lovers than for less favored mortals, and by means of this book they may press some two hundred poets into their service to thread for the "inexpressive she" all

the beads of Love's rosary. The volume is a quarto sumptuous in printing and binding. Of the plates we cannot speak so warmly.

The third book on our list deserves very great praise. Bryant's noble "Forest Hymn" winds like a river through edging and overhanging greenery. Frequently the designs are rather ornaments to the page than illustrations of the poem, and in this we think the artist is to be commended. There is no Birket Foster-ism in the groups of trees, but honest drawing from Nature, and American Nature. The volume, we think, marks the highest point that native Art has reached in this direction, and may challenge comparison with that of any other country. Many of the drawings are of great and decided merit, graceful and truthful at the same time.

The Works of Lord Bacon, etc., etc. Vols. XI. and XII. Boston: Brown & Taggard. 1860.

WE have already spoken of the peculiar merits which make the edition of Messrs. Heath and Spedding by far the best that exists of Lord Bacon's Works. It only remains to say, that the American reprint has not only the advantage of some additional notes contributed by Mr. Spedding, but that it is more convenient in form, and a much more beautiful specimen of printing than the English. A better edition could not be desired. The two volumes thus far published are chiefly filled with the "Life of Henry VII." and the "Essays"; and readers who are more familiar with these (as most are) than with the philosophical works will see at once how much the editors have done in the way of illustration and correction.
